Graduate Service-Learning Experiences and Career Preparation: An Exploration of Student Perceptions

Lisa Roe

Abstract

This dissertation overview summarizes a study exploring the relationship between service-learning and career preparation from the perspective of graduate students as adult learners. Using Knowles' adult learning theory as the theoretical framework and interpretive phenomenological analysis (IPA) as a qualitative method of inquiry, analysis of semistructured interviews from six recent graduates of a media advocacy master's degree program found that graduate students perceive service-learning as a supportive experience for their own career preparation. Findings from this study can help faculty and graduate educators conceptualize and implement service-learning experiences, informed by adult learning theory, by aligning them with graduate students' own professional goals and outcomes.

Keywords: service-learning, career preparation, adult learning theory, graduate education

Jacoby, 2014; Kuh, 2008). This discrepancy 2018; Wendler et al., 2012; Wickam, 2015). has led to an explicit call for more research on graduate S-LCE from within the field (Harris, 2017; Morin et al., 2016). As a form of experiential learning, service-learning is a pedagogical tool that intentionally links academic coursework with service or community engagement through purposeful and structured course design and reflection (Bringle & Hatcher, 1995; Jacoby, 2014; Welch & Saltmarsh, 2013).

research has found that professional and and career preparation?"

ver the past several decades, career advancement are among the top reaboth U.S. graduate education and sons students pursue formal graduate-level service-learning and community education (Merriam et al., 2012), especially engagement (S-LCE) have been at the master's degree level. Employers the focus of growing research expect adults with graduate-level degrees to interest. Although substantial empirical demonstrate maturity, a strong work ethic, evidence documents the impact of service- responsiveness to feedback, teamwork and learning experiences on undergraduate stu-collaboration, effective communication, dents, S-LCE scholarship and practice less critical thinking, and problem-solving often include the graduate student popu- skills, as well as the ability to apply knowllation (Bringle et al., 2012; Harris, 2017; edge to new contexts (Chhinzer & Russo,

However, employers also report many students completing graduate school illprepared for the workforce (Wendler et al., 2012). This disconnect presents an opportunity to explore the relationship between service-learning and career preparation for graduate students. The purpose of this dissertation study was to explore the relationship between service-learning and career preparation from the perspective of gradu-With nearly 2 million graduate students ate students as adult learners, with the folenrolled in the United States annually lowing guiding research question: "How do (Okahana et al., 2020), this population graduate students perceive the relationship deserves further study. Five participants identified as female, Wagstaff et al., 2014; see the dissertation five identified as White, and two identified

I conducted individual semi structured, indepth interviews with each research participant to "offer a rich, detailed, first-person account of their experiences" from their unique perspective (Smith et al., 2012; Smith & Shinebourne, 2012). Interviews took place over Zoom, using the audio recording auto transcription feature for each interview. The study followed key criteria and standards of ethics, quality, and rigor of qualitative research, including IRB approval, informed ment staff at the research site, who shared consent processes, and secure data storage Prospective participants met four eligibil- descriptions in my presentation of data ticipants' interviews, engaged in member search site or have graduated within the checking, and consistently reflected on past year at the time of the interview, (2) my use of codes to ensure the study had completed a graduate-level service-learning credibility and trustworthiness (Lincoln & 3 years, (3) be intending to enter or reen- Finally, I was transparent about my values ter the workforce upon completion of their and biases that influence my worldview and program of study, and (4) be within 21-35 perceptions as a scholar-practitioner in the research site, and the study was open to tion's responsibility to prepare students for participants of all genders, ethnicities/races, work and being a community engagement

The analysis stage of an IPA study is "comprocess" (Smith & Shinebourne, 2012, p. 77) and roughly follows a six-step process Although the study was open to students in (Smith et al., 2012). First, I became imcorded interview and reading the transcript ence. All six graduate students discussed in an attempt to recenter the participant's their service-learning as being a real or experience, followed by several rereads of real-world experience that ultimately conthe transcript. Second, I noted anything of nected to their career preparation in some interest within the transcript while keeping way. For example, one participant coman open mind. Third, I developed emergent mented, themes from the transcripts and the initial notes, which were short phrases that embodied the essence of the data, both the specific passage and the transcript as a whole. Fourth, I made connections between the emergent themes. Fifth, I repeated the process for each separate transcript for each research participant individually, treating each as a particular or unique case. Sixth, I looked for "patterns across cases but trie[d] to retain the individual detail and nuance of the case" (Smith & Shinebourne, 2012, p. 74). This involved reviewing the themes that emerged across all of the participants and creating a table with the key themes from each participant. At this point, I transitioned from exploratory coding to process coding (Saldaña, 2016) to verify and analyze the findings.

