This 14th in a series of guides for planning facilities for educational programs is intended for use in the preparation of educational specifications for facilities for dental hygiene programs. Designed for use by those responsible for planning facilities, the guide can also be used for instructional purposes in universities, colleges, seminars, and institutes. Pivotal questions about the educational program to be offered are posed, and the answers to these bear directly on the numbers and kinds of instructional areas needed to meet the program requirements. Much of the material is presented in checklist format which allows for consideration of alternatives in facility planning. Part I is a discussion of the major purpose, underlying assumptions, recent instructional trends, and guiding principles. Part II gives information on dental hygiene training objectives and the kinds of programs which will be organized to implement them. Part III describes the actual spaces desired to house the program. Part IV is an annotated bibliography of reference sources which offer a more detailed treatment of the various phases of facility planning. "A Guide to Systematic Planning for Vocational and Technical Schools" (ED026 537) is a related document. (JK)
The Center for Vocational and Technical Education has been established as an independent unit on The Ohio State University campus with a grant from the Division of Comprehensive and Vocational Education Research, U. S. Office of Education. It serves a catalytic role in establishing consortia to focus on relevant problems in vocational and technical education. The Center is comprehensive in its commitment and responsibility, multidisciplinary in its approach, and interinstitutional in its program.

The major objectives of The Center follow:

1. To provide continuing reappraisal of the role and function of vocational and technical education in our democratic society;

2. To stimulate and strengthen state, regional, and national programs of applied research and development directed toward the solution of pressing problems in vocational and technical education;

3. To encourage the development of research to improve vocational and technical education in institutions of higher education and other appropriate settings;

4. To conduct research studies directed toward the development of new knowledge and new applications of existing knowledge in vocational and technical education;

5. To upgrade vocational education leadership (state supervisors, teacher educators, research specialists, and others) through an advanced study and inservice education program;

6. To provide a national information retrieval, storage, and dissemination system for vocational and technical education linked with the Educational Resources Information Center located in the U. S. Office of Education.

express freely their judgment in professional and technical matters. Points of
view or opinions do not, therefore, necessarily represent official Office of
Education position or policy.
FOREWORD

One of the most fundamental concerns in planning for vocational and technical education facilities is that of assuring that educational requirements dictate the nature of the facilities. Other concerns include planning a sufficiently adaptable and flexible structure to permit needed modifications and programmatic changes over the lifetime of the building. Experiences have shown that adequate manuals and guide materials can provide substantial assistance in planning educational facilities. This document is a guide for planning facilities for occupational preparation programs for dental hygienists. The information recorded in the guide is to be used in the preparation of educational specifications.

The guide lists a series of pivotal questions about the educational program to be offered. The answers to these program questions bear directly on the numbers and kinds of instructional areas needed in the contemplated facilities. After program decisions are recorded, the guide provides for the description of instructional areas needed to meet program requirements. Much of the material is presented in a checklist format which allows for consideration of alternatives in facility planning.

The guide was designed for use by any person or groups of persons responsible for planning dental hygienist facilities. It is anticipated that knowledgeable persons such as dental hygienist instructors, state supervisors, university school plant planners, and local administrators will find the guide a useful planning tool. The guide can also be used for instructional purposes at universities, colleges, seminars, and institutes.

This guide is the fourteenth in a series being developed by The Center. The first thirteen guides developed were in the fields of home economics, machine trades, data processing, business and office occupations, laboratory animal science, electrical technology, automotive services, metallurgy, medical X-ray technology, medical assistants, medical secretaries, dental technology, and dental assistants. All guides follow the general format developed by The Center project staff and M. J. Conrad, head, Administration and Facilities Unit, College of Education, The Ohio State University. Vocational educators should also refer to A Guide to Systematic Planning for Vocational and Technical Schools.

The Center for Vocational and Technical Education, The Ohio State University, worked cooperatively with James D. MacConnell, Frank Brunetti, Joseph Hannon, Edwin Rios, and Clarke Schiller of the School Planning Laboratory, School of Education, Stanford University, in preparing this planning guide. Center project staff members were Richard F. Meckley, Ivan E. Valentine, and Zane McCoy.

The Center is grateful to the many individuals and groups whose assistance and suggestions led to the successful conclusion of the project.

Robert E. Taylor, Director
The Center for Vocational and Technical Education

A GUIDE FOR PLANNING FACILITIES FOR
OCCUPATIONAL PREPARATION PROGRAMS
FOR DENTAL HYGIENISTS
PART I
INTRODUCTION

PURPOSE OF GUIDE

The major purpose of this guide is to develop the necessary information for the writing of educational specifications to house dental hygiene programs.

In addition to the major purpose of providing important and comprehensive information to be incorporated in educational specifications, the guide is also designed to:

- Assist planners in the formation of creative housing solutions for desired educational programs.
- Prevent important considerations from being overlooked in the facility planning process.
- Encourage logical and systematic facility planning.

