World of Work

Prepared by the vocational education division of the state department of education and compiled by industrial arts educators, this resource guide provides a conceptual basis for the elementary teacher using industrial arts as a means of introducing children to industrial processes and orienting them to the physical and material world. Included in the guide are manipulative activities and experiences that will help to broaden the child's knowledge about the interdependence of people and the world of work as it involves them and their families. Seven categories of elementary industrial arts programs are briefly outlined: limited and comprehensive classroom, laboratory, traveling teacher, mobile and central laboratory, and summer school enrichment programs. An example of a resource unit for primary level is given in detail including: (1) purposes, (2) learning activities, (3) skills developed, and (4) resource materials. Included in the guide are: (1) a list of safety rules for the teacher, (2) source of supplies, (3) an evaluation checklist, (4) suggestions for furniture, (5) an outline for organizing instructional plans and (6) one for studying basic raw materials of industry. ACKNOWLEDGMENT

The Department of Education would like to express its sincerest thanks to Mr. D. C. Gilbert, Associate Professor, Industrial Arts Education, Northwestern State University of Louisiana, for his efforts in compiling this Curriculum Guide.
DEFINITION

Industrial Arts, at the elementary school level, is an essential part of the education of every child. It is a positive approach to education for each boy and girl in our changing society. It deals with the way man thinks about and applies scientific theories and principles to control his physical environment. It provides opportunities for developing concepts related to the child's aesthetic and utilitarian needs. These concepts are developed through concrete experiences, including the manipulation of tools and materials, the management of processes, and other methods of discovery. Industrial Arts at the elementary school level includes: (1) knowledge of technology; (2) development of psychomotor skills; and (3) development of attitudes and understandings of how technology influences society.
PHILOSOPHICAL BASE

Education in the United States is committed to the task of developing the full potential of all children. School systems differ widely in their approach to the child, the environment, and learning experiences. There is a divergence from highly structural to non-structural programs. For the most part, learning has been oriented to the verbal and symbolic; provisions for developing the nonverbal abilities of each child have not been emphasized. Research indicates a need for the development of these nonverbal abilities of children.

Each child brings to the learning situation a unique profile of development resulting from the sum total of his past experiences. Therefore, educators must recognize to deal with individual levels of development in such personal characteristics as attitudes, values, self-concept, knowledge, and psychomotor skills.

Recognizing these individual differences, there are two fundamental dimensions in which the educational process operates and for which the educator must assume responsibility. The first is the physical setting, which includes materials, facilities, and media stimulating both verbal and nonverbal responses in the learner. The second is the mode of the organization, governing the ways in which the children operate in the physical setting. A flexible learning situation sets the stage for interaction, exploration, experimentation, problem solving, and concrete experiences that satisfy aesthetic and
utilitarian needs. Learners are provided opportunities to assume responsibility, make decisions, think, receive immediate feedback, and express themselves freely.

Industrial Arts for the elementary school (technology for children) can satisfy these conditions. The uniqueness of industrial arts lies in the fact that its activities can provide a greater variety of elements that enhance the learning process than any other single discipline.

INTRODUCTION TO THE WORLD OF WORK

Understanding of industrial processes and insights into manufacture and production, as well as exposure to and contact with the physical and material world, facilitates orientation to the world of work. Students attain respect for craftsmanship. They learn to appreciate ability in others, both in technical skills and talents other than manipulation. These appreciations enhance human relationships. They help individuals recognize their own place as contributors to the social system and the accompanying sense of accomplishment and involvement.
A FRAMEWORK FOR ELEMENTARY SCHOOL INDUSTRIAL ARTS
(Interactive Technology for Children)

I. Focus on the Child - Children's Needs

A. Personal
B. Physical
C. Social
D. Cultural

II. Objectives

A. To enrich the elementary school curriculum
B. To provide opportunities for effective and meaningful learning experiences
C. To teach children about their technological heritage
D. To help children develop attitudes and understanding of how technology influences society
E. To develop a basic understanding of the organization and function of modern industry
F. To help children develop a gracious attitude toward man and work
G. To develop skills:
   1. Informative skills
   2. Planning skills
   3. Behavior skills
   4. Appreciation skills
   5. Manipulative skills (of least importance at the elementary level)

III. Integration with other subject matter areas:

A. Traditional subject matter areas (basic skill areas) are vehicles through which additional learning can take place.
B. No one subject matter area is an "island"—subject matter areas should reinforce each other.
C. Industrial arts activities have many contributions to make that will enrich and reinforce other subject matter areas.

