

Pamela Luft, PhD, has worked with and taught deaf and hard of hearing students in public school programs at the Maryland School for the Deaf; Kendall Demonstration Elementary School and the Model Secondary School for the Deaf, part of the Laurent Clerc National Deaf Education Center; the Florida School for the Deaf and the Blind; and the California School for the Deaf-Riverside. She is now on the faculty of Kent State University's Deaf Education program where she works with university students and area teachers of deaf students. Luft welcomes comments about this article at (330) 672-0593 (Voice/VP), (330) 672-2512 (FAX), or [pluft@kent.edu](mailto:pluft@kent.edu).

# miscues:

## meaningful assessment aids instruction

By Pamela Luft

LeRoy was a deaf sixth grader who used signs and his voice to communicate. Yanetta was a deaf eighth grader who had deaf parents and preferred American Sign Language (ASL). Michael was a deaf fifth grader in a suburban school who attended an oral program and used his voice exclusively to communicate. All three students struggled with reading. They had taken standardized tests and other tests required by the No Child Left Behind legislation, but the tests did not give their teachers the insight to develop an effective teaching plan. For LeRoy, Yanetta, and Michael, like so many deaf students (Charlesworth, Charlesworth, Raban, & Rickards, 2006; Luckner & Handley, 2008; Schirmer, 2000), reading comprehension threatened to be a barrier that prevented them from achieving academically.

**Miscues:**  
Figures 1, 3, and 4 show samples of how a teacher documents a student's misunderstanding of text.

In an effort to assess their reading more fully and to develop effective instructional plans, teachers decided to use miscue analysis. Miscue analysis has been defined as a structured observation of student reading (Chaleff & Ritter, 2001) in which teachers give students interesting and challenging material and systematically note errors as they read (Goodman & Watson, 1998; Goodman, Watson, & Burke, 1987; Miller, 1995). Used since the late 1960s,

miscue analysis enables teachers to see how effectively students use and apply content and textual schemata and observe students' successful and unsuccessful skills and strategies as they make sense of print. Wilde (2000) has suggested use of miscues for individualized academic work and Individualized Education Program planning, particularly for struggling readers. For deaf students, linguistic and experiential factors may interfere with miscue evaluation, but in recent years it has been adapted for use with them (Ewoldt, 1981; Chaleff & Ritter, 2001). Our experience with LeRoy, Yanetta, and Michael shows how teachers can use miscue analysis to identify

Figure 1: Text for LeRoy's Miscue Analysis

**Mr. 49er**  
Crawford, Mississippi, 1978, Sixteen-year-old Jerry Rice is cutting a class. He is sneaking down his high-school hall, when someone taps him on the shoulder. Jerry wheels around. It's the assistant principal!  
Jerry panics. He takes off like he's been shot from a cannon. The assistant principal can't believe his eyes. Jerry is fast!

But he's finally caught. He gets six whacks with a leather strap. And his punishment isn't over. Either Jerry stays after school—or he tries out for football. The assistant principal knows that the team needs a good runner.  
Jerry doesn't like football. But being stuck after school is worse. He makes the team easily. His mom isn't happy.  
She's afraid he might get hurt. Jerry plays other ways. It turns out football is fun!  
And being a receiver is easy.  
Without knowing it, he's been practicing for years.

**Figure 2: This chart illustrates how a teacher transfers the miscue data into a form for analysis.**

LeRoy's Scored Miscue: Mr. 49er													
TEXT	MISCUE	OMISS	SUBSTITUTIONS			ADDN	REVRS	REPTN	AIDED	SIGNED	SELF-CORRECT	Comments	
			Beginning	Middle	End								
Crawford, MS	FS									ENG/ASL			
right	Correct									OK		Common Use Error	
But	And		0.5									Makes sense	
pressure	1. FS 2. SC										1		
is	it			0.5								noncontent for ASL	
his	her									OK		sloppy	
drops	disappear				1								
passes	pass-by-s									1			
supposed	think		0.5									mouths "think"	
Fans	fan-himself									1			
a while	all			0.5								"After all" makes sense	
settles	sit				1								
season	s..				1								
got	great			0.5								"he's great" makes sense	
By	Past									1			
<b>TOTALS</b>			<b>53</b>	<b>3.5</b>	<b>5.5</b>	<b>11.5</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>13.5</b>	<b>7</b>	
<b>Total MISCUE</b>							<b>87</b>						

Percent of words correctly read by student: \_\_\_\_\_ [total words - miscues/total words]  
 648 - 87 = 561 / 648 = 86.57%

**Brief statement of decoding patterns:**

- Omissions and fingerspelling patterns: 51 of 53 = FS; could improve use of context, **bricks** and **pressure** used FS to SC (bricks may have used picture)
- Substitution patterns: many show strong graphophonic skills: begin/being, proud/proud; others show making sense: supposed/think, know/think
  - commonly substituted female pronouns for male (she/he, her/his)
- Addition, repetition, and reversal patterns: additions of pointing for he/his, 2 repetitions of single words (every, greatest = emphasis)
- Teacher-aided words: none
- Signed English/ASL issues and patterns: 13.5 conceptual errors that may impair comprehension: scissors/cutting class, tire circle/wheels around, take-turns/turns, before/past, pass-by/pass (ball)
- Self-corrections: 7 self-corrections with 3 for small or non-content word errors (his/has, from/of)
  - not clear how he decoded "pressure" from the context

**Other observations and comments:**

- Surprising lack of recognition of football words: receiver, defender, positions, score, tackle, records, passes, touch-down signed as 2 words
- Used "disappear" for both **drops** and **deep**
- Would benefit from a meaning-focused approach; may be overusing word parsing and exact reading from prior Signed English instruction
- Six errors made sense (in the phrase or when signing); 2 errors are commonly mis-signed (not counted off): right away = correct a-way
- Surprising error with "can't" signed as "don't" or "not"
- He uses spatial indexing for he/his but never set up locations in space that he used in his signing
- Used a name sign throughout the story

appropriate research-based literacy practices for deaf students regardless of the communication policies of their schools.

