This guide is designed for use by any person or groups of persons responsible for planning occupational programs in the machine trades. Its major purpose is to elicit the necessary information for the writing of educational specifications for facilities to house needed vocational programs in machine tool operation, machine shop, and tool and die making. The material is also designed to (1) assist planners in the formation of creative solutions to the housing of desired educational programs, (2) prevent important considerations from being overlooked in the facility planning process, and (3) encourage logical and systematic facility planning. The guide is organized into four major parts: (1) Introduction, a discussion of the major purpose, (2) The Instructional Program, in which important information is sought on the machine shop department basis program features, objectives, and the kinds of occupational programs which will be organized to implement them, (3) Distinct Types of Instructional Areas to be Provided, in which the actual spaces desired to house the vocational programs are described in detail, and (4) Annotated Bibliography, a list of detailed reference sources. (HC)
A GUIDE FOR PLANNING FACILITIES FOR OCCUPATIONAL PREPARATION PROGRAMS in the MACHINE TRADES
The Center for Vocational and Technical Education has been established as an independent unit on The Ohio State University campus with a grant from the Division of Adult and Vocational Research, U. S. Office of Education. It serves a catalytic role in establishing a consortium to focus on relevant problems in vocational and technical education. The Center is comprehensive in its commitment and responsibility, multidisciplinary in its approach, and interinstitutional in its program.

The major objectives of The Center follow:

1. To provide continuing reappraisal of the role and function of vocational and technical education in our democratic society;

2. To stimulate and strengthen state, regional, and national programs of applied research and development directed toward the solution of pressing problems in vocational and technical education;

3. To encourage the development of research to improve vocational and technical education in institutions of higher education and other appropriate settings;

4. To conduct research studies directed toward the development of new knowledge and new applications of existing knowledge in vocational and technical education;

5. To upgrade vocational education leadership (state supervisors, teacher educators, research specialists, and others) through an advanced study and in-service education program;

6. To provide a national information retrieval, storage, and dissemination system for vocational and technical education linked with the Educational Research Information Center located in the U. S. Office of Education;
A GUIDE FOR PLANNING FACILITIES FOR

OCCUPATIONAL PREPARATION PROGRAMS IN THE MACHINE TRADES

MILTON E. LARSON

THE CENTER FOR VOCATIONAL AND TECHNICAL EDUCATION,
THE OHIO STATE UNIVERSITY, 980 KINNEAR ROAD
COLUMBUS, OHIO, 43212

SEPTEMBER, 1968

This publication was prepared pursuant to a grant with the Office of Education, U. S. Department of Health, Education, and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgment in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Office of Education position or policy.
FOREWORD

One of the most fundamental concerns in planning for vocational and technical education facilities is that of assuring that educational requirements dictate the nature of the facilities. Other concerns include planning a sufficiently adaptable and flexible structure to permit needed modifications and programmatic changes over the lifetime of the building. Experiences have shown that adequate manuals and guide materials can provide substantial assistance in planning educational facilities. This document is a guide for planning facilities for occupational preparation programs in the machine trades. The information recorded in the guide is to be used in the preparation of educational specifications.

The guide lists a series of pivotal questions about the educational program to be offered. The answers to these program questions bear directly on the numbers and kinds of instructional areas needed in the contemplated facilities. After program decisions are recorded, the guide provides for the description of instructional areas needed to meet program requirements. Much of the material is presented in a checklist format which allows for consideration of alternatives in facility planning.

The guide was designed for use by any person or groups of persons responsible for planning occupational programs in the machine trades. It is anticipated that knowledgeable persons such as machine trades instructors, state supervisors, university school plant planners, and local administrators will find the guide a useful planning tool. The guide can also be used for instructional purposes at universities, colleges, seminars, and institutes.

This guide is the second in a series being developed by The Center. Subsequent guides will be published for animal science technology, automotive trades, business and office occupations, data processing, dental technology, electrical technology, medical technology, and metallurgy. The first guide developed was in the field of home economics.

The Center for Vocational and Technical Education, The Ohio State University worked cooperatively with Dr. Milton E. Larson, Department of Vocational Education, Colorado State University in developing this planning guide. Center staff project members, Dr. Richard F. Meckley, Ivan E. Valentine, and Zane McCoy worked cooperatively with Dr. M. J. Conrad of the Administration and Facilities Unit.

The project staff is grateful to the many individuals and groups whose assistance and suggestions led to the successful conclusion of the project.

Robert E. Taylor, Director
The Center for Vocational and Technical Education

A GUIDE FOR PLANNING FACILITIES FOR
OCCUPATIONAL PREPARATION PROGRAMS
IN THE MACHINE TRADES
PART I
INTRODUCTION

PURPOSE OF GUIDE

The major purpose of this guide is to elicit the necessary information for the writing of educational specifications for facilities to house needed vocational programs in machine tool operation, machine shop, and tool and die making.

In addition to the major purpose of providing important and comprehensive information to be incorporated in educational specifications, the guide is also designed to:

• Assist planners in the formation of creative solutions to the housing of desired educational programs.

• Prevent important considerations from being overlooked in the facility planning process.

• Encourage logical and systematic facility planning.

ORGANIZATION OF GUIDE

The facility planning guide is organized under four major headings or parts. Part I (Introduction) is a discussion of the major purpose, the underlying assumptions, and the guiding principles which were utilized in the preparation of the guide.

In Part II (The Instructional Program) important information is sought on the machine shop department basic program features, objectives, and the kinds of occupational programs which will be organized to implement them.

In Part III (Distinct Types of Instructional Areas to be Provided) the actual spaces desired to house the vocational programs are described in detail.

Part IV is an annotated bibliography of reference sources which offer a more detailed treatment of the various phases of facility planning.
UNDERLYING ASSUMPTIONS

Important assumptions were made in the preparation of this guide. They were:

• Major educational program decisions have or are being made. Content of instruction has been determined through educational surveys, advisory committees, school board study, etc. Instructional methods have been determined by qualified machine shop and other appropriate staff members. To assure adequate educational program planning, the guide will ask important questions which may serve as guidelines to such planning.

• The numbers and kinds of students to be served by the program are generally known. Such information has been provided by enrollment projections, housing patterns, census data, student interests studies, etc.

• The information recorded in this guide will be used in the preparation of educational specifications for use by an architect in facility design.

• Sufficient finances are available to support both the provision of facilities and to operate the kinds of educational program outlined in the guide.

GUIDING PRINCIPLES

In planning facilities to house programs of vocational machine tool operation, machine shop, and tool and die making, it is suggested that educational program and facility decisions be consistent with the following guiding principles.

1. The educational program is the basis for planning space and facilities.

2. Space and facilities should be planned to accommodate changes in the educational program.

3. The program is planned to serve the needs of a variety of groups in the community.

4. Space and facilities for the program can be extended through the use of community resources.

5. Expanded programs to reach not only the average and those who are college bound, but also the unusually gifted, the physically handicapped, the mentally retarded and the culturally deprived are needed in vocational machine tool operation, machine shop, and tool and die making.