IV. Study of Industry

A. History
B. Industry's contribution to modern society
C. Technology of industry
D. Production
E. Consumption of industrial products
F. Service of industrial products

V. Classroom Organization and Management

A. Introductory procedures
B. Instructional personnel
C. Instructional procedures
D. Methodology:
   1. Construction
   2. Non-construction
   3. Research
   4. Problem solving
E. Evaluation

VI. Laboratory (Classroom)

A. Physical setting
B. Materials
C. Tools
D. Time allocated

Suggested Areas of Industry for Study in Elementary School Industrial Arts

1. Manufacturing  
2. Transportation  
3. Communication  
4. Construction  
5. Power  
6. Services
SUGGESTED LIST OF TOOLS FOR ELEMENTARY SCHOOL INDUSTRIAL ARTS
(Subject to revision to meet individual teaching needs)

SAFETY

The Industrial Arts teacher can be held liable for injuries that occur to his students, as it can be proved the teacher was negligent in his responsibilities. However, this should not be a discouraging factor as it relates to industrial arts activities in the elementary classroom. Statistics show that industrial arts is no more prone to accidents, with elementary students, than any of the other regular elementary school offerings. The teacher's understanding of the use of tools and equipment is the best key to conducting a safe program. As the teacher introduces each tool and/or piece of equipment a brief statement should be made related to the safety factors involved. Horse-play should not be tolerated.

The following specific safety measures are recommended:

1. Keep oily rags in a closed, metal container.

2. Keep lids tightly closed on paints.

3. Teach children to carry sharp edged tools close to their body with the sharp edge pointed downward.

4. Teach children to take turns, not push or run.

5. Insist that children wear eye goggles when engaging in activities that could conceivably cause injury to the eyes.

6. Use the saw block (shown on page 64).

7. Provide gloves for handling hot items.

8. Inspect electrical wiring; teach children how to insert and remove an electric plug from a convenience outlet; pull the plug, not the cord.

10. Keep your laboratory neat and clean—"have a place for everything and keep it in its place."

11. Teach children to place tools under their saw horse or work bench temporarily when they are not using them. Keep them out of the aisle of traffic.
IMPLEMENTATION THROUGH VARIOUS APPROACHES TO ELEMENTARY SCHOOL INDUSTRIAL ARTS

The organization and administration of industrial arts programs in the elementary school fall into several general categories. There is a vast difference between minimum and maximum programs both in content and facilities. Most elementary school programs are directed by the regular teacher in the classroom utilizing portable tools and equipment. A few programs involve a specially trained teacher who, in cooperation with other teachers of the school, directs the work in a laboratory or permanent workshop facility. Between these two extremes are a variety of programs which are successful and need some explanation.

Elementary school industrial arts programs fall into the following general categories:

I. Limited classroom program
II. Comprehensive classroom program
III. Laboratory program
IV. Traveling teacher program
V. Mobile laboratory program
VI. Central laboratory program
VII. Summer school enrichment program

The philosophy of the local school district, the budget, the time, the classroom or laboratory space, and the personnel determine the approach to industrial arts in any school district.
I. **Limited Classroom Program**

The majority of elementary school industrial arts programs fall into this category. The term "limited" refers to the classroom time allowed for the subject, to the tools and materials available and to the direct assistance available from an industrial arts consultant. The activity is usually integrated with other subjects of the elementary curriculum such as geography, history, science, language arts, art through tool skills, experimentation, problem solving, and the appreciations of various industrial processes.

This category can be characterized as follows:

a. The program is directed by the classroom teacher.

b. The work is correlated with other subjects.

c. The activities are usually limited to blocks of time, units, or episodes.

d. Minimum numbers of hand tools are used.

e. Tools and equipment are portable.

f. The services of an industrial arts specialist are minimal.

II. **Comprehensive Classroom Program**

In this type of program the classroom teacher has the advantage of regular assistance from an industrial arts consultant. The school visitations by the consultant are frequent, and usually many teachers of several grades are involved in the industrial arts programs. A course of study is set up for all grades, and there is planned articulation from grade to grade.