ORGANIZATION OF GUIDE

The facility planning guide is organized under four major headings or parts:

- Part I (Introduction) is a discussion of the major purpose, the underlying assumptions, recent instructional trends, and the guiding principles.
- Part II (The Instructional Program) gives important information on dental hygiene training objectives and the kinds of programs which will be organized to implement them.
- Part III (Distinct Types of Instructional Areas to be Provided) describes in detail the actual spaces desired to house the program.
- Part IV is an annotated bibliography of reference sources which offer a more detailed treatment of the various phases of facility planning.
UNDERLYING ASSUMPTIONS

Important assumptions were made in the preparation of this guide. These were:

- Major educational program decisions have or are being made. Content of instruction has been determined through educational surveys, advisory committees, school board study, etc. Instructional methods have been determined by qualified professors, instructors and other appropriate staff members. To assure adequate educational program planning the guide will ask important questions which may serve as guidelines to such planning.

- A cooperative and collaborative relationship has been established with knowledgeable local agencies who are aware of economic, political, and social conditions which must be taken into account in short- and long-range educational planning.

- Educational, economic, political, and social planning has revealed the approximate numbers and kinds of students (school-age and adult) to be served by the proposed school. Such information has been provided by enrollment projections, census tract data, student interest studies, etc.

- The information recorded in this document will be used in the preparation of educational specifications for use by an architect(s) in facility design.

- Sufficient funds are or can be made available to support both the provision of facilities and the operation of the desired occupational preparation programs.

RECENT INSTRUCTIONAL TRENDS

- Expanded programs to reach not only the average and those who are college bound, but also the unusually gifted, the physically handicapped, the mentally retarded, and the culturally disadvantaged are needed and being provided by occupational preparation programs.

- Cooperation among instructors in developing interdisciplinary units or courses is increasing. Cooperative instruction is encouraged and facilitated by the proximity of instructional and work areas where the teachers can plan together and produce instructional materials.

- Mobile equipment and convenient space for storing it is making the same space available for many purposes and resulting in more effective and efficient use of space.
Mechanical and electronic teaching aids are being utilized to a greater degree by instructors in occupational preparation programs. To some extent, the effective use of such devices depends upon the accessibility and convenience of storage.

GUIDING PRINCIPLES

In planning facilities to house occupational preparation programs, it is suggested that educational program and facility decisions be consistent with the following guiding principles.

- The educational program is the basis for planning space and facilities.
- Space and facilities should be planned to accommodate changes in the educational program.
- The program should be planned to serve the needs of a variety of groups in the community.
- Space and facilities for the program can be extended through the use of community resources.
- Safe and healthful housing must be provided for all students.
- Space and facilities for occupational preparation programs should be considered in context with the total educational program of the institution and the community.
PART II

THE INSTRUCTIONAL PROGRAM

In Part II of the guide, important instructional program decisions with respect to basic program features, objectives, and needed information on occupational preparation programs to be housed are recorded.

BASIC PROGRAM FEATURES

Basic features of the educational program are determined greatly by a school or department's educational philosophy. A philosophy of education provides a base from which program objectives and teaching and learning activities designed to meet these objectives can be derived. In the final analysis, it is the kinds of teaching and learning activities to be carried on which should determine facility needs.

In this section, planners have an opportunity to express basic program features which will serve as guidelines for the planned occupational preparation programs in dental hygienists.

Indicate below the relative degree of emphasis to be placed on each of the program features stated by circling the appropriate number. The scale provided for this purpose ranges from 1 for major emphasis, 2 for some emphasis, 3 for slight emphasis, to N for no emphasis. This same scale will be used frequently throughout the planning guide.

1. Purpose of program

   a. A purpose of the program is to develop skills of working with modern technological equipment in the field of dental technology.  1 2 3 N
b. A purpose of the program is to prepare students for entry into further training programs. The nature of this training is:

c. Other program purposes:
1) 
2) 
3) 
4) 

2. Students

a. Student admission to the program is on the basis of selective criteria which include:
1) 
2) 
3) 
4) 

b. The program will place emphasis on skill acquisition.

c. The program will place emphasis on the learning of theory.

d. Students will have freedom of movement and access to learning materials.

e. Students will be encouraged to act independently.

f. Students will be provided with cooperative work experience outside the school.

g. Other basic program features in relation to students:
1) 
2) 
3) 
4) 

3. Instruction

a. The instructional approach may be single discipline-dental hygiene as opposed to inter-disciplinary (humanities, science, etc.). If not a single discipline approach, describe the inter-disciplinary approach and the discipline involved.

1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis
b. Cooperative or team instruction will be used. If this mode of instruction is to be extensively emphasized, describe in general terms.

______________________________________________________________

Yes  No

c. Community resources will be utilized in instruction. If a high emphasis is to be placed on use of community resources, describe some of these resources.

______________________________________________________________

1  2  3  N

d. Instruction flexibility is required. If a high emphasis is to be placed on instructional flexibility please describe the kinds of flexibility desired.

