Focusing on efforts at human resource development among unemployed and/or disadvantaged Nova Scotia adults (especially those in economically depressed areas), the present annual report reviews Nova Scotia NewStart activities begun in 1960 and carried over into 1969, as well as those designed and initiated in 1969 or planned for initiation in 1970. Beginning with a statement of strategy and internal operations, the report deals with interventions by program staff members in adult basic education, counseling, placement, and occupational training; the development of research capability; current research staff operations; public relations; administrative and organizational functions; and the audited financial statement. A statistical and descriptive profile of 35 studies and projects also appears, followed by a projection of expectations for the future role of Nova Scotia NewStart in human resources research and regional economic development. Tables, charts, and ten references are included. (LY)

The Honourable Jean Marchand, Minister of Regional Economic Expansion, Canada

The Honourable Gerald J. Doucet, Minister of Education, Nova Scotia

Gentlemen:

The Board of Directors of Nova Scotia NewStart Inc. is pleased to present the second Annual Report of the Corporation representing an account of its activities during the twelve month period ended December 31, 1969.

This report is presented under the terms of the Federal-Provincial agreement in respect of Nova Scotia NewStart Inc. dated April 3, 1967.

I - INTRODUCTION

Nova Scotia NewStart Inc. was incorporated on June 29, 1967, under the terms of the Societies Act in the Province of Nova Scotia. Incorporation followed the signing of an agreement on April 3 of that year by the then Minister of Manpower and Immigration, the Honourable Jean Marchand, and the then Minister of Education and Premier of Nova Scotia, the Honourable Robert L. Stanfield.

Nova Scotia NewStart Inc. is a private corporation formed for the purpose of designing and conducting studies intended to add to existing knowledge of the etiology of social and economic disadvantage, and of developing and evaluating programs designed as experimental solutions to some of the problems identified. An additional responsibility of the Corporation is the transmission of reports of relevant aspects of its action-research activities to appropriate agencies, and the provision of assistance in the matter of dissemination of new knowledge and adoption of programs in the social system. It is one of several similar corporations in Canada functioning as the field operation of the Canada NewStart Program.

The present annual report, the second issued by this Corporation, is an account of those activities initiated in 1968 and carried over into 1969, as well as of those activities designed and initiated in 1969 or planned for initiation in 1970. Activities reported are those described in the annual plan of the Corporation for 1969, entitled "Experimental Plan for Human Resources Development", approved for implementation by the Minister of Education, Nova Scotia, the Honourable Gerald J. Doucet, on February 12, 1969, and for implementation and funding by the Minister of
Regional Economic Expansion, Canada, the Honourable Jean Marchand, on March 27, 1969.

The report provides in turn: a statement of strategy and internal operations; a report of interventions conducted by members of the program staff; a report of the development of research capability and current operations of the research staff; a report of public relations activities; a report of administration and organizational functions; the annual audited financial statement and report of the auditors and the Auditor General of Canada.

The final items in the report are a Study and Project Profile designed to show the kind and range of activity in which the staff of the Corporation was involved at the close of the report year, and a projection of expectations, based on experience to date, of the continued and future role of the Corporation.
II - STRATEGY AND OPERATIONS

1. Development of the Corporation

Since its establishment late in 1967, the Corporation has evolved, by the end of 1969, to the fourth stage of what may be seen as a five-stage development cycle in the growth of an action-research agency. While predictions are not properly a part of a report of this nature, all stages are characterized below in order to place the activities of the past year in a useful perspective.

Stage I: October, 1967 - June, 1968

Data gathering; identifying, by observation, needs and problems in the project area; formulating preliminary intervention plans; recruiting core staff; obtaining resources; establishing community and agency liaison; and establishing basic corporate policy.

Stage 2: July, 1968 - March, 1969

Refining initial intervention plans, testing techniques and materials in early interventions; further developing community and agency liaison; devising and conducting in-service training programs for staff; and recruiting key technical and research staff.

Stage 3: April, 1969 - September, 1969

Operating additional exploratory interventions; recruiting additional key research personnel; devising and conducting further in-service training programs for staff; developing data collection and control procedures; and formulating operating procedures within the multidisciplinary team.
Stage 4: October, 1969 - December, 1970

Developing and testing a schema for research and development; selecting and utilizing models for intervention and behavioural change; designing and implementing interventions on a substantially-improved data base; designing and testing a systematic procedure for the development and implementation of studies and projects; and initiating activities for the dissemination of information to agencies assumed to be potential "adopters" of techniques and programs designed and tested by the Corporation.

Stage 5: January, 1971 -

Activities in this stage are predicted to be essentially the same as in "Stage 4" above, with the exception that added emphasis is expected to be placed upon dissemination and adoption activities.

The first two stages were the subject of the 1968 Annual Report of the Corporation. This report treats the activities of the third and early fourth stages.

The remainder of this section treats the major development in planning and operations as a conceptual framework within which the reported activities in the subsequent sections have been designed and conducted.

2. Research and Development Study Schema

There are many interacting factors, both economic and non-economic, which combine to cause and perpetuate low levels of social and economic functioning. These include personal factors such as education levels, attitudes, health, and work skills; economic factors, such as jobs
available and wage levels; environmental factors such as schools, manpower agencies, health services, and welfare programs.

This interrelationship has caused the Corporation to develop a systems approach to the study of the interacting factors and the design of both instrumental and facilitative interventions. In order to achieve this perspective, all activities have been classified in three study areas (see Figure 1, Research and Development Study Schema). These areas are as follows:

a. Characteristics and Profile of the Disadvantaged

Attempts to identify and classify disadvantaged people have revealed a number of complications. Economic measures such as annual income must be considered in relation to age, sex, net worth, family size, housing costs, and other factors. These, in turn, are affected by educational, occupational, attitudinal, physiological, social, environmental, and other characteristics.

A major problem in the analysis of disadvantage is defining the characteristics of the sub-populations indicated by the factors contributing to disadvantage. A related problem is the development of a model relating the various kinds and levels of disadvantage to the core objective.