### LeRoy— A Football Fan **Text Selection**

LeRoy was interested in football and talked about NFL star Jerry Rice on several occasions. For this reason a chapter about Rice's life, "Mr. 49er" from the book *Football Stars* by S. A. Kramer, was selected for his miscue analysis. The chapter's reading level is 3.9 on the Flesch-Kincaid scale. The text was copied with enough space between each line of type to note how LeRoy decoded each word. (See Figure 1.) At 648 words, the text was somewhat long; however, it was a complete story and it began while Rice was in school, a fact with which we assumed LeRoy would surely identify.

LeRoy was asked if he would be willing to read and be videotaped and he agreed. His assignment was to read "aloud and in sign" in a corner of the classroom where he was comfortable and relaxed. After he completed the reading,

the teacher used a retelling procedure to further analyze his comprehension.

### **Scoring**

After LeRoy completed reading, the teacher marked his errors directly on her copy of the text and then transferred the information to a form based on the work of Miller (1995). (See Figure 2.) To show areas where LeRoy's signs did not reflect accurate representation of the English text this form was adapted by this author to include a new column to mark sign-related errors. LeRoy's program was based in *conceptually correct sign language*, therefore his teacher marked as correct LeRoy's translation of the English words "big," "large," and "great" into the sign *big*. Were LeRoy in a program using *English-based signs*—as he had been in the years prior to testing—he would have needed to produce initialized signing to have his translation marked correct.

The teacher evaluated LeRoy's fingerspelling according to whether or not the word was commonly fingerspelled in the Deaf community or in her classroom. If LeRoy fingerspelled

**Andrew Lost: On The Dog**  
 by Judith C. Greenburg, c. 2002

**Chapter One: The Atom Sucker**

"Wowzer(s)" Andrew shouted. "This is the best thing I've ever invented!"

Ten-year-old Andrew Dubble parked his new machine under a tree. The machine was as big as a doghouse. It looked like a porcupine. Skinny copper tubes poked out all over it. A fat iron pipe stuck out from the front.

The machine squatted on four big springs. A thick electrical cord hung from the back like a tail.

On the fat iron pipe, Andrew had painted the words THE ATOM SUCKER. In smaller letters he had written THE MOST POWERFUL SHRINKER IN THE UNIVERSE!

Andrew dragged the plug to the back of the porch of an old white house.

Andrew's thirteen-year-old cousin Judy Dubble lived here with her parents. But nobody was home on this sunny summer day. Andrew had the field behind the house all to himself.

said *in* for "a," *look good* for "let's go," and *but* for "past."

An instructional plan for Michael would build on his good initial letter phonics skills to combine middle- and end-of-word letter sounds with a focus on text comprehension, including self-monitoring and psycholinguistic strategies that focus on syntactic substitutions (Schirmer & McGough, 2005). In addition, Michael could reread the story with his speech teacher to work on contextual correction of the five instances of missing /s/ or /z/ plural sounds and 14 instances of missing /t/ or /d/ for past tense.

### Effective Assessment Means Effective Teaching

For LeRoy, Yanetta, and Michael, miscue analysis provided an opportunity for testing that was authentic, descriptive, and comprehensive. It provided

non-manual markers was extremely clear and accurate. Teachers should build links between her experiences and the information that unfolds in textbooks. These links would enhance her academic performance by reinforcing the high-level skills Yanetta applies to personal reading.

Michael, who loved to talk about spaceships and UFOs, was evaluated reading the first chapter from *Andrew Lost on the Dog* by Judith Greenburg. This chapter's reading level is a 4.1 on the Flesch-Kincaid readability scale. (See Figure 4.) As an oral student, Michael's evaluation proceeded similarly to that of hearing students except that his frequent omission of ending sounds—/s/ or /z/ for plurals and /t/ or /d/ for past tense verbs—was recognized as a possible consequence of hearing loss and, in accordance with Miller (1995), who addresses dialect and speech differences, was not counted as error.

Michael's results showed 51.5 miscues across 696 words for a score of 92.6 percent. Analysis of patterns showed 4.5 miscues for omitted words, no additions, reversals, repetitions, or words aided and 8 self-corrections. Substitutions indicated 8.5 beginning-word errors, 22.5 middle-word errors, and 16 end-of-word errors. Michael appeared to misread words by confusing them with words that were orthographically similar. Some of the confusions reflected accurate understanding of content, such as his reading of *electricity* for "electrical" and *controllor* for "controls." What concerned his teacher, however, were those confusions that were not semantically correct. For example, Michael said *skinner tub* for "skinny tube," *less* for "like," *fur* for "far," *pork* for "pocket," and *buttons* for "bottoms." In addition, he

meaningful assessment across the range of communication methods. It also allowed a choice of reading material that was flexible and student-centered, thereby allowing teachers to ensure that the reading content provided sufficient and familiar context so that it was an authentic and optimal measure of the students' abilities. Miscue analysis helped teachers understand their students' reading skills, improve their teaching strategies, and make their instruction more effective.
