AN ANNOTATED BIBLIOGRAPHY OF SELECTED RESEARCH RELATED TO TEACHING READING IN THE SECONDARY SCHOOL
SUPPLEMENT - 1961-1963

(PRELIMINARY DRAFT)

DR. EDWARD G. SUMMERS

This supplement continues the listing of research in secondary reading previously published which covered the period 1900-1960. The research which is included has appeared in the Reading Teacher research issues for 1962, 1963 and 1964. The categories used have been condensed as compared to the previous listing. For example, instead of separate headings for each of the content areas, all the research relevant to this topic has been organized under Reading in the Content Fields.

Research on Reading:

An interpreted summary of research, especially since 1943 and 1949, dealing with the teaching, use and evaluation of reading from the preschool years through college.

A compilation and interpretation of physiological and psychological research dealing with the reading-learning process. Among the topics covered are: The perceptual Nature of Reading, Learning Principles and the Reading Interest, Personality Factors in the Reading Process, and Readability and Legibility.

A review of the progress in reading instruction during the past fifty years, with a discussion of significant events during this period.

A discussion of significant research findings in the field of reading since April, 1951; contains 117-item bibliography.

Mackintosh, Helen E. "Language Arts Curriculum: Fifty-Year Highlights of the Elementary Program," Elementary English, 40 (Jan. 1963),

Summary of progress in language arts instruction presented by decades. Includes references to research in all areas of the language arts as well as specific mention of reading.

Reports 47 studies, 31 of which deal with reading.

A compilation of 221 research topics in progress or completed since 1960, of which 99 deal with reading as follows: elementary, 61; high school, 21; college, 12; and corrective, 5.
Describes the results of research in the language arts; includes eighty-four item bibliography.

Assembles the results of research, including a 90-item bibliography, 31 items of which deal with reading.

Summary of 102 items, 43 of them dealing with reading.

Summarizes major findings of 143 studies, July 1, 1960 to June 30, 1961.

A summary of 112 items published during the period July 1, 1961 to June 30, 1962 pertaining to the Sociology of Reading, the Psychology of Reading, the Physiology of Reading, and the Teaching of Reading.

Summarizes major findings of 101 investigations relating to reading; includes an annotated bibliography.

Annotated bibliography of 144 topics and summary of the research related to reading.

Annotated bibliography of 100 items and a summary of the research reported in them.
Presents an annotated bibliography of selected references relating to developmental reading, including reports of research.

An annotated bibliography of six items.

A third annual summary of professional literature on junior and senior high school reading, including some research reports.

The fourth annual summary of professional literature on junior and senior high school reading.

A review and bibliography of 90 reports of research on college-adult reading published in 1961.

Lists titles of 111 dissertations classified by topic.

Part I, abstracts of 22 doctoral studies in reading which were reported in Dissertation Abstracts; Part II, abstracts of 56 dissertations.
Summers, Edward G. "Recent Research in College and Adult Reading," Journal of Developmental Reading, 6 (Autumn 1962), 5-14. (1)

A summary of 15 recent research reports.

Lists 61 dissertations completed during the period surveyed.

A collection of research results, observations, and considered opinions on mature readers and reading creatively.

Russell, David H. "Reading Research that Makes a Difference," Elementary English, XXVIII (February, 1961), 74-78.

A presentation and discussion of ten "classic" examples of reading research.

Teachers of Reading

An examination of how the colleges and universities of the United States are preparing tomorrow's teachers of reading; data were obtained by a field study and questionnaires.

A questionnaire-interview study of the reading researcher—his training, career, institutional facilities, obstacles, and choice of topics and methods; the content of communications about reading—textbooks, teachers, manuals, professional literature; and of the beliefs and practices of school personnel.

Haag, Carl H.; Sayles, Daniel G.; and Smith, Donald E.P. "Certificate Requirements for Reading Specialists," The Reading Teacher, XIV (November, 1960), 93-100.

Reports results of a questionnaire on state certification requirements which was returned by forty-six of the fifty states to which it was sent.
Research Committee of the Western Michigan University Chapter, IRA
"Instructional Problems in Reading as Viewed by Teachers and Administrators." The Reading Teacher, XIV (November, 1960), 75-80, 114.

Reports the questionnaire responses of 549 elementary teachers and 56 school administrators from the same school systems, including the backgrounds, experience, and training of the respondents and, in addition, a list of problems each has encountered in the teaching of reading; also information regarding the kinds of in-service training programs provided by their schools.

A report of the extent of knowledge of sounds, phonic principles, number of syllables, and similar clues by 236 college students preparing to be elementary teachers.