______________________________________________________________

1  2  3  N

e. Other basic program features important to the planned instructional program:
1)  
2)  
3)  
4)  

EDUCATIONAL OBJECTIVES

Educational objectives are often identified as goals or outcomes of the educational program. An objective should describe a desired educational outcome that is consistent with a school's philosophy.

Objectives are important to both the planner and the architect since they determine the school's program and related activities. They provide important implications which, when translated into facilities, can enhance the desired program. Thus it becomes imperative to clearly establish the program objectives prior to embarking on educational specifications and building design.

The purpose of this part of the guide is to bring together elements in a way as to provide direction and understanding for the planner and the architect.
Space is provided to indicate degree of emphasis by circling the appropriate number for each of the objectives. The scale provides a purpose range from 1 for major emphasis, to N for no emphasis.

1. To prepare individuals for entry into gainful employment
   1 2 3 N

2. To motivate and recruit capable and qualified students to enroll in post-high school programs
   1 2 3 N

3. To provide pre-professional educational training for students who plan to enter colleges and universities
   1 2 3 N

4. To permit individuals to retrain or return and continue professional training
   1 2 3 N

5. Dental hygiene: The courses of instruction in dental technology emphasize the student's acquisition of knowledge and the development of attitudes and skills relevant to competency as a dental hygienist. The activities are sequentially designed to develop skills in academic, laboratory, and clinical areas of dental technology.
   a. X-rays, taking and processing procedure: Instruction in the use of X-ray equipment and materials of the various roentgenographic techniques, clinical skills, practice of intra-oral roentgenography, X-ray taking, X-ray developing and X-ray processing.
   b. Periodontics (anatomy, physiology, chemistry, histology, pathology, pharmacology, micro-biology, hygiene): Instruction of the basic sciences related to periodontal consideration. This includes clinical training that will develop skills to recognize, treat, and offer preventive measures in periodontal diseases and other oral abnormalities.
   c. Dental health: Instruction in methods of patient education with emphasis on chairside dental health instruction, fluoridation, school dental health programs, community dental health programs, and dental patient motivation.
   d. Sterilization techniques: Instruction in the techniques of sterilization, aseptic procedures, use of sterilization equipment,
and the use of chemical agents in micro-biotic control.

**e. General office duties:** Instruction in the ethics and professionalism associated with dental practices, particularly on interpersonal and vocational relationships and techniques and procedures related to records, insurance, jurisprudence, tax considerations, and maintenance of office equipment.

6. Other educational objectives:

   a. 
   b. 
   c. 
   d. 

**PROGRAM CONTENT AREAS**

This guide is designed to assist in the planning of facilities for an occupational preparation program in the field of dental hygiene.

In addition to professional training, the courses or units emphasize acquisition of knowledge and the development of understanding, attitudes, and skills relevant to personal, home, and family life.

In occupational preparation, the courses or units emphasize the student's acquisition of knowledge and the development of understanding, attitudes, and skills relevant to occupational preparation. Learning activities and experiences are organized to enable students to develop competencies essential for entry into occupations, to further training, or to acquire new or additional competencies for upgrading their job entry level.

Instruction is usually given in discrete subject areas or courses. Subject matter is coordinated with appropriate field, laboratory, and work experience. Programs of occupational preparation for the most part, can be classified under the four headings: 1) Scientific; 2) General; 3) Laboratory and 4) Clinical.

These four content areas relate directly to the professional field of service and can be used to categorize most occupational preparation programs. However, students in these programs often
elect or are required to take courses in subjects such as English, mathematics, and physical education. For example, a student in training to become a dental hygienist might take the following courses or units:

<table>
<thead>
<tr>
<th>Courses</th>
<th>Content Areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>American History</td>
<td>Academic</td>
</tr>
<tr>
<td>Biology</td>
<td>Science</td>
</tr>
<tr>
<td>English</td>
<td>Academic</td>
</tr>
<tr>
<td>Physical Education I</td>
<td>Physical Education</td>
</tr>
</tbody>
</table>

The concept of content areas is used because different disciplines require specific types of instructional facilities and equipment.

- Scientific (e.g., roentgenology)
- General:
  - Science (e.g., physics, chemistry, biology)
  - English, mathematics, and social studies
  - Music (e.g., band, chorus, and choir)
  - Physical Education
  - Other (This category is used in the event that a course or unit to be offered will not fit into any of the above content areas.)
- Laboratory (e.g., dental laboratory)
- Clinical (e.g., chairside assisting)

PLANNING INSTRUCTIONAL AREAS BY MODES OF LEARNING

The planning of instructional areas for occupational preparation facilities can be substantially aided through utilization of the concept of modes of learning. Learning can be divided into three distinct modes—reaction learning, interaction learning, and action learning.

