New York University is in deep financial trouble as are other higher education institutions in the country. This was evident in 1969 when federal funds were cut, operating expenses were inflated, and student enrollment declined. In February of 1972 the president of the University appointed a task force to study the problems and alternatives of the institution. This document presents the findings of that task force and presents a plan for financial solvency that must be implemented immediately in order to be effective. The plan takes into account improving the financial performance of the individual academic units, reductions in the cost of central services, prospects for additional income, and the rules, structures, and procedures for implementing the plan. President Hester's Statement on the Background of the Task Force Report

In February I appointed a Task Force to determine how to reduce our operating deficits substantially. The possible purchase of the Heights campus had then been announced by Governor Rockefeller, but it was clear that this alone would not solve our budgetary problems.

The report that follows presents the findings and recommendations of the Task Force and is an impressive and sobering document that will come as a shock to many people. It has been hard to accept the fact that an institution serving such useful purposes could fail to secure the financial resources it needs. For that reason, in addition to controlling expenses, we have sought large-scale assistance where it seemed logical to obtain it: in Albany and in Washington. But after much effort, federal support is still uncertain, and the state's ability to help us significantly is apparently limited to the possible purchase of the Heights campus.

The financial crisis developed rapidly over the last two and a half years. The University first felt the full impact of such inflation in 1969-70. At that time, an increase of about 17.5% in our operating expenses was expected; but it turned out to be closer to 25%. The Task Force was charged with finding a way to reduce these costs, perhaps by selling some of our facilities or by reducing our expenditures in some other way.

The charge to the Task Force was to produce a plan under which the University could regain, and retain, financial viability by 1974-75, in the face of large current deficits and the virtual exhaustion of the University's unrestricted capital. The plan laid out in this report is not an easy way out, but it does provide for the continuation of New York University as a major high-quality educational institution. It offers the opportunity for a fresh start: an institution restructured and reformed to meet the changed circumstances of the 1970's and to provide those educational opportunities for which New York University is especially suited by its location, resources, and history. We believe that the University community will choose survival and a new start.

The Task Force report is cast in dollars and terms. We are well aware that there is more to education than money: intellectual direction, conviction, imagination and collegiality are other vital inputs. But money, if not a sufficient condition for high-quality education, is a necessary condition and the one input now in short supply at New York University. If the financial difficulties can be resolved, the University's human resources are more than equal to the intellectual challenges of the
President Hester's Statement on the Background of the Task Force Report

In February I appointed a Task Force to determine how to reduce our operating deficits substantially. The possible purchase of the Heights campus had then been announced by Governor Rockefeller, but it was clear that this alone would not solve our budgetary problems.

The report that follows presents the findings and recommendations of the Task Force and is an impressive and sobering document that will come as a shock to many people. It has been hard to accept the fact that an institution serving such useful purposes could fail to secure the financial resources it needs. For that reason, in addition to controlling expenses, we have sought large-scale assistance where it seemed logical to obtain it: in Albany and in Washington. But after much effort, federal support is still uncertain, and the state's ability to help us significantly is apparently limited to the possible purchase of the Heights campus.

The financial crisis developed rapidly over the last two and a half years. The University first felt the full impact of cuts in federal support, inflated costs of operation, and the decline in undergraduate enrollment in the fall of 1969. At that point the Commission on Effective Use of Resources was appointed to find ways to cut anticipated deficits. The Commission succeeded in reducing a projected $9 million deficit for last year to $6,800,000. At the same time we intensified our student recruitment program and pressed hard in Albany for an increase in the Bundy formula and for categorical support for high-cost areas such as medicine, dentistry, and engineering. Simultaneously we were trying to convince Congress to inaugurate direct institutional support.

Just a year ago, in the spring of 1971, we had grounds for hope for increased state support and significant federal institutional aid. Severe budget problems in Albany and complex conditions in Washington dashed those hopes. Last May I explained our impending crisis to the State Commissioner of Education and told him that I believed New York University warranted special assistance. The final result, after extensive efforts by the Governor and legislative leaders, was the recent legislation authorizing the purchase of the Heights campus.

In February, as soon as we knew what form state assistance might take, the Task Force was appointed to address our remaining problems. It was clear that the sale of the Heights campus would, at best, provide turnover income. We must consider it with the greatest seriousness.

James M. Hester

The charge to the Task Force was produce a plan under which the University can regain, and retain, financial viability by 1974-75, in the face of large current deficits and the virtual exhaustion of the University's unrestricted capital. The plan laid out in this report is not an easy way out, but it does provide for the continuation of New York University as a major high-quality educational institution. It offers the opportunity for fresh start: an institution restructured to meet the changed circumstances of the 1970's and to provide those educational opportunities for which New York University is especially well suited by its location, resources and history. We believe that the University community will choose survival and a new start.

The Task Force report is cast in dollar terms. We are well aware that there is more to education than money: intellectual direction, conviction, imagination and collegiality are other vital inputs. But money, if not a sufficient condition for high-quality education, is a necessary condition and the one input now in short supply at New York University. If the financial difficulties can be resolved, the University's human resources are more than equal to the intellectual challenges of the 1970's.

The time pressures under which the final draft of this report was prepared may have made it, in some places, awkward in expression; for this we apologize.

This is a unanimous report.

I. A PLAN FOR FINANCIAL SOLVENCY

The Task Force plan for financial solvency has three basic elements. First, we have developed financial targets for 1974-75 for the individual academic and nonacademic units; the achievement of some of these targets will require severe reductions in expenditure. This report deals mainly with this element of the Task Force plan. Second, we propose rules and procedures to ensure that (a) the targets are in fact met and (b) the University continues to operate solvently after 1974-75. Third, we have examined the possibilities for increasing income by new educational departures, differential tuition arrangements and other innovations.

Prudent planning dictates that we not pin our hopes on these possibilities for generating additional income. We treat them as a means — to the extent that the added income is realized — to abate the severity of the required reductions and to permit growth and enrichment of educational programs in the future. Nor do we plan for fiscal salvation through increased external funding, federal, State or foundation. The events of the past year or so, especially the last few weeks, clearly show that no one in the world outside is at hand waiting to save us; to the extent that even partial external fiscal salvation is offered, the cost may be entirely too high.

This, then, is a plan based on our own efforts. Again, to the extent that more outside help — State vouchers for additional...
Preface

Within the next few weeks, New York University must choose which of two precedents it will shatter: it can choose to be the victim of the largest and most spectacular financial collapse in the history of American higher education, or it can choose to surmount, by its own resolute actions, the most difficult financial crisis any university has faced and survived.

The charge to the Task Force was to produce a plan under which the University can regain, and retain, financial viability by 1974-75, in the face of large current deficits and the virtual exhaustion of the University's unrestricted capital. The plan laid out in this report is not an easy way out, but it does provide for the continuation of New York University as a major high-quality educational institution. It offers the opportunity for a fresh start: an institution restructured and reformed to meet the changed circumstances of the 1970's and to provide those educational opportunities for which New York University is especially well suited by its location, resources and history. We believe that the University community will choose survival and a new start.

The Task Force report is cast in dollar terms. We are well aware that there is more to education than money: intellectual direction, conviction, imagination and collegiality are other vital inputs. But money, if not a sufficient condition for high-quality education, is a necessary condition, and the one input now in short supply at New York University. If the financial difficulties can be resolved, the University's human resources are more than equal to the intellectual challenges of the 1970's.

million of unrestricted income and gifts shown in Table 1, nearly $68 million consisted of income and gifts attributable to the activities of individual schools. The major such sources were student fees ($57 million), the State appropriation ($4.6 million) and indirect expense recovery on sponsored programs ($3.3 million). The principal income item not attributable to individual schools was $1.9 million of general endowment income applied.

Since the University's income largely comes from the individual schools and colleges, that income must defray not only the direct expenses in the budgets of the schools and colleges but also the costs of the centrally budgeted services; there is little other income available to cover such of "every tub on its own bottom," the percentages in column (4) would not be equal. In particular, the educational divisions with heavy use of libraries and plant, in particular the schools at University Heights, the Graduate School of Arts and Science, WSC, Education and BPA, would have had to produce column (4) percentages in excess of 159 to break even. On the other hand, the School of Continuing Education, the School of the Arts and the Graduate School of Social Work could break even with a percentage significantly below 159. The University's cost accounting system indicates that only four divisions fully covered their shares of "indirect" costs in 1970-71. GBA, GPA, Law and Dentistry, the first three of which were the only schools with column (4) percentages in excess of 159.

Framework of the Plan

Our plan starts with the estimated income, expenditures and deficit for the current year, 1971-72. The present estimate is that current expenditures will exceed current income plus unrestricted gifts by $11.5 million. (The reported deficit will be somewhat smaller because of the transfer of funds to reflect the difference between actual endowment earnings and the 6 percent rate of return.) Despite stringent economies, the deficit will be greater next year, 1972-73, because of adverse enrollment trends and some built-in cost increases. In our plan, 1973-74 is the year of change, with a balanced budget achieved in 1974-75. However, most of the improvement must occur in 1973-74: we propose that each of the budgets of the individual academic and nonacademic units for 1973-74 reflect no less than 80 percent of the improvement between 1971-72 and 1974-75 that our plan specifies.

The financial targets we have developed relate to the income (net of uncommitted student aid) and gifts generated by the several schools and colleges, the costs incurred by the schools for instruction and directly related purposes (like the Dental Clinic, extension and public service, and organized research) — "direct costs" — of the centrally budgeted or "indirect" costs allocated to the schools, the largest of which are libraries and the operation and maintenance of plant. In particular, our plan has two steps: maximizing the
million of unrestricted income and gifts shown in Table 1, nearly $68 million consisted of income and gifts attributable to the activities of individual schools. The major sources were student fees ($57 million), the State appropriation ($4.6 million) and indirect expense recovery on sponsored programs ($3.3 million). The principal item not attributable to individual schools was $1.9 million of general endowment income applied.

Since the University's income largely comes from the individual schools and colleges, this income must defy not only the direct expenses in the budgets of the schools and colleges but also the costs of the centrally budgeted services; there is little other income available to cover such costs and, at the end of the 1971-72 fiscal year, there will be very little unrestricted capital available. The allocation of central, or joint, costs among units is necessarily an arbitrary process. Nonetheless, if the University is to operate, the schools and colleges must collectively produce income substantially in excess of direct costs.

The Budgetary Position of the Schools

In its investigations, the Task Force confronted two obvious questions about all this. First, just how much income must the academic units in combination produce in excess of their direct costs? Second, how much such income do the individual units produce at present? To answer these questions sensibly, some further adjustments to the data shown in Table 1 are necessary. They are shown in Table 2. One adjustment is to subtract student aid from general University funds. In a very real sense, student aid is an offset against income from student fees, for it is a fair presumption that, in the absence of student aid, student fee income would be reduced by at least that amount. The inclusion of student aid on both sides of the accounts overstates both income and expenditure. Another adjustment is the subtraction from both sides of centrally generated University income and the central costs such income would defray. The residuals, on line 5 of Table 2, represent the net costs that the educational division must bear and the net income available credited to the schools and colleges.

Since some, but not all, schools and colleges have some expenses for libraries, space and other services included within their own budgets, we have developed our own distinction between "direct" and "indirect" costs on the basis of the formal budgets, but of functional categories of expenditure. We define as "direct" costs for this purpose all expenditures from general funds (aside from student aid) that directly provide the educational and research activities for which the University exists. These functional categories include:

- instructional and departmental research,
- other organized activities relating to educational departments, a category including noncredit workshops and seminar programs, Town Hall and similar activities;
- organized research (primarily the Courant Institute and the Research Division of the School of Engineering); and
- extension and public services, a category dominated by the activities of the School of Continuing Education.

In 1970-71, total expenditures from general funds for these categories amounted to $44 million; net expenditures for the supporting services allocated to the schools amounted to $26 million (70 percent of this total is accounted for by library, plant and student services costs). Thus, total costs allocated to the schools were 159 percent of "direct" costs, while the total income generated by the schools was 143 percent of "direct" costs. That is, balancing the budget in 1970-71 would have required an average reduction in costs of 10 percent or an average increase in income of 11 percent.

In Table 3, we present data for the individual schools for 1970-71. In examining the Table, it should be kept in mind that a balanced budget could have been achieved only if the average school (weighted by size) had generated income and gifts equal to 150 percent of its direct costs. To be sure, the schools differ greatly in their use of libraries, space and other "indirect" services: even under a regime,

GBA, GPA, Law and Dentistry, the first three of which were the only schools with column (4) percentages in excess of 159.

**Framework of the Plan**

Our plan starts with the estimated income, expenditures and deficit for the current year, 1971-72. The present estimate is that current expenditures will exceed current income plus unrestricted gifts by $115 million. (The reported deficit will be somewhat smaller because of the transfer of funds to reflect the difference between actual endowment earnings and the 8 percent rate of return.) Despite stringent economies, the deficit will be greater next year, 1972-73, because of adverse enrollment trends and some built-in cost increases. In our plan, 1973-74 is the year of change, with a balanced budget achieved in 1974-75. However, most of the improve-

ment must occur in 1973-74: we propose that each of the budgets of the individual academic and nonacademic units for 1973-74 reflect no less than 80 percent of the improvement between 1971-72 and 1974-75 that our plan specifies.

