INTRODUCTION

Community College Correctional Education Program Annual Report 2003-2004

Introduction

THE REPORT

The Annual Report 2003-04 provides a snapshot of enrollments, student achievements, staffing, and funding for community college correctional education programs provided at Washington State Department of Corrections adult facilities. The primary source of information for this document is the State Board for Community and Technical Colleges' (SBCTC) Data Warehouse, which is derived from the common management information systems used by all community and technical colleges in the state. An electronic version of this report is located on the State Board's Web site: <http://www.sbctc.ctc.edu>.

THE CORRECTIONAL EDUCATION DEPARTMENT

On July 1, 2002, the Washington State Board for Community and Technical Colleges entered into an Interagency Agreement with the Washington State Department of Corrections to provide educational services to eligible offenders incarcerated in the state's thirteen prisons and two pre-release facilities. During fiscal year 2004, the State Board sub-contracted with nine community colleges, which operated programs within the confines of each prison facility. These programs included: basic skills, vocational skills training, and offender change intervention. Prior to 2002, the Department of Corrections contracted separately with eleven local community colleges for educational services.

NEED

Most of the men and women entering correctional facilities lack the literacy and employment skills needed to succeed in our communities upon release. The Washington Department of Corrections reports approximately fifty percent of all offenders entering the correctional system score below the 9th grade level in basic literacy skills.

- Offenders who are provided opportunities to gain job skills are much more likely to be successful in the community upon release. A successful ex-offender contributes to the community by working, paying taxes, making restitution payments, and supporting other family members.
- Educated offenders are statistically less likely to commit additional crimes upon release. The Correctional Education Association conducted a study in three states to determine if education, independent of other programs, could have a significant impact on employment and recidivism of offenders after release. Almost 3,200 inmates were included in the study, making it one of the most comprehensive studies ever conducted in

correctional education. The subjects were followed for a three-year period following release from incarceration during 1997 and 1998 in Ohio, Maryland, and Minnesota.

Inmates who participated in education programs while incarcerated showed lower rates of recidivism three years after their release. For each state the three measures of recidivism – re-arrest, re-conviction, and re-incarcerations – were significantly lower. The re-incarceration rate for education participants was 21 percent, compared to 31 percent for non-participants.

In every year of the study, the wages reported to the state labor departments were higher for the education participants than for non-participants. There is a direct correlation between education level and recidivism: the higher the education level, the lower the recidivism rate. A decrease in recidivism reduces long-term costs to taxpayers.

- Education programs are an integral part of the “targeted interventions and seamless services” prescribed in the state’s Offender Accountability Act. Offenders who attain literacy and job skills are better equipped to find and keep employment, take care of their families, and contribute to their communities.

PROGRAM DESCRIPTIONS

Basic Skills Education

Adult Basic Skills programs are comprised of classes provided in the areas of Adult Basic Education (ABE), General Educational Development (GED) preparation, and English as a Second Language (ESL).

- Adult Basic Education courses are provided for offenders who have not attained a high school diploma or a GED and score below the 9th grade level on a standardized assessment. Reading comprehension, writing, and math skills are emphasized in these classes.
- GED preparation courses are provided for offenders who have not attained a high school diploma or GED and score at least at the 9th grade level, but less than the 12th grade level on a standardized assessment. In order to receive the GED certificate, the offender must pass five separate tests that measure knowledge and application skills in the following areas: Language Arts Reading, Language Arts Writing, Science, Social Studies, and Mathematics.
- English as a Second Language courses provide instruction in speaking, listening comprehension, reading and writing skills for offenders whose primary language is a language other than English.

Male offenders are administered the Comprehensive Adult Student Assessment System (CASAS) appraisal test at the Washington Corrections Center in Shelton, Washington. Female offenders are tested at the Washington Corrections Center for Women in Gig Harbor, Washington. The offenders' appraisal test scores are entered into the Washington Department of Corrections' Offender Based Tracking System where they can be accessed by education staff.

When the offender is transferred to a receiving institution, he or she is provided an education services orientation by college staff. The student is administered a CASAS pretest to determine placement in the Basic Skills program. Once an intake is completed, the student is then registered for the appropriate Basic Skills classes.

