Transforming Identities: Theorizing Place(s) and Space(s) in Community Engagement Pedagogy

Jen Almjeld

Abstract

While rightly focusing on relationships and partnerships, community engagement scholars sometimes ignore the powerful ways learning may be impacted by mundane places like public schools, parks, and community centers and the ways spaces are imbued with emotions, power, and history. This piece argues that community engagement faculty must make the physical places and liminal spaces of our community partnerships purposeful parts of our curriculum. Using a Writing in the Community course as a case study, the article analyzes undergraduate reflections, then theorizes important differences between place and space and offers a critical lens—via feminist geography for community-engaged teachers to consider the places and spaces in which they partner and ways those locations impact identities inhabited by students and by community partners. Finally, I offer reflection questions for faculty, students, and community partners intended to position temporal and emotional locations at the heart of communityengaged curriculum.

Keywords: community engagement pedagogy, mobility studies, place-based learning, girlhood

But that's exactly where my spring Writing understandings of others' positionalities. in the Community (WRTC 486) class took me and 16 undergraduate students enrolled Educational experts have long touted the in my inaugural community-based learning power of learning in context and in space course. Turns out, no one really wants to go (Knapp, 2007). Whether enrolling in a seback to middle school. A particular place on earth can be a kind of curriculum lens through which all traditional school subjects may be closely examined. The immediacy and relevancy of place in the lives of students can be a huge catalyst to deep learning. (p. 216)

Student identities aren't the only ones Community course forced me to think about tions, power, and history.

This piece argues that community engagement practitioners and scholars must critically examine the physical places and liminal spaces where we locate our community partnerships and make those locations purposeful parts of our curriculum. Beginning with a limited case study and brief analysis of data collected via undergraduate reflections for a 2016 Writing in the Community course, the article goes on to theorize important differences between place and space and offers a critical lens—via feminist geography—for community-engaged teachers to consider ways places might be positioned as geographical, physical, and contextual, while space may productively be thought of as ephemeral, aspirational, and transformative. For the purposes of this project and with a focus on engagement pedagogy, I argue it is also useful to draw a theoretical distinction because place is often ruled by logistics—times, dates, transportation, funding, and so on—whereas space might be reframed as vital to the transformative power of community engagement learning. Next, the piece interrogates the relationships between place/space and existing and aspirational identities of students and partners working in those locales. Finally, I offer a series of questions for educators, students, and partners to focus critical attention on places and spaces and the learner identities that grow from both.

Case Study: Teacher-Research Reflections

Working with and for girls in local public image, and notions of class. About halfway middle schools during our Writing in the through the course, we devoted a week to

The class was born both of ways learning may be impacted by mundane my research interest in girl identities and in places like public school classrooms, parks, what Erica Yamamura and Kent Koth (2018) and community center meeting rooms and explained as an "emerging model of placethe ways such spaces are imbued with emo-based community engagement" (p. ix) in their Place-Based Community Engagement in Higher Education. The course ran for 3 years with students from the School of Writing, Rhetoric and Technical Communication (WRTC) planning and facilitating weekly activities for an afterschool program intended to empower young women to lead by building confidence, writing, technical, and storytelling skills, and offering training in critical awareness and analysis. For my undergrads, the main course objective was to study the ways girls write and are written and how discourse impacts identity performances for girls and, by extension, for all of us. In the first iteration of the course in spring 2016, 16 undergraduates from a variety of majors, including English, sociology, justice studies, communication studies, social work, health sciences, and WRTC, and I met as a group on campus on Monday evenings, and then the class split into two teams to work on site at local middle schools on Tuesdays or Wednesdays. Our Monday evening classes included discussions of readings and artifacts aimed at increasing the undergraduates' rhetorical, technical, and design skills while also introducing them to the concept of public and private discourse as shaping identities. We began the term with training from the Office on Children and Youth, which covered ways for the undergrads to be approachable, respectful of middle schoolers' privacy, and aware of likely differences between themselves and our community partners, specifically involving race and socioeconomic status. Along with readings on gender performativity and girlhood in particular, we also read about ways texts impact ethnicity, body young women of color. We also read excerpts from House on Mango Street by Sandra Cisneros, as well as bell hooks's Bone Black. The goal was to carefully think through representation of marginalized populations in our media and school systems.

and for others.

