## CHAPTER XLV.

### STATISTICS OF NORMAL SCHOOLS.

The number of students pursuing training courses for teachers in various institutions in the United States in the scholastic year 1897-98 was 89,225. These students were in 1,376 schools of various grades. Nearly 52 per cent of the whole number, or 46,245, were in the 167 public normal schools. The 178 private normal schools had 21,293 students in training courses for teachers, public universities and colleges had 2,255, private universities and colleges had 6,065, public high schools had 7,378, and private secondary schools had 5,989 students pursuing similar courses. The following table shows the number of institutions of each class and the number of normal students in each class for four scholastic years:

*Normal students reported for four years.*

| Classes of institutions.               | 1894-95.           |                | 1895-96.           |                | 1896-97.           |                | 1897-98.           |                |
|--|--------------------|----------------|--------------------|----------------|--------------------|----------------|--------------------|----------------|
|  | Institu-<br>tions. | Stu-<br>dents. | Institu-<br>tions. | Stu-<br>dents. | Institu-<br>tions. | Stu-<br>dents. | Institu-<br>tions. | Stu-<br>dents. |
| Public normal schools .....            | 155                | 36,276         | 160                | 40,421         | 164                | 43,199         | 167                | 46,245         |
| Private normal schools .....           | 201                | 21,927         | 169                | 23,777         | 198                | 24,181         | 178                | 21,293         |
| Public universities and colleges ..... | 26                 | 1,075          | 27                 | 1,691          | 30                 | 1,839          | 23                 | 2,255          |
| Private universities and colleges ..   | 166                | 5,327          | 166                | 5,335          | 166                | 4,650          | 188                | 6,065          |
| Public high schools .....              | 433                | 6,809          | 447                | 8,246          | 507                | 9,001          | 494                | 7,378          |
| Private high schools .....             | 458                | 9,124          | 439                | 7,930          | 422                | 7,064          | 326                | 5,989          |
| Grand total .....                      | 1,439              | 80,538         | 1,408              | 84,400         | 1,487              | 89,934         | 1,376              | 89,225         |
| In all public institutions .....       | 614                | 44,160         | 634                | 50,358         | 701                | 54,039         | 684                | 55,878         |
| In all private institutions .....      | 825                | 39,378         | 774                | 34,042         | 786                | 35,895         | 692                | 33,347         |

The above statement shows that in 1897-98 nearly 63 per cent, or 55,878 students in training courses for teachers, were in public institutions. The 167 public normal schools had an average of 277 normal students to the school, while the average number to the 178 private normal schools was 120. The average number of such students in 23 public universities and colleges was 98 and in 188 private universities and colleges 32. The average number of normal students in 494 public high schools was 15, and the average number in 326 private high schools and academies was 18. Students in public and private normal schools pursuing other courses of study are accounted for elsewhere in this chapter.

The number of graduates from the public and private normal schools at the close of the year ending June, 1898, was 11,255, or almost exactly one-sixth of the number of normal students in those schools. If one-sixth of the normal students in other institutions completed their courses the total number of graduated teachers for the year must have reached 14,871.

#### PUBLIC NORMAL SCHOOLS.

With two exceptions, all the States make provision for the education of teachers in public normal schools. The statistics of the 167 public normal schools are summarized in Tables 1 to 8, while information concerning each school is given in Table 19.

Table 1 shows the number of public normal schools in each State. New York and Pennsylvania have 15 each; Massachusetts, 10; West Virginia, North Carolina, Mississippi, and Wisconsin, 7 each; Alabama, 6; Ohio, Minnesota, Iowa, and Missouri, 5 each. Wyoming and Nevada have no public normal schools. In the 167 schools there were 1,863 teachers employed in instructing normal students, and 241 teachers engaged wholly in other departments.

The total number of normal students in the public normal schools was 46,215, as already stated—12,578 males and 33,667 females. The enrollment in each State is shown in Table 2. These schools also had 673 students in business courses, 3,570 in secondary grades equivalent to the high school grades, and 26,104 in elementary grades, as shown in Table 2.

Table 3 shows that the total number of students and pupils receiving instruction in the public normal schools was 76,594. There were 32,080 children in the model schools attached to or used by these institutions. This 32,080 includes most of the children in the elementary grades mentioned in Table 2, but in many cases elementary schools in the neighborhood are used as model schools.

