ABSTRACT Compiled as a tool for locating information about research in educational management, this new edition has been expanded both in the scope of its subject areas and in the number of organizations and researchers listed. The directory, with increased coverage of research on educational facilities, lists 154 organizations and 416 individuals. Cited for each organization is its name and address, purpose, policy for supplying information to users, geographic service areas, and topics of available publications. The personnel section cites each researcher's name, title, address, subject areas, research affiliation, and available publications. Extensive subject indexes are provided for both organizational and personnel sections. (Author)
ERIC and ERIC/CEM

The Educational Resources Information Center (ERIC) is a national information system operated by the United States Office of Education. ERIC serves the educational community by disseminating educational research results and other resource information that can be used in developing more effective educational programs.

The ERIC Clearinghouse on Educational Management, one of twenty such units in the system, was established at the University of Oregon in 1966. The Clearinghouse and its nineteen companion units process research reports and journal articles for announcement in ERIC's index and abstract bulletins.

Research reports are announced in Research in Education (RIE), available in many libraries and by subscription for $21 a year from the United States Government Printing Office, Washington, D.C. 20402. Most of the documents listed in RIE can be purchased through the ERIC Document Reproduction Service, operated by Leasco Information Products, Inc.

Journal articles are announced in Current Index to Journals in Education. CIJE is also available in many libraries and can be ordered for $39 a year from CCM Information Corporation, 866 Third Avenue, Room 1126, New York, New York 10022. Annual and semi-annual cumulations can be ordered separately.

Besides processing documents and journal articles, the Clearinghouse has another major function—information analysis and synthesis. The Clearinghouse prepares bibliographies, literature reviews, state-of-the-knowledge papers, and other interpretive research studies on topics in its educational area.

Compiled as a tool for locating sources of information on educational administration, the first edition of the directory, published in July 1968, listed 101 organizations providing publications and other information in the field. In September 1969 the second edition was published with the title Directory of Organizations and Personnel in Educational Administration. The listing was expanded to include 122 organizations, and a new section was devoted to individual researchers. One hundred twenty-three individuals were listed.

The change in title for this third edition corresponds to the change in title of the Clearinghouse. With the closing of the Clearinghouse on Educational Facilities at the University of Wisconsin in June 1970, the coverage of facilities documents was assigned to the Clearinghouse on Educational Administration. Operating with an enlarged scope, the Clearinghouse changed its name to the Clearinghouse on Educational Management. Therefore, this edition, in addition to covering such subjects as finance, planning, organization of instruction, staffing, and evaluation, also includes research on educational facilities at all levels of education.

The current listing identifies 154 organizations, 32 more than were included in the previous edition. The number of individuals listed has more than tripled—from 123 in 1969 to 416 in the current edition.

Although organizations and personnel are combined into one directory, the two sections are expected to have somewhat different functions. The purpose of the organizational listing is to guide users to organizations having specific publications or other information on educational management. Accordingly, we have indicated each organization's policy for supplying information in response to requests and, wherever possible, publications that can be obtained by writing to it.

The personnel listing, on the other hand, is meant to facilitate communication among researchers, who can use the listing to locate others doing similar or related research. It is hoped the increased communication made possible by the section will contribute to the overall improvement of educational management research.
For each organization listed, the directory cites its name and address, purpose, policy for supplying information to users, geographic service area, research subject areas, and topics of available publications. The organizations include USOE-funded laboratories and research centers, professional associations, school study councils, university research and service bureaus, and a variety of independent organizations.

For each person listed, the following information is provided: name, title, address, research subjects, research affiliation, and available publications. We did not attempt to list all publications authored by the persons listed because of the inordinate amount of space that would be required to indicate their availability and sources. Information for the personnel section was obtained by questionnaires sent to professors of educational administration in colleges and universities across the country. Persons were selected for inclusion in the directory on the basis of the relevance of their research for educational management.

ORGANIZATIONS
Organizations can be easily located in the directory in any one of three ways: (1) by their titles in the alphabetic listing, (2) by their subject areas and publication topics through use of the subject index, and (3) by their service areas through use of the geographic index. Indexes refer to the organizations' entry numbers, not to page numbers. Following is a sample entry and an explanation of its use:

The letters a, b, x, (beneath the address) indicate the organization's policy for responding to requests for substantive information from professionals and laymen. The three alternatives are explained in a key at the bottom of each odd-numbered page. Many organizations provide services only within a specified geographical area. This geographical service area is indicated in parentheses beneath the address. If publication topics are listed, copies of the publications are usually available to anyone, even if the organization is indicated as not equipped to answer requests for information. Many publications must be purchased, however.

With few exceptions, only subjects that relate to educational management have been listed in the organizations' subject areas. Listed terms are therefore not necessarily the only subjects in which the organizations specialize.

Researchers are listed alphabetically by their last names. An extensive subject index is cross-referenced with the alphabetic listing and provides access to the researchers by means of the subjects in which they specialize. Publications are not indexed. Following is a sample entry and an explanation of its use:

Name and title

Address for 1971-72 academic year

Agency with which research efforts are affiliated

Subjects of research

Publication available from researcher

With few exceptions, only subjects that relate to educational management have been listed in the subjects of research. Listed terms are therefore not necessarily the only subjects in which the researchers specialize. If a researcher specializes in more than one subject, or if his research is conducted under affiliation with more than one agency, each subject or each agency is numbered. Researchers should not be expected to supply information on the subjects in which they specialize.

Only publications that can be obtained by writing to the researchers at their own addresses are cited. All publications—papers, articles, books, etc.—are enclosed in quotation marks.