The first activity asked mixed teams of four to six university and middle school students to first read and then critique storybooks featuring female protagonists of differing ethnicity, race, and geographic locations. In particular, the stories depicted a modernday African American ballet dancer living in the city, a West Virginia girl growing up in coal country, a Native American folktale about wild horses, a young girl born in the Our class interacted with a total of 42

ing model.

2021, p. 92) phase, I noted repeated discussion of comments on location and mobility. I then assigned broad descriptive codes about the data, and in only 16 short reflection essays I coded 27 instances of explicit reference to acts of movement and mobility. In subsequent analysis of the data, I noted defined students and the girls in the YWLP, guides. and ways moving to and through places reessays, students recalled their opportunities "to explore," "to be surrounded by," to "immerse" themselves in and to "enter schoolers. Mobility scholar Tim Cresswell (2010) noted that "weaving of narratives around mobility" (p. 19) is common as we often experience movement as liberating and transgressive. Some students, for example, reported being glad they "took the plunge" or being grateful for the opportunity to "break out of the JMU bubble." A junior in the course, one of the most popular mentors among the tweens in the YWLP, reported that "walking in the shoes of a middle school girl" changed how she thought about girlhood and more broadly about gendered identities. Traveling these same routes and terrains revealed to my students more about the girls they worked with, and also about their own identities in relation to others. "Going to the middle school was fantastic," one student reported. "Not only did I feel like I was teaching these young girls about feminism and leadership, but I also felt like they were teaching me so much more than what I expected to get from this class."

Lawrence Grossberg (1996) encouraged us to think of identities as "ways of belonging. They are the positions which define us spatially in relation to others, as entangled and separated" (p. 101). The undergrads working in middle school cafeterias, hallways, Place-based learning is an accepted peda-

data shapes the research and the researcher the course as "someone girls can look up (Charmaz, 1996, p. 31). For this study I was to," "a nurturer," "a good influence," or in no way a dispassionate observer, but "some sort of mentor," according to stuwas an involved instructor and community dents' reflection essays. Although many of activist interested in understanding and these evolving identities were located in bettering a new community-based learn- relationship to the girls, others were more inwardly focused. One student reported rediscovering "my awkward times as a In my initial "exploratory coding" (Saldaña, middle school student," and another said she often felt like "my middle school-self" again. Still others retained more traditional student identities, with one undergrad reflecting on her gratitude for the opportunity "to learn from some amazing young women." Finally, other reflections included claims to new and in some cases future roles references to specific places, ways places as teachers, disciplinarians, coaches, and

sulted in transformative learning. In their Not only did the physical places we worked and learned in impact notions of identity, but location often became a signifier, an avatar of sorts to describe ourselves and this experience" of working with the middle others. In the reflections, and in class discussions, I noticed that the students were often identified by and with the buildings they inhabited. For example, my undergrads referred to girls in the YWLP as "the middle schoolers" or "the Thomas Harrison girls." And when I showed up alone on the Wednesday of our university's spring break, our 12-year-old community partners asked impatiently where the "JMU people" were. Both sets of learners/writers seemed to embody and to be embodied by the places they were allowed and expected to move in and through. Feminist geographer Susan Hanson (2010) reminded us that this may be particularly important in regard to feminine identities because "women are quite literally kept in their place by being denied access to certain locations at certain times" (p. 10). One undergraduate student echoed this idea in her reflection, saying, "It's not who you are, but where you are." Our schools and the physical buildings and lands comprising those schools quickly became extensions of—and stand-ins for—the undergrads and middle schoolers themselves. We learned to know one another by first recognizing our assigned and sanctioned places and spaces.

mobility, and curriculum:

Teaching is to guide students on adventures into partially unknown territory. . . . I never will have complete and accurate maps nor will I know all of the course territory. Sometimes my students show me new places that don't appear on the course map. When this happens, we explore together. With each trek into subject matter, I feel more confident on the journey. (p. 9)

Location often drives community engagement work that can challenge students' perspectives by moving beyond the familiar campus. Place necessitates the common conversations of transportation, mobility, and regionality. Community engagement scholars Yamamura and Koth (2018) explained that "place-based community engagement focuses intensively on a clear and definable geographic area" (p. 18). Similarly, girlhood studies scholars Pamela Bettis and Natalie Adams (2005b) explained that the "daily habits" and material realities of girls' lives must be "taken seriously, explored, played with, explained, and theorized" (p. 3). Both geographic place and intellectual space may be "inhabited" and are closely culture and rituals and helps us understand

not yet be garnering as much attention. toward aspirational spaces. Mobility studies Education scholar Clifford Knapp (2007) scholars, too, understand the importance of considered the connections between place, interrogating everyday places and practices, particularly those of marginalized populations. Cresswell (2010) explained that "mobility studies have begun to take the actual fact of movement seriously" (p. 18). He also observed, "Mobility can be thought of as an entanglement of movement, representation, and practice" (p. 17). For our class, the middle school was a lab of sorts where we could work together and also a shared place of common origin and experience despite the often radically variant home lives, home countries, and cultural backgrounds of my undergrads and the middle schoolers in our YWLP community.

Place Versus Space

In order to critically consider location and mobility as pedagogical tools—and sometimes barriers—for community engagement work, we must first differentiate between place and space. The importance of space and location swept multiple disciplines, including the humanities, during the "spatial turn" of the 1990s as described by theorist and urban planner Edward Soja (Blake, 2002). Yamamura and Koth (2018) stated that they "believe that place-based community engagement offers institutions of higher education a powerful tool tied to the daily habits and routines of those to become more connected to their comtherein; however, for our purpose place munities, with a goal of transforming their provides learning by immersion in local campuses, their local communities, and our nation" (p. x), but their notion of place the needs and values of other communities seems tied solely to geographic location and by being "present." Students in the YWLP does not consider the often more ephemproject commented frequently on place in eral, transformational notions of space. their final reflections and employed vis- My understanding of place as more fixed, ceral terms to document how it felt "being more stable and material and space as fluid on site" and "being in" the classroom or and generative and creative recognizes that learning "to fit into" the place (both figu- whereas both place and space often exist ratively and literally maneuvering adult concurrently, drawing theoretical distincbodies into child-sized plastic chairs). Like tions between the two might allow us to Boler's (1999) pedagogy of discomfort, our more productively respond to calls in civic learning in the middle schools was "about and community engagement to attend to bodies, about particulars, about the 'real' the "why" of place. "Engagement defined material world we live in" (p. 196). Still by activities connected to places outside other students adopted a learning as journey the campus does not focus attention on the metaphor (Knapp, 2007), using phrases like processes involved in the activity—how it "came from," "to travel," "being with and is done—or the purpose of connecting with beside the girls," "walking into class," and places outside the campus—why it is done" "going to" to describe both physical and (Saltmarsh et al., 2009, p. 6). Though this intellectual movement. We must consider, observation was made more than a decade then, both the specifics of a place—and its ago in a white paper chronicling an early recursive rituals and practices—as well as 2008 Kettering Foundation debate on reamovement through such physical places and sons civic engagement had not reached its

potential, such critiques persist in civic and community engagement initiatives. The temptation to take our "academic knowledge" out in service to other "places" and people persists, but attention to place and space as themselves learning tools and sites of knowledge creation with and for students and community partners may help us more knowledge.

