Guides, Health Programs, Instructional Materials, 
Junior High Schools, *Mental Health, Mental Health 
Programs, *Personal Adjustment, Secondary Education

This publication contains curriculum suggestions for 
teaching Mental Health for grades seven, eight, and nine. The content 
and activities of this guide are intended to help teachers give the 
adolescent some understanding of the factors which have influenced 
his development and which will continue to influence him as a 
functional and responsible human being. More specific objectives 
include: 1) develop a realistic understanding of self-potential; 2) 
achieve a better adjustment in their interpersonal relationships; and 
3) realize that normal individuals differ in patterns of physical 
growth and development. The publication format is intended to provide 
teachers with basic content in the first column; a listing of the 
major understandings and fundamental concepts which children may 
achieve, in the second column; and information specifically designed 
for classroom teachers which should provide them with resource 
materials, teaching aids, and supplementary information in the third 
and fourth columns. (KJ)

This publication contains curriculum suggestions for teaching Strand III - Mental Health, for grades 7, 8, and 9.

The publication format of four columns is intended to provide teachers with a basic content in the first column; a listing of the major understandings and fundamental concepts which children may achieve, in the second column; and information specifically designed for classroom teachers which should provide them with resource materials, teaching aids, and supplementary information in the third and fourth columns. The comprehensive nature of the health program makes it imperative that teachers gain familiarity with all of the strands presently in print. In this way, important teaching-learning experiences may be developed by cross referring from one strand to another. As a case in point, mental health teachings may include supplementary materials from physical health, sociological health problems, environmental and community health, and education for survival.

It is recommended that the health coordinator in each school system review these materials carefully and consult with teachers, administrators, and leaders of interested parent groups in order to determine the most appropriate manner in which to utilize this strand as an integral part of a locally adapted, broad, and comprehensive program in health education.

The curriculum materials presented here are in tentative form and are subject to modification in content and sequence. Critiques of the format, content, and sequence are welcomed.

INTRODUCTION: The Family

The family is the recognized basic unit of our society within which members can relate most intimately to each other and within which children are born and raised. The physical and emotional development of children are influenced most strongly by interactions between members of the family and the general physical and emotional atmosphere present. The family is dynamic and is affected by environment, by income, by births, by deaths, and by the personal feelings and desires of each family member. It is within this social structure that the most basic physical requirements are met, and within which the child satisfies his emotional needs and desires.

In our society, a family unit may proceed through what is commonly referred to as the family life cycle. This cycle includes the following stages:

1. The beginning family (here the family is being established and the first child is born).
2. The preschool stage
3. The school-age family
4. Families with teen-agers
5. Family as a launching center for the grown child or children
6. The "empty-nest" stage
7. The aging family

Families may vary greatly in structure and function. Some, for example, may be matriarchal or patriarchal, authoritarian or democratic, child-centered, or some combination or variation of these. The family functions to satisfy the needs of individual members. The extent to which different families satisfy the needs of individual members varies.

Within a family each person's need pattern may be met in different ways. Family members tend to share the same basic value patterns but some issues involve diverse value orientations, especially where teen-agers are involved.

Important as the family is in the emotional, sexual, physical, and intellectual development of the child, other factors in the total environment, as well as the individual's hereditary potentials, should be considered. As the child grows and develops, he becomes more independent and his environmental contacts become more diversified, and, in some instances, more important than those of the family. The kinds of influence these will have on his personality development are extremely complex. The content and activities of this guide are intended to help teachers give the adolescent some understanding of the factors which have influenced his development and which will continue to influence him as a functional and responsible human being.

Teachers of grades 7, 8, and 9 are aware of the vast physiological, psychological, and maturation differences of youngsters in their classes. The teacher should be able to help students grow toward responsible adulthood by helping them to achieve the following objectives:

1. Develop a realistic understanding of self-potential.
2. Encourage open and frank discussion which may lead to responsible standards of human behavior.
3. Recognize that each person must accept himself and others as individuals with unique capacities and abilities for living and working together.
4. Utilize the problem-solving approach as a help to finding realistic, socially acceptable solutions to personal problems.
5. Understand that people need successful social relationships with others in order to develop their human potential.
6. Achieve a better adjustment in their interpersonal relationships.
7. Obtain objective, factual, scientific information in the areas of mental and emotional health.
8. Realize that normal individuals differ in patterns of physical growth and development.
OUTLINE OF CONTENT

I. Why We Do the Things We Do
   A. Basic needs
       1. Physical needs
          a. Food and water
          b. Shelter
          c. Protection from elements
       2. Emotional needs
          a. Love
          b. Security
          c. Recognition - the feeling of personal worth and achievement
          d. Competence - the feeling of personal achievement and success

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

A person's behavior is motivated by his needs and desires and channeled by his social and natural environment toward certain goals.

