THE PURPOSE OF THE CENTER WAS TO DEMONSTRATE WHAT COULD AND SHOULD BE DONE IN ESTABLISHING AND OPERATING A TRAINING PROGRAM IN AGRICULTURAL SUPPLY SALES AND SERVICE. TEACHER EDUCATORS, A LOCAL ADVISORY GROUP, AND THE COUNTY BOARD OF EDUCATION ASSISTED IN OPERATING THE CENTER. DURING THE 2-YEAR PERIOD, 165 TEACHERS OF AGRICULTURE, 28 SCHOOL OFFICIALS, 34 TEACHER EDUCATORS, 45 SUPERVISORS AND COORDINATORS, AND 34 OTHERS OBSERVED THE PROJECT. A FOLLOWUP STUDY OF VISITORS REVEALED 51 SCHOOLS STARTING SIMILAR PROGRAMS WITHIN 1 YEAR. OTHER SIGNIFICANT FINDINGS INDICATED—(1) THERE IS A GREAT NEED FOR TRAINING PROGRAMS IN AGRICULTURAL OCCUPATIONS, ESPECIALLY SALES AND SERVICE, AGRICULTURAL MECHANICS, AND HORTICULTURE; (2) AGRICULTURAL BUSINESSES ARE WILLING TO COOPERATE IN PROVIDING EMPLOYMENT EXPERIENCE; (3) SCHOOL ADMINISTRATORS WERE ENTHUSIASTIC ABOUT THE POSSIBILITIES OF SUCH PROGRAMS; (4) INFORMATION OBTAINED AT THE CENTER WAS HELPFUL IN STARTING PROGRAMS; (5) STUDENT REACTION TO THE PROGRAMS WAS EXCELLENT; (6) YOUNG TEACHERS WERE MORE INTERESTED THAN OLDER ONES IN STARTING THIS TYPE OF PROGRAM; (7) THERE IS A SHORTAGE OF QUALIFIED INSTRUCTORS FOR NEW PROGRAMS; (8) DEMONSTRATION CENTERS INFLUENCE THE ADOPTION OF INNOVATIVE IDEAS AND PROGRAMS; AND (9) MORE DEMONSTRATION CENTERS ARE NEEDED. QUESTIONNAIRES SENT TO TEACHERS AND ADMINISTRATORS, A CENTER EVALUATION INSTRUMENT, AND PUBLIC RELATIONS MATERIALS ARE INCLUDED. (CM)

INTRODUCTION

The program at Reidland High School was designed to prepare students for "job entry" in agricultural-supply businesses. The course of instruction was based on the competencies needed for employment and advancement. The competencies were identified by surveying agricultural businesses.

Purpose

The program had three distinct purposes:

1. To prepare high-school students for effective "job entry" and advancement in agricultural businesses which sell agricultural supplies and services to farmers and others.

2. To help students discover an interest in a particular phase of agriculture and to move on to take specialized or technical training in an area vocational school or a community college.

3. To cause other students to develop a desire to go to college and prepare themselves for professional careers in agriculture.

Background to Developing the Program

The 1962 report of President Kennedy's panel of consultants on Vocational Education suggested several changes in existing programs of vocational agriculture. Foremost among these was the recommendation that "programs should be developed for more occupations" and "present restrictions should be changed to recognize that agriculture is no longer based on production alone, and that agricultural education should provide increased emphasis on the related occupations in agriculture."

Kentucky, like many states, had a large number of students enrolled in vocational agriculture who did not enter farming. Also, many students have not been enrolled in vocational agriculture due to a belief that the training leads only to a career in farming. The number of farm related jobs -- agribusiness -- is increasing each year in Kentucky. Thus, a need and a demand for specialized training in agricultural occupations were apparent.

The extension and expansion of programs of vocational agriculture required the development of new programs, appropriate guidelines, teaching materials, and new methods of teaching. Thus, pilot and developmental programs were needed to chart the course for instructional programs in specialized areas of agriculture.
for the large number of young men who are to work in nonfarm agricultural occupations.

The joint staff in agricultural education (supervisors and teacher educators) in Kentucky met in October and November, 1963, and developed the philosophy and criteria for pilot programs in agricultural occupations. A pilot program was started in the Department of Vocational Agriculture at Reidland High School in January, 1964.

The Reidland School district for several years had become more industrialized; farms had become smaller, and a number of farmers had gone to work in industry. Due to this change in the economic orientation of the community, the enrollment in vocational agriculture had decreased.

The agriculture department at Reidland had been evaluated in the summer of 1962. The outlook for vocational agriculture was not good. The enrollment was down to 35 and the agricultural building was being taken over by the music department. The farm mechanics laboratory was being used as a storage facility by the board of education. The low enrollment and retarded progress of the department was due to several factors:

1. Lack of farming programs for students.
2. Lack of interest by parents and students.
3. Lack of a program for students not interested in farming.
4. Lack of understanding that "agriculture is more than farming."

At the time there was a decrease in enrollment in vocational agriculture, the metropolitan area around Reidland was serving on a business basis, an ever-increasing number of people in agriculture.

The pilot phase of the program in agricultural occupations was completed on June 30, 1965, after 18 successful months of operation. The enrollment in the vocational agriculture grew from 35 to 108 and the teaching staff increased from one to three teachers between 1963-1966.

The pilot program proved very effective in preparing students for "job entry" in agricultural-supply businesses.

Course of Study

A survey of competencies needed by employees in agricultural-supply businesses was conducted in the Paducah Area (training location of Reidland students). Information from the local survey,
a state survey, and personal observations in local businesses by the teacher served as a basis for developing units of instruction. The course of study included the following units:

1. Opportunities in Agricultural Occupations
2. Orientation to the Training Program
3. Organization of Distributive Businesses
4. Agricultural Mathematics
5. Human Relations and Personality Traits
6. Store Skills
7. Salesmanship and Selling
8. Merchandising Feeds
9. Merchandising Seeds
10. Merchandising Fertilizers
11. Merchandising Agricultural Chemicals

The course of study was revised and refined with information and insight gained through supervision and consultation with businessmen and the help of the local advisory committee.

Classroom Instruction

Demonstrations, resource people, role playing, and modified problem-solving procedure were used in teaching the class. The problems dealt with were practical and realistic in that they were the kinds the students encountered at their training centers in the agricultural-supply businesses. The teacher kept in close contact with the owners and managers of the stores for areas on which to place special and timely emphasis in the instructional program. The daily instruction was kept flexible to allow for seasonal and employer-employee problems to be dealt on a timely basis. The sequence of instruction was determined by the owners and managers of the agricultural businesses.