The number of colored normal students in the public normal schools was 1,763, as shown in Table 3. Nearly all these were in the public normal schools for the colored race supported by the Southern States.

The number of graduates from the normal courses of the public normal schools in 1898 was 8,188, as shown in Table 4. Of these graduates 6,645 were women and 1,543 men. There were 102 graduates from business courses and 607 from other courses.

Table 5 shows for each State the income of the public normal schools. The appropriations from States, counties, and cities for support aggregated \$2,566,132 for the 167 schools, an increase of \$139,947 over the previous year. The total income for the year from appropriations, tuition fees, productive funds, and from other sources was \$3,445,751, an increase of \$180,823 over the year 1896-97. It is probable that the greater part of the \$307,409 mentioned in next to the last column of the table as "other sources and unclassified" came directly or indirectly from public appropriations.

Table 6 is an exhibit of the value of buildings and other property of the public normal schools. The number of volumes in the libraries of 150 of these institutions was 566,684, valued at \$586,077. The value of buildings, grounds, scientific apparatus, etc., was \$19,990,222.

The amount of public appropriations received each year for the last six years by the public normal schools is shown in Table 7. With the exception of a single year, when there was a small decrease in the appropriations, there has been a steady increase since 1892. These appropriations increased from \$1,452,914 in 1892-93 to \$2,566,132 in 1897-98.

Table 8 shows the amounts appropriated each year for six years for buildings and improvements in the States and Territories. There has been a decrease in the aggregate for the past two years, the \$417,866 appropriated for 1897-98 being less than the aggregate for any year since 1891-92, when it was \$394,635.

#### PRIVATE NORMAL SCHOOLS.

The number of private normal schools reporting to this office for the year 1897-98 was 178. There are many other private institutions known as normal schools, but the training of teachers is not their distinctive work. The statistics of private normal schools will be found summarized in Tables 9 to 14, while the information concerning the separate schools is given in Table 20.

Table 9 shows the number of teachers in the 178 private normal schools. There were 1,008 teachers for normal students and 736 wholly for other departments. Fifteen States and Territories have no private normal schools. - In the North Atlantic and Western divisions there are only 19 such schools.

The number of students pursuing training courses for teachers in the private normal schools was 21,293, as shown in Table 10. This was a decrease of 2,888 from the previous year. The number of students in business courses was 5,031, an increase of 1,156. The number in secondary grades was 7,337, a decrease of 248. The number of pupils in elementary grades was 16,999, a decrease of 235 from the previous year. The total enrollment in all the grades and departments of these schools, as shown in Table 11, was 50,660, a net decrease of 2,215. This decrease is due to the fact that a few of the schools reported the previous year suspended and a number of others ceased to be distinctively training schools for teachers. The number of schools was thus reduced from 198 to 178.

It is also shown in Table 11 that there were 2,410 colored normal students in private normal schools, nearly all of them in colored normal schools in the South supported by donations and tuition fees. This table also shows that the number of children in the model schools used by private normal schools was 6,726.

Table 12 shows that there were 3,067 graduates from teachers' training courses, 1,164 from business courses, and 672 from other courses in the private normal schools in 1897-98. This was a decrease of 1,041 in the number of normal graduates, decrease of 347 in the number of business graduates, and a decrease of 1,034 in the number of graduates from other courses.

Table 13 shows the income received from various sources by the private normal schools so far as reported. The aggregate income of these schools was \$898,909, a decrease of \$127,168 from the previous year.

An exhibit of property owned by private normal schools is presented in Table 14. The number of volumes in the libraries of 140 of these schools was 194,460, valued at \$197,932. The value of buildings and grounds, scientific apparatus, etc., was \$5,047,507. Benefactions amounting to \$240,203 were received during the year. The total money value of the endowment of the institutions reporting this item was \$2,311,594.

#### DISTRIBUTION OF NORMAL STUDENTS.

A comparison is made in Table 15 between certain statistics of public and private normal schools. In the public normal schools only 27.20 per cent of the normal students were males, while the female students comprised 72.80 per cent of the number. In the private normal schools the number of students was almost equally divided between the sexes. In the public normal schools 17.71 per cent of the students in the school during the year graduated, while in the private normal schools the per cent of graduates was 14.40.

Table 16 is a summary, by States, of the number of students pursuing teachers' training courses in universities and colleges, in public high schools, and in private high schools and academies.