This purpose is characterized as follows:

a. The classroom teacher directs the work in close cooperation with a specialist.
b. The industrial arts activities related to other subjects, to the study of technology, and to the discovery of personal abilities.

c. The industrial arts specialist does not "take over" the program but does provide active assistance to classroom teachers and students.

d. The activities and content dictate the numbers and kinds of tools that are needed.

e. Tools and equipment are portable.

f. The work is scheduled on the basis of a semester or a school year.

g. Regular courses of in-service training are offered to teachers.

III. Laboratory Program

The trained industrial arts teacher who leads a laboratory program has a dual role to play in the elementary school. He directs a balanced industrial arts program for the children of the school in cooperation with the classroom teachers, and he gives these teachers sufficient in-service training to be fully aware of the total needs of the children.

The industrial arts teacher has an excellent opportunity to give children a variety of experiences which reflect modern technology and still maintain a balanced relationship with the elementary school curriculum.

The ideal laboratory teacher is one who has an industrial arts background and has had some training or experience in elementary education.

This category is characterized as follows:
a. The industrial arts teacher directs the activities.

b. The classroom teacher cooperates in planning the work, and he assists in carrying out the objectives of the work.

c. The industrial arts work is subject oriented, yet it will complement the general elementary course of study.

d. A regular schedule of classes is set up for each semester or for the school year.

e. The course of study would be articulated by the cooperative efforts of the industrial arts teacher, the classroom teachers, and the school administrators.

f. Tools and equipment are appropriate to the content.

IV. Traveling Teacher Program

The traveling industrial arts teacher functions in about the same way as the laboratory teacher in Category III. He works in the classroom, in a laboratory, or in a multipurpose room.

The traveling industrial arts teacher:

a. Visits two or more schools on a regular schedule and teaches children.

b. Plans the program with the classroom teachers and the local administrator; the work centers around local needs.

c. Uses tools and equipment permanently assigned to each school.

V. Mobile Laboratory Program

The mobile laboratory has been used mostly in rural areas where schools are far apart, and each school is unable to afford tools and equipment of their own. This mobile unit may serve as a laboratory for tools, and equipment may be moved to other work areas. The equipped van or trailer can serve as an in-service training facility
for teachers at the end of the school day.

The mobile laboratory teacher:

a. Moves from school to school in a self-contained unit.

b. Works with children in the unit, in a classroom, or in other convenient work areas.

c. Plans and works cooperatively with the faculty to serve local needs.

d. Conducts in-service education for teachers.

e. Provides workshop facilities for the construction of teaching aids and accessories.

VI. Central Laboratory Program

Certain circumstances may require the establishment of centralized industrial arts laboratories. Children would travel to the center on a regularly scheduled basis. Programs would be conducted by an industrial arts teacher in a facility designed for comprehensive industrial arts activities. A special effort must be made to coordinate industrial arts with classroom instruction.

VII. Summer School Enrichment Program

Many school districts offer enrichment studies as well as remedial work in summer programs. Art, music, drama, science, and industrial arts activities have been highly successful in various summer school organizations. Rather than spend a full summer school day on one subject, there have been some rather innovative combinations such as theater arts, math-science, etc., all combined with industrial arts.

The summer period provides many opportunities for experimentation in various programs and for the in-service training of teachers.
VEHICLE OF INSTRUCTION

When the scope and sequence of an industrial arts program has been determined, suitable plans for maximum learning in an orderly environment need to be developed. The following outline may assist the industrial arts consultant and/or the classroom teacher in organizing instruction.

CHILDREN'S LEARNING ACTIVITY PROCEDURE

I. Title: The title should give a clear picture of what is to follow in the content.

II. Rationale: The rationale includes the basic reasons for the activities and the justification for the children's experiences. The statement may introduce a problem that needs a solution; it may preface content for orderly confrontation; or it may present an activity to satisfy a need arising from other areas of the curriculum.

III. Concepts: The basic concepts of an instructional unit should be stated so that the objectives and activities selected are directed toward understanding these concepts.

IV. Behavioral Objectives: Behavioral objectives should clearly state what is to be accomplished by the students. They should be written so that the students will know:

1. What will be provided to work with.
2. What performance is expected of them.

3. What criteria will be used in the evaluation.

The objectives provide the basis for selection of learning activities and experiences.