Analysis and Key Findings

Iterative coding and analysis of participant interviews revealed three distinct themes with subthemes that shed light on how each participant perceived the relationship between their service-learning experiences and career development (see Table 1).

perience and how participants interpreted experience varied; experience in and of

It allowed me to essentially have a receipt. I was able to say I got a degree in essentially strategic communications in a nonprofit or advocacy space and within that degree I also had the opportunity to consult a nonprofit organization on their strategic communications approach in such a way that they probably wouldn't have been able to afford or wouldn't have been able to devote the resources to actual communications firm or professional marketing professional. So I think being able to say that I filled that role in some way was certainly beneficial because I feel that it just gave me more experience, real tangible, real life experience and it kind of gave me the confidence to be able to speak on that whereas I think without this course and without this degree, in particularly without the course, I wouldn't have been able to say that I had experience like consulting an organization on their communication strategy.

The first theme explored the concept of ex- The value or weight they each put on the

transformative or substantial impact.

The second theme unpacked how certain conditions were inherent to the structure of the experience because it was part of an academic course. Peer relationships, the demands of balancing school and work, and the semester time frame all emerged as subthemes. For example, in context of the impact of the semester time frame, another participant shared,

I always, personally, I always feel like, am I really helping them? Is this really helping? I think in some ways it is because it provides an outside perspective, but it always seems to me like our recommendations were for them to hire interns who could actually do a lot of the work and as students and coming from an outside perspective, there's only so much you can do in a short amount of time for class.

The course context, as a discrete unit in which the service-learning experience took place, also had an influence on the perceived relationship to their career preparation.

subthemes emerged, including the signifimade.

I've understood the meaning, the impact of that experience to have evolved. I don't have many specific memories of work I did in that program. There are entire classes I've forgotten completely, you'd have to remind me. Going to visit [my community partner] is not something I'm going to forget. . . . You know, thinking of that, it put this place in my head, but now I have to think about and remember, it is a place that's real and wonder how the people there are doing.

of professional concepts.

itself was not universally valued as having a Additionally, four key findings emerged in this study. First, for both novice and experienced professionals, graduate servicelearning can build skills and self-efficacy that relate positively to their career trajectory. This study's participants were able to gain skills and self-efficacy from the service-learning experience, consistent with other studies demonstrating skills graduate students developed through servicelearning (e.g., Dietz, 2018; Levkoe et al., 2014; Lu & Lambright, 2010; Moorer, 2009; Wickam, 2015). Teamwork and collaboration are among the skills that employers expect of employees with graduate degrees (Chhinzer & Russo, 2018; Wendler et al., 2012); from the participants' perspectives, the teamwork and collaboration required within the group service-learning project directly related to their career preparation.

Second, however, integrating a servicelearning experience into a course in and of itself may not automatically support students' career goals, even when there is strong alignment between the degree program, principles of service-learning, and students' drive to positively contribute to society through their career. In this study, the service-learning experience did not Finally, the third theme examined how the meet all students' career preparation goals participants highlighted and conceptualized or expectations, especially when those goals their relationship to the community. Three were targeted or narrowly defined. The course offered participants limited choices cance of human connections, what it means for their service-learning community partto be an outsider, and why capacity building ner because the instructor had prearranged is significant in a professional context. For the relationships and projects. Although example, a third participant reflected on the an element of choice was available, some importance of the human connections they participants felt constrained because they wanted experience in a specific field or setting. Further, this limitation of choice detracted from some participants' experience because, as self-directed learners, they would benefit from making decisions as part of the learning process (Forrest & Peterson, 2006; Hagen & Park, 2016; Knowles, 1980; Merriam & Bierema, 2013).

Third, service-learning can highlight tensions between students' social roles. All of the participants expressed that they enrolled in graduate school for career and professionally motivated reasons. They saw their social role as a student as investing in their future professional self. However, the demands of individual social roles were Essentially, participants' relationship to sometimes in conflict or tension with one the community became a way of describing another (Onorato-Hughes, 2019; Wyland their experiences, learning, and application et al., 2015). For some, their social role as an employee was just as important as

managing many roles and commitments.

Finally, graduate students are aware of (even if not satisfied with) how the structures of academia impact the extent to which service-learning supports their career preparation. Prior research suggests that faculty members and graduate programs should examine how they can integrate experiences and opportunities for professional preparation into the curriculum so that students do not always need to look beyond their coursework for those opportunities while in school (Gu et al., 2018). Time, location, finances, and accessibility, in addition to other life factors such as family commitments, can serve as barriers to many professional development experiences for graduate students (Rizzolo et al., 2016); service-learning courses as well as other institution-wide programs can serve in part as a response to this challenge (Doberneck et al., 2017; Goodhue, 2017; Matthews et al., 2015). In the current study, not only did the students have to negotiate with their community partner to ensure the project was feasible within the amount of time they had, but they imagined the potential if they were not bound by those limits (such as a single semester's course). For instance, they imagined scenarios where they could have continued working with the partners throughout their graduate school experience, and the resulting benefits.