Table 17 is a general summary, by States, of all the students in the five classes of institutions reported to this office as pursuing normal or teachers' training courses in 1897-98.

Table 18 contains a list of the universities and colleges in which courses designed for the professional training of teachers are maintained. The number of normal students in each institution each year for the past six years is given. Certain universities and colleges having regularly organized departments of pedagogy did not report the number of students pursuing courses in such departments.

TABLE 1.—Summary of statistics of public normal schools in 1897-98.

## SCHOOLS AND INSTRUCTORS.

| State or Territory.        | Schools. | Teachers for normal students. |         |        | Teachers wholly for other departments. |         |        | Total number teachers employed. |         |        |
|----------------------------|----------|-------------------------------|---------|--------|--|---------|--------|---------------------------------|---------|--------|
|                            |          | Male.                         | Female. | Total. | Male.                                  | Female. | Total. | Male.                           | Female. | Total. |
| United States.....         | 167      | 783                           | 1,080   | 1,863  | 165                                    | 576     | 741    | 948                             | 1,656   | 2,604  |
| North Atlantic Division..  | 56       | 268                           | 485     | 753    | 72                                     | 307     | 379    | 340                             | 792     | 1,132  |
| South Atlantic Division... | 27       | 90                            | 129     | 219    | 28                                     | 80      | 108    | 118                             | 209     | 327    |

## CHAPTER XLVI.

### STATISTICS OF SECONDARY SCHOOLS.

During the scholastic year ending June, 1898, there were enrolled in institutions of various classes reporting to the Bureau of Education 626,115 secondary students. This was a gain of 41,211 over the preceding year, or more than 7 per cent. The total number of pupils enrolled in the schools of all classes in the United States for the year was 16,687,643. The secondary students comprise about 3.75 per cent of this aggregate enrollment. The secondary students enumerated were distributed among eight classes of institutions as follows:

| Institutions.                           | Male.          | Female.        | Total.         |
|---|----------------|----------------|----------------|

| <b>Total .....</b>                      | <b>234,379</b> | <b>341,736</b> | <b>626,115</b> |

In the elementary schools of nearly all the States there are many students pursuing secondary studies where high schools are not accessible. These students and others not reported probably exceed 25,000. The aggregate number of secondary students in the United States may be safely estimated at 650,000. This total does not include the 70,950 students enrolled in commercial schools, although many of the branches taught in these institutions are equivalent to high-school studies. These students who spend only a few months in the commercial schools are not given the standing of students who are enrolled for the entire year in secondary schools.

For the year 1897-98 there were 5,315 public high schools and 1,990 private high schools and academies reporting to this office. This chapter is devoted almost exclusively to the statistics of these 7,305 secondary schools. The following table shows the growth of public and private high schools and academies for the past nine years:

| Year reported. | Public.  |            |           | Private. |            |           | Total.   |            |           |
|----------------|----------|------------|-----------|----------|------------|-----------|----------|------------|-----------|

| 1897-98 .....  | 5,315    | 17,941     | 449,600   | 1,990    | 9,357      | 105,225   | 7,305    | 27,298     | 554,825   |

While there has been a small decrease in the number of private high schools and academies within the last four years, the increase in the number of public high schools has been phenomenal. In 1889-90 there were 2,523 public high schools with 202,963 secondary students, while in 1897-98 the number had reached 5,315 schools with 449,600 students.

The relative progress of public and private high schools for the past nine years is shown in the following table, which gives the proportion of the number of schools, teachers, and students of the two classes:

| Year reported. | Per cent of number of schools. |          | Per cent of number of teachers. |          | Per cent of number of students. |          |
|----------------|--------------------------------|----------|---------------------------------|----------|---------------------------------|----------|
|                | Public.                        | Private. | Public.                         | Private. | Public.                         | Private. |
| 1889-90.....   | 60.75                          | 39.25    | 55.85                           | 44.15    | 68.13                           | 31.87    |
| 1890-91.....   | 61.78                          | 38.22    | 57.03                           | 42.97    | 68.26                           | 31.74    |

| 1894-95.....   | 68.37                          | 31.63    | 62.26                           | 37.74    | 74.74                           | 25.26    |
| 1895-96.....   | 70.25                          | 29.75    | 64.21                           | 35.79    | 78.11                           | 21.89    |
| 1896-97.....   | 70.87                          | 29.13    | 63.71                           | 36.29    | 79.18                           | 20.82    |
| 1897-98.....   | 72.76                          | 27.24    | 65.72                           | 34.28    | 81.03                           | 18.97    |

For the year ending June, 1890, the public high schools had about 68 per cent of the number of secondary students, and for the year ending June, 1898, about 81 per cent.