Although many feminist geographers, whose work I rely on heavily, seem to use "place" and "space" pretty much interchangeably (Davidson, 2012; Moss & Al-Hindi, 2008), others often mark "place" as the less physical of the two and as aspirational. Isabel Dyck (2005), for example, is interested in ways that physical spaces create "a place" for women in particular. spaces" of women in order to better unbe identified:

Space is located among the "hard" sciences as a central term in the attempt of geography to transform the discipline from a descriptive into a quantitative, analytical, and thus, scientific, enterprise. Place, on the other hand, is located among the "soft" humanities and social philosophy oriented social sciences as an important notion in the post-1970 attempt to transform geography from a positivistic into a humanistic, structuralist, hermeneutic, critical science. (p. 647)

Geographer Andrew Merrifield (1993) argued that the distinction between the two terms may be dangerous if it is overly rigid:

The Cartesian viewpoint assumes a duality between the material (external) world and the (internal) world of human consciousness. . . . Space is not a high level abstract theorization from the more concrete, tactile domain of place.

. . . An attempt to overcome this absolute separation is made . . . by arguing that both space and place have a real ontological status since they are both embodied in material process—namely, real human activities. (p. 520).

accurately see off-campus locations as op- Like Merrifield, I see the terms as slippery portunities to create rather than deliver and undoubtedly entangled, but some distinction may be helpful for those pursuing community engagement with the dual goals of better understanding the places we inhabit with others while also creating new, aspirational spaces for our students and our partners. Place and space are inextricably linked and need not be rigidly or antithetically defined, but can productively be theorized as serving distinct roles in community engagement.

She explained "exploring the hidden spaces In simplified terms, I frame place as a fixed that feminist scholars show are integral and physical location, whereas space might to contemporary place-making" (p. 235). be thought of as more abstract and fluid, as Lorraine Dowler and Joanne Sharp (2001) often aspirational or inspirational. In our also argued for attention to "mundane class, the middle schools proved important as physical places for our groups to meet derstand ways such spaces and practices as well as spaces of history and origin for impact women's realities. Juval Portugali my undergrad students—as touchstones to (2006) explained the distinction between their own pasts—and as spaces of both posplace and space as largely disciplinary and sibility and limitations for the students and having to do with how a scholar wishes to our young community partners. The girls we worked with faced any number of rules and regulations about physical places they may occupy in the school, when, and with whom. The college students also experienced physical restrictions via locked doors, buzzers for entry, and name tags to prove "the right" to move in the hallways alongside their 12-year-old counterparts. Such physical restrictions impact ways inhabitants are encouraged and allowed to think of themselves. The middle schools, then, were spaces of aspiration and of becoming for all members of our writing project as we worked to build a YWLP community identity. The schools served as sites of incredible vulnerability for both current and former middle schoolers experiencing the insecurity, anxiety, and unease that come in the in-betweenness and liminal space of growing up and learning.

> Although notions of place may be rooted mainly in the present and past, space—in this context—may productively be thought of as future focused. In community engagement, space often invites students to inhabit future professional or civic selves in order to work effectively with community partners.

(Mountford, 2001, p. 42) and bring direc-ship in the field. tion and promise for the future. This liminal space of "becoming" considers both what came before and what will follow and is important to students and faculty engaged in learning, and might also create opportunity for new community partner identities and experiences to evolve. For example, rearranging chairs in our middle school classroom created space and invitation for often shy girls in the YWLP to join in an impromptu dance party led by the undergrads. On another day, YWLP girls were invited to dress up as famous feminists of the past (Amelia Earhart, Queen Elizabeth I, Rosie the Riveter, etc.) to make space to imagine themselves as feminist leaders. Both of these experiences were made possible by the physical (place) and emotional (space) environment.

with maximum breadth and scope, at any nomic positions radically from individuspace one chooses" (2014, p. 177). This sort alistic "spectating" that often "signifies a volunteer placement in an alternative edu- process of teaching and learning from/with

This sort of identity "liminal space" has (p. 21) for students. This place-based combeen thoroughly discussed in feminist and munity engagement work, combined with girlhood studies (Bettis & Adams, 2005b) critical reflection, then created a "third and was important to community-engaged space" to consider otherness and differstudents in my class as they constructed ence and also a liminal space for student new identities as activists, teachers, ex- teachers that "entails a potentially radical perts, explorers, and any number of other reconfiguring of their personal identities roles facilitated by the more abstract spaces and subjectivities" (p. 21). These sorts of of "girlhood," "tween life," and "commu- student transformation, often happening nity outreach," as mentioned in their end- in liminal spaces of becoming, are fairly of-term reflections. Space, then, might be common goals in most community engagethought of as aspirational and as an invita- ment work, but critical discussions of ways tion to change and grow. Such spaces both places and spaces facilitate these transfor-"carry the residue of history upon them" mations seem fairly absent from scholar-

