
Teaching practices appropriate to 11 different treatments of secondary school beginning French instruction are outlined and discussed. Treatments vary by (1) strategy (traditional: audiolingual or functional skills; and modified audiolingual or functional skills enriched with grammar), (2) type of laboratory (audio passive or tape recorder; audio active; and audio active record), and (3) text. A section on the traditional method (strategy 1) describes general do's and don'ts and three treatments using different texts. The section on the functional skills method (strategy 2) explains general concerns involving the use of both audio active and audio active record laboratories and suggests for their effective use, four different treatments (two different texts and two labs) in the beginning and intermediate lesson plans. The functional skills plus grammar method (strategy 3) section is organized like that for strategy 2 with the addition of two different grammar outlines, one for each text. TO THE TEACHER

It is a distinct pleasure to extend a cordial welcome to you as one of the participants in the experiment, "An Assessment of Three Foreign Language Teaching Strategies Utilizing Three Language Laboratory Systems." This project is the most comprehensive experiment to date in the teaching of foreign languages in the secondary school. Approximately sixty teachers are participating, representing numerous school districts throughout the Commonwealth. And, most important are the 1,800 students who will be studying a foreign language as part of this project during the coming academic year.

This project represents the combined efforts of four educational agencies--the United States Office of Education, the Pennsylvania Department of Public Instruction, the State Colleges, and the local school districts. The Federal Government encouraged the development of the proposal and is now contributing the lion's share of its costs; the Department of Public Instruction committed considerable resources to identifying the specific issues that deserve research priority and to the writing; the local districts, in addition to their financial contributions, agreed to abide by the research requirements. West Chester State College is the project center, coordinating the myriad details that are essential to the successful execution of the research design.

While the major concern of this experiment is to resolve significant problems for the language teacher, you will also benefit in several other ways:
1. You will be given training in the teaching methods applicable to your teaching condition.
2. You will have the benefit of the contributions of the project's consultants, who are among the country's leading linguists.
3. You will be encouraged to resolve other problems in your teaching by means of objective research.
4. You will share in the enthusiasm that accompanies an undertaking that is of such importance to your professional field.

We are depending on your cooperation, which will be the critical factor in determining the success of this project.

ABSTRACT

Title: A Comparison of the Effectiveness of the Traditional and Audiolingual approaches to Foreign Language Instruction Utilizing Laboratory Equipment.

Principal Investigators: Emanuel Berger, Bureau of Research, Department of Public Instruction, Pennsylvania
                        Alfred D. Roberts, Department of Modern Languages, West Chester State College, Pennsylvania

Contracting Agency: The Department of Public Instruction; Harrisburg, Pennsylvania

Federal Funds Requested: $68,590

Beginning and Ending Dates: October 1, 1966 - January 31, 1968

Statement of Purpose

This study is a continuation of Project 1330, funded originally under Title VI, NDEA. Essentially, comparing the effectiveness of the traditional and two variations of the audio-lingual approaches to foreign language instruction in the secondary school is also the purpose of this experiment.

The major purpose for continuing the experiment is to assess the effectiveness of these approaches at the termination of two years of foreign language instruction. Also, this study proposes to replicate the experimental procedures that were followed during the first year of the study with another sample of beginning language students.

The specific objectives of the phase of the study concerned with the second year of language learning are:

1. To determine which teaching strategy among the traditional, audio-lingual, and modified audio-lingual approaches best accomplishes the four objectives of the foreign language program in the secondary school - listening comprehension, speaking fluency, reading, and writing.

2. To determine which language laboratory system among the audio-passive, audio-active, and audio-active record systems best accomplishes those objectives of the foreign language program for which the laboratory is intended.