A small store was set up in the classroom and stocked with agricultural supplies found in the local businesses. The store was used as a teaching device in which the students engaged in "role playing" in many phases of the training program. Realistic visual aids, such as scales, cash registers, telephones, sales tickets, display cases, and shelving played an important role in teaching the class.

The class was scheduled between 11 and noon each day, for a total of five hours of classroom instruction per week.

Supervised Occupational Experience

Students were placed in agricultural-supply businesses for training, usually after two or three weeks of class instruction.
The training stations were evaluated and selected by the instructor and the advisory committee. A meeting of prospective cooperating managers and owners of agricultural-supply businesses was held to orient them as to the aims and purposes of the program. A good understanding of the duties and responsibilities of the cooperating businesses was secured and specific individuals in the businesses were identified to direct and work with each student during his training.

Students, with teacher guidance, made appointments for job interviews, with two boys going to each place of business. Each employer selected the student of his choice. The occupational experience was scheduled when "business was moving" in the stores, and during the time of day and days of the week when the employer could make effective use of the students. The students' class schedules were worked out by the principal in April of the junior year, for the senior year. This early scheduling allowed some students to receive supervised experience in the morning, 7:00-10:30 a.m., with others in the afternoon from 12:30-5:00 p.m., and on Saturdays. Arranging with employers for student work experience at the time when "business was moving" rendered the businesses a service when they needed extra help and at the same time provided good occupational experience for the students.

Students were placed in the training centers a few days before they were put on the payroll. This gave the student an opportunity to become acquainted with the business and learn the location of the various products. Also, it allowed the student freedom to move around, observe, and develop an understanding of how the employees in the business dealt with customers.

**Supervision**

The students were supervised two or three times a week during the first two weeks in training. The employers were counseled regarding the progress of the students, their work habits, and attitudes. Students were not disturbed in their work. However, the teacher observed their performance and made notes to be used later for individual counseling, group discussions, and class work. After the students were employed, the class period on Monday was used to discuss individual and common problems encountered in their work and how to handle them.

Supervision of the students assisted the teacher to determine the sequence of instruction and insured that the classroom instruction was related to the duties and skills needed at the training stations.
Selection of Students

Students enrolled in the agricultural occupations class were 12th grade students. The following factors were considered:

1. Completed two years of vocational agriculture prior to enrolling in class.
2. Completed two courses in business and/or speech.
3. Had parent approval -- parents were required to attend orientation meeting.
4. Had transportation available for going to and from school to training station.
5. Had no obligations that would interfere with training -- (September-June)
6. Had passing grades in all subjects.

In addition, students were selected the second semester of the junior year for the program from those who: 1) indicated an interest in an agricultural occupation other than farming, 2) showed an interest as indicated on the Kuder preference, and 3) those who in the judgment of the teacher and guidance counselor could profit from the instruction.

THE DEMONSTRATION CENTER

The Demonstration Center was conceived as a teaching device which would make effective use of observation in attempting to make clear to those who visited and studied it how such a program could be set up and operated in a very practical and effective manner -- to make clear to visitors what could and should be done in initiating such a program.

Objectives of the Center

The specific objectives of the Center were:

1. To demonstrate an on-going program which had as its purpose the training of 12th grade students of vocational agriculture in agricultural-supply businesses -- sales and service.
2. To further develop the training program at the "Center."

Facilities for Demonstrating the Program

The facilities at the Center consisted of: two classrooms, one
with a 5' x 20' room adjoining with a one-way glass and sound system for observation of class being taught. In addition, there were three offices, a conference room, and an agricultural mechanics laboratory. The demonstration classroom was a typical classroom, "dressed up" for an agribusiness class. A mock store, display cases, racks, and shelves on the walls were stocked with agricultural supplies. Charts and visual aids were placed in the classroom to complete the atmosphere of a farm-supply store.

The conference room included a table and seating facilities for 20 visitors along with slide, movie, and overhead projectors for showing pictures and transparencies.

Operation of the Center

The program was administered by the Division of Vocational Education, College of Education, University of Kentucky. The McCracken County Board of Education cooperated by providing two teachers (in the three-teacher department), facilities, and local supervision. The teacher education staff in agricultural education at the University were responsible for preparing teaching materials, brochures, and flyer announcements. Dr. Harold Binkley on the University staff gave direction and general supervision to the operation of the Center.

The local advisory group organized in January, 1964, continued to serve the Center and provide advice for further development of the program.

Invitations to Visit the Center

The Demonstration Center was open to visitors October 1, 1965, through May 15, 1966, and October 1, 1966, through May 15, 1967. Visitors were requested to make their reservations on Tuesdays or Thursdays so as not to interrupt the program for a week.

Professional workers in agricultural education, school administrators, and state and local advisory groups from all 50 states were invited and encouraged to visit, study, and observe the program which had as its purpose training 12th grade vocational agriculture students in nonfarm agricultural occupations.

Announcements regarding the operation were sent to all directors of agricultural education and all head teacher educators in agricultural education. Announcements were made at state teachers' conferences and at regional and national meetings.

The director of the Center recommended that visitors arrive the afternoon before the scheduled visit (Monday or Wednesday
afternoon). The evening was spent in orienting visitors to the community, town, and for general discussion of the program. Slides and movies were shown and a copy of the course of study was provided for each visitor. Teaching aids and materials were presented and discussed. This period of orientation proved very successful. The schedule of events the second day followed this general plan:

**Agenda for Visitors to the Center**

<table>
<thead>
<tr>
<th>Hour</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>8- 9 AM</td>
<td>A tour of Demonstration Center and department facilities</td>
</tr>
<tr>
<td>9-10 AM</td>
<td>A meeting with the principal, assistant superintendent, advisory committee members, the guidance counselor, and cooperating businessmen</td>
</tr>
<tr>
<td>10-11 AM</td>
<td>A meeting with the other teachers of agriculture in the department. An overview of total program in vocational agriculture at Reidland and the county-wide program was presented and discussed.</td>
</tr>
<tr>
<td>Noon-Noon</td>
<td>Observation of demonstration class being taught through one-way glass</td>
</tr>
<tr>
<td>Noon-12:30 PM</td>
<td>A visit with students enrolled in program -- at lunch</td>
</tr>
<tr>
<td>12:30-2 PM</td>
<td>A tour of other agricultural occupations programs in county (horticulture and agricultural mechanics)</td>
</tr>
<tr>
<td>2-4 PM</td>
<td>Visits to agricultural-supply businesses to observe students on the job at training stations</td>
</tr>
</tbody>
</table>

A majority of the visitors spent one-and-a-half days at the Center.