Responses from 570 high school teachers in Michigan to a questionnaire concerned the percentage of their students possessing reading skills essential for required work, expectations for assuming this responsibility of teaching reading, and undergraduate training for this purpose. In addition, 1029 college freshmen replied to 16 questions concerning their high school reading needs and the reading training they had received.

Discussion of the responses received from letters sent to colleges and universities requesting information on their programs in the teaching of reading.

Simmons, John S. "Who is Responsible? The Need for Qualified Supervision of Reading Programs," English Journal, 52 (Feb. 1963), 96-97, 99. (II)

Based on questionnaire responses from 127 secondary schools in five North Central states, data were collected on questions of administration and supervision of the program and the training of those responsible for it.

Burnett, Richard J. "The Diagnostic Proficiency of Teachers of Reading," The Reading Teacher, 16 (Jan. 1963), 229-34. (II)

A study of 75 undergraduate elementary education enrollees, 93 elementary teachers, and 19 trained reading specialists, using a diagnostic problem-solving test in reading.

Sixty-three teachers in San Diego County, California, chose among three methods of teaching reading: the basal, the individualized, and the language experience approach. The California Psychological Inventory and the Brightstone Pupil-Teacher Rapport Scale were administered to determine if differences in teachers’ scores were related to the methods chosen.

Reading Achievement

Ramsey, Wallace. "The Kentucky Reading Study," The Reading Teacher, 16 (Dec. 1962), 176-71. (V-1)

Reports a survey in the state of Kentucky regarding the reading status of fourth graders and eighth graders in over 50 per cent of the school districts in the state.

An analysis of the progress of 41 superior readers in Evelyn "Good's Reading Dynamics Course, evaluated by means of eye-movement photographs and tests of comprehension, as well as by rate of reading a longer selection.

An analysis of achievement, including reading, of students in Grades 6 and 8 of eastern Kentucky, where school enrollments (over 300, 100-300, under 100) were the major variables for classification.

Two studies comparing the achievement in language arts, arithmetic, and reading of public- and catholic-school students who had completed Grade 5.

A comparison of two groups at each grade in each of four measures: spelling, spelling of phonetic syllables, syllabication, and intelligence to determine a relationship between these and reading achievement.

A group of 31 seventh grade students with a history of a single retention between Grades 1 and 5 were matched with a group who had never been retained. The groups were compared on seventh grade marks, achievement test scores in reading and arithmetic, and intelligence test scores.

An analysis of growth in reading achievement at life ages 16, 17 and 18 among 42 institutionalized students with I.Q.'s of 47 to 31, determining sex differences and rate of change.

A review of the research since 1955 on identifying the gifted and helping the gifted reader; contains a twelve item bibliography.

The Laubach Literacy materials, or films, were used for 16 weeks with 156 illiterate inmates of a reformatory to determine the improvement in reading and related areas. A second study involved 163 similar students for 20 weeks.

In an attempt to predict college grades for 69 college freshmen, high school average grades, the SCAT and the STEP of mathematics, reading and writing were used. Sex differences were also calculated.

Tests and Measurement

Reports recent research in tests and measurements as it applies to the area of reading.

Lennon, Roger T. "What Can be Measured?" Reading Teacher, 14 (Mar. 1962), 326-37.

A critical review of 15 reports of research dealing with testing and implications.

Three studies to determine the relationship between introversion-extroversion and reading test reliability and validity. Subjects were high school and college students who took the SA-S Senior Scales. The closed procedure, the Cooperative Reading Test, (C2), and the survey section of the Diagnostic Reading Test were used.
The first 30 comprehension questions of the Cooperative English Test, Reading Comprehension (C), were administered to 126 college freshmen without the passages to determine their validity and other test data related to ability to spot the answers.

Hlaxotunian, Berj. "A Note on Reading and Closure," The Reading Teacher, XIV (May, 1961), 343-44.

Relationships of three Thurstone closure tests to reading scores at Grades 7 and 8.

A study of the reading and arithmetic achievement of 375 pupils ages 12-17 with I.Q.'s from 80-110 to determine the effect of age and I.Q. on mastery in these two areas.

Cleland, Donald L., and Toussaint, Isabella H. "The Interrelationships of Reading, Listening, Arithmetic Computation and Intelligence." Reading Teacher, 15 (Jan. 1962), 223-31

The predictive value of the Stanford-Binet, the Primary Mental Abilities test, the Durrell-Sullivan and STEP Listening tests, and American School Arithmetic test were determined singly and according to best combinations with middle-grade pupils whose reading was measured by the Gates Reading Survey test.

Relationship between reading-grade scores and mental-grade scores in three intellectual ability groups for 649 high-school sophomores in Waco, Texas.
Predisposing Factors in Reading

Comparison of the reading achievement of over 6000 boys and girls in Grades 2 through 8, using the author's tests.