Life is dependent upon meeting our physical needs.

Mental and emotional health are functions of our self-concepts.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Have students formulate and discuss their definitions of success in the following areas:

- work
- play
- home life
- friendship

Have students do library research or guided reading to determine the nature and relationship of physical needs, and emotional needs, and how each one depends on and influences the other.

SUPPLEMENTARY INFORMATION FOR TEACHERS

All people have certain basic needs. (Sometimes these are divided into categories such as physical and emotional needs.)

A need is a lack of something essential to the individual, and its existence motivates the seeking of that which is needed. When this effort is blocked, frustration results in the form of tension or stress. (Anxiety, anger, and grief are examples of stress.)

Tension and stress are essential to normal human functioning, although at times they may interfere with one's effectiveness.
e. Independence

f. Self-actualization

B. Success in getting what we need

Whether or not one succeeds in getting what is needed depends on his learnings, social influences, and personal qualities.

Have students recall stories about outstanding personalities in many fields:

Discuss how strengths or weaknesses affected their success.

Discuss some of the failures these men had.
(How many times did they fail before they attained success?)

How did they learn from their failures?

Social interaction: As we work toward our goals, doubts concerning our abilities may interfere with our efforts. We may question whether the goal is worth the expenditure of effort required for its attainment. During such periods of questioning, the encouragement and support of friends, parents, and relatives may be crucial in convincing us that our goal-directed efforts are worthwhile. Friends and family members may also discourage an individual's efforts to reach a goal.

Learning: The behavioral responses that lead to need-satisfaction should be as varied as those objects or activities which will help to satisfy these needs. The process of learning responses that are need-satisfying is further complicated as one develops experience. It would be appropriate, at this point,
C. Frustration

Frustration is characterized by tension and results from the failure to satisfy a need, solve a problem, or reach a goal because of some personal or environmental obstacle.

D. Reactions to frustration

Though each individual experiences frustration in his life, all people do not react to frustrating conditions in the same manner.

The perception of frustration, as well as the ability to cope with it, is dependent on one's personality, and therefore varies from one person to the next. An emotional state results when one

<tr>
<td>Have students write a paragraph concerning an episode in their life when a need was met. Give your reaction.</td>
</tr>
<tr>
<td>Have students write a paragraph concerning an episode in their life when a need was not met. Give your reaction.</td>
</tr>
</tbody>
</table>

Supplementary Information for Teachers

- Explore the differences between purposive learning and trial-and-error learning as they relate to the establishment of one's goals and the efforts to attain these goals.
- Personal factors which determine one's persistence in goal attainment are (1) interests, (2) aptitudes, (3) abilities, and (4) emotional maturity.
- The obstacles leading to frustration may be environmental or personal.
- People's reactions to frustration differ according to (1) their dispositions, (2) the persistence with which they deal with the frustrating conditions, (3) the flexibility of their total personality, and (4) the degree to which they remain objective.
- The anatomical and physiological changes that are characteristic of the early adolescent can be
<table>

