To provide vocational educators with reliable information about the handicapped and suggestions for implementing services according to the Vocational Education Amendments of 1968, ideas were developed during a 2-day national conference attended by 200 educators and rehabilitation specialists, and were refined during nine regional clinics. Using these suggestions, this document strives to answer specific questions of program implementation, using model programs when possible, so that administrators at the local level can choose and implement according to need. The information is presented in these sections: (1) Who are the Handicapped? (2) Organizing for Cooperation: Interagency Involvement, (3) Services Available from Vocational Rehabilitation, (4) A Model for Statewide Cooperative Agreement, (5) Programs and Services, (6) Providing Services in Rural Areas, (7) Community Involvement in Vocational Educational Services for the Handicapped, (8) Considerations in Planning Vocational Education for the Hearing, Visually, and Physically Impaired, (9) Personnel, (10) Some Suggested Sources of Teaching Materials and Assistance, and (11) Vocational Education Amendments of 1968: Sections Related to the Handicapped. This publication was prepared pursuant to a grant with the Office of Education, U.S. Department of Health, Education, and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgment in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Office of Education position or policy.
ACKNOWLEDGMENTS

The project staff of the National Conference on Vocational Education for Handicapped Persons was especially fortunate to have the fine response and cooperation of many persons. We are pleased to take this opportunity to thank those who made major contributions to this undertaking.

We would particularly like to thank the staff of the Division of Vocational and Technical Education of the U.S. Office of Education for their continued support and guidance. Special thanks go to Dr. Edwin Rumpf, Mr. Michael Russo, Miss Barbara Kemp, Mr. Hal Young, and Mr. Emanuel Weinstein.

The Bureau of Education for the Handicapped in the U.S. Office of Education and the Rehabilitation Services Administration in the Social and Rehabilitation Service worked closely with the Division of Vocational and Technical Education and offered technical assistance and advice throughout the project. We would especially like to thank Dr. James Gallagher, former Associate Commissioner, Bureau of Education for the Handicapped and Mr. Joseph Hunt, Commissioner, Rehabilitation Services Administration who joined Dr. Rumpf in addressing the participants at the National Conference.

We were very fortunate to be able to have the services of so many knowledgeable consultants. Their excellent position papers gave direction to the conference participants. Our consultants were Dr. Salvatore DiMichael, Director, Institute for the Crippled and Disabled, New York City; Dr. Ralf Peckham, Assistant Superintendent, Michigan Department of Education, Lansing; Dr. Julius S. Cohen, Associate Director, Institute for Study on Mental Retardation, University of Michigan; Dr. G. Orville Johnson, Director, Department of Special Education, Ohio State University; Dr. Jerry Miller, Director, Special Education for the Philadelphia City Schools, Dr. Marvin Kivitz, Director of Education, Vocational Training and Rehabilitation, Elwyn Institute, Elwyn, Pennsylvania; Dr. D. Robert Frisina, Vice President, National Technical Institute for the Deaf, Rochester Institute of Technology; Dr. John W. Kidd, Assistant Superintendent, Department for the Mentally Retarded, Special School District of St. Louis County; Dr. Jerry Olson, Assistant Superintendent for Occupational, Vocational and Technical Education, Pittsburgh City Schools; and Dr. Samuel T. Price, Department of Special Education, Illinois State University.

Those who served as discussion group leaders deserve particular praise for their professional contributions. We are grateful to Dr. Jack Dinger, Dr.
Richard Weatherman, Dr. Karl Egerman, Mr. Herbert J. Wolfe, Dr. Richard Holman, Mr. Morton Bregman, Dr. Morvin Wirtz, Dr. Philip C. Chinn, Mr. William C. Geer, Mr. Richard M. Switzer, and Dr. Floyd McDowell.

The recorders, selected graduate students in the Department of Special Education and Rehabilitation of the University of Pittsburgh, devoted a great deal of time preparing reports for the project staff. We wish to thank Mr. William Garove, Mr. Douglas Morgan, Mr. William Penn, Mr. Robert Rinaldi, Mrs. Janet Klineman, Mrs. Mary Moore, Miss Karen Groves, Mrs. Sandra Golomb, Mr. Edward Handley, Mrs. Nancy Johnson, Miss Sheri Klein, and Mr. John Carroll for their efforts.

We are particularly grateful to Dr. Al Tudyman, Director of Special Education, Oakland, California Public Schools, Mr. Chester Loomis, Supervisor of Special Education, Detroit Public Schools and Mr. Don L. Partridge, Texas State Director of Special Education for preparing descriptions of their excellent programs for use in this document.

The project received continuing support from Dr. Paul H. Voelker, Chairman, Department of Special Education and Rehabilitation, University of Pittsburgh and the staff of the Department of Special Education and Rehabilitation. We sincerely appreciate their cooperation. Special thanks go to Mrs. Dana Paulick who served as project secretary.

Finally, we wish to acknowledge the participants who came to Pittsburgh and took part in the Conference. Similar thanks go to the staffs and participants of the Regional Clinics sponsored by the Division of Vocational Technical Education. We hope this report is worthy of their efforts.

</table>
INTRODUCTION*

Handicapped persons in our society have provided exciting challenges to those who provide for their education and rehabilitation. Provision for and modifications of services to accommodate to their needs have created problems which have stimulated innovation and imagination in the quest for appropriate solutions. The 1968 Amendments to the Vocational Education Act of 1963 have focused renewed attention on the handicapped. The Congress of the United States has mandated that 10 percent of the Federal funds allocated under parts B of this act be designated to provide vocational education to the handicapped. As State and local vocational education personnel attempt to implement such services, they will require reliable information about the handicapped and realistic suggestions about programs and services.

The purpose of this document is to make available some of the information vocational educators will require. The Division of Vocational and Technical Education of the U.S. Office of Education has contracted with the Department of Special Education and Rehabilitation, University of Pittsburgh, to prepare the material for presentation. The process of preparation has involved a large number of vocational educators, special educators, and vocational rehabilitation specialists from all sections of the country. Between February 25–27, 1969, a National Conference on Vocational Education of Handicapped Persons was held in Pittsburgh. In attendance were 200 invited persons with interest in one of the three fields. These people were stimulated to discussion by position papers prepared by six nationally recognized leaders in these fields. The ideas developed at this conference were summarized and presented at nine regional clinics conducted by the Division of Vocational and Technical Education. At this level ideas were refined, further suggestions were received, and have been incorporated into this document.

Not all of the questions which need answers can be effectively handled in this document. The intended audience represents such a wide range of backgrounds and needs that only suggestions and recommendations are possible. The task of local program development and operation continues to require that vocational educators, special educators, vocational rehabilitation specialists, and others work closely together. This document, however, should provide a basis for constructive action.

The education process for handicapped persons may be viewed as the

*Written by Earl B. Young, University of Pittsburgh. (August 1969.)
modification of educational practices, instructional programs, and school plants for those individuals who possess disabling conditions which prevent them from learning at the normal rate. The wide variation of these modifications emphasize the individualization of instruction.

Education for "the good life" in "a great society" has been a basic philosophical position since early times. Education for an occupation has been a major part of the educational enterprise in all societies in recorded history. People were trained to perform some useful service, in some formal manner, leading to service in the church, government, the military, and for the crafts and trades. It was not until the Greeks generated and propagated the notion of the "Seven Liberal Arts" that education took on a nonvocational function.

The Judeo-Christian ethic of work has provided an added impetus to vocational training beyond the obvious economic necessity of working to earn money with which to buy services or products. Work is good. Those who work (says the ethic) will prosper in body and mind.

In free societies everyone is assumed to have the right to work. Indeed, the individual is expected to work since everyone is expected to contribute to the commonweal. Free men are expected to "know about" and to "know how to." Both of these are essential to the well-being of each person.

There are certain theoretical considerations which serve as the basis for vocational education for all. Free societies can flourish when they make maximum use of their resources, both human and natural. Any individual who does not contribute his share to the socioeconomic system is viewed as an economic liability. Thus, every potential worker must be trained to perform some useful service to the maximum of his capabilities. This kind of "economic realism" coupled with the philosophy of humanitarianism provides the basis for a society which is meaningful and conducive to physical and group well-being.

Those who do not, or cannot, contribute their share to the common good must be borne by the more fortunate. It is incumbent upon any free society, however, to make certain that each person be given the opportunity to earn a living, thus making it possible for him to enjoy "the good life." Experience has shown that the disabled, when properly educated, achieve the state of well-being which is the birthright of all in free societies.

All this is to say that the philosophical and theoretical foundations of all education pervade the conduct of the vocational educator and special educator as well. Working side by side, each using his special skills and knowledge, the vocational preparation of every young handicapped person can be achieved.

This document strives to answer specific questions of program implementation. Wherever possible, model programs have been outlined to explain the concepts of service which are presented. A total program concept is offered as a guide. At the local level, decisions will have to be made as to what portion of the program will be allocated to specific departments or
agencies. Differences in implementation will reflect geographic and administrative variables which can only be accounted for through the cooperation of the parties involved.

Wherever possible the reader has been directed to primary source material as the means of exploring specific topics in greater depth than is possible in this document. The reader is also advised to contact those specialists in or around the local community who can offer guidance. The organizations listed in the appendix are offered as acceptable substitutes where personal guidance is not possible. Additional help can be obtained by contacting personnel in State department offices.

The largest portion of this document deals with the services to persons with permanent intellectual deficits. Special sections have been prepared which are specifically addressed to the hearing impaired, the visually impaired, and the physically handicapped.
WHO ARE THE HANDICAPPED?*

The handicapped are a diverse population within our society. They vary in characteristics to as large an extent as the nonhandicapped. This section is devoted to giving the reader general insights into the nature of the handicapped. The classifications to be dealt with correspond to those specified for service in the Vocational Education Amendments of 1968. The reader should bear in mind that classifications are only arbitrary labels used to describe persons with similar disabilities. A classification cannot serve as the basis for defining the type of program needed by a particular person. Each person should be individually assessed so that his program can be designed to meet specific needs.

The material on age range, size of class, transportation, and special materials is included to acquaint the reader with the scope of services typically available to the handicapped who have received special education.

Mentally Retarded

For educational purposes, the mentally retarded are classified into two groups, educable and trainable.

The Educable

This group will probably comprise the largest single block of students to be served by the vocational educator. Two to 3 percent of the general population is thought to be educable mentally retarded. Their rate of intellectual development ranges from 50 percent to 75 percent of normal intellectual growth although these figures are arbitrary. While exceptions are common, the large majority of educable students will achieve maximally at the sixth grade level.

The educable can be served through a variety of instructional organization patterns. The most common pattern is special classes with participation in some activities in other parts of the school.

Special Education Services.—Size of Class: Secondary classes in special education include 12–15 students. The more students there are in one class with a wide range of ages and mental abilities, the smaller the class should be. Newly organized classes are best begun with very small groups of students.

*Portions of the material in this chapter were adapted from the October, November, and December issues of School Management, with permission of the publisher. These articles were copyrighted by CCM Professional Magazines, Inc., 1967. All rights reserved.
**Age Range:** Special education is usually organized in four groups for instructional purposes.

1. Preschool class (nursery and kindergarten), ages 3–6 (mental age 2–4)
2. Elementary primary class, ages 6–10 (mental age 3–6)
3. Elementary intermediate class, ages 9–13 (mental age 6–9)
4. Secondary school class, ages 13–19 (mental age 9–12)

**Transportation:** Sparsity of eligible students may require drawing in students to the school from great distances.

**Special Materials:** The materials used in regular classes must be changed or supplemented by special materials and instructional procedures adjusted to the retarded youngster's rate of learning.

**Postschool Adjustment:** When properly trained the educable may enter the world of work in positions comparable to the nonretarded. Usually, the highest level of attainment involves jobs in unskilled and semiskilled areas. As more training resources become available, this pattern is changing and the educable are being prepared for jobs in industries formerly thought to be beyond their capacities.

**The Trainable**

The trainable respond more slowly to education and training than do the educable. Their rate of development is approximately one-quarter to one-half of the normal rate. An individual in this group is likely to have secondary physical or emotional problems in addition to retardation. Education and training emphasizes the acquisition of self care skills; social adjustment to the family, school, and neighborhood; and economic usefulness in either the home or a sheltered situation. The trainable usually require some care, supervision, and economic support throughout life.

There are approximately three trainable individuals in every thousand people in the population. Vocational educators can expect to work with very few trainable students, although it is possible that these students might profit from exposure to selected aspects of the vocational education program.

Generally the trainable are served in special schools or in special classes of regular schools.

**Special Education Services—Size of Class:** The class should be limited to six or seven. This is particularly true if students are away from home for the first time, or if age and mental abilities vary greatly. Class size can be larger if students are older, have had school experience, or are grouped according to age and/or mental ability.

**Transportation:** The cost of transportation becomes a major item in operating classes for these students, because they are unable to go to school unattended and because of population sparsity.

**Postschool Adjustment:** The trainable are being found more frequently in sheltered workshops as these become established. Some few do make mod-

---

11
erately successful adjustments to community employment when adequate guidance is available. These jobs do not require skills which are traditionally taught in vocational education.

**Speech Impaired**

Speech is considered defective simply when its deviation from average speech draws attention to itself.

The major categories of speech defects are: (1) articulatory disorders, (2) vocal disorders, (3) stuttering, (4) delayed speech, and (5) speech disorders associated with cleft palate, hearing impairment, or cerebral palsy.

About 80 percent of the speech cases in school are articulatory disorders which involve substitutions ("wight" for right, "yeth" for yes, "ye-ow" for yellow, etc.), omissions (consonants dropped), distortions (whistling the "s" sound), and additions ("on-a the table").

There are approximately 35 students out of every 1,000 who can be classified as having speech impairments.

**Special Education Services**

*Size of Class:* Most students receive therapy in groups of four and some receive individual therapy. The therapy sessions may last 30 minutes and are usually held twice a week.

*Age Range:* Speech correction services are usually concentrated in the following ways: 74 percent in grades K-2, 19 percent in grades 3 and 4, 7 percent in grades 5 through 12.

**Postschool Adjustment**

In most cases these students will make the same adjustment as regular students.

**Visually Impaired**

For educational purposes the visually impaired are classified into two groups, the blind and the partially sighted.

A blind student is one who has so little vision that the senses of touch and hearing must be substituted for sight when teaching. Braille is most often used by these students. Many magazines and books are regularly translated into braille for use by the blind. Tapes and records are also available. The reader is directed to the Instructional Materials Center at the American Printing House for the Blind, to the Library of Congress, or to local service agencies for specific help in locating and identifying applicable instructional material.

The partially sighted are able to utilize some remaining vision for learning. Special materials, instructional procedures, and conditions are incorporated to accommodate the students.

There are few blind and partially sighted persons in the general population by comparison with the mentally retarded. There are approximately
three blind students and six partially sighted students out of every 1,000. Occasionally a visually impaired student will take part in vocational education, but as a rule specific programs should not be established in the public schools to serve this population. The visually impaired are educated in a variety of organizational arrangements related to the severity of loss of vision. The partially sighted are integrated as fully as possible into regular school programs, with itinerant teachers and resource rooms available when necessary. Very often the blind are brought together in residential schools where the preparation for possible return to the community is intensive.

**Special Education Services**

*Size of Class:* Six blind students per class; eight to 12 visually impaired students per class.

*Age Range:* Usually from 3 to 21 years.

*Special Materials:* Books with large type, typewriters, projection and magnifying equipment are just a few of the special materials used by the partially seeing. For the blind there are braille materials, audio equipment, maps and globes with relief surfaces, etc.

*Transportation:* Here again, the relative sparsity of the blind and partially seeing—nine students out of every 10,000—makes transportation a major problem.

**Postschool Adjustment**

A number of agencies provide employment for the blind. Most prominent among these are the Lighthouse for the Blind workshops in cities throughout the country. As training programs become available, more blind and partially sighted individuals are being prepared for community employment.

**Hearing Impaired**

Students with impaired hearing are classified into two groups for educational purposes: the deaf and the hard of hearing.

Students are considered deaf when their sense of hearing is nonfunctional for ordinary purposes. There are two classes in this group, based on the time when loss of hearing occurred: (1) the congenitally deaf—those who were born deaf; (2) the adventitiously deaf—those who were born with normal hearing but whose hearing has become nonfunctional, due to illness or accident.

Approximately one student out of every 1,000 is deaf; five students out of every 1,000 are thought to be hard of hearing.

The deaf and hard of hearing are educated under many organizational plans, particularly resource rooms, itinerent specialists, and special classes. For severely hearing impaired youngsters many States operate special residential schools. These schools serve rural, as well as urban areas.
**Special Education Services**

*Size of Classes:* Usually six to eight students.

*Age Range:* Instruction should begin very early. Some parent-child programs begin when the child is only 10 months old.