A comparison of the reading achievement of 112 eighth grade pupils who ranked in the upper quarter on the California Auding Test with 104 pupils who ranked in the lower quarter on the test.

A study of the auditory discriminability of phonetic elements and the construction of a list of 1200 words with varying levels of discriminability for children with hearing loss, speech defects, and reading difficulty.

An evaluation of selected psychometric tests of visual-motor abilities and development of clinical procedures for the electrical recording of oculo-motor patterns to compare retarded readers with nonretarded. Subjects were 7 boys whose reading difficulty appeared to be due to perceptual factors, 6 boys who showed emotional maladjustment in addition to a reading disability, and 8 boys of comparable age and grade levels with average-to-good reading skills.

Two experiments were performed to determine whether college students would recognize visually nonsense words with high spelling-to-sound correlation better than those with low spelling-to-sound correlation. In the first experiment subjects wrote what they saw on the tachistoscope exposure, while in the second, they chose the correct pseudo-word from four versions.

Gruber, Ellis. "Reading Ability, Binocular Coordination and the Ophthalmograph," Archives of Ophthalmology, 67 (Mar. 1962), 280-86. (IV-I)

An analysis of ophthalmographic records of 50 patients, ages 10-68 years, to determine the validity of the evidences of binocular coordination based on the findings of an ophthalmologist's examination.
Young, Francis A. "Reading, Measures of Intelligence and Refractive Errors," American Journal of Optometry and Archives of American Academy of Optometry, 40 (May 1963), 257-64. (IV-1)

Based on tests given to 117 pupils (ages not given), the relationships between hyperopia or myopia and intelligence (measured by the Stanford-Binet and the California Test of Mental Maturity) were determined. The Durrell-Sullivan Reading Achievement Test scores permitted a partial correlation to be obtained with reading held constant.

Investigation of 302 children to determine whether the following dominance anomalies are significantly associated with reading achievement in the first grade: left-eye dominance, lack of dominance, crossed dominance, directional confusion, and confusion in identifying right and left.

Twenty-four each of advanced, average, and retarded readers in Grades 6-8 were compared on their ability to learn through visual and auditory stimuli. Comparisons at different reading levels were made, and effects of transfer from one sense modality to another were assessed.

Reading Skills and Teaching Procedures

A survey, using questionnaire, interview, and observation techniques, of 795 school systems in communities over 10,000 population to determine the conduct and content of American reading instruction.

An analysis of the reading process which names "areas of behavior related to the acquisition of reading skills," drawn together information from psychology and linguistics to "demonstrate the extreme complexity of the reading process," and shows "the relation between the nature of language as a generalizing and conceptualizing process and the skills involved in reading," contains thirty-two references.

A survey of the state of teaching English based on nearly 1250 replies from colleges, business executives, editors, librarians and many other groups; includes data on reading proficiency.
Purcell, John Wallace. "Poor Reading Habits: Their Rank Order," The Reading Teacher, 16 (Mar. 1963), 353-58. (IV-9)

Reports the results of polling 327 college students and adults who voluntarily enrolled in reading improvement classes to determine in order of importance which of 12 most common reading habits applied to them.

Summary and interpretation of 34 titles related to the process of beginning reading.

Presents a rationale for a "meaning-discrimination approach" to beginning reading (as opposed to "meaning-first" or "discrimination-first") by relating this approach to the reading act, the nature of learning, and research evidence.

Brekke, Gerald H. "Actual and Recommended Allotments of Time for Reading," The Reading Teacher, 16 (Jan. 1963), 234-37. (V-II)

A report of responses to a questionnaire regarding time allotted to basal reading in Grades 1-8 in 1,224 schools and that allotted to "other reading" in 1,027 schools. The results are compared with those of eight previous studies and with time recommended by authorities.

Comparison of the reading gains made in an academic year by about 277 pupils, Grades 3 through 6, 166 of whom were in graded and the remainder in ungraded classes for reading instruction. Subgroups equated for intelligence and composite scores on the Iowa Basic Skills Tests were also compared.

Dale, Edgar; Eichols, Gerhard; and others. Children's Knowledge of Words. Ohio State University, Bureau of Educational Research and Service, 1960.

An interim report of research which presents word lists for Grades 4, 6, 8, 10, and 12 comprised of those words which had a familiarity score of 50 per cent or over, as determined by multiple choice tests.

Briefly reviews research in the area of vocabulary in the higher grades and suggests the nature of needed research in this area.
Fitzgerald, James A. "An Integrating Basic Communication Vocabulary," Elementary English, 40 (Far. 1963), 283-89. (IV-5)

Reports the development of a communications core vocabulary using a variety of word lists as sources. The author claims that this vocabulary, which contains the most common words for both children and adults to use and which they encounter in listening, speaking, reading, writing, spelling, and handwriting, can and should be used in the total language arts program.