The financial targets we have developed relate to the income (net of unfunded student aid) and gifts generated by the several schools and colleges, the costs incurred by the schools for instruction and directly related purposes (like the Dental Clinic, extension and public service and organized research) — "direct costs" — and the centrally budgeted or "indirect" costs allocated to the individual schools.

expected to generate unrestricted income and gifts (net of unfunded student aid) of $65.9 million

2. This will amount to 147 percent of direct instructional and related expenses of $44.8 million

3. Thus, the academic units will be generating, to cover indirect, centrally budgeted costs, an excess over direct costs of $21.1 million

4. But net indirect costs allocated to the schools will amount to an estimated $32.6 million yielding a short-fall of $11.5 million

5. To have achieved a balanced budget in 1971-72 would have required that the schools and colleges, in the aggregate, generate income equal to 175 percent of direct costs.

As Table 4 shows, only two of the academic units (GBA and Law) will generate income in excess of 175 percent of direct costs. A third unit (GBA) will not meet this standard, but nonetheless is not in a deficit position because it makes relatively light demands on centrally budgeted services. On the other hand, the units at University Heights with very high plant costs and several of the units at the Square — the Arts and Science units, BPA, Education — with heavy use of libraries, plant and student services, would have been in deficit even had they met the 175 percent standard.

Our targets for 1974-75 (see Table 6, below) call for high percentages for such schools.

We propose, below, economies in the operations of the centrally budgeted services that will significantly reduce these costs by 1974-75. Also, the sale of the University Heights campus will reduce noninstructional costs, for libraries, plant operation, debt service and the like, by an estimated $4 million. On the other hand, undergraduate enrollment trends and some of the academic restructure we propose will reduce income of some of the academic units significantly. Thus, a balanced budget for 1973-74...

In 1970-71, the schools and colleges are grouped into categories based on their activities. The schools with column (4) percentages in excess of 159.

**Framework of the Plan**

Our plan starts with the estimated income, expenditures and deficit for the current year, 1971-72. The present estimate is that current expenditures will exceed current income plus unrestricted gifts by $11.5 million. (The reported deficit will be somewhat smaller because of the transfer of funds to reflect the difference between actual endowment earnings and the 6 percent rate of return.) Despite stringent economies, the deficit will be greater next year, 1972-73, because of adverse enrollment trends and some built-in cost increases. In our plan, 1973-74 is the year of change, with a balanced budget achieved in 1974-75. However, most of the improvement must occur in 1973-74: we propose that each of the budgets of the individual academic and nonacademic units for 1973-74 reflect no less than 80 percent of the improvement between 1971-72 and 1974-75 that our plan specifies.

The financial targets we have developed relate to the income (net of unrestricted student aid) and gifts generated by the several schools and colleges, the costs incurred by the schools for instruction and directly related purposes (like the Dental Clinic, extension and public service and organized research) — "direct costs" — and the centrally budgeted or "indirect" costs allocated to the schools, the largest of which are libraries and the operation and maintenance of plant. In particular, our plan has two steps: maximizing the excess of income produced by the schools over their direct costs and minimizing the aggregate size of the indirect costs that this excess must cover.

We express the targets in the first step in both percentage and dollar terms. Let us examine the aggregate estimates for the University (exclusive of the Medical Center and of income and expense of restricted funds) for 1971-72:

1. In 1971-72, the schools and colleges are

2. The following table shows only two of the academic units (GPA and Law) will generate income in excess of 173 percent of direct costs. A third unit (GBA) will not meet this standard, but nonetheless is not in a deficit position because it makes relatively light demands on centrally budgeted services. On the other hand, the units at University Heights with very high plant costs, the units at the Square — the Arts and Science units, BPA, Education — with heavy use of libraries, plant and student services, would have been in deficit even had they met the 173 percent standard. Our targets for 1974-75 (see Table 6, below) call for high percentages for such schools.

We propose, below, economies in the operations of the centrally budgeted services that will significantly reduce these costs by 1974-75. Also, the sale of the University Heights campus will reduce noninstructional costs, for libraries, plant operation, debt service and the like, by an estimated 4 million. On the other hand, undergraduate enrollment trends and some of the academic retrenchment we propose will reduce income of some of the academic units significantly. Thus, a balanced budget for 1974-75 cannot be achieved simply by meeting the 173 percent standard that applies in the current year. Specific dollar targets for individual schools, as well as percentage standards, are necessary. Those targets are developed in the following section. In Table 3, we present a summary of the targets that will produce a balanced budget for 1974-75, at 1971-72 salary and tuition levels (the adjustments necessary to provide for salary increases are discussed below). A reduction in direct instructional costs of $10.5 million, nearly one-fourth, is required, and a reduction in other costs of $7.3 million, or 22 percent, is also necessary.
II. IMPROVING THE FINANCIAL PERFORMANCE OF THE ACADEMIC UNITS

In late March and early April, the Task Force asked the heads of each of the academic units — deans of the schools and colleges with separate budgets and directors of free-standing institutes and centers operating with unrestricted University funds — to prepare three-year budgetary plans extending through 1974-76, plans that met fairly demanding standards of financial performance. In most cases, we had one or more meetings with the respective deans and directors to discuss these plans and, in a few cases, revised or adjusted plans were submitted to us.

For most of the academic units, the targets presented in Table 6 and discussed in the following paragraphs are those specified in the plans presented to us (adjusted, where necessary, to reflect uniform assumptions on salaries, tuition, etc.). For some units, however, we found the plans presented to us unacceptable and the targets we present are those set by the Task Force. However, for both types of cases, we use the term “targets” not as an indication of well-intentioned hopes, but as financial results that simply must be achieved if the University is to survive. The critical figure is the excess of income over direct expense, in dollars (column 1 of Table 6). If income falls short of the projected level for any school, that school must find ways to reduce its projected direct instructional and related expense, dollar for dollar.

On the other hand, if income exceeds the projected levels — and our hope is that new educational programs and other innovations will have this result, especially for undergraduate education — then direct instructional costs can rise at least proportionately. This is especially important in the Arts and Science complex and in other units where substantial cuts in direct instructional costs are anticipated. The appropriate point of view for the schools and colleges is that every $100,000 of additional income and unrestricted gifts generated — above the amounts projected — can save roughly four full-time faculty positions.

Before turning to the individual units, we must recognize the unreality of projections based on the assumption that salary levels can remain frozen for four years (from 1971-72 through 1974-75). During the 1960's, rising salary levels were, in essence, financed by fairly steady increases in tuition rates. We believe that this will not be a feasible course, in regard to underwriting observations and suggested guidelines.

Costs of instruction, in any institution, differ so widely among the disciplines in the best of circumstances — with enrollments and external funding assiduous efforts to economize and use efficient educational methods — that the relative income generated to direct instructional costs would be far from uniform among Arts and Science departments. The very large shares of centrally budgeted instructional costs in that so many normally low-instruction cost disciplines in fact have very high instructional costs. Moreover, in many of these instances in which enrollment declines have not been matched by a contraction in staffing or space, we suggest where the cuts must be most drastic.

For example, language departments should not be high-cost ones and they have not been historically at this University. Yet many of them produce income that does not cover direct instructional costs, and it alone does not cover anything to cover any other costs. Some of them do just as bad as those in financial terms on the undergraduate level as on the graduate level. Clear enrollment declines form the principal basis for these reductions. In the absence of any reasonable expectation of a reversal, there are a number of obvious cases for program termination among the languages.

This cannot be considered unthinkable for even now we do not offer instruction in a number of languages that are widely used and possess an extensive literature (e.g., Hindi, Bengali); instruction in traditional Western languages is not sacrilegious simply because it is both traditional and Western.

The humanities, other than the language departments, are also historically low-cost ones for the most part, and some of them continue to be so. Moreover, in most cases the undergraduate programs have excellent financial results. But here, too, there are departments that barely cover direct

For most of the academic units, the targets presented in Table 6 and discussed in the following paragraphs are those specified in the plans presented to us (adjusted, where necessary, to reflect undergraduate commitments on salaries, etc.). For some units, however, we found the plans presented to us unacceptable and the targets we present are those set by the Task Force. However, for both types of cases, we use the term "targets" not as an indication of well-intentioned hopes, but as financial results that simply must be achieved if the University is to survive. The critical figure is the excess of income over direct expenses, in dollars (column 1 of Table 6). If income falls short of the projected level for any school, that school must find ways to reduce its projected direct instructional and related expense, dollar for dollar.

On the other hand, if income exceeds the projected levels — and our hope is that new educational programs and other innovations will have this result, especially for undergraduate education — then direct instructional costs can rise at least proportionately. This is especially important in the Arts and Science complex and in other units where substantial cuts in direct instructional costs are anticipated. The appropriate point of view for the schools and colleges is that every $100,000 of additional income and unrestricted gifts generated — above the amounts projected — can save roughly four full-time faculty positions.

Before turning to the individual units, we must recognize the unreality of projections based on the assumption that salary levels can remain frozen for four years (from 1971-72 through 1974-75). During the 1960's, rising salary levels were, in essence, financed by fairly steady increases in tuition rates. We believe that this will not be a feasible course, in regard to undergraduate tuition levels, in the 1970's. However, modest increases in tuition in the graduate and professional schools do seem feasible. As Table 7 shows, an increase in graduate and professional tuition to $90 a point (or the rough equivalent, for divisions not now on the $83 a point schedule) could come close to financing salary increases averaging 10 percent above 1971-72, in the academic units, in our projections for 1974-75. Larger salary increases would require increases in income not projected in any of the tables to this point.

This is the aggregate picture for the academic units. The units that are large or exclusively graduate or professional would have greater room for salary increases financed from graduate tuition increases. We believe that the need to finance salary increases — or do without them and lose faculty and staff — should provide a powerful incentive to innovations that generate additional income.

The Arts and Science Complex

The Task Force recommends a vertical reorganization of the University, that is, academic, budgetary and administrative integration of the relevant graduate and undergraduate divisions in the Arts and Science complex and (also in Business

These Arts and Science divisions are estimated to produce a deficit, on a fully allocated cost basis, of $4.6 million, more than half the total University deficit. Even if the costs attributable to University College's location at the Heights (and thus avoided: when it returns to Washington Square in September 1973) were eliminated, the deficit would be approximately $4.7 million. The Arts and Science divisions more than cover their direct instructional costs, but they account for very large shares of centrally budgeted expenses: nearly half of library and student services costs and roughly one-third of space occupancy and central services costs. Thus, to operate without deficits, they would have to produce income in excess of direct instructional costs of very considerable magnitude, and more so than for most other divisions of the University.

The overall plan of the Task Force calls for substantial reductions in some of the centrally budgeted expenses. But even if drastic reductions in these costs are achieved, the University can remain solvent only if the direct instructional costs in Arts and Science are also reduced drastically.

At the undergraduate level, the problem is one of scaling down to match undergraduate enrollments. We project that the combined Washington Square College-University College enrollment will level off at a full-time equivalent total of just over 4,000, compared to 5,300 in the Fall term, 1971. **Propor-tionately much larger declines are anticipated in the numbers of undergraduates from other divisions taking liberal arts courses, reflecting expected enrollment trends in these divisions.**

At the graduate level, we anticipate relatively steady enrollment, on balance only slightly below the 1971-72 level. The action that is required here includes the elimination of a few programs with very low enrollments (and hence very high per student costs), but, more generally, a slimming down of course offerings and instructional staff in the numerous departments where per student costs have risen rapidly, to unsustainable levels, in recent years. In all, the targets we set call for a reduction in direct instructional and related costs in Arts and Science from $16.7 million in 1971-72 to $11 million in 1974-75.

The specific cutbacks required to meet the financial targets of course must be determined within the academic units, for Arts and Science as for the other parts of the University. Elsewhere, we suggest some operating procedures for doing this, with substantial faculty involvement. However, we have examined the data for individual departments in Arts and Science; this examination has resulted in the following recommendations.

**Another structural issue concerns the Department of Economics at Washington Square, now a joint GSAS-Courant Institute with extensive financial interchanges. Given the restructuring of both Arts and Business Administration, the budgetary and academic arrangements for Economics should be explicit about the nature of its alliances among the two new unified faculties and the central administration and office staffs.**

**This makes no allowance for increased enrollments stemming from new departures in postgraduate Arts and Science education.** It further assumes that tuition will remain at current levels.
The financial situation of the University of [Name] is critical, with projected deficits and a need for significant retrenchment. The Arts and Science complex, in particular, faces drastic reductions in funding.

**FINANCIAL OF THE UNIVERSITY**

In early April, the boards of each of our schools, state budgets and independent institutes and universities, including the University of [Name], began to finalize their three-year budgets for the years 1974-76. In all these, enrollments are expected to be substantially lower, a combination of Immediate expectations and more generous financial circumstances. In most cases, our directors had to report that the financial position of their endowments and unrestricted University funds was not as encouraging as had been anticipated. In the spring of 1971, to avoid deficits, the University must reduce its costs to a level of approximately $4.7 million. The Arts and Science departments, however, have been hit particularly hard.

In 1971-72, those Arts and Science divisions are estimated to produce a deficit, on a fully allocated cost basis, of $6.4 million, more than half the total University deficit. Even if the costs attributable to University College's location at the Heights (and thus also unaffordable) were eliminated, the deficit would be approximately $4.7 million. The Arts and Science divisions contribute substantially more than other divisions to the costs of instruction, student services, and central staff costs. Thus, to operate without deficits, they would have to produce income in excess of direct instructional costs of very considerable magnitude, and more so than for most other divisions of the University.

The overall plan of the Task Force calls for substantial reductions in some of the centrally budgeted expenses. But even if drastic reductions in these costs are achieved, the University can remain solvent only if the direct instructional costs in Arts and Science are also reduced drastically.

The data for 1971-72, when the Arts and Science departments were forced to produce income in excess of direct instructional costs, clearly suggests where the cuts must be most drastic.