V. Learning Activities: Once the objectives have been stated, activities and experiences should be selected to help students obtain them. The child should have a major role in selecting, planning, and executing these activities.

VI. Evaluation: Evaluation techniques must be utilized to determine if and when the objectives have been achieved.
EXAMPLE OF A RESOURCE UNIT

TITLE: Families and the World of Work

KIND OF UNIT: Resource Activity Unit

GRADE LEVEL: Primary Level

The following resource unit was planned cooperatively by: Emma Lou Slack, Alice Lee Claiborne, Dorothy Dickson, Kenneth Kirkpatrick, Christella Lewis and Everett Waldrum, who were participants in the EPDA Institute, "American Industry in the Elementary School," Northwestern State University.
FAMILIES AND THE WORLD OF WORK

Introduction

Industrial arts is the field of study, or the body of knowledge, skills, attitudes, and activities related to man's way of changing raw materials into needs for daily life.

Our society is highly efficient in many branches of technology from the manufacture of essential goods to the rendering of daily services.

MAJOR CONCEPT I: There are many kinds of workers. The workers in a community are dependent upon each other.

Social living | |
### PURPOSE

To reinforce the idea that many goods have to be produced away from home because of cost of equipment and the many specialized skills needed.

### LEARNING ACTIVITIES

- The teacher can read the story "The Cat Who Wondered" to the class; the class might discuss the various jobs of people.
- The teacher can read the story "Twelve O'Clock Whistle" to the class:
  - a) This story explains why specialization is needed and would motivate the children toward a team project using the assembly line method.
  - b) The children would probably choose little cars or other type of transportation vehicles as their project.
  - c) Filmstrips
  - d) Study Prints

### SKILLS DEVELOPED

- Critical thinking and analytical evaluation
- Listening skill
- Cutting
- Sawing
- Screws and nuts
- Painting
- Sanding
- To assemble
- To cooperate
- To share
- To discuss
- To evaluate

### RESOURCES

**Book:**
- Sprague, Lucy M. "The Cat Who Wondered," from *Animals, Plants, and Machines: D. C. Heath and Company*

**Book:**

**Filmstrip:**
- Fs 48-Neighborhood Workers (Sacramento City, A. V.)

**Study Prints:**
- S. P-40 Community Helpers
PURPOSE

To reinforce the idea that some workers produce goods and some services and are all important and interdependent.

LEARNING ACTIVITIES

The children can cut from magazines pictures showing producers at work. An exhibition can be made of the pictures grouping them under the titles "Producers of Goods" and "Producers of Services."

a) Filmstrip
b) Film

SKILLS DEVELOPED

Cutting
Fastening
Association
Discrimination
Tactile skill
Perception skill
Cognitive learning
Auditory discrimination
Visual discrimination
Listening skills
Increasing perceptual field of children.

RESOURCES

Magazines of all type
Filmstrip--Fs48
Neighborhood Workers
(Sacto, City, A. V.)
Film--Coronet--"Helpers in our Community." (This film introduces the street repairman, the doctor, the storekeeper, the bus driver, and other community helpers.)
PURPOSE

To show that more people are now free to produce services which make our lives more comfortable.

To also reveal that today people have a wider choice of services than people had a long time ago.

To help the children discover that today a larger number of people produce services than produce goods.

LEARNING ACTIVITIES

The teacher can ask the children to find out at home how many of their parents, relatives, friends, neighbors, and community helpers are actually engaged in producing services.

After the information has been gathered, the children might prepare a pictorial chart entitled "Our Fathers Produce Goods and Services away from Home." The chart should include the following headings: Number of Fathers Who Produce Services and Who Produce Goods.

The children should use symbols to represent the number of persons in each category, and put a legend at the bottom explaining what the symbol stands for.

SKILLS DEVELOPED

Job classification
Language experience
Learning new words
Sharing of ideas

Language usage
Word discrimination
Tactile skills
Manipulative skills
Cutting (Scissors)
Glueing
Square usage (measurements)
Ruler (number and fractions)
Perception skills
Chart reading
Symbols to help understand how computers work
Geometry
Concepts--square, triangle, rectangle, circle, straight line, etc.
How to read legends for future use in map construction

RESOURCES

1. Resource people available
b. Books--Who Am I? Racine, Wis: Whitman, 1952: (Simple riddles describing producers of goods and services. Children will enjoy guessing the riddle.)
c. Book--Daddies: What They Do, N.Y. Lothrop, Lee and Shepard, 1946. (To be read aloud to children. Could be used to distinguish between producers of goods or services.)