<th>MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS</th>
<th>SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES</th>
<th>SUPPLEMENTARY INFORMATION FOR TEACHERS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>fails to satisfy a need, solve a problem, or attain a goal.</td>
<td>for everyone? Ask for reasons for their answers.</td>
<td>frustrating. An understanding of these changes is basic to frustration reduction. In some cases it is extremely difficult to help an adolescent to understand, appreciate, and accept his physical being. It is not enough to tell him that many of the physical conditions cause frustration for others.</td>
</tr>
<tr>
<td></td>
<td>Frustration may lead to disruption and further frustration or to continued growth and development, depending upon the individual's ability. When one overcomes a frustrating situation, his confidence in overcoming future frustrations may be increased.</td>
<td>Have students list effective approaches in solving emotional problems.</td>
<td>Individual reactions to frustration may be classified as disruptive or constructive.</td>
</tr>
<tr>
<td>1. Disruptive effects</td>
<td>Among adolescents, frustrating situations may develop within the individual as a result of perception of himself, his family, school, and peer relationships.</td>
<td>Ask students to recall events in which tension resulted in undesirable consequences, for example, &quot;choking-up&quot; in athletic events.</td>
<td>The disruptive effects of frustration include (1) hostility, (2) aggression, (3) reduced aspirations, (4) apathy, and (5) escape. It is difficult to classify aggression as a disruptive reaction in all cases of frustration. The expression of hostility may in some cases reduce pent-up feelings and reduce aggressive behavior.</td>
</tr>
<tr>
<td>2. Constructive effects</td>
<td>Frustration may cause an individual to seek new solutions to his needs.</td>
<td>Assign students the task of writing about a specific event in which tension preceded creative effort. This may be illustrated by one or two students</td>
<td>Constructive effects of frustration are those that encourage the individual to learn more effective approaches, and the development of new skills</td>
</tr>
</tbody>
</table>
II. Learning More About Ourselves

A. Growing and developing

1. Nature of development

Development may be viewed as the process of completing tasks that enable the individual to cope with subsequent tasks.

- Have students prepare a short essay on "What is most important to me." Include reasons why this is important. Have them react to several papers to elicit broad discussion on developmental tasks.
- Have students list some of the problems they face. Then have them list several problems solved previously which aided in arriving at a solution for subsequent problems.
- Have students read about a fictional or biographical character illustrating the concept "developmental tasks." (e.g., Huck Finn, Tom Sawyer).

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

- solving a puzzle or problem, and reporting their feelings to the class.

SUPPLEMENTARY INFORMATION FOR TEACHERS

Robert Havighurst has developed a useful model for the study and understanding of man's development. This approach may be termed the concept of "developmental tasks." According to Havighurst, beginning at birth and continuing throughout the individual's life, a variety of tasks must be successfully completed so that the individual may be able to continue his development and face new tasks. For example, the young child must learn to stand before he can walk; walk before he can run, etc.

Other developmental tasks are a result of one's emotional growth as an individual or as a socialized being. (Acceptance of one's sexuality would be an example of such a task.) There is no hard and fast separation between these

. "Smoking problems"  
. "How to make and keep friends"  
. "Learning about popularity"  
. "Making the most of yourself"  
(produced by Family Filmstrips - distributed by Society for Visual Education). | You might emphasize that tasks facing individuals in other periods of development are as perplexing and difficult as those of the adolescent period. |
<p>| a. Achieving new and more mature relations with peers of both sexes | As the individual develops, it becomes necessary to establish more mature relationships with others. | Discuss physical, psychological, social, and emotional differences and the changing roles of male and female in our society. | A new intimacy develops involving the ability to be confided in and to confide in others, depending on friends and, in turn, permitting them to depend on you, etc. As teen-agers develop, individual differences become more pronounced. Tolerating differences in interests, abilities, activities, likes, and dislikes among others is an important task of this period. |
| b. Achieving a masculine or feminine social role | There are many overlapping roles of women and men. | | As one's body takes on definite adult characteristics, he is expected to assume a social role appropriate for adults of his sex. This psycho-social task is related closely to a biological task. A new sense of sexuality is developing. |</p>

<td>The freedom to make decisions carries inherent responsibilities.</td>
<td>Have the students read and evaluate the New York State Youth Commission's charts on &quot;rights&quot; and &quot;responsibilities.&quot; Have the students develop a &quot;Declaration of Rights and Responsibilities.&quot; This may be the outcome of the class members meeting with and working with a group of parents. Or it may be the result of classwork plus a series of planned student interviews of parents. Develop two</td>
<td></td>
</tr>
<tr>
<td>e. Achieving assurance of economic independence</td>
<td>Self-esteem is related to one's perceptions of his vocational, social, and intellectual capacity.</td>
<td></td>
<td>Adolescents continue to receive emotional support from peers, parents, and other adults. However, for one to achieve emotional independence, he must learn to make decisions for himself, and, more importantly, to accept responsibility for these decisions.</td>
</tr>
</tbody>
</table>

Supplementary Information for Teachers:

Body size, shape, and characteristics can pose serious barriers to self-acceptance. This task has many important implications that should be explored in class.