Vocational Skills Training

Vocational Skills Training programs are a series of courses or classes necessary to achieve a proficiency standard or to obtain a certificate. These programs, such as Welding, Information Technology, Barbering, Electronics, Carpentry, Drafting, and Auto Body Repair, provide offenders with job skills related to employment in prison work programs and in the community. Much work has been completed by the colleges, State Board, and the Department of Corrections to standardize these programs in order to achieve curricular and instructional continuity. The Information Technology program was standardized and the same curriculum is now offered at thirteen facilities by nine different community colleges. Offenders who don't complete the program before being transferred to another facility are now able to finish the program at the new facility. Standardization of this program supports more completions and better offender skills. The welding program was standardized during 2002-03 and is currently being offered at two correctional facilities by two different colleges.

Offender Change Programs

Offender Change Programs are classes designed to change behavior, thinking, and attitudes known to contribute to criminality. These programs are designed to address the dynamic risk factors that, if changed, reduce the likelihood of future criminal behavior. Education providers offered three standardized Offender Change Programs – Stress/Anger Management, Victim Awareness, and Job Hunter. Other non-standardized programs offered during 2003-04 in this category were Parenting, Family Dynamics, Women's Issues, Critical Thinking, Cultural Diversity, Achieving Your Potential, Breaking Barriers, Relapse Prevention and Community Reintegration.

HIGHLIGHTS

**Community Colleges Correctional Education Program
Annual Report 2003-2004**

Highlights

1. The community colleges under sub agreements with the State Board produced 3,875 FTES as a system during FY04. The colleges fell short of the 4,000 FTES that were contracted for between the Department of Corrections (DOC) and the State Board. Several factors contributed to the decrease in FTES this past year.
 - A. DOC's decision to redistribute FTES among colleges around the state and within program areas necessitated the reduction of faculty in some program areas and the increase in faculty in other areas. The reduction in force and hiring processes for the individual colleges delayed the opening of some course sessions.
 - B. In some cases, the number of FTES that were allocated by DOC could not be produced due to few student referrals and conflicts with other program and work assignments.
 - C. Correctional site classroom and shop facilities were not adequate to accommodate the number of students needed to meet contracted FTES. For example, at Stafford Creek, the opening of the new welding shop/classroom was continually delayed and was not ready for occupation until summer quarter FY05. The college lost most of the welding FTES that would have been produced due to construction delays.
 - D. Prolonged contract negotiations between the State Board and DOC led to disruption of programming during summer quarter. Several colleges lost their ability to contract with faculty because instructors found other summer positions when the contract was not negotiated in a timely manner. This led to decreases in the summer program offering at many sites.
 - E. DOC made the decision in the fall of 2004 to change Pine Lodge Pre-Release from a co-ed to an all women's facility. The transfer of offenders out of and into the facility caused the overall population to drop and thus referrals to the education program dropped during most of winter and spring quarters. Several sites experienced a temporary decrease in the offender population when offenders were transferred to out-of-state prisons. These transfers disrupted educational programming and caused a reduction in FTES.
 - F. Mandated medical benefit and part-time faculty salary increases impacted the colleges' ability to offer the same level of programming as the year before. Funds used to support instruction had to be used to pay for these mandated cost increases.

2. The colleges, State Board and DOC continue to work collaboratively on a systematic approach to correctional education.
 - A. Five Information Technology instructors representing four colleges, State Board staff, and a representative from DOC began work on the revision of the Information Technology program in FY04. The committee revised all courses within the program sequence. One new course was added and the competencies/outcomes for each course were totally revised. Committee members also developed common course assessments. The State Board staff designed and developed the original Information Technology program Web site used to track student progress in the program. State Board staff has redesigned the Web site to match the revised Information Technology program. This Web site will be the prototype used for tracking student progress in other correctional education vocational training programs as they become standardized. The State Board Information Services division continues to provide on-going technical support and training. The new curriculum will be implemented in the new year.
 - B. DOC made the decision to adopt Employment Security's Job Hunter Program as the standardized pre-employment training program offered to eligible offenders in the state system. Employment Security and DOC provided two 3-day training sessions to college instructors. The Job Hunter program was implemented at the correctional sites during winter and spring quarters.
 - C. The Victim Awareness program revision was finalized in the winter of 2004. DOC provided facilitator training over a 2-day period in March. The revised program was implemented immediately after the training session.
 - D. Tacoma and Pierce Colleges standardized the Technical Design program in collaboration with Correctional Industries. This program provides students with drafting and computer assisted design skills. Students are employed by Correctional Industries at McNeil Island and the Washington Corrections Center for Women as they complete their training program. The collaborative relationship between Correctional Industries and the colleges provides students with formal training at the same time they are applying newly learned skills on the job.
 - E. Centralia College and DOC participated in a joint effort to research and plan the implementation of a vocational assessment pilot program at the Washington Corrections Center. Eligible offenders at the Reception Center will be administered a vocational training assessment to determine their skills and areas of interest in the area of employment. Students will also receive an orientation concerning the vocational training programs offered at various correctional facilities throughout the state. Ultimately, the plan is to target eligible offenders, when possible, to be transferred to a facility that provides the training program that best meets the offender's employment goals and aptitudes.

