DECENTRALIZATION, WAITING FOR SOMETHING TO TURN UP.
BY TOBIER, ARTHUR CENTER FOR URBAN EDUCATION, NEW YORK, N.Y.

PROPOSALS BY THE NEW YORK CITY BOARD OF EDUCATION FOR SCHOOL DECENTRALIZATION ARE REVIEWED. PROPELLED BY THE BOYCOTT OF I.S. 201, THE BOARD ULTIMATELY DEVELOPED SEVEN PROJECTS WHICH WOULD ENCOURAGE COMMUNITY INVOLVEMENT. THE PROPOSAL OFFERING THE GREATEST POSSIBILITY FOR COMMUNITY PARTICIPATION WAS ONE WHICH SUGGESTED THE CREATION OF TWO EXPERIMENTAL UNITS COMPOSED OF A MIDDLE SCHOOL AND ITS FEEDERS. ONE UNIT WAS TO BE ORGANIZED AROUND A JUNIOR HIGH SCHOOL ON THE WEST SIDE OF NEW YORK CITY, AND THE OTHER UNIT WAS TO CONSIST OF I.S. 201 AND ITS THREE FEEDER SCHOOLS. BOTH PLANS COLLAPSED. OF THE SIX OTHER PROPOSALS, ONE FOR BROWNSVILLE IN BROOKLYN COULD NOT GAIN COMMUNITY SUPPORT, AND THE OTHERS WERE EITHER POSTPONED INDEFINITELY OR THE BOARD DID NOT DEVELOP A SPECIFIC PLAN TO IMPLEMENT THEM. FINALLY, A NEW DECENTRALIZATION SCHEME INVOLVING THREE NEW EXPERIMENTAL UNITS WAS ANNOUNCED FOR WHICH THE FORD FOUNDATION WOULD PROVIDE PLANNING GRANTS TO ENABLE EACH UNIT TO DEVELOP ITS OWN PROPOSALS FOR A GOVERNING BOARD. HOWEVER, IN THIS PLAN THE BOARD OF EDUCATION WOULD HAVE VETO POWER OVER THE PROPOSED LOCAL GOVERNING BOARD, ITS PROJECTED PROGRAMS, AND ADMINISTRATORS AND SUPERVISORS. THE TEACHERS UNION AND THE COUNCIL OF SUPERVISORY ASSOCIATIONS HAVE EXPRESSED SOME RESERVATIONS ABOUT THE ESTABLISHMENT OF ELECTED LOCAL SCHOOL BOARDS. OTHER ISSUES TO BE FACED INVOLVE POSSIBLE CONFLICTS WITH CERTAIN STATE EDUCATION LAWS AND DETERMINING WHETHER THE EXPERIMENTS IN DECENTRALIZATION ARE ADEQUATE AND "WISE." THIS ARTICLE IS PUBLISHED IN "THE CENTER FORUM," VOLUME 2, NUMBER 2. (NH)
Proposals by the New York City Board of Education for school decentralization are reviewed. Propelled by the boycott of I.S. 201, the Board ultimately developed seven projects which would encourage community involvement. The proposal offering the greatest possibility for community participation was one which suggested the creation of two experimental units composed of a middle school and its feeders. One unit was to be organized around a junior high school on the west side of Manhattan, and the other unit was to consist of I.S. 201 and its three feeder schools. Both plans collapsed. Of the six other proposals, one for Brownsville in Brooklyn could not gain community support, and the others were either postponed indefinitely or the board did not develop a specific plan to implement them. Finally, a new decentralization scheme involving three new experimental units was announced for which the Ford Foundation would provide planning grants to enable each unit to develop its own proposals for a governing board. However, in this plan the Board of Education would have veto power over the Proposed local governing board, its projected programs, and administrators and supervisors. The teachers union and the Council of Supervisory Associations have expressed some reservations about the establishment of elected local school boards. Other issues to be faced involve possible conflicts with certain state education laws and determining whether the experiments in decentralization are adequate and "wise." This article is published in "The Center Forum," Volume 2, Number 2. (NH)
Decentralization: Waiting For Something To Turn Up

Decentralization probably became an imperative in New York at the moment parents in Harlem boycotted the opening of IS 201. Before that point, many observers feel decentralization could have been dealt with by the board within its own pace and concerns. After that point, the matter was drawn irrevocably into the political realm where the board's ability to exercise effective authority has become increasingly unsure. Since then a lot of proposals for decentralization have been suggested and experiments designed. What effect all of this will have on education over both the short- and long-term it is too early to say. This report is an attempt simply to place the effort thus far to decentralize in some perspective.

