The mission of the ERIC Management Review Group was to examine the practices and procedures used by Central ERIC Management in their guidance and management of the 19 ERIC clearinghouses. The major topics covered in this report are: recommendations; the role of the clearinghouses; the bibliographic and documentation function; the interpretation and analysis function; development of relationships with "Linkage Organization"; direct services by the Clearinghouses; support for emerging areas of interest; and ERIC Clearinghouse management. Appended is a list of Review Group Members. (LS)
In Fulfillment of Order No. 0-8077

REPORT

OF THE

ERIC MANAGEMENT REVIEW GROUP

October 20, 1970
I. INTRODUCTION
The mission of the ERIC Management Review Group was to examine the practices and procedures used by Central ERIC Management in their guidance and management of the 19 ERIC clearinghouses. We were also to comment on the organization and operation of the clearinghouses themselves. Primarily, we were concerned with the policies that had been set up by the Central ERIC Management Group in defining their relationship with the clearinghouse directors and with the reports and management procedures which were being followed. The review group was not asked to examine the management of the central ERIC facility as it relates to the activities of central processing, the computer operations of Leasco, or the microfiche and hard-copy production activities of NCR.

Similarly, it was not a part of the mission of the Review Group to examine larger questions such as the role of ERIC in the general education information network nor to evaluate the role which ERIC products play in the general information system of educational practitioners. Inevitably, the Group was drawn into discussions regarding these larger roles and, as appropriate, comments will be made on these roles as they relate to management problems.

Almost inevitably the report of a review group highlights possible shortcomings or areas needing attention. This report is no exception. But we would be remiss if we did not express our appreciation of the very real achievements of the ERIC system and those responsible for developing it. A system has been developed which contributes greatly to the needs for educational communication. The Director of the National Center for Educational Communications, the Director of ERIC, and his staff were most cooperative and helpful in supplying information, in discussing problems, and in interacting with the Review Group in a frank and positive manner.
This report is organized as follows:

I. Introduction
II. Recommendations
III. The Role of Clearinghouses
   A. Relative Priority of Clearinghouse Activities
   B. The Users of ERIC Products
   C. Differences in Emphasis between Clearinghouses
IV. The Bibliographic and Documentation Function
   A. The Use of ERIC Materials
   B. Considerations of the Criteria of Utility
   C. Source of ERIC Documents
   D. Centralized Processing
V. The Interpretation and Analysis Function
VI. Development of Relationships with "Linkage Organizations"
VII. Direct Services by the Clearinghouses
VIII. Support for Emerging Areas of Interest
IX. ERIC Clearinghouse Management
   A. Management Procedures
   B. Contract Matters
   C. Guidance to Clearinghouse Directors
   D. Policy Regarding Interpretive Reports
   E. Policy Advisory Group
Appendix. Review Group Members
II. RECOMMENDATIONS

Recommendations and suggestions are made at various points throughout the report. In this section they are brought together for easy reference. At times their summary character may reflect too dogmatic a position or too simple a treatment since they are separated from the context which, hopefully, gives them clarity and qualification. The major recommendations of the Management Review Group follows:

1. Central ERIC Management should clarify the relative emphasis to be placed on serving users with widely differing needs. If the primary audience for ERIC products is those practitioners in state and local education agencies, this should be clearly stated as guidance to clearinghouse directors. (See pages 7 - 9, 19, 20, 27, and 28.)

2. Central ERIC should issue guidelines to clearinghouse directors regarding the content, intended audience, format, and level of analysis and writing of interpretive reports. (See page 18 - 21.)

3. Central ERIC Management should examine the relative value of the report literature, curriculum and teaching materials for inclusion in ERIC. The present inclusion of primarily the report literature no longer seems justified in view of the apparent emphasis on ERIC's service to practitioners. (L.e pages 16 - 17.)

4. It is our understanding that the Central ERIC Management does not place a high priority on the rendering of direct services by clearinghouses. In view of the large number of requests made for such services, it is suggested that this position be reevaluated, particularly by a careful analysis of the linkage between the ERIC system and the ultimate users. (See page 22 ff.)

5. While recognizing the quality of the ERIC production system, there does not seem to be sufficient emphasis on the "marketing" of ERIC
services; that is to say, the resources available through ERIC need to be actively and vigorously brought to the attention of potential user groups.

6. It is suggested that guidance to clearinghouse directors should be made explicit, in writing, perhaps through a series of policy guidance documents. (See pages 27-28.)

7. Central ERIC Management should review, clearinghouse by clearinghouse, the wide variation between clearinghouse functions as revealed in FY 69 expenditures (and presumably in similar FY 70 figures) to determine if they are consistent with the policies and guidance that may result from the previous recommendations. (See pages 9-10.)

8. Central ERIC Management has a well formulated management plan as it relates to clearinghouses. It is recommended that a detailed examination be made, clearinghouse by clearinghouse, of the extent to which the administration of the plan has been followed year by year. (See pages 23 and 24.)