Sexual changes which should be discussed include: physical - physiological - emotional - social.
OUTLINE OF CONTENT

f. Selecting and preparing for an occupation

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

The school guidance counselor is trained to help students in understanding themselves and in planning their future life.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

lists --

1. Teen-age Declaration of Rights (what we have a right to expect from our parents)
2. Parents' Declaration of Rights (what parents have a right to expect from their teen-age sons and daughters)

As a summary experience, the class can compare the two lists, identify the similarities, locate possible sources of conflict, and suggest ways of resolving these conflicts.

Invite the school guidance counselor to discuss careers. Provide students with a list of the resources that are available in your school and community to help them learn about different vocations.

Provide examples to illustrate how vocational planning and academic planning are related.

SUPPLEMENTARY INFORMATION FOR TEACHERS

independent. He must be assured that, given his abilities, interests, etc., he is capable of making a living in the adult world. For many young people, this task is prolonged and may not be completed until extensive education or training has been acquired. The essential point is that the young person "feels" less dependent on parents and other adults for economic support. This task has important implications for allowances, part-time employment, purchasing one's own clothes, etc.

The school guidance counselor is in an excellent position to discuss his role in helping to prepare young people to approach this task. Within the health sciences, for example, dozens of occupations may be explored to inform students of the vocational potential of this broad field.

One of the purposes of this health area is to help teenagers with this task. The pupil's experiences in the

</tr>
<tr>
<td>2. Skeletal growth</td>
<td>Body proportions are strongly influenced by skeletal development.</td>
<td>Have class discuss physical appearance at the different developmental stages in the life span - the baby; the older child; the youth; young, middle-aged, and elderly adult.</td>
<td>The basic reproductive process should be discussed at this time. This may include a review of the reproductive system as it relates to the new roles of the adolescent. (See page 13).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>There is a higher correlation between skeletal age and onset of puberty (as indicated by menarche in the female) than between the onset of puberty and chronological age. Onset of puberty can be estimated more accurately from knowledge of a girl's skeletal age than on the basis of height and weight measurements. It appears that in the early school years girls are generally one year in advance of boys in skeletal development. This advantage increases to nearly two years by the time of high school entrance.</td>
</tr>
</tbody>
</table>
### OUTLINE OF CONTENT

#### 3. Uniqueness of individual growth patterns

- We are unique because each human being has his own personalized set of physical and mental capabilities.

#### B. Relationships to other maturities

- Total maturity is a resultant of physical, mental, and emotional development and cannot be determined in terms of one's physical appearance.

#### 1. Adult appearance and immature behavior

- **a. Looking "grown up" is not being "grown up"**
  - As one becomes more mature physically, others expect him to show similar development in his mental and emotional activities.

### MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

- We are unique because each human being has his own personalized set of physical and mental capabilities.
- Total maturity is a resultant of physical, mental, and emotional development and cannot be determined in terms of one's physical appearance.

### SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

- Illustrate that it is possible for one to be "16 physically" and "10 or 12 emotionally."
- Develop a graph or chart comparing the growth patterns of boys and girls.

### SUPPLEMENTARY INFORMATION FOR TEACHERS

- Maturation of the skeleton tends to occur at approximately the same time that one's adult height is attained.
- The uniqueness of individual patterns of growth development has been incorporated in much of the subject matter; it is well to devote specific attention to it at this point.
- Since one's level of total maturation is most often judged by observing his physical size and shape, it is not unusual for the physically mature adolescent to consider himself an adult when he achieves adult size.
- Emphasis should be placed on the fact that being "grown up" is much more complex than looking "grown up." The adolescent may insist that he should be granted all the privileges of an adult when his body stature has reached that of an adult. The most effective way to be treated like an adult is to behave in a mature manner. This involves accepting the responsibilities that

