## CHAPTER XXXVIII.

## MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888-89, pages 411-428, 1362-1367; 1889-1890, pages 1148, 1209-1212, 1351-1356; 1891-92, page 1197; 1892-93, pages 186, 188, 560-575; 1893-94, pages 877-949, 2093-2169; 1894-95, page 2170; 1895-96, pages 989-992, 1001-1152, 1821-1329, 1510-1521 (column 8); 1896-97, pages 193-197, 699-703, 2211-2222 (column 8), 2279-2294; 1897-99, pages 141, 194, 723, 2370-2382 (column 8), 2419-2440; 1898-99, pages 26, 83, 179-189, 208-209, 858-863, 1355-1361, 1442, 1448, 1525-1536 (column 8), 2139-2162; 1899-1900, pages 329, 875, 1811-1821 (column 8), 2437-2467, 2505; 1900-1901, pages 216, 217, 1510, 1961, 2231-2268, 2342-2372; 1901-2, pages 1294-1311 (column 9), 1959-2002.

There are 587 cities in the United States having 8,000 inhabitants and over. In 322 of these cities manual training is taught in some of the grades of the public schools. In 1890 only 37 city school systems included manual training in the list of subjects of instruction. In 1894 the number had increased to 95, in 1896 to 121, in 1898 to 146, in 1900 to 169, in 1901 to 232, in 1902 to 270, and in 1903 the number had increased to 322. Table 1 gives these figures by States and geographical divisions. Table 2 gives the names of the cities in which manual training was given in 1902–3, indicating for each city the grades in which it was taught.

In 1894 this Bureau had reports from 15 manual training schools in the United States. These schools had 3,362 students in manual training, 2,403 males and 959 females, all of secondary or high school grade. The next year, with the same number of schools reporting, there were 4,892 students, 3,621 males and 1,271 females. In 1897 the number of schools had increased to 40, with 13,890 students, 9,224 males and 4,666 females. Industrial training schools, or schools in which certain trades were taught, were included with the manual training schools proper, and since 1897 the statistics given are for "manual and industrial training."

In 1898 there were 58 manual and industrial training schools, with 18,977 students, 12,975 males and 6,002 females. All these were reported as students of secondary or high school grade. Those not actually pursuing such secondary studies had been required to master certain secondary branches before entering. In 1899 the number of schools had increased to 66, with 20,701 students, 13,903 males and 6,798 females. In 1900 there were 69 schools, with 24,716 students, 15,819 males and 8,897 females. In 1901 the number of schools reporting was 78, with 28,981 students, 18,928 males and 10,053 females. In 1902 the number had increased to 85 schools, with 29,507 students, 18,771 males and 10,736 females. In 1903 there were 95 schools, with 33,062 students, 20,170 males and 12,892 females.

The statistics for the nine years mentioned, showing the growth of manual and industrial training schools since 1894, will be found in tables 3, 4, and 5. From these tables every effort has been made to exclude all students below secondary or high school grades.

For the scholastic year 1902-3 this Bureau collected statistics from 186 manual and industrial training schools. These include the 95 of high school grade mentioned above, 48 of elementary grade, and 43 industrial schools for Indians. Four of the Indian schools had some students of high school grade.

The statistics of the 186 schools are summarized in table 6. These schools had 56,432 pupils in manual and industrial training, 22,672 in elementary grades, and 33,760 in secondary or high school grades. Of those in secondary grades 9,180 were not receiving literary instruction, but were regarded as students of high school grade before admission. The actual number receiving literary instruction of secondary school grade in these 186 schools was 24,580. It may be noted also that of the elementary pupils in industrial training 1,076 were not receiving literary instruction. The actual number receiving such instruction of elementary grade was 21,596. Table 6 also shows that the 186 schools had 1,354 teachers of elementary and secondary studies and 2,321 instructors in manual and industrial training.

Table 7 gives, by sex, the number of teachers and students already shown by totals in table 6.

The statistics of the 43 Indian schools are included in these two tables. Four of the Indian schools had 698 students of high school grade and 9,267 of elementary grades in industrial training.