9. Preliminary information suggests that a considerable savings might be made through centralization of the more routine aspects of document processing. The Central ERIC Staff should study this possibility to see if savings would actually be realized and how centralization would impact on related clearinghouse activities. (See page 18.)

10. Central ERIC should study present practices regarding the criteria for selecting material, bibliographic format, characteristics of abstracts, etc. to assure that ERIC practices are maximally compatible with other information resources frequently used by libraries and information centers.
11. Central ERIC Management should sponsor studies of the criteria to maximize the utility of various report areas as a means of obtaining guidance regarding the extent that ERIC should sponsor information activities in these several areas. (See pages 12 - 16.)

12. The National Center for Educational Communications should have a plans and analysis capability and associated resources which allow for prompt response to rapidly developing areas of interest. (See pages 22 - 23.)

13. It is recommended that the expressed intent of Central ERIC should be to continue individual clearinghouses on at least a three-year basis, provided there is satisfactory performance and funding and priorities permit. (See pages 25 and 26.)

14. It is recommended that USOE establish an advisory group for the National Center for Educational Communications. (See page 29.)

III. THE ROLE OF CLEARINGHOUSES

A. Relative Priority of Clearinghouse Activities

Since an evaluation of the management functions relative to the clearinghouses was one of the missions of the group, it was important for us to understand the role and operations being performed by the clearinghouses. We recognize that the several activities being undertaken by the clearinghouses have changed over time; originally the major emphasis was on report collection and bibliographic processing, while now increasing emphasis is placed on the analysis of the implications of these reports for educational activities. In trying to understand the evolving priority of functions at the clearinghouses we drew up a table which seemed to reflect the opinions of Central ERIC Management as to the relative emphases on the different activities being conducted by the clearinghouses.
Table 1

As the table indicates, the early history of the clearinghouses, from the time of their being founded and for a year or two thereafter, placed major emphasis on the collecting of report documents and their analysis for entry in the abstract service of ERIC, "Research in Education." As time went on, the Central ERIC Staff recognized that the simple availability of an abstracting and bibliographic service was not sufficient to have a marked influence on practitioners and researchers in the education field; therefore, priority shifted from the processing of report to the analysis and interpretation of material contained both in RIE and in the published
literature. While the documentation activities of the clearinghouses were still important, the mechanical aspects of handling the report literature had been well worked out and routinized. The professional directors of the clearinghouses were able to turn their attention to more analytic and interpretive questions. The Central Clearinghouse Staff indicates that they now hope these trends will be further emphasized, with the clearinghouses taking a still more active role in interpreting the results of research, development, and innovative practice throughout the education community. In addition to analytic reports, the importance of special seminars and the communication aspects of professional societies, the role of regional and state information centers are recognized and given emphasis. It was suggested that in the future the document-oriented processing activities will, perhaps, be given a still lower priority in the overall operation of the ERIC clearinghouses.

B. The Users of ERIC Products

In considering the function and priorities of the clearinghouses, it became apparent that there was not a clear definition of who were the prime users of clearinghouse services. Probably in the early time period the clearinghouses tended to be oriented toward the academic researcher and those workers in the then recently established regional development laboratories. As time went on, it became evident that there was a great need to broaden the role of the clearinghouses from their emphasis on research reporting to an emphasis on overall educational resources. With this change in emphasis, there was a corresponding change in the audience toward whom the ERIC clearinghouses were oriented.

It now seems to be the belief of the Central ERIC Clearinghouse Management that the ERIC system should be primarily oriented toward
serving the larger educational needs as represented by the requirements of the practitioners in the local and state educational agencies. This shift from a service oriented primarily to the researchers to one for the practitioner has resulted in a corresponding change in the role of the clearinghouse and the clearinghouse director. Generally, the researcher is satisfied if he has a system which makes available a bibliographic record of the existing literature. He wants to have a descriptive or evaluative abstract of the literature, as well as the appropriate bibliographic references. It is his mission to analyze this literature and condense it in accordance with his needs. On the other hand, the practitioner has quite different needs. Generally, he has neither the time nor the inclination to make a detailed study of all the relevant literature on a particular problem he may face in his day to day duties. Rather, he wants an authoritative and succinctly stated summary of the relevant knowledge, as well as an interpretation which will lead to wise action on his part.

The review group recognizes that the statement of a dichotomy, with the researcher on the one hand and practitioner on the other, is too simple and that their needs tend, to some degree, to overlap. Nevertheless, we gained the impression that the differing requirements of these two roles had not been recognized clearly when giving guidance to the directors of the clearinghouses. There seemed to be a feeling by some on the ERIC staff that traditional bibliographic services were important and a belief that this role of the ERIC clearinghouse should be emphasized and continued at a high level. But again, there was a recognition that the ERIC system must go beyond its document-processing activities and that its ultimate success would be judged by the influence it had on the everyday practice of the educational community. It is perhaps enough to simply state these points to lead to the suggestion that the Central ERIC Management is
somewhat conflicted regarding the relative emphasis that should be placed on these roles. As a result, the guidance to the clearinghouse directors may lack something in clarity. Guidance should be given in functional terms such as background needed to understand the report, newness of topics to be covered, level of detail, style, etc.