The IS 201 boycott closed the school for a week during which the professional bureaucracy of the school system acted only in reaction to crisis. It attempted to bail itself out by replacing the school's white principal with a Negro acting principal. The nominee, a woman, declined, refusing to be treated in any but a professional manner. Further, the teaching staff threatened to resign unless the principal's appointment was reaffirmed. When the board agreed to work toward a compromise solution—that is, opened the door to outside alternatives—it set in motion processes that are just beginning to make themselves felt. On October 30 and again on February 17, the board announced "a desire to experiment with varying forms of decentralization and community involvement," that the board saw as possible ways of achieving decentralization:

1. Division of a current school district into two smaller districts each with its own local school board and district superintendent.
2. Establishment within a school board area of a small grouping of schools, possibly including a high school and feeder intermediate and primary schools. Such a cluster could contract for special services as it needed them.
3. A demonstration district of small size with representatives of the community, parents, and staff, that sought to make more effective use of such people in the context of school programs. Such a demonstration could also experiment with new approaches to teacher training and curricular involvement, that the board saw as only one offered the prospect of passing on any real authority to the community.

This was the first project which called for the creation of two experimental school units, each consisting of a middle school and its feeders, under the supervision of an elected board. One of the units was to be in a socially and economically diverse urban renewal area on the upper West Side. The unit consisted of Joan of Arc Junior High School, and PS 75, 84, 163, and 179. The other unit consisted of IS 201, and IS 24, 39, and 68, in Harlem. The boards for these units were to be designed in consultation with each school's parent association, teaching staff, and community representatives, and elected by the community. Each elected board then would select a principal or administrator who had at least the equivalent of New York state certification for principals, and who would be...

But even in this instance, in which authority was to be transferred to the local community, the transfer was qualified in important respects. The elected board was given little leeway in handling budget allocations and personnel. Textbooks, supplies, and maintenance funds would still be assigned to individual schools. Teacher assignments remained subject to agreements with the United Federation of Teachers and the Council of Supervisory Associations (principals and superintendents).

In less than a month IS 201 had fallen back into the same impasse between community and teachers that existed in September, and the Joan of Arc community showed itself to be hopelessly fragmented on the fundamental issues of the character of the elected board and establishment criteria for community participation. Early in June the
In the school system there was only a reaction to crisis. It attempted to bail itself out by replacing the school’s white principal with a Negro acting principal. The nominee, a woman, declined, refusing to be treated in any but a professional manner. Further, the teaching staff threatened to resign unless the principal’s appointment was reaffirmed. When the board agreed to work toward a compromise solution—that is, opened the door for outside alternatives—it set in motion forces that were just beginning to make themselves felt. On October 20 and again on February 17, the board announced “a desire to experiment with varying forms of decentralization and community involvement.” During the winter, it tried without success to get George Bundy, who had just become president of the Ford Foundation, to head a task force panel that would suggest decentralization programs.

Throughout this period the board made no formal commitment to decentralization. At the end of March the state legislature, in response to Mayor Lindsay’s request for more state aid for New York City schools, directed the mayor to submit a plan for decentralization by December 10, 1967. The next day the board distributed a 6,000 word policy statement about decentralization which it adopted some two weeks later at a public meeting. In all but 400 words of this statement the board spelled out decentralization in terms of the existing structure, practices, and personnel of the school hierarchy. The closing passage however, listed four kinds of experiments, all calling for community participation.

1. Division of a current school district into two smaller districts each with its own local school board and district superintendent.

2. Establishment within a school board area of a small grouping of schools, possibly including a high school and feeder intermediate and primary schools. Such a cluster could contract for special services as it needed them.

3. A demonstration district of small size with representatives of the community, parents, and staff, that sought to make more effective use of such people in the conduct of school programs. Such a demonstration could also experiment with new approaches to teacher training and curriculum development.

4. Several demonstrations in single schools to test parental and community involvement within a school’s program. The policy statement included the fact that the board “had requested the superintendent to formulate and present to it, as soon as possible, specific proposals.”