It was not until 1889-90 that the United States Bureau of Education attempted to collect statistics from all the public high schools, although information was collected concerning public high schools in the larger cities as early as 1876. The following table shows the percentage of the number of public and private high-school students to the total population each year for twenty-seven years:

*Number of secondary students in public and private high schools.*

| Year.        | Secondary students.     |                         |                          |                         |                             |                         |
|--------------|-------------------------|-------------------------|--------------------------|-------------------------|-----------------------------|-------------------------|
|              | In public high schools. | Per cent of population. | In private high schools. | Per cent of population. | In both classes of schools. | Per cent of population. |
| 1871.....    |                         |                         | 38,280                   | 0.097                   |                             |                         |

a Previous to 1890 only the pupils in public city high schools are given. From 1890 onward all public high schools are included.

In the above table the statistics of the years from 1871 to 1889 have been carefully corrected upon the basis of reports for later years. Prior to 1890 the number of students reported by a large number of the private high schools included the whole number in attendance, the elementary pupils as well as the secondary students. An attempt has been made in the preceding table to eliminate all pupils below the high school grades.

#### PUBLIC HIGH SCHOOLS.

The statistics of public high schools are summarized in Tables 1 to 15 and the information concerning each school is given in detail in Table 42. Tables 16 to 29 relate exclusively to private high schools and academies, while Tables 30 to 38 combine the statistics of public and private high schools. Tables 39 and 40 show the distribution of secondary students by States in the various classes of institutions.

The number of public high schools reporting to this office for the year 1897-98 was 5,315, a gain of 203 schools over the preceding year. The number of these schools which were departments of city or village systems was 4,675, while only 620 were reported as independent. Of the number belonging to city or village systems 700 are in cities which have 8,000 population or over. The 620 independent public high schools are generally outside the cities or villages.

The number of teachers instructing students in the public high schools as shown in Table 1 was 17,941, the number of men being 8,542 and the number of women 9,399. This was an increase of 1,132 in the number of teachers over the preceding year.

Table 1 also shows that the public high schools had 449,600 secondary students, 189,187 males and 260,413 females. There was a gain of 40,167 students, or only a little less than 10 per cent. The male students comprised 42.08 per cent of the whole number, and the female students 57.92 per cent.

The States of the North Central Division had 225,578 of the public high school students, or considerably more than half the total number for the United States. The North Atlantic Division had 141,747 secondary students in the public high schools, the South Central 32,888, the South Atlantic 24,383, and the Western Division 25,004.

Included in the 449,600 there were 6,306 colored secondary students. It is noticeable that only 2,853 of these colored students were in the two Southern divisions, while the other divisions had 3,448. If the 681 colored secondary students in Missouri be subtracted from the number in the North Central Division and added to the total in the two Southern divisions the number would be 3,539 for the South and 2,767 for the Eastern, Northern, and Western sections of the country.

#### STUDENTS AND COURSES OF STUDY.

Table 2 shows the number of secondary students in classical and scientific courses known to be preparing for college, the number of graduates in 1898, the number of college preparatory students in the graduating classes, and the number of public high school students in military drill. The number preparing for college was 51,066, or 11.36 per cent of the whole number. The number of graduates was 53,022, or almost 12 per cent of the total enrollment. The number of graduates prepared for college was 14,552, or 27.45 per cent of the total number of graduates. The number of students in military drill was 9,032, an increase of 371 over the preceding year.

*Students in certain courses and studies in public high schools.*

| Courses, studies, etc.                                | Number of students. | Per cent of total number of secondary students. | Male students. | Per cent of total number of male students. | Female students. | Per cent of total number of female students. |

a Per cent of number of graduates.

The above table is a synopsis of the summaries exhibited in Tables 2 to 11. About 14 per cent of the male students and nearly 10 per cent of the female students were preparing for college. About 10 per cent of the male students and 13 per cent of the female students enrolled graduated in 1898. Nearly 35 per cent of the male graduates and about 23 per cent of the female graduates had prepared for college.