C. Difference in Emphasis between Clearinghouses

In considering the allocation of resources among the clearinghouses and the way in which these resources were utilized within the clearinghouses, the Review Group had available a detailed analysis of the ERIC clearinghouse expenditures for FY 69. This analysis showed that the clearinghouses had received about $3 million in federal support in FY 69 and that the average clearinghouse had received approximately $175 thousand. The figures detailed the way in which the clearinghouses had used their resources in three major categories: those related to document acquisition, selection, and processing; secondly, those activities related to the preparation of interpretation and analysis reports, newsletters, bulletins, and other linkage work; and, thirdly, those expenditures related to the overall management of the clearinghouses, their training activities, advisory boards, and public relations. As a general rule, approximately a third of the resources were devoted to acquisition and processing. Another third were devoted to analysis and dissemination activities, and the remaining to administration and special projects. While these generalizations are true for the clearinghouses as a whole, we note wide variation from clearinghouse to clearinghouse. For example, in the area of document acquisition and processing, one clearinghouse spent as little as 20% of its resources on these activities, while another spent just over 55% on them. In the area of analysis, interpretation, and linkage work, one clearinghouse spent about 20% of its resources in this area, and another spent almost 65% of its resources on these activities. Similarly, one
clearinghouse seemed to have used as little as 10% of its resources on administration, advisory boards, and public relations, whereas another spent as high as 40%.

These wide variations in level of expenditures could be accounted for by several factors. FY 69 was the first year in which such statistics had been accumulated and it is quite possible that the clearinghouses had different practices in allocating expenditures under different categories, and thus the wide variations are more a function of bookkeeping than they are of the reality of expenditures. On the other hand, the Central ERIC Clearinghouse Staff indicated that they were aware of quite a degree of variation from clearinghouse to clearinghouse in the emphasis that is placed on the several functional activities. While there should not necessarily be great uniformity among the clearinghouses, the existence of wide variations raises question as to the extent to which the clearinghouse directions were operating under common assumptions regarding the relative importance the Central Clearinghouse Staff places on these different activities. The Review Group suggests that the Central ERIC Clearinghouse Staff examine the FY 69 expenditures, and the FY 70 expenditures just now being collected, to see if they are in agreement with the relative emphasis being placed on expenditures and can rationalize the variations from clearinghouse to clearinghouse. It may be found that the several clearinghouse directors are following their idiosyncratic interpretations of guidance from central ERIC and that more uniform guidance is called for.

IV. THE BIBLIOGRAPHIC AND DOCUMENTATION FUNCTION

A. The Use of ERIC Materials

The Review Group did not have as one of its responsibilities an analysis of the functional utility or extent of utilization of the ERIC system. Nevertheless we were inevitably drawn to the question of the way in
which the ERIC bibliographic services are being used and the different kinds of users. Most of the Management Review Group members have had experience in the use of ERIC materials and some were in day-to-day contact with these materials. In particular, three different members described how they used ERIC materials.

In the San Francisco Bay area there is the Information and Dissemination Center for Educational Materials supported by local school districts. One of the major resources available to this center is the various ERIC materials. It is reported that these materials are used by the dissemination center on a daily basis. For example, in February 1970 the Center had 55 individual requests which were satisfied by search of the ERIC material. As a result of these searches, 850 microfiche and about 350 photocopies were supplied to requesters. Had it not been for the availability of the ERIC bibliographic resources, these requests for service could not have been efficiently fulfilled.

Recently the New York State Education Department has started an Educational Resource Information Center giving service to local educators. Although this service was started only in January of 1970, by April and May it was receiving monthly over 300 requests for services. Again, these services were dependent on the ERIC materials being supplied through the clearinghouses and the central ERIC system.

In a different area, information was collected regarding the use of ERIC materials at the library of Teachers College, Columbia University, New York City. Users of the system during one week were queried regarding the reason they were using the materials and their educational status. Of the 49 users, 40 were students, while four were researchers, and five were outside visitors. Of these users, 19 were using the system in connection with class assignments, 16 on term papers, nine on dissertation searches, and the remainder on miscellaneous activities.
These examples are cited to give a feeling of the way in which the ERIC bibliographic materials are being used through the country. Without making an exhaustive evaluation, the Review Group is convinced that the ERIC bibliographic materials form a very important and useful resource which is critical to the operation of many information services throughout the educational community.

B. Consideration of the Criteria of Utility

As the amount of report literature in a given field becomes subject to bibliographic control, a point is reached at which it becomes prohibitively expensive to capture the last few documents. In general, the addition of each new document to a bibliographic service becomes less and less cost-effective in terms of the incremental information which is added to the base bibliographic file. When a new subject area is being developed, and bibliographic control is first being exercised, the addition of new items of information adds considerably to the store of total organized information regarding the subject, but as the file becomes larger and the total amount of information becomes more definitive, then the addition of any single new piece of information, on the average, adds less to the total amount of information. This point is made to show the dilemma facing all bibliographic and information resource stores, namely, the problem of how exhaustive and complete the system should try to be.