The First Specific Proposal

In a press release dated April 20, the day after the board publicly accepted its statement, the board’s information office made available the “Proposals recommended by Dr. Donovan and approved by the board to explore specific areas and procedures in encouraging community involvement in school affairs.” The proposals covered seven “decentralization” projects, but called for the creation of two experimental school units, each consisting of a middle school and its feeder, under the supervision of an elected board. One of the units was to be in a socially and economically diverse urban renewal area on the upper West Side. The unit consisted of Joan of Arc Junior High School, and PS 75, 84, 163, and 179. The other unit consisted of IS 201, and PS 24, 39, and 68, in Harlem.

The boards for these units were to be designed in consultation with each school’s parent association, teaching staff, and community representatives, and elected by the community. Each elected board then would select a unit administrator who had at least the equivalent of New York state certification for principal, and who would be responsible to the board for administering the educational program of the school unit. It was left to the community to work out details of the proposed project.

In less than a month IS 201 had fallen back into the same impasse between community and teachers that existed in September, and the Joan of Arc community showed itself to be hopelessly fragmented on the fundamental issues of the character of the elected board and on establishing criteria for community participation. Early in June one of the Joan of Arc feeders, PS 75 (which benefits from special zoning and has one of the highest reading scores in the city), voted not to be part of the experiment, and most of the people active in school affairs in the community began to leave town for the summer.

Other Proposals

The second project suggested by Dr. Donovan called for establishing a smaller-than-usual school district in the Brownsville section of Brooklyn—12 schools and 25,000 pupils—simultaneously to relieve overcrowding in four adjacent districts and to see if the smaller district would permit greater community involvement. But the Board of Education, according to Robert Robinson, in charge of caretaking operations for all of the board’s decentralization efforts, had dif-
1. Division of the entire school district into two smaller districts each with its own local school board and district superintendent.

2. Establishment within a school board area of a small grouping of schools, possibly including a high school and feeder intermediate and primary schools. Such a cluster could contract for special services as it needed them.

3. A demonstration district of small size with representatives of the community, parents, and staff, that sought to make more effective use of such people in the conduct of school programs. Such a demonstration could also experiment with new approaches to teacher training and curriculum development.

4. Several demonstrations in single schools to test parental and community involvement within a school's program.

The policy statement included the fact that the board "had requested the superintendent to formulate and present to it, as soon as possible, specific proposals."

The First Specific Proposal

In a press release dated April 20, the day after the board publicly accepted its statement, the board's information office made available the "Proposals recommended by Dr. Donovan and approved by the board to explore specific areas and procedures in encouraging community involvement in school affairs."

The proposals covered seven "decentralization" projects, but...
fically gaining support for the project from the community. The Brownsville Community Council, the poverty agency in the area, complained that the project provided no real mechanism for community involvement. It argued that the plan was imposed upon them rather than drawn from the community. The plan called for the district superintendent and local school board to be selected and maintained in exactly the same way that those in other districts are currently selected and maintained. According to Mr. Robinson, Dr. Donovan decided not to go ahead with the project for the time being.

The third project called essentially for the not-novel involvement of a university in guiding the educational program in the south and central Bronx. A governing board of parents, staff, and university faculty was suggested but not the mechanics of choosing the board or any indication that the board would be anything but advisory. The community would be involved to the extent that individuals would be trained for such para-professional jobs. Mr. Robinson said the response from

The fourth project was much like the third except it substituted private industry for the university, and it would test new technology in the classroom.

The fifth project, in the Parkchester section of the Bronx, a predominantly white neighborhood, called for a district superintendent's cabinet composed of the principals in the district plus parent and community representatives, including a representative of the area's poverty agency. The cabinet would be consultative, and draw its agenda from a chain of committees, parent and teacher thinking and organized at different levels of the district representing. Implementation of the project, Mr. Robinson said, was scheduled in the fall. Details are not available.

