'TEACHING IN IPI' IS AN INTRODUCTORY PROGRAM DESIGNED TO EQUIP THE TEACHER WITH THE BASIC SKILLS REQUIRED TO PLAN AND CONDUCT IPI IN THE CLASSROOM. IT COMPRISSES FIVE VOLUMES, OF WHICH THIS--DIVIDED INTO TWO SECTIONS: AN OVERVIEW OF INDIVIDUALIZED INSTRUCTION AND IPI, AND BEHAVIORAL OBJECTIVES AND THE IPI MATHEMATICS CONTINUUM--IS THE FIRST. SECTION I DEALS WITH THE HISTORY OF INDIVIDUALIZATION, AN OVERVIEW OF INDIVIDUALIZED INSTRUCTION AND HOW INSTRUCTION IS INDIVIDUALIZED, IN EACH CASE CONSIDERING THE PHASES OF PRETEST AND POSTTEST. NEXT IT GIVES AN OVERVIEW OF IPI AND HOW INSTRUCTION IS INDIVIDUALIZED IN IT; A DIRECTOR AUDIO-VISUAL TAPE, SAMPLE ITEMS, WORKSHEETS AND A MATHEMATICS CONTINUUM ARE PART OF THESE. A SUMMARY SHEET AND A GLCSSARY OF TERMS CONCLUDE THE SECTION. SECTION II DISCUSSES BEHAVIORAL OBJECTIVES IN IPI MATHEMATICS, HERE USING A SECOND DIRECTOR TAPE (AUDIO), AND THE ORGANIZATION OF THE MATHEMATICS CONTINUUM. A SUMMARY SHEET CONCLUDES THIS SECTION AND THIS VOLUME. (GO)

TEACHING IN IPI

Section I

AN OVERVIEW OF INDIVIDUALIZED INSTRUCTION AND IPI

A. History of Individualization
B. Overview of Individualized Instruction
C. How Instruction is Individualized
D. Overview of IPI
E. How Instruction is Individualized in IPI

Suggested setting: 1. Individual work
2. Group of 3-5
This section is designed to present the elements of a generalized system of individualized instruction and to describe how a teacher uses them to individualize instruction in the classroom. In addition, this section introduces IPI as a specific system of individualized instruction and describes how the elements of IPI help the teacher individualize instruction.
HISTORY OF INDIVIDUALIZATION
PRETEST: Section I: History of Individualization

The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as a posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.
Answer true or false:

1. The attempts to individualize instruction extend back into the beginning of American education.

2. IPI is the first systematic plan designed to individualize instruction.

3. Experimentation with individualized instruction has shown that this type of instruction can increase motivation and reduce retardation of students.
PRETEST: Section I: History of Individualization (pp. 6-8)

1. True
2. False
3. True
Individually Prescribed Instruction is a procedure designed to permit the school to more nearly meet the needs of the individual pupil. As such it is a part of a rather long term tradition in the historical development of education. Most educators and psychologists have long recognized the importance of adapting instruction to the individual, but efforts to achieve this, although quite numerous, have never been fully successful. To understand the place of IPI it is useful to have some comprehension of the previous history of efforts in this area. This is a brief introduction to this background. The reader is encouraged to supplement this by additional study in other sources.

A survey of the history of instruction indicates that formal learning began very much as an individual affair; that is, pupils came to school to receive instruction individually from the teacher. Education was generally for a select few; therefore, fewer pupils attended school. This made possible the provision of individualized instruction for those students.

For example, in the one-room school pupils proceeded on an individual basis rather than as intact groups. As education involved a larger and larger fraction of the population, it became necessary to deal with pupils in grade-level groups, and individualized instruction diminished.

---

1 This brief history of individualization has been drawn from Scanlon, Robert G., *Factors Associated With a Program for Encouraging Self-initiated Activities by Fifth and Sixth Grade Students in a Selected Elementary School Emphasizing Individualized Instruction*, Doctoral Dissertation, University of Pittsburgh, 1966.
However, as knowledge of the significance of awareness of differences among pupils has increased, many efforts have been made to individualize instruction, even within the context of schools offering mass education.

Systematic plans for providing instruction on an individual basis date back as far as 1888 with the work of Preston Search. Washburne and Billet point out that the efforts of Frederick Burk in developing materials for individual instruction are among the best known.

Shane reviewed individual differences in the historical perspective of school organization plans. He notes that:

In general, during the past century, educators have endeavored: (a) to reduce individual differences found in non-graded schools of the seventeenth and eighteenth century by introducing grade levels, (b) to make the graded approach less arbitrary by permitting pupils to progress at different rates of speed on "multiple-tracks" or individualized programs, (c) to organize students within a given grade level through ability grouping, and (d) to introduce ungraded grouping, especially during the early elementary years, as in Milwaukee during the early 1940's.

A historical overview of organizational plans since 1850 indicates that there has been considerable debate and little agreement on the best framework for teaching and learning. Old ideas have continually reappeared on the educational scene. A genuinely novel approach has occasionally made its appearance, but no one best kind of classroom organization has ever found universal acceptance. Shane further notes that the historically significant plans dealing with individual differences within the organization of the school have been related to grouping for instruction.

Experimentation with individualized instruction has demonstrated that it can produce desirable results. Several researchers have noted that individualization of school programs show evidence of the following:
time is saved; retardation of students is reduced; a motivating factor is present. Henderson and others conclude, "Paced instruction designed to insure success as a reward for individual effort is a prominent characteristic of most corrective programs." They further state, "It is possible that a major effect of this technique is a gradual development of a new self-reliance, which releases the child from a dependence upon others and permits him to deal more effectively with the printed page."

Mayar-Oakes reports a gain of 25 per cent in proportion of students passing the state-wide examination after experience with the Dalton Plan. Peters' findings, based on thirteen experiments, note favorable results for individualizing instruction when comparing the contract plan and the recitation method.

Berson, Jones and Jones, Webster and others and Goodlad and Anderson have provided research to substantiate great differences among individual pupils. These researchers clearly state that great differences in physical development, motor, intellectual, emotional, and social behavior do exist. Research efforts of Washburne and Marland, Jones, and Peters note attempts to provide for individual differences. Jones also points out that when provisions are made for some of the differences, classroom instruction can be made more effective.

This limited review of individual differences and attempts at individualized instruction is by no means complete. The previous brief overview only highlights some of the research and programs concerned with individual differences.
The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Answer true or false:

1. The concern with individualizing instruction is a recent development in the United States.

2. Multiple track programs and ungraded groupings have been used to increase the individualization of instruction.

3. Research has shown that classroom instruction becomes more effective when provisions are made for individual differences.
POSTTEST: Section I: History of Individualization (pp. 6-8)

1. False
2. True
3. True
OVERVIEW OF INDIVIDUALIZED INSTRUCTION
OVERVIEW OF INDIVIDUALIZED INSTRUCTION

The teacher defines a system of individualized instruction:

1. Names the major components and explains how they work together.
2. Discriminates between instances of individualized and group instruction.
3. Describes the required characteristics of each component.
The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.
Answer true or false:

1. Individualized instruction is designed primarily for the few student's in a class whose learning needs are so different that they demand special attention.

2. In individualized instruction, it is permissible to use small group instruction.

3. A teacher identifies five students having repeated difficulties with addition in solving two-step problems. This is an example of individualized instruction.

4. The teacher organizes her class into high, average and low reading groups based on reading inventory scores. This is an example of group instruction.

5. The teacher guides the class through a systematic review of the science assigned to the previous grade. This is an example of group instruction.

6. Individualized instruction limits the materials groupings and teaching methods used in a class.

7. Teaching methods are used to get the student together with the selected materials and equipment.

8. Individual rates of progress are possible when instructional time is varied for each group of students.
9. In selecting materials and equipment the teacher chooses those items that are matched to the student's instructional objective.

10. Both student and teacher work toward mastery of the instructional objective.

Complete:

1. Student behavior gives the teacher information about the student's:
   a. 
   b. 
   c. 

2. The six kinds of instructional resources used by a teacher to individualize instruction are:
   a. 
   b. 
   c. 
   d. 
   e. 
   f. 
ANSWER KEY

PRETEST: Section I: Overview of Individualized Instruction (pp.)

True-False:

1. F  6. F
2. T  7. T
3. T  8. F
4. T  9. T
5. T  10. T

Completion:

1. a. Mastery of instructional objective
   b. Learning needs
   c. Learner characteristics
2. a. Instructional objectives
   b. Diagnostic instruments
   c. Materials and equipment
   d. Learning settings
   e. Teaching methods
   f. Instructional times
The central question of concern to teachers is how to meet the needs of the individual student in a school system geared to educate the masses through group instruction. Teachers generally have handled the response to this question by thinking about individualized instruction in terms of instruction for a few students whose learning needs are so different that they demand special attention. Students requiring remedial work that cannot be handled by group instruction are tutored by the teacher. Very bright students are singled out for independent work called "enrichment". In this way the teacher handles the extremes in the class with the purpose of bringing them to the point where they can rejoin the group. Essentially by making individual arrangements for these students, the teacher works towards minimizing their individual differences so that they are more manageable in group instruction.

This appears to be a contradictory way of thinking about individualizing instruction. However, a teacher has no choice in the face of persistent demands to individualize teaching in a system designed for and geared to group instruction. As a result, the teacher is forced to limit individualized instruction to the few students who can be handled through tutoring or independent study.

However, individualized instruction as a way of teaching requires that each individual student, rather than the group, be the starting point for all instructional decisions. This is the only restriction in the definition. The teacher is free to use any materials, groupings, teaching methods, etc. needed to carry out these instructional decisions.
The following statements present a set of typical classroom practices which describe instances of individualized or group instruction. Using the criterion that individualized instruction requires that the learning needs of the individual student form the basis for all instructional decisions, you are asked to decide which statements describe individualized instruction and which describe group instruction. You will need a 5 x 8 card to uncover the answers and explanations for each item.
THE FOLLOWING PRACTICE MATERIALS AND EXERCISES ARE SELF-CORRECTING. SLIDE A 5 X 8 CARD DOWN THE PAGE UNTIL YOU SEE A ROW OF DOTS.

