Activities geared to meet the needs and capabilities of low functioning residents (mental age 2 to 4 years) of an institution who were not benefiting from other language development material are given. The lessons incorporate material from other programs to form a series of 212 daily lesson plans. Each lesson is structured and self-explanatory and is centered around a token reinforcement system. Experiences for vocabulary recognition, conversation building, matching, critical thinking, following directions, and other language skills are described. The lesson plans contained in Volume II were developed in conjunction with the research project on A Language Development Program for Mentally Retarded Children. A full report of the methodology and results of the program is contained in Volume I, EC 004 826. (WW)

The 212 daily lesson plans contained in this Volume (II) were developed in conjunction with the research project "A Language Development Program for Mentally Retarded Children." A full report of the methodology and results is contained in Volume I.
Summary

This project was undertaken to determine if non-professional persons could effectively function as "Language Developmentalists" for small groups of children primarily falling in the severely retarded range. The utilization of non-professional personnel serving as language teachers was conceived as one approach in providing more intense speech and language training to a larger segment of the institutional population. The research covered approximately 18 months of language training. The project was undertaken in a state residential institution housing 400 residents, many of whom have concomitant sensory and motor disabilities.

Forty residents were initially selected for participation in the program. An equal number of children served as controls matched on the variables of CA, I.Q., and Language Age. The mean CA for the total group (Language Training and Control) was 13.28 years. The mean I.Q. for the two groups was 33. The experimental edition of the Illinois Test of Psycholinguistic Abilities and the Stanford-Binet Intelligence Scale were administered to both the Language Training and Control groups prior to the start of the program and at the following 9 and 18 month intervals. The Vineland Social Maturity Scale and Mechan Verbal Language Development Scale were administered prior to the program and during the final (18 month) testing period.

Two former Psychiatric Aides were trained as the "Language Developmentalists." The major part of their training took place in the classroom where they were teaching. This was supplemented by informal discussions and readings pertaining to speech and language problems of the mentally retarded, operant learning theory, the role of a language developmentalist, and a short survey of language development materials. The language teachers were provided with appropriate language development materials and supervised during the course of the study by a certified Speech Pathologist serving as the Project Director. One teacher was assigned to twenty children comprising the "low" level classes, the other Language Developmentalist was assigned to twenty children comprising the "high" level classes. Four to six children participated in each class. The classes met daily for approximately one hour. The Peabody Language Development Kits (Levels 1 and 2) were used for the four high level classes. A series of daily lesson plans were developed during the course of the project for use with the four low level classes. A token reinforcement system was used in all classes to reinforce appropriate responses to the materials. The tokens were exchanged for a variety of foods and objects.
Results showed the children attending language classes made significantly greater raw score gains on the ITPA than did the matched Control Group over the 18 month period. The mean pre to post raw score gain on ITPA was 20.41 points for the Language Training Group and 3.25 points for the Control Group. Significantly greater gains in I.Q. scores were made by the Language Training Group when compared to the Control Group at the 9 month interval. Overall pre to post (18 months) gains, in favor of the Language Training Group, did not quite reach the required .05 level of statistical significance (F<.07). The mean pre to post I.Q. score gains for the Language Training Group was 3.64 points as compared to .22 points for the Controls. No difference between groups were found on the Vineland Social Maturity Scale or Mecham Verbal Language Development Scale.

Results obtained from the research generally support the position that non-professional persons can be trained to effectively function as Language Developmentalist for severely retarded institutionalized children. This finding should have a significant and advantageous impact on the training and education of institutionalized children. Results from the program point to the need to make greater use of non-professional persons in the formal education and training of retarded children, while utilizing professional persons more as consultants and supervisors to large scale programs involving a significantly greater number of the residential population.
Introduction

The lesson plans contained in this Volume were written and developed during the project to meet the needs and capabilities of those low functioning residents who were not receiving optimal benefit from other language development materials and programs. The lesson plans were primarily written and designed by the Project Director, Mr. Gorin Rutherford. Essentially, the series of lessons reproduced in this Volume were developed for children whose mental ages range from approximately two to four years.