The necessary data for such a model has been collected, and the further development of the model will continue in 1970.

b. Environmental Studies

Currently there are no satisfactory theories relating disadvantage and environmental variation in such a way that useful

empirical implications can be drawn. Studies of environmental factors were conceptualized in 1969 and will be further developed during the next year. Further reference to these studies is made in Section VIII of this report.

c. Evaluation of the Effectiveness of Interventions

The Corporation is concerned with developing, implementing and evaluating action programs designed to achieve change in environmental and personal factors contributing to disadvantage. The two study areas described above are subsidiary to this end. The types of interventions are shown graphically in Figure I, and described in further detail in Section VIII of this report.

3. Development and Utilization of Models

A multiplicity of interrelationships is recognized among the variables associated with the Corporation's action-research program. Since it has been found useful to specify schema to show how variables are interrelated, two models have been specified and their usefulness will be further examined.

a. Schematic Intervention Model

This model, shown in Figure 2, is designed to show the manner in which a number of variables can be related to the major dependent variable of economic disadvantage. The Corporation, during the past year, has been concerned with only those interventions which can be described as "instrumental" (directed toward individuals or groups in order to change behaviour) or "facilitative" (directed toward groups or institutions in order to change practices).
Educational Interventions
Facilitative Interventions
Community Factors
Structural Interventions
Background Factors
Behaviour
Internal Stimuli Dispositions
Level of Disadvantage

Figure 2 - A SCHEMATIC INTERVENTION MODEL
b. Behavioural Change Model

The schematic intervention model, while related to the individual, does not provide detailed information on how to make instrumental interventions effective. One model which has been specified by the Corporation, and which is being utilized in a number of interventions, is a behavioural change model which makes use of reinforcements to encourage designed behavioural changes, in order to determine which reinforcements are operative for various individuals or groups. Reference to studies in which this model is used will be found in Sections IV and VII.

4. Study Development, Implementation and Termination System

With the growth of a multi-disciplinary action-research team, it has been necessary for the Corporation to develop a systematic procedure identifying needs and priorities, and, having achieved this, to provide a system through which staff expertise could be co-ordinated for the development, implementation, and reporting of selected projects and studies. Such a system, the Study Development, Implementation and Termination System (SDITS) is shown in Figure 3. This system was developed and tested by the Corporation in 1969 and will be further refined during the coming year.

5. Adoption of Corporation Programs

While it is too early to report specific activities of the Corporation to encourage agencies and institutions to adopt programs that have been developed and tested internally, attention has been given to the specification of a schema for these activities. Such a schema,

**NOTE:** Terminology based on that employed by Guba Clark, and L.D. Clark

**Figure 4:** Sequence Schema of Activities Leading to Adoption of Programs
III - PROGRAM

Direct program involvement with disadvantaged people in the target area has been of two kinds:

1) Instrumental (educational) interventions which involve the design, development, and testing of programs designed to effect desired changes in behaviour of people or group, and

2) Facilitative interventions which centre on the establishment of programs or facilities which would enable disadvantaged people to take action on their own behalf.

1. Instrumental Interventions

The major interventions classed as "instrumental" have been in three areas: (1) Counselling and Placement, (2) Adult Basic Education, and (3) Occupational Training. During the early months of the operation of the Corporation, the choice of projects of this type was governed largely by experience and observation. Certain weaknesses or gaps in available services were noted and programs were designed to remedy these deficits.

Using the heuristic approach, these projects provided information and guidance for subsequent projects of a more specific nature. While an adequate research staff was being assembled, this procedure utilized the competencies of the program personnel in developing and refining operational techniques. As capable research people became available, the research and evaluation skills were then combined with the program design and development skills to produce a well-balanced action-research team.
a) **Counselling and Placement**

The responsibilities of the Counselling and Placement Unit include: (1) responding to requests for training, guidance, or counselling, (2) locating and recruiting trainees for various projects, (3) assisting trainees in solving personal problems, (4) providing information on trainee development to project personnel, and (5) assisting trainees in securing employment or further training.

In addition to the above functions, which were largely of a supportive nature, the Counselling staff completed the operation of Project 722/68 - Pre-Vocational Orientation and Upgrading for Recent School Leavers.

The unit also provided supervision for a field staff of General Guidance Workers who were trained in Project 710/68, and operated out of the Extension Centres set up under Project 711/68. During 1969, the operation of the Extension Centres was reviewed, and the conclusion was reached that they had served their purpose. The Centre called NewPlace in Yarmouth South was turned over to the Social Development Staff as a base of operations. The West Pubnico Centre was continued as a point-of-contact with that area, and as a base for community-centred projects. The South Ohio Centre and the Mobile Centre were phased out.

b) **Adult Basic Education**

The primary objective of the Adult Basic Education Unit is to develop a program and process adaptable to the individual needs of the disadvantaged. This requires extensive attention to curriculum
organization and to instructional mode, utilizing, for the most part, existing materials.

During 1969, suitable space for an Adult Basic Education Centre was located, renovated, and equipped. Staff was secured and assumed the task of organizing the curriculum, assembling materials, and developing an instructional system.

Concurrent with this developmental process, the Centre was involved in three upgrading projects, and provided supplementary service to four others.

Project 752/68 - Methodology Evaluation in Communications Training was an evening class designed to assess the potential of the Educational Developmental Laboratories Communications Program. It involved 15 adults with reading achievement from zero to the grade six level.

Project 754/68 - Investigation of Auto-Instructional Usage of E.D.L. was a day-time project designed to examine the problems attendant on the ad hoc use of an Adult Basic Education facility. No entry or exit dates or qualifications were demanded and the program was adapted to the needs of each individual.

Project 364 - Pre-Vocational Communications Training was initiated in September and involved 15 young men who required remediation in reading skills to qualify for admission to Vocational School. The project was operated in co-operation with the Vocational School which provided an exploratory vocational opportunity along with remedial work in mathematics and science.

In addition to these exploratory projects, the Adult Basic
Education Unit provided basic upgrading for trainees enrolled in Corporation projects in On-The-Job Training, Craft Training, Fisheries Training, and for Project 722/68 - Pre-Vocational Orientation Occupational Training.

c) Occupational Training

Much time and thought has gone into the development of occupational training courses, and training facilities have been multiplied throughout the country. The Corporation's Occupational Training Unit has not attempted to duplicate or modify these services in its own program, but has concentrated on aspects of occupational training which are felt to require further study and remediation.