For example, language departments should not be high-cost ones and they have been historically at this University. Yet, many of them produce income that does not cover direct instructional costs, let alone contribute anything to covering other costs. Some of them do just as badly in financial terms on the undergraduate level as on the graduate level. Clearly, enrollment declines form the principal explanation in these cases. In the absence of any reasonable expectation of a reversal, there are a number of obvious causes for program termination among the languages. This cannot be considered unthinkable, for even now we do not offer instruction in a number of languages that are widely used and possess an extensive literature (e.g., Hindi, Bengali); instruction in a traditional Western language is not sacrosanct simply because it is both traditional and Western.

The humanities, other than the language departments, are also historically low-cost ones for the most part, and some of them continue to be so. Moreover, in most cases, the undergraduate programs have excellent financial results. But here, too, there are departments that barely cover direct costs, and these are not always our most prestigious ones.

**Instructional costs in the social sciences** should be low, even at the graduate level. Our social science departments, with one exception, have achieved under our budgetary constraints. The proposed reductions in outlays for student services and research (see below) it may be that higher fractions of the remaining funds be devoted to direct costs.

The sciences do tend to be high-cost operations and ours are no exception. But there is real question in regard to whether we can continue to permit a department to operate under conditions that result in its covering 60 percent or less of its direct costs, as is the case for two of our science departments. That this outcome is not inevitable is demonstrated by the one science department that does cover its direct costs even at the graduate level.

If Arts and Science as a whole were to be in balance in 1974-75, it would have to produce income that is equal to 135 percent of direct costs. We suggest as guidelines for retrenchment that any department that fails to generate at least 135 percent of direct instructional costs should be considered for discontinuance. The decisions on cross-subsidization among departments within the Arts and Science complex must be made explicit ones.

The financial targets we set for Arts and Science as a whole assume income of $19.5 million and specify direct instructional budgets of $11.0 million. This would produce an excess of income over direct costs of $8.5 million; even so, we estimate that Arts and Science will have a deficit, if any, of only $5 million.

*The income projections used here are based, in part, on the current formula employed to apportion income from restricted funds, $12,000,000-$15,000,000, to the schools and to the departments within the schools. The allocation of income to the schools is based upon a formula which takes into account a number of factors, including the number of students, the percentage of students not enrolled in the schools, and the percentage of students enrolled in the schools. The allocation of income to the departments within the schools is based upon a formula which takes into account a number of factors, including the number of students enrolled in the departments, the percentage of students enrolled in the departments, and the percentage of students enrolled in the departments who are not enrolled in the schools.

**The following observations and suggested guidelines** should be taken into account when making decisions on the future operations and ours are no exception. But there is real question in regard to whether we can continue to permit a department to operate under conditions that result in its covering 60 percent or less of its direct costs, as is the case for two of our science departments. That this outcome is not inevitable is demonstrated by the one science department that does cover its direct costs even at the graduate level.

If Arts and Science as a whole were to be in balance in 1974-75, it would have to produce income that is equal to 135 percent of direct costs. Note: Because of rounding, detail may not add to totals.

a) Includes instruction and departmental research; Dental Clinic; organized research (Engineering and Courant); extension and public service (Education and SGE); and other organized activities (Law, SGE and Center for International Studies).
on a fully allocated-cost basis, in excess of $1.5 million. Income will be equal to 181 percent of direct instructional costs in the aggregate. Consequently, any department that fails to meet the 181 percent standard will be receiving a subsidy from the departments that do more than meet this standard (as well as the subsidy from other divisions of the University built into the overall Arts and Science financial targets). This subsidization process should be done on the basis of explicit decisions that the Department X is in fact worth such a subsidy.

**Education**

The targets for the School of Education assume a further large decline in undergraduate enrollment in 1972-73, with no recovery thereafter. Graduate enrollment is expected to hold up well, and the income generated by the School in 1974-75 (at current tuition levels) is expected to be little different than it is in the current year (about $55,000 higher). Direct instructional costs are to be controlled tightly, to produce a decline of close to $300,000. On balance, the School should overcome the deficit it is expected to generate in 1971-72.

**Business Administration**

As in the case of Arts and Science, the Task Force has recommended budgetary integration of the graduate and undergraduate faculties in Business Administration and creation of a single faculty of Business Administration. In 1971-72, the Graduate School of Business Administration is expected to have a surplus on a fully allocated-cost basis, but this will be more than offset by the deficit of the undergraduate College of Business and Public Administration. Undergraduate enrollment and income are projected to decline substantially to 1974-75, but there will be matching declines in the instructional costs for undergraduate education, according to the plans submitted to us. Graduate enrollment is projected to rise further and instructional costs at the graduate level will also rise. On balance, however, the excess of income over direct costs for Business Administration in 1974-75 is targeted for nearly $350,000 more than in the current year, and Business Administration as a whole will not be a deficit operation. It should be noted that significant portion of the excess over direct instructional costs is not available to cover centrally budgeted costs at Washington Square, but instead must be used for space use after the occupancy of Tisch Hall).

**School of Law**

The School of Law, like GBA and GPA, is currently in a surplus position, albeit modestly. Its income, direct instructional costs, and excess of income over direct costs are projected to change only slightly to 1974-75, but that change is a favorable one. As with GBA, the Law School’s excess of income over direct costs is not all available to meet centrally budgeted indirect costs, since it directly provides a library and other costly services.

**College of Dentistry**

The budget plan presented to the Task Force by the College shows a more rapid increase in direct instructional and related (mainly Clinic) costs than in income. By 1974-75 the excess of income over direct costs will be only $100,000 or so above 1971-72 outlays for operation and maintenance of the existing Dental plant. We are persuaded that this excess will be insufficient to cover the likely plant costs — on existing buildings — in 1974-75, much less contribute anything for other costs, some of which are incurred at the Dental Center, not Washington Square. Therefore, we have set as a target for the College an excess of income over direct expense for “organized activities” of $1.4 million, over $400,000 greater than in the plan presented to us, to be achieved by appropriate adjustments of income and direct expense, mainly the latter.

Moreover, we are concerned with the financial impact of the proposed new building. Like all other schools, the College must present a detailed plan for covering, in full, both debt service and operating costs of the new building, before proceeding with the building. We fully realize that this requirement has not been set (or met) for other new buildings in recent years, but the University simply has no resources left to meet deficits on planned new buildings. Other divisions of the University cannot be called upon to dismiss faculty members in order to help finance new buildings at the Dental Center or anywhere else. That seems to us far harsher than to require that the financial planning for new buildings guarantee their complete support, however dire the consequences of failing to construct new buildings.

**Graduate School of Social Work**

Like numerous other schools and departments, the Social Work should be continued. Its discontinuance will permit a real and early saving of appreciable amounts; we estimate that elimination of the direct instructional cost deficit and the readily realized savings of space occupancy and central service costs could total $300,000 on the basis of 1971-72 experience.

The discontinuance of any school is a prospect that is difficult to contemplate, let alone recommend. It is especially difficult in the case of Social Work. We are mindful of the real and symbolic value of a school of social work in an urban university. The School does reach into the ghetto communities in important ways, training people who will be providing services directly to poverty-area residents and actually providing services right now, in the form of students doing field work in social agencies. Moreover, the proportions of its faculty and student body who are minority-group members or women are high relative to other schools at the University.

The Task Force has had oral and written consultations with the faculty and dean of the School. They have spoken eloquently and fervently of the social value of the School’s effort. In addition, at our request, they have addressed the financial problems of and prospects for the School. We have been told that the clinical nature of social work instruction makes reduction in per student costs very hard to achieve, although marginal reductions stemming from some limited admission of part-time students to the didactic courses are expected next year and thereafter. Also, the School proposes to institute an undergraduate social work program with lower per student costs, but the overall improvement that this program will contribute to the School’s finances has not been specified and may depend largely on the external funding that may or may not be forthcoming.

Therefore, the prospect for financial viability for the School seems to rest on increases in income from government sources for instructional programs (the one large new research program at present is only 50 percent financed from external sources) and receipts from gifts. We have been given budget projections premised on large increases in income and gifts. The premises strike us as highly optimistic in view of experience in the recent past, in particular the premise that large continuing receipts from unrestricted gifts will be forthcoming for a school that never before has attracted significant amounts of gifts income.
The targets for the School of Education assume a further large decline in undergraduate enrollment in 1972-73, with no recovery thereafter. Graduate enrollment is expected to hold up well, and the income generated by the School in 1974-75 (at current tuition levels) is expected to be little different from what it is in the current year (about $55,000 higher). Direct instructional costs are to be controlled tightly, to produce a decline of close to $300,000. On balance, the School should overcome the deficit it is expected to generate in 1971-72.

Business Administration

As in the case of Arts and Sciences, the Task Force has recommended budgetary integration of the graduate and undergraduate faculties in Business Administration. In 1971-72, the Graduate School of Business Administration is expected to have a surplus on a fully allocated-cost basis, but this will be more than offset by the deficit of the undergraduate College of Business and Public Administration. Undergraduate enrollment and income are projected to decline substantially to 1974-75, but there will be matching declines in the instructional costs of the graduate education, according to the plans submitted to us. Graduate enrollment is projected to rise further and instructional costs at the graduate level will also rise. On balance, however, the expected further increase in direct costs for Business Administration in 1974-75 is targeted for nearly $850,000 more than in the current year, and Business Administration as a whole will not be a deficit operation. It should be noted that a significant portion of the excess over direct instructional costs is not available to cover centrally budgeted costs at Washington Square, but instead must be used to operate library, buildings and services downtown at GBA.

School of the Arts

In the current year, the School of the Arts will have a deficit on a fully allocated-cost basis. Demand for admission to most of the programs of the School is very strong and the School plans to overcome its deficit by increasing enrollments in these programs. The targets call for an increase in direct instructional costs, to yield an excess of income over instructional costs of $950,000 by 1974-75.

Public Administration

In proportion to its size, the Graduate School of Public Administration has by far the most financial results of any of the Schools in the University. This is a consequence of sharp rises in enrollment in recent years, combined with a modest rate of faculty expansion and success in raising external funds to finance instructional programs. The 1974-75 targets call for a 25 per cent increase in enrollment, although at rates that are very low by recent standards, and a somewhat faster rate of increase in direct instructional costs. In terms of percentages, the School's results will deteriorate slightly and its surplus in fully allocated-cost basis will also decline slightly (in part due to higher College of Dentistry

The budget plan presented to the Task Force by the College shows a more rapid increase in direct instructional and related (mainly Clinic) costs than in income. By 1974-75 the excess of income over direct costs will be $130,000, or about $50,000 higher than in 1971-72 outlays for operation and maintenance of the existing Dental plant. We are persuaded that this excess will be insufficient to cover the likely plant costs on existing buildings— in 1975, much less even to do something for other costs, some of which are incurred at the Dental Center, not Washington Square. Therefore, we have set as a target for the College an excess of income over direct expense for "all activities" of $1.4 million, over $400,000 greater than in the plan presented to us, to be achieved by appropriate adjustments of income and direct expense, mainly the latter.

Moreover, we are concerned with the financial impact of the proposed new building. Like all other schools, the College must present a detailed plan for covering, in full, both debt service and operating costs of the new building, before proceeding with the building. We fully realize that this requirement has not been met (for met in any other new buildings in recent years, but the University simply has no resources left to meet deficits on planned new buildings. Other divisions of the University have managed to persuade faculty members in order to help finance new buildings, at the Dental Center or anywhere else. This seems to us far harsher than to require that the financial planning for new buildings guarantee their complete support, however dire the consequences of failing to construct new buildings.

Graduate School of Social Work

Like numerous other schools and departments at the University, the Graduate School of Social Work was enabled to expand its program considerably during the 1960's by a large infusion of government funds. As in other cases, government support has been severely cut back in the last few years. Prospects for Social Work have been especially severe, because most of the government support directly financed instruction, not research. This means not only loss of direct cost recoveries and ancillary support, but also the loss to training programs of the salary to the University's unrestricted funds budget, if the instructional program is to be maintained.

In consequence, the School is now operating with a large deficit. It is the only one of the University's schools and colleges that will not cover its direct costs of instruction from its general revenues, and thus it will not be contributing anything for the use of space, communications services, personnel and payroll services, and the like, not to mention libraries and central overhead costs. On a fully allocated-cost basis its 1971-72 deficit was $285,000, roughly 37 percent of its income; the estimated deficit for 1972-73 is approximately $450,000, equivalent to 60 percent of its income. Relative to size or any other measure, this is one of the worst financial outcomes among the University's schools.

The Task Force, therefore, has been compelled to consider whether the School...
School of Law

The School of Law, like GBA and GPA, is currently in a surplus position, albeit modestly. Its income, direct instructional costs, and excess of income over direct costs are projected to change only slightly from 1974-75, but that change is a favorable one. As with GBA, the Law School's excess of income over direct costs is not all available to meet centrally budgeted indirect costs, since it directly provides some library and other costly services.

College of Dentistry

The budget plan presented to the Task Force by the College shows a more rapid increase in direct instructional and related (mainly Clinic) costs than in income. By 1974-75, the excess of income over direct costs will be only $100,000 or so above 1971-72 outlays for operation and maintenance of the existing Dental plant. We are persuaded that this excess will be insufficient to cover the likely plant costs on existing buildings — in 1974-75, much less contribute anything for other costs, some of which are incurred at the Dental Center, not Washington Square. Therefore, we have set as a target for the College an excess of income over direct costs of $1.4 million, over $400,000 greater than in the plan presented to us, to be achieved by appropriate adjustments of income and direct expense, mainly the latter.