The major intention of developing the present lesson series was not to replace other excellent programs currently available, but to provide a supplement to them in accordance with the needs of very low functioning retarded children. Accordingly, many of the materials from other programs have been included within the present series of lessons.

Basically, an attempt has been made in the present lesson series to provide a structural framework of presenting new materials and concepts. The daily format for presenting the lesson remains fairly constant, yet it is designed to accommodate new materials as learning takes place.

Each daily lesson is well structured and self-explanatory. Competency in presenting the materials should require some practice, yet little direct supervision. The materials and equipment needed for any particular lesson plan are described at the top of each page. As can be noted, the lesson series is centered around a token reinforcement system. The tokens (interlocking plastic chips) are used in the daily lessons to reinforce correct or approximated responses by the children to the various
learning tasks. Brightly colored felt pockets (4½" x 6") are pinned on each child when he enters the classroom. The tokens are placed in the pockets by the teacher when the child is being reinforced. The tokens are exchanged at the end of each class for a variety of sweets and small toys made available in the classroom "store." Implementation of the token system would probably require additional training for those persons using the present lesson series. An attempt will not be made to detail those requirements for a token reinforcement system in this Volume. The token system does, of course, necessitate the availability of reinforcers which can be exchanged for the tokens dispensed in the classes.

I. Classification Time
1. Present and name each picture (one at a time) of a classification of clothing, either man, woman, girl, boy, or baby. Say, "THIS (OR THESE) IS (OR ARE) BOY'S CLOTHING." Place 5 pictures of clothing on the chalkboard ledge. Stress that these are all the (classification) clothing. EXAMPLE: " THESE ARE ALL PICTURES OF BOY'S CLOTHING."

8. If named correctly, using both classification and name of clothing, reward with a chip, and ask for the other picture of classification of clothing. When selection is made say, "WHAT IS THIS?" Again the response should be classification and name of clothing. (For some children a complete sentence should be recognized as a correct response, for other children only the name of the item of clothing will be recognized as sufficient to receive a chip.) 
9. Increase the difficulty of the task by placing two pictures of one classification and one of another classification, then three pictures of one classification and two of another.

II. Conversation Time
1. Use woman's purse, man's hat, or baby's bib.

2. Remove the three shapes, give them to a child, say, "PUT THE (SHAPES) WHERE THEY WERE, (NAME OF CHILD)."
3. For an incorrect response, make correction.
4. For each correct response, reinforce with a chip. Also, when a child reproduces the entire pattern, allow that child to make a new pattern, then to request another child to reproduce the pattern.
2. For a correct response, reinforce with a chip.
3. For an incorrect response, make correction.

II. Guessing Time
1. Instruct the class that one of the children will be shown one of the cards A-32 through A-36. Then the child is to pantomime the activity, following which the other members of the class will guess what activity was pantomimed.
2. Do not permit the other children to see the card; as you show one of the cards A-32 through A-36, say, "DO WHAT THIS PERSON IS DOING."
3. To the class, say, "WHAT WAS (NAME OF CHILD) DOING?"
   a. When a child guesses correctly what is being pantomimed, then reinforce the child who pantomimed and then the child who identified the activity, each with a chip.
   b. If no child can identify the activity being pantomimed, place cards A-32 through A-36, say, "WHICH OF THESE ACTIONS DID (NAME OF CHILD) DO?" Allow one or two additional trials of pantomiming; then if no one makes the identification, show another child a picture to pantomime the activity. If the class fails to identify the activity being pantomimed, then no reinforcer to any child, either the one pantomiming or those guessing.

2. Remove the three shapes, give them to a child, say, "PUT THE (SHAPES) WHERE THEY WERE, (NAME OF CHILD)."
3. For an incorrect response, make correction.
4. For each correct response, reinforce with a chip. Also, when a child reproduces the entire pattern, allow that child to make a new pattern (by tossing the shapes if he desires), then to request another child to reproduce the pattern.

IV. Vocabulary Building Time (Comparison)
1. As a large and small shape of each category (square, circle, triangle) is placed on the large case, identify as: big or little (shapes).
2. Encourage each child to say in unison: "THIS IS A (SIZE) (SHAPE)."
3. Remove all but the large and small square from the large case.
4. Say, "POINT TO THE (SIZE) SQUARE, (NAME OF CHILD)."
   a. For a correct response, reinforce with a chip, and a statement, "YES, THAT IS THE (SIZE) SQUARE."
   b. For an incorrect response, after the child is seated, make correction.