- F. During FY04, Walla Walla Community College and the State Board secured a grant from the K-20 educational network consortium to provide video conferencing capabilities for education programs at Ahtanum View Corrections Center, Coyote Ridge Corrections Center, and the Washington State Penitentiary. The college and State Board worked with DOC to put in place the infrastructure within the facilities to complete the links needed to provide interactive instruction from one facility to the others. During spring quarter, students at Coyote Ridge were able to participate in the Job Hunter program that was offered at the Washington State Penitentiary.
3. The Council for Basic Skills in collaboration with the Office of Adult Literacy at the State Board adopted the Comprehensive Adult Student Assessment System (CASAS) to determine program placement and level completions for students enrolled in the Basic Skills program. The new assessment policies and procedures went into effect on July 1, 2003. Prior to this date, level completions were determined by student performance on various non-standardized performance tasks.

Overall, Adult Basic Education and English as a Second Language level completions dropped in FY04 when compared with the previous year. A significant drop in completions also occurred in the community college and community-based organizations' programs. This is a typical trend when a state system moves from one assessment system to another. During FY04, baseline data was generated throughout the year so that programs will now be able to evaluate their programs regularly to make informed decisions to increase student success in the basic skills programs.

During August and early September all basic skills instructors received comprehensive training on the administration and scoring of the standardized assessments. Assessment materials were shipped in September and October to each of the sites. All students enrolled in the program were administered pre-tests. The WABERS reporting system was reconfigured to assist with the collection of student data and testing information. Program managers received training on monitoring assessment practices and using the assessment data and reports generated by the WABERS system to assist them with program improvement planning.

4. The State Board and college providers completed a survey of vocational training programs during winter quarter to try to determine barriers to program completions. Each vocational training program offered at the correctional facilities participated in the survey. During winter quarter, 1,876 students were enrolled in a vocational training program. Of the number enrolled, 159 students completed their program. A little over two-thirds of the students continued their training program spring quarter.

A disturbing finding indicated that almost 25% of the enrolled students withdrew from the program during the quarter. Another 10% of the students experienced absenteeism of more than 20% of their scheduled class time. The reasons for student withdrawals and absenteeism were numerous, but an analysis of the data showed that the majority of withdrawals were a result of:

- Students being transferred to another institution (20%)
- Students released to the community (14.8%)
- Student assigned to an institutional job (12%).

The majority of absences from class were a result of:

- Institutional appointments with DOC staff (19%),
- Students skipped class (15%),
- Students placed in segregation or the Intensive Management Unit for disciplinary problems (14%)
- Students had medical appointments (12%).

DOC and the State Board are working to find ways to reduce withdrawals and absenteeism, and increase vocational training program completions based, in part, on the results of the survey.

5. Airway Heights experienced a security breach during GED testing in February. A test booklet was lost during one of the testing sessions. This caused the immediate suspension of all GED testing in the Spokane area including testing at the community college, its branch campuses, Airway Heights Corrections Center, and the Pine Lodge Pre-Release facility. Testing was resumed at all of the sites, except Airway Heights, approximately thirty days after the incident. Airway Heights was not able to resume testing until the middle of spring quarter on a very limited schedule.

Despite the temporary closure of GED testing at two correctional sites, the college providers increased their GED battery completions by approximately 3.5%.