**Staff Responsibilities**

The principal investigator was responsible for seeing that the Demonstration Center was set up and that it functioned properly. He directed the setting up of procedures for inviting visitors, handling of visitors, and the records to be kept. In addition, he
was responsible for preparing letters, announcements, brochures, a demonstration manual, and the course of study.

The director of the Demonstration Center was responsible for teaching and supervising the class in agricultural occupations at Reidland. He was responsible for handling correspondence and coordinating the activities of all visitors and for keeping the necessary files and records at the Center.

Teachers of agriculture at the Center (two in addition to the director) were responsible for teaching the other agricultural classes in the department and shared in explaining and interpreting the total program of vocational agriculture to the visitors. The Center placed emphasis on a total program of vocational agriculture with special attention to the class in nonfarm agricultural occupations.

Administration and supervision was under the principal at Reidland High School and the Assistant Superintendent of McCracken County Schools. These men met with visiting groups and answered questions.

A graduate assistant had as his responsibilities preparing letters of announcements, brochures, the course of study, working out standard operating procedures, setting up a file and records system, and for giving general help to the Center under the direction of the principal investigator.

Consultants consisted of agricultural businessmen from Kentucky, Illinois, and Missouri and professional educators -- teacher educators and supervision in agricultural education from other states who visited the Center to evaluate the training program.

The course of study used at the Center was a part of the take-home benefits to the visitors. It was an attractive 200-page spiral-bound publication on 8½" x 11" quality paper. Included in the course of study were all the units of instruction and tests used in connection with the instructional program. A demonstration project manual was also provided each visitor to the Center. The manual explained how the total program of vocational agriculture was organized at Reidland and gave details on the class in nonfarm agricultural occupations. The manual also explained how the work stations were developed, uses made of the local advisory group, and other details of the program.

VISITORS TO THE CENTER

During the two-year period, 306 people visited the Center.
They were classified as follows:

**Professional People Visiting the Center**

<table>
<thead>
<tr>
<th>Category</th>
<th>1965-67</th>
</tr>
</thead>
<tbody>
<tr>
<td>Teachers of Agriculture</td>
<td>165</td>
</tr>
<tr>
<td>Superintendents</td>
<td>11</td>
</tr>
<tr>
<td>Principals</td>
<td>17</td>
</tr>
<tr>
<td>Regional Coordinators</td>
<td>5</td>
</tr>
<tr>
<td>State Supervisors</td>
<td>40</td>
</tr>
<tr>
<td>Teacher Educators</td>
<td>34</td>
</tr>
<tr>
<td>Farmers</td>
<td>10</td>
</tr>
<tr>
<td>School Board Members</td>
<td>5</td>
</tr>
<tr>
<td>Others</td>
<td>19</td>
</tr>
</tbody>
</table>

An accurate record was kept on all visitors including information on their occupation, responsibility for school programs, and their address.

**Surveying the Visitors**

In September, 1966, a questionnaire was mailed to all who visited the Center between June, 1965, and June, 1966. In September, 1967, the same questionnaire was sent to all visitors to the Center during the period July, 1966, and July, 1967.

A different type of questionnaire was sent to: 1) teachers of agriculture, 2) superintendents of schools, regional coordinators, state supervisors, and teacher educators, and 3) farmers, businessmen, and school board members. The responses from the last group was so small that the results are not given.

The questionnaire was designed to evaluate the effectiveness of the Demonstration Center in transmitting ideas and in getting new programs started. The Center attempted over a two-year period to make clear to those who visited and studied it, how such a program could be set up and operated and what should be done to get such a program underway.

The questionnaires consisted of three parts:

1. A section dealing with where programs have been started, resulting from a visit to the Center.

2. A section relating to plans for starting such a program, and

3. A section inviting suggestions for improving the Center
in its job of demonstrating a program in agricultural occupations.

The three questionnaires used are in Appendixes J and K.

REACTION OF TEACHERS WHO VISITED THE CENTER

There follows the results of a survey of the teachers of agriculture who visited the Center.

General Information

There were 80 replies from the 165 teachers who visited the Center, a return of 65 percent. The teachers who completed and returned the questionnaire represented 23 states. Significant facts revealed by the survey are:

<table>
<thead>
<tr>
<th>Item</th>
<th>1965-66</th>

<td>7</td>
</tr>
</tbody>
</table>

At the time that the surveys were completed there were 586 students enrolled in 51 classes in agricultural occupations, an average of 11 students per class.

Agricultural businesses in the communities which could provide opportunities for supervised practice in the program area were:

- Total number: 396
- Average number of businesses per program: 8

Number of agricultural businesses that the teacher planned to use for supervised practice:

- Total number: 295
- Average number of businesses per program: 6

Reaction of Administrators and Agricultural Businessmen

Responses of school administrators after the teacher of agriculture explained the program in agricultural occupations to them:

- We would like to have the program.
- With the exception of a few problems, they thought it was a good idea and that a program should be started.
Administrators were very cooperative, interested, and enthusiastic.

- Would like to have a program, but teachers do not have enough time to provide it.
- Thought it would be a good program to start for some seniors.
- Very enthusiastic. They wanted to get things moving and find out if they could develop such a program.
- Favorable but cautious.
- Skeptical.

Responses of local agricultural businessmen after the teacher explained the program:

- Very favorable -- needed.
- The school cannot supply enough boys.
- They desired the program very much.
- Very receptive, but wanted time to study and evaluate.
- Business has a strong need for boys trained in this manner.
- Mixed feelings, but willing to cooperate.
- The businessmen were less enthusiastic than the board members.

Ideas Secured at the Center

Main ideas picked up at the Center which helped to get a program underway included:

- The use of props and of student enactment of on-the-job situations.
- Location of shelves and the counter, what to have in the school store, and an overall view of the program.
- Classroom surroundings and store atmosphere.
- Public relations, advisory committee, and teaching units.
- Agreement with employers.
- Course of study.
- Methods of expanding a program where industry and urbanization are moving in and replacing farms.
- Realized need for a similar program.
- The approach to use in organizing such a program.
- Facilities that could be developed.
- Supervision of students on the job.
- The importance of selling school administrators on the program.
- The need for the program in many schools.
- The use of instructional materials.
- The use of business places for educational training.

Plans of Teachers That Had Not Started Programs

Teachers whose schools had not started programs were asked what their plans were. The responses follow:
Response | Number
--- | ---
Yes, planned to start program | 17
No, did not plan to start program | 14
Uncertain | 9

If so, in what areas?