The sixth decentralization project suggested a rag-tag of individual demonstration projects in five schools: PS 36-125, 139-10, and 175 in Manhattan; PS 129 in Bedford-Stuyvesant; and PS 148, a new school in the Bronx. Each project would involve parents and teachers in planning, operating, and evaluating the school program, and outside experts to help; community residents could be hired and

and community residents in managing the schools. The experiment was the same suggested in the first project of the April proposal, but with crucial differences. First, and most importantly, the Ford Foundation was providing planning grants for each of the units. Secondly, three units were involved instead of two: IS 188—which had managed, at least temporarily, to solidify behind a planning proposal (the Jews of Astoria community remained in profound disagreement); a highly-organized Lower East Side community, Two Bridges; and a Negro and Puerto Rican community in Brooklyn, Ocean Hill-Brownsville. Third, the requests for planning grants originated with the community. These requests spelled out in rough detail what the communities hoped to achieve. This last point separates the experiment from all others proposed. The board, it should be noted, retains the right to reject whatever proposals result from the planning grants.

The board announced such an experiment seems to have exceeded its patience and critics alike. To understand the board's decision involves an understanding of the Ford Foundation's role in all
ficulty gaining support for the project from the community. The Brownsville Community Council, the poverty agency in the area, complained that the project provided no real mechanisms for community involvement. It argued that the plan was imposed upon rather than drawn from the community. The plan called for the district superintendent and local school board to be selected and maintained in exactly the same way those in other districts are currently selected and maintained. According to Mr. Robinson, Dr. Donovan decided not to go ahead with the project for the time being.

The third project called essentially for the not-novel involvement of a university in guiding the educational program in four to six schools in the south and central Bronx. A governing board of parents, staff, and university faculty was suggested but not the mechanics of choosing the board or any indication that the board would be anything but advisory. The community would be involved to the extent that individuals would be trained for sub- and para-professional jobs. Mr. Robinson said the response from

The fourth project was much like the third except it substituted private industry for the university, and it would test new technology in the classroom.

The fifth project, in the Parkchester section of the Bronx, a predominantly white neighborhood, called for a district superintendent's cabinet composed of the principals in the district plus parent and community representatives, including a representative of the area's poverty agency. The cabinet would be consultative, and draw its agenda from a chain of committees, parent and teacher thinking and organized at different levels of the district representing. Implementation of the project, Mr. Robinson said, went scheduled in the fall. Details are not available.

The sixth decentralization project suggested a rag-tag of individual demonstration projects in five schools: PS 20-125, 150-10, and 175 in Manhattan; PS 198 in Bedford-Stuyvesant; and PS 148, a new school in the Bronx. Each project would involve parents and teachers in planning, operating, and evaluating the school program, and outside experts to help; community involvement would be joined and community disorganization.

The board's decentralization policy statement was followed within a few weeks by the building or curtailing of a series of programs that had been designed to encourage desegregation and integration, namely open enrollment and the phasing out of vocational schools in favor of comprehensive high schools. Shortly thereafter the board went into contract negotiations with the UFT. The problem of planning for viable decentralization was put off for the fall.

The series of moves and counter-moves set off a barrage of criticism which was summarized by the New York Times in an unusually favorable editorial on June 14. It described the city school system as "adrift on a sea of indecision" with "unholy keeping the vessel moving on a chartless course."

It charged the board with indecision and with hastily announced reform plans whose only impact was the pressure of crises, and said the plans "were readily abandoned" when the emergency seemed past.

"The school system cannot afford," the Times warned, "to work time precious communications of the board's panel on decentralization... and community residents in managing the schools." The experiment was the same suggested in the first project of the April proposal, but with crucial differences. First, and most importantly, the Ford Foundation was providing planning grants for each of the units. Second, three units were involved instead of two: IS 215—which had managed, at least temporarily, to rally behind a planning proposal (the Jews of Ave. community remained in profound disagreement); a highly-organized Lower East Side community, Two Bridges; and a Negro and Puerto Rican community in Brooklyn, Ocean Hill-Brownsville. Third, the requests for planning grants originated with the community. These requests spelled out in rough detail what the communities hoped to achieve. This last point separates the experiment from all others proposed. The board, it should be noted, retains the right to reject whatever proposals result from the planning grants.

That the board announced such an experiment seems to have auto
tomated its intimates and critics alike. To understand the board's decision involves an understanding of the Ford Foundation's role in all

The problem of planning for school
democratization was put off for the
fall.
The series of moves and counter-
actions set off a barrage of criticism
which was summarized by the New
York Times in an unusually favor-
eloped editorial on June 14. It described
the city school system as "shill in a
sea of isolation" with "anxiety
keeping the vessel moving on a
charted course."