GED test passing rate average:

Correctional education programs	86.9%
Washington State GED programs	84.1%
National passing rate average	70.6%

During FY04, 330 fewer tests were administered when compared with the year before, yet the battery completion rate increased. The decrease in tests administered is probably the result of increased testing costs. The education providers have had to scale back the number of students they test. The results seem to indicate that students who are tested are well prepared and pass their tests. Those who are less prepared are required to prepare more diligently before participating in testing. The cost of all GED testing in the State of Washington will increase in excess of 30% in FY05. The correctional education programs have had to continually absorb rising costs without a funding increase, thus eroding their capacity to provide educational programs and services.

6. Some student and faculty demographic changes were noted in FY04. For the system, 100 more students participated in educational programs in FY04 than in the previous year, but fewer FTES were produced. More students are taking fewer classes. This may be the result of institutional job assignments, mandatory participation in other programs, or an effort to reduce inmate idleness in the institution by requiring more offenders to participate, but reducing the overall time each is able to spend in the program. The increase in offender transfers from one institution to another may also have negatively impacted FTES. When a student's time in class is reduced, there is a subsequent reduction in student progress and program completions.

A. The correctional education system saw a 1% decrease in the number of women enrolled in educational programs during the year. This may be the result of a change in the offender population as a whole or as a result of the reassignment of Pine Lodge Pre-Release facility from a co-ed to an all-women facility. The transfer of offenders to the facility may have disrupted attendance in education programs. The State Board and colleges will be monitoring enrollment patterns during the next year to ensure eligible women offenders are receiving adequate educational opportunities.

B. Another demographic change that was noted was a decrease of 1% in the number of African American students and a 3% decrease in the number of Latino/Hispanic students enrolled in educational programs. White student enrollment increased by 4%. Upon further analysis of program areas:

African American student participation in-

- Basic Skills increased
- Offender Change increased
- Vocational Training decreased

Latino/Hispanic student participation in-

- Basic Skills decreased
- Offender Change decreased
- Vocational Training decreased

White student participation in-

- Basic Skills program increased slightly
- Offender Change increased
- Vocational Training increased

The shift in ethnic participation may be due to overall changes in the offender population. The State Board will work with the Department of Corrections to monitor population trends and ensure all eligible offenders have equal access to educational opportunities provided at the correctional facilities.

C. The college providers experienced a 6% decrease in faculty in FY04

Reasons:

- Medical benefit and part-time faculty salary increases were not funded.
- Many potential part-time employees cannot attend 6 full weeks of the Department of Corrections' mandatory CORE training due to other employment responsibilities.
- A significant amount of funding must be utilized to enable part-time employees to participate in CORE training.
- The cost of employee training often strips the available funding that would have gone to increasing instructional effort.

7. The college system was able to purchase equipment needed to upgrade the Information Technology computer labs at the Monroe Correctional Complex and the Washington State Penitentiary. With the addition of replacement equipment at these two correctional facilities, all the Information Technology labs have been upgraded within the last three years and the programs will be able to implement the revised standardized curriculum due to be implemented by January 1, 2005.
8. The State Board received a three-year Grant to States for Workplace and Community Transition Training for Incarcerated Youth Offenders from the U.S. Department of Education. The grant allows the community college system to provide post-secondary vocational programs to eligible offenders 25 years of age and under. Peninsula and Tacoma Community Colleges have agreed to participate in the grant and serve students within the guidelines of the grant. DOC has agreed to develop guidelines to transfer eligible offenders from the Reception Center to the institutions participating in the grant.

COURSES AND PROGRAMS OFFERED

**Community Colleges Correctional Education Program

Coyote Ridge	293	294	315	274	609
Larch	98	170	147	205	413
McNeil Island	370	417	419	380	839
Mission Creek	0	0	0		
Monroe	360	664	555	768	1,374
Olympic	24	200	163	168	287
Pine Lodge	186	272	300	229	653
Stafford Creek	804	864	798	824	1,741
Tacoma Pre-Release	138	120	112	124	311
Wash. Corr. Ctr.	674	1,263	1,241	1,062	3,090
Wash. C. C. for Women	453	513	589	652	1,498
Wash. St. Penitentiary	888	977	952	1,033	2,210
Program Totals	5,396	7,131	6,908	7,179	15,770
Unduplicated Program Total	5,325	6,895	6,667	6,991	
System Total					13,453

Each student documented in Quarters 1-4 was counted only once during the quarter even if the student was enrolled in more than one program. For example, a student might have been enrolled in a basic skills and an offender change class during quarter 1. Despite being enrolled in two program areas, that student would only be counted once in the total for that site. If a student was transferred to another institution during the quarter, the program total would reflect the student's attendance at both sites by counting her/him twice.