<table>
<thead>
<tr>
<th>Area</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agricultural Occupations -- sales and service</td>
<td>18</td>
</tr>
<tr>
<td>Agricultural mechanics</td>
<td>2</td>
</tr>
<tr>
<td>Small engines</td>
<td>1</td>
</tr>
<tr>
<td>Horticulture</td>
<td>2</td>
</tr>
</tbody>
</table>

Number of agricultural students in school who should receive training in agricultural occupations similar to the program at the Center:

- Total number | 578
- Average per program | 22

Number of agricultural businesses in the school districts which had a potential for supervised practice:

- Total number | 323
- Average per program | 12

Number of the businesses that would cooperate in a program:

- Total number | 233
- Average per program | 9

Programs possible:

- Yes, program possibilities | 22
- No, program possibilities | 13

Handicaps or obstacles to having a program included:

- The small size of the school.
- The problem of getting administrative approval.
- Inadequacy of the facilities.
- Limited opportunity for placement of students.
- Low abilities of students.
- Not enough interested students.
- Schedule difficulties.
- Interference with sports.
- Limited teacher staff.
- Students will choose regular vocational agriculture in senior year.
- A lack of money for the program.
- A lack of time.
- Teachers have a full job with present programs.

Suggestions for Improving the Center

Suggestions for improving the Center in its job of "demonstrating a program in agricultural occupations" included:

- Have a wider variety of placement stations.
- Visitors should spend more time at the Center.
- The facilities should be enlarged.
- More money should be made available for teaching materials.
- Modernize the rest of the department to go with the Center.
- Visitors should have a chance to see more boys at work.
- Visitors should have the opportunity to go with the instructor on a typical supervisory visit.
- Motion picture should be prepared on various parts of the program.
- The Reidland project should be related more to the normal agriculture teachers' situation.
- More audio-visual materials should be used.

Value of Materials Received at the Center

- The materials have been useful to me as a supplement to the courses I am teaching even though I am not teaching agricultural occupations.
- They were not perfect; every situation is different. They did provide a direction in which to start.
- Very valuable. The personal evaluation sheets and the lesson plans are especially helpful.
- They are good resource materials.
- Interesting and will be of value when a program is started.
- Good basic materials from which a curriculum could be set up to fit our school.
- All materials will serve as a basis to get programs underway.
- They are useful and time-saving. They make teaching the course easier.
- Would not want to attempt to teach the course without them.
- Valuable, but not as valuable as observation.
- More information should be made available to superintendents and principals on the cost of the program and the potential value to the economy of the community.

-14-
Summary

Of the 51 programs in agricultural occupations which had started, 32 were in sales and service; 10 in agricultural mechanics; two each in horticulture and farm management; and other areas, one each. Students enrolled in the programs were primarily seniors, with about one-fourth of the programs having both juniors and seniors. Administrators in the schools were generally favorable toward the program. Some wanted to proceed with caution. Only one reported skepticism toward the value of such training.

Seventeen schools were planning to start programs in agricultural occupations in the near future. These were primarily in the area of sales and service. Agricultural businesses seem to be very cooperative in their willingness to provide supervised practice for the students. Estimates indicated an average of nine cooperating businesses would be available per program.

Reasons given explaining why a program could not be developed in some schools. The three reasons most frequently mentioned were:

1. Small size of the school.
2. Teachers had a full job with present program.
3. Lack of money for facilities.

Suggestions for improving the Center included:

1. Have a wider variety of placement stations for supervised practices.
2. The program should be more closely geared to the normal situation in which teachers of agriculture find themselves.

There was a relationship between the age of teachers and their starting new programs. Seventy-four of 80 teachers gave their ages in responding to the questionnaire. Thirty teachers were below 35 years of age and 44 were 35 or older. Of the 30 teachers below 35 -- 47 percent had started programs, 37 percent planned to start programs with only 16 percent not planning to start programs. Of the 44 teachers 35 or older, 40 percent had started programs, 8 percent had plans for starting with 52 percent not planning to start programs.

REACTION OF OTHERS VISITING THE CENTER

The questionnaire sent to school administrators, supervisors, and teacher educators dealt with securing information on:

- Positions held and scope of responsibility.
Effectiveness of the Demonstration Center.

Programs underway, resulting from a visit to the Center.

Plans for future development.

Estimate of potential for programs in schools under direction and supervision.

Response and Reaction to the Program

Forty-five or 54 percent of the 88 administrators, supervisors, and teacher educators from a twelve-state area returned questionnaires. These groups represented a total of 1,964 departments of agriculture. Four hundred fifty-one departments or 22 percent had developed training programs in agricultural occupations. In response to "how effective was the Center in demonstrating the program?", 44 of 45 or 98 percent said the program was adequately demonstrated.

Of the 45 respondents, 36 or 80 percent said it was of great interest; 30 or 70 percent stated the program had good possibilities; 22 or 50 percent thought the program was needed in their schools; 11 or 24 percent said program had limited possibilities; and three or seven percent stated program not needed in their areas.

Suggestions

Suggestions for improving the Center included:

- Place students in a wider variety of occupations for supervised work experiences.
- Involve more students in the program.
- Reduce the number of charts, items of equipment, and specimens in the classroom not having a bearing on the teacher-learning process currently in operation.
- Provide a clear background explanation of the need for changing the program of vocational agriculture.

Other Comments

- The program should be expanded to include other areas in addition to salesmanship.
- Only demonstrated one kind of occupation. Horticulture, both productive and ornamental should be included.
- In Georgia, a 3-week intensive training program for ten teachers was set up after visiting the Center.
- Getting a program started with a small number of students is a big problem.
- Plans are being made to establish several programs.
- Would like to see more application of the program in Missouri.
- We need more guidelines for establishing a program, seeing this program helped.
- Teachers say our organization for the programs is too complex and too involved and that the teachers are already overloaded with present programs.
- Teachers are very cautious. They fear traditional production programs will lose something with the introduction of off-farm occupations.
- Programs in agricultural occupations will improve the image of vocational education in agriculture.

Major areas in which programs have been developed include: 108 in agricultural business -- sales and service, 87 in agricultural machinery, and 84 in other areas, primarily horticulture.

More than 90 percent of all students enrolled in courses in agricultural occupations are seniors, with the percentage of juniors increasing.

Number of agricultural businesses in the school area supporting programs for occupational experience ranged from four to ten for an average of six. Over 90 percent of the potential cooperators' attitudes was good to excellent. Likewise, over 90 percent said the ideas received at the Center were helpful.