Related to this is the question of where a particular store of information is perceived as lying on the general curve mentioned above. To illustrate these points, several hypothetical figures have been drawn. These figures are not based on empirical evidence but reflect the general opinion of the Review Group regarding the shape of the curves for these particular topics. Figure 1 (page 15) shows the possible shape of the relationship between the percent of the report literature covered and the cumulative value of adding new reports for the two areas of tests,
measurements and evaluation and the area of the urban disadvantaged. The curve for tests and measurement starts at a relatively low level. This is because tests and measurements is a traditional subject in education and there already exists a large literature both in book and journal form. Thus the addition of new material from the report literature starts from a large base and each new report does not, percentagewise, add a great deal to the overall store of information. On the other hand, the area of the urban disadvantaged is relatively new and rests on a much less secure theoretical and empirical foundation than does the area of tests and measurement. Thus the formation of a new bibliographic store on urban disadvantaged starts out at a higher utility level and likewise the addition of each new report adds more to the total sum of information than does the addition of a similar item in the tests and measurement area. The importance of each clearinghouse's information to the overall fund of information in its specialty area differs depending on the level of sophistication and the total amount of literature available in that particular area. It would be instructive to have curves similar to these for all the areas covered by the clearinghouses. No doubt there would be some disagreement from authority to authority as to the nature of these curves, but until there is reasonable understanding of the intercept and slope of the curves, it will be difficult to develop a rational position as to the emphasis that should be placed on the bibliographic and document collection activities in the several areas represented by the clearinghouses.

Figure 2 represents another way of thinking about the bibliographic materials available from any clearinghouse. Figure 2 is a possible representation of the relationship between the percentage of material covered in the area of tests and evaluation and the cumulative value of adding a new report as viewed from the perspective of several different
users. If this representation is correct, it argues that the practitioner, the student-scholar, and the researcher all receive about the same amount of information through the addition of items to a clearinghouse bibliography in this particular area. This is based on the supposition that the amount of literature in this area is already quite great, is covered by a number of different bibliographic and abstracting services and that the increment derived from any particular item is not great for any of the user populations. On the other hand, Figure 3 shows a quite different set of curves for the area of urban disadvantaged. The rationale behind these curves is that for the researcher, the report literature in urban disadvantaged is, relatively speaking, unsophisticated and unsystematized. Many of the reports are not based on sound experimental or observational material but rather are impressionistic and single case studies. Thus the researcher finds this material of limited value in his effort to work in the field. The curve shows that for each item added, on the average, the researcher does not gain a great deal. On the other hand, for the practitioner who is faced with the problem of working in the area of urban disadvantaged, the initial formation of a body of information, as unreliable as it may be, is still his best source of information and probably the only one to which he can turn. Thus any material is welcome and the addition of new items adds, relatively speaking, more to his information about a particular topic. The student-scholar tends to fall between these two extremes. He wishes to understand the phenomena, to draw generalizations about it, and to be more detached than does the practitioner who must take action.

A consideration of these figures emphasizes several points. One is that the bibliographic functions of the different centers vary considerably in terms of their information utility, that this variation depends on
Cumulative value of adding new reports

Coverage of Report Literature

Urban Disadvantaged
Tests and Measurement

Coverage of Tests and Measurement Report Literature

Practitioner
Student-Scholar
Researcher

Coverage of Urban Disadvantaged Report Literature

Practitioner
Student-Scholar
Researcher
a number of factors, but particularly on the state of knowledge, understanding, and documentation in any particular field. Second, the importance of establishing a large ERIC data base differs considerably from field to field. This variation depends on a number of things, but particularly on the status of the field, its general support institutions, the level of development of theory in the field, and general ability of educators to deal with problems in the area. Third, the curves emphasize that the importance of the ERIC data base varies depending on the user. In some areas researchers will find much less incremental value in adding material to the data base than will practitioners.

The fourth factor to be considered relative to the curves revolves around the coordinates at which the present ERIC file stands in the distribution of coverage of the literature. For example, it is conceivable that in the area of tests and measurement the literature is at a 75% coverage point, whereas in the area of the urban disadvantaged it is only at a 10% coverage point (or perhaps the percentage should be reversed). The ERIC management should have a perception of where each clearinghouse stands relative to this question and thus be guided by the relative emphasis that should be placed on bibliographic activities at the several clearinghouses. Probably not too much emphasis should be placed on the exact shape of the curves presented here. They do represent, however, a method whereby the ERIC management could examine the relative importance of the literature being processed by the several clearinghouses.