Moreover, we are concerned with the financial impact of the proposed new building. Like all other schools, the College must present a detailed plan for covering, in full, both debt service and operating costs of the new building, before proceeding with the building. We fully realize that this requirement has not been met (or met) for other new buildings in recent years, but the University simply has no resources left to meet deficits on planned new buildings. Other divisions of the University cannot be called upon to dismiss faculty members in order to help finance new buildings, at the Dental Center or anywhere else. That seems to us far worse than to require that the financial charges for space use after the occupancy of Tisch Hall).

School of Law

The School of Law, like GBA and GPA, is currently in a surplus position, albeit modestly. Its income, direct instructional costs, and excess of income over direct costs are projected to change only slightly from 1974-75, but that change is a favorable one. As with GBA, the Law School's excess of income over direct costs is not all available to meet centrally budgeted indirect costs, since it directly provides some library and other costly services.

College of Dentistry

The budget plan presented to the Task Force by the College shows a more rapid increase in direct instructional and related (mainly Clinic) costs than in income. By 1974-75 the excess of income over direct costs will be only $100,000 or so above 1971-72 outlays for operation and maintenance of the existing Dental plant. We are persuaded that this excess will be insufficient to cover the likely plant costs on existing buildings — in 1974-75, much less contribute anything for other costs, some of which are incurred at the Dental Center, not Washington Square. Therefore, we have set as a target for the College an excess of income over direct costs of $1.4 million, over $400,000 greater than in the plan presented to us, to be achieved by appropriate adjustments of income and direct expense, mainly the latter.

Moreover, we are concerned with the financial impact of the proposed new building. Like all other schools, the College must present a detailed plan for covering, in full, both debt service and operating costs of the new building, before proceeding with the building. We fully realize that this requirement has not been met (or met) for other new buildings in recent years, but the University simply has no resources left to meet deficits on planned new buildings. Other divisions of the University cannot be called upon to dismiss faculty members in order to help finance new buildings, at the Dental Center or anywhere else. That seems to us far worse than to require that the financial should be continued. Its discontinuance will permit a real and early saving of appreciable amounts; we estimate that elimination of the direct instructional cost deficit and the realization of savings of space occupancy and central service costs would total $200,000 on the basis of 1971-72 experience.

The discontinuance of any school is a prospect that is difficult to contemplate, let alone recommend. It is especially difficult in the case of Social Work. We are mindful of the real and symbolic value of a school of social work in an urban university. The School does reach into the ghetto communities in important ways, training people who will be providing services directly to poverty-area residents and actually providing services right now, in the form of students doing field work in social agencies. Moreover, the proportions of its faculty and student body who are minority-group members or women are high relative to other schools at the University.

The Task Force has had oral and written consultations with the faculty and dean of the School. They have spoken eloquently and fervently of the social value of the School's effort. In addition, at our request, they have addressed the financial problems of and prospects for the School. We have been told that the clinical nature of social work instruction makes reduction in per student costs very hard to achieve, although marginal reductions stemming from some limited admission of part-time students to the didactic courses are expected next year and thereafter. Also, the School proposes to institute an undergraduate social work program with lower per student costs, but the overall improvement that this program will contribute to the School's finances has not been specified and may depend largely on the external funding that may or may not be forthcoming.

Therefore, the prospect for financial viability for the School seems to rest on increases in income from government sources for instructional programs (the one large new research program at present is only 50 percent financed from external sources) and receipts from gifts. We have been given budget projections premised on sale of the University Heights campus, the Task Force did examine the finances of the School of Engineering and Science. We found that the School had been in a deficit position in most recent years and that its current and prospective deficits at University Heights were so large that we were prepared to recommend closing the Heights campus if there were no sale to the City or State. Under the terms of the State legislation, the University is required to enter negotiations immediately, directed at the merger of "appropriate programs" of the School of Engineering and Science into the Polytechnic Institute of Brooklyn. The Task Force therefore has found it very difficult to make any independent recommendations concerning the School, despite extensive consultations and analysis. However, we do not mean to preclude any feasible resolution of the future of the School and its faculty.

By feasible we mean to suggest that, if any engineering education is to be offered at Washington Square, it must be done under the fiscal guidelines set in this report: that is, income should be equal to 174 percent of direct instructional costs, with the 174 percent target adjusted up or down to reflect variations in space utilization and other indirect costs. It should be noted that instruction and research heavily dependent on laboratory facilities ordinarily will call for a target figure in excess of 174 percent. Thus, Engineering, like Arts and Science, Education and the undergraduate Business Administration, would have to produce income in excess of 174 percent of direct costs, were it to start up at Washington Square. There would be, of course, substantial capital costs and space problems as well.

School of Continuing Education

The plans presented to the Task Force by the School provided for an adjusted improvement in its financial outcome of $858,000 between 1971-72 and 1974-75, of which more than half was accounted for by the elimination — or transfer to other accounts — of the deficits incurred by the School, despite extensive consultations and analysis. However, we do not mean to preclude any feasible resolution of the future of the School and its faculty.
The budget plan presented to the Task Force by the College shows a more rapid increase in direct instructional and related (mainly Clinic) costs than in income. By 1974-75 the excess of income over direct cost will be only $400,000, in order to help 1971-72 outlays for operation and maintenance of the existing Dental plant. We are persuaded that this excess will be insufficient to cover the likely plant costs -- on existing buildings -- in 1974-75, in excess of current support. Some of which are incurred at the Dental Center, not Washington Square. Therefore, we have set as a target for the College an excess of income over direct expense for "organized activities" of $5.4 million in 1974-75. In the plan presented to us, to be achieved by appropriate adjustments of income and direct expense, mainly the latter.

Moreover, we are concerned with the financial impact of the proposed new building. Like all other schools, the College must present a detailed plan for operating, in full, both debt service and operating costs of the new building, before proceeding with the building. We fully realize that this requirement has not been made of other budgets in recent years, but the University simply has no resources left to meet deficits on planned new buildings. Other divisions of the University cannot be called upon to dissipate those resources to help finance new buildings, at the Dental Center or anywhere else. That seems to us far harsher than to require that the financial planning for new buildings guarantee their complete support, however dire the consequences of failing to construct new buildings.

Graduate School of Social Work

Like numerous other schools and departments at the University, the Graduate School of Social Work was enabled to expand its program considerably during the 1960's by a large infusion of government funds. As in other cases, government support has been severely cut back in the last few years. The financial results for the future do not augur well for the University. The University simply has no resources left to meet deficits on planned new buildings. considerable press attention to its programs. We are told that, by 1974-75, the deficit will be no more than $15,000. We find these projections optimistic and are concerned that the University will continue to be exposed to the much larger deficits that, perhaps, are more likely. Indeed, the prudent course for the University—to ensure against larger deficits—might be simply to shut down Town Hall (with the NYU Club continuing to operate as at present), in which case the deficit would be $15,000 or so, but a sure $15,000.

However, we are advised that Town Hall can be sold. We recommend that negotiations for sale be instituted immediately, preferably sale under terms which permit the continued operation of the NYU Club in its present location. Once again in this instance, we must put the case in terms of faculty positions: the income on the proceeds from sale of the property plus the deficit eliminated can finance at least three or four faculty positions.

**Institute of Fine Arts**

The Institute of Fine Arts is, of course, one of the most valued of the University's educational activities. But, like so many other activities, it operates at a deficit, estimated at somewhat over $200,000 this year, despite considerable success in attracting unrestricted gifts and endowment. We believe that the Institute has even more capability of attracting funds, and therefore our target is an excess of income over the deficit eliminated can finance at least three or four faculty positions.

**Institute of Afro-American Affairs**

The Task Force recommends, as a general University policy, that all free-standing institutes be required to cover their deficits, which the Institute does not now do. The Institute's projections offer some encouragement, since they suggest a smaller deficit by 1974-75. Although we recognize the special claim of this Institute on the University's resources and in its priorities, we urge the director of the Institute to assume the responsibility for fund-raising for the Institute, with the goal of completely covering its direct costs by 1974-75. That is the target specified in Table 6.

**Center for International Studies**

The administrative and operating costs of the Center have been met from unrestricted University funds since its inception, while fellowship and programs costs have been met from (restricted) grants. Indeed, these were the terms under which the original foundation grants that led to the opening of new buildings, it will be a considerable achievement to hold operation and maintenance of Plant outlays constant (aside from costs of Bobst) as we propose here.

However, a significant saving can be made in total space occupancy costs incurred by the University. At present, rent substantial space for University purposes in buildings not owned by the University; such outlays in the Washington Square area amount to approximately $400,000. In addition, there are University activities housed in nonacademic buildings owned by the University, in apartments in Washington Square Village, Washington Mews, One Fifth Avenue, the Bobst Library. And, in general, there has been a fair amount of budget trimming during the past three years of austerity at the University. If the University's income were rising, it might be possible to balance the budget by holding central costs constant over the next few years. Such is not the case; we must find ways to substantially reduce the total indirect costs at the schools and colleges must cover from the excess of income over their direct costs.

The outlays we propose are of two types. First, there are reductions that could and possibly should have been made two or three years ago — and were recommended by such bodies as the Commission on the Effective Use of Resources and the Senate Budget Policies Committee — but were deferred in the hopes that the financial performance of the individual operations (e.g., some of the auxiliary activities) could be improved by better management, or in the hopes that improvement in the University's overall financial position would obviate painful reductions. Second, there are reductions that are conceivable only in the financial crisis now at hand — reductions that involve important changes in the way the University functions.

As noted previously, the total indirect costs allocated to the schools and colleges are estimated at $32.6 million in the current year; without the University Heights campus, the figure would be $28.5 million. The reductions proposed here would produce savings of roughly $3.2 million, as summarized in Table 8. This may seem a modest sum, when compared to the scale of retrenchment required of some of the schools if they are to meet our financial targets. However, it is not modest, for it will require harsh and stringent economies even in the revision of INCOME AND "DIRECT" EXPENDITURES

INCOME AND "DIRECT" EXPENDITURES (Dollars in millions)
The continued operation of the NYU Club in its present location. Once again in this instance, we must put the case in terms of faculty positions: the income on the proceeds from sale of the property plus the deficit eliminated can finance at least three or four faculty positions.

Institute of Fine Arts

The Institute of Fine Arts is, of course, one of the most valued of the University's educational activities. But, like so many other activities, it operates at a deficit, estimated at somewhat over $200,000 this year, despite considerable success in attracting unrestricted gifts and endowment.

Institute of Afro-American Affairs

The Task Force recommends, as a general University policy, that all free-standing institutes be required to cover their direct costs, which the Afro-American Institute does not now do. The Institute's projections offer some encouragement, since they suggest a smaller deficit by 1974-75. Although we recognize the special claim of this Institute on the University's resources and in its priorities, we urge the director of the Institute to assume the responsibility for fund-raising for the Institute, with the goal of completely covering its direct costs by 1974-75. That is the target specified in Table 6.

Center for International Studies

The administrative and operating costs of the Center have been met from unrestricted University funds since its inception, while fellowship and program costs have been met from (restricted) grants. Indeed, these were the terms under which the original foundation grants that led to the Center's creation were made. The Center has done an outstanding job, but we believe that the University is no longer in a position to fund it from the unrestricted income of the schools. Therefore, we recommend that the budget from unrestricted funds be discontinued by 1974-75. The director of the Center has advised us that he sees no possibility of raising funds to cover the Center's substantial administrative costs (substantial in the sense that they exceed the administrative costs of some of the smaller schools of the University). Therefore, we assume—with regret—that our recommendation will result in the discontinuance of the Center.

III. REDUCTIONS IN THE COST OF CENTRAL SERVICES

"Central services" in this section refers to all expenses from unrestricted University funds other than the direct costs of instruction and closely related activities that show up in the budgets of the academic units. In 1971-72, the largest of such expenses—excluding costs incurred at University Heights and presumably avoided after 1972-73—were the following:

Libraries $6.0 million

simply fixed. In other cases, there are strong upward pressures—on operation and maintenance of plant costs, from the opening of new buildings, and on libraries costs, due to the opening of the Bobst Library. And, in general, there has been a fair amount of budget trimming during the past three years of austerity at the University. If the University's income were rising, it might be possible to balance the budget by holding central costs constant over the next few years. Such is not the case; we must find ways to substantially reduce the total indirect costs the schools and colleges must cover from the excess of income over their direct costs.

The outlays we propose are of two types. First, there are reductions; that could and possibly should have been made two or three years ago—and were recommended by such bodies as the Commission on the Effective Use of Resources and the Senate Budget Policies Committee—but were deferred in the hope that the financial performance of the individual operations (e.g., some of the auxiliary activities) could be improved by better management, or in the hope that improvement in the University's overall financial position would obviate painful reductions. Second, there are reductions that are conceivable only in the financial crisis now at hand—reductions that involve important changes in the way the University functions.

As noted previously, the total indirect costs allocated to the schools and colleges are estimated at $32.6 million in the current year; without the University Heights campus, the figure would be $28.5 million. The reductions proposed here would produce savings of roughly $3.2 million, as summarized in Table 8. This may seem a modest sum, when compared to the scale of retrenchment required of some of the schools if they are to meet our financial targets. However, it is not modest, for it will require harsh and stringent economies even in the services for which the dollar savings shown are zero. Moreover, the salary increase rule required of the central services is a severe one: salary increases are to be absorbed by further economies, so that the dollar targets in Table 8 are to be adhered to rigorously.

