QUARTER**

# APPRENTICES & TRAINEES

## Early trend estimates

### Introduction

This publication presents early estimates of apprentice and trainee commencements for the December quarter 2010. Indicative information about this quarter is presented here; the most recent figures are estimated, taking into account reporting lags that occur at the time of data collection.

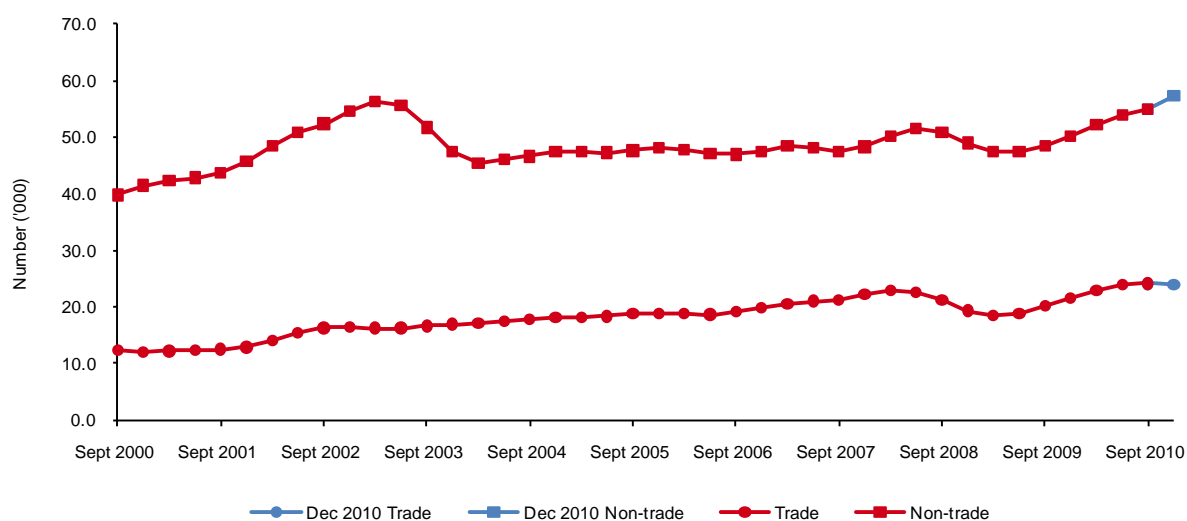

The early trend estimates are derived from the National Apprentice and Trainee Collection no.66, December 2010. Data are only available for commencements at the national level and have been seasonally adjusted and smoothed. Further information at the disaggregated level for the December quarter 2010 will be released in early June 2011.

### Highlights

Early indications for the December quarter 2010 show that:

- Trade commencements appear to have recovered from the slump experienced prior to the June 2009 quarter. The trend from June 2009 to June 2010 was one of steady growth, but the trend since then indicates that quarterly commencements are relatively stable.
- Non-trade commencements continue to show an upward trend, with December 2010 being the sixth consecutive quarter of steady growth since June 2009.

Notes: (a) The December quarter 2010 estimate is based on an early estimate which is seasonally adjusted (based on data from September 2000 to December 2010) and 7-point Henderson smoothed. Only the December quarter 2010 estimate from this series is presented. The quarterly data presented to September 2010 have been seasonally adjusted (based on data from September 2000 to September 2010) and 7-point Henderson smoothed. These are consistent with the forthcoming September quarterly 2010 publication.