Reaction learning usually occurs in an instructional area designed for lecture and demonstration and is characterized by activities which tend to be largely teacher-centered with the central focus on lecturing. Student activities include listening, observing, and the taking of notes. Group size for reaction learning may vary from one to a hundred. The number of students has little effect on the learning experience if proper technological aids such as television, microphones, projectors and the like are used. Student activities are relatively passive in reaction learning.

Lecture/demonstration areas can be used commonly for reaction learning in all subject areas. For example, in planning facilities for diverse occupational preparation programs: e.g., dental hygiene training and dental assistant training, the planner should bear in mind that reaction learning for students in both programs can occur in the same kind of space. This means that facility planning should be done in terms of the total program rather than its fractional parts. In many instances, lecture/demonstration areas can be shared. Where a great deal of facility sharing is expected the
planner should consider the relative merits of optimum location within the building and the advisability of clustering various instructional areas.

*Interaction learning* usually occurs in a *seminar* instructional area and is characterized by both teacher and learner participating as both listener and speaker. This mode of learning, of course, must occur in groups; however, sociological research suggests these groups should not exceed 18 persons for optimal effectiveness. Active interaction of all students generally requires a longer time span than reaction learning.

Seminar areas, like lecture/demonstration areas, are usually designed for common use by all vocational service areas. The same considerations which were outlined for lecture/demonstration areas also apply to seminar areas.

*Action learning* which usually occurs in a *laboratory* instructional area allows the individual student to learn by doing. Students learn on an individual basis, but may function in a group setting. In more flexible types of educational programs, students are scheduled for laboratory work on an individual basis. Since action learning involves overt action by individual students, the teacher's role is largely that of a consultant to the learner.

Laboratory instructional areas are more specialized than lecture/demonstration areas used for reaction learning and seminar areas used for interaction learning. Since laboratory areas are designed to facilitate the learning of specific vocational and technical skills, there is less likelihood of sharing such areas by students in various vocational training programs. Wherever common elements of skill instruction are found among vocational training programs, the possibility of sharing and clustering laboratory spaces can be both expedient and economical.

**SPECIALIZED AND MULTI-USE OF INSTRUCTIONAL AREAS**

The relative accounts of time to be spent by students in a given vocational program in reaction, interaction, and action learning has definite implications for the number and kind of spaces to be provided. These time considerations combined with decisions on the degree of specialization versus multi-use help determine the nature of facilities required. Since most vocational programs have concentrated on action learning experiences, facilities designed for a particular vocational program have seldom provided adequate reaction and interaction facilities because of the limited utilization of such spaces. However, if the learning activities in any vocational program are broken down into the modes of learning, it will be noted that reaction and interaction spaces are the same regardless of the vocational area. Therefore, by providing common reaction and interaction spaces for all vocational programs, the most modern technological aids can be justified which, in most cases, will permit lectures, demonstrations and other group reaction learning experiences for groups larger than typically used in vocational
education programs. Not only will group reaction learning be improved but more time will become available for the professional staff to work with individuals and small groups in interaction and action learning activities.

Scheduling group reaction and interaction learning experiences into specialized facilities permits complete flexibility in the use of action learning laboratories on an open individualized basis since students would no longer need to be scheduled into the action learning laboratories on a specific class basis. This will permit 100 percent room utilization of the action learning laboratories and also permit the introduction of differentiated staff assignments into vocational education.

The open laboratory concept also permits the planned sharing of certain specialized equipment which may be required by two or more vocational programs.

OCCUPATIONAL PREPARATION PROGRAMS TO BE OFFERED

Information on the dental hygiene program is entered on a separate Form A, page 18. Directions for completing this form appear on pages 15 and 16.
INSTRUCTIONS FOR COMPLETING FORM A
BASIC PROGRAM INFORMATION

Item 1
*Occupational Preparation Program*--Enter here the name of the occupational program to be offered.

Item 2
*Yearly Enrollment*--Enter here the projected maximum number of students to be enrolled in the program.

Item 3
*Nature of Students*--Underline all categories which apply to the students to be enrolled in the program.

Item 4
*Weeks of Instruction per Year*--Enter here the number of weeks per year the school will be open for instruction, e.g., 38 weeks.

Item 5
*Total Weekly Periods or Modules*--Enter here the total number of periods or modules (if modular scheduling is to be used) per week available for instructional purposes for each student. Do not count periods or modules scheduled for lunch and other non-instructional purposes.

Column 6
*Courses of Instruction*--List the courses or units of instruction to be offered either on a required or elective basis for the occupational preparation program.

Column 7
*Content Area*--Opposite each course of instruction, enter the appropriate content area as presented on page 11.

Column 8
*Total Course Enrollment*--Opposite each course of instruction, enter the projected maximum student enrollment.

Column 9
*Maximum Group Size for Reaction Learning*--Opposite each course or unit of instruction, enter the maximum group size in number of students for reaction (lecture/demonstration) type learning.
Column 10

*Estimated Weekly Periods or Modules of Reaction Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to reaction learning per student.

Column 11

*Weekly Group-Periods or Modules (Lecture/Demonstration)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 9 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 10.

Column 12

*Maximum Group Size for Interaction Learning*—Opposite each course or unit of instruction, enter the maximum group size in number of students for interaction (seminar) type learning.

Column 13

*Estimated Weekly Periods or Modules of Interaction Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to interaction learning per student.

Column 14

*Weekly Group-Periods or Modules (Seminar)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 12 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 13.

Column 15

*Maximum Group Size for Action Learning*—Opposite each course or unit of instruction, enter the maximum group size in number of students for action (laboratory) type learning.

Column 16

*Estimated Weekly Periods or Modules of Action Level Learning*—Opposite each course or unit of instruction, enter the estimated number of periods or modules per week to be devoted to action learning per student.

Column 17

*Weekly Group-Periods or Modules (Laboratory)*—To compute weekly group-periods or modules, divide the entry in Column 8 by the entry in Column 15 and round up to the nearest whole number. Then multiply the whole number by the entry in Column 16.

DISTINCT TYPES OF INSTRUCTIONAL AREAS TO BE PROVIDED

QUANTITATIVE FACILITY NEEDS

The number of instructional areas to house the programs described in Part II (The Instructional Program) are recorded in this section of the guide.

As indicated in Part II, there are three principal types of instructional areas used to accommodate educational programs. They are:

- Lecture/demonstration areas--used principally for group reaction learning.
- Seminar areas--used principally for group interaction learning.
- Laboratory areas--used principally for group or individual action learning.

In addition to these instructional areas, there are, of course, other school-wide auxiliary areas such as instructional materials centers, language laboratories, gymnasiums, and auditoriums which are part of the overall school plan. Requirements for such facilities are calculated as a part of total school planning and are not made in this guide.

Forms B, C and D can be used to compute the number of lecture/demonstration, seminar, and laboratory areas required for the dental hygiene program.

Results of the computations on Forms B, C and D are entered on Form E which is a summary of total instructional area requirements for the dental hygiene program.
In the event that instructional area requirements are already determined (e.g., it has been decided that one combination laboratory and lecture/demonstration area will be provided) the information can be recorded directly on Form E without making the computations on Forms B, C and D.

After the number of instructional areas are determined on Form E, information can then be recorded in the following section of the guide concerning the nature of these spaces.
INSTRUCTIONS FOR COMPLETING FORM B
LECTURE/DEMONSTRATION AREA REQUIREMENTS BY CONTENT AREAS

Column 1
Content Area--Content areas are listed in Column 1.

Column 2
Total Enrollment--To obtain total enrollment for content areas, find the total enrollment for each content area as indicated in Columns 7 and 8 of Form A for all occupational preparation programs.

Column 3
Maximum Group Size--Opposite each content area, enter the maximum group size desired for a lecture/demonstration area to serve the content area (Form A, Column 9).

Column 4
Total Weekly Periods or Modules--Opposite each content area, enter the total periods or modules per week the school will be open for day school instruction. This entry will be identical for all content areas and identical to the number recorded for Item 5, Form A.

Column 5
Total Weekly Reaction Group Periods or Modules--Opposite each content area, enter the total group periods or modules per week to be devoted to reaction learning as indicated in Column 11 of Form A for all occupational preparation programs.

Column 6
Lecture/Demonstration Areas Required--Opposite each content area, enter the quotient of Item 5 divided by Item 4. Round up to the nearest hundredth.

Column 7
Adjusted Lecture/Demonstration Areas Required--To adjust for scheduling difficulties which result in areas being less than 100 percent utilized, multiply the entry in Column 6 by 1.3 and enter the result, rounded up to the nearest hundredth, in Column 7 for each content area.

Column 8
Totals--Since lecture/demonstration areas, unlike laboratory areas, can be utilized by nearly all content areas, the entries in Column 7 can be added for all lecture/demonstration areas with identical maximum group sizes as entered in Column 3. For example, 8a might read 1 lecture/demonstration areas with a student capacity of 10 each.

FORM E

SUMMARY OF FACILITY REQUIREMENTS FOR DENTAL TECHNOLOGY OCCUPATIONAL PREPARATION PROGRAMS

1. Lecture/demonstration areas for reaction learning (see Form B) e.g., 1 area with a student capacity of 40 each.
   a. _____ area(s) with a student capacity of ____.
   b. _____ area(s) with a student capacity of ____.
   c. _____ area(s) with a student capacity of ____.
   d. _____ area(s) with a student capacity of ____.

2. Seminar areas for interaction learning (see Form C)
   a. _____ area(s) with a student capacity of ____.
   b. _____ area(s) with a student capacity of ____.

3. Laboratory areas for action learning (see Form D)
   a. _____ dental science laboratory area(s) with a student capacity of ____.
   b. _____ dental roentgenology laboratory area(s) with a student capacity of ____.