C. Source of ERIC Documents

The above leads to the question of the source of the documents that are covered in the ERIC bibliographic system. It is reported that the RIE portion of the system receives about 15% of its documents from
mandatory sources; that is to say, from reports which are generated as the result of studies sponsored by the Federal Government and which are required to be reported in ERIC. The other 85% are either volunteered to the ERIC clearinghouses directly or the ERIC clearinghouses have established relationships with authors and professional organizations which know that they would like to receive report literature. It is reported that of the 85% volunteered to the ERIC clearinghouse, editors screen the material and reject about two-thirds as either being of local interest or of being repetitive of material already contained in RIE. It should be noted that the clearinghouses do not abstract and enter into the RIE file material which appears in the regular journal literature; rather, citations are entered in CIJE, which ERIC sponsors, and is published through a commercial organization.

Central ERIC should consider the quantity and quality of material entering and being retained within the ERIC system. As the data file grows it will become excessively large for ease of handling. Similarly, some material which entered the system in the beginning will become obsolete or will have been replaced by later material. Consideration should be given to dropping some material from the file. Likewise, it may become desirable to partition the file by subject matter or some other functional category. This would enable users to search a data base more nearly tailored to their interests.

Another problem which needs to be considered is the basic nature of the material to be included in the ERIC system. As has been mentioned, it originally started with emphasis on the research literature. As the system has evolved there has been more emphasis on the total resources available in education rather than just research. There needs to be an examination of the question of the kind of material that should be entered into ERIC. In addition to the research literature should RIE contain reports on material regarding curriculum, or teaching
materials available in different subject areas? In general, the tendency has been to limit ERIC to the report literature, but there is a growing feeling that this may be too narrow an orientation.

IV. Centralized Processing

There is question regarding the desirability of centralizing much of the processing that is now carried out at the several clearinghouses. As the processing activities have become more and more routine it has become increasingly feasible to centralize this portion of the ERIC document work. Under this scheme the documents would still be collected by the several ERIC clearinghouses but much of the bibliographic functions and the abstracting activities would be centralized in one place. It is suggested that such a centralization might significantly decrease the cost of processing. It is reported that the costs of bibliographic and abstracting functions in the current ERIC system average about $50 an item. It has been suggested that some other indexing and abstracting services are able to produce their material at a significantly lower rate. The Management Review Committee did not have the resources to examine this question in detail but does recommend that the ERIC central staff undertake an intensive examination of the funds that might be saved through the centralization of processing activities. It should be emphasized that such a change does not necessarily decrease the importance of the ERIC clearinghouse, since many of the functions that might be transferred are of a routine nature. On the other hand, careful consideration needs to be given to the extent to which savings would actually be achieved, and also consideration needs to be given to the possibility that many activities at ERIC clearinghouses may have a great interdependence.

V. THE INTERPRETATION AND ANALYSIS FUNCTION

Each ERIC clearinghouse generates products that summarize, review, and synthesize the state of knowledge on topics within its area of interest.
Originally, ERIC management placed primary emphasis on the collecting and processing of report literature. In recent years, however, the emphasis has changed by placing priority on the production of interpretive papers, state-of-the-art reviews, etc. In the last three years 234 annotated bibliographies on selected topics have been produced by the clearinghouses. During the same period 223 review and state-of-the-art papers have been published. The emphasis on these reports is reflected in the increasing number year by year. In FY 68 there were 32 review and state-of-the-art papers; in FY 69 there were 81; and in FY 70 there were 110.

In producing this material the responsibility for its initiation and production rests almost entirely with the director of the clearinghouse. It is expected that because of his expertise in the various substantive areas he will be alert to the topics which will be of greatest interest to his colleagues and others using ERIC products. Generally, he will decide the topics to be covered and the method to be used in obtaining the paper. Frequently he will consult with his other colleagues at the clearinghouse or in the educational institution where the clearinghouse resides. Frequently he will also review his plans with his national advisory board. The Review Group has the impression that while the Central ERIC Staff has indicated the priority they place on the general production of interpretive and analysis materials, it has remained largely to the discretion of the clearinghouse director as to what materials will be produced, the audience for whom they are intended, and the method by which they should be produced.

Although the Review Group did not make an extensive study of the process of producing such reports, it is our general observation that sometimes these reports are written by the clearinghouse director himself or in collaboration with members of his staff. At other times, the director asks knowledgeable professionals to produce reports on a particular subject. The clearinghouse usually supports the author by preparing bibliographic material, in supplying reports in its files, in giving secretarial support, and, at times, remunerates the author by offering an honorarium. Apparently, what support and whether or
not an honorarium will be given and who will author the reports is almost entirely at the discretion of the clearinghouse director.

In considering interpretation and analysis reports, the Review Group was impressed by the degree to which the clearinghouse directors have been given freedom to produce materials. While we believe it important that the directors be given freedom of expression in selecting appropriate topics and choosing the authors of reports, we also feel that somewhat more specific guidance should be given by the Central ERIC Clearinghouse Staff. Among the questions we have in mind is "who is the audience for whom the reports are intended?" It is our impression that considerable ambiguity exists regarding this question. Some reports seem to be directed more toward the researcher or university scholar than toward the practitioner. Some reports seem to involve the reporting of original research while other reports are summaries of the literature. It is our impression that the Central Clearinghouse Staff intends these reports to be directed toward the practitioner in the field, particularly toward the teacher, curriculum supervisor, or the school principal, rather than toward the more scholarly or research-oriented person. Whatever the intention, the clearinghouse central staff should give clear guidance to directors on this point.