The Unduplicated Program Total under each quarter counts each student only once even if he or she was enrolled in education programs provided by two different colleges during the quarter due to a transfer mid-quarter.

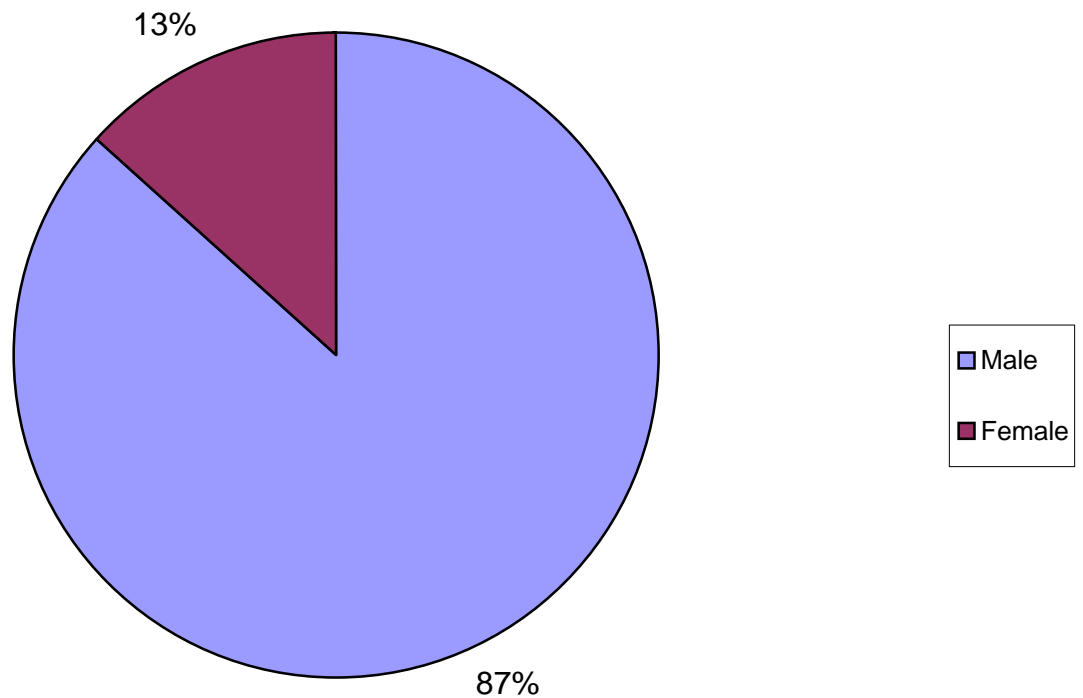

Under the annualized headcount, each student was counted only once even if the student attended classes multiple quarters.

Under the system total, each student was counted only for participation in educational programs during the year regardless of attendance in multiple programs or at multiple sites.

*Adult Basic Education/English as a Second Language

Data combines student enrollment in the Adult Basic Education and English as a Second Language programs. The WABERS system does not separate the two programs into different reports.

Prior to July 2003, level completions were determined by various non-standardized performance tasks used by the instructors. The community college system adopted CASAS assessment system that was used beginning July 1, 2003 to determine level completions for students enrolled in the Adult Basic Education and English as a Second Language programs. (See #3 under Highlights.)

*The mission at the Washington Corrections Center changed at the beginning of the year, the Information Technology program was suspended during 2003-04.

The Information Technology program is divided into modules of instruction that are sequenced to allow the student to complete up to two short-term training certificates and a one-year certificate.

Module 1 – Microsoft Office Certificate – 300 clock hours, 20 credits.

Module 2 – Microsoft Office Specialist – 240 additional clock hours, 16 additional credits.

Module 3 – Information Technology One-Year Certificate –150 additional clock hours, 10 additional credits that include the general education courses required for any community college professional/technical program over 45 credits in length.
