This report briefly discusses the development of a survey instrument that will be used for an impact study of Wisconsin State University at River Falls. The questionnaire will be sent to 9,000 living graduates for whom addresses are available. Two books relevant to the study are briefly summarized. Both are entitled "They Went to College," and were written by C. Robert Pace, and jointly by Ernest Havemann and Patricia Salter West, respectively. The procedures used to develop the questionnaire basically involved a faculty committee reacting to the work of a single individual, followed by a tryout of the instrument on 50 graduate students. The survey instrument is included in the appendix. (AP)

Summary

As an outgrowth of discussions relating to the coming centennial of the founding of Wisconsin State University - River Falls in 1874, an impact study of the institution and its graduates was deemed desirable. Reviews of the literature located several suggestions, but only two comprehensive studies of the general type envisioned here. No comprehensive studies of the graduates of this type of institution could be found.

The project described in this report deals with the development of the survey instrument to be used in a follow-up study of the 9,000 living graduates for whom up-to-date addresses are available out of the 11,440 total who have graduated from this institution since its founding. Procedures used in developing the questionnaire basically involved a faculty committee reacting to the work of a single individual followed by a tryout on 50 graduate students. The resulting instrument is reproduced in the appendix of this document.

Background for the Study

Wisconsin State University - River Falls will observe its centennial anniversary in 1974. Founded as a one-year school in 1874, River Falls progressed to a two-year institution in 1875, a three-year institution in 1914 and finally a four-year institution in 1927. After being labelled a State Teachers College in 1927, it was renamed a State College in 1951 and a State University in 1963. The Normal changed from a single purpose teacher-education school to a multi-purpose teacher-education and liberal arts occupational curricula institution. To date, a total of 11,440 students have graduated.

Little knowledge has been gathered about these graduates. Just what has the university done to the students over the years? What did a college education do to a Polk County farmer's son? What are his attitudes on government, religion, family and politics? What is his value system today? And in turn, what does he do for his community, what impact has he had upon the society he inhabits? Havemann and West stated it this way:

The facts have been pretty scarce. What does a college do to its students? What kind of breadwinners does it turn out, and what kind of citizens with what kind of political and

2Registrar's records.

3Ernest Havemann and Patricia Salter West, They Went to College (New York: Harcourt, Brace and Company, 1952, pp. 4-5.)
This project was designed to construct a pertinent questionnaire for use in a survey of the impact of graduates of Wisconsin State University - River Falls. Specifically, the three areas of impact inquiry were:

1. The graduate before River Falls.
2. The graduate's present beliefs, attitudes and opinions.
3. The graduate after River Falls.

In 1974, the history of Wisconsin State University - River Falls will be published by Dr. Walker U. Wyman, Professor of History on the staff at River Falls. He felt that to write the history of an educational institution, information about its graduates must be at hand, for without the students there would be no university. Wyman explained his expectations of the study this way: "I like to think of it as a biography of a class or classes that somehow tells the story of the institution's impact upon the people and region it serves."4

Thus, this study was important in that it served as the preliminary step for a much larger investigation as well as resulting in a questionnaire for use in that investigation.

Freedman5 generalized that in the long run the best evaluation of the meaning of a college education is likely to result from studies of alumni. Unfortunately such studies are complex and not easily carried out and as a result there have been few important studies in this area. Most of the empirical studies center on various sociological factors, such as the income of college graduates, the age at which they married, or the number of children they have. Other studies utilizing questionnaires assessed such factors as the esthetic values of college graduates, their interests and opinions, and their attitudes toward various aspects of their college careers. Freedman concluded, nevertheless, that rare indeed were comprehensive studies of college alumni.

Two books which proved quite extensive in coverage, were found. They are partially summarized here because they are as comprehensive as the proposed study.

The first book was Pace's They Went to College.6 Pace surveyed samples of the men and women who entered the University of Minnesota

4Walker D. Wyman, An Interdepartmental Memorandum at Wisconsin State University - River Falls, November 14, 1968, p. 2.
6C. Robert Pace, They Went to College (Minneapolis: The University of Minnesota Press, 1941), Chap. 11.
in 1924, 1925, 1928, and 1929. The survey was conducted in 1937 through the use of a fifty-two page mail questionnaire.

The second book was also entitled They Went to College, written by Ernest Havemann and Patricia Salter West. They reported on questionnaire returns from 9,064 respondents representing 1,037 colleges. The data were obtained in 1947. They study was designed originally to shed light on readers of TIME magazine and was not intended to be a study of college-educated people as such. Most TIME readers are college-educated, however, so the data lent themselves to a study of the general state and activities of men and women who have attended college.

Pace found that the lives of alumni were pretty much centered in the "private" sphere, with the family, work and recreation as the predominant interests. The alumni voted and were interested in governmental policies, but tended to be rather passive politically. Intellectual and esthetic pursuits did not loom large in their lives. Pace suggested that "colleges may not be producing the cultural values they so frequently claim." He concluded that the chief differences between graduates and people who dropped out of college were in the vocational realm with the income of the graduates being somewhat higher and their reported job satisfaction somewhat greater.

In the more recent study, Havemann and West reported almost universal satisfaction with college experience. Ninety-eight percent of the respondents would choose to go to college again, were they reliving their lives, and 84 percent would choose the same college. This satisfaction did not hold, however, for the general type of curriculum or course pursued in college. In fact, this area was the focus of the greatest dissatisfaction with the college experience. In the matter of general versus more specific kinds of education, 44 percent were satisfied, 35 percent wished they had had a more specific kind of training, and 21 percent wished they had had a more general educational experience. In the professions, those who had had a more general type of undergraduate education tended to be "the more active and interested citizens." Students with high grades were found to be more likely to enter professions and even to earn more money in a given profession than were students with lower grades. The degree of college satisfaction though related to grades, was little related to type and extent of extra-curricular activity. Alumni who had obtained higher grades as students were more content with their college, major and extent of specialization.

Havemann and West noted that college educated men and women tend to marry individuals of similar educational levels. And that at all age levels the incidence of divorce was lower for college graduates than for people with less education.

---

7 Havemann and West, op. cit., See Foreward and Appendix.
8 Ibid., Chap. 9.
9 Ibid., Chap. XI.
10Ibid., Chap. IV.
Havemann and West also discovered that among college-educated people, Republicans outnumbered Democrats by a margin of three to two. Republicans were in the majority for all income levels indicating that preference for the Republican party was not associated more with level of income than with education. Havemann and West further detected a tendency toward an increasing number of the younger alumni calling themselves "independents."\(^1\)

Even in light of such studies Sanford commented that one fact is evident, "there is a remarkable discrepancy between the wide public acceptance of the value of college education and the paucity of demonstrated knowledge that it does some good."\(^2\) Sanford stated, however, that appraising the lasting effects of college can be attacked effectively when energy and resources are sufficient. This certainly opens a whole new corridor of investigation for researchers.

Methods of Procedure

The preliminary stages of pilot work were made up of several conferences with interested faculty members in order to delineate and refine the objectives of, and reason for, the proposed study.

Relevant literature relating to similar studies was carefully scrutinized. A collection was made of a number of partial studies. Further, extensive reading was conducted in order to become familiar with factors to be considered in the preparation of a questionnaire.

Since the TIME questionnaire (used in the report of Havemann and West) was not included in the text, a letter was dispatched to the research department of TIME requesting a copy. It was received within a few days. The questionnaires used for both studies reported in book form proved to be invaluable resources.

The "jury of experts" who acted on a consultant committee as the questionnaire was built included these faculty members of Wisconsin State University - River Falls: Dr. Marvin D. Thompson, Dr. Wayne Wolfe, Dr. L. Gordon Stone, Dr. James McLaughlin, Dr. James Dollahon, Miss Amy Fuller, and Dr. Wilbur Sperling.

At the first meeting of the committee the experimenter presented an outline of specific topics to be included in the questionnaire. Members of the committee gave suggestions for additional questionnaire topics and generally discussed the direction they felt the study should take.

After the first meeting letters were dispatched to Dr. Nevitt Sanford, Professor of Psychology and Education, Stanford University; Dr. Leo A. Munday, Director of Research Service Operations, American College Testing Program; Dr. Richard Prince, Chicago State College; and Dr. George D. Spindler, Department of Anthropology, Stanford University, requesting copies of attitude-value inventories which had been used in previous studies. All four were received and portions adapted for use in this study.

\(^{1}\)ibid., Chap.X.

\(^{2}\)Sanford, op. cit., p. 805.
The questionnaire itself was prepared a sub-section at a time. As each version of the questionnaire was completed it was presented to the board of experts who approved, revised, rejected and generally interpreted the questions. Careful consideration was given to such factors as wording, sequence of questions and length of the questionnaire in order to encourage a high level of responses. Each version was then rewritten and returned to the committee for final appraisal. This procedure was repeated three times before the questionnaire was finally approved.

Findings and Conclusions

The questionnaire developed in this project may be found in the appendix. During the 1969 Summer Session it was tried out on 50 graduate students enrolled on this campus with several items revised in terms of that experience.

Funding has been arranged to solicit responses on the questionnaire in February, 1970, using as subjects the approximately 9,000 living graduates on whom the University has up-to-date addresses. The results should provide a comprehensive 'portrait' of the impact of the institution on its graduates and their impact on society.

Present plans call for publication in terms of a series of scholarly articles as well as a book written for the general public.