We were also struck by the fact that the various reports differ considerably in format and level of content. Some reports we examined had no abstracts or summaries. Some were carefully edited, printed on quality paper, and represented very high quality products. On the other hand, others seemed to be rather hastily formed, were mimeographed, and may not represent the kind of product desired by the Central Clearinghouse Staff. Again, we would suggest that the Central Clearinghouse Staff consider the question of format, depth of analysis, quality of the report material, and expense judged appropriate in producing the reports. The emphasis here is not to reduce the freedom of clearinghouse directors in producing the reports they consider important but rather to give the directors an understanding of the
attitudes of the Central Clearinghouse Staff as to the goals to be achieved through the interpretation and analysis operation.

VI. DEVELOPMENT OF RELATIONSHIPS WITH "LINKAGE ORGANIZATIONS"

The clearinghouses are placed in several different settings. Some of them are operated by the professional association in the area covered by the clearinghouse, while others are situated at universities or non-profit institutions. There is a general feeling on the part of the Central Clearinghouse Staff that it is very important for the clearinghouses to develop linkages with the appropriate professional organizations. This is done through the appointment of executive officers or other officials from professional organizations to the advisory councils of the clearinghouses. It is also accomplished by having the clearinghouse regularly prepare material for publication in the professional journals, where there is often a regular column devoted to ERIC activities. At other times there are major articles prepared by the ERIC clearinghouse director. While these activities are considered highly important by the Central ERIC Staff, it is not apparent that the clearinghouse directors have been given explicit guidance regarding the relationships that should be established. Again, there needs to be an appropriate balance between central guidance and the initiative and freedom of the clearinghouse directors in establishing relationships to professional organizations. The Management Review Group was not supplied with any specific material on this subject, and thus is not in a position to make any specific recommendations, except to recognize the importance that professional organizations play as a communications media to professional educators.

Perhaps even more important is the relationship between ERIC services and organizations and the many information resource centers which link to the ultimate users of information. Increasingly, there are intermediate agencies such as state education departments' information systems and regional information services which are in direct contact with the practitioner.
These organizations frequently combine ERIC materials with those from other sources to fill local needs. The ERIC system is well organized to collect and make available appropriate information, but activities associated with assuring that the ultimate customer is served are not as well thought out or organized. This latter problem should continue to receive high priority by the National Center for Educational Communications.

VII. DIRECT SERVICES BY THE CLEARINGHOUSES

During FY 70 the ERIC clearinghouses are reported to have answered 56,351 direct questions which came to the clearinghouses by mail, by phone, or through personal requests. It is further reported that the majority of these requests came from practitioners and educational decision makers rather than from researchers. This large number of requests means that each clearinghouse dealt with about 10 such direct service requests each working day. Clearly, this service consumes resources which might otherwise be used for bibliographic, document acquisition or interpretive materials production. The Review Group has the impression that the Central ERIC Staff feels that these direct services detract from the major function of the clearinghouses and should be of low priority. Again, the Review Group did not have the time or resources to investigate this question in any depth, although it should be pointed out that the rendering of such services certainly must enhance the degree of support the ERIC system receives throughout the educational community. The rendering of this service to practitioners and educational decision makers would seem to be an important function which apparently is not being adequately fulfilled elsewhere. The Review Group suggests that the Central ERIC Staff reexamine their position on this question, and, having done so, give clear guidance to the clearinghouse director.

VIII. SUPPORT FOR EMERGING AREAS OF INTEREST

From time to time new areas of educational interest arise at a more rapid
rate than had been anticipated or they do not easily fall within the domain of one of the clearinghouses. Recently the areas of "experimental schools," performance contracting, and voucher systems have been much discussed but the ready availability of information about these areas has been slow to be systematized. Continually new areas will arise, frequently in poorly defined form. It is suggested that the National Center for Educational Communications should, at a very early stage, be in a position to recognize these emerging interests. If this idea is accepted, it leads to the requirement for a functionally defined responsibility for planning and analysis within the Center.

In support of such an activity it might be wise to establish a general or "current subjects" clearinghouse within Central ERIC. Such a clearinghouse could collect information in special or new areas, analyze it, issue bibliographies, and generally act as a resource for those concerned with new trends in education. The material collected and processed by such a clearinghouse would be of a different character than that usually handled. Probably it would include newspaper clippings, material from popular magazines, speeches by administrators and politicians, as well as items from more traditional sources.

IX. ERIC CLEARINGHOUSE MANAGEMENT

A. Management Procedures

The procedures used in managing the ERIC clearinghouses have been clearly described in a report by Mr. Marron. (1) From this report it is apparent that a number of management procedures are used, including conferences, newsletters, progress reports, technical guides, and formalized program planning and budgeting methods. These procedures seem to constitute a well-thought-out system of management. For example, the program planning and budgeting cycle has the following major steps:

1. Four months prior to the anniversary date of a contract the particular ERIC clearinghouse is visited by the ERIC contract monitor. During this visit he examines the clearinghouse operation in some detail, assessing management control, efficiency, and overall adequacy of the processing plan. He also discusses with the director plans for the subsequent budget year.