Lesson Plan - Low Level
Lesson #185

Date:_________________

Purpose: 1. To recall a sequence of events.
         2. Identification of sounds produced in the classroom.
         3. Identification of indoor sound and related activities.

Materials: Follow Through With Sounds--Laminated student cards;
          Instructional Transparency (optional); Overhead Projector
          (optional); Materials for reinforcement; a bell; a can;
          a piece of paper; a piece of wood or pencil.

I. Story Time
1. Using the laminated student card (or the instructions transparency, optional), tell a brief story of events as they happened, calling attention to the sound which accompanied the events. Example: The sound of Dan's mother walking.
   She called Dan to awaken him. The sound of the shower.
   Dan brushing his teeth. Dan hears the baby crying and he speaks to his baby brother. Dan goes to the kitchen where bacon is frying, coffee is perking. Dan's mother is using the electric beater. Dan pours the juice. Dan's sister sets the table. In the living room the clock ticks. Dan's
mother cleans the rug with the vacuum cleaner. Dan hears the
doors chimes as his friend is ready for school.

2. Give each child an opportunity to tell part of the story,
following the order of the pictures from left to right as
the events of the morning proceeded at Dan's home. Remind
the class that they are telling the story; so each one will
begin telling the story where another child ended his part
of the story.

3. Reinforcement
   a. For each correct response, reinforce with a chip.
   b. To encourage additional response, ask questions.
   c. Correct incorrect responses.

II. Activity Time
1. Select two children, have them sit in chairs at the front of
the room. Give each child an object with which a sound might
be produced.

2. Give each child an opportunity to demonstrate producing a
sound with the object.

3. When the demonstration is completed, direct the other children
to close their eyes. Point to one of the children with noise
makers to produce the sound.

4. Ask for identification of the sound.
   a. If a child identifies the sound correctly, (Example:
      "That was (name of child) ringing a bell") reinforce with a
chip both the one producing the sound and the one identi-
ifying; also, the child who guesses correctly, should change
places with the child who produced the sound. Also, give
the child, now sitting at the front of the room, another
sound producing object.

   b. If a child fails to identify the sound, instruct the
children to close their eyes and listen for another sound.

III. Listening Time
1. Position the pre-recorded tape at the beginning of the second
section (approximate reading 60 on tape recorder).

2. Provide each child with a laminated student card, or where
inadvisable for each child to have a card, show one card to the
class.

3. Say, "TODAY AS YOU HEAR SOUNDS IN DAN'S HOUSE, PUT YOUR FINGER
ON THE OBJECT WHICH MAKES THE SOUND."

4. Begin playing the tape (beginning with the second section). In
these classes when each child has a card, each child should re-
dpond by pointing to the object making the sound. If only one
card is used, ask one child to point. Then the teacher, who
has a student card, will point to the correct response. Say,
"IS (NAME OF CHILD) POINTING TO THE SAME PICTURE AS I AM POINT-
ING?"

5. Reinforcement-
   a. For each correct response, reinforce with a chip.
   b. For an incorrect response, make correction.

Lesson #195

Date: ______________________

Purpose: 1. To verbally and motorically identify selected Outdoor Sounds that are presented in a non-sequential order.
2. To verbally identify noise-making objects.
3. To develop the visual ability to note similarities and differences of colors.

Materials: Instructional transparency for Outdoor Sounds; Laminated Student Cards; Pre-recorded tape for Outdoor Sounds; Overhead projector; Materials for reinforcement; a pencil or small pointer; Noise-making objects--a ball, a xylophone (from P-Level Kit); Ladoca Colored Yarn Set.