4. Multi-purpose areas

   If any of the specialized areas above are to be combined as multi-purpose spaces, indicate the combinations desired, e.g., dental science laboratory and dental roentgenology laboratory(s).
   a. 
   b. 
   c. 
   d. 

*This laboratory requires a clinical setting; it may be programmed in the institution, or in general facilities available in the community (e.g., dentist's office).
QUALITATIVE FACILITY NEEDS

This section records information concerning the required instructional areas. Special forms are provided for describing the nature of lecture/demonstration areas, seminar areas, laboratory areas, and auxiliary areas. For each type of instructional area, information in the following categories should be considered.

1. The relationship of the area to other instructional areas (specialized versus multi-purpose utilization of space).

2. The number of areas needed.

3. The activities of students and teachers in the instructional area.

4. The spatial relationships within the area and its relationships to other instructional areas.

5. The furniture and equipment required for the area.

6. The environmental factors required for the area.

7. The special utility services required for the area.

8. The minimum space requirements for the area.
FORM F

DESCRIPTION OF LECTURE/DEMONSTRATION AREA(S)
TO BE USED PRINCIPALLY FOR GROUP REACTION LEARNING

1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis

1. The lecture/demonstration area(s) should be planned:
   a. As independent unit(s) Yes No
   b. In combination with laboratory area(s) specify Yes No
   c. In combination with seminar area(s) Yes No
   d. As an area within a single multi-use space Yes No

2. Number of lecture/demonstration areas required for the desired program (see Form E) 

3. Student and instructor activities in this space. Indicate the extent to which each of the activities listed below will occur.
   a. Listening to lectures 1 2 3 N
   b. Observing demonstrations 1 2 3 N
   c. Taking notes 1 2 3 N
   d. Viewing films, slides, overhead projections, etc. 1 2 3 N
   e. __________________________________________ 1 2 3 N
   f. __________________________________________ 1 2 3 N

4. Spatial relationships. Indicate the extent to which the lecture/demonstration area(s) should be accessible to the:
   a. Instructional materials center 1 2 3 N

FORM H

1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis

16) Using to learn and care for lathes and model trimmers
17) Learning the anatomy of teeth and supporting tissues
18) Learning microscopic tissues and organs with particular reference to teeth
19) Introduction to general pathology
20) Identifying clinical pathologies of diseases affecting teeth

4. Spatial relationships. Indicate the extent to which spaces should be accessible within the dental science laboratory area(s).

a. Laboratory to:
   1) Instructional area
   2) Instructional aids
      a) TV/closed, open, circuit
      b) Overhead projector
      c) Movie projection
      d) Chalkboards, models, charts, etc.
   3) Stand-up work area
   4) Supply storage area
   5) Independent study area
   6) Individual student storage area
      a) Supplies and materials

DESCRIPTION OF DENTAL ROENTGENOLOGY LABORATORY AREA(S)
TO BE USED PRINCIPALLY FOR ACTION LEARNING

FORM I

1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis

1. The dental roentgenology laboratory area(s) should be planned:
   a. As independent unit(s)
   b. In combination with laboratory area(s) specify
   c. In combination with seminar area(s)
   d. In combination with lecture/demonstration area(s)
   e. As an area within a single multi-use space

2. Student capacity required for scheduled activities (see Form E)

3. Student and instructor activities in various space divisions within the dental roentgenology laboratory area(s). Indicate the extent to which each activity will occur.

Laboratory space
1) Introduction to roentgenology 1 2 3 N
2) Principles of roentgenology 1 2 3 N
3) Learning principles of the various roentgenographic techniques in pathological conditions 1 2 3 N
4) Experience in taking X-ray 1 2 3 N
5) Learning dark-room procedures 1 2 3 N
6) Clinical skill practice of intro-oral roentgenography 1 2 3 N
7) Learning to use X-ray equipment 1 2 3 N
8) Acquiring skill of X-ray processing 1 2 3 N
9) Learn principles of X-ray radiation protection 1 2 3 N
10) Instruction in equipment and materials for bite-wing X-ray 1 2 3 N
11) Instruction in filing of roentgenograms 1 2 3 N
12) Learning skills of administrative processes of X-ray materials 1 2 3 N
13) Practice methods and procedures of cataloging finished roentgenographic plates 1 2 3 N
14) Learning processes of mounting X-ray film 1 2 3 N
15) Learning basic maintenance skills of X-ray equipment 1 2 3 N
16) Learning X-ray operating room procedures 1 2 3 N
17) Office practices as related to the operation of an X-ray laboratory 1 2 3 N
FORM I

1 major emphasis
2 some emphasis
3 slight emphasis
N no emphasis

18) Learning legal requirements associated with the use of X-ray equipment 1 2 3 N
19) Learning patient management techniques 1 2 3 N

4. Spatial relationships. Indicate the extent to which spaces should be accessible to each other within the dental roentgenology laboratory area(s).