It charged the board with in-
decision and with hastily announced
resolutions whose only impetus
was the pressure of crises, and said
the plans "were ready abandoned"
when the emergency passed.
"The school system cannot afford,"
the Times warned, "to mark time
waiting recommendations of the
mayor's panel on decentralization."

Three weeks later, in early July,
the board announced a new de-
centralization experiment: the
creation of three independent multi-
school units each governed by an
elected board, run by unit admin-
istrators, and providing an unpre-
cedented voice for parents, teachers,
disagreement; a highly-organized
Lower East Side community, Two
Bridges; and a Negro and Puerto
Rican community in Brooklyn,
Ocean Hill-Brownsville. Third, the
requests for planning grants origi-
nated with the community. These
requests spelled out in rough detail
what the community hoped to
achieve. This last point separates
the experiment from all others
proposed. The board, it should be
noted, retains the right to reject
whatever proposals result from the
planning grants.

That the board announced such
an experiment seems to have as-
tended its intimates and critics alike.
To understand the board's decision
involves an understanding
of the Ford Foundation's role in all of
this.

"The board announced at the same time an ex-
periment to be conducted by Sal Cedano of
State University, which is reported on elsewhere in this issue.
Ford had come to feel with others that the school system was not responding to community needs. It had also begun to question the board's notion of superintendency decentralization. Arguing for the concept of organic decentralization, Ford felt that the result of such an approach had to be the strengthened representation of those closest to the learner—parents and teachers.

The community groups, Ford learned in its meetings, wanted something new in the management of public education. They wanted the parents to become trustees of the school, and they wanted the right to hire their own administrator. They wanted, in effect, potency and legitimacy vis-a-vis the board.

The Ford Foundation was willing to give money to support pilot efforts for increased public participation in running the schools, but would not support an expanded program. Ford said it would help the communities get more money. But it maintained that in order to make the effort work on its own terms and thus make it permanent, the existing system had to be prepared and participate in determining curriculum, contract directly with committees, and central budget allocations.

The three planning grants totaling $125,000 were promised in May in the hope that they might be implemented within the year; the board gave its approval at the end of June; the public announcements were made July 6. The aim of the planning for which the grants were made is a proposal that will spell out for the board how such community would administer a model school district and what it conceived of as its relationship to the board.

In the Community

In the first five weeks since the board's announcement the communities have involved themselves with establishing the several layers of a governing structure necessary to begin work. To some degree they have shaped an educational program. The speed with which each group has moved reflects certain political realities in the community. Two Bridge and Ocean Hill have no committee community groups to contend with. IS 228 has several. For at least the next several months the board, of driving two in the

The grant earmarked support over the summer for election expenses: training institutes for parents, governing board members, and school-community workers; a teachers institute; medical, psychological, and educational diagnostic services for children; and consultants.

Since mid-July a planning group of approximately 100 parents and teachers has been meeting regularly at IS 201. According to David Spencer, a project spokesman, several subcommittees have been formed on which both teachers and parents work. Andrew Donaldson, a Negro school art supervisor, one of two Negro males on the city's principal list, was hired as planning administrator.

Mr. Spencer said the planning committee expects a first draft of its proposal to be ready around the beginning of September. As of mid-August, when volunteers began to canvass voters for the governing board election, the proposal was still completely fluid.

Mr. Spencer said that tentative agreement had been reached on the makeup of the governing board: ten parents (two from each school) elected by school parents; five com
The Establishment's Ladder

FORD FOUNDATION became involved in school decentralization after the IS 201 boycott. When McGeorge Bundy was asked by the board to form a task force, he met two sides into East Harlem to assess the community leaders' feelings about joining such a group. The sides came back with the news that there was absolutely no interest to participate on the board's panel and that community school leaders had formed a "People's Board of Education." Mr. Bundy stalled the board and asked his staff—including Mario Fontini—to develop their contacts with the IS 201 negotiating team. Ford and the East Harlem leaders held informal meetings throughout the winter and spring, and Mr. Fontini made contacts with a number of community school leaders. The meetings helped give the groups legitimacy and at some point Dr. Drumm began to participate in the discussions.