Student reaction to this type of program, in schools where they have been started, ranged from 95 percent rating good to excellent with the remainder rating fair. Twenty out of 21 or 95 percent of the visitors to the Center felt there were sufficient businesses in the communities where the programs were started to provide the students with supervised practice. Those visitors who felt it not possible to have programs in their schools gave the following reasons:

- Lack of suitable work stations close to school.
- Need for a teacher to implement the program.
- Where there is limited production agriculture, opportunities for related occupations are limited.
- Lack of facilities and manpower.
- Most schools do not have businesses located close enough to provide supervised practice.
- Teachers are not prepared to deal with some of the distributive instruction.
- Lack of interested teachers.
- Lack of understanding by students.
- Lack of understanding by the school administration.
- Lack of prepared and dedicated teachers.
Summary

In estimating the potential for new programs in this area, 50 percent indicated a strong need, with 43 percent indicating a need of fair. Opportunities for employment of young men trained through such a program showed 73 percent good to excellent and 27 percent poor or variable. Opportunities for employment after training: sales and service rated first, followed by agricultural mechanics, and then horticulture.

Thirty questionnaires returned indicated that programs should be established in 736 schools. By September 1, 1966, there had been 451 departments (in the eight states) whose administrators responded that had developed programs in agricultural occupations. By September 1, 1967, there were an additional 255 schools. This represents 22 percent of all the vocational agriculture departments in the areas represented by supervisors, teacher educators, and school administrators who visited the Center.

There was unanimous agreement among the respondents that the program at Reidland was adequately demonstrated and that it provided visitors what they came to see. The most widely voiced suggestion for improvement was that the students should be placed in a wider variety of occupations for supervised work experience.

Nearly all respondents indicated that the program was of great interest to them; that it had good possibilities; and that it was needed in their schools. Administrators in general thought that programs in agricultural occupations have good potential, were strongly needed, were interested in starting programs, and that they would like to have such a program going in their schools.

More than 90 percent of all students enrolled in agricultural occupation courses were seniors. There are a few juniors and almost no freshmen and sophomores enrolled in the programs.

The people responsible for programs said there were plans for establishing 134 new programs.

Responses to the questionnaire indicated that there were an additional 736 schools where programs in agricultural occupations are needed in the eight-state area. And, that agricultural sales and service, mechanics, and horticulture have the greatest potential for program development in the order named.
SUMMARY, CONCLUSIONS, AND IMPLICATIONS

The survey of those who visited the Center, a year after visitation, attempted to evaluate the effectiveness of transmitting ideas and in getting new programs started in the twenty-four states that had people visit the Center to study the program. A summary of the major findings, conclusions, and implications is presented.

General Summary

During the two-year period the program was demonstrated, 163 teachers of vocational agriculture, 28 school officials, 34 teacher educators, 45 supervisors or coordinators, and 34 others visited the Center for observation and study. Most visitors spent part of two days at the Center and were provided with as much insight and understanding of the program as time permitted. In addition, each visitor was given brochures, a copy of the course of study, and a demonstration project manual. Other materials given to assure maximum take-home value included copies of selected instructional materials, lists of teaching aids used, and where to secure them.

While at the Center, each visitor filled out a registration card (See Appendix I). This information was used as a basis for a survey conducted a year later to evaluate the effectiveness of the program.

Significant findings revealed by surveying those who visited the Center include:

1. There is a great need for training programs in agricultural occupations. Programs in sales and service, agricultural mechanics, and horticulture are in the greatest demand.

2. There is a genuine willingness on the part of agricultural businesses to cooperate in providing supervised practice for students.

3. School administrators are enthusiastic about the possibilities for such programs.

4. The ideas acquired at the Center were helpful to the visitors in getting new programs started in their schools.

5. The chief obstacles to establishing programs in agricultural occupations were: (a) lack of proper facilities, and (b) lack of teacher to provide instruction.
6. There was almost complete agreement that the Center adequately accomplish its job of demonstrating the program in agricultural occupations.

7. The materials received by visitors at the Center were of great value in making plans for new programs and improvement of those already in operation.

8. Visitors described the program at the Center as being of great interest, having good possibilities, needed in schools, and that they would like to have a program.

9. More than 90 percent of the students enrolled in programs established are seniors.

10. Student reaction to the programs that have been started range from good to excellent.

11. Plans for developing programs in agricultural occupations are being made in many schools, which tends to indicate rapid growth in the near future.

12. The opportunities for employment of young men with this type of training were evaluated as excellent.

13. Young teachers are much more interested in developing new programs than are the older teachers.

14. Large schools with multi-teacher departments are interested and more apt to start new programs.

15. There is a shortage of teachers qualified to instruct in the new programs.

16. There are many students in the schools who should have training in agricultural occupations similar to the program at the Center.

Each year the Center operated two five-man committees who evaluated the Demonstration Center. One committee included school administrators and agricultural businessmen within the state of Kentucky. The other, an out-of-state committee, consisted of state supervisors and teacher educators in agriculture representing five different states. The major areas evaluated were:

1. **The Program** -- How well does the program as operated prepare 12th grade students of vocational agriculture for occupations in agricultural-supply businesses -- sales and service?
2. **The Program Demonstrated** -- How well does the "Center" demonstrate the program to those who come to observe and study it?

The evaluation instrument used by the committee is included as Appendix L. The evaluation by the committees, each year, in the 37 specific areas ranged from very good to excellent.

**Conclusions**

Effectiveness of the Demonstration Center was rated superior. Careful study of the responses to these two areas: 1) dissemination of ideas and 2) establishment of programs -- indicate that the Center performed in a superior manner to satisfy both functions. Visitors, without exception, were favorably impressed by the ideas they acquired. Many new programs have been started or plans for the new programs have been made for implementation in the near future.

The need for programs in agricultural occupations is great. A relatively small number of schools now has programs in agricultural occupations. Teachers are oriented to production agriculture and little response has been made to the challenges of a wider scope of instruction made possible under the provisions of the Vocational Education Act of 1963. As opportunities for employment continue to decrease in farming, they are rapidly increasing in other agricultural occupations, and the schools must respond by providing training to prepare young men for job entry into these farm-related occupations. Demonstration centers, such as the one at Reidland, can make a great contribution to vocational education in the broad field of agriculture by demonstrating sound and promising programs.

More demonstration centers are needed. Considering the effectiveness of this Center as a means of disseminating information and getting new programs started, it seems highly desirable that other centers should be established to demonstrate a greater variety of vocational programs over a larger geographical area.

Adoption of new programs is slow at best, and demonstration centers are an effective vehicle to overcome this problem. However, it is very important that demonstration programs should be preceded by an adequate pilot period to resolve many difficulties before the school or program is established as a demonstration center.