*Transportation:* Here again, the relative sparsity of these youngsters usually make transportation a major expense. Transportation to and from residential schools is normally provided by the parents.

**Postschool Adjustment**

The hearing impaired can adjust to working situations in the community. Some few will need extended sheltered employment. Some agencies now offer rehabilitation programs specifically designed for this population. In some urban centers, the deaf have been able to share living accommodations, religious and recreational activities.

**Crippled and Health Impaired**

These students have limited abilities in self-mobility, sitting in a classroom, and using materials for learning because of muscular and neuromuscular handicaps. These conditions include cerebral palsy, muscular dystrophy, multiple sclerosis, poliomyelitis, spina bifida, paraplegia, and heart conditions.

Some students have limited abilities, similar to those listed above, due to skeletal deformities. Examples include clubfoot, congenital dislocation of the hip, scoliosis (curvature of the spine), bone cysts, tumors, and conditions caused by accidents.

Other students have limited strength, vitality, and alertness for school work due to chronic health problems. Examples include heart conditions, tuberculosis, rheumatic fever, nephritis, infectious hepatitis, infectious mononucleosis, asthma, hemophilia, epilepsy, leukemia, and diabetes.

There are approximately 20 such students who suffer from one of these diseases out of every 1,000. This population should be integrated with regular students whenever possible, depending on the degree of impairment.

They may also be served in resource rooms, special day schools, special classes, hospital instruction, and homebound instruction.

**Special Education Services**

*Size of Classes*

1. Special classes, eight to 12 students. If children are severely handicapped, size should be smaller.

2. Homebound students, of course, must receive "individual" instruction. The case load per teacher varies from five to 12 students, depending on the length of time spent with each student, the number of visits per week, travel time, and State regulations and rules.

3. Hospitalized students can receive both individualized and small group instruction.
Special Materials: Homebound and hospital programs can incorporate educational TV, radio programs, home-to-school telephones, and some kinds of teaching machines. Specially designed equipment makes it possible for the physically handicapped to learn most activities of daily living. Many community organizations are very responsive to raising funds for purchasing special materials and equipment for these children.

Transportation: Many of these children use wheelchairs and/or orthopedic devices. The time and expense involved in transportation can be considerable.

Postschool Adjustment:
This depends on the severity of the disability and the presence of secondary related problems. Employers are finding that they can successfully employ this population to perform jobs of greater complexity than were formerly considered possible. The physically handicapped, particularly those in wheelchairs, have special problems in dealing with architectural barriers.

Emotionally Disturbed and Socially Maladjusted

Emotionally Disturbed. The behavior of the student may be inappropriate to the point that it is both distracting and disruptive to the rest of the class, placing undue pressure on the teacher and intensifying the pupil's own problems.

Socially Maladjusted. Students who are constantly causing trouble in school or at home (truants, predelinquents, delinquents, and "incorrigibles").

There are approximately 20 emotionally disturbed or socially maladjusted students out of every 1,000. These persons are educated most often in special classes or special schools. Due to poor identification procedures many emotionally disturbed or socially maladjusted students are not receiving adequate service. Many are in the regular programs and are not receiving special education.

Special Education Services

Size of Special Classes: Emotionally disturbed, six to eight students; socially maladjusted, 10 to 15 students.

Special Materials: These students may reject textbooks that stress middle-class values and behavior, and are illustrated with "conformist" children. Therefore, a library of special instructional materials must usually be developed. Audio and visual tapes, movies and slides, records, and programmed learning devices are valuable teaching aids.

Transportation: Location of a special day school or special classes may make transportation a major problem.

Postschool Adjustment
The potential for this population varies greatly. When properly treated and trained, some enter the community and make valuable contributions.
ORGANIZING FOR COOPERATION—INTERAGENCY INVOLVEMENT

Effective vocational education for the handicapped depends on close cooperation between vocational education, special education, and vocational rehabilitation. The regulations to implement the Vocational Education Amendments of 1968 in Section 102.40 state in part that "the State plan shall provide for cooperative arrangements with the State Special Education agency, the State Vocational Rehabilitation agency, or other State agencies having responsibility for the education of handicapped persons in the State."

The State plan, to be implemented efficiently, will depend on working arrangements at local levels. Each situation requires imaginative planning by schools, public and private agencies, and other related groups. Since no hard rules will cover all situations, this section will present examples of effective State and local cooperation. Administrative organization, financial and legal considerations in the State vary and should be carefully examined as plans are developed.

Following is a brief description of how the Texas Education Agency is planning for vocational education services for handicapped students. The services will be jointly operated by the Divisions of Vocational Education, Vocational Rehabilitation, and Special Education.

Vocational Education for the Handicapped In Texas

I. Organization for Planning

Level One.—The Commissioner's Coordinating Council.* The Commissioner's Coordinating Council is composed of the Commissioner, the Deputy, Associate, and Assistant Commissioners; it meets biweekly.

Level Two.—The Executive Planning Committee. Reporting to the Commissioner's Coordinating Council is the Executive Planning Committee composed of the 27 major division directors. This committee also meets biweekly on alternate weeks.

Level Three.—Standing Committees and Special Task Forces. Reporting to the Executive Planning Committee are four standing committees composed of selected agency professional staff and a variety of standing task forces and temporary task forces.

One of the standing task forces is a task force for coordinating vocational

*"Commissioner" refers to the Texas State Commissioner of Education.
education, vocational rehabilitation, and special education programs. This task force is composed of two members from each of these divisions and one member each from Guidance and Counseling, Secondary Education, Funds Management, and the Office of Planning.

II. Task Force for Coordinating Vocational Education, Vocational Rehabilitation, and Special Education

This task force meets on call as needed. It has had a major responsibility for the State policies relating to the Cooperative Vocational-Academic Education (CVAE) program, for planning three demonstration projects that are currently (or will be) in operation, and for coordinating the planning effort of the State Plan for Vocational Education.

III. Brief Description of Pilot Projects

1. Longview Independent School District—Program started in January 1968. It consists of two junior high school level classes for the educable mentally retarded, served by two vocational education teachers and one vocational rehabilitation counselor (part-time). The special education teachers provide the academic preparation for the students; the vocational education teachers provide vocational training appropriate for the groups; the vocational rehabilitation counselor follows through with off-campus supervised job training.

2. El Paso Independent School District—This project has been in planning for almost a year and is scheduled for operation September 1, 1969. It consists of two vocational education teachers, one for boys and one for girls; four high school classes for the educable mentally retarded; and one vocational rehabilitation counselor. The pattern will be similar to the Longview project except the vocational classes are located in a technical high school and the four educable mentally retarded classes are located on four different academic high school campuses. In this project vocational rehabilitation has also provided a large portion of the equipment for the vocational education program.

3. Region XIX Education Service Center, El Paso—The project is named "Vital Information for Education and Work." This project originally started under NDEA, Title V, to provide current and up-to-date information on vocational opportunities for high school students. Through ESEA, Title VI, monies it has been broadened to include a special component for handicapped students. Future plans at this time are to attempt the development of this project on a statewide basis using vocational education, vocational rehabilitation, and special education funds.

IV. The Future

As of September 1, 1969, the Division of Vocational Rehabilitation will cease to exist and a new State Commission for Vocational Rehabilitation will be established. This creates an additional dimension for planning efforts.
The plan at this time is for the vocational education monies earmarked for the handicapped to be used for pilot projects. Plans are being made for both divisions; that is, vocational education and special education, to review these projects jointly. The operating techniques at this time have not been finalized.

The role of special education is seen as one which aids vocational education and vocational rehabilitation in avoiding duplication of their respective efforts.

To date there have been no major problems encountered in the joint planning that have not been resolved by employing the conference table method.

The Detroit Galaxy Program

The Detroit Public Schools have a model program of cooperation between special educators and vocational educators at the local level. While no funds are appropriated from the State of Michigan to categorically support this exchange, the two local departments have coordinated their efforts to assure adequate service for the handicapped in vocational education programming.

In September 1966, a building services and landscape gardening program opened at a Detroit junior high school which offered training to the handicapped. From this initial effort programs evolved in personal service, commercial food preparation, health services, fabric and clothing, gasoline service station, and small appliance repair. From one center offering one training program, there are now eleven centers which have from one to four programs each.

The impetus for this cooperation grew out of a World of Work Committee which functions to consolidate the efforts of the district to plan vocational preparation programs. The Committee is made up of personnel representing vocational education, special education, business education, administrators, in addition to curriculum specialists, and school housing personnel. Working as a team, this committee accepts recommendations from the department of the school which desires to establish programs related to vocational preparation. All of the proposals are reviewed, and if accepted, are directed to the State Department of Education. When decisions of funding allocations are made at the State and the level of funding is known, another set of decisions is made as a priority of need. Some programs are begun, others are delayed pending additional funding, and others are remanded. The essential quality of this approach is that each affected department plays a role in the decisionmaking process.

Recently a new concept of service was proposed in Detroit. The “Galaxy” program, as it is known, offers exploration into clusters of jobs, followed by training in that specific field which seems most appropriate.

Tables 1 and 2, which follow, give examples of the types of programming possible using this system. Most handicapped persons find success in the oc-

</table>
cupational preparation galaxy. Some few are accommodated in the pretrade galaxy.

Although the possibility should not be precluded, handicapped persons will only rarely show aptitudes for either the science, engineering, or technician galaxies. Handicapped young people with orthopedic or sensory deficiencies are sometimes capable of achieving at these levels.

The Department of Special Education intends to open a center—The New Garfield Center—supported by vocational rehabilitation money to expand the available service to mentally retarded young people. The program will be patterned after the "Galaxy" program, maintaining maximum compatibility. Personnel will be recruited for their skills in specific job clusters and certified as vocational education teachers, contingent upon the receipt of necessary training in a recognized institution. Paraprofessionals will be trained to supplement teachers to enhance the total program. The programs to be offered are:

**Industrial Materials and Processes**
- Auto Body Repair
- Welding—sheet, spot, arc, cutting, construction

**Construction Materials and Processes**
- Landscaping and Site Maintenance
- Building Mechanics (janitorial, custodial, light repair, etc.)
- Building Construction (houses, garages, stores)

**Personal Services**
- Commercial foods (short order service)
- Commercial serving
- Health Services (orderly, ward attendant, ambulance aide, medical library aide, etc.)
- Child Care (nursery—6 months to 5 years)

**Energy and Propulsion**
- Auto Mechanics
- Utility Engine Repair
- Electrical appliance and motor repair

**Visual Communication**
- Clerical Practices
- Drafting, graphic arts and photography

One difference to be noted is that the materials and processes area has been subdivided into industrial and construction to create a galaxy which is more restricted and therefore more concrete for the students.

The sequence of training moves from general to very specific. The student begins by spending about 20 weeks in "Galaxy" where he explores any
or all of the available training areas. During this period the student works with teachers, counselors (guidance and rehabilitation) and academic specialists. Other services do not necessarily cease.

The next step for a handicapped person is on-the-job training (OJT). During this time the school is extended into the community and the young person expands his skill and general work competency. If this is completed successfully the young person is returned for placement. After placement, the school continues to follow the worker and offers any needed support.

Oakland Unified School District

The Oakland Public Schools Department of Vocational Education supports a plan to provide certain handicapped youth with an after-school program in the area of automotive service. In September 1969, the school district will employ on an hourly basis and during after-school hours, two of the automotive service specialists presently teaching in the vocational education program. They will provide training for not more than 15 educable mentally retarded youth at the rate of 2 hours per day, 4 days a week for up to 40 weeks. The cost of instruction, supplies and equipment will be borne by the California Department of Rehabilitation while the vocational facilities will be provided by the Oakland School District.

The Department of Special Education of the Oakland Public Schools is working very closely with the Coordinator of Vocational Education of the Oakland Public Schools concerning vocational training which may be available to handicapped persons through the Vocational Education Amendments of 1968 and the Vocational Occupational Center Program.

It is anticipated that when funds under the Vocational Education Amendments of 1968 are available, the program for physically handicapped pupils with good hand use will be offering training in the field of electronic assembling. It is estimated that approximately 30 hours of training are now required for an electronic assemblyman who is unimpaired. It is felt it may take somewhat longer to train handicapped persons. There are other related courses that could be offered and will be explored when the time is propitious.

In reference to the Vocational Occupational Center concept mentioned above, this has been developed through specific legislation by the State of California. In effect it is possible for a school district or a number of school districts to develop a Vocational Occupational Center through a self imposed tax over-ride not to exceed 10c on $100 of assessed valuation to develop centers which will train skilled and nonskilled individuals in semi-skilled and skilled occupational courses. An example of this is Business Machine Repair which requires at least average intelligence. It is felt that the physically handicapped and the emotionally handicapped who are carefully screened could qualify for this type of training.
Other Case Studies of Programs for Handicapped Persons**

Under a contract with the U.S. Office of Education, the Social, Educational Research and Development, Inc. (SERD) in the spring of 1968 undertook a study of vocational education programs for persons with special needs which are in operation throughout the United States. For the mentally retarded, SERD focused on four programs which exist on the east coast. The following synopses have been taken from the SERD Report to the Office of Education. The case studies are only highlights designed to present the basics of the programs and provide a concept of what services are necessary to operate a program for the mentally retarded.

*Case Study A—Baltimore*

This program is titled "A Job Preparatory Curriculum" and is operating to provide vocational education for the "slow learner" from a city school system. In this instance "slow learners" include persons who have either physical or mental handicaps. The program is designed to serve students, 16 or older, who have completed the ninth grade. It is designed to offer 2 years of service. The school provides training for service occupations and employment placement.

The school population is about 350 students, ages 16 to 20 years.

The school is staffed with a principal, a job coordinator, 24 full-time teachers, one part-time physical education teacher, one counselor, a librarian, and a nurse. The academic instruction is related to the job context or to a living context: e.g., legal aid, health services, welfare programs, etc. Occupational training is offered in 11 areas. The curriculum attempts to expose the students to as many areas as possible and to keep the courses flexible enough that each student's individual need might be met. The second year of the program concentrates on a work-study approach.

The program has a low pupil-teacher ratio and provides prevocational orientation and instruction in addition to the vocational education. The vocational program, however, is rather restricted in its offerings. Although the school helps in job placement, there is no followup once students have been placed.

*Case Study B—Buffalo*

The program began on a pilot basis in one high school in 1964 with mentally retarded students who were enrolled at the 12th-grade level. They spent a half-day on the job in the local commercial, service, or industrial community. The jobs were secured by a teacher-coordinator. The special classroom teachers devoted a large segment of instructional time to the facing and solving of problems encountered by the pupil in the work experience. An interview, a psychological examination, and a medical examination were completed August 31, 1968.
tion were required before job placement. The State Division of Vocational Rehabilitation cooperated by providing case workers to aid in job placement and in the investigation of the safety and suitability of the training situations. A training fee was paid by the DVR to the cooperating employers and this fee, in turn, was paid to the participating student in the form of wages. The program was successful and was expanded until now it is in operation in each of the 12 secondary schools of the city. It is this comprehensive, decentralized, and citywide character that makes this program unique among vocational education programs for the mentally retarded in U.S. secondary schools.

The program's staff during the 1967-68 year consisted of a program supervisor, six teacher-coordinators, one visiting teacher, one guidance counselor, and clerical assistants. All teacher-coordinators were certificated by the State as special education personnel and were recruited especially for this program. Under title III of the Elementary and Secondary Education Act (ESEA), the Division of Instruction of the school district has established a Demonstration Center for Teachers of Mentally Retarded Children.

A student entering the secondary program for the retarded under this special needs program undertakes a curriculum designed for 4 years. Each year is a sequence of phases planned to develop the pupil's potential and to prepare him to take part in the world of work. Students progress through four identifiable phases on an individual basis.

Phase I serves as an orientation period during which the student learns to adjust to the school surroundings. At this time, he learns to follow a rigid schedule; gains poise and self control; generally becomes familiar with the world of work; gains more competence in the basic skills; learns to recognize and accept his own limitations; is introduced to job opportunities available and how to apply for them; and learns the importance of getting along with others.

Phase II serves a dual purpose. It is basically an extension of Phase I, but also includes a detailed description of the occupations available in the local community, units on how to get a job and to hold it, and preparation for inschool and out-of-school work experience. The student learns to use the basic skills subjects to help him function independently. He also is taught the geography of government of the local community. Field trips are the major vehicle of instruction.

Phase III includes an inschool work program as an introduction to further work experience. This phase is a prerequisite to Phase IV. The student uses the basic skills subjects to help him in various job situations within the school environment. He receives training necessary to support himself in the world of work. The underlying philosophy of this phase of the curriculum is to enable the student to function independently in a work situation.