3. To determine the variable or combination of variables that best predicts foreign language achievement.

4. To identify student and teacher attitudes toward each of the teaching strategies and the laboratory systems.

5. To ascertain the levels of language mastery that can be achieved during the second year of the foreign language sequence in the secondary school.
Procedures

1. Approximately 105 teachers of French and German were assigned during the first year of the experiment to an experimental condition -- the conventional approach or one of several variations of the audio-lingual approach.

   Most of these teachers have agreed to continue with the same treatment and same students at Level Two.

2. The pre-experimental data will consist of (a) California Test of Mental Maturity, (b) Foreign Language Proficiency Tests for Teachers and Advanced Students, (c) The Modern Language Aptitude Test, (d) MLA Cooperative Classroom Tests, Form LA, (e) Listening Discrimination Test, (f) Cooperative Language Tests, ETS, 1941.

3. The criterion measures will be (a) MLA Cooperative Tests Form MB, (b) Pronunciation Test (to be developed), (c) student attitudinal scales (to be developed), (d) Cooperative Language Tests, ETS, 1941.

4. Supervision of the project teachers to assure adherence to the assigned treatment will be by means of (a) teacher manuals specifying appropriate teaching practices for each treatment, (b) classroom visitations by the field consultants during the academic year.

5. Several teacher evaluation meetings are planned during the year to enable staff and teachers to review mutual problems and plan for forthcoming procedures.

Educational Contribution

The essential contribution of the project's end results will be to provide educators with experimental evidence regarding the methods that appear most effective in teaching a foreign language to secondary school students. The results should shed light on several critical questions regarding the current ferment in language teaching.
RESEARCH IN SECONDARY SCHOOL FOREIGN LANGUAGE INSTRUCTION

Recent changes in foreign language teaching have been far more sweeping than in other subject areas in the secondary school. The entire gamut of materials, equipment, the teacher's role in the classroom, and the student's behavior while learning the second language have little, if anything, in common with the manner in which many of us studied a foreign language. We might even go a step further in noting that the scientific study of language is a relatively recent development.

Despite recent ferment, few educators would attempt to predict the effect these new insights will have upon teaching procedures in the foreign language classroom. One reason for this reluctance is the sheer absence of empirical data favoring a given method. Professor John Carroll traces the dearth of rigorous research in language learning to several sources—the diverse goals of language learning, the difficulties of specifying and adhering to pre-assigned teaching conditions, and the linguistic sophistication necessary for observing pupil responses.

In spite of these obstacles there are several considerations that recommend research in language learning as a potentially fruitful endeavor. Normally, the student begins the study of a new language at a zero point and proceeds to acquire a specific set of habits and skills. The changes are, for the most part, caused by stimuli that are present in the school setting—the teachers and instructional materials. Furthermore, with the development of reliable and valid measures of aptitude and achievement the task of assessment is no longer the problem it was. Thus the Department of Public Instruction deemed it timely to approach both the federal government for financial support and the local school districts for their cooperation in seeking answers to problems in foreign language teaching.

PROJECT 1330: ITS POTENTIAL CONTRIBUTION

Project 1330 is a reality and is now entering its 2nd year. The project has been well-received because it deals with problems of concern to foreign language teachers. This project deals with questions which, when resolved, will have a profound effect on the teaching practices in language classrooms throughout the country.

Among the problems that it attempts to resolve are:

1. Which of several widely used methods of foreign language teaching is most effective in developing the four language skills—listening, speaking, reading, writing?

2. Which of three types of language laboratory systems is best suited, economically and instructionally, to language learning?

3. Is academic potential the best predictor of foreign language achievement?

4. Should methods of instruction vary according to student ability?
SYSTEM I: THE TAPE RECORDER

The tape recorder serves several practical purposes when the teacher uses "functional" materials. The tapes provide authentic native models for imitation by the students, and the teacher is freed to circulate among the students and monitor their performance. Also, student responses may be recorded for later evaluation by the teacher.

SYSTEM II: AUDIO-ACTIVE (LISTEN-RESPOND)

This constitutes one type of "language laboratory." Each student position is equipped with a microphone, amplifier and headset. Usually there is more than one tape recorder or other program source at the teacher console which is wired for monitoring individual student performance.

