This document contains a proposed curriculum for a Bachelor of Sciences program in elementary education with an academic concentration in bilingual education for Spanish-English bilinguals. A questionnaire sent to selected individuals provided ideas on some of the issues and problems discussed in this paper. The questionnaire, included here along with results, covers general considerations, training in linguistics, training in English and Spanish, competence in Spanish, training in culture, training in methodology, practice teaching, training in educational foundations, and training in testing. Suggestions for the teacher education curriculum are presented along with explanation. The program developed here is weighted toward the language arts. Several basic ideas for the preparation of the teacher for bilingual education are listed. (VM)
THE PREPARATION OF THE TEACHER
FOR BILINGUAL EDUCATION

by:
Dr. Joseph Michel, Professor
Foreign Language Education
and the Humanities.

U.S. DEPARTMENT OF HEALTH, EDUCATION & WELFARE
OFFICE OF EDUCATION

THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE
PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS
STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION
POSITION OR POLICY.
As I address you today, I am reminded of the student who asked the professor in zoology, "What do you think of the Time-lapse and Ultrastructural Studies of Early Embryogenesis in Drosophilia?" To which the professor replied with some haughtiness, "I don't think, I know!" "What do you think?" The student quipped back: "I don't think I know, either."

In talking to you about "The Preparation of the Teacher for Bilingual Education," my opening remark to you is "I don't think I know, either." That is, I certainly do not have all the answers. However, since Dr. Tom Walker was kind enough to extend an invitation to address you, it was obviously because he thought I possessed some expertise on the subject. I feel I do. Then, why my hesitation? I hesitate because of the nature of the problem to which I must address myself.

If I were to ask you how to prepare a teacher for monolingual education, I would have as many answers as there are people present in this room. The question is too general. I further think that no one present would have the temerity to stand before this group with the conviction that he had all the answers for the preparation of teachers for monolingual education. If this be the case, you can see the quandry I am in when I have to discuss the preparation of teachers for bilingual education. Hence, what I propose to do is not to give you answers, but to explore the issues and the problems, perhaps suggesting some guidelines and hopefully, shedding a little light on the topic of discussion.
In designing a model for bilingual education, the researcher can approach the problem either practically, theoretically, or using a combination of both. At the University of Texas at Austin, the Foreign Language Education Center and the Department of Curriculum and Instruction chose the latter alternative.¹

A carefully designed questionnaire was sent last year to 425 selected individuals. Four hundred twelve were returned, representing a 96.6% response. Twelve questionnaires were considered unsuitable and 66 came after the deadline. Hence, 334 were counted in the study, representing a 78.5% response.²

The answers represent opinions from four states: Texas, Arizona, Idaho, and California. Incorporated into the results is a cross-country sample of bilingual program administrators and supervisors. Over three-fourths of the results are Texas answers.

The following is a further breakdown of the persons represented in the sample:

1. 76% were teachers in bilingual programs. 14% were administrators or supervisors in the bilingual program.
2. 47% had less than one year experience in a bilingual education program. 18% had one year experience; 14% two years experience.

¹ Principle researchers for the project were Professor Joseph Michel, Director of the Foreign Language Education Center and Professor Mario Benítez, now Vice-President for Academic Affairs at Texas A & I University.

² This high response was due in large part to the efforts of Dr. Severo Gómez and his staff of the Texas Education Agency and to Mr. Gonzalo Garza and Dr. Ricardo Cornejo of the Southwest Educational Development Laboratory.
3. 56% had three years or more teaching experience in the elementary school.

4. 54% held a bachelor's degree. 21% held a bachelor's degree and had hours toward the master's degree. 13% had the master's degree.

5. 75% held teacher's credential. 11% had no credential at all.

6. 70% were Mexican-Americans. 23% were Anglo-Americans.

7. 58% used English or Spanish equally (approximately). 29% used predominantly English.

It should be amply apparent that one can prepare teachers for many positions within bilingual education. The Foreign Language Education Center is of course interested in preparing them for teaching language. Other areas of the curriculum should and do concern themselves with their preparation in Social Studies, Math, Science, etc.

A further look at the questionnaire and the answers received is now to the point.

With the information from the questionnaire in hand, we began the formal work of drawing up a Bachelor of Science program in Elementary Education with an Academic Concentration in Bilingual Education (for Spanish-English bilinguals).*

As the base for the program, the traditional academic foundations were kept, forty-five hours being required: 12 in English, 3 in philosophy, 3 in psychology, 3 in geography, 6 in American history, 6 in government, 6 in mathematics and 6 in science. This work usually corresponds to the freshman and sophomore years.