I. Listening Time
1. Move the Instructional Tape to the point where the narrator announces, "Game One."
2. Place the Instructional Transparency on the Overhead projector. Distribute the student cards for Outdoor Sounds (optional).
3. Tell the children that they will hear some sounds, and they are to point to the object which would make that sound.
4. Play the tape (Game One). The sounds will be presented as follows:
   (a) Walking through dry leaves
   (b) Sound of ambulance
   (c) Jackhammer breaking pavement
   (d) Whisper and creak of old oak trees
   (e) Phhhht of cat
5. After hearing the sound, provide opportunity for a child or the children to point to the object as instructed by the narrator.
6. Reinforcement -
   a. For a correct response, reinforce with a chip, praise, and pointing to the correct object on the transparency.
   b. For an incorrect response, make correction.

II. Activity Time (Listening)
1. Place the noise-making object on a table--bell, glass, paper, book, ball and xylophone.
2. Produce a noise with each object by moving or striking it.
3. After the children have identified each noise with their eyes open, repeat the activity with their eyes closed.
4. To increase the difficulty, produce two or more sounds for a child to identify all sounds heard.
5. Reinforcement -
   a. For each correct response, reinforce with a chip and praise.
   b. For an incorrect response, make correction or direct the request to another child.

III. Activity Time (Matching)
1. Using the Ladoca Colored Yarn Set, introduce a few of the most contrasting colors first.
2. Hang the color skeins on the nails of the rack.
3. Demonstrate putting matching skeins on the matching colors of
the rack.

4. Begin by naming and giving a color skein to a child, say, "MATCH THE (COLOR) YARN, (NAME OF CHILD)."
   a. For a correct response, reinforce with a chip.
   b. For an incorrect response, direct the same request to another child.

Purpose: 1. To identify through motoric responses selected Outdoor Sounds that are presented in a non-sequential order.
          2. To remember sounds the children heard as they came to class.
          3. To develop the visual ability to note similarities and differences of colors.

Materials: Instructional Transparency for Outdoor Sounds; Laminated Student Cards; Pre-recorded tape for Outdoor Sounds; Overhead projector; Materials for reinforcement; a pointer; Ladoca Colored Yarn Set; Crayons—blue, red, green, brown, and black; PLDK, P-level cards—Cat A-5, Dog A-9, Duck A-10, Lamb A-15, Gun T-13.

   2. Place the Instructional Transparency on the overhead projector. Distribute the student cards to the children (optional).
   3. Place the crayons (blue, red, green, brown, and black) on a surface. A brief exercise for reviewing identification and naming the crayon colors should prove helpful for this section. If all the members of a class can identify all five colors, then each child may be provided with a student card and five crayons (optional).
   4. Tell the children that as they hear a certain sound on the tape, they are to circle the sound source with the color indicated by the announcer. Demonstrate and provide opportunity for each child to draw a circle.
   5. Depending upon the ability of a class, the class may respond to the instruction of the announcer or individual children may be called upon to respond. In classes where children cannot identify the colors, select the correct color for the child.

(Class imitate the sound). THEN, I HEARD A DUCK QUACKING. (Imitate sound). THEN, I SAW A LITTLE LAMB, AND HE MADE THE SQUAWK BA-BA. (Imitate sound). NEXT, I SAW A BOY WITH A GUN. THE GUN MADE A SOUND, BANG-BANG.

2. For a child who can, provide opportunity for that child to tell the story. Encourage the child to produce the sentence, "ON MY WAY TO CLASS, I HEARD A __________________." Then have the class imitate the sound. Encourage the child telling the story to direct the class imitating the sound.

3. For children who are unable to tell the story, decrease the difficulty by giving them a picture to tell-"ON MY WAY TO CLASS, I HEARD A __________________." Encourage sentences.

4. **Reinforcement**
   a. For correct responses, reinforce with chips.
   b. For incorrect responses, make correction.

      1. Present and describe Facial Cards D-1a, face smiling, short hair; D-2a, face frowning, short hair; D-6a, face smiling, right eye closed, short hair; D-7a face smiling, both eyes closed, short hair; D-8a, face frowning, both eyes closed, short hair.
      2. Place the above five Facial Cards on the chalk ledge.
      3. Have available the matching Facial Cards D-1b, D-2b, D-6b, D-7b, and D-8b.
      4. Give a matching (D, b) card to a child, say, "FIND A (DESCRIBE THE CARD) LIKE THIS."
      5. Reinforcement—
         a. For a correct response, reinforce with a chip and a discussion as to how the pictures are alike.
         b. For an incorrect response, direct the request to another child.