SYSTEM III: AUDIO-ACTIVE-RECORD (LISTEN-RESPOND-COMpare)

Recording facilities at student positions provide the teacher with an additional tool in developing "functional" skills. The student records the master and his own responses and then compares these during playback. Differing learning rates can be accommodated. This is a practical means for evaluating oral performance, and closer teacher supervision is possible.

THE ROLE OF THE "TEACHER-RESEARCHER"

The term "teacher-researcher" signifies that as a research participant you will be functioning in two capacities. We encourage you to maintain a completely natural attitude in order not to give the impression that the experimental students are "special." To the extent that your classes are representative of other classes not in the experiment we will be able to generalize the final results. If your students suspected that they were part of a novel activity and that their performances were being carefully scrutinized, it would be difficult to apply the findings to a non-project class.

The major distinction between teaching a project class and your other classes is the absolute necessity that in the former you observe the teaching procedures appropriate for your assignment. In your normal teaching situation you are encouraged to vary teaching methods whenever your judgment dictates. As a researcher you are asked to follow the rules set forth in this manual. To facilitate your compliance with this requirement we urge you to follow these procedures:

1. Plan each lesson carefully. Always use the published program's teacher edition and this manual for guidance.
2. Whenever a problem arises about teaching procedures that you are unable to resolve discuss it with your field consultant or other project personnel.
3. Attend the scheduled meetings for participating teachers during the year.
4. Follow the suggested time schedule for covering the material, using your discretion to make modifications when necessary.
5. Maintain a brief record of important experiences relevant to this project and to language learning in general. This should include recording of and reasons for a student's withdrawal from the class, difficulties in learning or teaching certain skills, candid reactions of students and teacher to any phase of the program.

6. Use discretion in discussing the project with colleagues and parents. Avoid judging the strengths and weaknesses of the experiment until the data are collected.

ORIENTING THE STUDENT TO THE PROJECT

You are strongly advised against telling your students that this project is a major research project to determine how to teach languages effectively. Many students and many more parents will object to what they think is novel, experimental and untried.

You should emphasize that the school is collecting information about student ability and achievement in foreign language learning to offer them more effective guidance in their secondary school careers. You could discuss the differences between the study of a second language and other academic subjects. It is conceivable that ability in language learning is not related to academic proficiency in other school subjects.

THE ROLE OF THE FIELD CONSULTANT

The field consultant is the key figure in coordinating and unifying the many people who are involved in the project. He has participated in the writing of the manual, the meetings with the language consultants, and he is a competent and knowledgeable classroom teacher. He will visit your classroom about twice a month, discuss your experiences and advise you of forthcoming events that are of concern to the project. He is not concerned with rating your teaching performance. He is concerned that you understand your assigned condition and follow the appropriate teaching procedures.

We urge that you utilize his talents whenever problems arise. His visits with other teachers and his frequent discussions with the other field consultants will alert him to solutions to problems that you will encounter.

The consultant will act as:

1. **Observer** - He will visit your class about twice monthly and discuss your teaching assignment in the context of your teaching situation.

2. **Adviser** - He will offer you guidance when needed in dealing with problems.

3. **Liaison** - He will inform you of other teacher's experiences, alert you to forthcoming meetings, distribute and collect material, and transmit your suggestions to the project center.
STUDENT EVALUATION PROCEDURES

It is reasonable to expect that any broad scale educational research investigation will require the administration of various measures of aptitude, achievement and attitude uniformly to all student participants. All of these factors will be assessed at the beginning and at the end of the classroom instruction phase and at some intermediate point during the year.

General aptitude will be measured with the California Test of Mental Maturity, and language aptitude through the use of the short form of the Modern Language Aptitude Test. Achievement will be evaluated by means of cooperative classroom language tests.