Then on the academic foundation, we built academic competence in four disciplines: Linguistics, English, Spanish and Culture.

Since the teacher of the bilingual is working with language, he should know the structure and elements of language, and develop a philosophy regarding it. We identified this linguistic component as being taught in three courses: Introduction to Linguistic Science; Phonetics and Phonology; and Phonological Analysis.3

The next component was a further knowledge of English. Three areas were identified here as being important for the teacher: *folklore Areas such as the Life and Literature of the Southwest, Children's Literature, and Grammar of Written English. The second language with

*It is useful to remember that bilingualism is not a phenomenon peculiar to Texas. It is world-wide, with the languages differing. Thus we can call attention to Switzerland, France, Belgium, and Afghanistan (Pashto, Dari, Uzbaki) etc.

3We subscribe wholeheartedly to competence, however acquired rather than just credit hours. For discussion purposes however, it was necessary to designate areas and courses that covered this subject matter.
which the teacher for the bilingual would be concerned, of course, is the Spanish component. Here, two courses were identified: Spanish Practical Phonetics; and Spanish Applied Linguistics. The third component is the cultural component. Here it is necessary to point out that culture is not being used in the sense of refinement, or in the belletristic sense, but rather in the anthropological sense. That is, the patterned behavior of a human individual. Language and culture are inseparable, and one cannot discuss the one without discussing the other. The competencies identified in this area are: Sociology of the Mexican-Americans in the Southwest; Mexico and Spanish North America Since 1810; and the Chicano in American Culture: 1910 to the Present.

A composite specialization was then provided to give the teacher other necessary tools to fulfill certification requirements. Included here are: Speech for Teachers, Physical Education for the Elementary School, Health, Children's Literature, Art and Music, totalling 18 hours.

Professional Education was our next consideration. Included here are: Educational Psychology, 3 hours; Student Teaching, 9 hours; Observation, 6 hours; Ed. History, 3 hours; Language Acquisition for the Linguistically Different Learner, 3 hours; and 2 methods courses, 6 hours, to make a total of 30 hours.

Nine hours of electives are left and we recommend that the student take three of these in a course in Methods in Bilingual Education.

The B.S. is a minimal program, and a Masters program has also been developed.
Some further observations are now in order. The program I have described is weighted in favor of language. This is partly justified since many of the early problems encountered by the bilingual are language arts problems in both languages: understanding both languages, speaking both languages and reading and writing in them. The methods and techniques to be used by the teacher vary for teaching the language arts in both languages. The teacher also has to realize that language is not only something to be memorized, it is behavioral. The student has to learn to function in the language.

Each subject matter area taught the child represents special problems to which the teacher should be sensitized. Input from specialists in these areas should be constantly sought.

Still, no matter what the program for the preparation of the teacher for bilingual education, certain aspects are basic.

A. All programs should acquaint the teacher with the bilingual child and his psychological and sociological make-up.

B. All should give him competence in teaching specific areas of the curriculum in a bilingual school.

C. All should familiarize him with the nature of bilingualism and bilingual education.

D. All should impartially and accurately acquaint him with the cultural, social and family background of the bilingual child.

E. Any teacher in a bilingual program should know its purpose. The Texas Education Agency has now come out with a statement called "A Statewide Design for Bilingual Education." Teacher preparation programs ought to rely heavily on this statement.
F. Preparing teachers for bilingual education is really too
broad a statement. It has to be narrowed to specify the
particular area of bilingual education in which the teacher
should be prepared.

G. Finally, the programs now in existence for preparing teachers
for bilingual education have to be evaluated and refined after
their initial trial run. They should be innovative and take
into account performance objectives, team teaching, modern
technology, individual instruction and the whole list of
modern educational concepts being currently discussed in
our profession.

I have given you a description of our program at the University of Texas
for the preparation of teachers for bilingual education.

In conclusion, I would like to give you the recipe for the making of
a teacher for the education of the bilingual child.
A STATEWIDE DESIGN FOR BILINGUAL EDUCATION

TEXAS EDUCATION AGENCY
GOALS OF BILINGUAL EDUCATION
FOR TEXAS PUBLIC SCHOOLS

Primary Goal

The primary goal of Bilingual Education is successful achievement by the student of the goals of the educational process, using two languages, developing proficiency in both, but acknowledging English as the basic language of instruction in all schools and assuring its mastery by all pupils in the schools.