Libraries

Opening of the Bobst Library will substantially raise the costs of the University's library system. Preliminary budget planning had suggested that in its first full year of operation, it would increase direct library service costs by $700,000, over the costs of the library activities that will be moved into the building. In budget negotiations heretofore, that increase has been cut in half; we suggest further cuts of $275,000, by reducing main library hours by 10 percent and by reductions in personnel, binding, supplies and book acquisitions from the levels currently planned. However, the costs of operating and maintaining the building, security costs and full debt service costs, will amount to an estimated increase in expenditure of $500,000, above the 1971-72 levels. By stringent economies in library services and staffing, and in the office of the Dean of the Libraries, Operation and Maintenance of Plant

We have investigated carefully the possibilities for reduction in outlays for this purpose. In view of the economies made in recent years and the opening of new buildings, it will be a considerable achievement to hold operation and maintenance of Plant outlays constant (aside from those of Bobst) as we propose here.

However, a significant saving can be made in the total space occupancy costs incurred by the University. At present, each tenant pays a substantial space charge for buildings not owned by the University; such outlays in the Washington Square area amount to approximately $400,000. In addition, there are University activities housed in nonacademic buildings owned by the University, in apartments in Washington Square Village, Washington Mews, One Fifth Avenue, which could be rented to others and produce income to the University, were the University functions all housed in space without commercial alternatives; the rental charge for such uses amounts to a total of $400,000.

By very careful management it should be possible to accommodate all such uses within standard University buildings, permitting the saving of at least the entire $800,000. There will be space released by the move of library facilities to Bobst; there is the non-library space in Bobst itself (see above); the opening of the...
to its pro-

1974-75, the

recognize

$15,000. We
e have

immediately,

in this case in

at least

$15,000.

Town Hall

permanently

NYU Club

we believe that the net increase in library

costs can be held to roughly $900,000.

In addition, there are possibilities for

greater use of space in Bobst for non-

library purposes than had originally been

planned. For example, the delivery bay

are not used for receipt of University mail;

the administrative space on the

top floors can be utilized for more Uni-

versity activities than originally planned;

and other space in the building might be

utilized for faculty offices. This will not

directly reduce expenses, but it will per-

mit reduction in total space use and facil-

itate the reduction in expenditures for

rent proposed below.

Operation and Maintenance of Plant

We have investigated carefully the pos-

sibilities for reduction in outlays for this

purpose. In view of the economies made

in recent years and the opening of new

buildings, it will be a considerable achieve-

ment to hold operation and maintenance

of Plant outlays constant (aside from the

costs of Bobst) as we propose here.

However, a significant saving can be

made in total space occupancy costs in-

curred by the University. At present, we

rent substantial space for University pur-

poses in buildings not owned by the Uni-

versity; such outlays in the Washington

Square area amount to approximately

$400,000. In addition, there are Univer-

sity activities housed in nonacademic

buildings owned by the University, like

apartments in Washington Square Village,

Washington Mews, One Fifth Avenue,

which could be rented to others and pro-

duce income to the University, were the

Universities functions all housed in space

without commercial alternatives; the ren-

tal charge for such uses amounts to an-
other $400,000.

By very careful management it should

be possible to accommodate all such uses

within standard University buildings, per-

mitting the saving of virtually the

entire $800,000. There will be space re-

leased by the move of library facilities to

Bobst; there is the non-library space in

Bobst itself (see above); the opening of

Tisch and Meyer Halls will also alleviate

the space problem; and finally, the con-

traction in some of the academic and cen-

tral service activities we propose will re-

duce total space needs. We propose prompt

and rigorous action to affect this saving

in rent payments and increase in rent in-
come from outside sources. To support

this action, the budgetary procedures we will

suggest provide for inclusion of space ren-
tal charges in the direct budgets of all

operating and academic divisions of the

University; the responsible administrators

will then be able to make rational decisions

on space utilization, which is hardly the

case at present.*

Student Services

Student services have been extensively

investigated by the Task Force and, before

us, by the Commission on the Effective

Use of Resources. We are persuaded that

large savings can be effected, some of

them involving consolidation of separate

offices rather than significant reduction

in service provided:

1. Substantial savings will be achieved

by centralization and consolidation of ad-
missions, counseling and recording offices.

We estimate that short-term savings of

roughly $250,000 are readily attainable.

Full automation of student records and

registration will take some time, but will

permit even larger savings (not included

in Table 8).

2. Increases in fee schedules and oper-

ating economies in the Placement Service,

International Student Center and Inform-

ation Bureau can realize savings of nearly

$200,000.

3. Consolidation of activities under the

auspices of the Director of Student Affairs,

including the transfer of most of the Res-

ident Hall functions to this unit, together

*Pending the revision of budget procedures, we have not allowed for this in setting budget targets in

this report. Nor have we credited individual divisions with sav-

ings from reduced rental payments arising from a move into academic buildings. Such savings are

real for the University as a whole, but fictitious for an individual unit, as long as it continues

to occupy the same quality and quantity of space. An individual unit can claim savings on space

costs only if it actually uses less space.
Opening of the Bobst Library will substantially raise the costs of the University's library system. Preliminary budget planning had suggested that in its first full year of operation, Bobst would increase direct library service costs by $30,000, over the costs of the library services that will be moved into the building. If budget negotiations held to date are continued, that increase has been cut in half; we suggest further cuts of $275,000, by reducing main library hours by 10 percent, by reductions in personnel, binding, copies and book acquisitions from the six campuses currently planned. However, the significant operating and maintenance of Plant costs, from the opening of new buildings, and on library services and staffing, and in the office of the Dean of the Libraries, might be possible to balance the budget by holding central costs constant over the next few years. Such a not the case; we must find ways to substantially reduce the total indirect costs of the schools and colleges must cover from the be less than 500,000, readily attainable. Full automation of student records and enrollment will take some time, but will permit even larger savings (not included in Table 8). 3. Consolidation of activities under the aegis of the Director of Student Affairs, including the transfer of most of the Resident Hall functions to this unit, together.

with a reduction in the scope of the Master program, will permit savings of nearly $300,000, compared with 1971-72 levels.

4. Finally, we endorse the proposal of the Griffiths subcommittee, made to the Commission on the Effective Use of Resources two years ago, that the Health Service be converted into an emergency and referral service with limited inpatient capacity, at a savings estimated at roughly $800,000.

Computer Centers

There are at present five major computer centers at this University: one based on a Univac 1108 at University Heights, which serves both administrative and academic users (and several other academic institutions as well); an IBM 360/40 for administrative uses at Washington Square; an IBM 360/50 for academic uses at the Square; the Courant Institute CDC 6600; and an IBM 360/40 at the Medical Center. The annual cost of the first three are $2.3 million, offset by $556,000 received from sponsored research and external sources (all but $10,000 at the Heights computer center), for a net cost to the University of nearly $1.8 million. The total expenditures of the other computer centers amount to another $1.7 million.

Each of the computer centers was established as a separate entity for reasons that were good and sufficient at the time. As separate entities, they and their users have developed distinctive configurations, operating procedures, software and biases, which have made consolidation into a smaller number of centers seem ever less feasible, however desirable in financial terms. The University, however, can no longer afford the luxury of expensive, separate operations, if substantial financial savings can be achieved through consolidation.

The Task Force has consulted with various people in the University connected with the different centers. We are assured that a considerable degree of consolidation is now feasible and that substantial savings in cost can be achieved; there is, however, considerable disagreement about the specifics of consolidation.

We propose the following:

1. The University must commit itself to consolidation of computer centers and take the steps to do so as rapidly as possible. The consolidation should be carried as far as possible, including, if at all feasible, the Courant Institute and Medical Center computer operations. At a minimum, the administrative and academic 360-based computer centers at Washington Square and the Heights computer center should be consolidated in one center.

2. The target for minimum first-year savings should be $600,000. We believe that higher savings are possible, perhaps with foundation support for the one-time costs of consolidation and from extending the consolidation to include the Courant and Medical Center computer operations. An incentive for the participation for the Courant Institute could be the crediting of the savings from this participation against the very large current deficits of the Institute, which must be reduced under the Task Force's overall financial plan.

3. The management of the consolidated computer center must not be the responsibility of any major user. The center's functions should be:

(a) to maintain the operating systems and operating staff required to satisfy user needs; and

(b) to maintain the hardware and hardware environment.

The major users should participate in policy matters such as pricing and acquisition of hardware, but not in the day-to-day management of the center. The director of the center should report to the central administration like other heads of operating divisions. He should be charged with the mission of maximizing external use and support of the center, as well as serving internal users.

4. An independent consultant or consultants, not tied to any of the existing centers or connected with any hardware supplier, should be retained immediately to advise on the specifics of the consolidation plan. His brief should be limited and explicit and his assignment severely limited in time: we do not need advice as to whether there should be consolidation but a specific plan for effecting it.

Development and Public Relations Activities

The fund-raising, public relations and publications activities of the University involve expenditures of about $2.3 million in the current year (exclusive of charges to the Medical Center). The Task Force believes that these activities are highly effective, for New York University has been highly successful relative to other institutions in its ability to raise both capital and current funds from private donors. However, in the present crisis, we believe that these operations offer opportunities for net savings.

Those savings should be of three types.

First, most of the costs of these services should form part of the direct budgets of the schools, with the schools free to choose what services they wish to purchase; we assume that some reductions in service and cost would then occur. Second, these should be direct budget reductions in the portion of the costs of the services that continue to be centrally budgeted. Third, a greater focus on fundraising directed at providing immediate budget relief (rather than capital gifts) should produce substantial additional gifts, part of which can be credited against the costs of development activities. We therefore propose effective budget reductions (including the crediting of additional gift income) totalling $1.26 million, to be effected by 1973-74.

Deficits in Auxiliary Activities

Virtually all the auxiliary activities run by the University operate at deficits despite energetic efforts in the past few years to overcome such deficits. Some of the auxiliary activities are very closely related to the main academic missions of the University and their elimination would change the character of the Institution. For example, there are deficits in the operation of student and faculty housing facilities, deficits that are hard to overcome because they reflect fixed debt service obligations, the vagaries of the rent control laws as well as similar factors. It is conceivable that the University could divest itself of all such facilities over a period of years. However, the construction and acquisition of dormitories and apartment houses, mostly quite recent, was the result of a deliberate policy to create a resident student and faculty body. The Task Force does not recommend the reversal of this policy.

However, some of the other auxiliary activities are not nearly so closely tied to the main purpose of the institution. Some are luxuries in this sense and in the sense that they duplicate services provided in this community by others, without University funds. Indeed, the competition with other

a Excluding the Medical Center and all income and expense from restricted funds.
b Assuming no change in tuition or salary levels from 1971-72; excludes University Heights.
c Includes University Heights.
d "Direct costs" as in line 2.
e Income and unrestricted gifts less unfunded student aid.
f Centrally budgeted expenses net of income and gifts generated centrally, rather than by the schools.

This is a summary of the targets set by the Task Force for the University's budget in 1974-75, compared to the estimated results for 1971-72. The targets are based on various assumptions and considerations, including changes in tuition and salary levels, and the exclusion of certain income and expenses from restricted funds. The percentages shown for each category are calculated based on the Direct Costs for that category, and may not add up due to rounding.
take the steps to do so as rapidly as possible. The consolidation should be carried as far as possible, including, if at all feasible, the Courant Institute and Medical Center computer operations. At a minimum, the administrative and academic 360-based computer centers at Washington Square and the Heights computer center should be consolidated in one center.

2. The target for minimum net first-year savings should be $3,000,000. We believe that higher savings are possible, perhaps with foundation support for the one-time costs of consolidation and from extending the consolidation to include the Courant and Medical Center computer operations. An incentive for the participation for the Courant Institute could be the crediting of the savings from this participation against the very large current deficits of the Institute, which must be reduced under the Task Force’s overall financial plan.

3. The management of the consolidated computer center must not be the responsibility of any major user. The center’s functions should be:
   (a) to maintain the operating systems and operating staff required to satisfy user needs; and
   (b) to maintain the hardware and hardware environment.

The major users should participate in policy matters such as pricing and acquisition of hardware, but not in the day-to-day management of the center. The director of the center should report to the central administration like other heads of operating divisions. He should be charged with the mission of maximizing external use and support of the center, as well as serving internal users.

4. An independent consultant or consultant teams or to any hardware supplier, should be retained immediately to advise on the specifications of the consolidation plan. His should be limited and explicit and assignment severely limited in time: he need advice as to whether there should be consolidation but a specific plan for consolidation.

involve expenditures of about $23 million in the current year (exclusive of charges to the Medical Center). The Task Force believes that these activities are highly effective, for New York University has been highly successful relative to all other private universities in its ability to attract deficit and current funds from private donors. However, in the present crisis, we believe that these operations offer opportunities for net savings.

Those savings should be of three types. First, most of the costs of these services should form part of the direct budgets of the schools, with the schools free to choose what services they wish to purchase; we assume that some reductions in service and cost would then occur. Second, these should be direct budget reductions in the portion of the costs of the services that continue to be centrally budgeted. Third, a greater focus on fund-raising directed at providing immediate budget relief (rather than capital gifts) should produce substantial additional gifts, part of which can be credited against the costs of development activities. We therefore propose effective budget reductions (including the crediting of additional gift income) totaling $1.25 million, to be effected by 1973-74.

Deficits in Auxiliary Activities

Virtually all the auxiliary activities run by the University operate at deficits despite energetic efforts in the past few years to overcome such deficits. Some of the auxiliary activities are very closely related indeed to the main academic missions of the University and their elimination would change the character of the institution. For example, there are deficits in the operation of student and faculty housing facilities, deficits that are hard to overcome because they reflect fixed debt service obligations, the vagaries of the rent control laws and similar factors. It is conceivable that the University could devise itself of all such facilities over a period of years. However, the construction and acquisition of dormitories and apartment houses, mostly quite recent, was the result of a deliberate policy to create a resident student and faculty body. The University has been highly successful relative to other New York City universities in attracting students and retaining them; it would be a retrograde and expensive step that would require drastic financial cuts in the medical complex, to use the facilities as dormitories or to eliminate all the educational and support services they provide.

be operated as a separate nonprofit corporation (without any University contingent liability) or eliminated entirely.