As shown in the above table, there were 223,307 public high school students studying Latin, or almost 50 per cent of the whole number. More than 46 per cent of the male students and 52 per cent of the female students were studying Latin in 1897-98. The number in each State is given in Table 3. The numbers and percentages for the other leading high school studies are given in the above table for the United States, and by States in detail in Tables 3 to 11.

Latin was taught in 4,488 of the 5,315 public high schools. This was an increase of 260 in the number of schools offering Latin. The number of students was 25,293 more than the preceding year, an increase of more than 12 per cent.

The table which follows shows the per cent of students in certain courses and studies each year for the past nine years. The per cent of students in Latin increased from 34.69 in 1889-90 to 49.67 in 1897-98. In several other branches the increase was quite as marked.

*Per cent of total number of secondary students in public high schools in certain courses and studies, etc.*

<sup>a</sup> Per cent of total number of graduates.

There has been a falling off in the proportion of students preparing for college since 1889-90, although the actual number each year has been larger. In 1889-90 the per cent of public high school students preparing for college was 14.44 and in 1897-98 only 11.36.

Table 12 gives the statistics of public high schools in cities of 8,000 population and over. There were 700 such schools, with 6,880 instructors and 208,775 students, in 1897-98. Outside of these cities there were 4,615 public high schools, with 11,061 instructors and 240,825 students. In the cities these schools had an average of 298 students to a school, while the average outside of the cities was 52 students to a school, as shown in Table 14.

EQUIPMENT AND INCOME.

Table 15 exhibits the equipment and income of public high schools in each State. The number of volumes in the libraries of 4,341 schools was 2,389,895; the value of grounds, buildings, scientific apparatus, etc., owned by 4,300 schools was \$33,096,650. Only 1,905 schools were able to report the amount of State or municipal aid received, owing to the fact that in most cases separate accounts are not kept of the proportion of public appropriations used by the high schools. The amount of public money received by the 1,905 high schools was \$4,816,237. The amount received from tuition fees by 1,646 schools was \$552,932; the amount received from 202 schools from productive funds was \$209,847, and the amount received by 786 schools from other sources unclassified was \$1,630,831. It is certain that nearly all of the latter item should be credited to State, county, or city appropriations.

The total income of 2,141 schools reporting this item was \$7,209,847. This was an average of nearly \$3,368 to the school. It is hardly probable that this average would be maintained by the 3,174 schools not reporting this item.

## PRIVATE HIGH SCHOOLS AND ACADEMIES.

The statistics of private high schools, academies, and seminaries having students of no higher grade than secondary are summarized in Tables 16 to 29, inclusive. The tables from 16 to 26 are similar in form to Tables 1 to 11, in which the statistics of public high schools are summarized, and the two series may be compared. Tables 27 and 15 may also be compared. Table 30 is a comparative showing of the average numbers of teachers and students in public and private high schools.

The number of private secondary schools reporting for 1897-98 was 1,990, or 110 less than the number reporting the year before. Table 16 shows that these schools had 9,357 teachers instructing secondary students, a decrease of 217, and that these schools had 105,225 students, a decrease of 2,408 from the previous year. The total number of secondary students included 1,659 colored students, 260 in the North Atlantic division, 15 in the North Central and Western divisions, and 1,384 in private colored schools in the two Southern divisions. The number of elementary pupils reported by the 1,990 schools aggregated 124,807.

## STUDENTS AND COURSES OF STUDY.

The number of students in private secondary schools preparing for college was 26,693, about 25 per cent of the number enrolled and a decrease of 3,637 from the year before. As shown in Table 17, the number of these college preparatory students preparing for the classical course was 16,361, and the number preparing for scientific courses 10,332. The number of graduates in the class of 1898 was 12,148, or nearly 12 per cent of the number of secondary students enrolled. In the classes that graduated there were 5,388 students prepared for college, or more than 44 per cent of the graduates. There were 7,854 students in military drill, an increase of 1,206 over the preceding year.

Tables 18 to 23 give the number of students in each of 18 high school studies in each State, while the percentages of students in these studies are shown in Tables 24, 25, and 26. The following table is a synopsis showing the number and per cent of students by sex in college preparatory courses and in the leading high school studies in private institutions of secondary grade in 1897-98:

*Studies in certain courses and studies in private high schools and academies.*

| Courses, studies, etc.                                | Number students. | Per cent of total number of secondary students. | Male students. | Per cent of total number of male students. | Female students. | Per cent of total number of female students. |
|---|------------------|---|----------------|--|------------------|--|
| Students preparing for college:                       |                  |   |                |  |                  |  |

| Civics .....  | 16,565           | 15.74   | 7,975          | 15.29                                      | 8,590            | 16.19  |

a Per cent of total number of graduates.

A comparison of this table with the similar table relating to public high schools will show that while the private secondary schools were preparing over 25 per cent of their students for college but little more than 11 per cent of the public high school students were making such preparation. In the private schools 48.45 per cent studied Latin, as against 49.67 per cent in the public high schools. The per cent studying algebra in the private high schools was 51.70 and in the public high schools 56.13 per cent.

The progress made by the private high schools and academies in the past nine years, as indicated in the increased percentages of students in certain courses and studies, may be seen from the following table:

*Per cent of total number secondary students in private high schools and academies in certain courses and studies.*

| Students and studies.                           | 1889-90. | 1890-91. | 1891-92. | 1892-93. | 1893-94. | 1894-95. | 1895-96. | 1896-97. | 1897-98. |
|---|----------|----------|----------|----------|----------|----------|----------|----------|----------|

a Per cent of number of graduates.

The per cent of graduates has increased steadily from 8.50 in 1890 to 11.54 in 1898. The proportion of graduates prepared for college to the total number of graduates each year has decreased from 61.37 per cent in 1891 to 44.35 per cent in 1898. As in the case of the public high schools, there has been a marked increase in the number of students in Latin. In 1889-90 the per cent was 31.32, and in 1897-98 it had increased to 48.45. In the nine years the proportion studying algebra increased from 37.12 to 51.70 per cent. In the same period the number studying Greek increased from 7.02 to 10.43 per cent. In several other leading high school studies the increase is not less marked.

## EQUIPMENT AND INCOME.

The equipment, income, benefactions, value of endowment, etc., of the private secondary schools are exhibited in Table 27. Of the 1,990 schools, 1,397 reported libraries with an aggregate of 1,718,631 volumes. The value of buildings, grounds, scientific apparatus, etc., owned by 1,421 of these schools was \$60,769,995. Only 297 of these schools received aid from public funds to the amount of \$162,299. The amount received in tuition fees by 1,245 schools was \$6,349,804, while 304 schools received \$838,978 from productive funds. Receipts from sources not indicated amounted to \$976,755 for 430 schools. The aggregate income of 1,316 schools was \$8,329,836. Benefactions amounting to \$1,298,670 were received by 181 schools. The total money value of the endowment of 358 of these institutions was \$44,404,372.

## DENOMINATIONAL SCHOOLS.

The number of private secondary schools reported as under the control of religious denominations in 1897-98 was 968. There were 52,604 students in these denominational schools, as against 52,621 in nonsectarian schools. In Table 43, which gives in detail the statistics of private secondary schools, the name of the religious denomination controlling each school is given in column 4. From Tables 28 and 29, which show the number of schools in each State controlled by each religious denomination, the following statement is condensed:

| Religious denomination.        | Schools. | Instruct-<br>ors. | Students. |
|--------------------------------|----------|-------------------|-----------|
| Nonsectarian.....              | 1,022    | 4,653             | 52,621    |
| Roman Catholic.....            | 351      | 1,662             | 14,325    |
| Baptist.....                   | 92       | 401               | 6,412     |
| Presbyterian.....              | 99       | 439               | 5,348     |
| Episcopal.....                 | 108      | 710               | 5,315     |
| Methodist Episcopal South..... | 51       | 205               | 4,157     |
| Methodist.....                 | 56       | 289               | 4,093     |
| Friends.....                   | 55       | 297               | 3,597     |

| All other denominations.....   | 70       | 341               | 4,215     |
| Total.....                     | 1,990    | 9,357             | 105,225   |

## PUBLIC AND PRIVATE SECONDARY SCHOOLS.

Table 30 presents a comparison of certain statistics of public and private high schools. For example, it is shown that the public high schools have an average of about 85 students to a school, while the average number for the private high school is 54.