In addition, attempts will be made to assess the student's attitude toward language instruction in general and toward the particular foreign language that he is studying. All testing materials including both booklets and answer sheets will be supplied by the Project Center.

THE TEACHING STRATEGIES AND LABORATORY SYSTEMS

I. Strategy I: The Traditional Method.

The major objectives of foreign language instruction according to this method are:
1. To read with facility in the foreign language.
2. To translate from the foreign language into English and vice versa.
3. To develop an appreciation for the foreign country's culture, its people and its heritage.
4. To develop a better understanding of the syntax and structure of the student's native language.

Carefully graded reading selections in the text incorporate both the grammar to be learned and the vocabulary items. The student practices the grammar rules by applying them in written form to sample sentences following the lesson. Vocabulary lists are memorized and practiced through translation from English into the foreign language.

II. Rationale.

The basis for the traditional approach is rooted in both common educational sense and a history of successful experience. Few would doubt that proficiency in a language's grammar accompanied by command of its lexicon will result in the stated objectives. Also, those who have taught and assessed student achievement in foreign language through the years report that effective teaching procedures, as in other academic subjects, produce the desired results. Unless there is convincing evidence to the contrary, "traditionalists" feel justified in supporting a "proven" method in preference to programs that have as yet to prove their worth in the classroom setting. Finally, educators maintain that a well educated person should be acquainted with the literature and culture of other countries.

I. Strategy II: The functional skills method.

The primary objective of foreign language instruction according to the "functionalists" is that the student be able to use the language as it is used in the foreign country. It is considered essential that the four language skills be taught in a progression - listening first to the spoken word, followed by repeating orally that which was heard, then reading the graphic symbols that were both heard and spoken, and, finally, writing that which was heard, spoken and read.

The "functional skills" are taught by means of the dialog and its associated activities. There is opportunity for extensive student practice in both listening and speaking in the target language. Vocabulary is learned only in context while formal prescribed grammatical analysis is avoided.

II. Rationale.

The principle advanced by those supporting this method is that, essentially, language is speech. Written symbols are a derived and secondary form of language. We are able to use our mother tongue effectively long before we can read or write the graphic symbols representing the spoken word. Furthermore, it is claimed that language learning is a skill, not an intellectual discipline. It follows, then, that methods effective in teaching science and mathematics are not ideally suited for cultivating language habits. More appropriately, the student is instructed to practice language forms to the point that his responses are automatic, in much the same way that he uses his own language.

III. List of general criteria - functional skills methods.

      b. Ability to express in writing simple concepts dealing with everyday situations.
SYSTEM II: AUDIO-ACTIVE (LISTEN-RESPOND)

This constitutes one type of "language laboratory." Each student position is equipped with a microphone, amplifier and headset. Usually there is more than one tape recorder or other program source at the teacher console. Finally, the teacher console is wired for monitoring individual student performance.

The immediate and most cogent argument for this installation is the privacy and isolation afforded each student. Eliminating distracting noises is recommended if students are expected to discriminate new sounds that are distressingly similar to those of his own language and to other sounds in the foreign language.

It is also claimed that hearing his own voice following that of the tape master, with amplification of similar quality, allows for effective correction when there is disagreement. Multiple-program sources provide for small group instruction and facilitate flashbacks to previous lessons that require review.
The addition of recording facilities at student positions provides the teacher with a significant tool in developing "functional" skills. Principally, the student records the master and his responses and then compares these during playback. Differing learning rates can be accommodated. This is a practical means for evaluating oral performances, and closer teacher supervision is possible than with less complete installations.

Competent language educators favoring the use of the record facility offer as support an argument based on the method by which language is learned. They claim that the learning of a foreign phoneme occurs as a result of conscious attention to the process of how it is produced. As a result, knowledge of the articulatory phonetics is a definite aid.