**************************************************

THEN STOP. READ THE STATEMENT AND CHECK THE COLUMN ON THE RIGHT WHICH INDICATES WHETHER OR NOT THE STATEMENT DESCRIBES INDIVIDUALIZED INSTRUCTION OR GROUP INSTRUCTION. SLIDE THE CARD DOWN UNTIL YOU SEE A ROW OF ASTERISKS.

**************************************************

THEN STOP. READ THE SUGGESTED ANSWER. CONTINUE THE PROCEDURE UNCOVERING EACH STATEMENT AND THEN THE SUGGESTED ANSWER.

EXERCISE

1. a. Administers informal reading inventory to each student.
   b. Organizes class into high, average and low reading groups based on inventory scores.
   c. Assigns a different basal reader to each group.

   a. The teacher is measuring the learning needs of individual students in reading.
   b. By organizing students into groups, the teacher is orienting her teaching toward group instruction.
   c. By assigning a text to each group the teacher is orienting her teaching toward group instruction.

   Check One

   |    |    |

21
2. a. Analyzes difficulty a student is having with addition and subtraction facts up to ten.

b. Gives student homework assignment consisting of arithmetic worksheets (facts 1-10) and counting rods.

- The teacher is diagnosing an individual student's learning problem.

b. The teacher is assigning materials for an individual student's learning need.

3. Decides to put the class through a systematic review of all the science assigned to the previous grade.

- This activity assumes all the students have learned and forgotten the same things. It also requires all students to work through the review at the same rate.

4. Recommends highly-talented student for piano lessons in lieu of scheduled music class.

- The teacher is providing the student with music instruction suited to his particular talent.

5. a. Identifies five students having repeated difficulties with addition in solving two-step problems.

b. Administers test on addition facts to five students. Two pass (100%, 95%); three fail (25%, 70%, 75%).

c. Decides the 70% and 75% students need additional drill and assigns them to drill each other with flash cards.

d. Assigns the 25% student to supplementary worksheets and disks; checks on him frequently.

e. Scolds the two remaining students for being careless in solving two-step problems.
a. The teacher is singling out individual students for further attention.

b. The teacher is measuring the achievement of the individual student.

c. In this case, the 70 & 75% students' individual learning needs are identical and can be met in a group activity.

d. The 25% student is assigned an activity and materials suited to his learning need.

e. The teacher has eliminated the possibility of poor recall of addition facts in the case of these two students. However, their individual learning problems are still undiagnosed. The teacher assumes both are careless.

******************************************************************************

6. Tutors a student during a snack time so he can catch up to the class in spelling.

This is a tricky statement. It is true that the teacher is working intensively on a student's individual learning needs. However, she wants to fit him back into a system of group instruction. Employing an occasional individualized technique to facilitate group instruction cannot be considered individualized instruction.

END OF EXERCISE
Once the teacher decides that the individual student and what he needs to learn are the basis for all instructional decisions, the teacher has taken the first step in individualizing instruction. The next step includes organizing all the instructional resources available to the teacher into a system that creates a learning environment suited to the individual learner. The instructional resources needed are:

1. **Instructional Objectives**: A description of the intended outcomes of instruction. It may be expressed as a very broad, general goal, a more specific goal or a very specific description of student behavior. Depending upon its degree of specificity, it may be called a goal, aim, purpose, objective (instructional or behavioral), skills, etc.

2. **Diagnostic Instruments**: Testing devices and assessment procedures used to gather data on student behavior in terms of learning needs and characteristics.

3. **Materials and Equipment**: All printed materials, audio-visual aids, mechanical devices, laboratory supplies, and objects that contain or convey information in an instructional program.

4. **Teaching Methods**: Specific procedures for guiding a student in learning a new behavior. The method, selected by the teacher, may or may not require the teacher's direct supervision as in the use of small group discussion or self-instructing materials.

5. **Learning settings**: Arrangements or groupings of students ranging from one student to large group instruction with or without the direct involvement of the teacher. The groups are formed on the basis of individual needs and are not permanent.
6. **Instructional time:** The amount of time a student spends in a subject area (flexible scheduling) or on a particular learning goal (pacing).

All the objects, devices, physical facilities and arrangements described above are instructional resources familiar to teachers and students in any instructional program. However, in individualized instruction the teacher and student use these resources in special ways. The teacher creates a unique program of studies for the individual student by choosing a specific instructional objective to be mastered by the student and deliberately selecting those instructional resources that will help him master the objective. The student works on his program under the teacher's guidance. How the student behaves while working in the program tells the teacher what he still needs to learn, what he has learned and how he reacts as a learner to the program created for him. This relationship between the teacher and student is shown in Figure 1.
Figure 1 represents a system of individualized instruction in which a teacher plans an individualized program of studies for a student by selecting appropriate resources from a larger set of instructional resources. The teacher guides the student as he works through the program. The student's behavior in the program in turn tells the teacher about his:

1. **Mastery of the objective**: Minimum acceptable performance of the stated objective.
2. **Learning needs**: A behavior or part of a behavior that a student must master. What exactly the student needs to learn in relation to a particular learning goal.
3. **Learner characteristics**: A set of student behaviors which can facilitate or impede his learning something new. Such things as organic development and peer-group relations affect the student's learning process and are characteristic of how he performs in school.

Based on this information, the teacher continues to develop the student's program of studies based on individual needs and characteristics.

This brief description is familiar to teachers who have time and time again attempted and failed to individualize instruction for all students in a system geared to group instruction.

In order for a teacher to manage individualized instruction for every student in the class, the teacher-student working relationship and the instructional resources they will use must have special characteristics that help the teacher individualize instruction. Generally speaking, the teacher must be flexible and ready to adapt instruction to any individual learning need encountered in the classroom. Instructional resources must offer the teacher a wide range of choices and a variety...
of selections for individualizing the instruction of each student. The students themselves must work differently in such a program and interact in special ways with the teacher.

Figure 2 expands the description of the system of individualized instruction presented in Figure 1. Figure 2 adds the special characteristics that distinguish a system of individualized instruction from more conventional systems. Examine Figure 2 carefully in preparation for a small group discussion. The discussion will give you an opportunity to exchange ideas and information with some of the other teachers working through these materials. This exchange might include:

1. Any questions or topics you would like to discuss.
2. A discussion on the complementary roles of the teacher and student in individualized instruction.
3. A discussion on how the special characteristics of the instructional resources can help a teacher to individualize instruction. (You may wish to select one or two resources for detailed discussion or one characteristic of each resource for a broader discussion.)
4. Describe how you have individualized instruction by specifying how you worked with the student and what instructional resources you used.
Figure 2: Special Characteristics of a System of Individualized Instruction

### INSTRUCTIONAL RESOURCES

#### Instructional Objectives
1. Wide range
2. Detailed listing of what student is to do
3. Carefully sequenced
4. Degree of mastery required

#### Diagnostic Instruments
1. Achievement tests (pretests, subtests, posttests) for each objective
2. Ways of assessing learner characteristics
3. System for storing and retrieving information about student

#### Materials and Equipment
1. Matched to objectives in the sequence
2. Various kinds
3. Self-instructing

#### Learning Settings
1. Variety of arrangements of students ranging from independent study to large group instruction
2. Formed on basis of individual learning needs and characteristics

#### Teaching Methods
1. Variety of methods
2. Designed to produce maximum interaction between student and his objective, materials and equipment, and learning setting.

#### Instructional Time
1. Flexible scheduling of different subjects
2. Varied rates of progress to allow sufficient time for mastery of selected objective
SMALL GROUP DISCUSSION

The Special Characteristics of a System of Individualized Instruction

1. Either start a sign-up sheet to form a small group of about six (6) teachers or add your name to one.

2. Participate in the group discussion as suggested as soon as a group of about six (6) teachers is formed. In the event you must wait for a group to form, continue working through these materials until a group is ready.

3. Use the rest of the page for any notes you may wish to make during the discussion.
POSTTEST: Section I: Overview of Individualized Instruction

The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instruction materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Answer true or false:

1. In individualized instruction, a teacher provides for individual differences in order to bring the students to the point where they are more manageable in group discussion.

2. Individualized instruction uses the tutorial method almost exclusively.

3. Teacher works after school with a student in addition so he can keep up in class the next day. This is an example of group instruction.

4. Teacher gives a student a number line to help him with his difficulty in remembering number facts. This is an example of individualized instruction.

5. Two students work on an identical multiplication problem of the type both had failed on a diagnostic test. This is an example of group instruction.

6. A system of individualized instruction encourages the teacher to use a wide range and variety of materials.

7. Tutoring is the method most frequently used by teachers to individualize instruction.

8. Individual rates of progress allow each student to master his instructional objective.
9. In selecting materials and equipment the teacher chooses those items that are matched to the students instructional objective.

10. Both student and teacher work toward mastery of the instructional objective.

Complete:

1. A teacher plans an individualized program for a student based upon information about the student's:
   a. ____________________________________
   b. ____________________________________
   c. ____________________________________

2. The six kinds of instructional resources used by a teacher to individualize instruction are:
   a. ____________________________________
   b. ____________________________________
   c. ____________________________________
   d. ____________________________________
   e. ____________________________________
   f. ____________________________________
ANSWER KEY

POSTTEST: Section I: Overview of Individualized Instruction (pp. 50-53)

True-False:

1. F  6. T
2. F  7. F
3. T  8. T
4. T  9. T
5. F  10. T

Completion:

1. a. Mastery of instructional objective
   b. Learning needs
   c. Learner characteristics

2. a. Instructional objectives
   b. Diagnostic instruments
   c. Materials and equipment
   d. Learning settings
   e. Teaching methods
   f. Instructional times
HOW INSTRUCTION IS INDIVIDUALIZED
HOW INSTRUCTION IS INDIVIDUALIZED

The teacher:

1. Describes how instruction is individualized:
   
   a. Names the component of instruction that is varied to individualize instruction.
   b. Lists and describes the six instructional resources that may be varied from student to student.
   c. Identifies instances of individualized instruction and the specific instructional resources being used to vary instruction.

2. Describes the steps taken in individualizing instruction:
   
   a. Names in order and explains each of the steps.
   b. Identifies the instructional resources and names the step in which they are used.
   c. Describes mastery requirement as a prerequisite to proceeding to next goal.
The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as a posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.
Select the instructional resource being varied in each statement. Write the letter of the correct answer in the blank on the right.

1. Two students are learning to read maps. One is working with programmed instruction while the other is watching a film on maps (a) diagnostic instruments (b) instructional settings (c) instructional material 

2. The teacher gives a lecture-demonstration to a group of students studying underwater life. (a) instructional time (b) instructional objectives (c) teaching method 

3. A student moving very rapidly through the math program is allowed to proceed unhindered. (a) instructional setting (b) instructional time (c) diagnostic instrument 

4. High school students are permitted to learn a foreign language of their choice. (a) instructional objectives (b) instructional method (c) instructional setting 

Select the step or steps taken in individualized instruction being described in each statement. Write the letter of the correct answer in the blank on the right.

5. Student works on program while teacher gives him guidance. (a) Implementing program (b) Mastery testing (c) Diagnosis of learning needs 

6. Teacher diagnoses student progress and modifies student's program as needed. (a) Diagnosis of learning needs (b) Ongoing evaluation (c) Prescription of learning program 

7. Teacher varies materials and equipment. (a) Selection of instructional objective (b) Prescription of learning program (c) Ongoing evaluation 

8. Teacher varies teaching methods. (a) Prescription of learning Program (b) Mastery testing (c) Ongoing evaluation
PRETEST: Section I: How Instruction is Individualized

1. c
2. b,c
3. b
4. a
5. a
6. b
7. b
8. a
HOW INSTRUCTION IS INDIVIDUALIZED

In individualizing instruction, the teacher starts with a particular student in mind and builds a learning program for him. In a class where instruction is individualized for all students, each student's program will differ from the others in one or more of the instructional resources assigned by the teacher. The teacher individualizes instruction by varying the instructional resources used from student to student according to each student's individual needs.

In such a class, we will find students working towards mastery of different instructional objectives. The teacher will be using different diagnostic instruments for different students. The materials and equipment used will differ from student to student. Students will be working in different learning settings and different teaching methods will be used by the teacher. In addition, different students will spend different amounts of time on a subject and work towards mastery of an objective at different rates.

The following statements are examples of how students' individual learning programs differ from one another in one or more of the following instructional resources:

1. Instructional objectives
2. Diagnostic instruments
3. Materials and equipment
4. Learning settings
5. Teaching methods
6. Instructional time
USE THE 5 X 8 CARD TO UNCOVER THE STATEMENTS. FILL IN THE BLANKS AT THE END OF EACH STATEMENT WITH AN APPROPRIATE NUMBER FROM THE LIST ABOVE TO INDICATE THE INSTRUCTION RESOURCE (S) BEING VARIED.

EXERCISE

1. High school students are permitted to learn a foreign language of their choice. 

(1) Instructional objectives are varied by permitting different students to work in different subject areas.

2. Two students are learning to read maps. One is learning this with programmed instruction while the other learns map reading by watching a film.

(3) Different materials are used for different students working on the same instructional objective.

3. A student is given as much time as he needs to complete the assignment.

(6) Different students are paced through the curriculum at different rates.

4. The teacher gives a lecture-demonstration to a group of students studying underwater life as a special topic.

(4 & 5) Instructional objectives (study of underwater life) are different for this group of students and the teacher is employing a particular teaching method with them.
5. Students are given a spelling pretest. ________

(2) A diagnostic instrument is used to discover students' achievement in spelling before it is taught.

*******************************************************************

6. A few bright students begin independent study of marine biology. ________

(1 & 4) Instructional objectives (marine biology) and a particular learning setting are selected based on students' abilities.

*******************************************************************

7. The teacher uses the questioning technique to get a quiet student to respond. ________

(5) Teacher is selecting a teaching method for a student with a particular characteristic.

*******************************************************************

8. In a unit of Canada different students are required to do particular kinds of reporting on various aspects of the country. ________

(1) Instructional objectives are being differentiated in terms of the kinds of reporting students do and the subject matter they cover.

*******************************************************************

9. A teacher uses a checklist to record her observations of some students reading orally. ________

(2) Diagnostic instrument is used to record student behavior.

*******************************************************************
10. A student moving very rapidly through the math program is allowed to proceed unhindered. _______

(6) Individual student is allowed to work at his own rate of progress.

********************************************************************

11. Students have been assigned multi-level texts in science to match their reading levels. _______

(3) Material is chosen based on students' reading abilities.

********************************************************************

12. A student learning to plot simple line graphs is given graph paper, pencils and rulers. _______

(3) Materials are selected for facilitating the learning of a skill by an individual student.

********************************************************************

13. A teacher assigns students to pupil-teams, peer-tutoring and small group instruction in running her spelling program. _______

(4) Learning settings are varied in carrying out the program.

********************************************************************

14. Teacher-pupil planning is found to be a successful way in developing a new topic in Civics. _______

(5) Teaching method is used to develop lesson.

********************************************************************

15. Sometimes students are taught in a whole class or in a large group of more than one class. _______

(4) Learning setting is varied at different times.

********************************************************************

END OF EXERCISE
In creating an individual program of studies for a student, the teacher proceeds systematically in selecting and assigning the appropriate instructional resources. The steps that are followed are represented in Figure 3 and are explained below.
Figure 3: Steps in Individualizing Instruction

(1) **Selection of Instructional Objective**
The teacher states what the student is to learn.

(2) **Diagnosis of Learning Needs**
Teacher selects and uses diagnostic instruments to assess the student as a learner in relation to the objective.

(3) **Prescription of Student's Program**
Teacher selects materials, learning settings, teaching methods, and estimates time needed for student to master objective.

(4) **Implementing Prescribed Program**
Student works on program. Teacher gives student guidance.

(5) **Ongoing Evaluation**
Teacher diagnoses student's progress and modifies student's program as needed. Student continues program.

(6) **Mastery Testing**
Teacher selects and uses instruments to measure student's mastery of objective.

---

Student Masters Instructional Objective
Step 1. Selection of Instructional Objective

The teacher begins planning by stating the instructional objective selected for the student. The objective may be the acquisition of a mathematics skill, the mastery of a set of scientific facts, the development of a social skill, etc. Whatever the objective may be, it is selected on the basis of what the student needs to learn next.

Step 2. Diagnosis of Learning Needs

Before instruction begins, the teacher pretests the student on the objective to determine what he knows and does not know. In addition, the teacher gathers relevant information about the student's past performance and background. This gives the teacher a set of data upon which to build the student's program. These data are obtained from pencil and paper tests, performance tests, checklists, informal inventories, standardized tests, cumulative records, etc.

Step 3. Prescription of Student's Program

This is the last phase of pre-instructional planning. The teacher reviews all the instructional resources available and prescribes the resources that will help the student master the instructional objective. At the end of this step, the initial design of an individual program of studies for the student is completed.

Step 4. Implementing Prescribed Program

At this point, both teacher and student carry out the program of studies as designed. The student uses the prescribed instructional resources and works towards mastery of the objective while the teacher guides him in following the program. This step is concerned with implementing the program as initially conceived by the teacher and is very closely related to Step 5.
Step 5. Ongoing Evaluation

As the student is working through his program of studies, his performance provides the teacher with data about its effectiveness. The teacher uses work products and the behaviors that the student exhibits as he works in the program as additional diagnostic data. These data tell the teacher whether or not the student is making progress towards mastery, and suggest reasons for progress or lack of progress. Based on this, the teacher may modify the student's program by repeating some or all of the pre-instructional activities of Steps 2 and 3 (Diagnosis and Prescription). The cycle of ongoing evaluation, re-diagnosis, re-prescription, and implementation is continued until the teacher judges the student is ready to be tested for mastery of the objective.

Step 6. Mastery Testing

Once the teacher has concrete evidence from the ongoing evaluation that the student has mastered his instructional objective and she can predict a high probability of success on a mastery test, the teacher selects an appropriate mastery test and assigns it to the student.

If the student's test performance indicates mastery of the objective, he is recycled to start a new program of studies. The teacher starts with Step 1 again. In the event the student does not meet the mastery criterion, his test performance is used as additional diagnostic data and the teacher recycles his program through all or part of Steps 2, 3, 4 and 5.
SMALL GROUP DISCUSSION

Steps in Individualizing Instruction

Preparation:

1. Select a student currently or recently enrolled in your class.

2. Plan and describe briefly an individual program of studies for this student by following the Steps 1 - 3 in individualizing instruction outlined on the preceding pages. (It will be necessary to simulate data in Step 2). Assume that all the instructional resources you need are available.

3. Either start a sign-up sheet to form a small group of about 4 - 6 teachers or add your name to one.

4. Join the group when it is formed.

Discussion:

1. Present and discuss the program created by the teachers in the group.

2. Project how the student would work in Steps 4 - 6 and describe some of the modifications you would make.

3. Include any questions or topics on individualizing instruction you may wish to discuss.
Up to this point, individualized instruction has been presented as an instructional system designed to create a learning environment suited to the individual learner's needs and characteristics. The discussion has described the framework within which a teacher can individualize instruction and has outlined the steps to be taken.

As important as the orientation to individualized instruction is, it falls far short of what the classroom teacher needs to individualize instruction for all the students in her classroom. The teacher needs a complete set of fully-developed instructional resources to individualize instruction.

At the present time, Individually Prescribed Instruction (IPI) provides the teacher with a specific system of individualized instruction that can help to increase the individualization of instruction for all students. The materials that follow will describe IPI as a specific system of individualized instruction.
POSTTEST: Section I: How Instruction is Individualized

The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Select the instructional resource being varied in each statement. Write the letter of the correct answer in the blank on the right.

1. Two students are learning to read maps. One is working with programmed instruction while the other is watching a film on maps (a) diagnostic instruments (b) instructional settings (c) instructional material

2. The teacher gives a lecture-demonstration to a group of students studying underwater life. (a) instructional time (b) instructional objectives (c) teaching method

3. A student moving very rapidly through the math program is allowed to proceed unhindered. (a) instructional setting (b) instructional time (c) diagnostic instrument

4. High school students are permitted to learn a foreign language of their choice. (a) instructional objectives (b) instructional method (c) instructional setting

Select the step or steps taken in individualized instruction being described in each statement. Write the letter of the correct answer in the blank on the right.

5. Student works on program while teacher gives him guidance. (a) Implementing program (b) Mastery testing (c) Diagnosis of learning needs

6. Teacher diagnoses student progress and modifies student's program as needed. (a) Diagnosis of learning needs (b) Ongoing evaluation (c) Prescription of learning program

7. Teacher varies materials and equipment. (a) Selection of instructional objective (b) Prescription of learning program (c) Ongoing evaluation

8. Teacher varies teaching methods. (a) Prescription of learning Program (b) Mastery testing (c) Ongoing evaluation
POSTTEST: Section I: How Instruction is Individualized

OVERVIEW OF IPI
OVERVIEW OF IPI

The teacher defines IPI as a specific system of individualized instruction:

a. Names the major components and explains how they work together.

b. Discriminates between instances of individualized instruction using IPI resources and non-IPI resources.

c. Describes the required characteristics of each component.
PRETEST: Section I: Overview of IPI

The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.

2. Use the answer key immediately following the pretest to correct your work.

3. Work on the pages to which you are directed by the pretest answer key.

4. Take the posttest.

5. Use the answer key immediately following the posttest to correct your work.

6. Move on to the next pretest if you have scored 100%.

7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.

8. Use the pretest as a posttest. (Alternate using the two test forms.)

9. Work toward 100% mastery.
Complete:

1. The two types of diagnostic instruments specified by the IPI system are:
   (a) 
   (b) 

2. The aide in IPI carries out three main functions. These are:
   (a) 
   (b) 
   (c) 

3. Two resources in IPI are not specified. These are:
   (a) 
   (b) 

4. Instructional objectives in IPI are specified as:
   (a) 

5. In IPI, a student works on his:
   (a) 

6. In IPI, instructional time is specified as:
   (a) 

7. The material most used in IPI consists of:
   (a) 

8. Individually Prescribed Instruction is a ______ system of individualized instruction.
   (a) 

9. In IPI, skill objectives are correlated with:
   (a) 
   (b) 

10. As in the generalized program of individualized instruction, in IPI each student is provided with a program suited to his:
    (a) 
    (b)
Answer true or false:

1. An IPI teacher constructs her own pretests. __________

2. An IPI teacher uses materials correlated with behavioral objectives. __________

3. Student in IPI spends different amounts of time working on mathematics each day. __________

4. Student in IPI must complete math prescription at end of each math class. __________
PRETEST: Section I: Overview of IPI (pp. 58-59)

Completion:

1. a. IPI achievement tests  
   b. IPI record system
2. a. scores work  
   b. maintains record system  
   c. maintains materials center
3. a. teaching techniques  
   b. instructional time
4. math skill objectives
5. individual prescription
6. pacing
7. skill worksheets
8. specific
9. a. diagnostic instruments  
   b. skill worksheets
10. a. learning needs  
    b. characteristics

True-False:

1. F
2. T
3. F
4. F

DIRECTIONS: Listen to Audio-Tape #1. You may do this at any point of your work in this section.
Individually Prescribed Instruction is a specific system of individualized instruction. In IPI, teachers use a set of behavioral objectives correlated with diagnostic instruments and curriculum materials, teaching techniques and instructional time that are designed:

1. To enable each pupil to work at his own rate through units of study in a learning sequence.
2. To develop in each pupil a demonstrable degree of mastery.
3. To develop self-initiation and self-direction of learning.
4. To foster the development of problem-solving though processes.
5. To encourage self-evaluation and motivation for learning.

IPI as a specific system of individualized instruction is very similar to our general model of individualized instruction (Figure 1). Figure 4 represents a system of IPI with its special vocabulary and resources engineered for IPI. Study Figure 4 carefully to learn about IPI vocabulary and IPI resources.

EXERCISE

Compare Figure 4 The System of Individually Prescribed Instruction to Figure 2: A System of Individualized Instruction to note their similarities and differences.
There are six elements which distinguish Individually Prescribed Instruction from conventional elementary school procedures:

First: detailed specifications of educational objectives;
Second: organization of methods and materials to attain these objectives;
Third: careful determination of each pupil's present competence in a given subject;
Fourth: individual daily evaluation and guidance of each pupil;
Fifth: provision for frequent monitoring of student performance, in order to inform both the pupil and the teacher of progress toward an objective;
Sixth: continual evaluation and strengthening of the curriculum and instructional procedures.

They are represented in Figure 5 which expands the description of IPI to include its special characteristics. Figure 5 is similar to Figure 2. Use the following exercise to help you compare them.
Figure 5: Special Characteristics of IPI

  3. Accepts mastery requirement of 85%.
THE FOLLOWING STATEMENTS WILL HELP YOU COMPARE FIGURES 2 and 5 AND SPECIFY HOW IPI HAS BEEN ENGINEERED TO INDIVIDUALIZE INSTRUCTION. USE THE 5 X 8 CARD TO UNCOVER THE ITEMS. ANSWER BY FILLING IN TRUE OR FALSE.

EXERCISE

1. Of the three major parts of each figure, the student component and the teacher component are identical in both Figures 2 & 5. ______

.................................

True. Check Figures 2 and 5.

........................................

2. All the basic requirements for instructional objectives have not been met by the IPI Mathematics Continuum. ______

.................................

False. Inspection of Figures 2 & 5 indicates that the IPI Mathematics Continuum has met all four basic requirements for instructional objectives.

........................................

3. Teaching techniques used in IPI meet all basic requirements for learning settings and methods set in Figure 2. ______

.................................

True.

........................................

4. IPI requires that instructional time allow for flexible scheduling and pacing. ______

.................................

False. Figure 5 shows that pacing is the only way IPI uses instructional time.

........................................

END OF EXERCISE
POSTTEST: Section I: Overview of IPI

The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Complete:

1. The two types of diagnostic instruments specified by the IPI system are:
   (a) __________________
   (b) __________________

2. The aide in IPI carries out three main functions. These are:
   (a) __________________
   (b) __________________
   (c) __________________

3. Two resources in IPI are not specified. These are:
   (a) __________________
   (b) __________________

4. Instructional objectives in IPI are specified as:
   (a) __________________

5. In IPI, a student works on his:
   (a) __________________

6. In IPI, instructional time is specified as:
   (a) __________________

7. The material most used in IPI consists of:
   (a) __________________

8. Individually Prescribed Instruction is a ________ system of individualized instruction.
   (a) __________________

9. In IPI, skill objectives are correlated with:
   (a) __________________
   (b) __________________

10. As in the generalized program of individualized instruction, in IPI each student is provided with a program suited to his:
    (a) __________________
    (b) __________________
Answer true or false:

1. An IPI teacher constructs her own pretests.

2. An IPI teacher uses materials correlated with behavior objectives.

3. Student in IPI spends different amounts of time working on mathematics each day.

4. Student in IPI must complete math prescription at end of each math class.

HOW INSTRUCTION IS INDIVIDUALIZED IN IPI
HOW INSTRUCTION IS INDIVIDUALIZED IN IPI

The teacher:

1. Describes how instruction is individualized in IPI:
   a. Names the IPI component of the system that is varied.
   b. Lists and describes the 5 instructional resources that may be varied from student to student in IPI.
   c. Identifies instances of IPI and the specific instructional resource used to vary instruction.

2. Describes the steps taken to individualize instruction in IPI:
   a. Names in order and explains each of the steps.
   b. Identifies the instructional resources and names the step in which they are used.
   c. Describes the mastery requirement in IPI.
PRETEST: Section I: How Instruction in Individualized in IPI

The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as a posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.
Select the IPI resource varied in each statement. Write the letter of the correct answer in the blank on the right.

1. Teacher prescribes one third-grader the skill, C-Frac.-2, and another D-Num.-1 (a) Objectives (b) Achievement tests (c) Teaching techniques

2. Student is prescribed an abacus to help him master a skill in B-Num. (a) Instructional time (b) Materials and equipment (c) Objectives

3. Teacher prescribes a curriculum embedded test to assess student's mastery of skill 3 in D-COP (a) Teaching Techniques (b) Materials (c) Achievement tests.

Select the step taken in IPI described in each statement. Write the letter of the correct answer in the blank on the right.

4. Teacher uses curriculum embedded test to diagnose student's progress (a) mastery testing (b) diagnosing of learning needs (c) Ongoing evaluation.

5. Teacher specifies skills to be mastered (a) Diagnosis of learning needs (b) Ongoing evaluation (c) Writing prescription.

The statements below describe one of the following: a. IPI b. Generalized system of Individualization c. Both

Select the correct answer and place the letter in the blank on the right.

6. Mastery requirement of 85%.

7. Flexible scheduling.

8. Learning goals are carefully sequenced.

10. Teacher judgment used to assess learning characteristics.

HOW INSTRUCTION IS INDIVIDUALIZED

Instruction in IPI mathematics is individualized by varying:

1. IPI objectives from student to student;
2. IPI achievement tests from student to student;
3. IPI materials and equipment from student to student;
4. Teaching techniques from student to student;
5. Instructional time from student to student.

This IPI strategy is identical to the general strategy of individualized instruction. However, the specifics of the IPI strategy provide the teacher with:

1. An IPI Mathematics Continuum;
2. IPI achievement tests keyed to the Continuum;
3. IPI materials and equipment keyed to the Continuum;
4. IPI record system.

Though teaching techniques and instructional time are used to differentiate instruction in IPI, no IPI products in these areas have been developed yet. In IPI the teacher is expected to vary teaching techniques and instructional time based upon her judgment of student performance.

The following materials (Booklet I) will serve as a brief introduction to the way IPI resources are correlated to individualize instruction. Follow the directions on Booklet I.
Use this exercise with the materials in Level C, page 80.

THE FOLLOWING INSTRUCTIONS WILL HELP YOU LOCATE AN INSTRUCTIONAL OBJECTIVE IN THE IPI MATHEMATICS CONTINUUM AND TO RELATE IT TO SAMPLES OF IPI RESOURCES. USE THE 5 X 8 CARD TO UNCOVER THE ITEMS. FILL IN THE BLANKS.

1. Find the mathematics unit that is boxed in. This unit is called NUMERATION - Level Level C

2. Find the first objective that is underlined. Objective 1 requires that the student read and write numerals 1-200 in Sequence from any starting point.

3. Locate PRETEST: SAMPLE ITEMS. The underlined words indicate that these items measure achievement of and C-Numeration; Objective 1b

Inspect the sample items from the pretest. Do they ask the student to write numerals 1-200 in sequence from any starting point? 

Yes. The items ask the student to write numerals in the sequences: 10-15; 63-68; 97-102; 122-127; 179-184.

Compare the items with C-Numeration - Objective lb. Are the items related to the objectives? 

Yes. All IPI tests are keyed to IPI instructional objectives.

Locate SAMPLE WORKSHEET. Do the items ask the student to practice writing numerals 1-200 in sequence from any starting point? 

Yes. The student is asked to practice writing the sequence 116-125; 96-105; 191-200.

Compare the worksheet items to the pretest items and C-Numeration-Objective lb. Are they all concerned with reading and writing numerals 1-200 in sequences from any starting point? 

Yes. All IPI objectives, tests and worksheets are related.
8. When an IPI teacher selects a mathematics objective for a student, the teacher has many related (a) _______________________
and (b) _______________________
to choose from.

(a-b): tests, worksheets

## NUMERATION

- **Level A**
  1. Counts orally from 1 to 10.
  2. Reads numerals 1-10 left to right.
  3. Number sequence 1-10, number relations.
  4. Identifies, orally-written, cardinal numbers, concept of set.
  5. Counts orally a set 1-10 objects.
  6. Writes numerals from 1-10.
  7. Written numbers 10 objects—ordered.
  8. (9) Understands concept of (0) zero.
  9. (10) Vocabulary skills—before, after, smaller, larger, etc.

- **Level B**
  1. Reads or writes numbers 1-10 orally.
  2. Reads numerals 0 to 100. Counts 1-1000 by 1's orally.
  3. Writes numerals 1-100 in order. Counts 1-100 by 10's, orally.
  4. Identifies cardinal number of a structured group to 100.
  5. Relationship of 10's. Writes names.
  6. Identify larger > smaller < in a group

- **Level C**
  1. Identifies place value of the units, 10's, 100's to 200. Indicates >, <.
  2. Writes numbers, columns 100's, 10's, units.

## PLACE VALUE

- **Level A**
  1. Associates objects in a 1 to 1 relationship. Equivalent—non equivalent groups.
  2. Manipulates objects to illustrate add, subtr. facts through No. 8.

- **Level B**
  1. Circles numeral—picted addition.
  3. Mastery „+”, “-”, from 0 to 10.
  4. Places “=” or “x” in true or not true statements.
  5. Selects other names for numbers.
  6. Completes addition and subtraction sentences within number families.
  7. Use of commutative principle (+).
  8. Solves 1-step word problems.
  9. Vocabulary skills.

- **Level C**
  1. Use of associative principle.
  3. Sums 2 or 3 numbers, no carrying.
  5. Works column addition—3 or more addends, sums to 20.

## ADDITION

- **Level A**
  1. Demonstrates mastery, sums thru 20.
  2. Does column addition—no carrying.
  3. Finds missing addends—3 single digits.
  4. Uses words sum, addend—labels part.
  5. Add, carrying to 10's using 2 digit numerals, 2 or more addends.
  6. Add, carrying to 10's, 100's, using 3 digit numerals, 2 or more addends.
  7. Add, carry 10's, 100's, using 3 digit numerals 2 or more addends.
  8. Finds sums, column addition. Using 2 or more addends of 1 digit.

## SUBTRACTION

- **Level A**
  1. Subt. problems—numbers to 18.
  2. Subt. 2 digit—no borrowing.
  3. Finds missing addend—2 single digits.

- **Level B**
  1. Subt. numbers to 100. Any point.
  2. Skip counts, by 3's, 4's from any point.
  3. (a) Identifies and reads decimal fractions to hundredths.
  4. (b) Converts decimal numbers to fractions and other forms.
  5. (c) Fills in missing simple decimals.
**Level E**

1. Counts, reads, writes in 1,000,000 any starting point.
2. Identifies odd-even numbers. States, uses rules for addition, subtraction, multiplication, division, 2 numbers.
3. Rounds numbers by 2's, 3's, 4's, for comparison and estimating answers in sample word problems.
4. Gives numeral for 2, 3, 4 place number written in words, writes 2, 3, 4 place number in words.
5. Writes decimal for common or mixed fractions of 1/12 or 1/10 denominators — vise versa.
6. Identifies place values of decimals to thousandths.
7. Converts decimal fractions to thousandths to fraction form.
8. Identifies place value digits to 1,000,000.
9. Writes expanded notation, place value column, uses <, > relationship between 2 numbers (1,000,000).
10. Uses multiples of 10 to generalize multiplication and division facts. Uses factors to 5.
11. Writes decimal as whole number plus sum of decimal part to thousandths place.
12. Column addition, no carrying, 3 or more digit numbers, more than 2 addends.
13. Uses commutative principle of addition, 2 or more place numbers.
14. Uses associative principle for addition to add 2 or more numbers with whole numbers.
15. Adds with carrying for 4 or more place numbers with 2 addends.
16. Adds 2 numbers, whole parts, and 1 or 2 decimal places.
17. Solves multiple-step word problems.

**Level F**

1. Rounds numbers to nearest thousand, ten thousands, millions, for trimming answers.
2. Writes numerals for a 5, 6, or more number parts.
3. Locates prime numbers to 100 on a chart.
4. Makes place value chart in base 2, 3, 5 for comparison with base 10.
5. Converts decimal fractions to thousandths to fraction form.
6. Identifies place value digits to 1,000,000.
7. Charts large numbers by the place value of each digit.
8. Identifies numbers possible in base 5.
9. Identifies prime numbers in expanded notation, converts decimal to base 5 and vice versa.
10. Identifies and uses the associative principle for adding one and two digit numbers in base 5.
11. Identifies and uses the associative principle for adding more than 2 numbers (1 and 2 digits) in base 5.
12. Solves 1 step word problems which require adding and subtracting 1 and 2 digit base 5 numbers.
13. Makes place value chart in base 5 for comparison with base 10.

**Level G**

1. Tests any number to determine if it is prime or composite, finds prime factors of any given number.
2. Identifies prime numbers in base 5.
3. Identifies prime numbers in expanded notation, converts decimal to base 5 and vice versa.
4. Identifies numbers in base, 3, & 8. Changes number to base 10 and vice versa.
5. Solves multiplication problems.
7. Identifies and uses the associative principle for adding one and two digit numbers in base 5.
8. Identifies and uses the associative principle for adding more than 2 numbers (1 and 2 digits) in base 5.
9. Solves 1 step word problems which require adding and subtracting 1 and 2 digit base 5 numbers.
10. Identifies place value digits to 1,000,000.
11. Identifies prime numbers in expanded notation.
12. Adds and subtracts 1 & 2 digit numbers in base 5, 3, & 8 using expanded notation.
13. Adds and subtracts 1 & 2 digit numbers in base 2, 3, & 8 without expanded notation.
14. Identifies and uses the commutative principle for adding one and two digit numbers in base 5.
15. Identifies and uses the associative principle for adding more than 2 numbers (1 and 2 digits) in base 5.
16. Identifies and uses the commutative principle for adding one and two digit numbers in base 5.
17. Identifies and uses the associative principle for adding more than 2 numbers (1 and 2 digits) in base 5.

**Level H**

1. Identifies numbers in base, 3, & 8. Changes number to base 10 and vice versa.
2. Adds and subtracts 1 & 2 digit numbers in base 5, 3, & 8 using expanded notation.
3. Adds and subtracts 1 & 2 digit numbers in base 2, 3, & 8 without expanded notation.
4. Identifies and uses the commutative principle for adding one and two digit numbers in base 5.
5. Identifies and uses the associative principle for adding more than 2 numbers (1 and 2 digits) in base 5.
6. Solves 1 step word problems which require adding and subtracting 1 and 2 digit base 5 numbers.
7. Solves multiplication problems.
8. Identifies numbers in base, 3, & 8. Changes number to base 10 and vice versa.
10. Identifies numbers in base, 3, & 8. Changes number to base 10 and vice versa.
11. Solves multiplication problems.
12. Identifies numbers in base, 3, & 8. Changes number to base 10 and vice versa.
15. Solves multiplication problems.
17. Solves multiplication problems.

149. Solves multiplication problems.
150. Solves multiplication problems.

**Level I**

1. Identifies which numbers can appear in a base three, six, or seven system, writes numbers in the base in expanded notation, changes numbers written in base ten notation to numbers in this system and vice versa.
2. Adds and subtracts one and two digit numbers using expanded notation in base three, six, or seven.
3. Adds and subtracts one and two digit numbers without using expanded notation in base three, six, or seven.
4. Identifies and uses the associative principle for adding one and two digit numbers in base three, six, or seven.
5. Identifies and uses the associative principle for adding one and two digit numbers in base three, six, or seven.
6. Solves one-step word problems which require adding and subtracting one and two digit numbers.
7. Solves multiple-step word problems.
8. Solves multiplication problems in base three, five, six, or seven.
10. Identifies which numbers can appear in a base three, six, or seven system, writes numbers in the base in expanded notation, changes numbers written in base ten notation to numbers in this system and vice versa.
11. Applies the distributive principle for multiplication in base three, five, six, or seven.
12. Solves one-step word problems requiring multiplication in base three, five, six, or seven.
13. Uses repeated subtraction to solve division problems in base three, five, six, or seven.

</tr>
<tr>
<td>6 Solves 1 or 2 step word problems.</td>
<td>7 Solves 1-step problems thru 5 x 10.</td>
<td></td>
<td>5 Supplies missing operational signs.</td>
</tr>
</tbody>
</table>
### Level E

1. Uses repeated addition to solve multiplication problems. 1 place times 1, 2, 3 place numbers. Combinations 9 x 9.
2. Uses an algorithm for multiplication. Solves problems, 1 place times 2 place factors.
3. Uses associative principle for multiplication. Multiplies more than 2 numbers with single digit factors.
4. Uses distributive principle, single digit factors to simplify multiplication problems.
5. Multiplies 1 digit factor times 2 digit factor.
6. Multiplies 1 digit factor times a 3 or more digit factor.
7. Finds squares of numbers 2, 3, 4, 5. Write in exponential form — identifies base and exponent.
9. Multiplies 2 digits by 2 digits.
10. Solves step word problems.

### Level F

1. Uses distributive principle, simple numbers, simplify division problems
2. Uses "indirect" division with 1 digit divisor, 2 or more digit dividend. No remainder.
3. Divides with remainders, 1 digit factor and product.
4. Divides with remainders, 1 digit factor, 2 or more digit products.
5. Checks division problems by inverse operation of multiplication for 2 or more digit products.
6. Finds missing factors or quotients for division problems thru 81 ÷ 9.
7. Solves 1-2 step word problems.

### Level G

1. Solves multiple number problems in exponential form when the bases are the same. All powers positive 12 thru 10.
2. Multiplies decimal numbers with decimal parts to the thousandths.
3. Multiplies decimal numbers factors by decimal parts to the thousandths.
4. Finds cubes of whole numbers
5. Finds cubes of whole numbers

### Level H

1. Performs division with a negative and positive number. Uses the correct sign for the quotient.
2. Divides a negative number by a negative number and states that the quotient is positive
3. Divides numbers written in exponential form with the same base with negative and positive numbers.
4. Finds square roots of numbers by using the square root algorithm and applies the Pythagorean rule to right triangle problems.
5. Finds cubes of whole numbers. Identifies cube roots of numbers by using simple charts or experimentation.

### Level I

1. Solves multiple step word problems.
2. Solves insurance problems — straight life, endowment insurance, etc.
3. Solves problems involving tax rate in mills per dollar.
4. Solves banking problems — checks, depositing, withdrawing money.
5. Solves stock and bond problems.
## Fractions

<table>
<thead>
<tr>
<th>Level</th>
<th>Tasks</th>

<tr>
<td><strong>D</strong></td>
<td>1. Knows value - penny, nickel, dime, quarter.</td>
</tr>
<tr>
<td></td>
<td>2. Recognizes quarter</td>
</tr>
</tbody>
</table>
**level E**

1. Uses simple fractions \( \left( \frac{1}{2}, \frac{1}{3}, \ldots \right) \) in dividing whole objects. Uses fraction words.
2. Places \( >, <, \) or \( \ldots \) between 2 simple fractions to show relationship. Reduces fractions to lowest terms.
3. Finds fractional parts of whole numbers giving a whole answer number.
4. Uses "numerator" — "denominator" to identify fraction parts.
5. Adds 2 or more fractions same denominator. Performs subtraction of fractions. Reduces to lowest terms.
6. Changes to equivalent fractions. Responds to "reduce fractions to lowest terms."

**level F**

1. Identifies an improper fraction and changes improper fractions to mixed fractions in lowest terms.
2. Uses \( >, <, \) or \( \ldots \) to show relationship between pairs of simple fractions, improper fractions, mixed fractions. Re-arranges fraction groups in order of largest or smallest first.
3. Finds LCM for a set of whole numbers and finds the LCM for a given set of fractions.
4. Performs simple addition, subtraction and multiplication with fraction having unlike denominators using picture regions, number lines, etc.
5. Finds greatest common factor for a set of numbers and uses the greatest common factor to reduce fractions to lowest terms.
6. Uses the algorithm for addition and subtraction of fractions, finds LCD.
8. Performs column addition, 2 or more simple fractions, like and unlike denominators. Reduces to lowest terms. Performs column subtraction.
9. Adds, subtracts fractions and whole numbers with improper fractions and mixed fractions. Answers, lowest terms.
10. Uses \( >, <, \ldots \) to show relationship between 2 step equations using fractional expressions with \(+, -, \) and \(\times\).
11. Writes decimal equivalent for simple fractions \( \left( \frac{1}{2}, \frac{1}{4} \right. \text{ etc.} \). Changes decimal equivalents to fractions.

**level G**

1. Identifies change in coins with purchase amounts up to $5.00.
2. Totals purchases, amounts less than $5.00. Indicates change. Counts out change starting with the total value of the purchase.
3. Adds-subtracts money values, two or more using cent and decimal notation.
4. Multiplies-divides money values using \$ \text{ sign and decimal point.}

**level H**

1. Solves multiple-step word problems involving multiplication and division of money values.
3. Divides simple fractions, improper fractions, mixed fractions by using reciprocals. Lowest terms.
5. Solves problems with fractions raised to whole number powers.
6. Uses the division algorithm for dividing simple, improper, complex, mixed fractions.
7. Solves word problems.

**level I**

1. Finds the value of a whole number raised to a fractional power.

The steps an IPI teacher takes in planning and conducting IPI in the classroom closely resemble the general procedures followed in a system of individualized instruction. Figure 6 takes these general procedures and translates them into the specific steps used in IPI. Study Figure 6 carefully to follow the flow of instruction in IPI.
Figure 5: Steps in Individually Prescribed Instruction

1. Selection of IPI Unit
   - Teacher, initially, places student in Continuum and identifies units to be mastered. Teacher selects next unit to be mastered.

2. Diagnosis of Learning Needs
   - Teacher administers unit pre-test to determine skill(s) within unit student must learn.

3. Writing a Prescription
   - Teacher specifies skills to be mastered and selects IPI materials and teaching techniques needed for student to master the skills at his own pace.

4. Implementing the Prescription
   - Student works on prescription. Teacher gives student guidance.

5. Ongoing Evaluation
   - Teacher uses worksheet scores, curriculum-embedded tests and teacher judgment to diagnose student's progress and may modify prescription as needed. Student continues prescription.

6. Mastery Testing
   - Teacher administers unit posttest to measure if student has at least 85% mastery of unit.

Student scores 85% or higher in unit posttest.
THE FOLLOWING STATEMENTS WILL HELP YOU DESCRIBE THE STEPS IN INDIVIDUALLY PRESCRIBED INSTRUCTION. USE THE 5 X 8 CARD TO UNCOVER THE ITEMS. REFER TO FIGURE 6 AS NEEDED.

Summary Sheet: An Overview of Individualized Instruction and IPI

<table>
<thead>
<tr>
<th>Generalized System of Individualized Instruction</th>
<th>IPI: A Specialized System of Individualized Instruction</th>
</tr>
</thead>
</table>

**DEFINITION**

Individualized instruction consists of the planning and conducting of instruction in a systematic way that provides each student with a program of studies suited to his learning needs and characteristics.

IPI is an instructional system in which teachers use a set of behavioral objectives correlated with diagnostic instruments and curriculum materials, teaching techniques and pacing to plan and conduct with each student an individual learning prescription.

**STRATEGY FOR INDIVIDUALIZING INSTRUCTION**

1. Vary instructional objectives from student to student.
2. Vary the diagnostic instruments from student to student.
3. Vary learning materials and equipment from student to student.
4. Vary learning settings from student to student.
5. Vary teaching methods from student to student.
6. Vary instructional time from student to student.

1. Vary skill objectives from student to student.
2. Vary IPI achievement tests from student to student.
3. Vary IPI worksheets, supplementary materials and devices from student to student.
4. Vary learning techniques (learning settings and teaching methods) from student to student.
5. Vary pacing from student to student.

**STEPS IN INDIVIDUALIZING**

1. Selection of instructional objective.
2. Diagnosis of learning needs.
3. Prescription of program of studies.
4. Implementing prescribed program.
5. Ongoing evaluation.
6. Mastery testing.

1. Selection of IPI unit.
2. Diagnosis of learning needs.
3. Developing a prescription.
4. Implementing the prescription.
5. Ongoing evaluation.
6. Mastery testing.
TEACHING IN IPI

Glossary

**Behavior:** Any overt, observable activity exhibited by the student.

**Diagnosis:** Determination of the learning needs and characteristics of a student from data obtained by the use of diagnostic instruments.

**Diagnostic instruments:** Testing devices and assessment procedures used to gather data on student behavior in terms of learning needs and characteristics.

**Flexible scheduling:** The allocation of instructional time to different subject areas.

**Implement:** Carry out or execute a plan for instruction or a Prescription as designed.

**Instructional resources:** All objects, devices, physical facilities, and arrangements used by the teacher and students in an instructional program.

**Instructional time:** The amount of time a student spends in a subject area (flexible scheduling) or on a particular learning goal (pacing).

**Learning characteristics:** A set of student behaviors which can facilitate or impede his learning something new. Such things as organic development and peer-group relations affect the student's learning process and are characteristic of how he performs in school.

**Learning needs:** A behavior or part of a behavior that a student must master. It describes what the student needs to learn in relation to a particular learning goal.
**Learning settings:** Arrangements or groupings of students ranging from one student to large group instruction with or without the direct involvement of the teacher. The groups are formed on the basis of individual needs and are not permanent arrangements.

**Mastery:** A stated criterion of minimum acceptable competency in performing a specific behavior.

**Materials and Equipment:** All printed materials, audio-visual aids, mechanical devices, laboratory supplies, and objects that contain or convey information in an instructional program.

**Mathematics Continuum:** A sequence of behavioral objectives.

**Objective:** A description of the intended outcomes of instruction. It may be expressed as a very broad, general goal, a more specific goal or a very specific description of student behavior. Depending upon its degree of specificity, it may be called a goal, aim, purpose, objective (instructional or behavioral), skills, etc.

**Pacing:** Rate of progress through the IPI continuum or any curriculum which allows the individual student to master the skills or objectives. Pacing refers to the amount of instructional time spent on a particular objective.

**Prescribe:** Select and describe the instructional resources needed for a student to master a learning goal or objective.

**Teaching Methods:** Specific procedures for guiding a student in learning a new behavior. The method, selected by the teacher, may or may not require the teacher's direct supervision as in the use of small group discussion or self-instructing materials.
TEACHING IN IPI

Section II

BEHAVIORAL OBJECTIVES AND THE IPI CONTINUUM

A. Behavioral objectives and the Specific Objectives in IPI Mathematics

B. Organization of the IPI Mathematics Continuum

Suggested setting: Group of 2-3
This section discusses the importance of behavioral objectives in a system of individualized instruction. It also describes the IPI Mathematics Continuum in detail.
BEHAVIORAL OBJECTIVES AND THE
SPECIFIC OBJECTIVES IN I?I MATHEMATICS
The teacher identifies behavioral objectives:

1. Selects objectives stated in terms of the learner doing or producing something.

2. Identifies that part of the statement which describes the action or product.

3. Identifies in the objectives the conditions for performance.

4. Identifies the mastery criterion contained in the objective.
PRETEST: Section II: Behavioral Objectives and the Specific Objectives in IPI Mathematics

The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as a posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.
Answer Yes or No

1. To name five principles of learning.

   This statement is stated in terms of the learner doing or producing something

2. To teach the important events occurring during the "Golden Age of England."

   This statement is stated in terms of the learner doing or producing something.