Two small equated groups of educable, non-reading retarded adolescents were compared on a support (prompting) and non-support (confirmation) program designed to teach four words.

Using Woolman's Progressive Choice method for introducing letters and their sounds, 13 trainable mentally retarded pupils were taught to recognize words and tested to determine retention over the summer vacation.

An experiment conducted to ascertain the more efficient mode of presenting materials for word learning in a multiple choice automated teaching situation. Speed of learning and retention were measured for 32 girls, ages 14-17, who responded to an auditory stimulus which was coupled with a visual presentation of the correct equivalent and its foils and who also responded to a visual stimulus coupled with auditory response alternatives.

Based on words used in the Scott-Foresman, Ginn, Macmillan, Houghton-Mifflin, and Heath readers, together with the Dolch (1942) and Fry (1960) lists, a composite list for the first three grades is determined.

A tabulation of words used seven or more times in the pre-primers, primers and first readers of eleven basic series.

A tabulation and comparison of the new words introduced at each of the primary grades in each of seven basal reading series.

Through tabulation of words common to 45 pre-primmers, primers and first readers, five lists of words were identified in order of frequency of appearance.

Contains a 54-item bibliography of articles, research reports, and textbook considerations of vocabulary improvement. Some items are reviewed.

Reports results of administering an experimental qualitative vocabulary test, calling for functional, concrete, or abstract correct definitions, given to 257 pupils in Grades, 3, 6, and 9 to determine whether significant changes in level of response occurred at the different grades.

An evaluation of modified programmed-instruction in Grade 7 over a period of eight weeks.

An analysis of the additive effect on the recognition of 22 unfamiliar words of context alone, word configuration, phonic and/or structural analysis of beginning elements, phonic and/or structural analysis of final elements, and finally the presentation of the entire word.

Reports an analysis of the phonic generalizations presented in the manuals of four basal readers. A "per cent of utility" is computed for each generalization—a measure of the extent to which it applied to words commonly met in primary grade material.

At grades 7 and 8, 25 poor readers were compared with 25 good readers for the number of secondary beginning strokes in handwriting.

A study of the relationship of learning to spell and read 149 common words to connotative positiveness or negativeness, intensity of meanings, frequency of occurrence, and length of word.

Report of an attempt to discover whether the irregularity of English spelling might be a cause of backwardness in reading. Included examination of research in countries in which the language was more regularly spelled, an inquiry into children's reading errors as related to the spelling of the words, and a test to see if children associate sounds with spelling.

At each of Grades 9 through 12, 15 students of average ability were used to determine the efficacy of forming verbal concepts by using words, pictures with correct concept emphasized, and pictures with the concept de-emphasized.

Two matched groups of girls in Grades 7-9 were given similar instruction, except that one used a pacer.

At Grades 5 and 6, 460 pupils, divided between experimental and control groups, used the Controlled-Reader and the conventional program to determine immediate differences in proficiency and differences five months after instruction concluded.

Bormuth, John R., and Aker, Cleatus C. "Is the Tachistoscope a Worthwhile Teaching Tool?" The Reading Teacher, XIV (Jan. 1961), 172-76.

A study to determine whether the tachistoscope is an effective means of increasing reading rate, comprehension, and vocabulary.

Boll, Isabel S. "Effectiveness of Different Methods of Study," Journal of Educational Research, 56 (Sept. 1962), 51-52. (v-8)

Comparison of listening, listening with note-taking, reading, and reading with note-taking among poor achieving college students and superior tenth graders as means of learning and retaining facts.
Advanced readers were compared with retarded readers of Grades 4-7, using a total group of 170, to determine relationships between reading comprehension and abstract or concrete thinking modes.

Using the STEP reading test in the autumn and the Cooperative Reading Test at the end of the spring term, comparisons were made of the gains of 408 high school students who had programmed instruction in mathematics with 156 who had the regular classes.

A correlational and factor analysis study of selected reading tests considering content (level of integration, function, and technical bias), method (type of presentation and response, level of difficulty, etc.) and error components among 126 British and 75 American college students.

The relative value of the topic sentence, cross headings, beginning and closing summary was assessed in a 2000-word passage at college freshman level to determine level of comprehension and amount of retention.

Based on tests of recognition of grammatical structure and information, as well as reading achievement tests given to 101 high school seniors. Coefficients of correlation are reported.

Using the Reading Versatility Test with 450 students in Grade 3, the range of rates and the ratios among them are calculated.

Review of 16 references relating reading rate to comprehension.

Reviews research on skimming from its beginning in 1914 to the present, including the author's current research, with implications for further research.