a. Laboratory to:
   1) X-ray room
      a) Instructional area 1 2 3 N
      b) Supply/storage area 1 2 3 N
      c) Dental chair 1 2 3 N
      d) Dental X-ray machine 1 2 3 N
      e) Hand sink/may be shared by more than one room if conveniently located 1 2 3 N
      f) Immediate access to dark room 1 2 3 N
   2) Dark room--Immediate access to X-ray room 1 2 3 N

b. Other important spatial relationships within the dental roentgenology laboratory area(s):
   1) ____________________________________________________________________________
   2) ____________________________________________________________________________
   3) ____________________________________________________________________________
   4) ____________________________________________________________________________

 c. Dental roentgenology laboratory area(s) to:
   1) Instructional materials center 1 2 3 N
   2) Instructors' offices 1 2 3 N
   3) Centralized storage 1 2 3 N
   4) Administration complex 1 2 3 N
   5) Classrooms 1 2 3 N
   6) Related labs 1 2 3 N
   7) Delivery area 1 2 3 N
   8) Teacher preparation area 1 2 3 N
   9) Student research area/references, library material 1 2 3 N
  10) Individual project area 1 2 3 N
  11) Lavatory facilities 1 2 3 N

5. Furniture and equipment related to dental roentgenology

a. X-ray machine
   1) Number required  
   2) Type required (floor mounted/wall) 
   3) Further description

b. X-ray control unit

PART IV
ANNOTATED BIBLIOGRAPHY

GENERAL FACILITY PLANNING

Contributors to this publication were teachers, supervisors, administrators, architects, engineers, school board members, and school plant planning specialists. In addition to background material on schoolhouse construction, the book deals with specific topics including school surveys, analysis and computation of space and facility needs, enrollment projections, building designs, site selection, finance, and building maintenance and operation. Many pictures and illustrations are found, along with sample forms and outlines, which can be used in the facility planning process. No special consideration is given to unique problems faced in the planning for vocational and technical education facilities.

A textbook on overall planning procedures for new and improved school facilities. The typical topics (school surveys, building planning, site selection and acquisition, architectural planning, contracting for construction, and the equipping and furnishing of buildings) are covered. The only mention of vocational schools is on page 270 where the author quotes from another source:

Vocational training should be de-emphasized in the school since this training often becomes obsolete before it can be used; also, special "trade" and "vocational" schools should be discontinued, unless the vocational curriculum is liberal in approach and broad in character. Such schools are often used as dumping grounds for students who are not wanted elsewhere and often no more than custodial care is provided for them. When more is provided, the skills taught are frequently too partial in nature.

Conrad, M. J. *Four Steps to New Schools*. Columbus, Ohio: Educational Administration and Facilities Division of the Bureau of Educational Research and Service. The Ohio State University.
A book prepared for the inexperienced school planner. The author emphasizes that a school building is an educational tool and should be designed to do the job it is intended to do. The four steps discussed are: 1) district-wide building survey; 2) educational planning; 3) architectural planning and construction; and 4) moving in and settling down. A glossary of important terms used in plant planning is located in the back of the book.

A compilation of references in the following categories: general references; periodicals; overview of school plant field; district-wide building survey; educational planning; the architect and his work; moving in and settling down; and related topics.

This manual is intended to assist officials of school districts who are planning programs for maximum use of school properties and who must develop policies and regulations for efficient management of such programs. Various schedules of facility use are illustrated for nine different school systems.

This work is designed to meet the needs of three distinct groups interested in providing educational facilities. Report A: "A Guide for Policy Makers" is directed to boards, administrators, planning committees, and institutional planners. Report B: "A Guide for the Design of Professions" is designed for architects, planners, and design specialists and planning committees; and Report C: "A Technical Guide" is intended for design-architects, engineers, equipment and furniture suppliers, and media specialists.

A basic reference on school plant planning and construction for use by superintendents, school board members, school plant planners, state department of education personnel, local school system officials, collegiate institutions, architects, lay advisory groups, and graduate students. Major topics covered are: planning and programming educational plants; spaces and equipment for learning; non-instructional systems; space organization and economy and resources. Much attention is given to plant planning through a description of a survey technique used to determine and satisfy school plant needs for a community. Site selection, kinds of instructional spaces, sonic, termal, and visual environments, and best use of natural and plant resources are also treated.
North Carolina. Department of Public Instruction. *A Digest of Educational Planning.* Raleigh.

The contents of this book include a description of what educational planning is, when it is done, who does it, and how it is done. The three steps of planning are identified as 1) identification and analysis of educational and facility needs, 2) adapting and implementing plant improvement programs, and 3) completing and evaluating a process of the educational planning.

Basic principles of school design is the thrust of this publication. It focuses on the interrelationship of patterns of school activities, organization of activities on the site, design potentials for various sites, and the building design data necessary for communicating the school's needs to the architect.

This publication seeks to suggest which learning functions can be served electronically, to symbolize the nature and progressive complexity of each electronic system, and finally to estimate budgets which will provide for adequate systems in relation to engineering and warranty costs.