Table 8 is a financial summary, so far as the requisite data could be obtained from manual and industrial training schools, not including the schools for Indians. The aggregate value of buildings, machinery, tools, and other equipment for the schools reporting was \$5,892,269. These schools had a total expenditure for the scholastic year of \$1,099,926. Of this amount \$710,083 was for pay of teachers, \$117,294 for materials, \$94,489 for new tools and repairs, and \$178,060 for incidentals and for purposes not classified.

Table 9 gives in detail the number of students and teachers in the 143 manual and industrial training schools, exclusive of Indian schools. Table 10 exhibits the financial statistics of each school. Table 11 is a statistical showing for the 43 schools for Indian children. Table 12 shows the number of pupils in each branch of industrial or manual training in each school from which this information could be obtained. Industrial training is offered in most of the negro schools, reform schools, and schools for the defectives, statistics of which will be found in the chapters devoted to these classes of institutions.

## SPECIAL AND UNCLASSIFIED SCHOOLS.

Certain schools which could not be classified or fully reported as manual or industrial training schools, and others giving incomplete statistics, are mentioned below: Alabama Girls' Industrial School, Montevallo, Ala.—This is a State institution for white girls. In the language of the legislative act the school "is established for the purpose of giving therein instruction in the liberal arts and sciences; English language and literature, the science and art of teaching as a profession; music, drawing, painting, decorative art, botany, horticulture, floriculture, scientific dairying, cooking, sewing, dressmaking, millinery, bookkeeping, stenography, typewriting, telegraphy, and any and every other branch of human knowledge or industry by which women may live."

Cogswell Polytechnic College, San Francisco, Cal.—This school offers the following courses, of three years each: Mechanic arts, drafting, steam engineering, surveying, domestic science, art. There is a one-year commercial course.

Bliss Electrical School, Washington, D. C., offers a course complete in one year in electrical engineering, including mechanical drawing.

Bradley Polytechnic Institute, Peoria, Ill., has as many as 10 departments, including those of chemistry, domestic economy, manual arts, physics.

Simmons College, Boston, Mass., was established by the will of the late John Simmons "as an institution in which instruction in such branches of art, science, and industry might be given as would best enable women to earn an independent livelihood." The courses offered for the year of opening (1902-3) included 4 courses in household economies, 3 secretarial courses, 2 library courses, and 5 scientific courses.

Lowell Textile School, Lowell, Mass.—This school has four regular courses of three years each, as follows: Cotton-manufacturing course, wool-manufacturing course, general course in designing, course in chemistry and dyeing.

Pratt Institute, Brooklyn, N. Y.—Besides the regular high school department, this school has the following departments: Fine arts, domestic arts, domestic science,

science and technology, kindergarten, library.

The Brooklyn Institute of Arts and Sciences, Brooklyn, N. Y., has departments of archæology, architecture, astronomy, botany, chemistry, domestic sciences, electricity, engineering, entomology, fine arts, geography, geology, law, mathematics, microscopy, mineralogy, music, painting, pedagogy, philology, photography, physics, political science, psychology, zoology.

Ethical Culture Schools, New York, N. Y.—Throughout the entire course of eight years in the elementary grades periods are given to manual work and art. In the high school the work in art is continued, but manual training is an elective study.

Hebrew Technical Institute, New York, N. Y., offers a course of study extending over three years, including the common branches and algebra, geometry, physics, chemistry, electrical and steam engineering, wood and metal working.

New York Trade School, New York City, has courses of instruction in drawing, electrical work, house, sign, and fresco painting, blacksmithing, bricklaying, plastering, carpentry, printing, steam and hot-water fitting, sheet-metal work, and plumbing.

School of Industrial Art and Technical Design for Women, New York, N. Y.—This school offers, besides courses in free-hand and mechanical drawing, instruction and practice in designs for stained glass, carving, lace, oilcloth, book covers, wall papers, furniture coverings, draperies, tapestries, carpets, rugs, furniture, mantels, hangings, staircases, lamps, ornaments of all kinds.

Rochester Athenxum and Mechanics' Institute, Rochester, N. Y., has three well organized and equipped departments with several three-year courses in each. The departments are industrial and fine arts, manual training, domestic science and art.