Phase IV moves the student from a school situation into the community for various job experiences. He continues to participate in classroom experi-
ences correlated with the community job and receives further training in basic skill subjects. Half the student's time is spent in school and half in the community with a typical pattern of 20 hours a week of work experience over a period of 30 weeks. The time in school is devoted to facing and solving problems met in the work experiences of the student. The aim of this phase is to prepare the student to gain the proper skills to retain a job after completion of the 4-year program.

The holding power of the program appears remarkably strong. Whereas the dropout rate for mentally retarded secondary school students was 29 percent in the year immediately preceding the initiation of the program, the average dropout rate during the past 3 years of the special program has been 1 percent.

The following features seem to make this an effective vocational education offering: A strong prevocational program during the first 3 years provides an opportunity for the enrollee to explore different occupations prior to his selection of a skill training. Second, the entire program is well oriented toward the labor market, through regular consultations with employers, representatives of the DVR, and field representatives of the State Employment Service. Third, the 11th and 12th grade elements of the program are well articulated. Fourth, there is an opportunity to earn an income while learning. The student receives academic credit for the work experience and earns a certificate of completion when he has completed the entire program.

Case Study C—Cleveland

This program operates to facilitate the development of academic skills and to impart marketable skills to those students, grades 7 through 12, from the 55 schools of the city which are involved in the project. The regular school year consists of two semesters. Beginning in 1967, a summer program was offered. This program is a joint Bureau of Vocational Rehabilitation and school venture with a predominant number of mental/functional retardates.

The school has a principal, an assistant principal, a program coordinator responsible for the ancillary services, about 50 teachers, three advisors, two home visitors, and a part-time staff consisting of a physician, nurse, dentist, dental hygienist, medical aide, speech therapist, and psychologist. Several orientation sessions are conducted early each year for new teachers.

The seventh and eighth grade students are organized into five transitional classes. Special remedial basic education courses are offered, with flexible and programmed materials, and extensive use of audiovisual aids. Periodically these classes participate in tours to locations of educational and cultural significance in the metropolitan area. Completion of this transitional program leads to a ninth grade program of courses in English, community civics, mathematics, general science, art, and occupational information plus a number of vocational experiences. Successful completion permits the student to move from the junior high level to the senior high level where, over a period of 3 years, he may be involved in one or more of the
programs at the tenth to twelfth grade levels. Regardless of the level of instruction or the subject matter, the material is always related to the world of work or to the life situations of the students. A coordinating committee of staff members was created to correlate these academic areas as closely as possible with the vocational and occupational training activities. Regular exchanges between faculty of the academic and vocational phases are attempted, so each staff group is knowledgeable of the aims and activities of the other.

Six shops have been established for training purposes including Small Engine Mechanics, Horticulture Work-Study, Building Maintenance, Office Production, Engine Lathe Operations, and the Occupational Work Experience Laboratory. Also, three sheltered workshops are operated for the seriously mentally or physically handicapped students. These include Small Appliance Repair, Production Woodwork, and Shoe Repair. Customers are charged for the services and the students share the profits. Students are assigned to these shops, based on their expressed interests, aptitudes revealed by testing, and after-job counseling by staff members.

The Occupational Work Experience Program is a 3-year program. In the first year, at the tenth grade level, four periods per day are used for basic academic courses and two periods are open in the work laboratory. In the last 2 years of the program, half the day is spent in school in basic academic subjects while the other half is spent in a job. Completion of this 3-year program is recognized with a certificate. In recent years, as many as 10 percent of the students have been returned to regular school programs after varying periods of the program. The vocational phase is strong in the following ways: effective use has been made of title I ESEA funds to obtain new training equipment; a prevocational program exists but with limited perspectives concerning the scope of occupations available; and the classes are close to the recommended maximum of 15 students per class.

Case Study D—Manatee County, Florida

This school district, since 1947, has provided some educational opportunities for its special needs students. Records indicate that about 4.7 percent of the school population regularly needed these special services, which were included as part of the regular elementary, junior high, and high school programs. In 1964, a "Special Disadvantaged Project" was developed to effect "a comprehensive and coordinated program between special education and rehabilitation, with the view of bridging the gap between education and remunerative employment."

The program is staffed with a director, eight academic instructors, nine vocational instructors, and three guidance counselors. The Division of Vocational Rehabilitation personnel involved in the program are a supervising counselor, three counselors, one social worker, and one job placement coordinator. Both the academic and vocational instructors must be certified by the State as public school teachers in exceptional education, and the vocational teachers are further required to have had work experience in the
occupational area being taught. The vocational staff was given special screening to insure interest, aptitude, and ability in working with disadvantaged youth. No inservice program of any depth and regularity has been developed, although regular staff meetings are held to discuss program problems and progress.

The instructional programs provide three class periods of occupational training daily throughout the school year for students who are presently assigned to special educational classes in one of the seven secondary schools of the county. Approximately 70 percent of the program enrollees are assigned to upgrade special education classes at the home school. They do not receive units toward graduation nor is credit given them for participating in the occupational training program. Instead, they receive a certificate of completion. The remainder of the students who are assigned to graded classes do receive credits for the vocational courses and may proceed to a high school diploma. The skill training given at the center consists of six courses, each concerned with a general area of service occupations. During the first few weeks of the school year, the students are rotated through the six skill training areas to give them information and ideas concerning each one. The vocational training is quite flexible, permitting varied experiences within one occupational area and in related areas. It is possible for students in this program to transfer to the regular vocational course offered at the area center.

Close working relations with the Division of Vocational Rehabilitation and the State Division of Vocational Education are maintained to keep the content and methodology current to the newest ideas for the education of seriously disadvantaged youth. In addition, detailed case records are maintained on each individual's progress throughout the system.

The placement of students from this program is unusually high, almost 100 percent and at an average hourly rate of $1.60 per hour. This results from (1) the policy of retaining persons in the program until placed, (2) a quality program, and (3) a substantial demand in this geographic area for semiskilled and service personnel. Approximately 25 of the 1966–67 graduates progressed so well that they were trained in regular-skill craft vocational courses. The program also has built-in followup counseling to assure job retention and permanency of adjustment.

There are many factors which contribute to the effectiveness of this program. The practices which recommend themselves to other programs are: (1) the careful planning of the program prior to its opening, which included not only course content and teaching method, but the critical matter of administrative arrangements; (2) the close and compatible relationship between the agencies involved; (3) careful selection of teachers; (4) teacher orientation; (5) frequent staff meetings; and (6) a training concept of training for job clusters, rather than individual occupations.

Residential schools and institutions, both public and private, are eligible to receive funds under the Vocational Education Amendments of 1968.
These resources can be used to develop and upgrade vocational training programs. Institutions interested in applying for these funds should contact the State Director of Vocational Education.
SERVICES AVAILABLE FROM VOCATIONAL REHABILITATION*

The public vocational rehabilitation program is a State-Federal partnership, with State vocational rehabilitation agencies in each State providing vocational rehabilitation services directly to their handicapped clients. The program has had long experience in providing vocational services to handicapped young people in school settings and is an especially important resource for the vocational educator to become thoroughly familiar with as he develops his own activities for the handicapped.

In some States, a single vocational rehabilitation agency provides services to handicapped individuals with all types of disabilities; in other States there are two vocational rehabilitation agencies with one agency devoted exclusively to serving the blind and visually impaired. Vocational educators planning school programs will have to be careful, especially in planning activities for the visually handicapped, to assure that the appropriate vocational rehabilitation agency is involved in the planning effort.

The State vocational rehabilitation agencies maintain local offices throughout the State, usually in the larger cities and at the institutions and facilities at which they operate special vocational rehabilitation programs. Most agencies assign counselors to visit on a regular basis the major public and private institutions in the State, and, to the extent possible, counselors also visit the secondary schools in their areas.

Central to the vocational rehabilitation process is the vocational rehabilitation counselor who either himself provides, or arranges for other professionals to provide, any of the broad range of vocational rehabilitation services for which an eligible handicapped individual can qualify. A young person in need of assistance can either make direct contact or be referred to a counselor by others, such as his teacher or school guidance counselor. An individual is eligible if the vocational rehabilitation counselor can determine that: (1) he has a physical or mental disability, (2) he has a substantial handicap to employment, and (3) there is a reasonable expectation that providing vocational rehabilitation services will make him employable. The fact that an individual is disabled does not, in itself, make him eligible for vocational rehabilitation. In all cases, no matter what the disability, the three basic eligibility criteria must be met.

When an individual applies for vocational rehabilitation, he is given a

*Written by Harold F. Shay, Assistant Chief, Division of Disability Services, Rehabilitation Services Administration, Social and Rehabilitation Service, Washington, D.C.
thorough diagnostic study which consists of a comprehensive evaluation of the pertinent medical, psychological, vocational, educational, cultural, social, and environmental factors in his case. This diagnostic study, arranged by the vocational rehabilitation counselor, includes an evaluation of the individual personality, intelligence level, educational achievement, work experience, vocational aptitudes and interests, personal and social adjustment, employment opportunities and other pertinent data which might be helpful in determining both the individual's eligibility for vocational rehabilitation and the nature of the vocational education program in which he should participate.

Once an individual is determined to be eligible, he may receive any of the other vocational rehabilitation services provided by the vocational rehabilitation agency. These include:

1. Counseling and Guidance—Carried out in close coordination with teachers and school counselors to ascertain the youngster's assets, problems, and goals, and to formulate a plan of services for him.
2. Physical Restoration—To correct or substantially modify within a reasonable period of time a physical or mental condition which is stable or slowly progressive. This includes such things as medical, surgical, and dental treatment services, prosthetic and orthotic devices, hospitalization and convalescent home care, hearing aids, wheelchairs, physical therapy, occupational therapy, speech therapy, eyeglasses and visual services, and psychological services, but it does not generally include treatment for acute or transitory conditions.
3. Training including:
   Personal Adjustment Training—To aid the young person to acquire personal habits, attitudes, and skills necessary to enable him to function effectively in a vocation in spite of his disability.
   Prevocational Training—To create readiness for specific training or work opportunities by using actual or simulated work tasks in special sheltered workshop, or in school or community work situations, for periods of training or work experience.
   Vocational Training—Arranged at the school or in the community, full-time or part-time, and in either formal vocational classes or on-the-job training; training provided under the auspices of vocational rehabilitation never duplicates public school vocational education programs already available to such students.
4. Maintenance—This might include lunches during community work assignments or other maintenance of indigent persons in relation to other services when client is unable to secure them at home or at school.
5. Placement—Includes job development activities and counseling with both employee and employer to ensure that a job placement is satisfactory.
6. Followup—To help the individual maintain himself in employment.
7. **Transportation**—When necessary for diagnosis or other services under an individual rehabilitation plan.

8. **Reader services for the blind and interpreter services for the deaf.**

9. **Services to members of a handicapped individual's family** when such services make a substantial contribution to the rehabilitation of the client.

10. **Other goods and services** necessary to make the individual employable.

Over and above the services provided directly to its clients, the State vocational rehabilitation agency also can assist vocational education for the handicapped in a number of other ways. It can help in constructing, expanding, renovating, or equipping school rehabilitation facilities and in staffing these facilities for a 51-month period. It can assist in such things as removal of architectural barriers from buildings where the handicapped could either be trained or employed, in purchasing a special bus or other vehicle for transporting the handicapped, or in providing special instructional materials for use by the handicapped.

A vocational education program for the handicapped which fails to utilize the vocational rehabilitation resource would be incomplete.
A MODEL FOR A STATEWIDE COOPERATIVE AGREEMENT

Title: Vocational Education and Vocational Rehabilitation Partnership in Secondary School Programming for Educationally Handicapped Youth, Project Series #8
Prepared by: Indiana Department of Public Instruction, Division of Special Education, Division of Vocational Rehabilitation, and Division of Vocational Education.

Introduction

One of the purposes of the title III project entitled Developing Cooperative High School Work Orientation Programs for Educationally Handicapped Youth was to demonstrate the effectiveness of focusing the combined financial, professional, and experience resources of the three existing State agencies primarily responsible for the education, training, and life adjustment of the handicapped. These three divisions of the Indiana Department of Public Instruction are:

1. Division of Special Education—Charged with the primary responsibility of the development and coordination of programs modified to meet the special needs of handicapped children within the public school framework.
2. Division of Vocational Education—Charged with a specific responsibility of providing for the vocational education training needs of public school children with special needs.
3. Vocational Rehabilitation—Charged with a responsibility for educational and training services in preparation for employment, placement in a job, and followup as stipulated under the Laird Amendments, Public Law 89-333.

This document is a draft model of an agreement which may be drawn up between a school corporation and the three divisions of Indiana Department of Public Instruction. To qualify, the program should consist of a sequence of logical phases providing preemployment services to the eligible participants.

It is suggested that the following procedures be observed by the schools as their proposals, based upon this revised model, are submitted for review:

1. Develop the plan in cooperation with the appropriate Area Vocational Rehabilitation Supervisor.
2. Utilize the assistance of personnel of the three divisions of the Indiana Department of Public Instruction, (a) Division of Special Education, (b) Division of Vocational Education, and (c) Division of Vocational Rehabilitation.

3. Submit five (5) copies of the proposed agreement to the Division of Vocational Rehabilitation. Copies of the proposal will subsequently be routed to the Division of Special Education and Vocational Education.

AN AGREEMENT BETWEEN THE
INDIANA VOCATIONAL REHABILITATION DIVISION
DIVISION OF SPECIAL EDUCATION
DIVISION OF VOCATIONAL EDUCATION
and the

(Name of School Corporation)

I. Purposes of the Agreement

The purpose of this agreement is to provide eligible vocationally handicapped students a program of preemployment services not traditionally provided to students in the public school setting and which will enable them to continue in an organized program of preemployment vocational experience in order to afford an opportunity to prepare for gainful employment.

To realize this goal a cooperative program has been developed and established by the Schools, in conjunction with and upon the recommendation of the Indiana Vocational Rehabilitation Division, Division of Vocational Education, and Division of Special Education.

The overall size of the Program provided by the school is limited only by the number of students available for services and the school's ability to provide such services.

The Preemployment Vocational Experience Program (hereinafter referred to as the PVE Program) consists of a sequence of logical phases providing prevocational services to the eligible participants. The phases of the program may include:

A Vocationally Oriented Curriculum
Preemployment Guidance and Counseling
Inschool Work Adjustment Training
Job Exploration
Vocational Evaluation
Community Work Experience
Postschool Training
Placement and Followup

II. Eligibility

All students enrolled in Special Education programs, Vocational Education Special Needs programs, and all additional students eligible for such
enrollment shall be given consideration for participation in this program. Referral for the services of the program shall be the responsibility of the Preemployment Vocational Coordinator of the Schools. Determination of eligibility for rehabilitation services shall be the sole responsibility of the Indiana Vocational Rehabilitation Division. Individuals not considered eligible by the Indiana VRD may participate in the program at school expense.

III. Preemployment Vocational Experience Program

A. Organization

The PVE essentially consists of three general phases designed to: (1) identify vocationally appropriate and inappropriate individual characteristics; (2) provide opportunities and experiences for developing behavioral modification in line with the demands of the world-of-work and the personal needs of the individual (psychological, social, and emotional); (3) afford a variety of preemployment vocational experiences in progressively more competitive environments, establishing a sound experiential background for future vocational selection and placement.

The PVE services will be inaugurated for eligible participants upon their acceptance into the program and shall be provided as needed during the 10th, 11th, and 12th grades. Services to be provided at VRD expense must be formally authorized by the Vocational Rehabilitation Division prior to the actual provision of such services.

In general, the program sequence shall follow a predetermined pattern with provision for such flexibility as may be necessary to provide for the individual needs of the participants, as follows:

10th Grade—Preemployment adjustment training within the school environment.

Program objectives include vocational guidance in job families, development of appropriate aspiration levels, evaluation (personal, social, vocational), acquisition of knowledge and development of readiness through the use of preemployment experiences.

11th Grade—Development of a realistic concept of the world-of-work.

Continued vocational guidance in job families with emphasis upon community exploration in occupational areas; parallel classroom activities developing specific skills, attitudes and habits necessary to vocational training within the school and community; continued personal and vocational evaluation via work-testing activities in an occupational experiences laboratory, and a variety of actual and meaningful work situations, established with prior VRD approval.

12th Grade—Development of a realistic self-concept in the world-of-work.

Progression to this final phase usually will involve participation in the cooperative work-study aspect of the program. The students will engage in various community based occupations on a regular part-time or
cooperative basis, with continuing supervision and personal evaluation. In school and community based work stations will be established with prior VRD approval. In the final semester, those demonstrating the necessary reliability and maturity (readiness) will work in selected community jobs, supervised regularly by the program coordinator for the purpose of evaluation and personal guidance.

B. Services and Responsibilities

Intake—
1. All special education 10th, 11th, and 12th grade students shall be eligible for referral. Referral will be initiated by the Preemployment Vocational Coordinator of the Schools.