The main points of attention were:

1) Unrealistic entry requirements for trades remediation;
2) Lack of training for occupations with low educational entry requirements (e.g. housekeeping, fishing);
3) Lack of training opportunities for physically-handicapped or home-bound people;
4) Need for a process for responding quickly and locally to employment requirements; and
5) Need for a curriculum related to actual job-performance requirements.

Project 340 - On-The-Job Training was a refinement and extension of Project 841/68, and provided individual training opportunity for each of 12 people in a variety of trades for which they would not otherwise have been eligible. The purpose of the project is to
demonstrate the feasibility of preparing people for jobs on the basis of performance ratings, rather than on educational certification.

Project 420 - Fisheries Training was a modification and extension of Project 800/68. Using a chartered trawler and leased shore training facilities, a training program for deckhands on fishing boats was conducted, alternating training periods at sea and ashore. The project had two major purposes: (1) to develop and test a training curriculum, (2) to prepare young men to be capable deckhands.

Project 460 - Oil Burner Repair and Servicing was conducted to demonstrate the possibility of responding quickly to local employment needs. In consulting with the oil dealers and burner servicemen in the area, a training program was developed, utilizing the services and facilities of one of the local servicemen. Nine men were trained for 12 weeks in the shop, and were then given 12 weeks of on-the-job experience.

Project 500 - Housekeeper/Homemaker Training involved the training of 18 disadvantaged women in housekeeping and homemaking skills. The program provided six weeks of skill development in a training centre, followed by six weeks of practical experience in private homes. The purpose of the project was to (1) develop and test a curriculum for training homemakers and housekeepers, and (2) through the establishment of skill requirements, to improve the status of home care employment.

Project 600 - Craft Training has as its purpose the develop-
ment of marketable craft skills for people with physical or environmental limitations. The project provides training in a variety of crafts that can be practiced at home and on a variable schedule. The establishment of a marketing co-operative is an integral part of the project.

Study 010 - Dacum Curriculum Method is a study and analysis of the development, utilization, and efficacy of a system which defines and measures skill development in terms of behavioural objectives. The study incorporates the evaluation of the use of DACUM in several Corporation projects.

2. Facilitative Interventions

Corporation activities in this category are of two kinds - information-giving and social development.

a) Information-Giving - Three Corporation activities have been conducted in this area:

   Extension Centres. These centres were set up in 1968 and reported on in the 1968 Annual Report. They were designed, from an informational point of view, to direct disadvantaged people to sources of assistance. As stated in the Counselling and Placement section of this report, they have served their experimental purpose and have been phased out.

   Fisheries Information Centre. (Project 921) This Centre was established to provide a communications channel for fishermen and others in the fishing industry. Sufficient data have been collected and analyzed to establish the value of the Centre, and efforts are being made to have it maintained as a service by an
appropria
t

**Occupational Training Information and Study Centre (OTISC),**

(Proiect 942) This Centre commenced operation late in 1969 to provide information on occupations and occupational training. The project also anticipates conducting a variety of occupational short courses to fill a training void in the area. Records of utilization are being kept and analyzed to determine the nature and extent of the use of the Centre.

b) **Social Development**

After exploring the potential for social development in three different parts of the county, a decision was made to concentrate on the needs of Yarmouth South. This decision was based on limitations of time and resources more than on the relative needs of each situation.

**Project 821 - Yarmouth South Program.** The purpose of this program is to facilitate and assess activities by disadvantaged people in identifying their own needs and resources, and in developing and implementing plans for self-improvement. A community development approach is being used involving the services of two social workers and two community aides. The major focus of attention to date has been on housing.

3. **Operational Reports**

As projects are completed, the project manager assumes responsibility for the preparation of a written summary of the operation of the project. This report is reviewed by an Editorial Board, is examined by a Study Committee, and proceeds to an Evaluation Committee for decision as to reproduction and distribution (see Figure 3).
Operational reports in preparation during 1969 included:

710-711 Extension Centres and the use of Guidance Workers

720 Opportunities Analysis - A group discussion preparatory to work or training

722 Pre-Vocational Orientation

752-754 Basic Educational Upgrading

841 On-The-Job Training

420-800 Fisheries Training

460 Oil Burner Repair and Servicing

500 Housekeeper/Homemaker Training

921 Fisheries Information Centre
1. Philosophy

The focus of the Corporation is on action-research. This has been interpreted as being synonymous with applied research with emphasis on the application of knowledge from the behavioural sciences to the study and solution of problems of social concern in relation to disadvantage. One of the major concerns has been to stress the rational choice of solutions to problems and to design and implement these solutions so that effectiveness in reaching measurable objectives can be evaluated and made transferrable for application elsewhere. Towards this end emphasis has been placed upon the need for systematic analysis of problems; attention to program design, development, and management; relevant evaluation design; and systematic collection of data for use in analysis. Emphasized also has been the need to produce concrete outcomes in the form of transferable program packages, and evaluation or evidence reports on their effectiveness, in order to optimize the wider-scale usefulness of the Corporation's projects.

As far as possible, efforts have been designed to stimulate the development of research skills, and to cultivate critical evaluation of all Corporation interventions in relation to problems of social and economic disadvantage. In keeping with this purpose, current literature on relevant research and program development is reviewed for the purpose of assisting Corporation personnel in their tasks.

2. Major Activities

In addition to functions related to staff training, staff organization, and administration, activities of the Research Division have found focus
in three major areas. The first of these is the design and direction of studies in each of the three major study areas shown in Figure 1 of Section II, and shown again in profile form in Section VIII. A second area of activity has been one of consultation and assistance in matters of design and evaluation procedures to members of the staff of the Program Division on intervention projects described in Section III. A third activity of the Research Division has been the development of data-processing services.

a) Research Studies

During 1969, two studies were carried out with focus on determining the feasibility of two training projects initiated by the Program Division. One of these was concerned with the advisability of fisheries training for deckhands for work in the offshore fishing fleet. This was directed by Dr. B. Shaw, Research Associate to the Corporation, and Dr. L. R. Denton, Research Director. The second study was designed to determine the job demand for oil burner mechanics in the Yarmouth area. This was initiated as a result of a proposed project for training oil burner mechanics and was co-ordinated by Miss Genevieve Webb, a student research assistant, directed by Professor L. Lafferty of the Sociology Department of Acadia University.