More teachers, school officials, supervisors, and teacher educators need to have the opportunity to observe and study programs in operation, to have adequate explanations given,
and to benefit from the materials, methods of instruction, and courses of study developed for such programs. There are many possibilities for demonstration programs in vocational education -- business education, distributive education, industrial education, home economics, and health education. The follow up of those who visited the Demonstration Center reveals that in vocational agriculture alone there are hundreds of teachers interested in going to see and study good sound programs. If the demonstration approach could be implemented as a dissemination device, the responsibility for broadening programs of vocational education as presented in the 1963 Act could be more quickly realized.

Implications

The findings regarding the value of a demonstration center suggests several implications for vocational agriculture. These include:

1. Demonstration programs have an important place in vocational research and development because of their effectiveness in causing adoption of new methods. The unrestricted nature of the 1963 Vocational Education Act has presented new possibilities that must be explored, developed, and implemented as rapidly as possible. Demonstration centers are a workable answer to this problem.

2. Demonstration programs should be set up in schools following a test or pilot period in order to disseminate the many features of sound programs of instruction.

3. Because of the radical differences that exist between the production vocational agriculture courses and the agricultural occupations program as demonstrated at Reidland, it is imperative that teachers who are to establish such programs receive additional training to qualify them for this undertaking. To go, see, and study such a program can do much to provide the additional training needed.

4. Teacher education institutions need to take immediate steps to prepare teachers for their program development and instructional roles in the new areas of agricultural occupations. Demonstration centers can add much to the preparation effort of these teachers.
5. The Demonstration Center at Reidland is only one small step in the direction of attaining the objectives of the 1963 Vocational Education Act. The use to be made of this type of Center, to meet the growing needs of students, is limited only by the imagination of the leadership in vocational education.

We take pleasure in extending you an invitation to visit our DEMONSTRATION CENTER at Reidland High School near Paducah, Kentucky. You are located in one of eight states which are within easy driving distance of the CENTER -- 200 miles or less from your state line to the CENTER.

The CENTER is being financed by the U. S. Office of Education through 4-C funds under the 1963 Vocational Education Act. The department of vocational agriculture at Reidland has just completed an 18-month pilot period in training agriculture students in nonfarm (off-farm) agricultural occupations.

The program provides training for senior students of vocational agriculture in agricultural businesses, involving sales and services. There is a carefully planned course of study and each boy is placed in an agricultural business for supervised work experience.

The facilities at Reidland are designed to permit your observing the class in session through one-way vision glass.

Enclosed are several copies of an announcement regarding the opening of the CENTER and forms for making reservations.

We hope you and a number of your teachers will visit the CENTER during the year to study the program.

Sincerely yours,

M. M. Botto, Director
Agricultural Education

Harold R. Binkley, Head
Department of Agricultural Education
YOU ARE INVITED TO VISIT THE

DEMONSTRATION CENTER

(UNDER CONTRACT WITH U.S. OFFICE OF EDUCATION)

Training Students in Agricultural Occupations
(Agricultural-Supply Businesses — Sales and Service)

CENTER IS LOCATED AT REIDLAND HIGH SCHOOL
PADUCAH, KENTUCKY

SEE BACK SIDE FOR ADDITIONAL INFORMATION
SOME FACTS ABOUT THE PROGRAM

1. The special class in agricultural occupations is a part of the total program of the Department of Vocational Agriculture at Reidland High School.

2. The successful operation of a pilot program (for 18 months) resulted in the department being set up as a Demonstration Center in 1965-66.

3. The department has successfully completed one year as a Demonstration Center. Over 300 teachers, teacher educators, supervisors, superintendents, principals, board members, and others from 20 states visited the Center during 1965-66.

4. The program prepares senior students of vocational agriculture for jobs in agricultural-supply businesses—sales and service.

5. The program has support of the agricultural businesses, school administration, the press, radio and television, the community, and the public.

6. The program of instruction includes class work and supervised practice in agricultural-supply businesses.

7. The program of instruction includes the following units:
   - Opportunities in Agricultural Occupations
   - Orientation to Training Program
   - Organization of Distributive Businesses
   - Agricultural Mathematics
   - Human Relations—Personality Traits
   - Store Skills
   - Salesmanship—Selling
   - Feeds
   - Seeds
   - Fertilizers
   - Agricultural Chemicals

8. Class instruction includes: problem solving, demonstrations, constructing displays, role playing, rehearsing, and use of resource people.

9. The classroom is attractive and colorful—there are peg-board shelves, large shelves, and display racks that contain materials and production supplies which are sold in the businesses where the students do their supervised practice.

COME SEE AND STUDY THE PROGRAM FOR YOURSELF

- The Center is open to visitors October 1, 1966, through May 15, 1967.
- Materials available to visitors at the Center include: course of study, brochures, a handbook, and slides.
- People available for consultation at the Center include: the teacher of the class, other teachers of agriculture, the principal, the superintendent, members of the advisory committee, students, and managers of agricultural businesses.
- From the observation room, you can observe the class being taught through one-way vision glass.
- See slides and movies dealing with selected aspects of the program.

Programs in nonfarm agricultural occupations. One in horticulture; the other in agricultural power pry. The Director of the Demonstration Center has been appointed county coordinator to co-placement of students for supervised work in the agricultural businesses of the area.

The Nonfarm Training

Program serves a three-fold purpose: prepares boys for effective "job-entry" and in agricultural businesses which sell agri-cultural supplies and services to farmers and others who are in need of them.

1. It helps many boys discover an interest in a particular phase of the business or in agriculture and to move on to take specialized or technical training in an area vocational school or a community college.

2. It causes other boys to develop a desire to go to college and prepare themselves for professional "careers in agriculture. All of these constitute "program dividends."

Program Development and Cooperation

The program was developed through the cooperation of:
- McCracken County Board of Education
  Paducah, Kentucky
- Division of Agricultural Education
  State Department of Education
  Frankfort, Kentucky
- Department of Agricultural Education
  College of Education
  University of Kentucky
  Lexington, Kentucky

For Reservations

Starting October 1, 1965, and continuing through May 15, 1966, the Center will be open each Tuesday and Thursday for visitors. Please phone or write:

Bill L. Williams
You are invited to visit and study the program. Reidland High School is located in Western Kentucky, near Paducah. The people at Reidland, including the teachers of agriculture, the principal, the superintendent, the advisory committee, and the cooperating agricultural businessmen extend you a hearty invitation to visit and study the program which provides training in nonfarm agricultural occupations.

It is suggested that you bring a carload when you visit the Center. State staff members, teachers, school administrators, advisory committee members, and representatives of agricultural businesses are welcome.

How the Program Started
The program started in January, 1964, as a pilot program training senior students of vocational agriculture in nonfarm agricultural occupations. Students were selected and training stations were arranged for in December, 1963. An advisory committee was organized at the start to provide advice and assistance to the teacher and school administrators in getting the program underway and in keeping it instructionally sound. The Department of Vocational Agriculture at Reidland completed a successful 18-month pilot period in June, 1965.