2. All referrals shall be made to the local counselor of VRD. Referral data shall include a recent psychological evaluation (which includes a WAIS or Binet) complete school, social, and educational histories, any other personal and educational data deemed pertinent by VRD.

3. All referrals shall be processed by VRD personnel in accordance with established procedures.

4. As a part of VRD eligibility determination each student-client shall be provided a medical examination at VRD expense.

5. Upon notification of eligibility of each student-client, the Preemployment Vocational Coordinator and the VRD counselor shall arrange and conduct a client/parent orientation to the PVE program.

VRD Plan and Authorization to Purchase Services—The VRD counselor is responsible for the preparation of a formal “Rehabilitation Plan” developed upon case work data available to date which includes data from the client/parent orientation to the PVE program.

The VRD counselor is responsible for the preparation of a formal “Authorization to Purchase Services.” The “Authorization” must be supported by the content of the formal Rehabilitation Plan. The “Authorization” must be prepared prior to the date of the commencement of the services being authorized. Authorization for services will originate only with the VR counselor.

Evaluation—
1. Written reports of the status and progress of each client shall be an integral and continuous part of the program. Reports of these observations shall be frequent and periodic, provided no less than each academic period, and will be maintained by the Preemployment Vocational Coordinator. Copies of all such reports shall also be submitted to the VR counselor. All persons involved with each client (teacher, counselor, employer, family) have a responsibility for providing this data.

2. Established evaluative techniques and instruments will be utilized where determined appropriate. Additional psychological and social evaluations may be provided by the staff of the Schools or from other
agencies and service facilities in the community, when indicated and as requested or provided by the VRD.

**Occupational Training—**

1. **Organization**—Program recommendations shall be developed for each student-client compatible with the rehabilitation training needs of the individual. These recommendations shall be submitted to VRD by the Preemployment Vocational Coordinator for modification and/or approval prior to authorization for services. Authorizations for service will originate only with the VR counselor.

The number of students and physical conditions of each training unit shall comply with the specifications for such classes, established by the State Department of Public Instruction.

Where appropriate to the overall program needs the school corporation will establish an “Occupational Experiences Laboratory” as an integral part of PVE Program. This laboratory should be established in accord with the recommendations of the Division of Special Education, Division of Vocational Education, and the Vocational Rehabilitation Division. It is intended to realistically replicate an industrial setting, and will be used in programming for students with special vocational needs. The OEL will provide supervised work adjustment and evaluation experiences, and may consist of a specific area especially equipped and maintained for such purpose; and/or may consist of a number of specified work training stations in a given school environment. Each arrangement will be specifically developed and each agreement consummated.

In cases in which specific basic skill training is provided the individual by the PVE program such training will be consistent with current community job opportunities. The Preemployment Vocational Coordinator is responsible for conducting a current community occupational survey, or obtaining information regarding current occupational opportunities when available from agencies operative in the given community.

The general educational curriculum and specific preemployment vocational experience plan for each level of the training unit(s) shall be submitted for the joint approval of the Divisions of Special Education, Vocational Education, and Vocational Rehabilitation, including a description of the occupationally oriented materials to be used in implementing the program.

A followup of each participant completing or discontinuing the program shall be conducted at three month intervals during the first calendar year following termination. The Preemployment Vocational Coordinator is responsible for the followup. The data gained shall be supplied to VRD for utilization in determining the effectiveness of the program in achieving its goals and in continuing planning for discontinued or repeat clients.

2. **Personal Adjustment Training**—The emphasis in parallel classroom activities shall be largely upon the development of those basic personal skills related to effective occupational and personal adjustment. They shall in-
clude occupational and environmental exploration, personal adjustment training, personal management, survival skills training, utilization of public utilities, facilities and services.

3. Work Adjustment—Work adjustment training shall generally consist of a variety and sequence of simulated and real occupational experiences designed to afford the individual an opportunity for self-development towards the program goal—additional postschool training or vocational placement compatible with aspirations and abilities may be provided by VRD.

The majority of the student-clients, because of age or nature of primary disability, will probably begin their occupational careers in entry-level occupations. Therefore, the primary emphasis of the PVE work adjustment program shall focus majorly on general preemployment experiences directed toward the development of appropriate attitudes and habits. The skills specific to such entry occupations are best developed on the job, by the employing agency. The character of actual work performed by students will be determined by the employer, cases in which students are employed in sheltered workshops subcontract work may be included. Work adjustment training will include a variety of experiences in such entry-level occupations. Special emphasis will be placed on developing:

- Motivation
- Work Tolerance
- Self-Reliance and Reliability
- Regularity and Punctuality
- Positive Responses to Direction and Supervision

- Peer Group Interpersonal Relations
- Perseverance on the Job
- Relative Values of Speech, Accuracy and Productivity

The progress and the plan of each student-client shall be reviewed at least once each semester by the PVE Program staff and the VRD counselor, and appropriate adjustment made where indicated.

4. Placement—Satisfactory completion of the program by the client shall include direct placement in an appropriate job; or continued VRD training and vocational counseling services designed to prepare the client for suitable employment.

The primary responsibility of the PVE program shall be the preparation of the individual to participate in continuing services toward optimum utilization of the individual’s vocational potential. Vocational guidance and counseling towards this goal will be provided by the program staff and the Vocational Rehabilitation Counselor, throughout the course of the school program, in order to assure smooth transition to other community services under the auspices of VRD.

5. Program Evaluation—The evaluation of the PVE shall be continuous and reflect the extent to which the services provided have helped the individual attain the rehabilitation goals, as established in the formal recommendations. Such evaluation is the joint responsibility of the VRD and
Recommendations to alter the PVE program shall be approved by the Vocational Rehabilitation Division through its local counselor.

6. Supportive Services—All appropriate supportive services such as, parent and client guidance, social, psychological, special remedial services shall be provided by the schools, where competent professional staff is available. Other community based supportive services will be utilized on an individual need basis, upon the recommendation of the VRD and PVE administrations.

C. Staff*

Superintendent of Schools—Through his designated agent is responsible for the overall activities of the pre-employment program. He shall assist in interpreting school procedures and services as requested and operate the program according to standards established by the Indiana Department of Public Instruction.

Preemployment Vocational Coordinator is responsible to the and will be responsible for the development and coordination of all preemployment activities within the school and the community; will develop liaison between the school community and local and state agencies; will develop and coordinate training stations in cooperation with the VRD Counselor; will see that periodic evaluations and other pertinent information are kept in the student-client file; will prepare a quarterly budget covering costs to VRD for vouchering purposes; will collect pertinent data on students; will counsel with students on individual problems affecting job training. Where possible, this will be a full-time assignment and in no case will it be less than one-half time involvement. The Preemployment Vocational Coordinator will meet the minimum requirements for certification set forth by the Teacher Training and Licensing Commission of the State Board of Education, and in addition shall have had occupational experience in business or industry. Graduate level training in counseling and guidance, special education, vocational education, and vocational rehabilitation is desirable.

Psychologist—will be responsible for evaluation of learning ability, and of social competency, assessment of emotional stability, ascertainment of academic progress, appraisal of vocational fitness, formulation of recommendations, and participation in case conferences.

School Social Worker—will provide case history information on those students referred for preemployment services who are not in special education programs; will act as a consultant to the preemployment staff and will participate in case conferences.

Special Education-Vocational Education and/or Regular Classroom Instructors—will work closely with the Preemployment Vocational Coordinator in reference to referral procedures and the inschool work experience program and vocational adjustment training program; will develop and imple-
ment, with the help of consultants, a parallel academic and vocationally oriented curriculum; will keep pertinent cumulative records to help determine readiness for particular phases of the prevocational program; will make referrals and recommendations and will provide supplementary data regarding the students as requested.

Division of Vocational Rehabilitation Counselor’s Responsibility—The counselor and/or the area supervisor will be responsible for final determination of eligibility of students for VRD services. He will meet with students and parents to initiate the referral form and provide for special medical examinations, if needed. He will assist school staff and provide vocational rehabilitation counseling and guidance of students as required. He will meet periodically with the Preemployment Vocational Coordinator and assist him in locating job training stations. He will attend all case conferences relative to student-clients.

D. Records and Reports

The coordinator of the PVE shall be responsible for establishing and maintaining client and program records and reports as required by VRD, Division of Special Education, Division of Vocational Education of the Indiana Department of Public Instruction and the Indiana State Board of Accounts; and such as may be required by the State and Federal Departments of Labor, Wage, and Hour Division. Where applicable, the “Criteria” cited in Standards for Rehabilitation Facilities and Sheltered Workshops, Vocational Rehabilitation Administration, U.S. Department of Health, Education, and Welfare, 1967; Section V, “Records and Reports,” will be used in development of the PVE Program.

IV. Implementation

A. The School Corporation agrees to conform to the provisions of this agreement in providing services to the eligible student-client via the provision of adequate facilities, appropriate professional staff, and all available supportive services. The School Corporation also agrees to provide overall supervision to the PVE in conjunction with the Vocational Rehabilitation Division and in line with the terms of this agreement.

B. The Indiana Vocational Rehabilitation Division, as part of its commitment to this joint agreement will, in addition to providing professional personnel who work with the staff of the program, and the vocationally handicapped students, also assist the program financially, through the purchase of services. Such student-client services fall into two categories:

1. Those directly purchasable through the PVE Program, such as:
   a. Evaluation
   b. Personal Adjustment Training
   c. Work Adjustment Training
   d. Vocational Training

Upon receipt of satisfactory evidence of these services, the Indiana
Division of Vocational Rehabilitation will pay on an individual case basis a per student-client training fee to the Schools equal to one half ($1/2) the established overall per-pupil cost for the school year which is $_______. This reimbursement will be adjusted on the basis of student-client attendance at the end of each semester. Payment will be made following each semester of the regular school year.

2. Those services purchasable from other resources are described in VRD brochure, Opportunity for the Disabled Through Vocational Rehabilitation.

C. The Division of Special Education, as part of its commitment to this joint agreement, will reimburse this program, as authorized by Rule S-1 of the Rules and Regulations of the Commission on General Education, Indiana Department of Public Instruction, for the following:

1. Instructional Costs **

<table>
<thead>
<tr>
<th>Name of Instructor</th>
<th>Certificate Number</th>
<th>Certificate Kind-Grade</th>
<th>Expiration Date</th>
<th>Job Assignment</th>
<th>% of Salary</th>
</tr>
</thead>
</table>

2. Special Transportation**

Upon receipt of evidence of the approval for enrollment of each student into the program, the Division of Spec. 1 Education, in accordance with the provisions of Rule S-1, Sections 2 and 7 E, will reimburse the school for pupil transportation for one round trip each day the student is in school at the rate of $______ per pupil per day.

** Annual reimbursement is based upon fiscal proration of available State Special Education funds.

D. The Division of Vocational Education agrees to reimburse programs developed in the area of Special Needs on a matching 50-50 basis. Federal funds will be provided to the local school corporation where evidence is submitted of the expenditure of local and/or State funds dollar for dollar. Any reimbursement is always authorized and approved, pending the availability of funds provided by the Vocational Education Act of 1963. Items which may be included in the budget are:

1. Instructional staff, (Academic-Vocational).
2. Guidance counselors to be used and percent of time devoted to this program.
3. Supervisory and other professional personnel to be used in the program.
4. Travel
5. Instructional equipment and supplies.
E. Special Conditions—The approval of this agreement is conditional upon the provision of data requested by the Divisions of Vocational Rehabilitation, Special Education, and Vocational Education.

V. Fair Labor Standards Act
The signing of this agreement signifies that the school corporation is complying and will continue to comply with Title 29, Chapter V of the Fair Labor Standards Act as amended in 1966 (effective Feb. 1, 1967), and other amendments as they become effective. All work activities shall be compensated in compliance with the regulations of the Wage and Hour and Public Contracts Division of the United States Department of Labor.

VI. Civil Rights Acts of 1964
The signing of this agreement signifies that the school corporation is complying and will continue to comply with Title VI of the Civil Rights Act of 1964 to the end that "No person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program or activity receiving Federal financial assistance."

VII. Effective Date and Duration of Agreement
This agreement shall take effect on and shall remain in effect until. The agreement is subject to annual renewal.

PROGRAMS AND SERVICES

The task of educators is not merely to equip handicapped youth with saleable skills. They are committed to the greater challenge of providing students with an educative process which meaningfully and realistically prepares them for responsible competency and fulfilling involvement as workers and citizens. This curricular commitment begins before the secondary vocational level. With handicapped students, vocational education should begin early in the school experience. To reduce and remove later hindrances to employability and to training, it is suggested that responsibility for prevocational education of the handicapped begin on the day of initial school enrollment. Ideally, a prevocational program must be provided in which the handicapped acquire interests, skills, attitudes, and knowledge necessary for later, successful occupational adjustment. This calls for a curriculum design which is carefully articulated between vocational-technical and special education personnel.

This section presents and reviews programs and services appropriate for handicapped secondary students who cannot succeed in regular vocational education without program modifications or special services.

There are two questions which may concern vocational educators as they plan to serve handicapped persons. The first question is:

For handicapped students who frequently possess serious deficiencies in general skills, should the vocational program be provided with segregated classes or should such youth become a part of an integrate program?

The answer to both parts of the question is “Yes.” The problem is one of planning and developing administrative structures that will enable individual adjustments to be made rather than requiring the individual to do all the adjusting to the preconceived programs and instructional levels.

The following chart illustrates increments of educational segregation and integration of the handicapped:
INCREMENTS OF EDUCATIONAL SEGREGATION AND INTEGRATION OF THE HANDICAPPED *

Integration Regular Class

It is possible for any one youth to be served in several of the programs during his tenure as a student.

Handicapped youth in the secondary school have frequently been denied meaningful vocational-academic exposures. Often separate systems have been established for these students. In some of these separate or segregated programs, vocational educators limit training to activities which may be far below the individual's potential and remove him from the social mainstream of the school.

"School districts often build area vocational technical schools for the intellectually capable, special skill centers for the mentally subnormal, scholars programs for the intellectually gifted and programs with great ambiguity and little direction for the majority of students. It is interesting to note that all of the programs function as if they were housed in separate agencies and dealing with different species of human beings." **

A major concern should be to avoid locking the handicapped into a rigidly prescribed program. Ideally, through the support of regular evaluation and counseling, their needs will dictate specialized services.

The second question which may concern the vocational-technical educator is:

Are there common needs and characteristics of the handicapped students that should be recognized as we plan his program of services?

---

** Jerry Olson, "Implementing Programs to Serve the Handicapped: Some Concerns and Considerations," Paper read during the National Conference on Vocational Education of Handicapped Persons, Pittsburgh, Pa., February 1969.
The handicapped person:

1. may fail to possess feelings of personal adequacy, self-worth, and personal dignity; he may have failed so often in school that he is provided with a feeling of hopelessness. He may also be unable to accept the disability which has been reinforced by society’s negative stereotyping.

2. may frequently be a disabled learner limited in his capacity to master basic communication and computational-quantitative skills.

3. may have limited mobility within his community and thus have little knowledge of not only the mechanics of getting about, of how to use public transportation, but will lack important information regarding the community’s geography, institutions, and places of commerce and industry. As a result, he may not view himself as a part of his community.

4. may possess personal-social characteristics which interfere with his ability to function satisfactorily in a competitive work setting.

5. may be affected by chronic illnesses and by sensory-motor defects which reduce his effective response to training and placement.

6. may possess physical characteristics which can elicit rejection and can be viewed by peers, teachers, and employers as unpleasant.

7. may lack goal orientation and particularly that which relates to selection of an occupational training area and the anticipation of fulfillment in that area.

8. may have unrealistic notions as to what occupational area would be most appropriate.

9. may lack exposure to worker models. This is particularly true of the large number of handicapped youth whose families receive public assistance or who are plagued by chronic unemployment.

**Recommended Program Components**

- **Prevocational evaluation**
- **Communication skills**
- **Computational and quantitative skills**
- **Occupational information and civic responsibility**
- **Skills training (OJT-training)**
- **Placement and followup**

**Prevocational Evaluation**

An ongoing comprehensive diagnostic service is needed in the program to give both student and staff members regular and repeated appraisals of vocational direction and potential. This will be referred to here as *prevocational skills evaluation*. The vocational educator will need to be involved to understand this process. While prevocational evaluation is probably accomplished best when staffed by personnel specially trained in that area, the continued and shared assessment of each student’s employability characteristics is ever present in each service area of the program and is one in which the student is always deeply involved.
Prevocational evaluation is an integral part of the total habilitation process. It provides comprehensive assessment of the student’s potential aptitudes and interests prior to any training and placement. It functions to give meaning and direction to curricular efforts as they relate to the program needs of individual students.