Complementary Goals

In order to make progress toward this primary goal, the following complementary goals should be sought:

1. Educational success on the part of the non-English speaking student, through permitting him to learn in his first language while he is learning to function successfully in English.

2. Continued development by the non-English speaking student of his first language as he is learning to function successfully in English.

3. Continued development on the part of the English speaking student of proficiency in a second language.

4. Increased recognition by the total community (parents, teachers, administrators, students) of the importance of bilingualism and its contributions to better understandings among the peoples of our society.

Coordinate Goals

The above goals refer to the end products to be sought in terms of the development of students. In order for these goals to be reached, coordinate goals of Bilingual Education are that the local school districts:

1. Provide an environment conducive to learning.

2. Develop an effective program that will give each student an opportunity to make progress toward these goals.

3. Appraise the student's level of development of language, concepts, and experiences (exercising care to avoid testing the student in his second language until he has sufficient control of the language so that his true verbal abilities can be measured).

4. Have available sufficient numbers of personnel qualified to conduct the program.
Texas Education Agency  
Priorities for Bilingual Education  
In Texas Public Schools

Texas is made up of 26 ethnic and national groups which have contributed to its development. Among these, the largest number of non-English speakers are the speakers of Spanish. Therefore, it is appropriate that the initial focus of the bilingual education program be upon Spanish and English. In the future, bilingual programs may be developed in ethnic and national areas other than Spanish as they are needed and desired.

This initial priority focus on Spanish and English is not intended to apply to programs of instruction in foreign languages. Bilingual Education programs should not be regarded as replacements for these types of programs of instruction in foreign languages. Both of these types of programs should continue to be emphasized, each having related but distinguishable objectives.

The following are priorities for the implementation of effective Bilingual Education programs in the schools of Texas, in order of their urgency.

First Priority: A Bilingual Education program should be provided for all children entering school for the first time who speak little or no English.

Second Priority: A Bilingual Education program should be provided for all children in the primary grades who have not been able to master the English language.

Third Priority: For those children in the middle and upper elementary grades who have not been able to master the English language and attain success in learning curricular content, bilingual instruction should be given.

Fourth Priority: For those students in secondary schools who have not been able to master the English language and attain success in learning curricular content, bilingual instruction should be given.

Fifth Priority: Instruction for students at all levels who do not have difficulty with English, whether they are native speakers of English or native speakers of Spanish, should include the following components:

- Language development in English and Spanish
- The concept of the confluence of cultures

The language development in this priority goes beyond the customary foreign languages programs.

Bilingual Education is a program developed to meet the individual needs of each child and is characterized by the following components:

I. The basic concepts initiating the child into the school environment are taught in the language he brings from home.

Orientation to the classroom code of behavior and patterns of social interaction with his peers are developed by drawing from the child's resource of experiences and concepts and language which he has already learned in his home environment.

II. Language development is provided in the child's dominant language.

The sequential development of the four language skills, i.e., listening, speaking, reading, and writing, is continued in the language for which the child has already learned the sound system, structure, and vocabulary. This is exactly the same approach which has been used in the past. The only difference is the use of the dominant language of the child whose first language is not English. With this one change the child begins developing the skills with the use of his first language without having to wait until he learns his second language.

III. Language development is provided in the child's second language.

By utilizing second language teaching methodology, i.e., teaching the listening and speaking skills by use of audiolingual instructional techniques prior to teaching the reading and writing skills, the child immediately begins to learn a second language. For the English-speaking child this instruction is in the language of the other linguistic group involved in the program and, of course, English is taught to the child who comes from a non-English speaking environment. Unique about this component of the program is the fact that the child does not have to re-learn language skills. He has only to transfer these skills learned in his first language to the second language.

IV. Subject matter and concepts are taught in the child's dominant language.

Content areas which are considered to be critical to the intellectual and emotional develop-
development of the child and to his success in the school environment are initially taught through the use of the child's first language, thereby permitting and encouraging the child to enter immediately into the classroom activities, drawing from all his previous experiences as a basis for developing new ideas and concepts.

V. Subject matter and concepts are taught in the second language of the child.

Since no language can be taught in a vacuum, content areas are also taught in the second language, providing the vocabulary and concepts which are needed for communication while the second language is being learned. Initially, the number of ideas and concepts are necessarily few due to the limitations imposed by the amount of language the child controls. The teaching techniques are audiolingual in order to insure the development of listening and speaking skills. As the child's second language ability develops, more and more content is included and the other skills, reading and writing, are incorporated.