The Ohio Mechanics' Institute, Cincinnati, Ohio, "is a technical school in which certain branches, demanded by local industries, are made prominent." At present there are courses of instruction in mechanical drawing and engineering, architectural drawing and engineering, free-hand drawing and general designing, painting in oil and water colors; also mineral colors, chemistry, physics, and electricity, mathematics, modern languages, general instruction.

The School of Industrial Art of the Pennsylvania Museum, Philadelphia, Pa., has now in operation ten schools or courses, as follows: Drawing, applied design, normal instruction, textile design and manufacture, wood working and carving, decorative painting, illustration, decorative sculpture, architectural design, modern languages.

Drexel Institute of Art, Science, and Industry, Philadelphia, Pa., has no fewer than a dozen departments, with several courses in each. The leading departments are mentioned under fine and applied arts, mechanic arts, electrical engineering, commerce and finance, science, technology, domestic science, domestic arts, normal training, library training, English language and literature, physical training.

Girard College, Philadelphia, Pa.—The courses of instruction cover the common branches, French, Spanish, mathematics, manual training, electrical mechanics, plumbing and gas fitting, carpentry, blacksmithing, foundry work, metal work, special training for the trades, military drill.

Pittsburg School of Design for Women, Pittsburg, Pa.—Instruction is given in all branches of drawing and painting, with special reference to their application in the

fine and applied arts. Sculpture and architecture are made prominent.

The Rhode Island School of Design, Providence, R. I.—In the free-hand department instruction is given in drawing, painting, modeling, wood carving, decorative design, sculpture. The mechanical department has courses in mechanics, engineering, mathematics, architecture.

New Bedford Textile School, New Bedford, Mass.—The principal course of instruction in the school relates to the general manufacturing of cotton, giving spinning, weaving, with a special course in mill designing, engineering, and general transmission of power.

Cooper Union, New York, N. Y.—A school endowed by the late Peter Cooper for the advancement of science and art, having a day and an evening session. In addition to the day and evening art classes, a free day school of technical science is maintained, including departments of engineering, physics, chemistry, electricity, naval architecture, etc.

New York School of Art, New York, N. Y.—The original purpose of this school was to afford instruction in the fine arts, but owing to the growing interest in illustration, ornamental and decorative work, industrial and applied art were added with a complete course in architecture.

Girls' Industrial College, Denton, Tex.—This school was opened in 1903. The subjects taught thus far have been arranged under four departments: English-science department, domestic arts, fine and industrial arts, and commercial arts. As the college develops new departments will be added.

Virginia Mechanics' Institute of Technology, Richmond, Va.—Instruction is given in arithmetic, algebra, geometry, trigonometry, applied mechanics, bookkeeping, free hand drawing, architectural drawing, mechanical drawing, naval architecture, chem istry, physics, electricity, and modeling.

Maryland Institute for the Promotion of the Mechanic Arts, Baltimore, Md.—The school has a night and a day course, consisting of artistic and industrial drawing, painting, modeling in clay, sculpture, and designing.

Washington Linotype School, Washington, D. C.—This school was established in 1899 to provide linotype instruction for union printers who have had no shop training in this kind of machine work.

Illinois College of Photography, Effingham, Ill.—This institution is devoted exclusively to teaching high-class photography. Its annual enrollment is at present over 250, consisting of students from all parts of the world.

Wells Memorial Institute, Boston, Mass.—The object of this institution is to provide working people mutual helpfulness, mental and moral improvement. The course includes classes in architectural and machine drawing, practical electricity, steam engineering, dressmaking, millinery, cooking, and stenography and typewriting. The present membership is from 1,800 to 1,900 men and women.

School of Messrs. R. Hoe & Co., New York, N. Y.—This school is maintained by this well-known company of manufacturers of printing presses and other machinery. In order to better equip the employees a night school was opened. The course of instruction includes English, mathematics, geometry, free hand and mechanical drawing. The membership of the school is restricted to the apprentices of the company.

Young Women's Christian Association, Brooklyn, N. Y.—This school has large classes of various nationalities studying English. The industrial course consists of cooking, sewing, dressmaking, millinery, embroidery, basketry, nursing, commercial department.