Major Area of Nonfarm Agricultural Occupations
The field of nonfarm agricultural occupations is broad and complex, and it is impossible to prepare people for employment in all the jobs in one instructional program. The program at Reidland is limited to preparing senior students of vocational agriculture for employment in agricultural businesses that sell supplies and services in feeds, fertilizers, agricultural chemicals and other agricultural supplies.

What the Instructional Program Includes
There is a systematic program of instruction which includes class work followed by supervised work experience related to the class instruction. The program runs through a school year and includes the following units:

- Agricultural Occupations
- Orientation to Program in Nonfarm Agricultural Occupations
- Organization of Distributive Businesses
- Agricultural Mathematics
- Human Relations
- Store Skills (including the use of scales, cash registers, adding machines, sales tickets, and telephone)
- Salesmanship

The assistant superintendent, the principal, and the teacher of the class in agricultural occupations review the course of study. This trainee is packaging bulk seed for a customer under supervision of an older employee. The total program of vocational agriculture at Reidland High School has a three-teacher department of vocational agriculture. There is a four-year instruction at the high-school level and an adult program for young and adult farmers. Freshmen: centers around crops, horticultural practices, and principles of plant health, and sanitation. Junior: soils, including physical properties, chemical properties, using materials, landscaping and horticulture. Senior: management and nonfarm agricultural occupations. The out-of-school program for young and adult farmers varies from year to year based on the needs of the groups.

The department has a greenhouse which is connected with the class work with freshmen and sophomores. Two teachers handle the first three years of instruction, and one teacher directs the program in nonfarm agricultural occupations.

Expanding Program in the County
In addition to the agricultural occupations, two other high schools in McCracken County offer, programs in agriculture and related vocations. Eastern High School and Western Kentucky Vocational School also offer instruction in agriculture and related vocations. The program at Reidland is designed to be a part of a comprehensive program of instruction available to students in the county.

Vocational Education

MEMORANDUM

TO:
FROM: Harold Binkley
DATE: January 19, 1966

Enclosed are certain materials that have been distributed in connection with the Demonstration Center. I thought you might like to know the distribution made and to look them over before we meet at Reidland.

1. The flyer, brochure, and reservation form

   -- 10 copies to all head teacher trainers in vocational agriculture, all states
   -- 10 copies to all state supervisors of vocational agriculture, all states
   -- 10 copies to each teacher trainer and supervisor in Kentucky, Tennessee, Illinois, Indiana, Missouri, Arkansas, Mississippi, and Ohio
   -- Copies to all principals, superintendents, and teachers of agriculture in Kentucky
   -- Copies of all members of the staff - College of Agriculture and College of Education
   -- Copies to departments of agriculture in state colleges and Berea College
   -- Copies to leading newspapers in Kentucky
   -- Copies to visitors at the Center

2. The Course of Study and Bulletin: Initiating Programs in Nonfarm Agricultural Occupations

   -- Copies provided all visitors to the Center
   -- Copy of each head teacher trainer, all states
   -- Copy of each head state supervisor, all states
   -- Copy of each to members of staff - College of Agriculture and College of Education
   -- Copy of each to be provided each teacher of agriculture in Kentucky
Appendix I - Registration Cards

Total enrollment in vocational agriculture ______________
Number of teachers in agriculture department ____________

DEMONSTRATION CENTER

VISITATION QUESTIONNAIRE

1. Is there a program similar to the one here, at the Center, in operation at your school? YES NO
2. Is this your first opportunity to observe this type of program? YES NO

3. Can a program such as the one here be put into operation in your school? YES NO UNCERTAIN
4. Do you feel that you should start such a program in your school? YES NO UNCERTAIN

5. To what extent can a similar program make a contribution in your school(s)? MUCH SOME LITTLE UNCERTAIN

Signed ____________________________
Appendix J - Questionnaire to Teachers of Agriculture

QUESTIONNAIRE

Date ____________

TO: Teachers of Agriculture who have visited the DEMONSTRATION CENTER at Reidland, Kentucky

FROM: Harold Binkley, Department of Agricultural Education, College of Education, University of Kentucky

Please help us evaluate the effectiveness of the Demonstration Center by responding to the following questions. Read each question carefully and give the best answer you can. Return the questionnaire in the enclosed self-addressed envelope. Please return as soon as possible.

INSTRUCTIONS: 1) Fill in blanks 1 through 7
2) If your school has started a program in agricultural occupations, answer questions 8 through 15
3) If your school has not started a program, answer questions 16 through 22
4) Answer questions 23 and 24

1. Name ___________________________ Age __________

2. School ___________________________ Address __________________________

3. Please list the people from your school (or community) who visited the Center with you.

   Name ___________________________ Position __________________________

   ___________________________ __________________________

4. Number of students in the high school ______

5. Number of students taking vocational agriculture ______

6. Number of teachers of vocational agriculture in the school ______

7. Has your school started a program for high-school students in agricultural occupations? ______
8. How many students are enrolled in the class in agricultural occupations? 

9. What major area of agricultural occupations does the program deal with? 

10. What students are enrolled in the program? 
   (Freshman, sophomores, juniors, seniors) 

11. How many agricultural businesses are there in the community that can provide an opportunity for supervised practice in the area of your program? 

12. How many agricultural businesses do you plan to use for supervised practice? 

13. After you explained the new program in agricultural occupations to the school administrators, what was their response? 

14. After you explained the new program to the men in the agricultural businesses, what was their response? 

15. What were the main ideas which you picked up at Reidland that helped you in getting your program underway? 

16. Do you plan to start a program in agricultural occupations in your school? 

17. If so, in what area? 

18. How many agricultural students do you have in the school who should have training in agricultural occupations similar to the program at Reidland? 

19. How many agricultural businesses are there in the school district that have the potential for supervised practice in the area of the Reidland program? 

20. How many of these businesses, in your judgment, would cooperate in a training program if they had a good understanding of what the program will do for students? 

21. Do you feel it is possible to have a program similar to the one at Reidland in your school? 

22. If you feel a program is not possible in your school, what are the handicaps or obstacles? (List.)
   a. 
   b. 
   c. 
   d. 

23. What suggestions would you make for improving the Center in its job of "demonstrating a program in agricultural occupations"?

24. How valuable are the materials which you received at the Center to you — such as course of study and the mimeograph sheets?
Appendix K - Questionnaire to Administrators

QUESTIONNAIRE

Date ______________________

TO: School Superintendents, Principals, Regional Coordinators, State Supervisors, and Teacher Educators who have visited the Demonstration Center at Reidland, Kentucky

FROM: Harold Binkley, Department of Agricultural Education, College of Education, University of Kentucky

This questionnaire is being sent to the persons addressed above who have visited the Demonstration Center at Reidland, Kentucky. Please help us evaluate the effectiveness of the Demonstration Center by responding to the following questions. Read each question carefully and give the best answer you can. Return the questionnaire in the enclosed self-addressed envelope as soon as possible.

A. Position and Scope of Responsibility

1. Name ____________________________________________
   Position __________________________________________
   Address ____________________________________________

2. How many vocational agriculture departments are under your supervision? ____________________________

3. Total students enrolled in these departments (give estimate) ____________________________

4. How many teachers of vocational agriculture are in the schools which you have a responsibility for programs? ____________________________

5. How many departments of vocational agriculture have programs which provide training in agricultural occupations (other than farming)? ____________________________

6. Please list the names and occupations (or positions) of the people who visited the Demonstration Center with you.

   Name ____________________________________________
   Occupations _______________________________________

   ____________________________________________
   ____________________________________________

   ____________________________________________
   ____________________________________________
B. Effectiveness of Demonstration Center

1. When you visited Reidland, was the program in agricultural occupations adequately explained and demonstrated to you?

__________________________________________________________________________

2. What suggestions would you make for improving the Center and the job of "demonstrating a program in agricultural occupations"?

__________________________________________________________________________

__________________________________________________________________________

3. What is your reaction to the program in agricultural occupations? (Check all appropriate comments)
   a. Of great interest       __________________________
   b. Have little interest    __________________________
   c. Good possibilities      __________________________
   d. Limited possibilities   __________________________
   e. Needed in my schools   __________________________
   f. Not needed in my area  __________________________
   g. Would like to have pro-
      gram going now           __________________________
   h. Will not establish such
      a program               __________________________
   i. Other comments         __________________________

4. What is the reaction of teachers and administrators in your school(s) to this type of program? (Check all appropriate comments)
   a. Good potential          __________________________
   b. Limited possibilities   __________________________
   c. Strong need             __________________________
   d. Little need             __________________________
e. Interested in starting a program
f. Not interested

g. Would like to have such a program now
h. Not interested in starting such a program
i. Other comments

C. Programs Underway At Present

1. If no programs have been established, go to Section "D"

2. List the schools within your scope of responsibility where programs in agricultural occupations are already underway.

<table>
<thead>
<tr>
<th>School</th>
<th>Address</th>
<th>Number of Students</th>
<th>Month and Year Started</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3. What are the major areas with which these programs are concerned? (Give numbers of programs for each area)

   Agricultural business--sales and service
   Agricultural machinery
   (Other)

4. What percent of all the agriculture students are enrolled in the program?
   a. Freshmen %
   b. Sophomores %
   c. Juniors %
   d. Seniors %
5. What is the average number of agricultural businesses, per program, that are available to provide supervised practice for the students? 

6. To what extent has the attitude been favorable in providing supervised practice for the students? (Select one) 
   (Excellent, Good, Fair, Poor)

7. Have the ideas you received at Reidland helped you in establishing programs in your area? 

8. What has been the student reaction to this type of program? (Check appropriate columns)

<table>
<thead>
<tr>
<th>Area</th>
<th>Excellent</th>
<th>Good</th>
<th>Fair</th>
<th>Poor</th>

<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Are there sufficient businesses in the communities, where the programs are to be established, to provide students with supervised practice? 

3. If you feel that programs such as the one at Reidland are not possible in your schools, what are the obstacles?
   a. ____________________________
   b. ____________________________
   c. ____________________________
   d. ____________________________

4. Have efforts been made to get teachers, principals, businessmen, board members, and other people who are responsible for the establishment of new programs to visit the Demonstration Center at Reidland?

If your answer is "no," do you anticipate initiating such an activity? ____________________________
When? ____________________________

E. Estimate of Potential for Programs in Agricultural Occupations in Your Schools

1. Is there a need for training in agricultural occupations in the schools where you have responsibilities? (Select one) (Strong, Medium, Weak) ____________________________

2. What is the opportunity for employment for young men with such training? (Check one) a. Excellent _____ b. Good _____ c. Fair _____ d. Poor _____

3. In what area of agricultural occupations do you think the opportunities for employment are greatest? ____________________________

4. How many of the schools in your area should have programs of instruction in agricultural occupations? ____________________________

5. What is your estimate of the potential for program development in your schools? (Use numbers)

Appendix L - Instrument for Evaluating the Center

EVALUATION OF DEMONSTRATION CENTER

Reidland High School, Paducah, Kentucky

Specific Objectives of the Center:

I. To demonstrate an on-going program which has as its purpose the training of 12th grade students of vocational agriculture in nonfarm agricultural occupations, area: agricultural-supply businesses -- sales and service occupations

II. To further develop the training program at the "Center"

Major Areas to be Evaluated:

I. The program -- How well does the program at Reidland, as operated, prepare 12th grade students of vocational agriculture for work (occupations) in agricultural-supply businesses -- sales and service?

II. The program demonstrated -- How well does the "Center" demonstrate the program to those who come to observe and study it?

Evaluation:

Evaluation ratings and figures to use for the various areas to be evaluated are as follows:

5. -- Excellent: the provisions or conditions are extensive and are functioning in an excellent manner.

4. -- Very good:*  
   a. The provisions or conditions are extensive and are functioning well, or  
   b. The provisions or conditions are moderately extensive but are functioning in an excellent manner.

3. -- Good: the provisions or conditions are moderately extensive and are functioning well.

*You may wish to indicate which of the alternatives given for evaluation "4" or "2" applies, you may use "4a" or "4b" and "2a" or "2b."
2. -- Fair:
   a. The provisions and conditions are moderately extensive but are functioning poorly, or
   b. The provisions and conditions are limited in extent but are functioning well.

1. -- Poor: the provisions or conditions are limited in extent and functioning poorly, or they are entirely missing but needed.

N. -- Does not apply or unable to evaluate.

AREA I
Specific Areas to Evaluate Regarding THE PROGRAM

1. Evaluation of "basic need" for the program
   Rating ______
   Comment: ____________________________________________
   ______________________________________________________
   ______________________________________________________

2. Evaluation of employment opportunities
   Rating ______
   Comment: ____________________________________________
   ______________________________________________________
   ______________________________________________________

3. Place of "the course" in the total vo-ag program
   Rating ______
   Comment: ____________________________________________
   ______________________________________________________
   ______________________________________________________

4. Adequacy of school and administrative support
   Rating ______
   Comment: ____________________________________________
   ______________________________________________________
   ______________________________________________________