**What Will Be Evaluated?**

1. **Basic Academic Skills Related to Communication, Computation, and Quantification:**
   - Reading, writing, alphabetizing, self-expression, listening, counting, ability to make serial arrangements by number, measuring length and weight, making change, telling time, etc.

2. **Skills Related to Work Performance in the Followup Job Activities:**
   - Assembly and disassembly of gas engines, electrical motors, etc.
   - Stitching, threading, and operation of sewing machine
   - Clerical tasks such as filing, envelope stuffing, sorting, packaging, knotting, and tying.
   - Custodial tasks
   - Recognition and use of basic hand tools
   - Landscaping tasks
   - Simple preparation of food
   - Warehousing tasks

3. **Personal-Social Skills**
   - Ability to get along with peers and those in authority
   - Ability to work without constant supervision
   - Punctuality and attendance
   - Stick-to-itiveness (perseverance)
   - Cleanliness, grooming, and general appearance
   - Courtesy and acceptable manners

4. **Skills Related to General Work Orientation**
   - Ability to remember work procedures
   - Adherence to safety rules and observance of caution
   - Following directions
   - Ability to move about the community and use public transportation
   - General physical health
   - Consumer “sense” (ability to make wise purchases, to understand relationship between work done and money earned)
   - Degree to which student understands relationship between his training potentials, opportunities, and eventual placement
   - Student’s understanding of occupational or job information

**Who Will Evaluate and Where?**

Prevocational evaluation can be provided in facilities operated either by the public schools or by a private agency. When carried on in the school, vocational educators have the facilities and the skills necessary to aid in the
provision of this assessment. Working in close cooperation with a special education teacher and a vocational rehabilitation counselor, an assessment schedule can be developed, with each staff member undertaking specific portions of the process.

Since vocational educators are usually aware of the levels of skills necessary to obtain employment in a specific occupation, they can help to develop precise evaluation tasks. If a boy is to be successful as an auto mechanic, he will be expected to have an interest and aptitude in working with selected tools common to that area. The vocational educator can help to determine if the boy can use these tools or has the potential to learn to use them after a reasonable period of training. Similarly, there is a reading vocabulary associated with each given area. The determination should be made as to the training needed to familiarize the boy with that vocabulary. The resulting training might jointly involve the vocational educator and the special educator.

In any occupation there are personal and work adjustment skills associated with the job. Working cooperatively, the vocational educator, special educator, and rehabilitation counselor can examine the student's present level in relationship to these skills and devise a training plan to remediate any deficiencies.

For some programs for the vocational education of the handicapped it will be feasible to identify a classroom or shop area as a prevocational evaluation laboratory where students can be observed and evaluated under formal and controlled conditions. In such a laboratory setting, there is assembled a variety of tools, materials, machines, and equipment used to assess eye-hand coordination, perceptual abilities, sorting and size discrimination, use and familiarity with basic hand tools, simple clerical tasks, assembly and disassembly of mechanical devices including varieties of gasoline engines, generators, electric motors, and appliances. Vocational educators are ideally equipped by training to operate such a facility. In order to more effectively operate such a laboratory, it may be helpful for the vocational education teacher to receive specialized and short term training at such schools as the Institute for the Crippled and Disabled in New York City.

When the prevocational evaluation is done outside the school, recommendations for a student will be made to the schools regarding the development of a training plan for him. This plan may include assessment of an individual's potential to be trained in a specific occupational skill.

An Example of Prevocational Evaluation Performed by the School—Detroit Public Schools—In the Detroit Public Schools the Special Education Vocational Rehabilitation Program serving handicapped youth, trained vocational evaluators provide with complete staff cooperation, a regular sequence of evaluating, profiling, and programming. Much of this assessment is accomplished in an area designed and equipped for this purpose. Students are regularly referred to the Prevocational Evaluation Laboratory on an individual basis for formal evaluation of varieties of employability
characteristics. Equipment common to many occupational areas is present in this area. These include all basic handtools relating to building and automotive trades as well as materials and equipment common to clerical, custodial, and health service occupations. Tests and evaluative devices relating to perceptual abilities, sorting, color, and sizes discrimination are also part of the prevocational evaluator’s equipment. Results of these evaluations are shared with all the school staff and form an important part of the total and ongoing assessment out of which the programming and prescriptive teaching evolve.

Another important source of evaluation of student’s employability is provided through the observation of students as they work in the contract workshop. Here, a large area of the school is especially designed and set apart as a simulated small factory setting. There is nothing in this work milieu to suggest school-like characteristics. Handicapped youth are employed here and receive payment for work done. The contract work is of a wide variety and is secured from industry in and around the Detroit area. Much of it relates to the automobile industry and involves assembly and disassembly, inspection, sorting, wiring, soldering, riveting, drilling, deburring, and packaging. All students participate in all operations unless specifically excused.

Care is taken to provide handicapped youth with all of the different operations so that each is given an opportunity to develop varieties of manipulative skill and to determine his own levels of competence and work tolerance. An important function of this workshop is to provide for the development of good work habits and acceptable social skills. While these youth readily accept the idea of receiving pay, initially most find it necessary to make drastic changes in their concept of what constitutes work done for this pay. In assembly line operations, the disabled youth quickly learns that satisfactory production and earnings depend upon each worker completing his operation with a degree of rapidity and skill. Youth also learn that an argument or disagreement can affect individual earnings of the entire group. Habits of punctuality and attendance are more rapidly acquired when it becomes apparent to the young worker that tardiness and absence reduce earnings. This is seen to be a strong motivating factor in the youth’s development as a worker. The reader’s attention, however, is called to the fact that this simulated factory, this work setting, serves as an ideal adjunct to the total prevocational effort carried on in the school. The workshop supervisor, a vocational education teacher, regularly supplies the staff with a systematic appraisal of the progress of the job operations to be performed.

The simple instrument used to convey this information consists of the following four point rating scale covering the following four general areas of work adjustment:

1. Performance Skills—These include dexterity, decisionmaking, remembering procedures and locations, following directions, and observance of safety rules.
2. Work Tolerance—Considered here are such factors as tolerance for repetitive or monotonous tasks, physical stamina, and resistance to fatigue.

3. Time Factors—Within this category are such factors as attendance and punctuality, speed and consistency, and the ability to perform several operations within a brief period of time.

4. Social Skills—Here the concern is with the degree to which the handicapped youth relates satisfactorily with peers, possesses an acceptable appearance, and accepts the authority and direction of the work supervisor.

Another major point of work assessment is accomplished by way of a series of job-try-outs assigned to the handicapped youth following his exposure to the contract workshop.

Based upon the findings of a series of concentrated evaluations in given occupational areas, an appropriate job-try-out site or station is chosen by and for the student. Normally requiring 4 weeks for completion, the job-try-out consists of a 4 hour per day, 5 day per week sampling of the nature of a particular occupational area. These job-try-out stations could be in the school or in the community. The job-try-out does not constitute a success-oriented or job-training sequence, but an opportunity for the youth to react, in terms of his interest and aptitude to a particular entry occupation. This also constitutes for most handicapped youth the initial exposure to the real world of work. Prior to beginning the job-try-out the prevocational evaluator reviews with the youth and “employer” a description of each disabled youth.

A time for arrival and departure is established. The “employer” is helped to understand the procedure in providing consistent evaluation and supervision of the client assigned, as well as the legal relationships, between the school and the “employer.” Youth are often overwhelmed by fears associated with getting to and from the job, of adjusting to the establishment of new personal relationships and of viewing themselves against the background of a real work setting. Both prevocational evaluators and counselors make regular visits to the job-try-out site, securing the “employers” evaluation and in regular interviews giving support to the student and his “employer.”

An Example of Prevocational Evaluation Performed by a Private Agency, The Vocational Rehabilitation Center, Pittsburgh, Pa.—This agency provides comprehensive vocational evaluation and adjustment services including testing, prevocational work experience, counseling and guidance, casework training, and job placement.

For the past 5 years, the Vocational Rehabilitation Center has provided prevocational evaluation to handicapped secondary students referred by the Pittsburgh Board of Education. These services, provided from the 10th through the 12th grade, are planned to become an integral part of the student’s school program. For 26 weeks, one-half school day is spent at the Vo-
cational Rehabilitation Center and the remaining half in the school setting. Joint staff meetings between school, Vocational Rehabilitation Center staff, and rehabilitation personnel from the State agency (Bureau of Vocational Rehabilitation) are held regularly during the evaluation to communicate the recommendations and findings to teachers. This evaluation program is used as a basis for recommending possible future courses of action on behalf of the student. These recommendations typically include such directions as termination of schooling with occupational placement, vocational training, strengthening in communication or computational skills.

One of the major functions of the evaluation services of this private agency is to help the school personnel relate the vocational training needs of the handicapped student to the total school program. Teachers are helped to understand, through the aforementioned staffing, that specific areas of the student's communication skills or computational skills will need remedial attention. It should be noted that the public vocational-technical schools cooperate in providing evaluations in welding and other trade training areas.

Academic Skills

Handicapped youth, particularly those with learning problems, when placed in vocational training areas, frequently discover that the acquiring of a skill is dependent upon a higher level of academic competence than they possess. Such a handicapped student in an auto mechanics class may lack the ability to read the service manual or parts catalog, be unable to understand cubic displacement, or read a vacuum gauge. Likewise, this student in a food service training area may be unable to read recipes or have sufficient computational skill to manage problems in quantity cooking. To a lesser degree other deficits in writing, following directions, speaking, etc., can hinder a young person's success in vocational education.

The academic abilities related to skill acquisition are an integral part of the total program. The single most important concept to be remembered is that traditional concentrations on academic achievement are not required. Students should have functional use of those skills which will be needed to succeed in training. Academic skills are also important to the young person in general life adjustment.

An academic program must be relevant to the individual needs of each young person. A prescriptive approach to academic instruction assures that each person will have the opportunity for a sufficiently general program with specific concentration in areas of greatest deficiency or in an area vital to prospective employment.

The vocational educator can aid in the coordination of programs for handicapped individuals in academic and personal-social areas by cooperation with both the special education teacher and the student. Close liaison can be created through regular planning conferences where the total pro-
gram for each individual handicapped student is worked out. Both vocational education and special education teachers can exchange information on academic and personal-social progress and plan prescriptive instruction.

Handicapped students with learning problems require considerable individual attention from an instructor in understanding basic concepts in communication, computation, occupational information, and personal-social skills. Teachers and counselors can provide the student with the opportunity to develop the skills which will be required for success in training and later work adjustment.

Communication Skills

Reference is made here generally to competencies in reading, writing, listening, and speaking. Regarding the development of the handicapped youth’s reading skill, teachers begin with the level of skill possessed and provide for improvement, keeping in mind that the primary concern is that youth’s growth toward training and employability. It is important, for example, to know whether or not a person can read signs like Stop, Danger, Exit, Men, Women, and other everyday terms.

The individual should be able to recognize key words in application forms, tax withholding forms, and similar materials. There are words which are associated with equipment, instructions, and standards which should be recognized.

Commercially produced instructional materials are rarely as relevant as the teacher may need in specific teaching situations. For this reason, simple and efficient materials can be developed by the teachers as they are needed. These can be supplemented by remedial materials when adapted for use by handicapped individuals. Remedial materials are especially useful where a severe reading handicap exists.

Often young people are challenged and motivated by special interest publications such as Motor Trend, Hot Rod, Popular Mechanics, and Popular Science for boys and Glamour, Seventeen, and Ingenue for girls. Copies of Look, Life, Ebony, Reader's Digest, and daily newspapers provide a wealth of valuable teaching material. The State driver training manual, in some States, motivates young people who are at an age where learning to drive is important.

There are many free or inexpensive sources of instructional materials. Many commercial firms (Kraft Foods, Dairymen's Council, Ford, General Motors and others) can supply high interest, low reading level materials. Labor unions similarly provide publications.

Audiovisual materials, when properly used, can supplement a program effectively and help to train visual and auditory concentration so vital to learning complicated procedures in many occupational areas. Speaking skills can be developed through the use of tape recorders.

Speaking and listening skills are also taught through the use of group discussions and role playing situations. Topics should be chosen which are relevant to each person's experiences, either of an occupational or social nature.
Computational and Quantitative Skills

As in the development of communications skills, efforts to develop computational skills are vocationally oriented. In addition to those skills needed for a specific vocational area, students are taught to understand the computation of pay checks and the deductions which are necessary. In addition, students need to manage some of the computational problems relating to social security, pensions, income tax, and insurance deductions.

Students should acquire the basic skills necessary for wise purchasing, budgeting, and financing. Young people are taught to save part of their income and should be familiar with banking procedures.

When students enter evaluation or training, both the in level of performance and potential is assessed to assure that they possess computational proficiencies consistent with their level of aspiration and that appropriate remediation is made available.

Probably the most important arithmetic concepts associated with vocational education involve the ability to understand and use quantitative measures. These are among the most difficult abstractions for handicapped youth with learning disabilities. For this reason special attention is given to preparing the individual who must work with quantitative concepts. Special education teachers try to introduce quantitative concepts early in the child's school experience. From simple counting exercises, the individual is involved in tasks of increasing complexity, with concentration on knowledge relevant to daily living and potential occupational areas.

When assessing a handicapped youth's potential in a specific vocational area, his ability to work with quantities is given careful attention. Very often the individual can learn to deal with quantities through the use of contrived systems which make up for an inability in a specific area.

Where it occurs that a special education teacher may lack practical and work oriented experience necessary for the application of quantitative concepts, the vocational educator may wish to assist in order to assure relevance.

Occupational Information and Civic Responsibility

This academic area offers the student an opportunity to become acquainted with varieties of occupations and his level of training as well as the rights and responsibilities of a citizen.

Using a "classroom in the community" concept, teachers and students regularly tour many places of employment in business, industry, institutions, government, etc. to provide handicapped youth with a first hand exposure to the nature of a particular job setting. This allows the youth to view himself against the background of that work situation and to become familiar with the surroundings. It gives opportunity for handicapped youths to interview employers and employees and upon return to the school to engage in group discussion which results in aiding the youth in gaining more realistic self-evaluation and in achieving stronger goal orientation.
Vocational educators can play an important role here in the selection of job site visits and in conducting group discussions both prior to and following the trips.

Extensive use of role playing is used to advantage particularly in practicing employment interviews, or in simulated discussions and conflicts between worker and foreman or between union steward and employer. Selected personnel can be brought into the classroom to represent labor unions, employment service, insurance companies, social security administration, and vocational rehabilitation and to inform handicapped youth and discuss with them the rights and responsibilities of worker-citizens. Parents and other handicapped students can be profitably involved in vocational education programs as models and participants.

It is most necessary that these disabled students gain an understanding of the functions of our democracy and particularly an understanding of their civic duties and privileges. This is an area of study which can be reasonably and efficiently managed as a part of occupational information instruction.

**Personal and Social Skills**

Students can be helped through personal counseling and group discussion and the use of visual and other aids to a greater understanding of how employers expect their employees to be dressed and groomed. Beyond employer acceptance, good personal grooming habits are an asset to the self-concept of the individual. Instruction is given in the use of personal grooming aids, sewing, mending, and styling.

In addition to grooming, these young people need to understand the need for proper etiquette and personal behavior. Role playing, group discussions, and film strips can be effective teaching devices. These students need to be aware of appropriate conduct in public places. This can most adequately be taught through repeated exposures to varieties of social experiences in the community as well as in the school.

Handicapped students are often unaware of resources in their home communities which they might use for recreational purposes. This information needs to be made readily available to students through the school program.

**Home and Family Living**

There are many skills related to home and family which are incorporated into the school curriculum. These include domestic activities, budgeting, purchasing, and child care. In addition to instruction, these students often require guidance to resolve problems as they occur.

**Skill Training**

We have considered program services which provide employability training, accompanied by intensive and continued prevocational evaluation. Basic work skills were provided, as in the Detroit program, through paid work experience in a simulated factory setting. The series of job-try-outs provided further evaluation and employability training. Frequently these
job-try-outs were provided in the school itself, as in the Oakland program. The reader's attention has been called to the fact that the academic portion of the program has depended for its content on teaching prescriptions provided by total school staff. We have noted that the academic content consistently relates to the work world and to the development of acceptable employability characteristics on the part of the handicapped youth. Reference has been made to the strong role the vocational educator plays in this prevocational, employability training phase as the youth is readied for specific skill training.

We shall now consider some guidelines for the vocational educator as he trains the handicapped youth for employment.

1. Train for the acquisition of basic employability characteristics.
2. Provide the academic teachers with information about the needs in academic skills as they relate to a specific vocational training area.
3. Train at a level of competency which matches the youth's potential.
4. Train in an area where the student can master a skill which is salable.
5. Where possible, combine training in the school with on-the-job training.
6. Be prepared to provide for shorter instructional periods and for longer time for course completion.
7. Be prepared to repeat segments of instruction, particularly for those students who possess learning handicaps.
8. Make provision for individualized instruction.
9. Utilize demonstration lessons and manipulative endeavor in the case of handicapped students with learning disabilities.
11. Make certain to treat all aspects of a learning situation; never take for granted the occurrence of incidental learning.
12. Place great emphasis upon safety procedures and caution in the use of tools and equipment.
13. Ensure an emotionally stable and predictable training environment.
14. Make copious use of the prevocational evaluation and the vocational counselor's support.

We are ready at this point to focus on that portion of the program which deals with the provision of specific skill training.

An Example of Skill Training—The Detroit Special Education Vocational Rehabilitation Program—In the Detroit program a training and placement counselor, working in concert with the prevocational evaluator, rehabilitation counselor, and student, selects for the youth either a vocational training school placement or an on-the-job training station. Employer-trainers in the community who agree to train students are helped by the placement counselor to understand the characteristics and needs of individual trainees. This placement counselor interprets to the trainer special needs related to the student's physical handicaps or perhaps to a reading
disability which might limit functioning in a particular segment of the job training. The trainer receives a training kit which includes a description of the school program goals, the trainee's payroll *** schedule, a time report, and a training progress report. During the initial weeks (total training time 13 to 20 weeks), this placement counselor visits weekly with the trainee and his trainer, reviewing progress and helping to solve problems expressed by either party.

The average daily OJT schedule consists of a 4-hour work day, 5 days each week, for 13 to 20 weeks. During this period trainees return to the school for employment counseling by the placement counselor.

In the case of trainees assigned to a vocational school program, the placement counselor, again with the support of a prevocational evaluator and a rehabilitation counselor, selects the appropriate facility, establishes a working relationship with the school staff, and regularly evaluates with them the progress of the student.

Placement

Throughout the training sequence, the goal of job placement in the community should be considered. The student is being prepared to take a job which is consistent with the training received, with his personal interests, and with an opportunity for advancement. Since the placement coordinator has been deeply involved in the total sequence of the program, the student's needs and potentials are familiar to him when the time for job placement arrives.

When a student is being considered for placement, several steps may be taken. First, the student's cumulative record is evaluated. This record will include all of the information which has been gained through prevocational evaluations and the training sequence. Second, prospective jobs are profiled, listing all requirements for the job. This profile is very specific, so that the individual and the job can be compared. The student plays an important part in the decisionmaking process to assure that the job is acceptable.

Various resources are available to aid the process of finding a job which is appropriate. The Bureau of Vocational Rehabilitation has resources available to assist. The State employment agency in most States has at least one person charged with the responsibility of arranging job placements for the handicapped.

Job placement for the handicapped in the community requires the selection of employers who will accept disabled youth. Careful consideration should be given to all variables which might affect success. The young person is told what is expected and should have a desire to take the job. Similarly, the prospective employer and his staff are given a profile of the person's potentials and should be willing to work closely with the person, the

*** Money which is received by the student is interpreted not as earned money but as a maintenance fee covering cost relating to food, transportation, etc.
placement coordinator, and other personnel. The family is constantly involved, and their willingness to accept the placement is obtained.

Knowing what a job is about entails considerably more than just understanding the specific tasks to be performed. Hopefully, the young person possesses sufficient skill to get to and from work, to work with others, to work under supervision, and other related skills. The placement coordinator works with the handicapped student to help him relate to the new job. If the employer has an orientation program for new employees, the placement coordinator should be prepared to interpret it for his new student-worker. Where none exists, the placement coordinator and the employer should work out an individual orientation sequence.

Whenever possible, the employer should take special care to demonstrate all details of the new job prior to placement. This reinforcement is often reassuring to the student. Following the demonstration the student may be given an opportunity to perform the tasks involved. This will serve to reinforce the student's self-confidence.

The student is familiarized with those parts of the physical plant in which he will work. The handicapped student should know the location of the lunchroom, the rest rooms, the payroll office, the medical section, and other facilities. It should not be assumed that most handicapped persons will learn these things incidentally. They may be shy, embarrassed, or not even knowledgeable that certain facilities or services are provided.

When the student is introduced to coworkers, the personal dignity of the individual must be maintained. Coworkers may be either helpful or hostile to the handicapped worker, depending often on the manner in which the new worker is introduced. The very fact that a third person (the placement coordinator) is present, indicates that this person is unique.

Followup

The job of the educator and of the vocational rehabilitation counselor does not terminate with the placement of a handicapped youth. This phase of the total sequence is so vital that some authorities look upon the early months of placement as an extension of the training program. The placement coordinator attempts to anticipate problems before a situation becomes bad enough to be irreversible. As with the evaluation and training sequence, followup is a team process involving the former student, the parents, the employer, and the school. These individuals, working together, can solve problems before they grow, and steps can be taken to remedy deficiencies.

The vocational educator can profit from keeping abreast of the followup efforts. Since the objective of vocational education is employment in a job consistent with training, the vocational educator will want to see how the alumni of the program adjust. The feedback from the followup program will be used to modify programs to reduce deficiencies. This is especially true as the vocational educator seeks to serve the handicapped. Further training may even be indicated and the opportunity provided.
PROVIDING SERVICES IN RURAL AREAS

Small communities, distant from large urban areas with multiplicity of services, face compound problems as they try to provide vocational services for the handicapped. The four most prominent problems concern the sparsity of the handicapped population, transportation, placement opportunities, and the availability of resources.

Once a rural school district has committed itself to vocational education for the handicapped, it sets about the task of making those decisions necessary for program implementation.

1. How will the services be organized?
2. What programs will be offered?
3. What students will be served?
4. What will be the sequence of service to a student?

Each of these decisions must be based on a realistic appraisal of local needs and goals. Often the decisionmaking process involves school personnel, civic leaders, representatives of business and industry, and others who can contribute ideas and information.

Unfortunately, these decisionmaking committees may not include a special educator or a vocational rehabilitation counselor. This is not unusual, since in some rural districts special education may exist as the part-time responsibility of a staff member and the vocational rehabilitation counselor operates out of a district office located in a distant metropolitan area.

However, if the program is to consider the needs of the handicapped, these professionals should be sought out early and their advice and counsel carefully considered. Once programs are in operation, the difficulty of effectively serving the handicapped increases. Those planning the programs should be made aware of the needs of this population, and convinced that it should be served, before the plans reach the stage of implementation.

As in more populated areas, the educable mentally retarded will form the largest single block of the handicapped. Since special education is often not well developed in rural areas, there is a great likelihood that many such youngsters will be found in the regular grades, in trouble in their course work, and in danger of dropping out of school. Most of these students will be functioning as anonymous, if somewhat troublesome, members of the student body at large. If they are taken into vocational education without proper evaluation, they may possibly experience failure there also.

It is incumbent upon special education, vocational education, and vocational rehabilitation to coordinate their efforts to identify those persons
who may be suspected of possessing some disability, and arranging for a thorough examination by the school psychologist, vocational rehabilitation counselor, or another appropriate source. The identification process requires that the available records of all students be examined by the counselors, psychologist, special education administrator, vocational rehabilitation counselor, pupil personnel representatives, or others who could be expected to have knowledge about the existence of persons with handicapping conditions. The important consideration is not specifically how the search is accomplished, but rather that it is not left to chance.

Once the vocational rehabilitation counselor accepts a student as eligible, he must decide on how best to secure a prevocational evaluation. The two most plausible alternatives are to have the evaluation done by the schools or to contact an agency in the nearest city, having the person go to the agency and live in housing arranged by the agency. Wherever possible, the former is desirable, as the individual can remain in his home and can continue to take part in other areas of the regular program.

If this alternative is chosen, school personnel representing vocational education and special education can cooperate in the establishment of a prevocational education laboratory. In another section of this publication the components of such a program have been outlined. The resources of the vocational education departments of the school could provide the setting for the evaluation, with representatives of both departments cooperating in supervision and administration. Following the evaluation, representatives of both departments can meet with the vocational rehabilitation counselor to develop a training plan.

In some cases, this training plan may include participation in vocational education as a full-time student. In other cases, the student may remain in special education and only participate minimally in vocational education at a prevocational exploratory level. A third possibility may be removal from school entirely for participation in a nonschool related training program.

Some adjoining school districts may find that the most efficient plan for the implementation of services is to combine their services in a regional vocational education center. This will not essentially change the pattern which has been outlined, but it does create problems of management. In a regional setup, the vocational educator cannot participate as actively in the case finding process. Similarly the problems of coordination of efforts increase significantly. When this is the case, the means must be found (possibly through financial support from vocational rehabilitation or under the 1968 Amendments to the Vocational Education Act) to plan a prevocational evaluation in the regional center. The cost of this service might be partially borne by the cooperating school districts. In lieu of this, a member of the regional school center staff might receive training in prevocational evaluation and serve in the capacity of an evaluator.

One specific example of a way in which rural school districts can provide
upgraded services to students in schools which are geographically dispersed is through the use of a mobile evaluation laboratory. The Champaign, Ill., public schools operate such a facility.

The MOVEX Laboratory, Champaign, Ill.*—The MOVEX (mobile vocational experience) laboratory is a large van containing a complete assortment of offset printshop equipment (very much like a workroom). It's air-conditioned and heated. Its electrical system can be plugged into outlets at schools.

The MOVEX program is designed to keep handicapped youth from dropping out of school by offering them a better model for a job than that to which they are customarily exposed. The students are given early and intensive work experience in the field of visual communications, an area they would generally not consider a potential job source.

The program is available to junior and senior high school students who are considered disadvantaged. The MOVEX vehicle was delivered to the district last spring and 18 youngsters used it. It is now in full use. The vehicle is usually driven to the two high schools and three junior high schools every day. Participating pupils use its facilities during class hours for work experience credit. Often they work in it at night, when it is parked outside the offices of the special services department.

Such a laboratory might also house a portion of a prevocational laboratory or many other types of vocational experience units. The Division of Vocational Rehabilitation can support the cost of such a laboratory for use by handicapped students.

COMMUNITY INVOLVEMENT IN VOCATIONAL EDUCATION SERVICES FOR THE HANDICAPPED

The success of handicapped persons in making the transition from school to the world of work very often depends on the extent to which the people around them accept and understand the special adjustment problems they face. Parents, prospective employers, resource agencies, and the student's peers must smooth the path at appropriate points and not pose unnecessary obstacles to vocational adjustment.

The community is made up of individuals, families, groups, and organizations which have planned or incidental contact with handicapped persons to the extent that they influence the course of their lives. In one typical work-study program, a bus driver for a public transportation company was so unpleasant with his handicapped riders that their absenteeism was measurably increased. This incidental contact had a demonstrable effect on students at a critical point in their training.

The Family

One common example of an unnecessary obstacle involves families whose vacation schedules may conflict with the handicapped student's training or employment. Consequently, the student may be forced to choose between his training or employment and the natural desire to vacation with the family. Frequently, this problem can be solved through parent counseling and by parent involvement in total program development.

In order of priority, the family will have the most direct influence on the adjustment of a handicapped youngster. The staff, especially the counselor, can contact the family early and assure at least their cooperation in the decisionmaking process. Hopefully beyond this, their active participation can be obtained. Parents can help their youngsters learn to use public transportation, to effectively spend and save their wages, and to make constructive use of leisure time.

Staff members often find that they must first prepare the parents for these major steps before the staff can work with the student. As an example, if parents reject the notion of their youngster using public transportation, the counselor might work individually with the family and bring them into contact with other families who have resolved this situation satisfactorily. Staff, working with the families of handicapped youngsters, might bear in mind that parents may not have had the opportunity to objectively formu-
late their goals and their strategies for preparing their youngsters for post-
school adjustment. The staff should stress that the ultimate goal of training
is vocational adjustment. The parents' sources of information may vary
from qualified professional assistance to the friendly advice of well meaning
neighbors. Parents are typically confused and possibly even bitter. For this
reason, extreme care should be exercised to remove their anxieties and to
offer supportive counseling.

**Advisory Committees**

Parents can serve as useful members of a program advisory committee.
While the responsibility and authority for program implementation rests
with staff members, some fine ideas may result from parent involvement.
Parents can assist staff members in informing other parents and the larger
community of program innovations. Besides parents, such committees
should also consist of other interested and responsible local people such as
civic leaders, clergy, and business and labor leaders who can help assure rel-
evance of the program to local needs and to offer bridges of communication
between the program and the community.

**Organizations Concerned With the Handicapped**

Parents of the handicapped have in most parts of the country formed
branch chapters of national organizations. These groups, primarily con-
cerned with a specific handicapping condition, have rendered invaluable
service at the local, State, and national levels. Through their efforts they
have made material available which describes the needs and characteristics
of handicapped persons, and which promotes their cause to business, indus-
try, and labor. These parent groups also sponsor sheltered workshops for
employment and training of the handicapped, recreational activities, and
other needed services.

In addition, professionals who are concerned about the handicapped have
joined together for many of the same purposes. These professional organiza-
tions publish journals which practitioners find helpful. Vocational educa-
tors can profit from involvement in these parent and professional organiza-
tions serving the handicapped.

**The Business and Labor Communities**

Those in the community who are most able and willing to help with the
handicapped often need reliable sources of information about them. For
this reason, high priority should be given to dissemination of such informa-
tion about the handicapped. Professionals working toward the preparation
of the handicapped for employment can make presentations of their pro-
grams to clubs and organizations, to personnel managers and supervisors,
and to employers.

When programs are organized, the counsel of the business and labor com-
Communities should be sought. Utilizing such advice of business and labor leaders will assure relevance to present and future community needs. When an occupation becomes obsolete, or when attitudes toward the handicapped filling particular positions are negative, then appropriate modifications need to be taken. For example, some of the mentally retarded can be trained as key punch operators and when given proper preparation, they can be as rapid and reliable as the nonhandicapped.

In some instances, unrealistic entry barriers or resistant supervisors have unnecessarily restricted work opportunities. When this is the case, appropriate orientation programs might be undertaken to assist employees to understand the potentials and limitations of the handicapped people involved.

The Communications Media

The communications media are an essential component of community involvement in a program. When the needs and potentials of the handicapped are presented, the probability of community attention to this population can be increased. Newspapers and radio-TV are often quite responsive to this type of "human interest" features. When these media are used it should be remembered that one program cannot modify the attitudes of significant numbers of people. For this reason care should be taken to avoid generalizations about handicapped persons which will do little to serve the desired purpose of the program. For example, it should be pointed out that all mentally retarded are not alike. They are as different as people in the general population. The public, and especially employers, should not be led to believe that they can predict the success or failure of any single retarded worker.

Site Visits

Many places of employment will be willing to provide the opportunity for site visits for trainees. The most profitable trips will be those where the student will be able to encounter wide ranges of occupations. Discussion sessions can be arranged with supervisors and workers who can share information about their particular work assignment. When these trips are planned parts of the total program, staff members will wish to coordinate the planning with appropriate personnel at the site.

Recreational Facilities

There are many recreational facilities which can be effectively used by the handicapped. Service clubs and organizations in some communities have established programs which are specifically designed for the handicapped. Public agencies and facilities such as libraries and recreation departments of many communities offer opportunities for the use of leisure time.

There are camps for the handicapped operated by parent and professional
organizations which offer a wide variety of programs. These groups also offer a range of other activities for the handicapped. There are some bowling alleys and swimming pools which have made special accommodations for the handicapped.

In most communities business establishments which specialize in recreational activities can arrange for groups of students to be tutored in skills which will enrich their nonworking hours and increase the probability of satisfaction with their postschool life. Since the primary purpose of any vocational preparation program is employment, the social activities should serve as an adjunct and be conducted after normal working hours.
CONSIDERATIONS IN PLANNING VOCATIONAL EDUCATION FOR THE HEARING IMPAIRED*

Planning instructional programs for hearing-impaired young people should be approached carefully and systematically. A well coordinated and comprehensive plan is necessary in order to provide for a number of existing differences: (1) in the degree of hearing loss encountered among these young people and in its handicapping effect, (2) in the numbers of hearing-impaired students in the community, (3) in the availability of existing resources, and (4) in the possibilities of developing new programs and new cooperative arrangements. Once these considerations are taken care of, the overall objectives for hearing-impaired students remain very similar to those for the hearing students—including economic independence, community involvement, marriage and family participation, and other commonly held aspirations. It is particularly encouraging to remember that these hearing-impaired students, ranging from mildly hard of hearing to something approaching total deafness, can and usually do achieve these goals. Their degree of independence results from very careful instructional planning.

Effects of Hearing Losses

In very general terms, hearing losses can be separated into those indicating a conductive loss and those evidencing a sensori-neural loss. In the first case, a number of treatments are available which may resolve the hearing loss entirely. For the rest of the students, appropriate amplification (a hearing aid) and classroom seating which permits visual contact with the teacher should allow satisfactory progress.

On the other hand, sensori-neural losses are rarely remedied through medical processes and present a different picture, a problem which is not resolved by amplification alone. With this type of loss, the ear tends to distort the sound it receives much the way a poorly tuned radio distorts sound to the normal ear. That is, a noise is heard, but it is so distorted that no message is intelligible. Of course, in extreme cases of deafness even the noise is not perceived. In these more serious hearing losses, an additional educational handicap results which is particularly affected by the age of the child when the loss occurred. A young person who has lost his hearing as a teenager may go through a rather traumatic adjustment period, but he does

*Written by William N. Craig, Ph.D., Associate Professor, Department of Special Education and Rehabilitation, University of Pittsburgh, Pittsburgh, Pa.
have access to normal speech and language development. This means that
the modifications in instructional procedures can be minimized. A child
whose hearing loss dates from early childhood, however, must rely on special
tutoring, special language stimulation, and direct feedback from his
teacher, parents, and others in order to gain information about his environ-
ment. He is learning a language he cannot hear. He is also required to per-
form in school with a language which he understands only fragmentally.
Fortunately, many young deaf people are able to overcome this problem
and perform rather adequately, assuming that they have received expert in-
struction. In establishing a program for such instruction, all the preceding
factors—the degree of hearing loss, the time of onset, and the relative handi-
capping effect—must be carefully balanced.

Population Density

For the incidence of deaf young people (with roughly 60 db losses or
greater), one national estimate would place a projection of seven per thou-
sand. Although the actual figure may well be closer to 1 percent of the total
school-age population, the relatively small size of this population indicates
that smaller communities should be very cautious about starting "one room
school houses"—one-class emergency-type programs—for deaf children. In
the first place, the age spread of these children is usually too great to allow
for meaningful grouping in the smaller school, so that such a class for the
deaf may include seven students ranging from age 6 to age 14. In addition,
vocational orientation and training should follow from a carefully planned
program of study in English, life adjustment, arithmetic, and related areas;
and, for deaf students, the vocational preparation must be carefully built
upon this educational-language background. Such a program requires spe-
cialized personnel and facilities which are usually available only in the
larger community.

Given a proper background in the language-related areas, deaf young peo-
ple should be able to perform in a very wide range of occupations including
such areas as electronics, dentistry, business, and printing. In order to pro-
vide the specialized support essential for the deaf student to maximally de-
velop his skills and to utilize them within the broader community, it is fre-
cently necessary to set up programs on an intercommunity, regional, or
State basis.

Existing Resources

Educational and vocational resources for both the hard of hearing and
the deaf students have increased greatly in the last few years. The Rehabili-
tation Services Administration, the Office of Education, State governmental
agencies, and more recently the Vocational Education Amendments of 1968,
have given a considerable boost to an already increasing momentum.
During the high school years, prevocational experiences are available in
most day and residential programs for the deaf. It would, therefore, seem logical to provide additional support to these programs before contemplating an entirely new program. Even if a new program is being considered, it should be closely articulated with the existing programs in order to provide some reasonable continuity. Specialized or more advanced training in the vocational areas would readily be encouraged by all administrators of schools for deaf children as long as these new programs were well conceived and staffed with sufficient numbers of people who understood the problems of deafness. At present, schools and classes designed for deaf students include some limited, vocational experience. In many instances, graduates of these programs are able to go on to more advanced programs with hearing students by obtaining support from the instructor directly. In other cases, a tutor or interpreter fills the gap. For the more talented deaf student, programs are available in regional technical-vocational centers located in New Orleans, St. Paul, and Seattle. Full 4-year college programs are available at Gallaudet College in Washington, D.C., and the Rochester Institute of Technology in New York State. Among the particularly talented deaf students (especially those skilled in language, lipreading, and speech), progress through colleges not specifically geared for deaf students has been possible. In more instances, progress through trade-technical training has been possible with only a minimum amount of specialized support.

New Programs and Arrangements

As previously suggested, the relatively low numbers of deaf students in separate communities encourage the extension and development of existing programs. In the case of a small day school for deaf children, this might mean the employment of tutor-instructors in order to assure optimum integration of the deaf student in classes for hearing students. In a similar sense, large residential schools for the deaf need both improvements in the present vocational programs and extension of these programs into the working community. In other words, schools can provide a considerable amount of technical information, but they still need additional support from the community in terms of on-the-job training, supplementary vocational training, and adjustment to the world of work. For deaf students, planning for the actual contact with the business world is of critical importance since the face-to-face visual orientation of the deaf individual with his potential employer is the most effective way of bringing the classroom to the business world. This program can be planned into the regular school year as long as highly competent experts in deafness are available to the deaf student. No one plan will meet the needs of all deaf students or of all communities. Therefore, new programs and arrangements should be developed through a group of participants from the school, industry, training facilities, and other community and governmental agencies. This plan should fit the community both in terms of the deaf person’s potential and of the employment condition within the region.
In conclusion, the social and economic objectives for the deaf student do not differ in essence from those of hearing students. The differences become one of making the same opportunities available to these students that are available to the hearing. This may mean extra time and specialized techniques, but the careful development of this potential can pay off in considerable benefits for the deaf individual and for the larger community. The importance of a well thought out, coordinated program in the schools is the critical link between the deaf individual and his full participation in the larger society.
CONSIDERATIONS IN PLANNING VOCATIONAL EDUCATION FOR THE VISUALLY IMPAIRED*

There are two major considerations in planning vocational education services for the visually handicapped (blind or partially seeing). The first consideration concerns the visual functioning of the individual. Even though a student may require braille for reading, he may be able to use his residual vision to function in a vocational setting. A partially sighted student may have little or no difficulty in a vocational setting, depending upon his visual ability as well as other individual characteristics.

When a vocational training plan is developed, all those concerned should be aware that the student's potential is not entirely determined by his visual deficiency. Just because the child is blind or partially seeing does not mean that he cannot respond to regular vocational training.

Sometimes the student can assist the teacher in an interpretation of his ability. While this is not always possible, the teacher should be aware of the fact that some students have had sufficient experience to add considerable insight to the evaluation process.

The second condition relates to the task which is to be done. Some tasks which are normally performed visually can be done tactually, or by utilizing the little residual vision of the individual. Some jobs can be physically adapted, while others will require no modifications for the visually handicapped.

The teacher can obtain professional advice on task analysis and modification by consulting local rehabilitation agencies and other programs for the visually handicapped. In some States, a separate Bureau for the Blind replaces the Division of Vocational Rehabilitation as the agency concerned with the visually impaired.

Closely associated with the tasks to be performed is the environment. Proper lighting and acoustical treatment can facilitate job performance by the visually handicapped. Each area to be used by this population should be analyzed for safety features. The vocational education teacher can gain assistance from a teacher of the visually impaired, an orientation and mobility specialist, or a rehabilitation counselor.

The Association for the Education of the Visually Handicapped and the American Association of Workers for the Blind and the Library of Cen-

---

*Written by Dr. Ralph L. Peabody, Associate Professor, Department of Special Education and Rehabilitation, University of Pittsburgh, Pittsburgh, Pa.
gress, Division for the Blind and Physically Handicapped, are sources of information regarding vocational training of the visually handicapped.

The visually handicapped have proven themselves extremely competent in a large variety of vocational pursuits. The variety of successful vocational placements has been as great as the individual capabilities of the visually handicapped person. All vocational education programs presently have potentiality for inclusion of visually handicapped students. The vocational plans for individual students will be very dependent upon the imagination, understanding, and sensitive observation of the professional educators involved.
CONSIDERATIONS IN PLANNING VOCATIONAL EDUCATION FOR THE PHYSICALLY HANDICAPPED*

Vocational training for the physically handicapped does not differ in form drastically from programs for the other students. Most physically handicapped students can receive training in programs where they are integrated with the nonhandicapped. An exception to this might be the student with severe cerebral palsy.

There are several groups of the physically handicapped which profit from vocational training. Some of the more prevalent physical disabilities characterizing students in such programs are muscular dystrophy, spina bifida, osteogenesis, congenital deficiencies, amputations, spinal cord injuries, and cardiac problems. Rather than describe these conditions in detail, we can point out that the teacher should be aware that these students may also have perceptual difficulties which could affect their rate of work and could cause safety problems in a shop. On the whole, these students can be expected to possess at or near normal intelligence. For most, their potential is in job areas which require only the use of upper extremities. Examples include clerical work, bench work, machine operation, and data processing.

The severely cerebral palsied student is multiply handicapped. Probably over 80 percent of these persons (1) have involvement in all four extremities, (2) are confined to a wheelchair, (3) have identifiable speech problems, and (4) have perceptual difficulties.

Severely cerebral palsied students may find employment in extended employment workshops; few enter competitive employment. In a sheltered workshop they can be paid at rates which are appropriate to their ability.

Unless the numbers of physically handicapped students warrant a staff of therapists, occupational therapists and physical therapists should be retained as program consultants. If a vocational education teacher can learn to understand a disability, his creativity should enable him to make the needed modifications usually done by a therapist. As the vocational education teacher begins to prepare a physically handicapped person, he may seek consultation from an occupational therapist or a physical therapist. The program should also employ a physician as a consultant. A qualified doctor of physical medicine will be invaluable as a consultant to the program.

The staff needs in vocational education programs which involve the physically handicapped are not very different from other vocational education programs. The vocational education teacher can expand his skills in deal-

*Written by Richard M. Switzer, Headmaster, Human Resources School, Albertson, N.Y.
ing with this group through field or inservice experience, and by observing occupational therapists for short periods. Occupational therapists are trained to work on small muscle activities to enable the individual to master the “activities of daily living,” such as eating, dressing, toileting, and shaving. Occupational therapists analyze an individual’s level of muscular functioning to decide what an individual can or cannot do. They also develop specialized training programs. Occupational therapists are skilled at developing devices to facilitate the acquisition of skill which the individual could not attain without such a device. Vocational education instructors may profit from observing these modifications. These observations can be valuable when adapting tools or machinery to the needs of the physically handicapped.

The training program for the physically handicapped can be compatible with that for all other students. A detailed prevocational evaluation should involve exposure to all areas which might offer potential employment. These will normally tend to be in two broad categories, clerical and industrial. The clerical field can include a wide range of tasks from operating adding machines through complicated data processing programming. As data processing expands it is possible that even a homebound person might be gainfully employed as a programmer. The banking field offers a wide range of clerical opportunities for the physically handicapped.

Industrial training will usually require modifications to the tools and machines to be used by the students. A great many employment opportunities exist in electronics, appliance manufacturing and repair, and similar fields. An occupational therapist or a rehabilitation counselor should be able to assist the vocational educator and the employer in modifying equipment, both in training and later on the job, to fit the needs of the physically handicapped.

The teacher should be sure that necessary tools and equipment are modified to fit individual specifications. In addition to local consultation, the teacher may wish to consult one of the following organizations:

Institute of Rehabilitation Medicine
400 E. 34th Street
New York, N.Y.

Institute for the Crippled and Disabled
400 First Avenue
New York, N.Y.

National Society for Crippled Children and Adults
2023 West Ogden Avenue
Chicago, Ill.

There are a few special considerations to be observed in training the physically handicapped. It is important to be cautious of architectural barriers in the shop and throughout the building. The student should have easy access to facilities such as the lunchroom, lavatories, and lockers.
If the student has been homebound for any period of time, there may be gross gaps in his academic learning. For example, the student may be able to read, but not be able to read a ruler because of limited past experience. He will require special remedial academic attention. For some students, long periods of inactivity at home or in a hospital may result in depressed intellectual functioning. Teachers, evaluators, and counselors should be cautioned against underestimating the student's potentials when that student has been confined for any length of time.

The physically handicapped student may be socially immature. Often these individuals have been sheltered and may not be able to make adequate social adjustments. Such students may require considerable encouragement.

The vocational education teacher needs to be aware that the Division of Vocational Rehabilitation can cover the cost of the modifications necessary to fit a program to a specific student.
PERSONNEL

Introduction

The focus of this report has been on improving programs to meet the future vocational education needs of the handicapped. But experience teaches that even the best of programs are dependent on quality of personnel available to conduct them. A trained and dedicated staff provides the dynamism essential to assure a continuation of high standards of quality.

The term "personnel" encompasses all persons involved in the planning, operation, or evaluation of the vocational education program. The personnel necessary for the vocational education of the handicapped may include teachers, administrators, counselors, supervisors, social workers, paraprofessionals and all others whose performance is required to operate a quality program. While this section will focus on local and State personnel, the same general standards of professional quality apply at the national level.

This discussion of the topic of personnel focuses on three broad descriptive dimensions. While more detail will be forthcoming, for the present the headings are Personnel Preparation, Personnel Utilization, and Personnel Interactions. These dimensions have been chosen to emphasize the relationships that exist on this subject in time, cost, manpower, and interdisciplinary cooperation. All of these variables require careful examination by professionals as they grapple with the problems of providing the people to staff vocational training programs which can be meaningful to the handicapped.

Personnel Preparation

Personnel preparation calls for leadership in vocational training to initiate trends which will be most effective in the years ahead, rather than at present. There are three distinct levels at which personnel preparation must be discussed. These are preservice training, inservice training, and staff development.

Preservice Training

For many reasons the preoccupation of special educators through the years has been on early education, usually at the primary and intermediate levels. Course work has centered on the introduction of tool subjects and social skills to young handicapped students. Attention that might have been given to vocational preparation was often absent. Vocational rehabilitation
counselor training programs have, in the past, concentrated on the older worker who has been employed, suffered physical or mental damage, and now requires counseling and therapy to reenter the world of work as a contributing member of society. Such training programs hardly apply to the handicapped youngster who is about to leave school at a chronological age often lower than his nonhandicapped peer, but lacking the physical, or mental capacity to compete as an equal. Vocational education training programs frequently have not offered potential instructors opportunities to learn about the needs of the handicapped.

Preservice training programs in all three fields can provide a substantial service to teachers preparing to work with adolescent handicapped by expanding their programming to incorporate the needs of this group. This might be accomplished through course work, practicums, student teaching, and internships focused on this group. Since all three fields are to be expected to cooperate for effective service at the community level, it would not seem unreasonable to assume that joint efforts could be undertaken at the college or university level. Students might be given training and exposure in all three fields through experiences conducted jointly by the faculties. While the student might continue to major in one speciality, a breadth of understanding could be obtained which would serve him well as a practitioner.

Some of the common elements which should be included in projected teacher training programs to make them relevant have been pointed out by Johnson.*

Broad general areas to be considered in personnel preparation:

(a) The type of vocational education program that is feasible for the handicapped student is based upon his personal characteristics as well as his potential for work success as far as the areas of academic and psychomotor skills are concerned.

(b) Provisions must be made to train the personnel to consider the various behavioral aspects of the students, not just the narrow learning of academic skills.

(c) Personnel must be taught to identify the specific vocational experiences that will be of the greatest value to the individual student.

(d) Personnel must be prepared to make the best use of existing facilities and where possible, change or add to inadequate facilities.

(e) Sequential planning must be done in order to provide a systematic developmental approach to the instructional program.

(f) Personnel should be trained to utilize labor and industry in the program in order to effectively integrate within the educational team the community services and employment opportunities, that are and will be available to the students.

Universities should be familiarized with the programs as they are developing so that they will be training educational personnel both in special education as well as in vocational education who are able to work in a cooperative, team approach.

Specialists in the areas of education, rehabilitation counseling, Federal and/or State employment agencies, social work, school psychology, sheltered workshops, and school administration are potential resource personnel to the teachers and the program in planning and implementing ways and means of achieving the various objectives of the programs.

The need exists for a prescriptive approach to instruction in conjunction with determining the specific characteristics of the handicapped as well as the specific education objectives for each one of the handicapped.

One level where preservice training is generally weakest is in supervision. A good supervisor offers necessary leadership to an instructional program in curriculum development, and materials preparation and distribution, inservice education, and other important aspects of the total service. The supervisor often brings together isolated parts of a program and facilitates team work.

Regardless of the level of task performance within an organization, it is becoming increasingly evident that a staff member can no longer attach himself to one component of the educational program to the exclusion of all others. Workers are most effective when they understand the total system for which they are employed. This is not to imply that a vocational educator needs to be an expert on the handicapped. However, he should possess sufficient understanding to recognize the unique needs and potentials of these individuals. Preservice education programs can contribute significantly to this understanding by facilitating the acquisition of sufficient knowledge as a part of the total program.

Inservice Training

Coupled with effective college and university programs there is a need for inservice programs within school systems which facilitate the acquisition of this knowledge by practicing personnel. The same general principles apply at this level as with preservice training. Joint sponsorship of programs can lead to effective inservice experience. The use of inservice teams, which concentrate on program improvement rather than on staff development, if undertaken creatively, can serve to upgrade personnel and accomplish necessary program changes. Curriculum revisions, program planning, case studies, and other important projects can facilitate inservice education.