Braam, Leonard. "Developing and Measuring Flexibility in Reading," The Reading Teacher, 16 (Jan. 1963), 247-51. (V-7)

Reports test results of attempts to develop flexibility through a 6-week summer reading improvement course administered to 71 college-bound high school seniors. Part of the study involved the construction of an instrument to measure improved flexibility in reading.

In an eighth grade, 102 students were asked to skim, read rapidly, and read thoroughly three respective selections and report their knowledge of flexibility of reading rate to ascertain their efficiency in adapting rate to purpose.

Reading in High School

Reports of two studies (one at high school and the other Grades 7 - college) in each of which one group was taught by the teacher while the other followed an individualized pre-planned program oriented toward materials at successively advanced levels.

An intensive descriptive study of the organizational patterns of 15 reading programs selected from 107 in Illinois secondary schools.

A questionnaire survey of 128 Michigan high schools to discover the status of reading programs, how they are organized, and the degree of satisfaction with their programs.

Tutoring high school students in vocabulary, reading skills, mathematical concepts and how to deal with multiple choice tests was provided 52 students. To determine the effect from pre to post-test on SAT-V College Board Examinations, changes in scores were compared with those of a control group.

An evaluation of an experimental language (including reading) and literature program in which groups were homogeneous and curriculum and instruction were altered in comparison with matched heterogeneous groups using traditional organization and program.

Woolcock, Cyril William. "Guiding the Reading of Superior Students in a Special High School." The Reading Teacher, 16 (May 1963), 440-51.

A questionnaire survey of the reading characteristics of 85 gifted girls in Grades 9-12. Data were collected on such topics as: (1) time spent in assigned reading; (2) the nature and amount of voluntary reading, related to other activities; (3) how they select books; and (4) their evaluation of their own reading competencies.

Reading in Junior High School

A questionnaire survey of reading practices in 133 junior high schools to determine extent and organization of classes, the common practices in teaching and testing, and the training of teachers.

Reports gains for a year during which certain aspects of the Higher Horizons program were adapted and utilized with a Norfolk, Virginia, Grade 7 class of 301, a majority of whom came from culturally disadvantaged homes. Aspects of the program involving reading were in-service training of teachers in reading skills, applications in the classroom, library utilization, and parent cooperation to encourage students to read at home.

Annotated bibliography on reading in Grades 7 through 9.

Report of a seven-week pilot study involving the use of the Controlled Reader in one of two selected classes of junior high school students.

Using eighty-six seventh grade students, three types of reading instruction were given to respective groups: (1) a variety of materials and approaches, (2) the SRA Reading Laboratory, and (3) a single text and workbook.

A pilot study of ten Grade 7 students compared with matched controls to determine the motivational effects of four weeks of visual training on oral reading, as measured by Gray's test.

**Reading in the Content Fields**

Review 20 recent studies in "applied reading" that is, reading in the content areas.

Based on test data collected from 305 fifth and sixth-grade children, attitudes toward different types of content were related to scores on a critical reading test in each type of content, general reading ability, attitude toward school and reading, intelligence, and socio-economic status.

Coefficients of correlation among scores on an experimental "Test of Recognition of Structural Relationships in English," the Cooperative Reading Test, and the Iowa Grammar Information Test were calculated for 101 high school seniors to determine the relative contribution of knowledge of, and ability to verbalize, rules of grammatical structure to reading comprehension.

Comparison of the reading improvement of seventy-nine to eighty-two pairs of tenth-grade students who studied geometry with those who did not.

Relationship of speed and accuracy in reading to answer a question and for main idea to scores on the Iowa Silent Reading Tests.

An experiment in the effects of teaching word analysis and meaning of basic biology terms to two tenth-grade biology classes; matched control groups followed the regular program.

Aldridge, Dilly G., and Anderson, Kenneth J., "A Study of the Relationship of Fundamental Skills measured by the National Merit Scholarship Qualifying Test to Natural Sciences Reading Ability," *School Science and Mathematics*, 60 (June, 1960), 439-44.

Using a sample of 300 students, the relationships between English Usage, Social Studies Reading and Words Usage to Natural Science Reading were explored statistically.

Using equated groups of 29 Grade 7 pupils in two sections and emphasizing outlining and drawing conclusions from factual materials, Groups 1 and 2 studied two social studies units, one by the Unit Plan and in the other, the method focused upon the development of ten selected concepts.

Based on the S.T.E.P. reading and social studies tests, fifteen high and fifteen low achievers in Grades 4, 5, and 6 were matched with a control group and given intensive training in problem-solving for four months.

**Reading: Interests, Habits and Tastes**

*National Conference on Research in English: Development of Taste in Literature (Hila B. Smith, Chairman), Research Bulletin of the National Conference on Research in English, Champaign, Ill.: NCTE, 1963. (I)*

A committee assembled and interpreted published and unpublished research dealing with taste in literature.

*Itt, Paul A. "Selected References on Interests," *Education*, 63 (Apr. 1963), 503-06. (I)*

An annotated bibliography of references on interests generally, including reading interests. Articles are concerned with theory or application as well as with research.

Summarizes the results of research in adult reading in the U.S.
Three types of tasks were tried as possible indices of interest stimulated by various printed message techniques or content forms: (1) the "close" procedure; (2) retention of content in which the reading was interrupted by an interfering message; and (3) proof-reading.

A summary of 16 studies of adolescent reading interests.

Stanchfield, Jo. "Boys' Reading Interests as Revealed Through Personal Conferences," *The Reading Teacher*, 16 (Sept. 1962), 41-44. (IV-9)

An interest questionnaire, using book titles, names of magazines, and newspapers, was used with 134 students in Grade 5 to determine sex differences and differences among bright, average, and dull learners.

Anon. "65% of Dailies' Readers Read from Front to Back." *Editor & Publisher*, 94 (Dec. 9, 1961), 15-16.

Based on the report by Cintrrey, this aspect gives data on how and what is read at different ages and in different income brackets.

Three hundred subjects at each of Grades 9 through 12 in two city schools replied to a questionnaire to determine their voluntary and preferred activities relating to: (1) TV, radio, and movies, (2) recreation and hobbies, including reading, and (3) vocational and educational preference.

An investigation to determine whether library circulation figures are a valid index of book reading for a sample of 145 laboratory and public school children in Grades 3-9. Data were collected by interviewing children as they return books to the school and public libraries.
Adams, John Q. "A Study of Leisure-Time Reading Preferences of Ninth Grade Students," High School Journal, 46 (Nov. 1962), 67-72, (IV-10)

A questionnaire study of favorite magazines of 60 Grade 9 students to determine order of preference, quality of each magazine, and relationships of "quality preferences" to respondents' I.Q.'s.

Relationship between time spent televiewing, studying, working, listening to music, sports, reading, dating, church, and motion picture viewing and grade point averages for 202 high school students in California.

Mass Media and Reading

An interpretive summary of about 270 selected studies of effects of mass media, including comic books and newspapers, on children and adults.

Review findings of those major studies in mass communication which have implications for education, including the sociology of reading; contains a seventy-nine item bibliography.

An evaluation and review of research in the use of the mass media in teaching English (including reading); contains a twenty-seven item bibliography.

The twelfth annual report on televiewing time and choice of programs in relation to reading and problems presented at home, based on questionnaires presented to about 200 pupils at each elementary grade and each year of high school.

Reports the finding of eleven studies; based on responses from 5,991 children and about 2300 parents, teachers, and school officials, concerning children's use of television, books, magazines, and newspapers over a period of two years.

A questionnaire study of time spent in televising, homework practices, parental attitudes, and program preferences of junior-high school students.

Readability

Questionnaires were sent to 12 publishers to determine their procedures in grading basal readers and children's books. The Spache and Dale-Chall readability formulae were used with selected texts to compare them with levels claimed by publishers.

An attempt to develop a simple formula based on the average number of letters per word and characters per sentence. The obtained scores were validated and readability was tested.

Review of 17 items of readability formulae, and a report of efforts to evaluate the readability of selected college science texts and adult reading improvement texts using the Dale-Chall formula.

A comparison between 10- and 50-page samples in total readability for each and all of five high school biology textbooks.

An effort to program the Farr-Jenkins-Paterson revision of the Fleisch Reading Ease Formula for the UNIVAC 1103 computer led to construction of a new readability formula better adapted to the computer.

Uses subjective description, Spache Readability Formula scores and judgment of first- and second-grade pupils and teachers with ten books.

Five recently published books of readings in psychology were analyzed for level of difficulty and human interest.

Assessment of level of difficulty of books involved selecting children of similar reading level and having them read (orally or silently with literal comprehension question) the selections. The results were compared to ratings on the Dolch and Spache formulae.

Using the Dale-Chall and Spache formulae, two issues of each of 14 magazines were measured for readability-level.

An analysis of the readability level of three types of occupational literature using the Yoakum formula to determine value and to determine specific patterns within each source.

Compared scores on the Cooperative English Test, C., and the Iowa Test of Education Development in Grades 10, 11, and 12, with the Dale-Chall readability level of ten common reference books.

Arndt, Val E. "Readability of Basal Social Studies Materials," The Reading Teacher, 16 (Jan. 1963), 243-46. (IV-12)

Reports and analysis of twenty-five books in four basal social studies series for elementary students to determine readability levels both within and between the books of each series.