F. Assignment: Practice record six, side A, band 1.
I. Strategy II: The functional skills method.

The primary objective of foreign language instruction according to the "functionalists" is that the student be able to use the language as it is used in the foreign country. It is considered essential that the four language skills be taught in a progression - listening first to the spoken word, followed by repeating orally that which was heard, then reading the graphic symbols that were both heard and spoken, and, finally, writing that which was heard, spoken and read.

The "functional skills" are taught by means of the dialog and its associated activities. There is opportunity for extensive student practice in both listening and speaking in the target language. Vocabulary is learned only in context while formal prescribed grammatical analysis is avoided.

II. Rationale.

The principle advanced by those supporting this method is that, essentially, language is speech. Written symbols are a derived and secondary form of language. We are able to use our mother tongue effectively long before we can read or write the graphic symbols representing the spoken word. Furthermore, it is claimed that language learning is a skill, not an intellectual discipline. It follows, then, that methods effective in teaching science and mathematics are not ideally suited for cultivating language habits. More appropriately, the student is instructed to practice language forms to the point that his responses are automatic, in much the same way that he uses his own language.

III. List of general criteria - functional skills method.

A. Use of target language in classroom.
   1. By the student: for all responses.
   2. By the teacher: for daily routine communication to pupils of instructions, cues and models.

B. Native tongue to be used only for describing grammar and syntax.

C. Sequence of learning.
   1. Hearing.
   2. Speaking.
   3. Reading.
   4. Writing.

D. Grammar.

SYSTEM II: AUDIO-ACTIVE (LISTEN-RESPOND)

This constitutes one type of "language laboratory." Each student position is equipped with a microphone, amplifier and headset. Usually there is more than one tape recorder or other program source at the teacher console. Finally, the teacher console is wired for monitoring individual student performance.

The immediate and most cogent argument for this installation is the privacy and isolation afforded each student. Eliminating distracting noises is recommended if students are expected to discriminate new sounds that are distressingly similar to those of his own language and to other sounds in the foreign language.

It is also claimed that hearing his own voice following that of the tape master, with amplification of similar quality, allows for effective correction when there is disagreement. Multiple-program sources provide for small group instruction and facilitate flashbacks to previous lessons that require review.
SYSTEM III: AUDIO-ACTIVE-RECORD (LISTEN_RESPONDCOMPARE)

The addition of recording facilities at student positions provides the teacher with a significant tool in developing "functional" skills. Principally, the student records the master and his responses and then compares these during playback. Differing learning rates can be accommodated. This is a practical means for evaluating oral performances, and closer teacher supervision is possible than with less complete installations.

Competent language educators favoring the use of the record facility offer as support an argument based on the method by which language is learned. They claim that the learning of a foreign phoneme occurs as a result of conscious attention to the process of how it is produced. As a result, knowledge of the articulatory phonetics is a definite aid.

F. Assignment: Practice record six, side A, band 1.

This condition subscribes to both the objectives and the basic methodology of the "Functional Skills Method." The major point of contention is how best to develop structural mastery - the basis of effective language usage - in the school setting.

According to this approach pattern drills are supplemented by explicit instruction in the appropriate grammar. Extreme care is exercised to limit the grammar to clarifying the pattern which was practiced during the dialog - (grammar is not taught independently of the language habits developed).

II. Rationale.

Essentially, there is no empirical evidence to support the elimination of formal grammar instruction in teaching a foreign language. Indeed, Mueller reported that students frequently fail to perceive grammatical signals even after extensive drills. Others argue that the manner in which a child learns his native tongue is not entirely analogous to the way an adolescent learns a second language in the classroom. In the latter case the student can "bring his intellect to bear on his problems and can speed up immeasurably through generalizations, shortcuts, and insights into the way the language operates if, and when, he understands its structure analytically."

Finally, the accompanying explanation might serve to prevent possible student boredom when he indulges in repetitious practice for considerable periods of time.