PURPOSE

People and families depend upon each other. To help children understand the importance of specialization. To help the children understand that today many specialists are needed to produce goods and services and that specialization increases dependence on one another.

To explain why we call a man or woman who learns to do a particular job a "specialist."

LEARNING ACTIVITIES

Read and enjoy the following poem:

"Every day some people come to my house to call--The Workman, the milkman, and that isn't all: The sanitation man, the baker, man, The groceryman--oh, My! So many, many people every day stop.

a) Have the children discuss the above poem.
b) If possible, make an original verse about helpers who serve our needs.
c) Discuss how goods and services produced by each neighborhood worker benefits other people.
d) Discuss possibility of what could happen if father could not produce the goods or perform all the goods and services we are accustomed to.
e) Poem--Father at Work
f) Learn song, "My Father" and act out various workers.

SKILLS DEVELOPED

Listening skills
Democratic
Capitalism at work
Group dependence
Poetic appreciation

Verbal Communication
Creativity
Prose
Poetry
Debating
Listening
Language usage
Analytical thinking
Problem solving
Vocabulary usage
Role playing
Manipulative skills
In making customs

RESOURCES

Author of poems
unknown--

Song:
Our Singing World:
Kindergarten Book.
Boston: Ginn, 1957.
Songs about various occupations

Filmstrip:
"Community Helpers."
Series: Set no. 2
McGraw Hill.

(Toby visits his father at his construction job and observes many fathers at work.) Film: "What Do Fathers' Do."
Churchill Films, Los Angeles.
Poem: "Father at Work," by William Rader. Fs 69-4
SOME WORKERS PROVIDE SERVICES

- Milk delivery driver
- Doctor
- Mechanic
- Photographer
- Street cleaner
- Firefighter
- Bank teller
- Farmer
- Chef
- Beer brewer
- Carpenter
MAJOR CONCEPT IV: Many Stores Specialize In The Kinds of Goods They Offer For Sale.

PURPOSE
To help the children recognize and know the functions of special stores and shops.

LEARNING ACTIVITIES
View and discuss a film.
Plan with children a field trip to the local bakery.
View filmstrips.
Write a letter to a national flour company asking for information on their product.

SKILLS DEVELOPED
To develop the skill of critically viewing a film.
To develop the skill of recognizing a bake shop by its smell as well as by sight.
To develop the skill of listening to the guide.
To develop the skill of viewing a filmstrip for information.
To develop the skill of correctly composing a letter.
To develop a better handwriting skill.

RESOURCES

</tbody>
</table>
**PURPOSE**

To develop the idea that money can be saved a little at a time. To develop in children an awareness that money has value.

**LEARNING ACTIVITIES**

- Class write a "thank you" letter to the bank.
- Make an experience chart about the field trip to the bank.
- Draw pictures of banks and families doing business with banks.
- Each child make a bank by cutting a hole in an empty plastic container.
- Keep a record of all money put in the bank.
- Study, handle, and discuss the different coins and their value, such as penny, nickel, dime, quarter, fifty-cent piece.
- View film

**SKILLS DEVELOPED**

- Letter writing and values of appreciation and politeness.
- Reading and writing of new vocabulary words.
- Creatively expressing themselves and their feelings through art.
- Learning manipulative skills using different types of materials.
- Adding together sums of money.
- Knowledge of what coins look like, value of each, and the size of each.
- Viewing of film for informational purposes.

**RESOURCES**

PURPOSE

LEARNING ACTIVITIES
Teacher reads a story to the children.
Children view film.
Teacher guides the children in a discussion about the "Christmas Club Plan" that banks offer families.
Read and look at a pamphlet about saving.
The children read a book about children and money.
Teacher and children have an oral evaluation in the form of a group discussion.

SKILLS DEVELOPED
Enjoyment of a story.
Critical listening.
Critical thinking.
Critical viewing for information.
Organizing thoughts so that other people will understand your meaning.
Listening and looking for information.
Reading for enjoyment.
Reading for information.
To help children draw conclusions and make judgments about their accomplishments.