The anxiety and vulnerability of liminal spaces, in particular, connects to Boler's (1999) notion of a "pedagogy of discomfort." According to Boler, "A pedagogy of discomfort begins by inviting educators and students to engage in critical inquiry regarding values and cherished beliefs, and to examine constructed self-images in relation to how one has learned to perceive others" (p. 176). Challenging personal perceptions begins in the distinction between spectating, or "to be a voyeur" (p. 183), and witnessing. "Witnessing, in contrast to spectating, is a process in which we do not have the luxury of seeing a static truth or fixed certainty. As a medium of perception, witnessing is a dynamic process" (p. 186). Witnessing, then, is embodied and in place and in relation to others and so is almost Soja (2013) explained the need for "the new always uncomfortable and disorienting. spatial consciousness" (p. 71) in his interest For our class project, being in and traveling in "thirdspace," a critical perspective that through shared middle school places created finds "no space is completely knowable" space for my students to undertake "collec-(2014, p. 177). For Soja, thirdspace is "not a tive witnessing" (Boler, p. 178) that shifted specific kind of space but a way of looking, their thinking about racial and socioecoof spatial awareness is ideal for the field privilege" (p. 184). Notions of privilege are of community engagement, which, despite paramount for students doing commuglobalization, remains committed to the nity engagement work and, as Beth Godbee importance and complexity of local spaces. (2009) reminded us, "White privilege—like This opening up of space and place as an other forms of institutionalized power and invitation to critical thought and personal privilege—is made invisible so that whites and social transformation is also connected often find themselves unaware and unreto the ideas of space as "liminal," or in- flective about their own unearned advanbetween spaces and times that come after tages" (p. 39). Michalinos Zembylas (2015) what was and precede what will be. Susanne explained that such new awareness and Gannon's 2010 article "Service Learning enhanced empathy "is inescapably tied to as Third Space in Pre-service Teacher others" and "pedagogical discomfort, then, Education" posited that a "required . . . is the feeling of uneasiness as a result of the cation setting" at her university's teacher others" (p. 170). Tying productive discomeducation program "invokes transition, fort in physical places to aspirational identransformation and productive instability" tities and spaces in community engagement adds new layers to what we hope to teach and place as tied to notions of belonging, need to prepare students.

In their reflections, the undergraduate students in WRTC 486 registered the middle schools as places of knowledge creation for themselves and our young partners and seemed to locate space in a hierarchy above place. Several students described making "space" for themselves and for the girls in the YWLP as a primary responsibility of ours in the partnership. One undergraduate described the need to provide "space for creation and expression" for the girls in our program, demonstrating ways we understand not only identity but perhaps also space as a concept itself in flux, as liminal location or borderland intimately connected both to who we are and who we are yet to become. Another student, a senior, explained, "I am glad I put myself out of my comfort zone to learn from the experience." In their reflections, students appeared to understand the off-campus sites as places to inhabit a variety of identities—that of learner, teacher, colleague, thinker—for and with our community partners creating a space of reciprocity rather than service.

philosophers, and historians, I argue that careful consideration of space and place will enrich both our students' learning and the work we do with our community partners. For our community partners, space in particular is often defined by access and who has "the right" to be certain places and who does not. Space is not always about liberation, but more accurately about the productive discomfort that often results in learning about ourselves and others.

Spaces and Places and Identities

our students, what we hope to learn from we may begin to see the connection beand with community partners, and ways we tween spaces and places and the identities of our students and our community partners. The notion of identity as a product of and in place is well established. The authors of "Muskrat Theories, Tobacco in the Streets, and Living Chicago as Indigenous Land" (Bang et al., 2014) reminded us that Indigenous scholars have long recognized the vital connection between people and place and pointed out that Western epistemological models often "deny peoples' connections to place" (p. 42). Similarly, the importance of place to girl identities the central focus of our course—is well established in girlhood studies. Bettis and Adams's (2005a) anthology Geographies of Girlhood considered particularly the temporary places girls occupy—schools, buses, malls, in transit to and from places, and so on—and argued that such physical locations are liminal spaces critical in shaping and understanding girlhood and the position it occupies between babyhood and womanhood. This project, then, argues that the places our students occupy or travel to and from while engaged in place-based community engagement work offer not only disciplinary expertise and self-awareness, but In particular, the notion of thirdspace also challenges to their current and future as a transformative space of becoming identities. Just as scholars posit girlhood as and change seems an important concept. a liminal space, or what Bang et al. might Borrowing from the work of Lefebvre, Soja describe as "sites of potential transformexplained thirdspace as "distinguished . . . ings" (p. 39), I see community-engaged from the traditional binary mode of looking and place-based learning as a liminal space at space from either a material/real per- for our students to discover, articulate, and spective or a mental/imagined perspective" construct identities based on locations and (Blake, 2002, p. 141). Thirdspace then may movement through places. Focusing on be thought of as "the place where temporal- what feminist geographer Rachel Silvey ity and spatiality, history and biography are (2006) called "the co-constructed nature really written, fully lived, filling the entire of identities and places" (p. 69), faculty geographical or spatial imagination" (p. must thoughtfully consider the ways that 141). Although these sorts of nuances might places and spaces contribute to all manner seem more appropriate to geographers, of learner, professional, and civic identities.

Moving in, to, and through places impacts not only our personal identities, but also our collective identities and our capacity to understand those around us. Grossberg (1996) saw "subjectivity as spatial," noting that "people experience the world from a particular position—recognizing that such positions are in space" (p. 100). Community engagement faculty member Ashley Holmes (2015) agreed that "situating student experience, learning, and writing in public sites beyond the classroom provides a meaningful context through which to explore social With the lens of space as transformative issues while facilitating student learning"

Boler (1999) explained,

Students and educators may feel a sense of threat to our precarious identities as we learn to bear witness. Witnessing involves recognizing moral relations not simply as a "perspectival" difference—"we all see things differently"—but rather, that how we see or choose not to see has ethical implications and may even cause others to suffer. (p. 194)

often uncomfortable for students, teachers, us.

Discussion

(p. 50). It also facilitates and forces students these young women's literacy practices and to see others in relation to themselves. As for expanding and shaping the university students' understandings of those unlike themselves. "The unequal geographies of mobility, belonging, exclusion, and displacement" (Silvey, 2006, p. 65) have been linked to economic and social inequality related to gender and other identity markers like race. Feminist geographer Hanson (2010) confirmed, "Feminists have long known that gender and mobility are inseparable, influencing each other in profound and often subtle ways" (p. 5). Experiencing firsthand the places where our young community partners could and could not be Consciously choosing where to locate learn- became both a pedagogical tool and a line ing in physical and virtual spaces then of inquiry for our course. Having more critiallows a focus on the identities we perform, cal awareness of the ways physical places create, and reject and how such identities we inhabit with our community partners bring us closer to or farther from communi- may impact and even open up aspirational ty partners. For teacher, mentor, confidant, disciplinarian, example, race and Whiteness were part of playground pal, writer, researcher, learner. my original curriculum during discussions Considering these places as also liminal of discourse and representation, but readspaces for transformation allows us to see ing my students' reflections encouraged me beyond the physical limitations and pos- to have more explicit discussions of place sibilities of engaged places and to instead and socioeconomic status and access. One view them as texts of sorts that invite stu- day in February, the undergraduates began dents and community partners to learn from chatting excitedly about plans for spring and with others and create space for us to break in their small groups, and the middle craft evolving identities. Spaces, places, and schoolers' revelations that most had never identities are never fixed, "not a once-and- been on an actual vacation and some had for-all" (Hall, 1990, p. 226), but instead are never traveled much more than an hour fluid and shifting. Learning in place with outside our 50,000-person town brought others changes then not only our individual into stark relief notions of privilege for my identities, but also the identities we per- undergrad students. The following Monday. ceive and assign to those around us. This our on-campus discussion centered on is what makes community-engaged work ways that socioeconomic status often not only impedes people from traveling to and and partners in that we risk having to really through other places, but also may deny change who we are and who others are to intellectual space to imagine oneself as a traveler or participant in other cultures.

This new awareness encouraged me to revise course readings to include texts on mobility and identity formation specifically. Partnering with Big Brothers Big Sisters And even now, 2 years after the last time I for this community literacy project, my taught this course, I am still grappling with undergrads and I were writing in place better ways to more systematically explore with and for girls facing inequalities based the place-based notions of knowledge creon gender, race, age, and socioeconomic ation, the importance of material places status. Focusing on the places the girls in and aspirational spaces, and the ways both YWLP were writing from—keeping in mind shape our individual and collective identities that young people are often assigned and with my students. As Roxanne Mountford limited to certain places—seemed para- (2001) reminded us, "Spaces have heuristic mount to understanding and encouraging power over their inhabitants and spectators by forcing them to change both their behavior . . . and, sometimes, their view of themselves" (p. 50). Understanding the spaces and places we occupy and are granted or denied access to then feels paramount not only to understanding personal identities, but also the challenges facing many in our society that are so often taken up in community engagement partnerships. My students clearly recognized this connection between movement, location, and identity in their final course reflections. One student commented on the connection between place and the ways identity "forms and changes in the spaces between home and the classroom," and so she felt that as adults we had a responsibility to "facilitate productive thought process in those spaces."

Making location and mobility a central concern of community engagement work and curriculum necessitates focus from both students and faculty. Although this data set is limited in size and scope, the analysis of the undergraduate reflection essays and details about the curriculum suggests the importance of location and mobility and ways place-based education offers unique learning opportunities for students. Further, the theoretical distinction between place as more fixed and material and space as aspirational and potentially transforming offers ways for both instructors and community partners to better understand places as imbued with cultural and political meanings and always connected to us as people and as communities of learners. To that end, I offer a series of questions for educators, students, and partners to ask themselves in order to reinvigorate or make explicit connections to locations of learning.

Critical Questions for Reflection and Planning

The questions below are intended to help community engagement faculty reflect on and prepare for the role that place, space, and challenges to identity may play in their partnerships. The three sets of questions—for faculty, students, and community partners—potentially can challenge us to consider both the limitations and opportunities of the places and spaces we move through.

Questions for Faculty

Place

What logistical matters (time,

travel, monetary needs, etc.) are associated with the place where we will work?

What is the local history of this place?

What restrictions govern this place? Who is denied or granted access? When?

What challenges must be addressed in this space (furniture arrangement, physical access for students and partners with disabilities, etc.)?

What possibilities does this space offer for physical, emotional, and intellectual connection with our community partners?

Space

What is the mood of this space?

What semiotic (the study of signs and symbols) messages are present? What colors are used? What does the layout of the room or building communicate to users? What explicit and implicit messages for the use of place and space exist?

What does this space invite/ask us to do (get involved, help, seek help, etc.)?

Is this a temporary (liminal) space like a refugee center for resettlement or a more permanent space like a local neighborhood?

Are there opportunities for this to be a liminal space—a space of transition and/or transformation—for my students, myself, my community partners?

Identity

What population(s) are most identified by and with this place and space?

Who does this place/space invite us to be (volunteer, at-risk, in need, team member, etc.)?

Questions for Students

Place

What logistical things do I need to know about this space? How will I get there? Do I have physical needs (accessibility, allergies, noise levels, etc.) that this place may not meet?

What is the local history of this place?

What restrictions govern this place? Who is denied or granted access? When?

Space

What is the mood of this space?

How do I feel in this space? Am I an insider, outsider, or both in this space?

What does this space invite/ask me to do (get involved, help, seek help, etc.)?

Identity

What population(s) are most identified by and with this place and space?

Who does this place/space invite me to be (volunteer, student, at-risk, in need, team member, etc.)?

Do I have prior experience with this place/space or one like it? Were those experiences positive or negative or both? How does that impact my current experience?

Questions for Partners

Place

What physical, financial, or logistical resources can I provide to this partnership?

What resources do I need from my partner to better prepare this place?

What places do our partners need to access to better understand my community?

What restrictions govern this place?

Who is denied or granted access? When?

What places or resources can I contribute without inconveniencing my community?

Space

What does this space invite/ask those in it to do (get involved, help, seek help, etc.)?

What is the mood of this space?

Is this a temporary (liminal) space like a refugee center for resettlement or a more permanent space like a local neighborhood?

Are there opportunities for this to be a liminal space—a space of transition and/or transformation—for our community, for the students?

Identity

What population(s) are most identified by and with this place and space?

Who does this place/space invite us to be (volunteer, leader, at-risk, in need, team member, etc.)?

Conclusions

Considering questions like those above while moving into and through new places may allow learners to move into unknown intellectual spaces and identities as well. In our Writing in the Community class, identities like teacher and mentor were as much new terrains for my undergraduates as were the middle school art room or main office. These places opened up space for my students to inhabit their former middle school selves, critically engage their current, mostly White-privileged student positions, and imagine future parent and community volunteer identities. In her final reflection for our class, one student explained, "Physically visiting the middle school put me in a whole new environment that made me learn a lot about myself and identitycrafting." Although my students struggled with feelings of discomfort and outsiderness in these middle school places, this initial—and, for some, constant—discomfort in place proved an important generative

space for the undergraduates, for me, and and aspirational spaces for growth. We all with others.

Bettis and Adams (2005b) took seriously "the liminal spaces of being an adolescent and of being female" (p. 6), and those of us that spend much of our time moving in and around learning places take seriously classrooms as spaces of discovery of other scholars and these initial findings from my students' reflection essays helped me to make more nuanced connections between people and places, places and spaces and privilege, and place/space and identity creation. Although we often privilege new places for learning and adventure—like in study abroad—this project suggests to me the importance of embracing also a return to our places of origin and ways these discovered and revisited places open up ephemeral

likely for many of the girls in the YWLP. made it through middle school, so the place Working together in this new place, there is familiar, and yet moving through it as were mistrust and nerves at the beginning. adults is also strange, making my students' Many in the diverse group of tweens we visits to our local middle schools both a partnered with were understandably ini- journeying back and a visit to a new land. tially suspect of a group of mostly White, In one student's reflection, she noted her mostly affluent adults invading their girl appreciation of the opportunity "to immerse space. A new awareness then of privilege myself in a place I had been living in for became a recurring theme of our course—four years but barely knew anything about." particularly when reflecting on time spent. The playgrounds and classrooms we moved at the middle school with many girls who through are products of those housed within differed from my undergraduates in na- them and are also an invitation to change, tional origin, race, ethnicity, and socioeco- to become, to grow. Learning in place and nomic status. Connecting with others unlike in community forced the undergraduates ourselves was a challenge for all of us in the into uncomfortable and often vulnerable partnership, but this uncomfortable space emotional spaces, but also afforded them was temporary—liminal—and, I think, new critical lenses as well as new identities taught us all a bit about learning from and and identifications anchored in locations. As I guided students through multiple physical locations, we became less a class and more a community of learners and workers and change agents. As one student wrote, I now consider myself an "advocate, a feminist, a woman, a service-worker, and a human." These identities might have manifested in a traditional classroom, but to be in liminal, and transformation. Considering the work "in-process" spaces with others invites students to step into new intellectual territories. Purposefully incorporating these new terrains into our community engagement partnerships and curriculum allows us to name the magic we, as educators, intuitively know so often happens when our students venture off campus to learn with and from others.

Jen Almjeld is an associate professor and director of graduate studies for the School of Writing, Rhetoric and Technical Communication at James Madison University.