A profitable type of inservice training is to offer workshops which reflect the needs and interests of the school's staff. Planning together, the vocational education and special education departments of a school can invite resource people from universities and agencies to present material on voca-
tional preparation for the handicapped, the characteristics of the handicap-
pertinent to instruction, sources of training materials and other
topic of mutual importance.

A wide range of new resources for inservice education have become avail-
able in recent years. Information resource centers, especially the ERIC net-
work, are now becoming more accessible. (See page .) Major publishers
and other large corporations have entered the field with expanded material
offerings. Federal and State funds are now available which can offer valu-
able assistance to support worthy efforts related to projects which school sys-
tems might wish to undertake. Administrators and supervisors responsible
for inservice education can often supplement their own resources with those
of governmental and commercial concerns for the improvement of their
programs.

Staff Development

Staff development is the third area of personnel preparation. Here the ed-
cuator returns for further study at a college or university, or for another
type of personnel growth. Funds are available in all three fields to support
these efforts. Educational Professions Development Act monies have recent-
ly become available to finance the preparation of ancillary personnel for
the instructional program. Funds from this source might be used to support
the training of prevocational evaluators, counselors, social workers, and
paraprofessionals in the knowledge required for vocational education of
the handicapped.

Colleges and universities can facilitate staff development by establishing
and improving the organization for training. Teachers College, Columbia
University, in New York City operates workshops and short-term training
courses for a variety of professional personnel.

In addition to academic settings, staff development takes place in private
or public agencies. Some rehabilitation agencies are noted for their efforts
in providing training to persons interested in upgrading their knowledges.
The Institute for the Crippled and Disabled in New York City offers work-
shops for professional personnel to improve their skills and obtain certifica-
tion as work evaluators. Increased financial assistance might encourage
other agencies to consider similar activities. Some residential schools for the
disabled have work-study programs which might serve as a foundation for a
staff development program.

Personnel Utilization

Cooperation, if it is to be meaningful, must be translated from positive
attitudes into actual practice. Nowhere is this more obviously important
that the problem of personnel utilization within a school district or be-
tween districts. When a decision is made that a particular function should
be a part of a school program, a question to be answered centers around
who should do the work. While it is reasonable to assume, for example, that a special educator might teach a handicapped youngster to read, one cannot assume that the youngster does not read when he participates in other aspects of the school program. A blind student needs help with mobility in any part of the program. Prevocational evaluation has been spoken of as a team process.

These are concrete examples which will enable the development of a flexible concept of staff utilization. If, in fact, a special education teacher has aided a retarded student to learn to read in the special class, it is reasonable that the same teacher can assist the vocational educator who needs to teach the student to understand simple written instructions. The vocational education teacher cannot be expected to become a reading instructor.

Trained supervisors can offer constructive leadership in more than the field in which they are trained. Many common variables exist in special education and vocational education which make it possible for one person to provide effective leadership in both places on matters which relate to the vocational training of the handicapped. The proviso is that the supervisors have been offered sufficient experiences to assure adequacy in the leadership they offer.

Team teaching, modular scheduling, and individualized instruction are all concepts which have had an appreciable effect on staff utilization. As a result, staff members have more flexibility in establishing a working relationship with students. Frequently, a staff member has time available to work with students, improve aspects of a program, and conduct research, which can result in significantly improved educational opportunities for students. These advanced concepts of staff utilization can offer to a handicapped student the attention from a staff member needed to make an experience successful. This additional effort need not always take the form of direct student-staff contact. Opportunities for community involvement in student experiences require that careful planning and evaluation, coordinated directly with the community, be included as integral components of the total program.

Private service facilities can help to alleviate some staff utilization problems. These agencies include Jewish Vocational Services, Goodwill Industries, Community Health Centers, and hospital service centers.

Special education, vocational education, and vocational rehabilitation might wish to explore approaches which could result in the more effective utilization of paraprofessionals. These people should be recruited for positions which offer opportunities for personal advancement.

**Personnel Interactions**

The third dimension for the discussion of personnel pertains to communication among personnel at the local, State, and national levels. In addition to communication within the education community, there is a real need to establish contacts with other components of the total community.
These may include public and private agencies, social and religious organizations, and other interested groups. The points of contact can usually be found if a reasonable search is made. But, some important potential contributions to vocational training for the handicapped are not organized into the most meaningful units for easy access. Labor and industrial people are one significant example. Often the people who belong to management organizations, fraternal organizations, and similar groups are not the same people who can be most useful in securing the entree necessary for communication and action. To mobilize these people requires creative attention and transmitting a feeling that their cooperation is desirable and meaningful, rather than ceremonious.

Parents present another group which is difficult to reach and to mobilize. Often group meetings, if they are to be used, will have to be scheduled at times which are convenient to them. The management aspects of working with parents often are the key to successful experiences. Attention to problems of transportation and child care can often increase significantly the willingness of people to participate.

Communication and other interactions are dynamic systems which must have means of evaluation and quality control incorporated into the structure. When programs are designed there should be adequate provision for continuous evaluation to assure long-range effectiveness.
SOME SUGGESTED SOURCES OF TEACHING MATERIALS

Instructional materials centers specifically for handicapped children have been established throughout the Nation to collect and to make available to local school districts such teaching aids for handicapped persons as test kits, tapes, records, braille books, and many other materials and devices. These centers also are involved in developing new materials and conducting practical workshops for teachers.

SOME SUGGESTED SOURCES OF ASSISTANCE*

Although your own State department's special education section may be the best place to go for expert advice, there are also organizations in the field that can be most helpful.

Most of the organizations listed below are especially effective in providing information on individual handicaps. They will usually provide you with free printed materials and news of the latest developments in their special area. Some of them also have information on films that can be used to enlighten your community on the problems of the handicapped and to gain wider support for your program.

Mental Retardation
American Association on Mental Deficiency
1601 W. Broad Street
Columbus 16, Ohio

National Association for Retarded Children
420 Lexington Avenue
New York, N.Y. 10017

Speech
American Speech and Hearing Association
1001 Connecticut Avenue, NW.
Washington, D.C.

Impaired Hearing
Alexander Graham Bell Association for the Deaf
1587 35th Street, NW.
Washington, D.C.

American Speech and Hearing Association
(above)

Conference of Executives of American Schools for the Deaf
Gallaudet College
Florida Avenue and 7th Street, NE.
Washington, D.C.

Washington, D.C. 20201
102.3 (i) "Disadvantaged persons" means persons who have academic, socioeconomic, cultural, or other handicaps that prevent them from succeeding in vocational education or consumer and homemaking programs designed for persons without such handicaps, and who for that reason require specially designed educational programs or related services. The term includes persons whose needs for such programs or services result from poverty, neglect, delinquency, or cultural or linguistic isolation from the community at large, but does not include physically or mentally handicapped persons (as defined in paragraph (o)) unless such persons also suffer from the handicaps described in this paragraph.

102.3 (o) "Handicapped persons" means mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, crippled, or other health impaired persons who by reason of their handicapping condition cannot succeed in a vocational or consumer and homemaking education program designed for persons without such handicaps, and who for that reason require special educational assistance or a modified vocational or consumer and homemaking education program.

102.4 (b) Objective of instruction. (1) Vocational instruction shall be designed to:

(i) Instruction relate to the occupation or occupations for which the students are in training; that is, instruction which is designed upon its completion to fit individuals for employment in a specific occupation or a cluster of closely related occupations in an occupational field, and which is especially and particularly suited to the needs of those engaged in or preparing to engage in such occupation or occupations. Such instruction shall include classroom related academic and technical instruction and field, shop, laboratory, cooperative work, apprenticeship, or other occupational experience and may be provided either to

(a) Those preparing to enter an occupation upon the completion of the instruction, or
(b) Those who have already entered an occupation but desire to upgrade or update their occupational skills and knowledge in order to achieve stability or advancement in employment.

(ii) Instruction for vocational students to benefit from instruction described in subdivision (i); that is, remedial or other instruction which is designed to enable individuals to profit from instruction related to the occupation or occupations for which they are being trained by correcting whatever educational deficiencies or handicaps prevent them from benefiting from such instruction.

(3) Pretechnical vocational instruction with the objective specified in subparagraph (b) (1) (ii) shall include instruction of the type described in subparagraph (2) of this paragraph, except that such instruction need not be designed to fit individuals for employment in a specific occupation, but must be primarily designed to prepare individual for enrollment in advanced to highly skilled postsecondary and technical education programs having the objective specified in subparagraph (b) (1) (i) of this section. It shall not include instruction which is primarily designed to prepare individuals for higher education or for professional training of the type described in paragraph (c) (2) of this section, and which is only incidentally designed for individuals preparing for technical education.

(4) Prevocational instruction with the objective specified in subparagraph (b) (1) (ii) shall include instruction designed to familiarize individuals with the broad range of occupations for which special skills are required and the requisite for careers in such occupations.

102.5 (b) Vocational instruction under contract

Arrangements with private postsecondary vocational training institutions.

(1) Postsecondary vocational instruction provided in other than public institutions may be provided only through arrangements with private postsecondary vocational training institutions entered into pursuant to paragraph (a) where the State board or local educational agency determines that such private institutions can make a significant contribution to attaining the objectives of the State plan, and can provide substantially equivalent training at a lesser cost, or can provide equipment or service not available in public agencies or institutions.

(2) For purposes of this paragraph, a "private postsecondary vocational training institution" means a private business or trade school, or technical institution or other technical vocational school providing postsecondary education in any State which meets the requirements set forth in subparagraph (A) through (D) of section
108(11) of the Act. A list of such institutions meeting the requirements of this subparagraph may be obtained upon request from the Division of Vocational and Technical Education, Office of Education, Washington, D.C. 20202.

102.6 Vocational Education for disadvantaged or handicapped persons

(a) Vocational education for disadvantaged or handicapped persons supported with funds under section 102(a) or (b) of the Act shall include special educational programs and services designed to enable disadvantaged or handicapped persons to achieve vocational education objectives that would otherwise be beyond their reach as a result of their handicapping condition. These programs and services may take the form of modifications of regular programs, special educational services which are supplementary to regular programs, or special vocational education programs designed only for disadvantaged or handicapped persons.

Examples of such special educational programs and services include the following: special instructional programs or prevocational orientation programs where necessary, remedial instruction, guidance, counseling and testing services, employability skills training, communications skills training, special transportation facilities and services, special educational equipment, services, and devices and reader and interpreter services.

(b) Funds available for vocational education for disadvantaged or handicapped persons may not be used to provide food, lodging, medical, and dental services and other services which may be necessary for students enrolled in such programs but which are not directly related to the provision of vocational education to such students. However, the State board or local educational agency conducting such programs shall encourage the provision of such services through arrangements with other agencies responsible for such services.

(c) To the extent feasible, disadvantaged or handicapped persons shall be enrolled in vocational education programs designed for persons without their handicapping condition. Educational services required to enable them to benefit from such programs may take the form of modifications of such programs or of supplementary special educational services. In either case, funds available for vocational education for disadvantaged or handicapped persons may be used to pay that part of such additional cost of the program modifications or supplementary special educational services as is reasonably attributable to disadvantaged or handicapped persons.

(d) If certain disadvantaged or handicapped persons cannot benefit from regular vocational education programs to any extent, even
with modifications thereto or with the provision of supplementary special educational services, then these persons shall be provided with special programs of vocational instruction which meet the standards and special programs of regular vocational education programs set forth 102.4 and which, in addition, include such special instructional devices and techniques and such supplementary special educational services as are necessary to enable those persons to achieve their vocational objective. In these cases, funds available for vocational education for the disadvantaged or the handicapped may be used to pay that part of the total cost of the instructional program and supplementary special educational services that are reasonably attributable to the vocational education of disadvantaged or handicapped persons.

(e) Vocational education programs and services for disadvantaged or handicapped persons shall be planned, established, administered, and evaluated by State boards and local educational agencies in consultation with advisory committees which include representatives of such persons in cooperation with other public or private agencies, organizations, and institutions having responsibility for the education of disadvantaged or handicapped persons in the area or community served by such programs or services, such as community agencies, vocational rehabilitation agencies, special education departments of State and local educational agencies, and other agencies, organizations, and institutions, public or private, concerned with the problems of such persons.

102.9 Training of Personnel

(a) General. The State board shall provide for such training (both preservice and inservice) as is necessary to provide qualified personnel meeting the requirements of the State plan pursuant to 102.38. Such training shall be sufficient to provide an adequate supply of qualified teachers and other personnel, including those capable of meeting the special educational needs of disadvantaged and handicapped persons in the State.

(c) Eligibility of enrollees. Training of personnel pursuant to paragraph (a) of this section shall be offered only to persons who are teaching or are preparing to teach vocational education students or consumer and homemaking students or who are undertaking or are preparing to undertake other professionally or semiprofessional duties and responsibilities in connection with vocational education programs or consumer and homemaking programs under the State plan to whom such education would be useful professionally.

102.22 Membership

The membership of the State advisory council shall exclude members of the State board, and shall include:
(h) At least one person with special knowledge, experience or qualifications, with respect to the special educational needs of physically or mentally handicapped persons;

102.35 State Administration and Leadership

(a) Adequate State board staff. The State board shall provide for a State staff sufficiently qualified by education and experience and in sufficient numbers to enable the State board to plan, develop, administer, supervise, and evaluate vocational education programs, services, and activities under the State plan to the extent necessary to assure quality in all education programs which are realistic in terms of actual or anticipated employment opportunities and suited to the needs, interests, and abilities of those being trained. Particular consideration shall be given to staff qualifications for leadership in programs, services, and activities for disadvantaged persons, handicapped persons, depressed areas, research and training, exemplary programs and projects, residential vocational schools, consumer and homemaking, cooperative vocational education, curriculum development, and work-study.

102.40 Cooperative arrangements

(b) With State agencies responsible for education of handicapped persons. The State plan shall provide for cooperative arrangements with the State special education agency, the State vocational rehabilitation agency, or other State agencies having responsibilities for the education of handicapped persons in the State. Such cooperative arrangements shall provide for:

(1) the joint development of a comprehensive plan for the vocational education of handicapped persons in the State which shall provide the basis for the provisions in the State plan relating to vocational education of handicapped persons; and

(2) coordination of activities of the State board and the other State agencies in the development and administration of the State plan to the extent that handicapped persons are affected, such as, for example, in the review of applications for funds for programs or projects providing benefits to handicapped persons. Copies of agreements between the State board and other agencies providing for the arrangements described herein shall be submitted when executed by the State board for filing with the State plan.

102.44 Requirements with respect to construction

The State plan shall provide assurance that the following requirements will be complied with on all construction projects assisted under parts B and E of the Act:
(d) Accessibility to handicapped persons. In the planning of construction of school facilities under the Act, the State board or local educational agency shall, to the extent appropriate in view of the uses to be made of the facilities, take into consideration the accessibility of the facilities, and the usability of them by handicapped persons, and of their compliance with the minimum standards contained in "American Standard Specifications for Making Buildings and Facilities Accessible to, and Usable by, the Physically Handicapped" approved by the American Standard Association, Inc., with appropriate usable segments of "Building Standards of the University of Illinois Rehabilitation Center" and "Occupancy Guidelines" of the Department of Veterans Benefits, Regional Offices, Veterans Administration and with such other standards in that regard as the Secretary of Health, Education, and Welfare may prescribe or approve.

102.54 Differences in vocational education needs

(a) In allocating funds among local educational agencies, the State board shall give due consideration to the relative vocational education needs of all the population groups referred to in 102.51 (a) in all geographic areas and communities in the State, particularly disadvantaged persons, as defined in 102.3 (i), and handicapped persons, as defined in 102.3 (o), and unemployed youth.

(b) In weighing the relative vocational education needs of the State's various population groups, the State board shall give particular consideration to additional financial burdens (other than those which are to be considered pursuant to 102.56 (b)) which may be placed upon certain local educational agencies by the necessity of providing vocational education students, particularly disadvantaged or handicapped students, with special education programs and services such as compensatory or bilingual education, which are not needed in areas or communities served by other local educational agencies in the State.

(c) The State plan shall describe in detail the method by which the State board will give due consideration to the criterion set forth in paragraph (a) in allocating funds among local educational agencies. This description shall include an explanation of:

(1) How the State board will identify the vocational education needs, including the need for special education programs and services referred to in paragraph (b), which must be met by each local educational agency in the State;

102.59 Percentage requirements with respect to uses of Federal funds

(a) Application of percentage requirements. The State plan shall
provide that allocations of Federal funds pursuant to 102.52 shall comply with the following requirements with respect to the use of Federal funds:

(3) Vocational education for handicapped persons. At least 10 percent of the total allotment for any fiscal year to a State of funds appropriated under section 102(a) of the Act shall be used only for vocational education for handicapped persons.