The statistics of public and private secondary schools are combined in Tables 31 to 38. Table 31 shows that the 7,365 schools had 27,298 teachers for secondary students and 554,825 students. Of these secondary students 241,359, or 43.50 per cent, were males and 313,466, or 56.50 per cent, were females. It is shown in Table 32 that 77,759, or 14 per cent, of the secondary students were preparing for college. The graduates for 1898 numbered 65,170, or nearly 12 per cent of the entire number enrolled. The number of graduates who had prepared for college was 19,940, or 30.60 per cent of the whole number of graduates.

The number and per cent of high school students in each of the eighteen leading high school studies in each State is given in Tables 33 to 38. The following synopsis shows the number and per cent of students in certain courses and studies for the United States:

*Students in certain courses and studies in public and private high schools and academies.*

| Courses, studies, etc.                                 | Number of students. | Per cent of total number of secondary students. | Male students. | Per cent of total number of male students. | Female students. | Per cent of total number of female students. |
|--|---------------------|---|----------------|--|------------------|--|
| Students preparing for college:                        |                     |   |                |  |                  |  |

| Civics .....   | 118,807             | 21.41   | 51,972         | 21.53                                      | 66,835           | 21.52  |

a Per cent of number of graduates.

The progress made by public and private secondary schools in the increased percentage of students pursuing certain studies has been noticed in referring to the summaries of the two classes of schools separately.

In 1889-90 the per cent of secondary students in public and private high schools studying Latin was 33.62. For the eight years since there has been each year a large increase in the number of Latin students, until the percentage for 1897-98 was 49.44. There has been but little variation in the proportion of students in Greek, and but a small increase in the percentage of students in French, while the percentage of those studying German increased from 11.48 in 1889-90 to 14.24 in 1897-98. In 1889-90 the per cent of students in algebra was 42.77, and in 1897-98 it had increased to 55.29. The per cent in geometry increased from 20.07 to 26.59 in the same time. The percentage of students in history other than history of the United States increased from 27.83 to 37.68 per cent in the eight years. These percentages for each of the nine years are shown in the following synopsis:

*Per cent of total number of secondary students in public and private high schools and academies in certain courses and studies, etc.*

#### SECONDARY STUDENTS IN THE UNITED STATES.

The distribution of secondary students enrolled in 1897-98 in eight classes of institutions is given by States in Tables 39 and 40. It is shown that of 626,115, the total number of secondary students in the United States as reported to this Bureau, 459,813 were in public institutions and 166,302 in private institutions. In the public institutions 449,600 were in public high schools, 6,643 in preparatory departments of universities and colleges, and 3,570 in public normal schools. In the private institutions 105,225 were in private high schools and academies, 46,831 in preparatory departments of private universities and colleges, 7,337 in private normal schools, and 6,909 in manual training schools.

The number of secondary students to each 1,000 population in the United States and in each State is given in Table 41. For the whole country there was an average of 8.60 secondary students to each 1,000 of population. The average for the North Atlantic Division was 9.61; for the South Atlantic, 4.87; for the South Central, 5.16; for the North Central, 10.87; for the Western Division, 9.05.

The number of students in higher education was 144,477, as shown also in Table 41. This number includes all students who in 1897-98 were receiving higher instruction in colleges, resident graduate students in universities and colleges, and all professional students in theology, medicine, and law. The independent professional schools are included, as well as those classed as departments of universities and colleges. Students of normal schools and schools of dentistry, pharmacy, veterinary surgery, and nurse training are not here included. The last column of Table 41 shows that the number of students in higher education to each 1,000 population was 1.98. The average in the North Atlantic Division was 2.26; in the South Atlantic, 1.98; in the South Central, 1.45; in the North Central, 2.02; and in the Western Division, 2.08.

Table 42 gives in detail the statistics of the 5,315 public high schools reporting to this office. Table 43 gives similar statistics of private high schools, academies, and other private institutions for secondary instruction.

Table 44 shows the number of public and private high schools for boys only, the number for girls only, and the number of coeducational schools of this grade in each State.

TABLE 1.—Public high schools—Number of schools, secondary instructors, secondary students, and elementary pupils in 1897-98.

| State or Territory.      | Number of schools. |         |        | Secondary teachers. |         |         | Secondary students. |         |        | Colored students (included in preceding column). |         |        | Elementary pupils, including all below secondary grades. |         |        |