RESOURCES
Story: The Grasshopper and the Ant, by Aesop.
Material that has been covered about banks and ways of saving.
Pamphlet: "Vinny and Billy," American Bankers.
Book: Joel Spends His Money, Albelard-Schuman, New York, 1954.
All materials covered.

WORKING

TO

EARNING

SAVING

BANK ACCOUNT
CONCLUSION

We have attempted to plan in this resource unit many manipulative activities and experiences that will help to broaden the child's knowledge about the interdependence of people and the world of work as it involves them and their families. A consideration of the differences in children and how their family fits into the vast "World of Work" was an important aspect in the preparation of this unit. A realization that teaching children is a much broader objective than teaching subject matter, puts a greater emphasis upon motivational techniques than ever before. The classroom teacher can draw from this unit the materials that best fit the needs of her unique classroom situation, and add or change it in any way that better provides for individual differences.

SUGGESTED OUTLINE FOR STUDYING BASIC RAW MATERIAL OF INDUSTRY

(Note: The degree of complexity of this outline will vary, dependent upon the maturity of the child or children who use it.)

I. Chemical Background

II. Biological Background

III. What is the Basic Raw Material?

IV. How is the Basic Raw Material Acquired?

V. Where is the Basic Raw Material Acquired?

VI. What are the Basic Processes through which the Raw Materials are carried to convert them to more usable products?

VII. Describe and give identifiable characteristics and some commonly known examples of products derived from Number VI. (Examples: Sheet Steel, Rods, Bars, etc.)

VIII. Describe manufacturing processes used to convert the products described in Number VII to other products that are available to the buying public usually through retail outlets. (Example: Sheet Steel formed into auto bodies.)

IX. Discuss the overall evolution of the metals industries (a brief chronological and historical development).

X. Economic value of the metals industries to our national economy.

XI. Employment opportunities in the metal industries
   a. What are some of the specific jobs?
   b. Where are they located?
   c. Job entry requirements
   d. Wage scales
   e. Present and projected need for workers in the field
XII. Application in the elementary classroom.

<table>

XIII. Suggested Projects:

Two projects are recommended: The anthropological approach

1. a project depicting methods used in time-gone-by; hand processes: Ex. Forming a candy dish in wooden mold.
2. a project depicting current methods (as relevant as possible in the classroom); machine processes; Example: Forming candy dish with arbor press.

XIV. Mass Production

XV. What effects have technological developments in the metal industries had on society?

XVI. What ways can this study of these metals industries relate to units of study on

SUGGESTED FURNITURE
This block is used as a guide for the hand saw. The student clamps the block on top of the piece to be sawed with the painted end on the squared mark where his board is to be cut. The block serves as a guide to keep the saw going straight through the stock. The red end serves as a safety factor. "Keep fingers out from under the saw."
Height should vary to meet need of elementary students, ranging from 15" up.

Approx. 28"

2" x 4"

2" x 4" Legs

Height varies to meet the need of individual student, ranging from 15" up.

Scale: $\frac{1}{8}" : 1"

The saw-horse is an indispensable item for manipulative activities. It serves as an individual work station; stock can be clamped on it for sawing and boring holes; two or more can be used together to support a large piece of plywood to make a table; and many other purposes. Eight or ten can easily be used in a classroom. They can be stacked on top of each other for storage.
The tool cart shown on the accompanying drawing can be constructed locally. The drawing gives complete dimensions plus a bill of material. It provides ample storage for tools and a limited amount of supplies, i.e., paint, nails, etc. Alterations can be made to local needs.

Note that it is mounted on casters. This enables the cart to be moved about as needed. Two or more teachers can share the tools and cart by moving it from one room to another.
1. SLOTS CUT IN TOP TO HOLD TOOLS REQUIRED.
2. HOOKS CAN BE PUT IN PEG-BOARD TO HOLD TOOLS.

Many industrial arts activities call for a sturdy work bench. The bench shown on the accompanying drawing serves the purpose very adequately. It can be constructed locally. The drawing gives complete dimensions and a bill of materials. The height of the work bench can be varied to meet needs of a particular age group, varying from 22" or 24" upward. This type work bench should not be mounted on casters. The number of benches per classroom can be adjusted to meet needs.
Part C is under top and joined to part A.

Note: Check dimensions for accuracy.