III. List of general criteria.

A. Use of target language in classroom.
   1. By the student: for all responses.
   2. By the teacher: for daily routine communication to pupils of instructions, cues and models.

B. Native tongue to be used only for describing grammar and syntax.

C. Sequence of learning.
   1. Hearing.
   2. Speaking.
   3. Reading.
   4. Writing.

D. Grammar.
   1. Descriptive rather than prescriptive.
   2. Incidental to functional skills being taught.

E. Reading.
   1. Printed material always presented as a transcription of spoken forms.
   2. As direct communication without the intermediary of translation from the target language to the native tongue.

F. Writing - learned first as a transcription of spoken forms.

G. Testing - written and oral tests given in order to test for listening comprehension and speaking proficiency as well as reading and writing skills.

H. Culture - "total culture" as reflected in language behavior is taught as opposed to refinement or prestige culture.
IV. Expected level of proficiency in four skills - functional skills-grammar method.

A. Listening comprehension.
   1. At end of semester.
      a. Phonemic discrimination - all basic sounds of the language.
      b. Understanding of basic words and phrases - spoken at normal speed.
   2. At end of year.
      a. Phonemic discrimination - nearly all phonemic differences.
      b. Understand simple conversation spoken at normal speed.

B. Speaking.
   1. At end of semester.
      a. Repeat any word or phrase with good accent and intonation.

SYSTEM II: AUDIO-ACTIVE (LISTEN-RESPOND)

This constitutes one type of "language laboratory." Each student position is equipped with a microphone, amplifier and headset. Usually there is more than one tape recorder or other program source at the teacher console. Finally, the teacher console is wired for monitoring individual student performance.

The immediate and most cogent argument for this installation is the privacy and isolation afforded each student. Eliminating distracting noises is recommended if students are expected to discriminate new sounds that are distressingly similar to those of his own language and to other sounds in the foreign language.

It is also claimed that hearing his own voice following that of the tape master, with amplification of similar quality, allows for effective correction when there is disagreement. Multiple-program sources provide for small group instruction and facilitate flashbacks to previous lessons that require review.
SYSTEM III: AUDIO-ACTIVE-RECORD (LISTEN-RESPOND-COMPARE)

The addition of recording facilities at student positions provides the teacher with a significant tool in developing "functional" skills. Principally, the student records the master and his responses and then compares these during playback. Differing learning rates can be accommodated. This is a practical means for evaluating oral performances, and closer teacher supervision is possible than with less complete installations.

Competent language educators favoring the use of the record facility offer as support an argument based on the method by which language is learned. They claim that the learning of a foreign phoneme occurs as a result of conscious attention to the process of how it is produced. As a result, knowledge of the articulatory phonetics is a definite aid.

3. One can form the present tense of all -er verbs by:
   a. Dropping the -er from the infinitive to find the stem. (For example, the stem of the verb trouver is trouv).
   b. Adding the following written endings to the stem:

<table>
<thead>
<tr>
<th></th>
<th>-ons</th>
<th>-ez</th>
<th>-ent</th>

<tr>
<td>e</td>
<td></td>
<td></td>
<td></td>

OBJECT PRONOUNS WITH PASSE COMPOSE

Il l’a regardé.
Il lui a répondu.

1. In the passé composé, object pronouns precede the verb.

This condition subscribes to both the objectives and the basic methodology of the "Functional Skills Method." The major point of contention is how best to develop structural mastery - the basis of effective language usage - in the school setting.

According to this approach pattern drills are supplemented by explicit instruction in the appropriate grammar. Extreme care is exercised to limit the grammar to clarifying the pattern which was practiced during the dialog - (grammar is not taught independently of the language habits developed).

II. Rationale.

Essentially, there is no empirical evidence to support the elimination of formal grammar instruction in teaching a foreign language. Indeed, Mueller reported that students frequently fail to perceive grammatical signals even after extensive drills. Others argue that the manner in which a child learns his native tongue is not entirely analogous to the way an adolescent learns a second language in the classroom. In the latter case the student can "bring his intellect to bear on his problems and can speed up immeasurably through generalizations, shortcuts, and insights into the way the language operates if, and when, he understands its structure analytically."

Finally, the accompanying explanation might serve to prevent possible student boredom when he indulges in repetitious practice for considerable periods of time.

III. List of general criteria.

A. Use of target language in classroom.
   1. By the student: for all responses.
   2. By the teacher: for daily routine communication to pupils of instructions, cues and models.

B. Native tongue to be used only for describing grammar and syntax.

C. Sequence of learning.
   1. Hearing.
   2. Speaking.
   3. Reading.
   4. Writing.

D. Grammar.
   1. Descriptive rather than prescriptive.
   2. Incidental to functional skills being taught.

E. Reading.
   1. Printed material always presented as a transcription of spoken forms.
   2. As direct communication without the intermediary of translation from the target language to the native tongue.

F. Writing - learned first as a transcription of spoken forms.

G. Testing - written and oral tests given in order to test for listening comprehension and speaking proficiency as well as reading and writing skills.

H. Culture - "total culture" as reflected in language behavior is taught as opposed to refinement or prestige culture.
IV. Expected level of proficiency in four skills - functional skills-grammar method.

A. Listening comprehension.
   1. At end of semester.
      a. Phonemic discrimination - all basic sounds of the language.
      b. Understanding of basic words and phrases - spoken at normal speed.
   2. At end of year.
      a. Phonemic discrimination - nearly all phonemic differences.
      b. Understand simple conversation spoken at normal speed.

B. Speaking.

      a. Repeat any word or phrase with good accent and intonation.
      b. Ability to respond to simple questions and to vary form and structure in simple directed conversation.
   2. At end of year.
      a. Repeat sentences with correct accent and intonation.
      b. Engage in simple conversation on a variety of basic everyday situations.
      c. Ability to vary spontaneously any basic structures already learned.

      a. Read and understand directly (without translating) simple dialogs.
      b. Understand grammatical functions in the reading material.
   2. At end of year.
      a. Read and understand directly dialogs and simple prose narratives dealing with everyday situations.
      b. Ability to understand all grammatical functions in the readings.

D. Writing.
   1. At end of semester.
      a. Write simple phrases previously learned with understanding of the grammatical functions involved.
      b. Reproduce from dictation basic dialogs already learned.
   2. At end of year.

      b. Ability to express in writing simple concepts dealing with everyday situations.
SYSTEM II: AUDIO-ACTIVE (LISTEN-RESPOND)

This constitutes one type of "language laboratory." Each student position is equipped with a microphone, amplifier and headset. Usually there is more than one tape recorder or other program source at the teacher console. Finally, the teacher console is wired for monitoring individual student performance.

The immediate and most cogent argument for this installation is the privacy and isolation afforded each student. Eliminating distracting noises is recommended if students are expected to discriminate new sounds that are distressingly similar to those of his own language and to other sounds in the foreign language.

It is also claimed that hearing his own voice following that of the tape master, with amplification of similar quality, allows for effective correction when there is disagreement. Multiple-program sources provide for small group instruction and facilitate flashbacks to previous lessons that require review.
SYSTEM III: AUDIO-ACTIVE-RECORD (LISTEN-RESPOND-COMPARE)

The addition of recording facilities at student positions provides the teacher with a significant tool in developing "functional" skills. Principally, the student records the master and his responses and then compares these during playback. Differing learning rates can be accommodated. This is a practical means for evaluating oral performances, and closer teacher supervision is possible than with less complete installations.

Competent language educators favoring the use of the record facility offer as support an argument based on the method by which language is learned. They claim that the learning of a foreign phoneme occurs as a result of conscious attention to the process of how it is produced. As a result, knowledge of the articulatory phonetics is a definite aid.