A comprehensive textbook on the administration of the school plant program. The book is organized into three major parts: Part 1—"Policy Decisions" deals with school building needs, studies and long-range planning; Part 2—"Program Recommendations" deals with local study of plant needs, evaluation of existing plant, determination of additional plant needs, site selection and development, and the preparation of educational specifications; Part 3—"Project Administration" is concerned with the financial aspects of a building program and with public relations. There is a brief mention of the objectives of vocational education as contrasted with the objectives of general education on page 12.

This book deals with the cost of a schoolhouse and the process of planning and financing it. It provides median costs for various building elements, designates individual responsibilities in process of building, and discusses arrangement of space and environmental factors.

The purpose of this publication is to reduce the broad principles and processes of school plant planning to those most applicable to vocational and practical arts education. Effective techniques for developing educational specifications are suggested. The committee provides a sequential treatment of program and administrative considerations, desired space and educational program, special site arrangement features, special physical aspects of building, and the financial requirements for the project.

A study of related literature on programmed instruction, instructional films, instructional television, and learning from various instructional media. It analyzes new instructional media approaches used at North Carolina's Fundamental Learning Laboratories System, and the integrated experience approach at Oakland Community College.

A general guide that describes important steps to be followed in the planning for and construction of vocational and technical education facilities. Important topics covered are: the impact of the Vocational Education Act of 1963; surveys of area educational needs; use of consultant services; basic planning considerations; educational specifications; general planning; and school construction cost and outlay. Sample floor plans and picture illustrations of vocational schools are included.

An account of the procedures followed in the establishment of a technical college within a period of less than 90 days. The entire planning process and implementation is described along with the PERT technique which was applied. The author concluded the PERT (Program Evaluation and Review Technique) was effective in assisting the planners in reaching their objectives within a short period of time.

The pamphlet emphasizes the need for a total flexibility concept in school building. Consideration is given to the use of building components to provide flexibility in space, lighting, air-conditioning, sewage system, and the like.

A report on new trends in the construction of vocational educational facilities. Among topics covered are occupational clusters, teaching techniques such as micro-teaching and educational parks, and unique problems faced by large city school systems. Special consideration is given to maximum utilization of vocational education facilities on an around-the-clock basis.

A report which relates the thinking of six outstanding consultants on various topics relating current trends in vocational-technical education and facility planning. Reviews the work of a local consortium consisting of three Center vocational specialists, three school plant planners, three representatives from the State Department of Education, three local school officials, and three practicing architects in defining problems, clarifying issues, suggesting approaches to organizing planning guides, and establishing guidelines for a series of facility planning guides in selected vocational and technical subject areas.

Wohlers, A. E. *A Manual for Planning a Secondary School Building (Vocational Education).* Columbus, Ohio: The Administration and Facilities Unit, School of Education, The Ohio State University, Pamphlet C-14.

A general facility planning guide for programs of vocational education. Principal topics covered include: 1) number of teaching stations; 2) types of teaching stations; 3) equipment needs; and 4) floor areas required. The planning manual also deals with spatial relationships of teaching facilities and the utilization of auxiliary areas such as libraries, cafeterias, and administrative suites. Planners using the guide are directed to complete checklists and fill-in blanks with the necessary information pertinent to vocational facility planning.
DENTAL TECHNOLOGY FACILITY PLANNING

A comprehensive report concerned with the most effective role the library can play in health education, the policy and situational decisions to be considered in planning new or renovated library facilities, the kinds of spaces the health services library of the future will need, and where the library planner can turn for help. Also included are sections on external and internal space relationships, general seating requirements, special rooms, and staff spaces. The appendices include structural and physical guidelines for planning and an extensive annotated bibliography.

The first section contains analysis of program development, development of curriculum essentials, and requisite resources for a selected health area. The second section of the guide presents general information, background for health facility administrators and the health practitioner association. This section concludes with two checklists, one for health facilities and another for the health practitioner association. There is brief mention in the appendices of the associations concerned with program development, referral lists of source agencies, and statements of needs, role and responsibilities of collaborative institutions.

A practical guide to serve programming committees as an orientation to fundamentals, and architects and engineers as an introduction to a specialized educational system. The deans of all the Nation's dental schools participated by giving detailed replies to a two part questionnaire. The first part focused on physical facilities--the second on curriculum content teaching methods and the manner in which these influence the utilization of space. The appendices contain space description forms and space allocation tables for primary and supporting facilities.

This manual summarizes the need for formal training programs in dental assisting and provides guidelines for their
establishment. Extensive appendices develop required student knowledge and skills, floor and layout plans for training facilities and equipment and supply lists for various training facilities.

This manual sets forth a standard physical radiation protection survey method. The manual consists of two parts: an illustrated step-by-step description of facilities inspection, and an appendix of reference materials related to radiological health. While intended as a reference for a surveyor interested in dental radiological health it is of equal value in helping the planner anticipate the unique requirements of this type of facility.