6. Cooperation among teachers in developing inter-disciplinary units or courses is encouraged by the proximity, flexibility, and convenience of classrooms and work areas where teachers can plan together and produce materials.
7. Safe and healthful housing should be provided for all students.

8. Mobile equipment, used where practical, with convenient space for storing it, adds to flexibility and often results in more efficient use of space.

9. The effective use of mechanical teaching aids, such as projectors, screens, recorders, and other devices, will depend upon the accessibility and convenience of storage.

10. Movable partitions, screens, folding doors, room dividers and portable furnishings and equipment can help in adjusting space requirements to meet specific needs.

11. Accessible convenient outdoor space adds to the flexibility of the department and can sometimes be effectively used to strengthen the educational program, as well as aid materials handling.
PART II

THE INSTRUCTIONAL PROGRAM

In Part II of the guide, important instructional program decisions with respect to basic program features, objectives, and needed information on occupational preparation programs to be housed are recorded.

BASIC PROGRAM FEATURES

Basic features of the educational program are determined greatly by a school or department's educational philosophy. A philosophy of education provides a base from which program objectives and teaching and learning activities designed to meet these objectives can be derived. In the final analysis, it is the kinds of teaching and learning activities to be carried on which should determine facility needs.

In this section, planners have an opportunity to express basic program features which will serve as guidelines for the planned occupational preparation programs in vocational machine tool operation, machine shop, and tool and die making.

Indicate below the relative degree of emphasis to be placed on each of the program features stated by circling the appropriate number. The scale provided for this purpose ranges from 1 for major emphasis, 2 for some emphasis, 3 for slight emphasis, to N for no emphasis. This same scale will be used frequently throughout the planning guide.

1. Purpose of Program

   a. The purpose of the program will be the preparation of students for gainful employment.

   b. The purpose of the program will be the upgrading of students presently employed in vocational machine tool
operation, machine shop, and tool and die making.

c. The purpose of the program will be the preparation of students for entry into further training programs. The nature of this further training is:  

<table>
<thead>
<tr>
<th>1 major emphasis</th>
<th>2 some emphasis</th>
<th>3 slight emphasis</th>
<th>N no emphasis</th>
</tr>
</thead>
</table>

| 1 | 2 | 3 | N |

---

d. Other program purposes:  

1) | 1 | 2 | 3 | N |
2) | 1 | 2 | 3 | N |
3) | 1 | 2 | 3 | N |
4) | 1 | 2 | 3 | N |

---

2. Students  

a. Students will be selected for entrance into the program. The basis for selection will be:  

| 1 | 2 | 3 | N |

---

b. The program will place emphasis on skill acquisition.  

| 1 | 2 | 3 | N |

c. The program will place emphasis on the learning of theory.  

| 1 | 2 | 3 | N |

d. Students will have freedom of movement and access to learning materials.  

| 1 | 2 | 3 | N |

e. Students will be encouraged to act independently.  

| 1 | 2 | 3 | N |

f. Students will be provided with cooperative work experience outside the school.  

| 1 | 2 | 3 | N |

g. Other basic program features in relation to students:  

1) | 1 | 2 | 3 | N |
2) | 1 | 2 | 3 | N |
3) | 1 | 2 | 3 | N |
4) | 1 | 2 | 3 | N |

---

3. Instruction  

a. The instructional approach will be single discipline (machine trades) as opposed to inter-disciplinary  

| 1 | 2 | 3 | N |
(machine trades, sheet metal, welding, etc.). If not a single discipline approach, describe the inter-disciplinary approach and the disciplines involved:

b. Cooperative or team instruction will be used. If this mode of instruction is to be extensively emphasized, describe in general terms:

c. Community resources will be utilized in instruction. If a high emphasis is to be placed on use of community resources, describe some of these resources:

d. Instructional flexibility is required. If a high emphasis is to be placed on instructional flexibility please describe the kinds of flexibility desired:

4. Other basic program features important to the planned instructional program are:
   a. 
   b. 
   c. 
   d. 

EDUCATIONAL OBJECTIVES

Educational objectives are often identified as goals or outcomes of the educational program. An objective should describe a desired educational outcome that is consistent with a school's philosophy.

Objectives are important to both the planner and the architect since they determine the school's program and related activities. They provide important implications which when translated into facilities can both enhance as well as adequately house the desired program. Thus it becomes imperative to establish clearly the
program objectives prior to embarking on educational specifications and subsequent building design.

The purpose of this part of the guide is to bring together these elements in a way to provide direction and understanding for both the planner and the architect. Space is provided below to indicate degree of emphasis by circling the appropriate number for each of the objectives, and to list additional objectives. The scale provided for this stated purpose ranges from 1 for major emphasis down to N for no emphasis.

1. To prepare individuals for entry into gainful employment.
   1 2 3 N

2. To upgrade students presently employed in this vocational field.
   1 2 3 N

3. To update students desiring to return to the vocational field after employment in another vocation.
   1 2 3 N

4. To motivate and recruit capable and qualified students to enroll in post-high school institutions.
   1 2 3 N

5. To provide pre-professional educational training for students who plan to enter colleges and universities.
   1 2 3 N

6. To develop in students specific and measurable knowledge in dimensional and operational computations which include:
   a. Measuring instruments 1 2 3 N
   b. Applied algebra 1 2 3 N
   c. Applied geometry 1 2 3 N
   d. Shop trigonometry 1 2 3 N
   e. Logarithms 1 2 3 N
   f. Slide rule 1 2 3 N
   g. ___________________________ 1 2 3 N
   h. ___________________________ 1 2 3 N
7. To develop in students specific and measurable knowledge and skills in blueprint reading and shop drawing which include:

   a. Symbols and abbreviations  1 2 3 N
   b. American standard lines for drawings  1 2 3 N
   c. Views and sections  1 2 3 N
   d. Freehand detail drafting  1 2 3 N
   e. Orthographic projection  1 2 3 N
   f. Pictorial drawing  1 2 3 N
   g. Dimensioning  1 2 3 N
   h. _________________________________  1 2 3 N
   i. _________________________________  1 2 3 N

8. To develop in students specific and measurable knowledge and skills in operation of machine tools which include:

   a. Lathes  1 2 3 N
   b. Shapers  1 2 3 N
   c. Milling machines  1 2 3 N
   d. Grinders  1 2 3 N
   e. Drill presses  1 2 3 N
   f. Planers  1 2 3 N
   g. Boring machines  1 2 3 N
   h. Sawing and filing machines  1 2 3 N
   i. Broaching machines  1 2 3 N
   j. Gear machines  1 2 3 N
   k. Turret lathes and automatics  1 2 3 N
   l. Tracer machines  1 2 3 N
1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis

m. Numerical control machines

n. ________________________

o. ________________________

9. To develop in students specific and measurable knowledge and skills in bench work which includes:

a. Hand tools
b. Soldering
c. Measuring tools
d. ________________________
e. ________________________

10. To develop in students specific and measurable knowledge and skills in inspection which includes:

a. Line measurement
b. Fixed gages
c. Thread gages
d. Dial gages and test indicators
e. Gage blocks
f. Comparison measurement
g. Angular measurement
h. Optical instruments
i. Surface roughness measurements
j. Micrometers and verniers

- **b.** ______________________ 1 2 3 N
- **c.** ______________________ 1 2 3 N
- **d.** ______________________ 1 2 3 N

**PROGRAM CONTENT AREAS**

The educational program in vocational machine tool operation, machine shop, and tool and die making should be designed to meet its established objectives. All decisions made with respect to educational programs should be consistent with established philosophy and objectives.