2. Three months before the anniversary date a budget session is scheduled at the central ERIC facility in Washington, where appropriate Office of Education personnel and the senior personnel from the ERIC clearinghouse meet to discuss the plans and budget level for the forthcoming year.

3. Following the meeting in Washington a formal letter is sent to the clearinghouse director covering the items discussed in the review session. All problem areas are noted, and the clearinghouse director is invited to react to the points raised by the Central Clearinghouse Staff.

4. As a result of the preceding session and correspondence, the clearinghouse director prepares a formal proposal which is submitted by his sponsoring agency (university, professional organization, etc.) for the continuation of the work of the clearinghouse.

5. When the formal proposal has reached central ERIC, it is processed through the normal Office of Education budget review, contracts and fiscal offices in a routine fashion.

The above will give a feeling for the extent to which the Central ERIC Staff monitors and manages the operation of individual clearinghouses. The Review Group finds little to suggest in the way of improvement on
this statement of management procedures. (Except that the process might well start earlier than four months before expiration of the contract.) Some concern is expressed, however, regarding the extent to which the ERIC staff is able to follow all of the steps mentioned in the management plan. We have noted instances where site visits appeared not to have occurred with the frequency specified or where the formal reaction to proposals did not seem to be as specific or definitive as the clearinghouse director feels would be most helpful to him. The Review Group did not have available detailed information regarding the actual number of site visits made, the actual extent of central ERIC conferences with the directors or material showing the evaluative results of these conferences. We consider this to be an internal management matter which the Director of ERIC and his staff will want to consider in depth. We would strongly suggest that the Central ERIC Staff review on a case by case basis the extent with which they have been able to visit each clearinghouse on an annual basis and the extent to which they have been able to complete the other elements of their management plan. It is very important that the clearinghouse directors receive clear, consistent, and properly timed guidance in writing.

B. Contract Matters

Another issue which was discussed by the Review Group dealt with the nature of the contract entered into between the government and the sponsoring institution. It is appreciated that because of the nature of the funds and the work being performed, a contract is a proper instrument rather than the grant mechanism. While it is important that the statement of work in the contract be relatively precise in defining the work to be done by the clearinghouse, it should also be recognized that the Office of Education is contracting for a professional service with an educational or professional institution and sufficient leeway should be given to allow the director to exercise considerable
professional judgment in the conduct of the work. While the contracts are formally on a year-to-year basis, it is the Review Group's opinion that there should be an understanding developed with each of the clearinghouses regarding the relative permanency of the clearinghouse, providing that adequate funds are available to continue the areas in which the clearinghouse exists. When a clearinghouse is first established, it would seem reasonable that, for most fields, there be an understanding that the clearinghouse will be maintained for at least a three-year cycle, with the expectation that it would be continued if performance were satisfactory. In certain stable or basic areas one might expect that the clearinghouse would continue operation at a given institution for a longer period—perhaps a five-year cycle. No matter what the length of the understanding, the sponsoring institution should be given at least a year's notice if there is an intention to discontinue a clearinghouse. This length of time seems only reasonable in view of the fact that most of the clearinghouses are at academic institutions where yearly appointments tend to be the mode for employment contracts. It should be kept in mind that unless a reasonable continuity is maintained, it will be difficult to attract well-qualified directors and, if this is not done, the quality of the clearinghouse will suffer. This becomes particularly important as the emphasis of clearinghouse products shifts from predominantly bibliographic to more analytic and interpretive activities.

There was some feeling on the part of members of the review committee that, at some institutions at least, the ERIC clearinghouses did not seem to be deriving appropriate benefits from the overhead being paid to the institution. It was noted that in several cases the clearinghouses seemed to be housed in substandard or very crowded conditions. There was a general feeling that the Central ERIC Clearinghouse Staff should review with appropriate university authorities the extent to which overhead funds were being used to properly support clearinghouse operations.
C. Guidance to Clearinghouse Directors

The Review Group considered at some length the kind of guidance that should be given to clearinghouse directors. It must be remembered that the 19 separate clearinghouses are part of a system serving the education community. As such, the directors of the clearinghouses need to have an appreciation of the overall goals the Central ERIC Staff is trying to achieve in the operation of the total ERIC system. The review committee feels that there may be a need for central ERIC management to clarify several matters in giving guidance to clearinghouse directors. Among the items we have in mind are questions such as the audience which is intended as the primary focus for the ERIC system.

We have the feeling that when the ERIC system was first established its target audience was thought of as being largely a research-oriented group. As USOE priorities and goals have changed, the audience which USOE management believes should be the target audience for the ERIC system may have shifted quite considerably to emphasize the educational practitioner and the state and local educational agencies. If this is, indeed, the intent of the Office of Education management, this guidance should be clearly transmitted to the ERIC clearinghouse directors, and their performance should be judged in terms of such guidance.