3. Place a check mark next to the words in the column which describes observable learner behavior.

   (a) To enjoy
   (b) To list
   (c) To know
   (d) To recite
   (e) To write

Answer Yes or No

4. To name orally the 50 states zip codes appropriate to each of the states.

   This statement indicates the condition necessary for the behavior to occur.

5. To identify lower and upper case letters

   This statement indicates the conditions necessary for the behavior to occur.

6. Given a human skeleton, the student must be able to correctly identify by labeling at least 40 of the following bones; there will be no penalty for guessing (list of bones inserted here).

   This statement indicates the minimum acceptable mastery criterion.
7. Given an otherwise properly functioning TV receiver the learner must be able to adjust the ion trap.

This statement indicates the minimum acceptable mastery criterion.

Write the letter of the correct answer in the blank on the right.

8. When presented with a form the student must fill out a standard accident report.

This statement:

(a) Omits the stating of the minimum acceptable.
(b) Does not contain a verb which describes observable learner behavior.
(c) Omits the condition necessary for the behavior to occur.

9. To identify a well-balanced breakfast, given the foods to be eaten and amounts, within 10 seconds.

This statement:

(a) Does not fulfill the criteria for indicating who is doing the behaving.
(b) Contains all criteria of a behavioral objective.
(c) Does not contain a verb which describes observable learner behavior.

10. To identify the twelve months and the seven days with 100% accuracy.

This statement:

(a) Contains all criteria of a behavioral objective.
(b) Omits the condition necessary for the behavior to occur.
(c) Omits the stating of the minimum acceptable mastery criterion.
PRETEST: Section II: Behavioral Objectives and the Specific Objectives in IPI Mathematics (pp. 109-194010

Audio-Tape #2: Claire Moshy, *Identifying Behavioral Objectives.*

**DIRECTIONS:** Listen to Audio-Tape #2 and follow the directions as given.
Behavioral Objectives

The following criteria will help you identify a behavioral objective. A behavioral objective is stated in terms of:

1. The learner;
2. Observable behavior;
3. Conditions of performance;
4. Mastery criterion (if not specified, it is 100%).
EXERCISE
(for Audio-tape #2)

Criterion 1: Who is doing the behaving?

1. To name the time zones in the United States.
2. To teach the causes of the Civil War.
3. To use a film to introduce simple machines.
4. To state the causes of the Civil War in writing.
5. To construct a model airplane.
6. To cover the use of a comma.
7. To name the letters of the alphabet in order.

</tbody>
</table>

END OF EXERCISE
(Turn on the recorder.)
EXERCISE
(for Audio-tape #2)

Criterion 2: Is the learner doing or producing something?

1. To name the three primary colors from memory.

2. To understand that multiplication is repeated addition.

3. To appreciate the literary value of Greek lyric poetry.

4. To construct an outline of Chapter 12 in the history book.

5. To list chronologically the events leading up to World War I.

6. To develop good health habits.

7. To know how a radio works.

8. The learner describes the function of the United Nations.

END OF EXERCISE
(Turn on the recorder.)
EXERCISE
(for Audio-tape #2)

Criterion 3: Under what conditions is the learner-behavior to occur?

1. Given a vocabulary list of 95 most common nouns, the student will pronounce all the words correctly.

2. To identify upper and lower case letters.

3. To identify well-balanced meals when presented with ten breakfast menus.

4. To name the prehistoric animals when given pictures of them.

5. To recite the "Ancient Mariner."

6. To name the fifty states orally when presented with their zip codes.

7. To fill in the names of the months and the days of the week on a calendar.

END OF EXERCISE
(Turn on the recorder.)
Criterion 4: What is the mastery criterion?

1. To count to twenty accurately from memory within twenty seconds.

2. To reduce a given list of fractions to lowest terms.

3. To alphabetize a random list of works with 100% accuracy.

4. To assemble a jigsaw puzzle within fifteen minutes.

5. To translate orally into English a selected French poem.

6. To name each primary and secondary color, when presented with a series of colored cards.

7. To run a 110-yard low hurdle race conforming to AAU standards.
POSTTEST: Section II: Behavioral Objectives and the Specific Objectives in IPI Mathematics

The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Answer Yes or No:

1. To identify the five basic parts of a green plant.
   This statement is stated in terms of the learner doing or producing something.

2. To use a film to demonstrate how to construct an aquarium.
   This statement is stated in terms of the learner doing or producing something.

3. Place a check mark next to the words in the column which describes observable learner behavior.
   (a) To believe
   (b) To circle
   (c) To understand
   (d) To appreciate
   (e) To multiply

Answer Yes or No:

4. To name a dinosaur given a picture of one.
   This statement indicates the condition necessary for behavior to occur.

5. To write the names of the 50 states given the abbreviations.
   This statement indicates the condition necessary for behavior to occur.

6. The student must be able to spell correctly at least eight of the ten words called out to him during an examination period.
   This statement indicates the minimum acceptable mastery criterion.
Answer Yes or No:

7. The student must be able to use the chemical balance well enough to weigh materials accurately to the nearest milligram.
   This statement indicates the minimum acceptable mastery criterion.

Write the letter of the correct answer in the blank on the right:

8. To list the three most important causes of the Civil War as agreed upon by at least two references given unlimited access to six references.
   This statement:
   (a) Does not fulfill the criteria for indicating who is doing the behaving.
   (b) Omits the conditions necessary for the behavior to occur.
   (c) Omits the stating of the minimum acceptable mastery criterion.

9. To know 4 out of 5 plays of Shakespeare when presented with their titles.
   This statement:
   (a) Contains all criteria of a behavioral objective.
   (b) Does not fulfill the criteria for indicating who is doing the behavior.
   (c) Does not contain a verb which describes observable learner behavior.

10. Given a contract with certain legal terms circled, the student is asked to write a definition of each of the circled terms.
    This statement:
    (a) Omits the condition necessary for the behavior to occur.
    (b) Omits the stating of the minimum acceptable mastery criteria.
    (c) Contains all the criteria of a behavioral objective.

10. C
As we examine the IPI Mathematics Continuum, we can apply the distinctions made concerning different levels of learning goals and objectives in Audio-tape #2.

The general aims of education in America indicate that children should study mathematics. This then is the broad general level. Defining the particular course of study and defining of each area within the Mathematics Continuum can be considered the second, more concrete, level. Stating the specific objectives or skills in each unit of mathematics is the most specific or behavioral level of the Continuum.

The general and concrete levels are important to you as an IPI teacher. They give you a setting for the part you play in developing a student who is competent in IPI mathematics.

The specific behavioral objectives or skills are most important to you since they will be an integral part of your day-to-day teaching. These are the skills that will be examined in terms of the four criterion questions:

1. **Who** is doing the learning?
2. Is the learner doing or producing something?
3. **Under what conditions** is the learner-behavior to occur?
4. What is the **mastery criterion**?
ORGANIZATION OF THE IPI MATHEMATICS CONTINUUM
ORGANIZATION OF THE IPI MATHEMATICS CONTINUUM

The teacher describes the IPI Mathematics Continuum with the use of a chart of the Continuum:

1. Locates and names the areas, levels, units and skills on the Continuum.

2. Describes the Mathematics Continuum, its areas, levels and skills in terms of generality and specificity, and in terms of 4 selected criteria of behavioral objectives.

3. Explains the sequence in the Continuum.

4. Lists a given set of units in the order in which they would be studied by a student.
The following items constitute a pretest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Directions:

1. Take the pretest.
2. Use the answer key immediately following the pretest to correct your work.
3. Work on the pages to which you are directed by the pretest answer key.
4. Take the posttest.
5. Use the answer key immediately following the posttest to correct your work.
6. Move on to the next pretest if you have scored 100%.
7. Work on the pages to which you are directed by the posttest answer key if you have scored under 100%. Discuss these pages with other teachers working through this section.
8. Use the pretest as a posttest. (Alternate using the two test forms.)
9. Work toward 100% mastery.

ORGANIZATION OF THE IPI MATHEMATICS CONTINUUM

The IPI Mathematics Continuum has been designed to provide the teacher with a clear set of carefully sequenced behavioral objectives in mathematics. A first step toward using the Continuum is to become familiar with the organization and details of the Continuum.

There are four diagrams in this section:

1. Organization of IPI Mathematics Continuum
2. Sample Unit from IPI Mathematics Continuum
3. IPI Mathematics Continuum (Area Objectives)
4. IPI Mathematics Continuum (Sequence of Units and Skills)

Examine each diagram and explanatory text to learn about the IPI Mathematics Continuum.
(1) The IPI Mathematics Continuum for kindergarten through grade six is organized into fifteen broad areas from numeration to special topics.

(2) Each area has a possible range of eight levels (A-H) of increasing competency and complexity. These levels approximate traditional grade levels.

(3) The boxes formed by the intersection of an area of mathematics and level of competency are units of behavioral objectives or skills the student must master at that point in the Continuum (refer to Figure 2).
The unit circled in Figure 1 and presented below in Figure 2 is a set of Division skills on Level D. The unit contains seven skills.

### Level D

1. Divides a set into subsets of equal number to solve simple grouping (division) problems.

2. Uses known multiplication facts to solve division problems related to products to 5 x 10, including 0 and 1.

3. Uses the terms "dividend", "divisor", and "quotient" to label parts of a division problem. Selects division as the proper operation when the "division" box is used.

4. Solves division problems through combinations of 50 ÷ 5 to demonstrate oral and written mastery (no pictures).

5. Divides 2, 3, 4 and 5 by 1 and into 0 and divides a number by itself.

6. Fills in frames for missing quotients. Divisors to 5, dividends to 50, also divisors to 9 when quotients are 5 or less.