Instruction in the machine trades can be subdivided into three major categories of machine tool operation, machine shop, and tool and die making. While much overlapping occurs, increased skill and knowledge is required in progressing from the operation of a single machine tool to the performance of the total functions of a machinist. The tool and die maker requires the highest degree of skill and knowledge of the individuals employed in the machine trades. This guide is designed to assist in the planning of facilities for any or all of the above mentioned machine trades.

In the courses or units of instruction the emphasis is on the acquisition of skill, knowledge, habits, and attitudes desirable for employment in industry in the machine trades.

Learning activities and experiences are organized to enable students to develop competencies essential for entry into their chosen occupations, to further training, or to acquire new or additional competencies for upgrading in the trade.

Instruction in vocational machine tool operation, machine shop, and tool and die making is usually given in discrete subject areas or courses. The subject matter is coordinated with appropriate shop, laboratory and/or work experience.

Instructional programs in machine trades can be classified under two broad headings or content areas of 1) Machine Shop Theory and Practice and 2) Blueprint Reading and Shop Drawing. These two content areas relate directly to the field of vocational machine tool operation, machine shop, and tool and die making and can be used to categorize most occupational preparation programs in the field. Students in these programs often elect or are required to take courses in subjects such as English, social studies, and physical
education which are available to all students. For example, an eleventh grade student in training to become a machinist might take the following courses or units:

<table>
<thead>
<tr>
<th>Courses</th>
<th>Content Areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine Shop Theory and Practice I</td>
<td>Machine Shop</td>
</tr>
<tr>
<td>Related Mathematics I</td>
<td>Academic</td>
</tr>
<tr>
<td>English</td>
<td>Academic</td>
</tr>
<tr>
<td>Social Studies</td>
<td>Academic</td>
</tr>
<tr>
<td>Related Blueprint Reading I</td>
<td>Blueprint Reading and Drawing</td>
</tr>
<tr>
<td>Physical Education I</td>
<td>Physical Education</td>
</tr>
</tbody>
</table>

The concept of content areas is used in this planning guide because different instructional content areas usually call for different kinds of instructional facilities and equipment. Of the content areas for the machine trades only machine shop theory and practice require unique space and equipment, the other related subjects and general education subjects utilize equipment and space provided for other common or specialized curricula. In this guide complete development will be provided for the content area 1) Machine Shop Theory and Practice and 2) Blueprint Reading and Shop Drawing.

The following content areas which usually call for specialized instructional areas are used in this guide:

- Machine Shop Theory and Practice
- Blueprint Reading and Shop Drawing
- Academic (e.g., English, mathematics, science)
- Science (e.g., physics, chemistry, and biology)
- Music (e.g., band, chorus, and choir)
- Physical Education
- Other (this category is used in the event that a course or unit to be offered will not fit into any of the above content areas)

PLANNING INSTRUCTIONAL AREAS BY MODES OF LEARNING

The planning of instructional areas for vocational facilities can be substantially aided through utilization of the concept of modes of learning. Learning can be divided into three distinct modes--reaction learning, interaction learning, and action learning.

Reaction learning, which usually occurs in an instructional area designed for lecture and demonstration, is characterized by activities which tend to be largely teacher-centered with the central focus on instruction. Student activities include listening, observing, and the taking of notes. Group size for reaction learning may vary from one to a very large number as the number of students has little effect on the learning experience if proper technological aids such as television, microphones, projectors and the like are used. Because student activities are relatively passive in reaction learning, a short optimum time span is normally employed.
Lecture/demonstration areas are usually designed to be used commonly for reaction learning in all subject areas. For example, in planning facilities for two diverse occupational preparation programs for the machine trades such as Machine Shop Theory and Related Mathematics, the planner should bear in mind that reaction learning for students in both programs can occur in the same kind of instructional area. This means that facility planning should be done in terms of the total program rather than its fractional parts. In many instances, lecture/demonstration areas can be shared not only by occupational preparation programs within vocational service areas, but also by distinct and dissimilar service areas such as machine trades and distributive education. Where a great deal of facility sharing is planned, the planner should consider the relative merits of optimum location within the total building and the advisability of clustering various instructional areas.

Interaction learning, which usually occurs in a seminar-type instructional area, is characterized by both teacher and learner activity participating as both listener and speaker. This mode of learning, of course, must occur in groups; however, sociological research suggests these groups should not exceed fifteen persons for optimum effectiveness. Active interaction of all students generally requires a longer time span than reaction learning.

Seminar areas, like lecture/demonstration areas, are usually designed for common use by all vocational service areas. The same considerations which were outlined for lecture/demonstration areas also apply to seminar areas.

A modified seminar-type instructional area is frequently utilized for both interaction learning and reaction learning in classes of the machine trades sequence due to the small numbers of students in the instructional groups.

Action learning, which usually occurs in a shop or laboratory-type instructional area, is characterized by small group or individual student learning by doing. Although learning is done on an individual basis, students may, nevertheless, function in a group setting. Very often in more flexible types of educational programs, students may also be scheduled for shop or laboratory work on an individual basis. Since action learning involves overt action by individual students, the teacher's role is that of a demonstrator of correct procedures, supervisor for, and consultant to the learner.

Shop and laboratory instructional areas, of necessity, are more highly specialized than lecture/demonstration areas used for reaction learning and seminar areas used for interaction learning. However, some basic shop or laboratory equipment may need to be provided for in both lecture/demonstration areas and seminar areas to expedite the learning process. Since shop and laboratory areas are designed to facilitate the learning of specific vocational and technical skills, there is less likelihood of sharing such areas by students in various other vocational training programs. However, where common elements of shop and laboratory instruction are found among various vocational training programs, consideration should be
given to the possibility of sharing and clustering the shop and laboratory facilities. For this to work effectively consideration needs to be given to the philosophy of the vocational educators involved.

NOTE: THE FOLLOWING SECTIONS OF THE GUIDE (PAGES 18-37) ARE DESIGNED TO ASSIST IN MAKING MATHEMATICAL DETERMINATIONS OF THE NUMBER OF VARIOUS KINDS OF INSTRUCTIONAL AREAS NEEDED TO HOUSE THE DESIRED PROGRAM. IF THE NUMBERS OF INSTRUCTIONAL AREAS REQUIRED ARE ALREADY KNOWN, PLANNERS MAY NOW PROCEED DIRECTLY TO FORM E, PAGE 39. IF, HOWEVER, MATHEMATICAL DETERMINATIONS ARE TO BE MADE, ALL FORMS SHOULD BE COMPLETED AS ACCURATELY AS POSSIBLE.

OCCUPATIONAL PREPARATION PROGRAMS TO BE OFFERED

Information on each of the machine trades occupational preparation programs to be offered is entered on a separate Form A which follows. Directions for completing Form A(s) appear on pages 18 and 19. To assist planners, a sample, completed Form A is given on page 20. Data entered in the sample Form A are for a machinist training program. The data were assumed for purpose of illustration. Some other occupational preparation programs commonly offered in the vocational service area of the machine trades include lathe operator, turret lathe operator, milling machine operator, shaper operator, grinder operator, quality assurance inspector, mold maker, tool maker, and die maker.

Form A for each occupational preparation program should be filled out as completely as possible. However, it is realized, for example, that a machine trades instructor completing Form A may be unaware of time allotments and methods of instruction in other subject areas. If such is the case, the instructor can only supply information on courses within the content areas of the machine trades.
INSTRUCTIONS FOR COMPLETING FORM A
BASIC PROGRAM INFORMATION

Item 1
Occupational Program--Enter here the name of the occupational program to be offered, e.g., machinist, lathe operator, milling machine operator, tool and die maker, etc. Complete a separate Form A for each occupational program to be offered.

Item 2
Yearly Enrollment--Enter here the projected maximum number of students to be enrolled yearly in the program.

Item 3
Nature of Students--Underline all categories which apply to the students to be enrolled in the program.

Item 4
Weeks of Instruction per year--Enter here the number of weeks per year the school will be open for instruction, e.g., 36 weeks, 52 weeks.

Item 5
Total Weekly Periods or Modules--Enter here the total number of periods or modules (if modular scheduling is to be used) per week available for instructional purposes for each student. Do not count periods or modules scheduled for lunch and other non-instructional purposes.

Column 6
Course of Instruction--List the courses or units of instruction to be offered either on a required or elective basis for the occupational program.

Column 7
Content Area--Opposite each course of instruction, enter the appropriate content area as presented on page 15.

Column 8
Total Course Enrollment--Opposite each course of instruction, enter the projected maximum student enrollment.

Column 9
Maximum Group Size for Reaction Learning--Opposite each course or unit of instruction, enter the maximum group size in number of students for reaction (lecture/demonstration) type learning.
Column 10
*Estimated Weekly Periods or Modules of Reaction Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to reaction learning per student.

Column 11
*Weekly Group-Periods or Modules (Lecture/Demonstration)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 9 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 10.

Column 12
*Maximum Group Size for Interaction Learning*—Opposite each course or unit of instruction, enter the maximum group size in number of students for interaction (seminary) type learning.

Column 13
*Estimated Weekly Periods or Modules of Interaction Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to interaction learning per student.

Column 14
*Weekly Group-Periods or Modules (Seminar)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 12 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 13.

Column 15
*Maximum Group Size for Action Learning*—Opposite each course or unit of instruction, enter the maximum group size in number of students for action (shop/laboratory) type learning.

Column 16
*Estimated Weekly Periods or Modules of Action Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to action learning per student.

Column 17
*Weekly Group-Periods or Modules (Shop/Laboratory)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 15 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 16.
**SAMPLE FORM A**

**BASIC PROGRAM INFORMATION**

1. **Occupational Program**: Machinist

2. **Yearly Enrollment**: 60

3. **Nature of Students** (underline appropriate categories): a. day school; b. night school; c. school age; d. adults; e. males; f. females; other (specify)

4. **Weeks of Instruction per year**: 36

5. **Total Weekly Periods or Modules**: 30

PART III

DISTINCT TYPES OF INSTRUCTIONAL AREAS
AREAS TO BE PROVIDED

QUANTITATIVE FACILITY NEEDS

The number of instructional areas to house the programs described in Part II (The Instructional Program) are recorded in this section of the guide.

As indicated in Part II, there are three principal types of instructional areas used to accommodate educational programs. They are:

- Lecture/demonstration areas--used principally for group reaction learning;
- Seminar areas--used principally for group interaction learning; and
- Shop/laboratory areas--used principally for group or individual action learning.

In addition to these instructional areas, there are, of course, other school-wide auxiliary areas such as instructional materials centers, language laboratories, gymnasiums, and auditoriums which are part of the overall school plan. Requirements for such facilities are calculated as a part of total school planning and are not made in this guide.

It is recommended that facility needs, including occupational programs such as vocational machine tool operation, machine shop, and tool and die making, be made on a school-wide basis in order to provide planners with a balanced picture of the building to be constructed and in order to provide economy and convenience through the sharing and clustering of various kinds of facilities and equipment.

Forms B, C, and D can be used to compute the number of lecture/demonstration, seminar, and shop/laboratory areas required, respectively for the planned programs in the machine trades. The use of these forms requires some mathematical ability. Personnel responsible for completing the guide may want to utilize the services of individuals with this special competence.
Results of the computations on Forms B, C, and D are entered on Form E which is a summary of total instructional area requirements for vocational machine tool operation, machine shop, and tool and die making.

In the event that instructional area requirements are already determined (e.g., it has been decided that one combination shop/laboratory and lecture/demonstration area will be provided) the information can be recorded directly on Form E without making the computations on Forms B, C, and D.

It is strongly recommended that appropriate personnel be utilized to ensure that the number of instructional areas is sufficient to meet program requirements. After the number of each type of instructional area is determined and recorded on Form E, information can then be recorded in the following sections of the guide concerning the nature of these instructional areas.
INSTRUCTIONS FOR COMPLETING FORM B
LECTURE/Demonstration AREA REQUIREMENTS BY CONTENT AREAS

Column 1
Content Area--Content areas are listed in Column 1.

Column 2
Total Enrollment--To obtain total enrollment for content areas, find the total enrollment for each content area as indicated in Columns 7 and 8 of Form A(s) for all occupational programs.

Column 3
Maximum Group Size--Opposite each content area, enter the maximum group size desired for a lecture/demonstration area to serve the content area (Form A, Column 9).

Column 4
Total Weekly Periods or Modules--Opposite each content area, enter the total periods or modules per week the school will be open for day school instruction. This entry will be identical for all content areas and identical to the number recorded for Item 5, Form A.

Column 5
Total Weekly Reaction Group Periods or Modules--Opposite each content area, enter the total group periods or modules per week to be devoted to reaction learning as indicated in Column 11 of Form A(s) for all occupational programs.

Column 6
Lecture/Demonstration Areas Required--Opposite each content area, enter the quotient of Item 5 divided by Item 4. Round up to the nearest hundredth.

Column 7
Adjusted Lecture/Demonstration Areas Required--To adjust for scheduling difficulties which result in areas being less than 100 percent utilized, multiply the entry in Column 6 by 1.3 and enter the result, rounded up to the nearest hundredth, in Column 7 for each content area.

Column 8
Totals--Since lecture/demonstration areas, unlike shop/laboratory areas, can be utilized by nearly all content areas, the entries in Column 7 can be added for all lecture/demonstration areas with identical maximum group sizes as entered in Column 3. For example, 8a might read 2 lecture/demonstration areas with a student capacity of 50 each.
### SAMPLE FORM B

**LECTURE/DEMONSTRATION AREA REQUIREMENTS BY CONTENT AREAS**

<table>
<thead>
<tr>
<th>Content Area</th>

<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
</tbody>
</table>

(8) Totals (Figures in Column 7 can be added together for areas with same student capacity as entered in Column 3). Round off total to next higher whole number.

- **a.** Lecture/demonstration areas with a student capacity of 30, each.
- **b.** Lecture/demonstration areas with a student capacity of 60, each.
- **c.** Lecture/demonstration areas with a student capacity of 25, each.
- **d.** Lecture/demonstration areas with a student capacity of 30, each.

**Note:** The entries in Column 7 indicate clearly that the lecture/demonstration areas would only be used sparingly by students enrolled in each of the content areas. One possibility might be construction of a lecture/demonstration area with a student capacity of 60 which could be subdivided to meet program requirements of all content areas. Another possibility would be the sharing of lecture/demonstration areas with other students enrolled in various other programs.

SEMINAR AREA REQUIREMENTS BY CONTENT AREAS

Column 1
Content Area--Content areas are listed in Column 1.

Column 2
Total Enrollment--To obtain total enrollment for content areas, find the total enrollment for each content area indicated in Column 7 and 8 of Form A(s) for all occupational programs.

Column 3
Maximum Group Size--Opposite each content area, enter the maximum group size desired for a seminar area to serve the content area (Form A, Column 12).

Column 4
Total Weekly Periods or Modules--Opposite each content area, enter the total periods or modules per week the school will be open for day school instruction. This entry will be identical for all content areas and identical to the number recorded for Item 5, Form A.

Column 5
Total Weekly Interaction Group Periods or Modules--Opposite each content area, enter the total group periods or modules per week to be devoted to interaction learning as indicated in Column 14 of Form A(s) for all occupational preparation programs.

Column 6
Seminar Areas Required--Opposite each content area, enter the quotient of Item 5 divided by Item 4. Round up to the nearest hundredth.

Column 7
Adjusted Seminar Areas Required--To adjust for scheduling difficulties which result in areas being less than 100 percent utilized, multiply the entry in Column 6 by 1.3 and enter the result, rounded up to the nearest hundredth, in Column 7 for each content area.

Column 8
Totals--Since seminar areas, unlike shop/laboratory areas, can be commonly utilized by nearly all content areas, the entries in Column 8 can be added for all seminar areas with identical maximum group sizes or entered in Column 3. For example, 8a might read 2 seminar areas with a student capacity of 20, each.

QUALITATIVE FACILITY NEEDS

In this section, detailed information on the kind of instructional areas required is recorded. Special forms are provided for describing the nature of lecture/demonstration areas, seminar areas, shop/laboratory areas, and auxiliary areas to be provided. For each general type of instructional area required information is sought in the following categories.

1. The relationship of the area to other instructional areas (specialized vs. multi-purpose utilization of space)
2. The number of these kinds of areas needed
3. The activities of students and teachers in the instructional area
4. The spatial relationships within the area and the area's spatial relationships to other instructional areas and the building as a whole
5. The furniture and equipment required for the area
6. The environmental factors required for the area
7. The special utility services required for the area
8. The minimal space requirements for the area
FORM F

DESCRIPTION OF LECTURE/DEMONSTRATION AREA(S) TO BE USED PRINCIPALLY FOR GROUP REACTION LEARNING

1. The lecture/demonstration area(s) should be planned:
   a. As independent unit(s) ________________________________ Yes No
   b. In combination with shop/laboratory area(s) (specify) ____________________________
   c. In combination with seminar area(s) Yes No
   d. As an area within a single multi-purpose space Yes No

2. Number of lecture/demonstration areas required for the desired program regardless of student capacity (See Form E).

3. Student and teacher activities in this space. Indicate the extent to which each of the activities listed below will occur.
   a. Listening to lectures 1 2 3 N
   b. Observing demonstrations 1 2 3 N
   c. Taking notes 1 2 3 N
   d. Viewing films, slides, overhead projections, etc. 1 2 3 N
   e. Viewing closed-circuit television 1 2 3 N
   f. Using computer-assisted instruction 1 2 3 N
   g. __________________________________________ 1 2 3 N
   h. __________________________________________ 1 2 3 N

4. Spatial relationships. Indicate the extent to which the lecture/demonstration area(s) should be accessible to the:
   a. Instructional materials center 1 2 3 N
   b. Building entrance 1 2 3 N
   c. Delivery area 1 2 3 N
   d. Other instructional areas
      1) ________________________________ 1 2 3 N
      2) ________________________________ 1 2 3 N
      3) ________________________________ 1 2 3 N
   e. Other building areas
      1) ________________________________ 1 2 3 N
      2) ________________________________ 1 2 3 N
      3) ________________________________ 1 2 3 N

5. Furniture and equipment
   a. Student seating
      1) Individual desks and chairs P A NA*

   *Code: P = Preferred; A = Acceptable; NA = Not Acceptable. This is used frequently throughout this part of the guide.
**FORM F**

1) **Number of desks and chairs required**
   - a) Number of desks and chairs required
   - b) Provision for storage

2) **Permanent-type desks**
   - a) Number required
   - b) Provision for storage

3) **Desk and chair combination**
   - a) Number required
   - b) Provision for storage

4) **Tables and chairs**
   - a) Number of tables required
   - b) Number of chairs required
   - c) Provision for storage

5) **Auditorium-type seating**
   - a) Number of seats required
   - b) Stage
     - Yes
     - No

b. **Stage**
   - 1) Permanent type
   - 2) Portable type

   The approximate area in square feet desired

   - 3) Provision for storage
   - Yes
   - No

   - c) Sound amplifying system
   - 1) Permanent type
   - 2) Portable type
   - 3) Combination projection screen, chalkboard, and tackboard

   - d) Controls for regulating light intensity
   - 1) Permanent type
   - 2) Portable type

   - e) Lectern
     - 1) Permanent type
     - 2) Portable type
     - 3) Provision for storage

   - f) Projection screen
     - 1) Built-in type
     - 2) Portable type
     - 3) Combination projection screen, chalkboard, and tackboard
     - 4) Approximate dimensions

   - 5) Provision for storage

   - g. Other equipment required for lecture/demonstration area(s) are:
     - 1) __________________________
     - 2) __________________________
     - 3) __________________________
     - 4) __________________________

   - **Provision for storage**
     - Yes
     - No

6. **Environmental factors**

   a. **Aesthetic**. Factors to be considered in the aesthetic domain are colors, light, style of architecture, design and the like. Indicate any special aesthetic considerations important to the planning of the lecture/demonstration area(s).

   - b. **Aerial**. Factors to be considered in this category include air temperature, radiant temperature, relative humidity, and ventilation. Indicate any special considerations important to the planning of the lecture/demonstration area(s).
FORM F

c. Visual. A properly controlled and balanced visual environment is important. The visual environment affects such things as accuracy in perception, attention to tasks, and speed of performance. Indicate any special factors which should be taken into account in planning the visual environment of the lecture/demonstration area(s).

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

d. Sonic. Factors to be considered in this category include such things as acoustical requirements and sound systems. Indicate any special consideration important to the planning of the lecture/demonstration area(s).

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

e. Safety. In planning a school building, safety for students and teachers is of prime concern. Indicate any special safety considerations which have implications for design of the lecture/demonstration area(s).

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

7. Vertical instructional surfaces

a. Chalkboard
   1) Wall-mounted
   2) Number of lineal feet
   3) Portable
   4) Provision for storage

b. Tackboard
   Number of lineal feet

c. Pegboard
   Number of lineal feet

________________________________________________________________________

________________________________________________________________________

8. Special utility services required

a. Electricity
   1) Projection equipment
   2) Sound amplifying equipment
   3) Electrical needs for other equipment (specify)
      a) __________________________
      b) __________________________
      c) __________________________
      d) __________________________

   Yes No
   P A NA
   P A NA
   P A NA

b. Other utility needs for the lecture/demonstration area
   1) __________________________
   2) __________________________
   3) __________________________
   4) __________________________

________________________________________________________________________
FORM F

9. The minimal space requirement in square feet for each lecture/demonstration area. (Optional) (The planner should be aware of any state or local regulation or recommendations concerning floor space requirements.)

10. Other important factors to be considered in the planning of the lecture/demonstration area(s) are:

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________
1. The seminar area(s) should be planned:
   a. As independent unit(s) Yes No
   b. In combination with shop/laboratory area(s) (specify)
   c. In combination with lecture/demonstration area(s)
   d. As an area within a single multi-purpose space Yes No

2. The number of seminar area(s) required for the desired program regardless of student capacity (See Form E)

3. Student and teacher activities in this space. Indicate the extent to which each of the activities listed below will occur.
   a. Small group discussing 1 2 3 N
   b. Viewing films, slides, overhead projections, etc. 1 2 3 N
   c. Demonstrating 1 2 3 N
d. Reporting 1 2 3 N
e. Working on projects or jobs 1 2 3 N
f. ____________________________________________ 1 2 3 N
g. ____________________________________________ 1 2 3 N

4. Spatial relationships. Indicate the extent to which the seminar area(s) should be accessible to the:
   a. Instructional materials center 1 2 3 N
   b. Building entrance 1 2 3 N
c. Delivery area 1 2 3 N
d. Other instructional areas
   1) ________________________________ 1 2 3 N
   2) ________________________________ 1 2 3 N
   3) ________________________________ 1 2 3 N
e. Other building areas
   1) ________________________________ 1 2 3 N
   2) ________________________________ 1 2 3 N
   3) ________________________________ 1 2 3 N

5. Furniture and equipment
   a. Seminar table
      1) Number required  2) Seating for how many persons
      3) Permanent type
      4) Portable type
      5) Provision for storage Yes No
   b. Chairs
      1) Number required
      2) Straight-back type
      3) Folding type
FORM G

4) Provision for storage
   Yes   No

c. Other equipment required for seminar area(s) are:

   1) ______________________
   2) ______________________
   3) ______________________

6. Environmental factors

   a. Aesthetic. Factors to be considered in the aesthetic domain are colors, light, style of architecture, design and the like. Indicate any special aesthetic considerations important to the planning of seminar areas.

   b. Aerial. Factors to be considered in this category include air temperature, radiant temperature, relative humidity, and ventilation. Indicate any special considerations important to the planning of the seminar area(s).

   c. Visual. A properly controlled and balanced visual environment is important. The visual environment affects such things as accuracy in perception, attention to tasks, and speed of performance. Indicate any special factors which should be taken into account in planning the visual environment of the seminar area(s).

   d. Sonic. Factors to be considered in this category include such things as acoustical requirements and sound system. Indicate any special considerations important to the planning of the seminar area(s).

   e. Safety. In planning a school building, safety for students and teachers is of prime concern. Indicate any special safety considerations which have implications for design of the seminar area(s).
FORM G

7. Vertical instructional surfaces

a. Chalkboard
   1) Wall-mounted
   2) Number of lineal feet
   3) Portable
   4) Provision for storage
       Yes No

b. Tackboard
   Number of lineal feet
       P A NA

c. Pegboard
   Number of lineal feet

8. Special utility services required

a. Electricity
   1) Projection equipment
   2) Sound amplifying equipment
   3) Electrical needs for other equipment
       specify
       a) __________________
       b) __________________
       c) __________________
       d) __________________

b. Other utility needs for the seminar area(s)
   1) __________________
   2) __________________
   3) __________________
   4) __________________

9. Minimal space requirement in square feet for each seminar area.
   (Optional) ____________ (The planner should be aware of any
   state or local regulations or recommendations concerning floor
   space requirements.)

10. Other important factors to be considered in the planning of the
    seminar area(s) are:

_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
_________________________________________________________________
FORM H

DESCRIPTION OF MACHINE SHOP THEORY AND PRACTICE
LABORATORY AREA(S) TO BE USED PRINCIPALLY FOR ACTION LEARNING

1. The Machine/Shop/Laboratory Area(s) should be planned:
   a. As independent unit(s) ____________________________ Yes  No
   b. In combination with shop/laboratory area(s) (specify)
   c. In combination with seminar area(s) ____________________________ Yes  No
   d. In combination with lecture/demonstration area(s) ____________________________ Yes  No
   e. As an area within a single multi-purpose space ____________________________ Yes  No

2. Number of machine shop theory and practice laboratory areas required (see Form E) ______

3. Student and teacher activities in various space divisions within the shop/laboratory area(s).
   Indicate the extent to which each activity will occur.