<tbody>
<tr>
<td>b. Conflicts within the family</td>
<td>The inability of some adolescents who look mature to act responsibly is a common source of tension between the adolescent, his peers, and adults.</td>
<td>Problem-solving techniques learned within the family unit become part of one's personality.</td>
<td>accompany new privileges. The more responsible the individual becomes, the more he demonstrates his ability to handle more adult privileges.</td>
</tr>
<tr>
<td>(1) Parent and child</td>
<td>Effective communication between family members can help to minimize friction and conflict.</td>
<td>Ask the question: If you were a parent, in what ways would you be similar to, or different from, your parents?</td>
<td>Sometimes teachers and parents expect adult behavior from adolescents who are only adults in the physical sense. When one's emotional development has lagged or simply not kept pace with his physical development, such unreasonable demands can cause anxiety and frustration.</td>
</tr>
<tr>
<td>(2) Sibling relationships</td>
<td></td>
<td>Have a student committee develop a questionnaire and conduct a survey of teen-parent relationships.</td>
<td>Physical maturity, in the absence of other maturities, is a common source of tension between teen-agers and parents. The following list is suggestive of some of the areas where tension may arise:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Have members of the class play the roles of siblings in conflict.</td>
<td>1. desire to use make-up and, in general, to dress in adult attire 2. decisions relative to friendship choices, &quot;hours,&quot; &quot;hangouts,&quot; etc. 3. parents' insistence that the adolescent not try to &quot;grow up&quot; too fast</td>
</tr>
</tbody>
</table>
OUTLINE OF CONTENT

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

c. Privileges of maturity mean increased responsibility

Individuals who expect to be granted new privileges should be willing to accept the responsibilities that accompany the privileges.

Demonstrating that one is capable of accepting new responsibilities is an effective way to convince others that he is ready for new privileges.

Need for external control is minimized when the individual exercises responsible self-control and is accountable for his own behavior.

C. Emotional maturity

At each stage of development, the individual is expected to be more emotionally mature than he was at an earlier point in his life.

"Emotional maturity" is an ideal quality. It is more accurate and useful to speak of growth toward emotional maturity than emotional maturity per se.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Have class members select from supplementary reading some descriptions of emotions people have felt and the ways in which they expressed them. Do any of these descriptions help the students understand their own emotions better? Do any of these descriptions describe how students may have felt in similar situations?

SUPPLEMENTARY INFORMATION FOR TEACHERS

and, paradoxically, that he stop being a baby and act "grown up"

Adolescents frequently fail to comprehend the impact of some of their behavior on parents' attitudes. They need to explore different techniques of demonstrating to parents and adults that they are becoming more responsible.

The term "maturity" is a term that is used to characterize mental and emotional health or development. Its use is based on the fact that humans ordinarily experience an increase in their ability to behave effectively as they pass through each stage of development. Thus, at each succeeding stage of development, one's behavior is expected
1. Growth in understanding emotional maturity, since this implies that one may not attain this ideal state.

The individual who is characterized by growth in emotional maturity is one who is developing emotional maturity. This development reflects an increase in understanding of self and others, acceptance of self and others, tolerance of self and others, and respect for self and others.

Through understanding our own actions and feelings, we are better able to understand other people. As understanding of others increases, ability to understand oneself is enhanced. The concurrent development of these two dimensions of understanding is necessary for emotional growth and one's ability to interact effectively with others.
<table>
<thead>
<tr>
<th>OUTLINE OF CONTENT</th>
<th>MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS</th>
<th>SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES</th>
<th>SUPPLEMENTARY INFORMATION FOR TEACHERS</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Growth in tolerance</td>
<td>The tolerant person is able to view human behavior from many different viewpoints, and is able to reject or modify previously fixed concepts and attitudes.</td>
<td>The class might compare those standards of behavior which they believe are primarily determined by society with those which are largely determined by the individual.</td>
<td>Individuals who have developed emotional maturity are likely to have a good understanding of life's realities. Understanding requires flexibility, another characteristic of emotional growth. This quality implies that an individual is able to view an object or event from a variety of perspectives.</td>
</tr>
<tr>
<td>3. Growth in acceptance</td>
<td>The accepting person is able to discriminate between a person and his behavior, even when that behavior is intolerable.</td>
<td></td>
<td>Becoming a more tolerant human being is an outgrowth of increased understanding of oneself and others. Since tolerance requires that one suspend judgments rather than react in a hostile or defensive manner, tolerance may involve more risk (emotional) to the individual. In order for one to suspend judgment, he must possess a degree of self-discipline, another characteristic of growth toward emotional maturity.</td>
</tr>
</tbody>
</table>