VI. Specific attention is given to develop in the child a positive identity with his cultural heritage, self-assurance, and confidence.

The historical contributions and cultural characteristics identified with the people of both languages involved are an integral part of the program. Both the conflict and the confluence of the two cultures are presented in the social development of the State and nation in order to create an understanding and appreciation of each in a positive rather than negative sense.

By providing the opportunities for successful participation and achievement, the child is encouraged to develop acceptance of himself and of others through social interaction.

This is a Revised Statewide Design for Bilingual Education approved by the State Board of Education on June 5, 1971. This revised design takes the place of the one approved by the Board November 11, 1968.

This design will constitute a uniform basis for all bilingual activities of the Texas Education Agency. Such activities include:

1. Bilingual programs based on State Statutes Articles 2654-1 and 2893, Vernon Civil Statutes.
2. Bilingual activities in Title I, Title I Migrant, and Title III, ESEA programs.
3. Projects under Title VII, ESEA.
4. State Accreditation Standards.
5. Multicultural curriculum guidelines required by Court Order.

RECIPE FOR A BILINGUAL TEACHER

Select a sympathetic personality. Trim off all prejudices, superiority complexes, intolerance and haughtiness. Pour over it in generous portions a mixture of the wisdom of Solomon, the knowledge of Socrates, the courage of Daniel, the strength of Samson, the craftiness of Delilah and the patience of Job. Add a sizeable amount of the knowledge of two languages and an understanding of two cultures. Season with the salt of experience, the pepper of animation, the oil of sympathy, a dash of humor and a cup of the good wine of empathy. Stew for about four years in non-air-conditioned portable classrooms, testing occasionally with the fork of sharp criticism thrust in by a principal, superintendent or bilingual program coordinator. When thoroughly done, garnish with a meager salary and serve hot to the community.

Joseph Michel
October 1971

It is recommended that 3 of these 9 hours be taken in a course which will be proposed shortly:

ED.C. 370E._ Methods in Bilingual Education

* Students wishing to study a language and culture other than Spanish may do so. See advisor for available courses.

** Student teaching must be done in a bilingual education project.

NOTE:

1. Students wishing to obtain a B.S. in Elementary Education with a concentration in bilingual education must be proficient in the target language. Proficiency in the language is shown by (1) a satisfactory score on the MLA Foreign Language Proficiency Examination, or (2) other evidence acceptable to the Foreign Language Education Center.

2. The program design for a B.S. in Elementary Education with a concentration in bilingual education does not allow for development of fundamental target language skills. A student must be proficient in these skills prior to entering this concentration.
THE UNIVERSITY OF TEXAS AT AUSTIN
Foreign Language Education Center
Austin, Texas 78712

THE MASTER OF ARTS DEGREE IN FOREIGN LANGUAGE EDUCATION

Concentration in Bilingual Education

A. PREREQUISITES

1. A Bachelor's degree or its equivalent.
2. Twelve semester hours of advanced undergraduate education courses or their equivalent.
3. Proficiency in the language as shown by (1) a satisfactory score on the MLA Foreign Language Proficiency Examination or (2) other evidence acceptable to the Foreign Language Education Center.
4. Admission to the Graduate School. This requires a satisfactory GPA (Grade Point Average) and a satisfactory score on the GRE (Graduate Record Examination).

B. THE PROGRAM

Thirty (30) semester hours* in upper-division and/or graduate courses to be taken from:

1. Courses in Education: Education courses related to bilingualism, bilingual education, curriculum, early childhood, English as a second language, etc.

2. Courses in Academic Specialization: Courses in linguistics, foreign language skills, cultures, or any combination of these.

C. NOTE

1. Students who are not proficient in one of the languages but who are interested in the English components of a bilingual program may obtain a Master of Arts degree in Foreign Language Education in an area closely related to bilingual education.

2. The University of Texas at Austin has excellent facilities for studies in Spanish language and Mexican-American group affairs. Other languages or groups may also be selected with approval of the Foreign Language Education Center.

3. All course work is determined in consultation with the student's graduate advisor. Applications for candidacy must be approved by the graduate dean.

*Six semester hours of course work and two papers may be substituted for a thesis related to bilingualism and bilingual education.
POSSIBLE SELECTION OF COURSES  
(Spanish target language, Mexican-American target group)

Thirty Hours from Courses such as:
