Some course and curriculum improvement projects funded by the National Science Foundation have produced definitive editions of textbooks, other printed materials, and instructional films. This bulletin lists materials available in 1968 through commercial or college and university sources. The publications include textbooks, laboratory guides, teachers' guides, supplementary readings for students and teachers, and sourcebooks. Materials are grouped by educational level (elementary and secondary school; college and university), and, within each level, by discipline (multidisciplinary, earth sciences, biology, chemistry, mathematics, physics, engineering, and social sciences). Citations include the project title, grantee, project director (1968), publishers of books and films, and 1968 prices. (Author/AL)

PREPARED BY COURSE AND CURRICULUM IMPROVEMENT PROJECTS

SUPPORTED BY

THE NATIONAL SCIENCE FOUNDATION

July 1968
INTRODUCTION

One of the major responsibilities of the National Science Foundation, an independent agency of the Federal Government, is to support the improvement of the quality of education in the sciences in the Nation's educational institutions. In carrying out this responsibility, the Foundation has developed a broad and flexible series of programs to help meet the needs of students, faculties, instructional programs and institutions.

Within this framework, an important area of concern has been support for efforts by scientists and science educators, aided by experts in instructional media, to create models of curricula, courses, and materials designed to help students and teachers at all educational levels gain deeper and more realistic insights into mathematics, the physical, biological, environmental and social sciences, and engineering. In working toward this goal, over the past decade the Foundation has supported more than 400 curriculum and course content improvement projects, most of which are described in a booklet, Course and Curriculum Improvement Projects (NSF 66-22), available from the National Science Foundation, Washington, D. C. 20550. These projects have developed an extensive collection of instructional materials for all educational levels from kindergarten to graduate school.

Some projects have produced definitive editions of textbooks and other printed materials and instructional films and kinescopes, many of which are now available through commercial publishers or distributors and college and university film distribution units. The purpose of this listing is to provide an easy reference to these publications and films. The publications include textbooks, laboratory guides, teachers' guides, supplementary readings for students and teachers, and sourcebooks. Preliminary versions and special reports are not included. The list groups materials by educational level and, within level, by discipline. Citations for each project give the project title, grantee, current project director (with his present address where different from that of the grantee), and titles and publishers of books and films. The list of films is limited to those generally available through sale and rental by the distributors. Prices shown are subject to change.

It should be emphasized that inclusion of an item carries no implication of endorsement or approval by the Foundation or the Federal Government.

The Foundation also issues a list of translations and adaptations of the United States materials for use in other countries. This list is available from the Course Content Improvement Program, Pre-College Education in Science, or the Science Curriculum Improvement Program, Undergraduate Education in Science, National Science Foundation, Washington, D. C. 20550.