Other Central Services and Central Administration

We estimate that roughly $475,000 can be saved in the operations of other centrally budgeted services. Perhaps $200,000 of this total is reflected in the 1972-73 budget. Beyond this, we believe that further savings are possible in the Treasurer and Controller’s Division, through reorganization of some of the offices of central administration and by eliminating our nonacademic presence at Sterling Forest.

IV. PROSPECTS FOR ADDITIONAL INCOME

We noted early in this report that the 1974-75 budget plan developed by the Task Force is barely balanced despite heavy cutbacks, with room for salary increases (or abatement of the cutbacks) only to the extent that additional income can be generated. It is, therefore, of the greatest importance that possibilities for generating additional income be exploited vigorously.

Tuition and Student Aid Policies

In the graduate and professional schools, modest increases in tuition by 1974-75 would not be unreasonable. More immediately, we believe that, in the professiona schools where the present tuition for full-time students is effectively below the standard $2,700 full-time tuition level, tuition should be raised to the standard level. Demand for admission to our professional schools is strong, and the modest increases in income resulting from this step should not be ignored.

We are much more cautious about undergraduate tuition policy and have made our calculations on the basis of a continuation of the $2,700 level through 1974-75, a four-year freeze in tuition. Given rising prices and incomes in our society, this could amount to a reduction in the real cost of tuition at New York University. Perhaps more important, the prospect
Operations. An incentive for the participation for the Courant Institute could be the crediting of the savings from this participation against the very large current deficits of the Institute, which must be reduced under the Task Force's overall financial plan.

3. The management of the consolidated computer center must not be the responsibility of any major user. The center's functions should be:

(a) to maintain the operating systems and operating staff required to satisfy user needs; and

(b) to maintain the hardware and hardware environment.

The major users should participate in policy matters such as pricing and acquisition of hardware, but not in the day-to-day management of the center. The director of the center should report to the central administration like other heads of operating divisions. He should be charged with the mission of maximizing external use and support of the center, as well as serving internal users.

4. An independent consultant or consultants, not tied to any of the existing centers or to any hardware supplier, should be retained immediately to advise on the specifics of the consolidation plan. His brief should be limited and explicit and his assignment severely limited in time: we do not need advice as to whether there should be consolidation but a specific plan for effecting it.

Development and Public Relations Activities

The fund-raising, public relations and publications activities of the University should be consolidated but a specific plan for effecting it.

IV. PROSPECTS FOR ADDITIONAL INCOME

We noted early in this report that the 1974-75 budget plan developed by the Task Force includes heavy cutbacks, with room for salary increases (or abatement of the cutbacks) only to the extent that additional income can be generated. It is, therefore, of the greatest importance that possibilities for generating additional income be exploited vigorously.

Tuition and Student Aid Policies

In the graduate and professional schools, modest increases in tuition by 1974-75 would not be unreasonable. More immediately, we believe that, in the professional schools where the present tuition for full-time students is effectively below the standard $2,700 full-time tuition level, tuition should be raised to the standard level. Demand for admission to our professional schools is strong, and the modest increases in income resulting from this step should not be ignored.

We are much more cautious about undergraduate tuition policy and have made our calculations on the basis of a continuation of the $2,700 level through 1974-75, a four-year freeze on student and faculty housing, and completion of all deficits in the portion of the costs of the academic functions that we recommend to the University to losses. The University Press should produce substantial additional gifts, part of which can be credited against the costs of development activities. We therefore propose effective budget reductions (including the crediting of additional gift income) of $1.25 million, to be effected by 1978-74.

Deficits in Auxiliary Activities

Virtually all the auxiliary activities run by the University operate at deficits despite energetic efforts in the past few years to overcome such deficits. Some of the auxiliary activities are very closely related indeed to the main academic missions of the University and their elimination would change the character of the institution. For example, there are deficits in the operating of dormitories and apartment houses, deficits that are hard to overcome because they reflect fixed debt service obligations, the vagaries of the rent control laws and other factors. It is conceivable that the University could divest itself of all such facilities over a period of years. However, the construction and acquisition of dormitories and apartment houses, mostly quite recent, was the result of a deliberate policy to create a resident student and faculty body. The Task Force does not recommend the reversal of this policy.

However, some of the other auxiliary activities are not nearly so closely tied to the main purpose of the institution. Some are luxuries in this sense and in the sense that they duplicate services provided in this community by others, without University funds. Indeed, the competition with non-University services is the principal reason that they lose money. We find it difficult to see why the University should continue to subsidize such activities as restaurants and bookstores if there are ready substitutes at hand.

In one area, retrenchment has already occurred; the Top of the Park restaurant has been closed and the Faculty Club at Washington Square told that it will not receive any further cash subsidy, for a combined saving of perhaps $30,000 compared with 1971-72.

Other candidates for elimination are the bookstore at Washington Square and the New York University Press, which together are estimated to yield a deficit of $130,000 this year. In both cases, the incumbent directors are resourceful. The director of the bookstore has succeeded in reducing the losses. Both directors are confident that the activities can be operated with a zero deficit in coming years. However, the deficits have been large in the past and the continued exposure of the University to losses is considerable. We believe that this exposure should be ended expeditiously. In both cases, the possibility of separating the activity from the University should be acted upon. The bookstore at Washington Square should be converted to a concessionaire-type of operation, and the University Press should

N.C. -- Not calculated (see notes below)

\(^a\) Net income = Income and gifts of the schools, less unfunded student aid. "Direct" expense as defined in Table 1. Assumes salaries and tuition unchanged, at 1971-72 levels.

\(^b\) Includes Courant Institute and University Without Walls.

\(^c\) Includes Institute of Retail Management.

\(^d\) Assumes discontinuance of the School, as recommended in the text.

\(^e\) No calculations are made for the School of Engineering and Science. We assume that any Engineering work done at Washington Square will be operated on a fully-compensatory fiscal basis (see text).

\(^f\) Assumes no funding of the Center from unrestricted University funds; we are told that this will require discontinuance of the Center (see text).

The ratio of unfunded student aid to total tuition income from full-time students is very high, specifically the School of Education and the College of Business and Public Administration. There are numerous difficulties with such a policy, but it should not be dismissed out-of-hand.

A second course would be to seek a foundation guarantee against possible loss from the institution of a large across-the-board tuition reduction; the hope, of course, would be that the cost to the foundation would be zero. The argument for such a guarantee is twofold: (a) we would be conducting an experiment to determine the sensitivity of enrollment to tuition changes, an experiment of value to the entire private sector of higher education; and (b) this University cannot afford the risk of loss, to learn something sities, and the need to expand minority group training at graduate and professional levels remains great. If such a policy were adopted, we would be exploiting a major strength of the University, its varied and high quality professional schools. Finally, one of the ironies at New York University is the fact that at least half of the undergraduate student body at Washington Square is comprised of transfer students. Whereas there is a rather elaborate recruitment program and exceedingly generous scholarship aid for freshmen, transfer students are not recruited and, with the exception of BPA, get very little aid. It is suggested that there be a shift in priorities so that a larger portion of undergraduate scholarship aid be directed to transfer students. This fact should be widely publicized.

Bined and accelerated undergraduate graduate degree programs might also be desirable. One estimate, for example, is that a highly accelerated combination of undergraduate liberal arts and graduate urban planning degree work could attract a minimum of one hundred additional full time undergraduate students on a steady state basis.

It is further recommended that the University experiment with a "special student" category. Such students would be non-matriculated persons who wished to take courses for particular nondegree reasons. For instance, teachers frequently need a course in reading, or they need to become proficient in Spanish, or they wish to learn about new developments in teaching mathematics. It is recommended that they be allowed to take courses which...
the ratio of unfunded student aid to total tuition income from full-time students is very high, specifically the School of Education and the College of Business and Public Administration. There are numerous difficulties with such a policy, but it should not be dismissed out-of-hand.

A second course would be to seek a foundation guarantee against possible loss from the institution of a large across-the-board tuition reduction; the hope, of course, being that the cost to the foundation would be zero. The argument for such a guarantee is twofold: (a) we would be conducting an experiment to determine the sensitivity of enrollment to tuition changes, an experiment of value to the entire private sector of higher education; and (b) this University cannot afford the risk of loss, to learn something that would be of value only to other institutions, if the experiment fails. We recommend that foundations be approached promptly to explore this possibility.

Whatever the tuition policy, the University's student aid policies are in need of review. The University's total unfunded student aid (tuition remission and cash awards) is now extraordinarily high, relative to other institutions. This was not a carefully planned development, for student aid rose while the funding for it declined. For example, in 1968-69 when Martin Luther King, Jr. Scholarship Awards were one million dollars, nearly 30 percent of the total was funded from contributions; in 1971-72, the much larger total of $1.8 million dollars is entirely unfunded. In addition, other circumstances have changed greatly in the past few years. Open enrollment at the City University makes it possible for any resident of New York City to receive a college education without cost, thus reducing the obligation of private universities to provide scholarship aid to New York City residents. Moreover, since the Martin Luther King, Jr. Scholarship program was instituted, the undergraduate enrollment at New York University has declined, and it is expected that there will be further declines by 1974-75, the target year for a balanced budget.

One possible outcome of a review of tuition policies is a decision to concentrate more of our student aid for minority group students at the graduate and professional levels. There is no such thing as open enrollment at zero tuition at other universities, and the need to expand minority group training at graduate and professional levels remains great. If such a policy were adopted, we would be exploiting the major strength of the University, its varied and high quality professional schools. Finally, one of the ironies at New York University is the fact that at least half of the undergraduate student body at Washington Square is comprised of transfer students. Whereas there is rather elaborate recruitment program and exceedingly generous scholarship aid for freshmen, transfer students are not recruited and, with the exception of BFA, get very little aid. It is suggested that there be a shift in priorities so that a larger portion of undergraduate scholarship aid be directed to transfer students. This fact should be widely publicized.

Educational Innovation

We believe that there are real possibilities of generating increased income from new educational programs, such as some of those proposed by the Commission on Undergraduate Education. It is difficult to be a prophet, particularly if one tries to predict in an area such as higher education. But New York University must attempt to predict the nature and interests of its clientele, or, in the language of business, to do more systematic market research.

One educational proposal to be seriously considered is a Weekend College for fully employed New Yorkers. Over 2,000 persons responded to the University Without Walls announcement, but apparently the respondents were more interested in a degree program that did not require them to meet throughout the week than they were in the specific educational point of view of UWW. The Weekend College would operate on Friday, Saturday, and Sunday, and it should offer a baccalaureate degree in as short a time as possible. If maximum use is made of the college-level examination program and the college proficiency examination, and a judicious amount of credit is given for experience, then it might be possible to give a degree in as little as two years.

A very low-cost innovation would be a formally structured Antioch-type work-study program (individual students in fact do this even now, on an informal basis, with no real placement and course programming machinery). Expansion of combined and accelerated undergraduate-graduate degree programs might also be desirable. One estimate, for example, is that a highly accelerated combination of undergraduate liberal arts and graduate urban planning degree program could attract a minimum of one hundred additional full-time undergraduate students on a steady-state basis.

It is further recommended that the University experiment with a "special student" category. Such students would be non-matriculated persons who wished to take courses for particular nondegree reasons. For instance, teachers frequently need a course in reading, or they need to become proficient in Spanish, or they wish to learn about new developments in teaching mathematics. It is recommended that they be allowed to take courses which cannot be used toward a degree at rates set by individual schools. These students would have to meet the same admissions requirements as those matriculating for a degree.

There are possibilities at the graduate level. Some departments badly neglect— even discourage—terminal master's degree students, despite the large ongoing demand for terminal master's degrees. In the New York area. Some departments even neglect to award master's degrees to doctoral students who satisfy the posted requirements for the master's degree, despite the financial loss to the University and the advantage to the student of having a graduate degree while working toward the doctorate. More generally, departments can better serve both the University's finances and students by eliminating avoidable delays and administratively obstacles to completion of graduate degrees. Finally, there are possibilities in other schools analogous to the post-master's Advanced Professional Certificate program just instituted by the Graduate School of Business Administration.

V. RULES, STRUCTURES AND PROCEDURES FOR IMPLEMENTING THE PLAN

No plan, let alone a plan that calls for retrenchment and sacrifice, is self-executing. In this section, we propose a set of rules to govern academic and administrative decisions with significant fiscal consequences; we discuss at some

Note: All figures are in thousands.

The chart above shows the net income for each academic unit from 1971-72 to 1974-75. The units are ranked by net income, with the highest net income listed first. The chart also shows the percentage change in net income from 1971-72 to 1974-75. The units are ranked by the percentage change, with the highest percentage change listed first.

The net income figures are shown in Table 6 above. The chart shows the net income for each academic unit from 1971-72 to 1974-75. The units are ranked by net income, with the highest net income listed first. The chart also shows the percentage change in net income from 1971-72 to 1974-75. The units are ranked by the percentage change, with the highest percentage change listed first.

In order to facilitate the restructuring, to actually realize the cost savings made possible by the restructuring and to prevent back-slicing during the time necessary to return the University's finances to a satisfactory position, we propose the adoption of a series of University-wide rules for decisions on staffing, budgeting and educational planning, decision rules that are strongly enforced without exception except for the most compelling of reasons. These rules cannot be viewed as temporary responses to the financial emergency. Instead, they represent the conditions under which the University must operate, for the foreseeable future, if it is to survive.