Tolerance represents a neutral state, whereas the accepting person is willing to go beyond the "live-and-let-live" position of tolerance, and move toward other people. To be an

<td>4. Growth in respect</td>
<td>After the emotionally developing person comes to understand, tolerate, and accept himself, his respect for others can be developed.</td>
<td>accepting person does not mean that one is uncritical of others or that he accepts every person equally.</td>
</tr>
</tbody>
</table>

The respecting individual has developed a sensitivity that makes him aware that all people possess positive traits.

In addition to the foregoing evidences of emotional growth, one may begin to describe the emotionally mature person as one who is --

- capable of self-expression
- adept at problem solving
- skillful in interpersonal relations
- capable of expressing emotions in a functional

Understanding of others and tolerance toward them are essential before one can be truly considered an accepting person.

The development of sensitivity toward self and others is a difficult task.
### OUTLINE OF CONTENT

**5. Growth of the social self**

The extent to which one has developed socially is evident in the quality of his interpersonal relationships.

**6. Acceptance or rejection of others**

- **a. Prejudging others**
  
  A common failure of the socially immature person is that his judgments regarding others are based on haphazard or superficial observations or interpretations of their behavior.

- **b. "Halo effect" and reactions to others**
  
  First favorable impressions from a limited contact may lead to a positive "halo effect" which may be misleading. The reverse, of course, is equally true.

### MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

- and socially acceptable manner
- accepting of self
- interested in an ever-widening circle from self to family, friends, community, etc.
- developing an active, thinking, inquiring mind

### SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

- Students may be asked to recall instances in which they have been "wrong about somebody." Explain reasons for the change in attitude.
- Have students collect photographs or drawings that express emotions and attitudes. What effect might a particular facial expression have on different people in a variety of situations? Using these pictures, show

### SUPPLEMENTARY INFORMATION FOR TEACHERS

Growth toward social maturity is dependent upon one's emotional development.

Frequently, one's judgment of others is generalized on the basis of some limited observation or initial contact with that person. For example, a first meeting with a person who is well-groomed and sharply dressed may cause an

</tbody>
</table>

#### Fundamentals Concepts

Effective group action requires good leadership and good followership.

#### Suggested Teaching Aids and Learning Activities

- Have students develop a list of basic personality traits. Select one positive and one negative characteristic and try to determine how it developed and how each affects personal relationships in different areas.
- Have the class discuss the part good leaders play in producing good followers. Ask them to consider these questions:
  1. What does being a good follower have to do with becoming a good leader?
  2. What school situations provide you with the opportunities to learn good leadership? To learn good followership?

#### Supplementary Information for Teachers

The ability to lead and the ability to be led are characteristics of the socially mature person. Individuals who are reluctant to assume leadership roles may be lacking in social development. Similarly, those who always insist on leadership roles may likewise be lacking in social sensitivity and development.

---

### IV. Boy-Girl Relationship During Adolescence

Most adolescents who have progressed in their social development will have formed a few close friendships and numerous relationships of a more superficial nature. The ability to lead and the ability to be led are characteristics of the socially mature person. Individuals who are reluctant to assume leadership roles may be lacking in social development. Similarly, those who always insist on leadership roles may likewise be lacking in social sensitivity and development.
OUTLINE OF CONTENT

A. The emerging self

1. Discovering physical changes
   a. External changes
   b. Internal changes

2. Discovering emotional changes
   a. New urges and feelings

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

During adolescence, there is an emergence of a new sense of identity. Rapid changes in height and weight, and the modification of the reproductive organs are among the most obvious signs of adolescence. Enlargement of breasts and hips in girls and modification of the penis in boys are external indicators of sexual development. Changes in endocrine balance and commencement of the ovarian cycle are internal manifestations of sexual development.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Have each student write an autobiographical sketch including events and experience which will give him greater insight into his emerging self.

Erik Erikson characterizes adolescence as a "period fraught with the danger of role diffusion as youth seeks identity."