Along the same vein, it is the Review Group's observation that the relative emphasis of clearinghouse activities has shifted from an emphasis on bibliographic activities to one giving high weight to interpretive and review articles and to linkage with the practicing educational community. If this is indeed the fact, we would wonder to what extent this has been made clear to ERIC clearinghouse directors. Is there a policy guidance series of publications which cover matters of this nature; are such changes in policy transmitted in a suitable fashion? It is our general feeling that overall policy guidance should be written and made quite explicit so that the directors have little
doubt as to the direction the overall ERIC system is evolving. The review committee would hasten to add that we believe it appropriate for the central ERIC management to make their policies and guidance clear to the ERIC clearinghouse directors, but at the same time the central management should give directors considerable latitude with respect to the operation of the clearinghouses, although guided by these general policies.

D. Policy Regarding Interpretive Reports

Continuing the above thought, we wonder regarding the extent to which it is clear to ERIC clearinghouse directors the role to be served by interpretive reviews and analysis material. To some extent we have the feeling that the several directors have developed their own interpretation as to the kinds and levels of reviews that are appropriate. We found it helpful to think of the planning and production of interpretive reviews in four separate stages. First, we believe there should be a clear statement by central ERIC management as to what audiences are considered most important for interpretive reviews and analysis materials. Are these materials to be written primarily for researchers, for university and college scholars, or for day-to-day practitioners and administrators in the field? It is our general feeling that this issue has not been resolved but that it should be, so that the clearinghouses can follow the Office of Education guidance in establishing priorities. Secondly, each ERIC clearinghouse director will devote time to planning the type of material he will wish to produce. Again, the question of audience becomes important. If the material is to be developed for the research audience, the director will undoubtedly wish to use certain consultants and plan to use certain authors who would be quite different than those who would be consulted or used if the audience is made up of general practitioners. It is believed that at the planning stage the central ERIC management
will wish to review the plans of the several directors regarding the interpretive material and analyses which they intend to produce in each contract period. The third area deals with the actual production of the material. At times it appears that interpretive reviews are written by the ERIC clearinghouse director himself, at other times by scholars in the field, much on the order of a journal article. At other times they are commissioned and written with either a research or practitioner audience in mind. The level of the audience, the kind of editorial assistance being used, the format in which the material is presented, and identification with the ERIC system are all important and general guidance should be given by the Central ERIC Staff. Finally, once the material is produced and distributed it should be evaluated. It would seem that an appropriate part of the duties of the director of the clearinghouse is to institute a formal evaluation of the extent to which the material that has been produced by the clearinghouse meets the guidelines for such materials. On a selective basis, such evaluations should be undertaken formally, but it would seem appropriate that informal evaluation be undertaken for every product.

E. Policy and Advisory Group

Early in the history of the management of the ERIC clearinghouses it became apparent that it would be advisable to form national advisory councils for each clearinghouse. It is felt by many directors that the advisory council has been an important adjunct in their management of the clearinghouse operation. The Review Group suggests that USOE consider the desirability of forming a similar advisory group for the National Center for Educational Communication. It is our feeling that a policy and advisory group might serve as an important link to other information systems, to ERIC users, to the educational community, and to the agencies supporting the educational communications effort. We believe that such an advisory and policy group
might include among its members several individuals representing the users groups toward whom the ERIC system is directed. Similarly, two or three ERIC clearinghouse directors might appropriately be members of the group. Representatives from several national or regional information systems should be considered. It is felt that such an advisory group should not be large, but rather should be small enough so that a very informal and intimate working relationship could be established. Perhaps quarterly or semiannual meetings would be appropriate. Basically, it is our feeling that it would be helpful to the overall communication effort of the Office of Education if an advisory group were available to assist in the formulation of overall policy for the guidance of this very important communications effort.
APPENDIX - REVIEW GROUP MEMBERS

Dr. Launor F. Carter (Chairman)
Vice President and Manager,
Public Systems Division
System Development Corporation

William D. Coats
Director, Educator Feedback Center and Associate Professor of Educational Leadership
Western Michigan University
Kalamazoo, Michigan

W. E. Ellis
Director, Office of Research
South Carolina State Department of Education

Sidney Forman
Professor of Education and Libraries
Teachers College
Columbia University

Frank W. Mattas
Director
Bay Region Education Resources Center, San Mateo County
Office of Education
Redwood City, California

Samuel A. Rosenfeld
Chief, Information Sciences Branch
Director, Mathematical Sciences Research Program, National Aeronautics and Space Administration

Sherman Ross
Division of Behavioral Sciences
National Research Council

Paul D. Hood
Director, Communication Program
Far West Laboratory for Educational Research and Development

Alvin G. Skelly
Executive Vice President
Council of the Great City Schools

Carl E. Wedekind
Director of Education Research
New York State Education Department

Philip Wright
Director
New England Research Applications Center
University of Connecticut