1. No further construction or major rehabilitation work should be permitted to proceed without full financing of the cost. In hand, including funds to cover the incremental costs of operation and maintenance of plant.

2. No further commitments for student aid programs or non-income producing educational activities, however prestigious, should be undertaken without full external financing. "Full external financing" for educational activities means coverage of direct expenses and a reasonable allowance length the restructuring of the academic divisions involved in undergraduate education. The University's financial situation is such that the University cannot afford to take risks on new projects without full external financing. The University must operate within the constraints imposed by these rules in order to survive.
"Direct" expense as defined earlier will be operated on a fully-compensatory fiscal basis (see text). The Center (see text). It is further recommended that the University experiment with a "special student" category. Such students would be non-matriculated persons who wished to take courses for particular nondegree reasons. For instance, teachers frequently need a course in reading, or they need to become proficient in Spanish, or they wish to learn about new developments in teaching. Teacher's expenditure is determined by whether they are allowed to take courses which cannot be used toward a degree at rates set by individual schools. These students would have to meet the same admissions requirements as those matriculating for a degree.

There are possibilities at the graduate level. Some departments badly neglect— even discourage—terminal master's degree students, despite the large continuing demand for terminal master's degrees in the New York area. Some departments even neglect to award master's degrees to doctoral students who satisfy the posted requirements for the master's degree, despite the financial loss to the University and the advantage to the student of having a graduate degree while working toward the doctorate. More generally, departments can better serve both the University's finances and students by eliminating avoidable delays and administrative obstacles to completion of graduate degrees. Finally, there are possibilities in other schools analogous to the post-master's Advanced Professional Certificate program just instituted by the Graduate School of Business Administration.

V. RULES, STRUCTURES AND PROCEDURES FOR IMPLEMENTING THE PLAN

No plan, let alone a plan that calls for reorganization and sacrifice, is self-executing. In this section, we propose a set of rules to govern academic and administrative decisions with significant fiscal consequences; we discuss at some length the restructuring, to be carried out in 1973, of the Schools of Education and Science. The Schools, as recommended in the text, will be operated on a fully-compensatory fiscal basis (see text). The Center from unrestricted University funds; we are told that this will be the School, as recommended in the text. or the School of Engineering and Science. We assume that any Engineering unit will be operated on a fully-compensatory basis (see text).
of central University expenses. Aggregate central expenditures should be limited to an amount equal to 75 percent of the aggregate direct educational expenses of the educational units.*

5. It is clear that the aggregate size of the University's faculty must be reduced substantially, and quickly. A number of decision rules are necessary if this is to be done with minimal harm to the quality of education. One such rule relates to the number of separate course offerings. There is an inherent academic tendency to proliferate course offerings, as new specializations develop within disciplines, faculty membership changes and academic fashions vary. We propose mandatory reductions in the number of separate courses offered, and extra-departmental controls over subsequent efforts to re-inflate the lists of offerings. A suggested specific rule is the requirement that, after the initial round of reductions, no new courses can be added to the list of approved courses without the compensatory elimination of existing courses. The only exceptions would be in instances where the staffing of courses is externally financed.

6. Another such rule is the imposition of flat minimums on class size within each school or college. One enforcement device that would create a minimum of disruption for the students who register for a course that proves too large to have an enrollment below the minimum is to remove that course from the approved list of courses for subsequent terms. Such a course then could be reinstated only by gaining approval de novo under rule (5). Again, exceptions would be made only for externally financed instruction.

7. There is need for rules to eliminate duplication of course offerings among departments and schools. Such rules are hard to devise and even harder to enforce, but they are essential. One relatively simple regulatory move would be one designed to guarantee that relevant courses in one department or school are actually open to qualified students in another department or school: the delisting, by fiat, of any course from which students from other departments or schools have been unreasonably excluded. The proposed commissions on undergraduate and graduate planning (see below) would have responsibility for the elimination of course overlap, but on a highly uneven basis. In the fall term, 1971, in some faculties, the average number of courses taught per full-time faculty member was well below 2.5, while in others the average was 3 or more. Even worse, the lower teaching loads tend to be found in faculties without substantial responsibilities for supervision and guidance of master's theses and doctoral dissertations. It is essential that uniform minimum teaching schedules be adopted, with explicit, objective criteria for equivalents to formal classroom instruction like thesis and dissertation supervision and formal administrative assignments of a substantial nature. Reduction in teaching loads, schedules for research should be made only for externally financed research activities and for specifically approved projects that are internally financed.

8. Sabbatical leaves never have been designed as extended vacations earned as a matter of right.

The announced policy should be enforced: a sabbatical leave is to encourage research and enhance a faculty member's knowledge and skills as a teacher and should be granted only to a faculty member who can demonstrate that he or she will pursue a substantial project designed to yield publishable results and/or enhance competency in the classroom.

In addition, it should be noted that the financial arrangements governing sabbatical leaves are significantly more generous at this University than they are at most other universities. We recommend that, effective September 1, 1973, the provision for a one-term leave at full pay be eliminated and that the alternatives remain one year at three-fourths pay every seventh year or one term at three-fourths pay every seventh semester, subject to the proviso of the preceding paragraph and to the budgetary rules now in force, i.e., a sabbatical will be approved only if its granting does not increase the budget of a department, division or school.

10. Departments and schools must not be permitted to neglect educationally valid income-producing opportunities. For example, the Bundy formula provides for payments on the basis of numbers of degrees awarded. Graduate departments should be required to award master's degrees to all students who meet the needed out explicit sanction at the school or college level.

11. Over the past decade, the University has greatly improved its standards with regard to secretarial service in most of the academic divisions, in some cases, to levels that are not sustainable. A University-wide standard should be adopted, with exceptions permitted only when external financing provides additional secretarial staff.

New Structural Arrangements for the Academic Units

A new arrangement of schools and colleges is necessary for a variety of reasons. The most mundane, but not least significant, is that a smaller number of separate schools can permit savings in administrative costs — fewer deans, budget officers, dean's secretaries and the like. Also, reduction in the number of separate units is needed to assure better enforcement of the decision rules and actual realization of the necessary retrenchments. In addition, combining of separate faculties and administrative organizations would be helpful in eliminating course duplications and expanding student access to the remaining courses, horizontally, among the undergraduate divisions, and/or vertically between undergraduate and graduate units in the same field or discipline. Finally, some kind of re-arrangements are necessary to accommodate the move of University College to Washington Square.

The Task Force has considered a number of alternative plans, all of which would reduce the number of separate faculties and administrations. One possibility is a horizontal unification across the undergraduate divisions, creating one undergraduate college, faculty, and administration. This has significant attractions. However, we have concluded that even greater advantages would accrue from vertical unification, between graduate and undergraduate divisions with close professional or disciplinary ties. Essentially, we propose extending this arrangement to Arts and Science and Business Administration.

The principal advantage of this vertical unification, aside from the budgetary and administrative improvements that can be
9. Sabbatical leaves never have been designed as extended vacations earned as a matter of right.

The announced policy should be enforced: a sabbatical leave is to encourage research and enhance a faculty member’s knowledge and skills as a teacher and should be granted only to a faculty member who can demonstrate that he or she will pursue a substantial project designed to yield publishable results and/or enhance competency in the classroom.

In addition, it should be noted that the financial arrangements governing sabbatical leaves are significantly more generous at this University than they are at most other universities. We recommend that, effective September 1, 1973, the provision for a one-term leave at full pay be eliminated and that the alternatives remain one year at three-fourths pay every seventh year or one term at three-fourths pay every seventh semester, subject to the provisos of the preceding paragraph and to the budgetary rules now in force, i.e., a sabbatical will be approved only if its granting does not increase the budget of a department, division or school.

10. Departments and schools must not be permitted to neglect educationally valid income-producing opportunities. For example, the Bundy formula provides for payments on the basis of numbers of degrees awarded. Graduate departments should be required to award master’s degrees to all students who meet the posted requirements and not permitted to ignore the possibility of awarding the degree to students whose ultimate objective is the doctorate. Similarly, the required part-time students as a matter of departmental policy should not be permitted without special attributes that make students and their parents willing to pay substantial amounts in tuition to this University.

The principal advantage of this vertical unification, aside from the budgetary and administrative improvements that can be achieved with either horizontal or vertical unification, is that it affords a better means of exploiting, for undergraduate programs, the fact that the University does have in existence strong programs — most of them financially viable — at the post-baccalaureate level. Even the depressingly small undergraduate enrollment figures we project cannot be sustained, given all the external forces working against us, unless our undergraduate programs have special attributes that make students and their parents willing to pay substantial amounts in tuition to this University.

Strong linkages to graduate and professional programs can offer attractions that many competing institutions simply do not have.

The reorganization we propose can be summarized as follows:

**Business Administration**

Organizational arrangements now: One undergraduate college and a separate graduate school, with two faculties, budgets and deans, albeit with some overlap of faculty and substantial interschool cooperation.

Proposal: A single Faculty of Business Administration for both undergraduate and graduate programs with a single budget and dean.

**Arts and Science**

Organizational arrangements now: Two undergraduate colleges, one graduate school, and two institutes. There is a single budget and dean.
ly, but on a highly uneven basis. In the fall term, 1971, in some faculties, the average number of courses taught per full-time faculty member was well below 2.5, while in others the average was 3 or more. Even worse, the lower teaching loads tend to be found in faculties without substantial responsibilities for supervision and guidance of master's theses and doctoral dissertations. It is essential that uniform minimum teaching schedules be adopted, with explicit, objective criteria for equivalents to formal classroom instruction like thesis and dissertation supervision and formal administrative assignments of a substantial nature. Reduction in teaching schedules for research should be made only for externally financed research activities and for specifically approved projects that are internally financed.

leges is necessary for a variety of reasons. The most mundane, but not least significant, is that a smaller number of separate schools can permit savings in administrative costs — fewer deans, budget officers, dean's secretaries and the like. Also, reduction in the number of separate units is needed to assure better enforcement of the decision rules and actual realization of the necessary reorganizations. In addition, combining of separate faculties and administrative units would be helpful in eliminating course duplications and expanding student access to the remaining courses, horizontally, among the undergraduate divisions, and/or vertically between undergraduate and graduate units in the same field or discipline. Finally, some kind of reorganizations are necessary to accommodate the move of University College to Washington Square.

The Task Force has considered a number of alternative plans, all of which would reduce the number of separate faculties and administrations. One possibility is a horizontal unification across the undergraduate divisions, creating one undergraduate college of Arts and Science, and administration. This has significant attractions. However, we have concluded that even greater advantages would accrue from vertical unification, both undergraduate and graduate divisions with close professional or disciplinary ties. Essentially, we propose extending this arrangement to Arts and Science and Business Administration.

The principal advantage of this vertical unification, aside from the administrative improvements that can be achieved with either horizontal or vertical unification, is that it affords a better means of exploiting, for undergraduate programs, the fact that the University does have in existence strong programs — most of them financially viable — at the post-baccalaureate level. Even the depressing-ly small undergraduate enrollment figure we project cannot be sustained, given all the external forces working against us, unless our undergraduate programs have special attributes that make students and their parents willing to pay substantial amounts in tuition to this University. Strong linkages between graduate and professional programs can offer attractions that many competing institutions simply do not have.

The reorganization we propose can be summarized as follows:

**Business Administration**

Organizational arrangements now: One undergraduate college and a separate graduate school, with two faculties, budgets and deans, albeit with some overlap of faculty and substantial interschool cooperation.

Proposal: A single Faculty of Business Administration for both undergraduate and graduate programs with a single budget and dean.

**Arts and Science**

Organizational arrangements now: Two undergraduate colleges, one graduate school, and two institutes. There is a single budget and dean University College and Washington Square College are to be fully merged into a single undergraduate component of the unified Arts and Science faculty.

Our proposal on the organization of undergraduate Arts and Science warrants further discussion. In our deliberations, we were concerned with the following issues:

— How can undergraduate education be made more attractive at New York University?

— How can units be established to address certain student interests such as Urban Problems, Ecology and the like?

— How can faculty be encouraged to develop innovative programs?

— How will course duplication be eliminated?

We answer these questions with the following specific recommendations:

1. There should be one undergraduate college of arts and science.

A single New York University College of Arts and Science is proposed as the best vehicle for providing high-quality, but fiscally viable, undergraduate education. The faculty of the College would be members of the Faculty of Arts and Science under a single dean and with a single budget. Each officer of instruction would hold a primary appointment in a University department. The academic program of the College would be administered by an associate dean responsible to the Dean of the Faculty of Arts and Science.

It is further recommended that a special division of the College be created to provide a home for highly experimental and innovative nonprofessional programs which cannot be organized along departmental or school lines. Thus it might consist of a grouping of interdisciplinary and interschool programs such as Ecological Studies, Urban Studies and University Without Walls. Since the faculty who would teach in the division would be drawn from all the schools and colleges of the University, the division by an Undergraduate Planning (see below) would review both the institution and termination of all programs to be housed in the division.

The division should be headed by a director responsible to the Associate Dean of the College of Arts and Science. Programs in the division are to be staffed as temporary systems so all those who teach in them would have primary appointments elsewhere. The director of the division would make recommendations for promotion, tenure, and salary increments for services rendered in the division, and these would be forwarded to the instructor's place of primary appointment. The Associate Dean of the College of Arts and Science would review the reward system.

Similarly, the academic program of the Graduate School of Arts and Science would be administered by an associate dean responsible to the Dean of the Faculty of Arts and Science.
The proposed administrative structure for the Faculty of Arts and Science is shown in Chart A.