7. Solves one-step word problems requiring division facts through 5 x 10.

Figure 2: Sample Unit from IPI Mathematics Continuum
EXERCISE
Summary Sheet for Figures 1 & 2

1. The Continuum has been analyzed and designed in terms of a sequence of ____________.

2. The content of the Continuum has been divided into ____________.

3. The levels of increasing competency run from ________________.

4. A _______________ in the Continuum is defined as set of behavioral objectives or skills of a given area at a specified level of competency.

5. Numeration is _________________.
   Special Topics is _________________.
   F-Time is _________________.
   The highest level of competency is _________________.

6. The behavioral objectives within a unit are also called _________________.

7. Criteria of Behavioral objectives and D-Division skills. Fill in criteria matching the skill column.

<table>
<thead>
<tr>
<th>Criteria</th>
<th>D-Division Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. _______?</td>
<td>All 7 skills describe the student doing something.</td>
</tr>
<tr>
<td>2. _______?</td>
<td>All 7 skills use action words as solve, fill-in, label, etc.</td>
</tr>
<tr>
<td>3. _______?</td>
<td>Skill #3 tells us behavior is to occur when division box is used. The other skills do not meet this criterion. In this case, the teacher meets this criterion through the prescription.</td>
</tr>
<tr>
<td>4. _______?</td>
<td>Students must score 85% or higher on all skill and unit tests in order to move on.</td>
</tr>
</tbody>
</table>

END OF EXERCISE
EXERCISE
(for 1st and 2nd grade teachers)

The following units from Level B are frequently used on your grade level. Apply the four Criteria of Behavioral Objectives in examining them. Discuss your interpretations with the other 1st and 2nd grade teachers. Ask the instructor for help if you need any.

B - Money

1. When presented with the coins (or pictures of) a penny, nickel, and dime, child selects the requested coin.

2. Matches coins; pennies and nickels (or pictures of them) with their numerical value or with value in other coins.

3. Responds to word "quarter" by selecting the correct coin (or picture) from a collection of coins.

4. Finds the value of collections of pennies and nickels and responds to use of "c" sign. Sums to 12c.

B - Time

1. Reads numerals to 12 on a clock face (oral).

2. Writes numerals to twelve on a clock face.

3. States that it is after ____ o'clock and before ____ o'clock when presented with a clock face which has only an hour hand pointing between any two numerals on the face. The students should be able to do this very quickly so that a timed test should be used.

B - Systems of Measurement

1. Locates when directed, the following: high, low, near, far; nearest, farthest; big, little; more, less; short, long; smaller, larger; taller, shorter; longer, shorter; right, left.

2. States that a ruler and yardstick are used for measuring and identifies each on request.
3. Says that ruler divisions are inches and that three one-foot rulers are the same length as one yardstick.

4. Identifies "one dozen" and "one-half dozen" objects.

B - Geometry

1. Locates the following figures on request: circle, square, triangle, and rectangle. Responds to these words when used in directions.

2. Reproduces a circle, square, triangle, and rectangle from memory.

END OF EXERCISE
EXERCISE
(for 3rd and 4th grade teachers)

The following units from Level D are frequently used on your grade level. Apply the four Criteria of Behavioral Objectives in examining them. Discuss your interpretations with other 3rd and 4th grade teachers. Ask the instructor for help if you need any.

D - Numeration

1. Reads and writes numbers to 1000. Reads and writes short sequences of numbers from any starting point forward or backward.

2. Completes patterns for skip counting by 3's from any starting point to 1000, forwards or backwards.

3. (D-2) Completes patterns for skip counting by 4's from any starting point to 1000, forwards or backwards.

4. (D-3) Converts pure decimal fractions of tenth to common fractions and words, and vice versa. Fills in missing pure decimal tenths on a number line.

5. (D-3) Converts pure decimal fractions through hundredths to fractions and words, and vice versa.

D - Place Value

1. Identifies the place value of the units, tens, hundreds, and thousands digit in numbers to 1000 by writing the place value in words or numerals when given the digit and by giving the digit when the place value is specified.

2. (D-1) Places or between two numbers to 1000.

3. (D-1) Writes the number which comes "before" or "after" a given number, or "between" two numbers for numbers to 1000.

4. (D-2) Writes numerals in expanded notation (up to 1000) in words or numerals with a + sign.

5. (D-2) Regroups or renames numbers in groups of hundreds, tens, and ones appropriate for borrowing and carrying.
6. (D-3) Solves addition and subtraction problems related by multiples of ten for combinations not yet studied.

7. (D-4) Writes pure decimal fractions in expanded notation using words, common fractions or decimal fractions.

8. (D-4) Identifies place value of digits of pure decimal fractions to hundredths by writing the place value in words, common fractions or decimal fractions when given the digit.

9. (D-4) Fills place value chart for pure decimal fractions to hundredths.

END OF EXERCISE
EXERCISE
(for 5th and 6th grade teachers)

The following units from Level F are frequently used on your grade level. Apply the four Criteria of Behavioral Objectives in examining them. Discuss your interpretations with other 5th and 6th grade teachers. Ask the instructor for help if you need any.

F - Numeration

1. Rounds numbers to nearest thousands, ten thousands, and millions for estimating answers in problem form. Rule: rounds up from 5.

2. Writes the standard numeral for a 5, 6, or more place number written in words and writes a 5, 6, or more place number in words.

3. Locates the prime numbers to 100 on a chart by the definition that: "A prime number is one which has exactly two different whole-number factors.

F - Place Value

1. Completes a place value chart for 4 or more digit numbers. A sample form is to be given for all exercises.

2. (E-3) Writes 10 multiplied by itself a number of times as 10 to a power, for all positive powers of 10 (not to include zero). Identifies the base and the exponent or power of a term.

3. Writes a number with one non-zero digit as a whole number less than 10 times a power of 10- i.e., 7 x 10^n.

4. Writes a number from 1 through 9 multiplied by itself a number of times in exponential form.

5. (F-2,5) Reads and charts decimal numbers to millionths with whole number parts to ten. Sample to be given for all exercises.

F - Addition

1. Adds with carrying for four or more place numbers with more than two addends.
EXERCISE - CONTINUED
(for 5th and 6th grade teachers)

2. Adds two or more numbers with whole number parts and decimals to the millionths. Addends need not have same number of digits. Maximum of 7 digits.

F - Subtraction

1. Subtracts two decimal numbers with whole number parts and decimals to the millionths. Terms need not have same number of digits. Maximum of 7 digits.

END OF EXERCISE
Each of the fifteen areas of IPI mathematics is rather broadly defined. However, each area has been analyzed into specific behavioral objectives or skills, and grouped into units of increasing competencies. The boxes with the diagonal lines represent the units of skills existing in each area.

For example, numeration contains skills at every level of difficulty. While multiplication and division each start with units of skills at Level D. Examine the chart to see how the units of skills are distributed through the Continuum.

</table>

The units in IPI mathematics are carefully sequenced. The sequence of units is presented in Figure 4. The numbers in the upper left-hand corner of each unit give the numerical order in which the units are mastered. Mastery of each unit is generally dependent upon mastery of the preceding unit. For example, if a student is working in B-Frac. (Unit 7), he has mastery of Units 1-6. After mastering B-Frac. (Unit 7), he will move into the next unmasted unit.

The numbers in the lower right-hand corner of each unit indicate the number of skills to be mastered. For example, D-Num. (Unit 23) contains five skills.

Figure 4 indicates there are 86 units and 436 skills in the Continuum to date. The Continuum is periodically reviewed and revised. Feedback from IPI teachers helps RBS and LRDC in these revisions of the mathematics program.
EXERCISE
Summary Sheet for Figure 3 & 4

1. __________________ are broadly defined in the Continuum.

2. The __________________ are carefully sequenced from 1 to 86.

3. A student who is ready to start work on the skills in F-Addition must have mastered all the skills in Units 1 to ____________.

4. The number of units in TIME is ____________. They run from Level _______________ to _______________.

5. The units contain different numbers of ________________.

6. (See Chart on following page.)
6. A student shows he has mastered all the shaded units on this chart. He should master all the units in one level before working through successive units. The student, represented on this chart, would master the units in this order:

<table>
<thead>
<tr>
<th>Sub.</th>
<th>Unit No.</th>
<th>Name</th>
<th>No. of Skills</th>

139
The following items constitute a posttest.

The answer key which accompanies the test is correlated to the instructional materials in this section. Based upon the right and wrong responses you have made on the test, the answer key will direct you to those pages on which you should work to achieve 100% mastery.

Use the directions given with the pretest.
Complete the following statements by writing the appropriate answer in the column of blanks provided on the right. Use the graph to find the answers.

1. The areas range from (a)____ to (b)____

2. (a)____ is the box formed by the intersection of an area of mathematics and level of competency. (a)____

3. C-Fractions is (a)____

4. Multiplication is (a)____
Complete the following statements by writing in appropriate answer in the column or blanks provided on the right.

5. (a) __________ are broadly defined in the Continuum.

6. The units contain different numbers of (a) __________

7. At present there are (a) __________ skills in the Continuum

Answer True or False

8. Generally to master a unit a student must have mastered the preceding units

9. Multiplication contains skills at every level of difficulty

10. Each unit contains five skills
POSTTEST: Section II: Organization of the IPI Mathematics Continuum (pp. 41-139)

1. A-H

2. unit

3. unit

4. area

5. areas

6. skills

7. 436

8. True

9. False

10. False
A behavioral objective describes an overt activity or observable product executed by the learner under a specific set of conditions with a stated degree of mastery.

**Criterion questions for a behavioral objective:**

1. Who is doing the behaving?  
   (Learner)
2. Is the learner doing or producing something?  
   (Overt behavior or observable product)
3. Under what conditions is the behavior to occur?  
   (Situational factors that will elicit the behavior)
4. What is the mastery criterion?  
   (Minimum acceptable competency)

**IPI Mathematics Continuum** is a carefully sequenced set of behavioral objectives in mathematics organized into areas of mathematics and levels of competency.

There are fifteen **Mathematics Areas** or subdivisions of the content in the Continuum (Numeration, Place Value, etc.) Each Area has a possible range of eight **Levels of Competency** (A-H). A particular Level of Competency in any one Area is a **Unit** (D-Numeration, A-Add., etc.) A Unit is composed of a set of **Skills** (D-Multiplication has eight Skills, G-Fraction has five Skills, etc.)

A student works on Units he has yet to master in the order in which they are sequenced in the Continuum.
