ABSTRACT

This bibliography presents 2,857 citations and annotations on published research literature on reading taken from the annual summaries of investigations on reading compiled on a yearly basis by the Reading Research Center of the University of Chicago. The citations from the annual summaries for 1900-1949 were transferred to magnetic tape which was used to generate a special master for multilithing the publication. Complete bibliographic data for the journal sources used to compile the listing are given. The entries are arranged alphabetically by author in yearly segments. The bibliography covers the complete reading spectrum from preschool to college and adult years and presents research on all aspects of reading, including physiology, psychology, sociology, and the teaching of reading. Complete information on the development of the bibliography is included. (ES)

Introduction

Several document corpora make up the Master File of materials on reading in the ERIC/CRIER information bank. Documents listed in the following bibliographies comprise the basic data base.

- (1) Published Research Literature in Reading, 1900-1949.
- (2) Published Research Literature in Reading, 1950-1963.
- (3) Published Research Literature in Reading, 1964-1966.
- (4) Recent Doctoral Dissertation Research in Reading.
- (5) Recent Reviews and Bibliographic Resources for Reading Research.
- (6) International Reading Association Conference Proceedings Reports on Elementary Reading.
- (7) International Reading Association Conference Proceedings Reports on Secondary Reading.
- (8) National Reading Conference Reports on College and Adult Reading.
- (9) United States Office of Education Sponsored Research on Reading, 1956-1967.
- (10) Additional References on Reading (Materials from sources other than those listed above).

The bibliographies include materials of current nature (considered to be approximately the most recent three years) and of a retrospective nature under the assumption that newer publications do not render obsolete the scholarship and criticism of the past -- awareness of what is current is only the beginning of knowledge. Each of the bibliographies covers a separate, distinct document collection on reading. The bibliographies are not congruent although there is

some overlap in the coverage of the compilations. The most extreme example of this would be a U. S. Office of Education sponsored project listed in (9), which was also the basis of a doctoral dissertation appearing in (4), which was reported on briefly at the annual national IRA conference (7), and was also subsequently published as a journal article and is cited in (2). Over 6,000 citations are contained in the Master File. When material in (10) is considered, it increases the number

of citations to approximately 6,500.

It is not suggested that the units in the Master File include all possible materials from the educational universe relating to reading. The data base is naturally limited by: 1. the span of years of scholarship incorporated, 2. the principle of selectivity operating in including or excluding items in any one bibliography, 3. the completeness and accuracy of the individual entries in each compilation, and 4. the coverage of unpublished and published materials available in any one year. Taken together the reportage of the bibliographies is impressive, and searches across the ten will conflate materials from a plurality of sources. Harnessing the materials from many bibliographies produces an effective informational system. The Master File is only an organizational first step along the way in meeting information needs in reading. It must be coupled with other parameters of classification, retrieval, and dissemination to develop an effective information system. The ultimate in impact and in effecting change in reading instruction is looking behind the bibliographies to the content of their source documents through the other vital function of a retrieval system -- information review and analysis. Through providing sources for analysis and other activities, coupled with organization and dissemination of information on textbooks, instructional materials and measuring instruments in reading, ERIC/CRIER could serve as a valuable stimulant to research and practice in reading.

¹Helen M. Robinson, the well-known authority on reading research, is the current director of the Center.

Developing the Bibliography

In attempting to identify basic published research literature on reading, ERIC/CRIER was fortunate to be able to utilize a comprehensive, sequential, longitudinal project which has identified, collected, organized, and disseminated information on reading research for the past forty years. The Reading Research Center of the University of Chicago has been systematically dealing with research literature on reading since the early 1900's.¹ The files of the Center, and the yearly reviews of research on reading which have appeared in professional journals, constitute the most complete, current, and retrospective coverage of research documents available in any domain in the field of education. The first published research summary in the collection was reported in the early nineteen twenties and covered the period 1900 to 1924. Since 1925, and continuing to the present, a yearly compilation has appeared in the literature. Although the complete listing spanning a period of sixty years is available on magnetic tape to ERIC/CRIER, this publication includes only the citations for the period 1900 to 1949. (Published Research Literature in Reading, 1950-1963, and Published Research Literature in Reading, 1964-1966, supplement this bibliography.) Complete citation data for each of the sources used is given in the Table of Contents. The annual summary consisted of two parts. Part one organized the research under various categories and discussed the contents of the documents reported. Part two consisted of a complete bibliography of reported

research with a brief descriptive annotation provided for each entry.² Throughout the long history of the summary the purpose has been much the same -- to provide a comprehensive annual review and analysis of research reported in the field of reading. Although other useful, briefer summaries and reviews of research on reading have been published, this collection remains the most comprehensive review covering the longest span of time on a continuous basis.

A set of the summaries listed in the Table of Contents was obtained and the citations in the bibliographies converted to magnetic tape. The bibliography is set up in yearly segments with the entries listed alphabetically by author. Each entry is preceded by a four digit number which is the RE number used to code the material for internal ERIC/CRIER use. This number also serves as the code number in using the index for the bibliography. (See, Index to Published Research Literature in Reading, 1900-1949.) The Table of Contents lists the complete citation data for each summary used, the document numbers included within that year, and the page number where that particular year begins.

Paper tape was used as the input medium, and a variety of tasks was accomplished by computer process-

²For a brief history of the summary see Clymer, Theodore and Summers, Edward G., "History of the Summary," Reading Research Quarterly, I, Winter, 1965, p. 3. For a description of the actual steps taken in making the yearly compilation see, "Preparation of the Summary," Reading Research Quarterly, II, Winter, 1966-67, p. 3. The description is fairly typical of

ing. Small errors occur throughout the bibliography. No matter what pains are taken by way of proofreading and re-keyboarding in an attempt to produce flawless input files, some errors will nevertheless creep in. Correction of small typographical errors can be an expensive process. In this instance a tradeoff was made between economics and ultimate perfection in final copy. It was decided to let small errors stand unless the error was likely to distort the meaning of the material. For example, if the text states that RUDOLPH LFESCH authored a book purporting to indicate Why Johnny Can't Read the error in spelling stands. Everyone in the field of education and reading, and even the knowledgeable lay public in this instance is aware that the spelling should be RUDOLPH FLESCH.

Once the edited material was stored on magnetic tape, a special reproducing ribbon and output paper were used to generate the printout on a continuous-form master. The final copy was then printed through the multilith process.³

The bibliography in itself should be extremely useful for browsing the research literature. The related index will aid the user in quickly locating material on broad topics in reading. This bibliography, searched

the production of the summary over the years of its publication.

³For a description of the process used in converting text to magnetic tape see, Summers, Edward G., Storing and Searching Reading Research by Computer, Indiana University, December, 1967. Final report on USOE project OE-5-10-224.

in combination with the others in the Master File, will perform invaluable service to those interested in the literature on reading. ERIC/CRIER will also search the entire data base and develop bibliographies on multidimensional levels on specific request from the serious investigator. Finally, a current awareness service can be initiated to maintain surveillance of newly added material on given user profiles.

Although individuals are listed as authoring various ERIC/CRIER output, every piece of material published is a result of joint effort of the Clearinghouse staff. This bibliography is no exception. Appreciation is expressed to ERIC/CRIER staff members for the 1967-68 contract period for their efforts in developing Published Research Literature in Reading, 1900-1949.