Statistical analysis of relationship between measures of anxiety and language arts (including reading) for 162 Grade 7 pupils in four school centers.

Two selections from a basal social studies book, one as written and the other with indefinite terms of time and space replaced by definite terms, were presented to 412 middle grade children in three schools to determine their comprehension of the two versions.

Comparison of scores on the Dale-Chall Formula for Prediction of Readability of five biology textbooks with the reading scores of 357 students enrolled in tenth grade biology in six high schools to determine the appropriateness of the books for the particular students.

Based on a questionnaire submitted to colleges nationwide, the ten biology texts in most frequent use were analyzed to determine their level of reading difficulty, using Flesch's formula with the syllable index and average sentence length.

A comparison of vocabulary, sentence length and variability from sample to sample among beginning science books.

Comparison of Dale-Chall Readability Scores of five Grade 11 Chemistry texts with the reading scores of students from six high schools and the scores of five physics books with reading scores of the twelfth-grade students.

Comparison of the comprehension of high school students grouped into four cells: good reader—good physics students, good reader—poor physics students, good reader—good physics students and poor reader—poor physics students. Subjects in each cell were divided into two groups, one which read from an original physics text while the other read a rewritten and more readable form of the same passage to determine the value of the Flesch Reading Ease Formula.

The author used the Dale-Chall and Flesch formulae to measure the readability of 5 junior high level industrial arts textbooks. The readability levels were compared to the publisher-rated readability and to the measured reading ability of 411 ninth grade general shop students.

Reading Materials

Report of changes in number, continuity, type and theme of comic strips over a period of fifty-nine years.

Reports research into sex and violence in American magazines, American newspapers, and the covers of paperback books. A content analysis was made with the aid of categories developed for classification of the various sex and violence themes; a Violence/Sex Index was made of 55 magazines and the covers of 296 paperback books.

Summarizes 25 studies relating to the reading of adults and children in books, magazines, and newspapers.

Content analysis of 12 daily newspapers in South Dakota to determine predominant attitudes toward teenager.

An analysis of themes and attitudes in 714 editorials submitted in a writers' contest for staffs of high school newspapers and yearbooks.

McIntyre, Robert B. "86.4% of U.S. Households Read Weekday Newspapers: 80.4% of Homes Buy, Read at least 1 Paper Each Day." Editor and Publisher, 94 (Dec. 2, 1961), 9.

Based on 4,826 interviews representing 2,449 households throughout the United States, individuals 15 years and older gave information about their newspaper reading habits as well as related statistics.

Based on self-administered questionnaires, given to 674 sixth graders and 700 tenth graders, the content of newspapers was classified as immediate or delayed reward types to determine the characteristics of children who tend consistently to choose to read certain types of items.

Survey of 4493 Texas teen-agers to determine newspaper reading habits, images of newspapers and newspaper men, what they would like in a column especially for them.

Reading Difficulties

A review of research concerned with reading disability at the high school and college levels; contains a seventy-seven item bibliography.

Comparison of three methods: (1) determining gains by before and after reading test scores, (2) comparing gains during remedial instruction with prior average gains, and (3) examining reductions in difference between achievement and potential.

Comparison of reading and adjustment changes of delinquent boys, ages 13 to 16; I.Q.'s 65 to 95, given three types of treatment: (1) group remedial reading, (2) tutorial group therapy, and (3) interview group therapy.

Woodbury, Charles A. "The Identification of Underachieving Readers," The Reading Teacher, 16 (Jan. 1963), 218-23. (V-14)

Relation of "difference between reading comprehension age and mental age; as a means of identifying underachievers in reading, compared to identification based on use of a differential index."

The author discusses discrepancies in the findings of various recent experimental studies in the area of personality and reading, theorizes a "gradient shift in the relationship between personality and reading disabilities as children advance through the grades," and presents a report of preliminary findings of his own research to support his theories. Contains twenty-two references.

A study of characteristics of forty-five male retarded readers, ages eight to eighteen years, to classify the frequency of common characteristics; the theory of treatment and prevention is based on the communality.

Report of comparison of conflict in the home of the poor reader and the good reader, using ten matched groups of parents of poor and good readers, "with respect to self-descriptions, attitudes toward each other, and attitudes toward their children."

An attempt to determine why there are more boys than girls in the retarded reading population by investigating whether fathers and sons classify reading as a "mostly masculine" or as a "mostly feminine" activity and relating the results to the reading ability and choice of curriculum.

Comparison of performance on a visual screening battery by 114 retarded readers with 101 non-retarded, selected from files of a reading clinic.

A comparison of test scores of children attending reading clinic, 20 of whom exhibited undue tension in contrast to 20 who did not. Oral reading errors, WISC profiles, and a number of associated factors were considered.

An evaluation of the difficulty of 30 poor readers from Grades 4-7, ten being assigned to each of three modes of reinforcement (visual, auditory, and kinaesthetic), in learning a list of paired associates (geometric forms and nonsense syllables). Each subject had discrimination training. The investigator explored reasons for ease or difficulty of association.

Analysis of variance was used to differentiate between a group of 48 good readers and a matched group of 53 poor readers on certain personality traits identified by the Thematic Apperception Test.

A review of research studies in which electroencephalographic abnormalities were related to reading disability.

Seventy-seven mentally retarded subjects with Wechsler mental ages from 6-1 to 12-7 were given the Durrell Analysis of Reading Difficulty, and rate of reading was compared to mental age expectancy. These 26 subjects were placed in homogeneous and heterogeneous groups for remedial instruction by classroom teachers.

Frost, Barry P. "The Role of Intelligence IQ in the Selection of Children for Remedial Teaching of Reading," Alberta Journal of Educational Research, 9, (June 1963), 73-78. (V-14)

Through the use of coefficients of correlation the relationship between scores on the Raven Progressive Matrices, the Mill Hill Vocabulary Scale (Oral form), and the Halborn Reading Scale were calculated to test the validity of using intelligence tests to predict improvement in remedial reading classes.

Relative gains between midterm and final examination scores of 102 university students enrolled in classes in the teaching of remedial reading and concurrently in additional laboratory sections were compared to gains of students enrolled in the course but not in the laboratory.

Comparison of the effectiveness of learning nonsense syllables by: (1) tracing with the eye, (2) finger tracing, and (3) pronouncing to determine the relative contribution of the Fernald tracing method. Subjects were 30 retarded readers assigned to three equivalent groups.

Comparison of the reading improvement of 12 experimental and 12 control pupils, some organic, others non-organic, and the remainder questionable, all emotionally disturbed retarded readers over a period of three months. The experimental group used a kinaesthetic-phonetic approach while control pupils used the traditional method in this pilot study.

An evaluation of the effects of "deanol" (administered to stimulate neural activity) in reading achievement and on clerical speed and accuracy. Sixty retarded readers from Grade 4 to college were compared to controls given placebo tablets.

A comparison of the progress made in reading by 44 college students who used exercises requiring the writing of every tenth word which was deleted, with that made by a group using Gilbert's Power and Speed in Reading. A second control group of 39 students were randomly selected and given no instruction.

Tau coefficients of correlation and partial correlations were used to determine the relationships between I.Q. age, and progress made in a remedial reading class for 41 subjects 8-14 years old, with I.Q.'s from 82-118.

A follow-up of 25 specific reading disability cases, after 12 years, to assess perceptual and neurological maturity of all and of reading disability subgroups.

Deanol, a psychic energizer, was given to 15 boys I.Q. from 50-69 with M.A.'s over six years, while placebos were given to a matched group, in a crossover design, to determine the effects on reading improvement.

A means for analyzing WISC sub-scores taking into account individual differences, applied to thirty pupils with varying levels of retardation.

A comparison of the subtest patterns of the WISC of thirty-five male retarded readers (with an I.Q. of 90 or above) with thirty-five non-retarded readers matched to the original group in total I.Q., sex, and grade level.

Coleman, James C., and Rasof, Beatrice. "Intellectual Factors in Learning Disorders," *Perceptual and Motor Skills*, 16 (Feb. 1963), 139-52. (IV-2)

An investigation to determine whether underachievers show a distinctive pattern of intellectual abilities as reflected in WISC scores. Subjects were 126 underachievers and 20 overachievers with an age range of 7.5-16. The effects of I.Q., age, and degree of retardation were examined separately.

Analysis of types of oral reading errors made by 20 reading clinic cases, 6-11 to 12-1 years, in Grades 2-7. Comparisons of their WISC subtest scores with standardized population were made. Case histories were examined to identify casual factors.

An analysis of scattergrams on the WISC of children ranging from 6 years 5 months to 14 years 6 months, and in Grades 1 through 9 to suggest implications for teaching reading.

Assessment of the effects of the promise of a reward on perceptual and symbolic learning tasks among 27 students in Grades 7 and 8, divided into advanced, average, and retarded readers and compared with equated control groups.

A study involving 200 ninth-grade students to assess "the relationship between scores on a personality tension and needs test and a social insight test, and reading competency and total educational development test scores, and with grade point averages."

From a sample of 300 boys, ages nine to fourteen, with I.Q.'s of 90-109 and at least two years retarded in reading, the WISC profile was compared with that of a previous investigation.