B. Identification
1. Following the same procedure as in (I, A) present and describe Facial Cards D-3a, face smiling, long hair; D-4a, face frowning, long hair; D-5a, face smiling, right eye closed, long hair; D-9a, face smiling, both eyes closed, long hair; D-10a, face frowning, both eyes closed, long hair.

2. Place the above five Facial Cards on the chalk ledge.

3. Have available the matching Facial Cards D-3b, D-4b, D-5b, D-9b, and D-10b.

4. Give a matching (D-b) card to a child, say, "FIND A (DESCRIBE THE CARD) LIKE THIS."

5. Reinforcement—
   a. For a correct response, reinforce with a chip and a discussion as to how the pictures are alike.
   b. For an incorrect response, direct the request to another child.

II. Memory Time
   A. Visual Memory
      1. Using the Instructo Kit and Overhead Projector, with Overlay No. 1 down, place two or three plastic shapes (Example: truck, rabbit, and arrow) on the horizontal line. Direct the class to look at the arrangement.
      2. Remove the plastic shapes, say, "PUT THE SHAPES LIKE THEY WERE, (NAME OF CHILD)."
      3. Reinforcement—
         a. For a correct response, reinforce with a chip.
         b. For an incorrect response, provide a second opportunity to see the arrangement and a trial. If correct response, reinforce with praise, no chip. If incorrect response, provide another child with an opportunity to respond with a different arrangement.

   B. Auditory Memory
      1. Using the Instructo Kit and Overhead Projector, with Overlay No. 1 down, place two or three plastic shapes (Example: truck, rabbit, and arrow) on the horizontal line. Direct the class to look at the arrangement.
      2. Remove the plastic shapes, say, "PUT THE SHAPES LIKE THEY WERE, (NAME OF CHILD)."
      3. Reinforcement—
         a. For a correct response, reinforce with a chip.
         b. For an incorrect response, provide a second opportunity to see the arrangement and a trial. If correct response, reinforce with praise, no chip. If incorrect response, provide another child with an opportunity to respond with a different arrangement.
B. Auditory Memory

1. Place Overlay No. 1 and No. 3 down. Instruct the class that they will be told to put the shapes in order. (Example: If you say, "TRUCK AND RABBIT," the order will be from left to right, demonstrate this order in the squares.)

2. Place the shapes—truck, rabbit, and arrow, on a table or the lower part of the Overhead Projector, say, "PUT THE TRUCK IN THE FIRST BOX, AND PUT THE RABBIT IN THE SECOND BOX, (NAME OF CHILD)."

3. Reinforcement--
   a. For a correct response, reinforce with a chip.
   b. For an incorrect response, provide a second opportunity to see the arrangement and a trial. If correct response, reinforce with praise, no chip. If incorrect response, provide another child with an opportunity to respond with a different arrangement.

III. Thinking Time

1. Using the Instructo Kit and Overhead Projector, place overlay one down, to divide the transparency by a horizontal line. Explain that the arrows point (to the right) the way the rabbits and trucks are to go. But, sometimes a rabbit or a truck goes the wrong direction; so everyone must look for something going the wrong direction. (Demonstrate as explaining concerning the parade. Place two trucks and two rabbits on the horizontal line for demonstration.)

2. On the horizontal line, place two trucks and two rabbits, one turned facing the left, the others facing to the right, as the arrows are pointing; say, "WHAT (OBJECT) IS GOING THE WRONG DIRECTION, (NAME OF CHILD)?"

3. Reinforcement--
   a. For a correct response, reinforce with a chip and provide opportunity for the child to correct the object turned the wrong direction.
   b. For an incorrect response, direct the question to another child.

IV. Activity Time

1. Using Facial Cards (D-5a, D-7a, D-8a, D-9a, D-10a), demonstrate the various facial expressions as seen on the cards.

2. Present a Facial Card to a child, say, "LOOK AT THE CARD, THEN, DO WHAT THIS FACE LOOKS LIKE." (Give a "long hair" to a girl and a "short hair" to a boy.)

3. Reinforcement--
   a. For each correct response, reinforce with a chip.
   b. For an incorrect response, assist with making correction.