The Young Women's Christian Association, Boston, Mass.—This school furnishes a complete course in dressmaking, millinery, and domestic science, cooking, sewing, general house work, laundry work, and home nursing.

Young Women's Christian Association School, New York, N. Y.—The object of the association is to promote the temporal, social, mental, moral, and religious welfare of young women. During the earlier period of the association the work was largely confined to commercial branches; now the industrial branches have overshadowed all other branches combined. The course includes thorough instruction in hand and machine sewing, dressmaking, millinery, art embroidery, feathercurling, cooking, and a

course for trained attendants. The industrial art course includes mechanical, freehand, cast, and life drawing, pen and ink work, crayon and water color, clay model-

ing, wood carving and designing.

Hutchinson's School for Watchmakers, Engravers, and Opticians, Laporte, Ind.; Waltham Horological School, Waltham, Mass.; Omaha Watch Repairing, Engraving, and Optical Institute, Omaha, Nebr.; St. Louis Watchmaking School, St. Louis, Mo.—These are schools for teaching the practical work of watch making, repairing clocks, jewelry repairing, engraving, and optics. The course of instruction also embraces etching, chasing, metal work, cardplate, and steel die work.

The Industrial Chemical Institute, Milwaukee, Wis.; Wahl-Henius Institute of Fermentology, Chicago, Ill.; National Brewers Academy, New York, N. Y.; United States Brewers Academy, New York, N. Y.—These schools offer courses in the analytical study of all materials used by modern brewers, with particular reference to all new devices for cooling, aerating, fermenting, filtering, carbonating, racking, and pasteurizing.

## CHAPTER XXXIX.

## COMMERCIAL AND BUSINESS SCHOOLS.

During the scholastic year 1902–3 there were enrolled, in 5,387 different schools, 243,521 students in business or commercial studies, as shown by reports from individual institutions to this Bureau. Of this number, 137,979 were in 516 regular commercial and business schools and 79,207 in 3,673 public high schools. The distribution of business students by sex among the five different classes of institutions giving business instruction is shown in the following summary for the past two years:

		190	1-2.		1902-3.

In the grand total there was an increase of 2,824 students. The commercial and business schools had an increase of 732, public high schools 2,413, and normal schools 1,636, while the number of business students decreased 1,028 in universities and colleges and 929 in private high schools and academies.

The following summary shows the fluctuations in enrollment of business students each year since 1890:

Students pursuing commercial studie

	In inst	itutions ne	ot distinctly	business s	chools.		*
Scholastic year.	Universities and colleges.	Normal schools.			Total.	In commercial and business schools.	Aggregate of students in commer- cial studies.
1899-90 1890-91 1891-92 1892-93 1893-94 1894-95 1895-96 1896-97 1897-98 1899-99 1899-1900 1900-1901 1901-2	7,300 4,577 5,678 5,056 5,869 6,463 7,953 8,610				24, 994 36, 564 27, 254 30, 892 34, 757 44, 228 51, 272 56, 002 52, 963 61, 332 99, 149 116, 402 103, 450 105, 542	78, 920 81, 898 77, 856 99, 654 115, 748 96, 135 80, 662 77, 746 70, 950 70, 186 91, 549 110, 031 137, 247 137, 979	108, 914 118, 462 105, 110 130, 546 150, 505 140, 363 131, 934 133, 748 123, 913 131, 518 190, 698 226, 433 240, 697 248, 521

The number of institutions in each State in which commercial branches were taught and the students enrolled may be learned from Table 1. Tables 2 and 3 show the distribution of such students among universities and colleges, normal schools,

public and private high schools. Tables 4, 5, and 6 summarize the statistics of the 516 regular business schools reporting, while information concerning each school is found in Table 11.

Tables 7 and 8 show the number of public high schools in each State offering business courses and the number reporting enrollment of students in bookkeeping, commercial geography, and commercial law, and the number of students in each of these branches. Tables 9 and 10 give similar statistics for private high schools.

Table 1.—Number of institutions of all grades in which commercial and business studies were taught and number of students in such studies in 1902-3.