Several other research studies were designed and initiated under the direction of Professor Lafferty during 1969. These were studies focused on evaluation of the Fisheries Information Centre (see Section VIII), a study of the life patterns of persons living in a disadvantaged pocket area, a study of the career patterns of
fishermen, and a study of the use of Extension Centres and the functioning of indigenous non-professional guidance workers. In addition, a study evaluating early basic education projects conducted by the Corporation was carried out under the direction of Mr. E. Pond.

b) **Consultative Support**

In addition to critiques and documentation relating to specific projects initiated by the Program Division, and participation in planning activities, a total of thirty-two papers were prepared by the Research Division as part of its consultative service to the Corporation.

c) **Data Processing**

Data processing needs on site are mainly those of preparation of data (punching, sorting and simple table-making). More sophisticated analysis of data is considered to be more efficiently managed by using a larger computer system. The original plan regarding data-processing service was to provide relevant information for operational decisions in carrying out programs. One major system was designed, developed, and tested during the year for the purpose of collecting and reporting staff interventions and trainee participation in relation to programs being operated by the Corporation. Difficulties inherent in operating the system and the limited research value of the information emerging resulted in discontinuation after a pilot test of two months duration.
The major uses of the Data Processing Unit have been to prepare data card files for analysis, and to carry out retrieval functions from Human Resource Survey data and other data-processing functions within the limitations of the unit record equipment.
V - PUBLIC RELATIONS

1. Public Information

During the year, all available media have been utilized to keep the public informed about the Corporation's purposes and activities. In addition, personal contact with groups and individuals has been maintained. Activities have included:

a) Local Press

News items in respect to projects, studies, staff appointments, training facilities, visits on site, and meetings and activities of organizations which have come into being through Corporation intervention.

Illustrated features on the Fisheries Information Centre, the Occupational Training Information and Study Centre, Craft Training, Fisheries Training, and the development of Arts Atlantic Co-Operative Limited.

Coverage of graduation of trainees from Homemaker/Housekeeper Training, Craft Training, and Oil Burner Servicing courses.

Article on NewStart, "Education and Training Outside the Classroom", for Education Week.

Advertisements in connection with recruitment for Fisheries Training and opening of new training and information facilities.

b) Provincial Press

News items in respect to projects and studies, training facilities, visits on site, and meetings and activities of organizations brought into being through Corporation intervention.

c) National Press

Illustrated feature in Week-End Magazine incorporating information
on both the Fisheries Information Centre and the Fisheries Training Project.

Item on Homemaker/Housekeeper Training Project in Chatelaine.

d) Radio

Canada NewStart Program purposes and projects were featured on "The Gillans", the fictional episode of CRC Radio Noon, heard daily Monday through Friday from 12:05 to 1 o'clock on the CBC Maritime network and independent stations.

Corporation personnel appeared on Open-Line programs on CJLS, Yarmouth. Programs have featured:

- Fisheries Training
- Housekeeper/Homemaker Training
- Occupational Training Information and Study Centre
- Craft Training
- Fisheries Information Centre

Spot announcements in connection with recruitment for fisheries training and opening of new training and information facilities were prepared for broadcast.

e) Television

Fisheries Training was featured on CBC "Fisherman's Log" during recruitment campaign for the Fisheries Training Project.

f) Film Slide Presentation

Film slides and script were provided for "The Nova Scotia NewStart Story".

Other presentations including slides and commentary were prepared for showing visitors to the Occupational Training Information and Study Centre.
g) **Posters**
   For recruitment campaign - Fisheries Training Project.
   For Occupational Training Information and Study Centre.

h) **Direct Mail**
   Progress reports on projects and studies mailed periodically to
   Board of Directors, local M. P., and M. L. A.'s, members of Advisory
   Council (see next page), and other interested persons.
   Project proposals mailed to selected lists similar to, but not
   identical with above.

2. **Community Relations**
   a) Contact has been maintained with community organizations. List of
      staff members and the fields in which they are working has been circu-
      lated as assistance to organizations in planning programs.
   b) Meetings have been arranged for community groups and staff members
      to discuss specific projects and general objectives. These meetings,
      which took place in the evening, were held in the Conference Room in the
      administrative offices, in the Basic Education Centre, and in the Fisheries
      Information Centre.
   c) Public was invited to "Open House" prior to the opening of new
      training and information facilities.
   d) Tours were conducted and programs arranged for groups and individuals
      visiting the Corporation from outside the project area.
   e) Advisory Council was formed consisting of 36 persons representative
      of the community. Purposes of the Council:
      To provide a channel for consultation and advice from the community.
      To circulate information to the community.
To take the necessary steps to retain in the community those Corporation facilities and programs which are seen as having a continuing value for the community.

VI - ADMINISTRATIVE AND ORGANIZATIONAL

1. Corporate Structure

Responsibility for the administration of the Canada NewStart Program changed in 1969 from the Department of Forestry and Rural Development to the Department of Regional Economic Expansion. No change occurred in the Federal-Provincial Agreement governing the mandate of the Corporation. Membership and policy as defined by the Agreement remain unchanged.

The Honourable Jean Marchand as Minister of Regional Economic Expansion continues as the federal member of the Corporation, and the Honourable Gerald J. Doucet as Minister of Education for Nova Scotia represents the Government of Nova Scotia as the Provincial member of the Corporation.

Mr. Thomas M. Jones continued as Executive Director and Chairman of the Board of Directors during 1969.

The Members re-appointed the following Board Members for 1969:

Mr. Eric M. Gozna, 641 Main Street, Yarmouth, N. S.

Mr. G. Arthur Hillier, 101 Sunnybrae Avenue, Fairview, N. S.

Mr. Lester W. Pink, 9 Aberdeen Street, Yarmouth, N. S.

Mrs. Jean Pell, Hebron, Yarmouth County, N. S. had previously signified that she would not be available for re-appointment. The vacancy created by the resignation of Mrs. Pell was not filled during the year. The Officers of the Corporation remained unchanged during 1969.

The Board of Directors met on nine occasions during the year as follows:

March 6; April 22; May 20; June 17; August 19; September 16; October 21; November 5; December 9.
The Annual General Meeting of the Corporation was held April 29, 1969, and a Special Meeting of the Corporation was held September 16, 1969 to negotiate an agreement for financial assistance to Arts Atlantic Co-Operative Limited.

All Members of the Board have ably and energetically fulfilled their responsibilities to the Corporation.

2. Staff

To meet the changing requirements of Research and Program, the Organizational Structure of the Corporation has been constantly under review and revision. By the end of the year, the structure as show in Figure 5 was being tested for use in reaching objectives stated for 1970. In order to implement the 1969 Plan of the Corporation and prepare for operation for 1970, thirty-nine personnel were added to staff. Ten persons were released on completion of projects, and seven person resigned to assume other employment or for personal reasons.

A staff listing giving position titles that conform with the organizational chart shown in Figure 5 follows.

a) Policy Group

M. T. Thibodeau (Mrs.) Guidance Worker
M. I. Trefry (Mrs.) Receptionist
M. B. Veinot (Mrs.) Guidance Worker
B. A. Voeltz (Mrs.) Clerical Assistant (Steno II)
S. L. White (Miss) Clerical Assistant (Steno III)
C. A. Woodward (Miss) Clerical Assistant (Steno II)

3. Consultants

A contract with Dr. Blair Shaw of the Department of Applied Psychology, Ontario Institute for Studies in Education, Toronto, continued during the year in order to provide a consultative service in project design assessment, instrumentation development, and identification of variables. Cost to the Corporation in 1969 was $6,300.00.

Professor Louis W. Lafferty, Department of Sociology, Acadia University, Wolfville, N. S. was awarded a contract to undertake several research studies, and to direct a group of six research assistants and a research aide assisting with these studies. The cost to the Corporation for this service in 1969 was $21,945.06.

Mrs. Jean Pell, Hebron, N. S. was placed under contract following her resignation from the Board of Directors to provide a Public Information Service from January 1, 1969 to May 31, 1969. At that time it was decided that the interests of the Corporation could be best served by creating a position for a Public Information Officer on
staff. This position was subsequently filled by Mrs. Pell. Consultant cost to the Corporation for this service was $2,400.00.

The services of thirty-eight additional persons were secured for varying periods to provide consultant services in training and instruction of trainees, and to develop curriculum and materials for projects under development or in operation. Approximate cost of these services was $35,000.00.

David Jackson and Associates of Toronto completed contracts for both the Human Resources Survey and the Economic Opportunities Survey initiated in 1968. Total expenditure on these contracts was $11,237.00.

Dr. E. Fraser MacDonald of Yarmouth was placed under contract to provide medical examinations for trainees. Total cost for 1969 was $1,100.00.

4. Accommodation and Facilities
   a) Headquarters

   The administrative headquarters location of the Corporation remained unchanged at 336 Main Street, Yarmouth, N. S. Research facilities in this building were provided by the relocation of the Basic Education Unit and Guidance and Counselling Unit. Audio-video equipment was moved to the Occupational Training Information and Study Centre. A semi-automatic Branch Phone Exchange was installed with capacity for fifty extensions to connect all facilities except the Pubnico Extension Centre and the Mobile Unit.
   b) Guidance and Counselling Centre

   This facility was opened at 342 Main Street, Yarmouth, N. S. in leased accommodation consisting of approximately 1,600 square feet in
June 1969 as a resource centre to provide facilities for the Intake, Placement, Guidance and Counselling activities for the Corporation.

c) **Adult Basic Education Centre**

   This facility was established in April, 1969 in leased accommodation on the second floor of a building located at 300 Main Street, Yarmouth, N. S. The Centre consists of approximately 3,860 square feet of floor space providing instructors' rooms, lecture rooms, electronic learning laboratory, reference library, and reading room designed to facilitate programs in basic education.

d) **Occupational Training Information and Study Centre**

   This facility was established in June, 1969 in leased accommodation on the second floor of a building located at 355 Main Street, Yarmouth, N. S. The Centre consists of approximately 2,813 square feet of floor space providing instructors' rooms, meeting room, study areas, reference and lending library, reading room, projection room, and theatre.

e) **Fisheries Information Centre**

   This facility, consisting of approximately 1,500 square feet of floor space in an ATCO prefabricated trailer unit complex (30' x 52'), was erected in 1968 on the Public Wharf in Yarmouth, N. S. It provides office, library, display and projection capabilities for the dissemination of current information to personnel interested in marine and fisheries occupations. The operation of this service continued throughout 1969. This building was purchased under the lease-option-to-buy clause of the agreement in December, 1969. Purchase was made to facilitate possible transfer of the service to some other agency when experimental purposes had been achieved.
f) **Fisheries Training Centre**

This facility consisting of approximately 5,000 square feet of usable floor space, located at 126 Water Street, Yarmouth, N. S. was leased for the purpose of providing shore training to trainees involved in Project 420. The space was utilized from April to September of 1969.

g) **Social Development Centre**

This Centre located at 174 Main Street, Yarmouth, N. S. was originally leased in 1968 as an extension centre for guidance and counselling. Now utilized for Social Development activities, it consists of approximately 4,000 square feet of floor space.

h) **Data Processing Centre**

Established in March of 1969 at 4 Thurston Lane, Yarmouth, N. S., the facility consists of approximately 1,150 square feet of leased ground floor office and machine room space designed to accommodate data processing staff and equipment.

i) **Homemaker Centre**

Located at 30 Chestnut Street, Yarmouth, N. S., this is a large private home purchased by the Corporation as a training site for participants in Project 500. It consists of approximately 3,500 square feet of floor space.

j) **Craft Centre**

This facility was retained on lease following 1968 operations as a training site for participants in Project 600. Located at 215 Main Street, Yarmouth, N. S., it was transferred in August, 1969 to Arts Atlantic Co-Operative Limited. The Co-Operative operates a training program under the terms of an agreement with the Corporation to prepare
disadvantaged people to supplement income by the production and marketing of handcrafts.

k) **Extension Centre (South Ohio)**

This is leased accommodation of approximately 610 square feet of floor space in South Ohio, Yarmouth County. Since the Corporation will not continue this operation in 1970, action is being taken to obtain permission to sub-lease.

l) **Extension Centre (Pubnico)**

This consists of two rooms in a commercial building in West Pubnico, Yarmouth County, N. S. Floor space of approximately 880 square feet is leased by the Corporation. This Centre was maintained for guidance and counselling and social development activities in the Pubnico area during 1969.

m) **Mobile Unit**

This is a 43' x 10' trailer owned by the Corporation and used as a mobile extension centre. From January to July, 1969, it was located in Tusket, Yarmouth County, N. S., and provided a base for guidance and counselling in that area. It was subsequently located in Greenville as a mobile classroom facility.

n) **M. V. Gulf Gerd**

This is a 130' stern trawler used in the fisheries training program under charter to the Corporation. With the completion of this program in September, 1969, the charter was terminated and the vessel returned to the owners.

o) **Oil Burner Training Centre**

This is a workshop leased at 32 Queen Street, Yarmouth, N. S.,
for the months of June, July, and August for the purpose of providing training space for Project 460.

p) **On-Job-Training Space**

Several firms in the area provided training space during the year for on-the-job training of trainees selected to participate in Project 340.
NOVA SCOTIA NEWSTART INC.

REPORT AND FINANCIAL STATEMENTS

DECEMBER 31, 1969
AUDITORS' REPORT

The Members,
Nova Scotia NewStart Inc.

We have examined the balance sheet of Nova Scotia NewStart Inc. as at December 31, 1969, and the statements of expenses and cash flow for the year then ended and have obtained all the information and explanations we have required. Our examination included a general review of the accounting procedures and such tests of accounting records and other supporting evidence as we considered necessary in the circumstances.

In our opinion, and as shown by the books of the Company, these financial statements present fairly the financial position of the Company as at December 31, 1969, the results of its operations, and the source and application of cash for the period then ended, in accordance with generally accepted accounting principles applied, except as indicated in Note 2 to the financial statements, on a basis consistent with that of the preceding year.

Touche Ross & Co.
Chartered Accountants.

A.M. Henderson, F.C.A.,
Auditor General of Canada.

Net cash balance - December 31, 1969 $26,821

The notes to the financial statements are an integral part thereof.
1. At December 31, 1969, there were outstanding commitments amounting to approximately $18,000 in respect of unfulfilled purchase orders ($13,000) and contractual commitments ($5,000) for consulting services on projects not yet completed.

2. During the year ended December 31, 1969, the Company changed its method of accounting for leasehold improvements. It was decided to write leasehold improvements off to expense when purchased to reflect the fact that such improvements revert to the lessor when leases expire. This change, with which the Auditors concur, resulted in an adjustment to equity of $4,399, representing the net book value of leasehold improvements as at December 31, 1968.

- Office furniture and equipment: $56,400
- Training equipment: $32,500

**Total Depreciated Balance Dec.31/69:** $124,400
During 1969 the Corporation was involved in a total of thirty-five studies and projects. (See Figure 6 - Study and Project Profile).

Of this number, eighteen were studies designed and directed by members of the research staff of the Corporation. In this group, three studies were completed in 1969 and reports were prepared and released by the Corporation on recommendation of the Editorial Board. The remaining studies will be further developed in 1970, and reports prepared for release to appropriate agencies.

Seventeen projects were operative in 1969 under the direction of members of the Corporation's program staff. Of this number, two were completed in 1969 and reports were released. Operations for seven additional projects were completed in 1969, and operational reports were in preparation at the end of the year. These reports will be released in 1970. Operations for the remaining projects, as indicated in Figure 6, will continue to be initiated in 1970.

It is anticipated that twenty-three of the studies and projects in which the Corporation was involved at the close of the year will result in reports, or report series, which will be released to the Nova Scotia Department of Education and the Canada Department of Regional Economic Expansion for wider consumption by potential adoptive agencies. The remaining studies and reports will be utilized internally in designing new interventions. A full profile of all projects and studies follows.

**Figure 6 - STUDY AND PROJECT PROFILE**
XI - OBSERVATIONS

One product of the Corporation's continuing examination of its effectiveness is the awareness that, given the present level of knowledge and experience, a great deal more might have been achieved. The purpose of this Chapter is to indicate ways in which the knowledge and experience gained to date might be invested in order to provide optimum return.

Since the Canada NewStart Program is an experiment of limited duration, it is important to examine, in mid-career, the degree of its effectiveness and the extent to which its achievements may be incorporated into a continued and extended effort to utilize and improve human resources capital. Four basic questions will be examined:

1. What has been learned that can contribute to further efforts of a similar nature?

2. To what extent have original objectives been met and in what ways have these objectives been significantly related to the solution of problems of human resource development and economic growth?

3. In what ways might the present NewStart structure be transformed, modified, or extended to capitalize on the initial investment?

4. What alternative organization and resource structures might be suggested for solving the complex problems of disadvantage, human resource development, and regional economic disparity?

The problems to which the Corporation has addressed itself are not ones which respond to short-term measures. The developing and testing of programs to assist the disadvantaged to reduce their economic dependence and to
increase their economic and social skills are long-range efforts. The payoff for programs designed to develop new knowledge in the form of instructional systems or social development strategies depends on continuity of investigation because of the long and involved process from conceptualization to commercially viable acceptance. The concern of the Corporation has been not merely with the transfer of resources from one segment of the population to another, but with the development of improved methods for utilizing such resources through research and development strategies. For this reason, the product of many Corporation efforts will be intermediate rather than ultimate, resulting in incomplete solutions which will require further development.

The amelioration of poverty cannot be treated in isolation. It must be seen as an element in a larger picture concerned both with physical and human capital development and research. Since the Corporation's mandate is in the field of human resources and since many other organizations and agencies are concerned with physical development, there is only casual reference here to the latter problem.

In the remainder of this Chapter, the following issues are explored in arriving at answers to the four questions posed above:

1. A rationale for human resources research;
2. The characteristics of research and development efforts;
3. The relationship between human resources research and regional economic development;
4. Human resources problems requiring research attention, and
5. The development of a multidisciplinary vehicle for solving human resource problems.

A Rationale for Human Resource Research

Any government has certain responsibilities with regard to the efficient use and equitable distribution of available resources. While the private sector controls parts of this, some programs are so large or of such widespread application that only government can cope with them.

While it has been traditional to concentrate primarily on physical resources such as land, minerals, and raw materials, it is important to recognize the value of human resources as a source of capital and income.

It is becoming apparent that no more than 50 per cent of the growth in per capita output in both Canada and the United States can be attributed to investment in physical resources. Dennison (1962) estimates that 21 per cent of the growth of real income in the United States between 1929 and 1957 was attributable to education while another 36 per cent was attributable to advances in knowledge which can be associated with educational advances. Gordon Bertram (1966), who replicated the Dennison model for Canada, estimates that better education alone has raised labour earnings of Canadians by 30 per cent and contributed at least 25 per cent to growth in per capita productivity during the period 1911 to 1961.

A strong case has been made by the economists (Weisbrod, 1966) for the social profitability and the individual profitability of government investment in human resources. What has not as yet been determined is the
best way to invest this capital. For example, will economies of scale (e.g., larger schools) permit output to rise proportionately more than the increase in human resource investment? Will improvement in the quality of teachers and in the introduction of educational technology result in greater productivity in a shorter time? Will improvement in techniques of organizing human resource production (health, welfare, education) increase productivity as they have done analogously for physical investments in industry? Human resource research is concerned with solving such problems and with finding effective and efficient ways to select inputs and transform them into desired outputs in an optimal way.

Characteristics of Research and Development Efforts

It is an unfortunate fact that a good deal of what passes for knowledge in the social sciences, in strong distinction from the physical and life sciences, is ideological in nature. It is not uncommon to have social scientists favour solutions to problems not because of any evidence for their likelihood of success, but because of preconceived ideological preferences. There is thus great need for developing an institutional, knowledge-seeking structure for accumulating objective knowledge through disciplined inquiry to permit policy-makers to make rational decisions with respect to social and human problems.

Recently, Cronbach and Suppes (1969) have suggested that research, in its broadest interpretation, can be characterized by the fact that it is "disciplined inquiry". In disciplined inquiry the study is conducted and
reported in such a way that the "argument can be painstakingly examined". The distinctive features are disciplined investigation, theoretical construction, empirical verification, and probabilistic conclusions. Cronbach and Suppes (1969) go on to suggest that disciplined inquiry can be regarded as (1) conclusion-oriented, (2) decision-oriented, or (3) social accounting. The decision-oriented study is a commissioned study while the conclusion-oriented one takes its direction from the investigator's commitments and hunches. Social accounting, in contrast, is a routine, continuous collection of facts that are relevant to maintaining a description of an ongoing process or institution.

The Corporation's activities are almost exclusively in the area of decision-oriented inquiries with some concern for improved social accounting. The process may be looked on as an input-output system where the inputs are the problems, the outcome objectives, and the programs; and the outputs are information, methodologies, and services. As an element in this process, it is necessary to evaluate the ongoing program activities in terms of both process and outcomes, and to develop, where possible, objectively measurable criteria.

Decision-oriented research of this type is typically the product of team efforts from several disciplines and is concerned with producing a tangible and useable product as well as with providing policy-makers with information to make decisions concerning the allocation of funds. The typical sequence of such decision-based inquiry is (1) conceptualization, (2) research, (3) product development, (4) demonstration, (5) transmission, (6) installation, and (7) production on a commercial basis.
While prototypes of this kind of organized research and development institution exist on a small scale, the design of a laboratory, such as is presented below, for the entire area of regional human resource research and development has nowhere as yet been essayed. The Corporation has made some small efforts toward this end, but, because of the limitation in time and resources, has not been able to attack this larger problem except on a theoretical basis.

The Relationships Between Human Resources Research and Regional Economic Development

Since the Corporation has been operating on a limited mandate in terms of time, target population, geographic area, and governmental involvement, it is now felt, as has been stated earlier, that it would be well to examine how the lessons learned to date might be related to a larger sphere of influence.

With current attention in regional economic development being on growth-centres with the emphasis on physical infrastructure improvements in limited areas, the question arises as to the place of human resource development in overall planning. The major problems in the human area would seem to be health, education, job training, and mobility. For example, there is need, in some areas of Canada, to reduce migration into large metropolitan areas and paradoxically at the same time to increase migration from stagnant areas. This implies an urban growth centre strategy based on intermediate-sized cities which have given some evidence of a potential for growth. Allocation of available resources in this way would tend to attract industry away from congested areas and simultaneously
to induce human resources to leave the lagging areas. Given limited resources, such a policy would appear to be optimal.

If this, or some regional variant of this model is being pursued, there is a real need to attack the structural problems of human resource development in lagging regions. This forms the basis for the concern for concentrating emphasis on research and development in human resources. For example, methods of determining the actual human resource needs of a lagging region may not be clearly apprehended, methods for preparing people to migrate are not well defined, nor is the relationship between infrastructure needs and human resource requirements in a lagging region well articulated. It is in this area that the need for disciplined, systematic investigation is obvious.

On the basis of experience gained thus far by the Corporation, it appears necessary to provide an apparatus for assisting policy-makers and economic planners in taking account of the human resource base and the social context which, if ignored, may well destroy the effectiveness of any economic plan.

**Human Resource Problems Requiring Research Attention**

According to the Canada Index of Programs for Human Development (1967) there are, at the federal level, over 200 programs concerned with some aspect of human resource development administered by some 21 different agencies. If these programs follow the usual pattern (Wilcox, 1969) some are designed to alleviate poverty (public assistance, welfare services); some attempt to remove the causes of human problems (area economic
development, manpower training, community betterment); but some may act to worsen situations (minimum wage laws, reduction of welfare payments as income rises). Because of the absence of evidence as to the actual effects of these programs, there is a definite need to examine them carefully and, if necessary, to design better programs to accomplish intended policy objectives. If human resource programs are to be anything more than palliatives and if they are to avoid retrograde effects, there must be understanding of the underlying factors which operate to create the unwanted conditions.

Because many anti-poverty programs are concerned with the redistribution of income from the taxpayers to the poor, there is need to ascertain whether, in fact, they are having the supposed redistributional effects. Universal programs, for example, such as medical insurance, family allowance, and old age security, often provide benefits to many outside the intended target population.

In this context, it is also necessary to ask whether an adequate proportion of available resources is being allocated to such progress-generating activities as research, development, dissemination, and evaluation. Some of the investments in human resource development are consumed immediately (pensions and allowances); some generate future streams of goods where the return takes place over a considerable time span, as with educational inputs for children, or over a shorter period of time, as in manpower retraining programs. However, inputs to research and development generate productivity increases in a more direct way since they are specially concerned with the solution of specific problems which
will increase the productivity of a particular process.

The list of human resource problems which would lend themselves profitably to research and evaluation is extensive. The following selection is reasonably typical:

1. Cost-benefit analysis to determine which alternative methods of providing training to disadvantaged and unemployed persons have the largest payoff;

2. Determination of the relationship between actual educational requirements on jobs of varying skills and the education of job incumbents;

3. Development of effective programs to improve mobility of people to jobs and better matching between vacancies and those seeking work;

4. Design of instructional systems and their development and dissemination to instructional systems both in prototype and in final installed form;

5. Applications and evaluation of instructional technology in the form of computer-assisted instruction, new media, textbooks, and other educational artifacts;

6. Determination of the income productivity of learning in different disciplines and the development of incentive programs to attract personnel to disciplines where skills will be most needed;

7. Examination of those factors, such as new technologies and mass media, which appear to influence the rate of social change and create disharmonies of development.
A Proposal for an Institute for Human Resource Research and Development

As a vehicle to provide human resource research and development input for regional economic development, the NewStart model has had some important shortcomings. Among these are: (1) concentration on only the disadvantaged segment of the population; (2) research in some instances being secondary to service objectives; (3) lack of adequate time to achieve overall objectives; (4) difficulty of achieving optimum balance among programs; (5) difficulty in producing useable products with limited time and resources.

Assuming the objective of providing validated information and programs for the human resource aspects of regional economic planning, there are a number of alternative approaches. These might include:

(1) The NewStart approach, the limitations of which have been discussed above;
(2) The Community College approach in which a research function could be built into the college operation;
(3) The Institutional-Facilitative approach by which research and development projects would be identified and contracted to existing institutions or agencies;
(4) The Social, Human, and Economic Area Redevelopment approach, which would concentrate on the effective development and utilization of the social, human, and economic resources of an area;
(5) The Human Resource Research and Development Institute approach which combines what seem to be the more desirable features of the previous four patterns and is the one recommended here.
This Institute could be local, provincial, or regional in scope and would have as its major objective the provision of research and development inputs to aid in solving the problems associated with human resource development.

Financing would be largely through the Department of Regional Economic Expansion but, because of the intimate relationship of education and welfare with human resource development, it would be desirable to have provincial financial involvement.

The proposed Institute would perform some or all of the following functions:

1. The evaluation of human resource development and service institutions such as schools, manpower, health and welfare agencies, toward the end of improving their service delivery systems, developing innovative programs, conducting pilot and demonstration projects, and providing assistance in planning for expected changes in demand and resource needs.

2. The development of criteria for agency evaluation which might include effectiveness of service delivery, openness to innovation, use of cost-effectiveness and budgeting techniques, organizational effectiveness, and decision-making skills.

3. The conducting of surveys, mobility studies, human resource, and economic studies of the population of the area to permit effective planning for human resource investment for descriptive, predictive, and normative purposes.

4. Development of regional models relating relevant human resource and economic variables. This would include manpower models, educational models, and resource allocation models as are required for forecasting and planning for human resource development.
(5) The development and demonstration of instructional systems and the design of new curricula utilizing modern training and educational technologies such as computer-aided instruction and behavioral modification techniques. Such development would be done in co-operation with Departments of Education and other manpower training agencies with special involvement of community colleges, technical institutes, universities, and other educational and training establishments.

(6) Pilot studies and demonstration projects of new educational technologies would be carried out within school systems in close collaboration with teachers and administrators of these systems. Particular concern would be manifested with respect to development of basic education and literacy training for the adult disadvantaged.

(7) The design of data bases for administrative and research purposes utilizing modern computer technologies would be developed for educational purposes.

(8) Applications of operations research techniques and statistical analysis would be made to problems of human resource development and allocation. Location studies would be conducted to determine optimal siting of new institutions in the medical, educational, and welfare fields.

(9) Provision of a shared data base for use of operating agencies concerned with human resources.

(10) Maintenance of a regional human resource information and retrieval system and the dissemination of useful information on new developments in the area of human resources.

(11) The development of co-operative relationships with other researchers, with community colleges and technical institutes in order to promote
the development of human resource research and development.

(12) The conducting of training programs for researchers in the area of human resource research.

To operate a Human Resource Research and Development Institute such as that postulated above would require a multidisciplinary team composed of sociologists, economists, administrators, educators, systems designers, mathematicians, programmers, operations researchers, statisticians, educational planners, and psychologists. The objective would be to conduct team research and development projects which would assist the decision-making process in human resource development and social problem solving. Co-ordination and co-operation with existing agencies would be of paramount importance.

This model for Human Resource Research and Development is based on an evaluation of the operation of Nova Scotia NewStart Inc. to date, with consideration of a wider field of applicability. It is felt that following such a model would greatly enhance the effectiveness of investments in human resources and consequently total economic development plans. A diagrammatic representation of the interrelationships suggested for the Institute is shown on the following page.

**Summary and Conclusions**

With regard to the four questions asked at the beginning of the Chapter, it is obvious that the Canada NewStart Program has thus far achieved only a portion of its original objectives. The major lesson learned is that the time and resources required to establish an organization, assemble staff, and carry out essential baseline studies is much greater than was anticipated. Furthermore, the limited time available seems to tend toward premature involvement.
in action programs without adequate background study. While a limited lifespan for such a venture may have some merits, too short a time makes it impossible to capitalize optimally on the considerable investment of time, money, and personnel.

In regard to the last two questions, the proposal recommended for a Human Resource Research and Development Institute capitalizes on the strengths of the Canada NewStart Program concept and builds on them a proposal for a more widespread, continuing organization. The proposal is made in the hope that its implementation will increase the return to be realized from the considerable investment in regional economic development.