   a. Machine tools space
      1) Machining parts 1 2 3 N
         2) Demonstrating operations 1 2 3 N
         3) ____________________________ 1 2 3 N

   b. Bench space
      1) Hand machining 1 2 3 N
         2) Demonstrating operations 1 2 3 N
         3) ____________________________ 1 2 3 N

   c. Inspection and layout space
      1) Quality assurance inspection 1 2 3 N
         2) Laying out castings and parts 1 2 3 N
         3) ____________________________ 1 2 3 N

   d. Assembly space
      1) Completing sub-assemblies 1 2 3 N
         2) Completing assemblies 1 2 3 N
         3) ____________________________ 1 2 3 N

   e. Welding and metal fabrication space
      1) Joining by gas welding 1 2 3 N
         2) Joining by arc welding 1 2 3 N
         3) Spot welding parts 1 2 3 N
         4) Fabricating steel sections 1 2 3 N
         5) ____________________________ 1 2 3 N

   f. Heat treating space
      1) Case hardening parts 1 2 3 N
         2) Hardening parts in heat treating furnace 1 2 3 N
         3) Quenching 1 2 3 N
         4) ____________________________ 1 2 3 N

   g. Demonstration space
      1) Other than a-2, b-2 above 1 2 3 N
         2) ____________________________ 1 2 3 N
FORM H

h. Planning space
1) Planning procedures and operations
   1 2 3 N
2) Research related to machining
   1 2 3 N
3) ____________________________
   1 2 3 N

i. Office space
1) Counseling students
   1 2 3 N
2) Instructor's planning activities
   1 2 3 N
3) ____________________________
   1 2 3 N

j. Tool room space
1) Checking tools in and out
   1 2 3 N
2) ____________________________
   1 2 3 N

k. Stock storage space
1) Selecting and cutting-off stock
   1 2 3 N
2) ____________________________
   1 2 3 N

l. Combustible storage space
1) Storing materials of combustible nature
   1 2 3 N
2) ____________________________
   1 2 3 N

m. Classroom space
1) Conducting related subjects classes
   1 2 3 N
2) ____________________________
   1 2 3 N

n. Other space(s) (specify)
1) ____________________________
   1 2 3 N
2) ____________________________
   1 2 3 N
3) ____________________________
   1 2 3 N

4. Spatial relationships. Indicate the extent to which spaces should be accessible to each other.

a. Within the machine shop/laboratory area(s)
1) Machine tools space to:
   a) Bench space
   1 2 3 N
   b) Inspection and layout space
   1 2 3 N
c) Assembly space
   1 2 3 N
d) Welding and metal fabrication space
   1 2 3 N
e) Heat treating space
   1 2 3 N
f) Demonstration space
   1 2 3 N
g) Planning space
   1 2 3 N
h) Office space
   1 2 3 N
i) Tool room space
   1 2 3 N
j) Stock storage space
   1 2 3 N
k) Combustible storage space
   1 2 3 N
l) Classroom space
   1 2 3 N
m) Other (specify)
   1 2 3 N

   ____________________________
   1 2 3 N

   2) Bench space to:
   a) Inspection and layout space
   1 2 3 N
   b) Assembly space
   1 2 3 N
c) Welding and metal fabrication space
   1 2 3 N
d) Heat treating space
   1 2 3 N
e) Demonstration space
   1 2 3 N
f) Planning space
   1 2 3 N
g) Office space
   1 2 3 N
h) Tool room space

DESCRIPTION OF BLUEPRINT READING AND SHOP DRAWING LABORATORY AREA(S) TO BE USED PRINCIPALLY FOR ACTION LEARNING

1. The blueprint reading and shop drawing area(s) should be planned:
   a. As independent unit(s) Yes No
   b. In combination with shop/laboratory area(s) (specify)
   c. In combination with seminar area(s) Yes No
   d. In combination with lecture/demonstration area(s) Yes No
   e. As an area within a single multi-purpose area(s) Yes No

2. Number of blueprint reading and shop drawing laboratory areas required (see Form E)

3. Student and teacher activities in various space divisions within the blueprint reading and shop drawing area(s). Indicate the extent to which each activity will occur.
   a. Blueprint reading space
      1) Studying symbols, specifications and blueprints 1 2 3 N
      2) Discussing elements of blueprints 1 2 3 N
      3) Solving problems involving blueprints 1 2 3 N
      4) _________________________________ 1 2 3 N
      5) _________________________________ 1 2 3 N
   b. Freehand sketching space
      1) Sketching views of machine parts 1 2 3 N
      2) Discussing sketches of machine parts 1 2 3 N
      3) _________________________________ 1 2 3 N
      4) _________________________________ 1 2 3 N
   c. Shop drawing space
      1) Planning shop drawings of machine parts 1 2 3 N
      2) Making orthographic projections 1 2 3 N
      3) Making pictorial drawings 1 2 3 N
      4) _________________________________ 1 2 3 N
   d. Blueprinting space
      1) Making blueprints of tracings 1 2 3 N
      2) _________________________________ 1 2 3 N

4. Spatial relationships. Indicate the extent to which spaces should be accessible to each other.
   a. Within the blueprint reading and shop drawing area(s):
      1) Blueprint reading space to:
         a) Freehand sketching 1 2 3 N
         b) Shop drawing 1 2 3 N
         c) Blueprinting 1 2 3 N
         d) Classroom or related space 1 2 3 N
         e) Storage space 1 2 3 N

      6) 

10. Other important factors to be considered in the planning of the blueprint reading and shop drawing area(s) are:
Other important factors to be considered in the overall planning and design of instructional areas for the planned vocational machine tool operation, machine shop, and tool and die making program(s) are:

Contributors to this publication were teachers, supervisors, administrators, architects, engineers, school board members, and school plant planning specialists. In addition to background material on school house construction, the book deals with specific topics including school surveys, analysis and computation of space and facility needs, enrollment projections, building designs, site selection, finance, and building maintenance and operation. Many pictures and illustrations are found, along with sample forms and outlines, which can be used in the facility planning process. No special consideration is given to unique problems faced in the planning for vocational and technical education facilities.

A textbook on overall planning procedures for new and improved school facilities. The typical topics (school surveys, building planning, site selection and acquisition, architectural planning, contracting for construction, and the equipping and furnishing of buildings) are covered. The only mention of vocational schools is on page 270 where the author quotes from another source:

Vocational training should be de-emphasized in the schools since this training often becomes obsolete before it can be used; also, special "trade" and "vocational" schools should be discontinued, unless the vocational curriculum is liberal in approach and broad in character. Such schools are often used as dumping grounds for students who are not wanted elsewhere and often more than custodial care is provided for them. When more is provided, the skills taught are frequently too partial in nature.
Conrad, M. J. Four Steps to New Schools. Columbus, Ohio: Educational Administration and Facilities Division of the Bureau of Educational Research and Service. The Ohio State University.

A book prepared for the inexperienced school planner. The author emphasizes that a school building is an educational tool and should be designed to do the job they are intended to do. The four steps discussed are: 1) district-wide building survey, 2) educational planning, 3) architectural planning and construction, and 4) moving in and settling down. A glossary of important terms used in plant planning is located in the back of the book.

A compilation of references in the following categories: general references; periodicals; overview of school plant field, district wide building survey; educational planning; the architect and his work; moving in and settling down; and related topics.

This manual is intended to assist officials of school districts who are planning programs for maximum use of school properties and who must develop policies and regulations for efficient management of such programs. Various schedules of facility use are illustrated for nine different school systems.

This work is designed to meet the needs of three distinct groups interested in providing educational facilities. Report A: "A Guide for Policy Makers" is directed to boards, administrators, planning committees, and institutional planners. Report B: "A Guide for the Design of Professions" is designed for architects, planners, and design specialists and planning committees; and Report C: "A Technical Guide" is intended for design-architects, engineers, equipment and furniture suppliers, and media specialists.

A basic reference on school plant planning and construction for use by superintendents, school board members, school plant planners, state department of education personnel, local school system officials, collegiate institutions, architects, lay advisory groups, and graduate students. Major topics covered are: planning and programming
educational plants; spaces and equipment for learning; non-instructional systems; space organization and economy and resources. Much attention is given to plant planning through a description of a survey technique used to determine and satisfy school plant needs for a community. Site selection, kinds of instructional spaces, sonic, thermal, and visual environments, and best use of natural and plant resources are also treated.

North Carolina. Department of Public Instruction. A Digest of Educational Planning. Raleigh.

The contents of this book include a description of what educational planning is, when it is done, who does it, and how it is done. The three steps of planning are identified as 1) identification and analysis of educational and facility needs, 2) adapting and implementing plant improvement programs, and 3) completing and evaluating a process of the educational planning.

Basic principles of school design is the thrust of this publication. It focuses on the interrelationship of patterns of school activities, organization of activities on the site, design potentials for various sites, and the building design data necessary for communicating the school's needs to the architect.

This publication seeks to suggest which learning functions can be served electronically to symbolize the nature and progressive complexity of each electronic system, and finally to estimate budgets which will provide for adequate systems in relation to engineering and warranty costs.

A comprehensive textbook on the administration of the school plant program. The book is organized into three major parts: Part I--"Policy Decisions" deals with school building needs studies and long-range planning; Part II--"Program Recommendations" deals with local study of plant needs, evaluation of existing plant, determination of additional plant needs, site selection and development, and the preparation of educational specifications. Part III--"Project Administration" is concerned with the financial aspects of a building program and with public relations. There is a brief mention of the objectives of vocational education as contrasted with the objectives of general education on page 12.

This book deals with the cost of a schoolhouse and the process of planning and financing it. It provides median costs for various building elements, designates individual responsibilities in process of building, and discusses arrangement of space and environmental factors.

VOCATIONAL-TECHNICAL FACILITY PLANNING

The purpose of this publication is to reduce the broad principles and processes of school plant planning to those most applicable to vocational and practical arts education. Effective techniques for developing educational specifications are suggested. The committee provides a sequential treatment of program and administrative considerations, desired space and educational program, special site arrangement features, special physical aspects of building, and the financial requirements for the project.

A study of related literature on programmed instruction, instructional films, instructional television, and learning from various instructional media. It analyzes new instructional media approaches used at North Carolina's Fundamental Learning Laboratories System, and the integrated experience approach at Oakland Community College.

A general guide that describes important steps to be followed in the planning for and construction of vocational and technical education facilities. Important topics covered are: the impact of the Vocational Education Act of 1963; surveys of area educational needs; use of consultant services; basic planning considerations; educational specifications; general planning; and school construction cost and outlay. Sample floor plans and picture illustrations of vocational schools are included.

An account of the procedures followed in the establishment of a technical college within a period of less than 90 days. The entire planning process and implementation is described along with the PERT technique which was applied. The author concluded the PERT (Program Evaluation and Review Technique) was effective in assisting the planners in reaching their objectives within a short period of time.

The pamphlet emphasizes the need for a total flexibility concept in school building. Consideration is given to the use of building components to provide flexibility in space, lighting, air-conditioning, sewage system, and the like.

A report on new trends in the construction of vocational education facilities. Among topics covered are occupational clusters, teaching techniques such as micro-teaching and educational television, facilities for handicapped children, educational parks, and unique problems faced by large city school systems. Special consideration is given to maximum utilization of vocational education facilities on an around-the-clock basis.

A report which relates the thinking of six outstanding consultants on various topics relating current trends in vocational-technical education and facility planning. Reviews the work of a local consortium consisting of three Center vocational specialists, three school plant planners, three representatives from the State Department of Education, three local school officials, and three practicing architects in defining problems, clarifying issues, suggesting approaches to organizing planning guides, and establishing guidelines for a series of facility planning guides in selected vocational and technical subject areas.

A general facility planning guide for programs of vocational education. Principal topics covered include: 1) number of teaching stations, 2) types of teaching stations, 3) equipment needs, and 4) floor areas required. The planning manual also
deals with spatial relationships of teaching facilities and the utilization of auxiliary areas such as libraries, cafeterias, and administrative suites. Planners using the guide are directed to complete checklists and fill-in blanks with the necessary information pertinent to vocational facility planning.

METAL TRADES FACILITY PLANNING

This publication consists of three sections: 1) pre-planning for school shops and facilities, 2) industrial arts laboratories, 3) shop architecture. Part II under the section, "general metals," includes twelve considerations in planning a metals shop. Several of these suggestions have application for machine shop planning.

An excellent volume of material on planning and equipping the school shop. This book describes planning the machine shop in Section VII. Covered under this section are such items as: planning the machine shop, new machine shops, equipping the machine shop, space requirements in the machine shop, and storage problems in the school machine shop. In addition to the treatment for machine shop, this volume also contains sections devoted to such topics as: general shop, automotive, drafting, electricity and electronics, graphic arts, metalworking, woodworking, technician training, purchasing and equipping considerations, and equipment and material suppliers.

This publication contains a section devoted to instructional space which includes shop planning. Covered are such items as: general requirements for shop facilities, vocational trades and industries shops, and industrial arts shops. Other chapters treat such topics as: the planning process, new approaches in secondary education, the general nature of the high school plant, general and service facilities, and the balanced conditioning of spaces for education.

This publication devotes space to instructional facility suggestions, and equipment and supplies. Covered under this section are lists of equipment for drafting laboratory, and also for metals laboratory. Contained in the publication is
information relative to curricula and course outlines for
the various courses of two options of mechanical technology:
1) design option and 2) production option.

Weaver, Gilbert G. Shop Organization and Management. New York,

Included in this book are three chapters significant for
planners of the machine trades, namely: 1) planning the
school shop, 2) making the shop layout, and 3) selection
and purchase of machines, tools, equipment and materials.
In addition, this book provides information relative to
such other subjects as: school construction for vocational
and industrial arts education, comparison of a school shop
with a commercial shop, storage and control of handtools and
materials, and physical conditions in the shop.

Wisconsin. Guidelines for Realistic Facility Planning for Schools
of Vocational, Technical and Adult Education. Madison,
Wisconsin: The State Board of Vocational, Technical and

Included in this publication are suggested guideline standards
for trade and industrial education as well as for the other
main services of vocational and technical education. The
guideline deals with class sizes and space requirements for
each of the services, and the principle divisions of the
services. Other items covered in the publication are:
procedure for planning facilities, planning a vocational
education facility, a check list for facility planning, and
related topics.