One is able to predict with reasonable accuracy the sequence of changes that will occur. The onset of the pubertal growth period in boys occurs between the ages of 10 and 16. Physical maturation appears a year earlier in girls than in boys. For those who wish to explore in detail the physical changes accompanying adolescence, it would be well to consult references dealing with adolescent psychology and human growth and development.

3. Changing values and interests

One's values and value judgments during adolescence reflect social, peer, and family influences.

As the individual develops his own interests, values, and attitudes, he may discover that they differ from the interests, values, and attitudes of others.

Have class members discuss several TV "family situation comedies." What roles were played by the father, mother, children? How were recognition, security, and affection shown? When were there times of need for parental guidance?

Have students list or describe situations in which they have felt the need for parental guidance versus situations in which they have felt independent of parental guidance.

Younger adolescents are becoming increasingly involved in making value judgments. Usually, recognition of social norms has developed but decisions to adhere to social norms are frequently influenced by the urgings and actions of one's peers. There appears to be an increasing individuality of judgment.

5. Realization of the self and development of a sense of identity

- Increasing capacity to become involved in a larger social experience, and to relate on an emotional level within this sphere.

- A realization of the self as a human being with a need for sexually oriented love and affection.

The adolescent's moods may flare up and subside for no apparent reason. Generally, these periods are short-lived and may be partly attributed to the effects of changing body hormones. Doubts, anxieties, and setbacks, as well as elation, personal satisfaction, and enthusiasm are common during this period.
### OUTLINE OF CONTENT

#### 4. Awareness of personal uniqueness

- Our individual values and interests are modified by dynamic social change and the influences of other cultures.

#### 5. Accepting the self with pride and responsibility

- a. Physical changes

### MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

- Those he respects and loves.

- Our individual values and interests are modified by dynamic social change and the influences of other cultures.

### SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

- "Role play" their values regarding appropriate areas, for example:
  - attire and grooming
  - parent-teen relationships or family relationships
  - relationships with people outside the family

- As a follow-up activity, compare inter- and intracultural value systems.

- Have a class discussion about when and to what extent a person should be willing to resist the demands of his group, or of his society. How would "progress" come about if no individuals were willing to resist social customs?

### SUPPLEMENTARY INFORMATION FOR TEACHERS

- During this period, which may, at times, place the adolescent at odds with other family members. Differences between adolescent and adult values often appear to lie in the interpretation he makes of a particular adult value.

- Interest patterns may undergo pronounced changes during early adolescence. These may be expressed in choice of reading material, choice of clubs and organizations, curriculum choice, vocational interests, etc.

- Many interests are transitory during this period, but their value in helping the adolescent is quite significant.

- Adolescents may view family and societal expectations of themselves with considerable ambiguity. For example, parents may urge them to "grow up," but resist certain adolescent

### SUPPLEMENTARY INFORMATION FOR TEACHERS

Junior high school pupils may or may not date. Many different conditions determine their behavior in this regard. Parental attitudes toward early dating is probably the most significant of these. Anatomical and physiological changes occurring at this age are other factors which should be considered.

Discussion of formal and informal dates, double dates, "Dutch treat dates," etc., should be included.

SUPPLEMENTARY INFORMATION FOR TEACHERS

Since many pupils either have no desire to date, or are not permitted to date by their parents, it is important to emphasize that early dating may have serious disadvantages.

The teacher should be aware that the class members in this discussion probably are not dating each other. The boys may not be interested in dating at this age level; the girls may be dating senior high school boys.

Dating will not automatically develop desirable skills. Dating may help the individual in the following ways:
5. Dating considerations

There are certain responsibilities associated with dating such as:

- parental understanding and approval
- dating behavior
- consideration for the dating partner
- where to go
- what to do

5. Dating activities and

Dating provides the opportunity for individuals to understand, appreciate, and

- how to ask for a date
- how to accept or reject a date
- what to do before, during, and after a date
- boy's role as a dating partner
- girl's role as a dating partner
- parent's role regarding their adolescent's dating
- going steady
  - purposes
  - values
  - handicaps

1. develop conversational abilities in a one-to-one or small group relationship
2. reinforce one's self-confidence in meeting another person's parents
3. understand that he or she enjoys the company of some people more than others
4. formulate his own self-system (through the positive and negative feedback of the dating partner)
5. develop common courtesies that are expected by other people.