This dissertation study had certain limitations. IPA involves a small sample size and is concerned with the individual or particular experiences of each research participant, and therefore the study lacks broad generalizability (Smith et al., 2012; Smith & Shinebourne, 2012). In fact, as noted, all participants were from the same degree program and service-learning course. However, that does not mean that lessons gleaned from this study are not transferable to other contexts or experiences. Additionally, at the time of the interviews, all participants had graduated from their graduate program 8-12 months prior, so

their social role as a student because they lapse in time impacted their recall (Giele needed employment in order to finance & Elder, 1998). This study was conceptutheir education. The demands of being an alized and initiated before 2020, but the employee conflicted with the demands of interviews took place during the COVID-19 being a student; the time commitments for global pandemic. The landscape of graduate service-learning projects, for instance, can education and labor markets is currently in be a source of tension for adult learners flux, which will likely have implications for enrollments, job security, and employment needs in the United States.

Significance and Recommendations for Practice

Pairing adult learning theory and IPA to explore the relationship between servicelearning and graduate students' career preparation offers a unique lens and framework to the S-LCE field. Knowles' adult learning theory as a theoretical framework for understanding graduate servicelearning is a robust opportunity for future research (Dietz, 2018; Wickam, 2015). For example, it would be exciting to unpack how students perceive the relationship between service-learning and their career preparation in business, public policy, organizational communications, public health, engineering, and other disciplines that offer service-learning courses for graduate students at the research site. Such exploration might include seeking themes that stretch beyond an individual course or discipline since the limitation of studies to a single course or discipline continues to be a challenge in S-LCE research (Morin et al., 2016). Additionally, future research should further examine how service-learning might contribute to or further support masters'-level students' self-efficacy and professional identity since this population has demonstrated having lower perceptions of their professional identity and competencies than their doctoral-level peers in other studies (Hardré & Hackett, 2015).

This study also adds to the discussion of how service-learning addresses employer expectations, particularly for master's-level graduates in the 21st-century workforce. Documenting the voices and perceptions of those who participate in service-learning is likewise crucial; in considering implications for curricular and program design, we need to include students' perspectives and hear their voices in the research (Cooke & Kemeny, 2014).

they had completed their service-learning This dissertation's findings, paired with experience approximately 2 years before the other scholarship on adult learning, graduinterview. Therefore, it is possible that the ate education, and service-learning, sugFirst, as graduate students can clearly Merriam & Bierema, 2013). benefit from service-learning, institutions should continue to invest in such opportunities for graduate students as a strattheir skill sets and build self-efficacy as they work toward their professional goals. institutionalizing this support than voluntary experiences that may conflict with adult learners' availability and time.

As a second consideration, departments or faculty members who are weighing how or whether to integrate service-learning into the graduate curriculum or a particular course should evaluate the desired and potential outcomes beyond service-learning's known benefits to learning course content and supporting the community. If servicelearning is intended to offer intentional opportunities that help students prepare for their careers, the graduate program should be explicit about that goal, as well as the expectations, commitments, and limitations of the engagement for the student. Such explicitness supports adult learners' motivations and their need to know the rationale behind what they are learning, The full dissertation is accessible via allows them to better balance competing social roles, and can clarify the extent to which they are able or expected to be self-

gests three recommendations for practice. directed in their learning (Knowles, 1980;

Third, graduate programs, faculty, and students should be encouraged to nurture reegy to help prepare them for their future lationships with community organizations careers. By engaging in service-learning that could lead to other career-supportive experiences, graduate students can grow intersections throughout the curriculum. Graduate programs can help foster these connections more formally, through inten-Adult learners especially value experiential tional integration across multiple serviceopportunities that are problem-based rather learning courses, or through lower stakes than subject-centered, aligning with their activities such as invitations to a guest motivations to pursue graduate education to speaker or employer panel, or networkadvance their careers (Merriam & Bierema, ing opportunities and events. Of course, other aspects of gradu- conversations with community partners to ate education can also help provide career understand their long-term goals and exreadiness. However, since service-learning pected benefits from investing time, energy, is embedded into coursework and is meant and resources into such a partnership (e.g., to align with curricular learning outcomes, Clayton et al., 2010) to help ensure these it represents a more consistent means for relationships are not exploitative or transactional.

> As gatekeepers of the curriculum and key socializing influences in the graduate student experience, faculty are uniquely positioned to offer service-learning and to clarify its benefits to their graduate students. Students want opportunities that allow them to apply their learning in a real-world context and better position them for their future professional goals. Serviceearning offers a compelling opportunity to meet students' expectations for graduate education, to address the skills and competency gap expressed by employers, and to expand the portfolio of opportunities for institutions to demonstrate their ongoing commitment to community engagement at all levels.