Long involved with the school system, especially in philanthropy,
funds and the most ethnically diverse. The school population is about 40 per cent Puerto Rican, 15 per cent Negro. There is also a substantial Chinese population. Some 70 per cent of the children speak Spanish or Chinese. The unit has an established relationship with its local school board (which the other two units lack). There is experience of community involvement in the schools through the use of classrooms by prekindergarten groups, poverty agencies, and adult education. The community, not surprisingly, responded immediately when it was asked to develop a proposal for a grant.

A planning council was set up before school ended in June which will serve as the model for the governing board when the project is implemented. The council includes six community representatives chosen by the membership of Two Bridges Neighborhood Council (funding agent for the $40,000 grant); six parents chosen by the parents associations of the five schools, including one at-large representative; and six teachers chosen by the UFT chapter (including the UFT district chairman, where school educators discuss their experiences and answer questions. The parents will presumably become the core of parents councils to be formed in each school, a structure in which parents will be able to question (but not determine) policy in the schools.

Two weeks ago the planning council held the first of several open meetings to discuss their progress. Last Thursday, a first draft of the proposal to be submitted to the board was made available. Its contents will be aired at a second public meeting mid-August. When the proposal is made final, the planning council will set a date for elections.

According to the unit’s proposal for planning funds, Two Bridges wants its 19-man governing board to be granted full fiscal authority, the right to hire staff and consultants, and full power in choosing curriculum and setting educational standards.

In addition to an administrator, the board would appoint business managers for each school. It would also regularly make available to the public all statistics concerning the unit, from broken windows to student turnover.

A Community Reconstituted

The Ocean Hill-Brownsville school project is being run at the butt end of Bedford-Stuyvesant where it edges into Brownsville, a poor working-class neighborhood of old apartment houses and single-family homes. Two years ago it did not exist as a community. Being on the periphery of two slum communities is like being the smallest in a family of hungry children. The substance of the poverty programs directed to Bedford-Stuyvesant ran thin by the time it reached Ocean Hill. That is perhaps why the community organized around the schools when a new one opened and another was promised. The changes that took place to give the community a focus is credited to a young Catholic priest, Rev. John Powis, who with his broken nose resembles Knute Rockne. Last year, in protest against not being represented on the local school board (District 17 takes in Ocean Hill, Crown Heights, East Flatbush, and Brownsville but draws its board members, since realigning two years ago, only from East Flatbush and Crown Heights), residents of Brownsville and Ocean Hill made contact with the Ocean Hill community through Father Powis. When the planning grant was made, Father Powis mobilized the community by having nuns out at 8 a.m. ringing doorbells and working a sound truck announcing the “opportunity to vote for representatives to a board that would operate the schools.” The response in a community where apathy had been the norm was the registration of some 1,800 parents to vote.

Before the school term ended in June, meetings were held with parents and teachers to establish guidelines for composing a governing board and defining its authority. There was disagreement between teachers and parents on specific details, but agreement on broad principles. Details were left to be worked out during the summer by planning representatives of the parent associations and UFT chapters. Our Lady of Presentation
of the proposal to be submitted to the board was made available. Its contents will be aired at a second public meeting mid-August. When the proposal is made final, the planning council will set a date for elections.

According to the unit’s proposal for planning funds, Two Bridges wants its 19-man governing board to be granted full fiscal authority, the right to hire staff and consultants, and full power in choosing curriculum and setting educational standards.

In addition to an administrator, the board would appoint business managers for each school. It would also regularly make available to the public all statistics concerning the unit, from broken windows to math scores, from teacher turnover to student suspensions.

The program would also create six-man parent-teacher councils (two parents, two teachers, two community residents) to meet monthly with the principal in each school to discuss school matters.

When the governing board is constituted, it will also include a principal chosen by supervisory-level people. The community representatives will be chosen in a community-wide election open to all residents of the area over 18 years old.

The unit has a storefront office on Catherine Street. The teaching staff put in a 30-hour week; parents and community workers work ten hours weekly. Full planning council meetings are held twice a week. Subcommittees meet once a week. A personnel subcommittee has been soliciting and screening resumes for the job of unit administrator. In addition, 50 parents, ten from each school, selected by their parent associations, are being put through a “community education” program consisting of a series of 15 seminars.