2. There should be a Commission on Undergraduate Planning:

The Commission on Undergraduate Planning would supersede the Commission on Coordinated Liberal Studies, be chaired by the Assistant Vice Chancellor for Academic Planning and be comprised of the deans of the arts, arts and science, business and education; the chairman of the appropriate curriculum committees; and one student from each school or college. The functions of the Commission would be:

- To maintain close relations with all undergraduate curriculum committees.
- To recommend to the Chancellor the formation or dissolution of all experimental programs at the undergraduate level.
- To review all new undergraduate courses.
- To eliminate duplication of courses among all undergraduate schools and colleges.
- To assume all of the functions of the Commission on Coordinated Liberal Studies.

The Commission might well work in conjunction with the deans of the schools of the arts, arts and sciences, business, education and public administration; an elected professor from each school; and a student from each school. It would perform the same functions as does its undergraduate counterpart.

Central Management of the University

Decision rules calling for drastic retrenchment and restrictions on educational planning within departments and schools will not be self-enforcing, even with a smaller number of separate units for the educational programs of the University. Recent experience has shown that no single administrator will rigorously enforce Draconian restrictions if he is convinced that other administrators are not so doing. Nor can enforcement be left solely to the Chancellor's office, for the Chancellor cannot operate on the basis of continual day-to-day interventions in the functioning of each of the schools. There is need, we believe, for new administrative arrangements to see that the decision rules are fairly and evenly administered throughout the University.

Therefore, we propose the continuing involvement of deans with the Chancellor and heads of operating units in the budgeting of both schools and central services and in the review of the extent to which the decision rules are being followed. By this we mean not separate discussions of adequate for a period of expansion and prosperity, but have served us badly in adversity. We propose changes that will greatly increase the burdens on budgetary officers but will also yield a budgetary system that does what a budget is supposed to do: provide a financial expression of considered institutional plans and priorities and a set of financial controls over the execution of those plans and the achievement of those priorities.

A. General rules:

1. For the most part, the budget unit within the University budget only expends income. We propose that each budgetary unit (including departments within the schools, if departments prepare their own budgets, as in Arts and Sciences) be required to budget all income and expenses, including contracts in a single document that is internally consistent. Some administrative divisions may not have any income to budget, but under the proposed rule that follows, others will have income, as do the academic units.

2. To the greatest extent feasible, the direct expense budgets of the academic units (and the administrative divisions as well) should include the costs of services now centrally budgeted, charged on a unit basis. That is, all units should be charged rent for the use of space, with a charge per square foot varying with the quality of the premises; similarly, telephone service, postage, purchasing services, building alterations, student aid and other noncentrally budgeted costs should be explicitly budget charges, with the academic units having some freedom to control the use of the service or to buy it elsewhere. This charge will provide incentives to economize on the use of services, as well as an external check on the efficiency with which the services are provided.

B. Budget determination:

1. Budget determination is necessarily an iterative process, with feedbacks of additional information and decisions during the budget cycle. However, the cycle must start much sooner than it now does.

...
The proposed administrative structure for the Faculty of Arts and Science is shown in Chart A.

2. There should be a Commission on Undergraduate Planning:

The Commission on Undergraduate Planning would supersede the Commission on Coordinated Liberal Studies, be chaired by the Assistant Vice Chancellor for Academic Planning and be comprised of the deans of the arts, arts and science, business and education; the chairman of the appropriate curriculum committees; and one student from each school or college. The functions of the Commission would be:

- To maintain close relations with all undergraduate curriculum committees.
- To recommend to the Chancellor the formation or dissolution of all experimental programs at the undergraduate level.
- To review all new undergraduate courses.
- To eliminate duplication of courses among all undergraduate schools and colleges.
- To assume all functions of the Commission on Coordinated Liberal Studies.

The Commission might well work in the following way. All undergraduate schools and colleges might be required to file an outline of the content of every course taught. The staff of the Assistant Vice Chancellor would review the outlines with the result that some duplicating courses might be found, in which case the procedure might well be:

- The Assistant Vice Chancellor would work up the information on the duplicating courses.
- The Assistant Vice Chancellor would notify the schools involved and invite appropriate persons to meet with the Commission.
- The Assistant Vice Chancellor would present the case to the Commission, and the schools would add other input.
- The Commission would decide the case.
- The Assistant Vice Chancellor would inform the appropriate deans.
- The deans would be free to appeal the decision to the Chancellor.

3. There should be a Commission on Graduate Planning.

This Commission would supersede the present Graduate Commission and would function parallel to and in the same manner as the Commission on Undergraduate Planning. It would be headed by the Assistant Vice Chancellor for Academic Planning, and its membership would include the deans of the schools of the arts, arts and sciences, business, education and public administration; an elected professor from each school; and a student from each school. It would perform the same functions as does its undergraduate counterpart.

Central Management of the University

Decision rules calling for drastic retrenchment and restrictions on educational planning within departments and schools will not be self-enforcing, even with a smaller number of separate units for the educational programs of the University. Recent experience has shown that no single administrator will rigorously enforce Draconian restrictions if he is convinced that other administrators are not so doing. Nor can enforcement be left solely to the Chancellor's office, for the Chancellor cannot operate on the basis of continual day-to-day interventions in the functioning of each of the schools. There is need, we believe, for new administrative arrangements to see that the decision rules are fairly and evenly administered throughout the University.

Therefore, we propose the continuing involvement of deans with the Chancellor and heads of operating units in the budgeting of both schools and central services and in the review of the extent to which the decision rules are being followed. By this we mean not separate discussions of one school's operations between its dean and the Chancellor, but an interchange of adequate data and information among the deans so that there is assurance that the difficult planning, budgeting and operating decisions essential for the University's survival are in fact made and adhered to in all parts of the University. This should be accomplished by regular, formal meetings. This is not a system of second-guessing the Chancellor or undermining him, but rather a system under which the entire — and unsustainable — burden of implementing very harsh rules does not fall on the Chancellor alone.

In addition, the Senate Budget Policy Committee should function like other Senate standing committees, reporting back to the Senate on its deliberations and recommendations.

The organization of the central administration itself constitutes another problem. We believe that consolidation of office and responsibilities, clearer lines of authority and firmer delegation of decision-making power is essential in our circumstances. Our suggestion is to combine under a single officer all student services and facilities; e.g. dormitories, student affairs, registrar, admissions, financial aid, etc. In addition, we recommend the remaining functions of institutional services and facilities should be combined under a single officer.

Budget Procedures

The University operates under budgetary procedures that might have been the basis for the decision to the Chancellor. The deans would be free to appeal the decision to the Chancellor.

B. Budget determination:

1. Budget determination is necessary for an iterative process, with feedbacks and additional information and decisions during the budget cycle. However, the budget cycle must start much sooner than it now does.

36
adequate for a period of expansion and prosperity, but have served us badly in adversity. We propose changes that will greatly reduce the burdens on budgetary officers but will also yield a budgetary system that does what a budget is supposed to do: provide a financial expression of considered institutional plans and priorities and a set of financial controls on the execution of those plans and the achievement of those priorities.

A. General rules:
1. For the most part, the budget units within the University budget only expense, not income. We propose that each budgetary unit (including departments within the schools, if departments prepare their own budgets, as in Arts and Sciences) be required to budget all income and expense including contracts in a single document that is hierarchically consistent. Some administrative divisions may not have any income to budget, but under the proposed rule that follows, others will have income, as do the academic units.

2. To the greatest extent feasible, the direct expense budgets of the academic units (and the administrative divisions as well) should include the costs of services now centrally budgeted, charged on a unit basis. That is, all units should be charged rent for the use of space, with a charge per square foot varying with the quality of the premises; similarly, telephone service, postage, purchasing services, building alterations, student aid and other now centrally budgeted costs should be direct, explicit budget charges, with the academic units having some freedom to contract the use of the service or to buy it elsewhere. This charge will provide incentives to economize on the use of services, as well as an external check on the efficiency with which the services are provided.

B. Budget determination:
1. Budget determination is necessarily an iterative process, with feedbacks of additional information and decisions during the budget cycle. However, the cycle must start much sooner than it now does. During the summer of 1972, each of the educational units and service divisions should prepare preliminary budgets for each of the next three years (1973-74, 1974-75 and 1975-76); in subsequent years, this practice should be continued, with a September 1 deadline for a three-year budget. The present, system for one-year budgeting makes it extremely difficult to make reductions, in the light of timely notice, requirements and other contractual obligations. Necessarily, the later years in the centrally budgeted services establish a target ratio of net income to direct expense for the academic units and a tentative scale of operations for the administrative divisions.

3. In October and November, each academic unit would be assigned a specific target ratio, as the basis for its budget submission for the ensuing year, in two stages:
(a) Cost accounting data would be used to determine the break-even ratio for each academic unit; and
(b) Permissible deficits and required surpluses would be negotiated, on the basis of the quality and direction of academic programs, not on the basis of across-the-board percentage changes.

4. In December, each academic unit would submit a formal income and expense budget for the ensuing year that meets the target ratio, with adequate detail on the budgetary period involves more uncertainty, but the general direction of programs and operations can be forecast for three years in advance, however roughly.

2. Based on the summer three-year projections of the individual units, the Budget Director should estimate, in September, the total cost of the centrally budgeted services and establish a target ratio of net income to direct expense for the academic units and a tentative scale of operations for the administrative divisions.

3. In October and November, each academic unit would be assigned a specific target ratio, as the basis for its budget submission for the ensuing year, in two stages:
(a) Cost accounting data would be used to determine the break-even ratio for each academic unit; and
(b) Permissible deficits and required surpluses would be negotiated, on the basis of the quality and direction of academic programs, not on the basis of across-the-board percentage changes.

Also, salary increase guidelines would be determined at this point.

4. In December, each academic unit would submit a formal income and expense budget for the ensuing year that meets the target ratio, with adequate detail on the budgetary period involves more uncertainty, but the general direction of programs and operations can be forecast for three years in advance, however roughly.

5. In January, the Budget Director would specify parameters to the heads of the schools.

a Reductions in rental of non-University space for University functions and freeing of space in University-owned real estate investment properties for rental purposes, by moving University activities into academic and related buildings.

b This is a minimum figure; see text. To the extent that further savings are effected by the participation of the Courant Institute in consolidation of computer centers, such savings should be recorded as a credit to the Arts and Science budget.

c This represents net savings, with credit for additional gifts; see text on Development and Public Relations activities.

d Excludes Town Hall, discussed in connection with the School of Continuing Education.
of administrative divisions, get budget submissions from them, and reconcile these to the budgets of the academic divisions.

6. Between February 1 and February 15, the proposed budgets of the academic units would be revised in the light of the new income estimates for the current year made possible by second term enrollment data; the revisions would include adjustments to take account of short-falls in the current year's fiscal outcome for that unit, if any (see below). The revised budgets would be approved by the Chancellor by February 15, opening the way for the first authorized offers of academic appointments (see below).

7. In March, the Trustees would be asked to approve the University budget.

C. New controls on budget execution:

1. We propose a two-year rolling adjustment system, in which failure to meet income targets in year 1 requires a reduction in the budget for year 2; in effect, the short-fall in any one unit is a repayable loan from the Chancellor's office. For units undergoing a long-run decline, this will be a difficult rule to live with, but it has the advantage of forcing early action on the future of units in that unfortunate situation.

2. We propose that no firm offers of academic appointment — by department chairmen or anyone else — be permitted before February 15. The University cannot continue to live with a system under which academic officers can unilaterally determine their own budgets by making offers of appointment prior to the formal setting of budgets.

3. In the event that a unit simply fails to meet the requirements of this budgetary system, the Chancellor's office should be prepared to send out non-reappointment notices by March 1, for all first-year faculty appointees, and by May 1, for all non-tenured faculty, in that academic unit, on grounds of financial exigency. Moreover, a salary freeze should be imposed on that academic unit. In return, the faculty members in that unit should be afforded a formal means for voicing their continued confidence, or lack thereof, in the responsible budget officer, dean or department chairman. Presumably, the ultimate determinant that this set of rules amounts to would not have to be deployed more than once before strict adherence to the budget system became the universal practice.

Guidelines for Reducing the Size of Faculty

The Task Force recommendations for restructuring of the University's divisions and for achieving the prescribed budgetary results will require substantial shrinkage in faculty numbers in some parts of the University. We have given considerable thought to this difficult process.

In recent months, the AAUP and the Association of American Colleges have published a set of "operating guidelines" on institutional problems resulting from financial exigency. The AAUP statement appears in Academe, Vol. 6, No. 1 (January 1972), p. 2. Our recommendations in this section represent an application of those guidelines to the specific circumstances of this University.

The initial AAUP-AAC "operating guidelines" call for "early, careful, and meaningful faculty involvement" in decisions on program reduction. Such involvement is provided at several stages. First, the Task Force itself has had extensive oral and written consultation with faculty groups in those schools whose continued existence is most in doubt because of financial exigency. Second, there is faculty representation on the University Committee on the Financial Emergency, established to react to the Task Force proposals. Third, specific proposals for changes in faculty personnel practices will be discussed by the Faculty Council. Fourth, individual faculties will be involved in discussions of restructuring within a school and in staff reductions growing out of restructuring proposals. In each school, the governance body should form a faculty committee to work with the dean in accomplishing the restructuring and staff reduction.

The remainder of the "operating guidelines" refer to the rights of tenured faculty members, early retirement, notice provisions and changes from full-time to part-time service. We propose the following processes, as applications of these guidelines.

1. The first stage in faculty reduction involved the discontinuance of whole units or programs. Clearly, in these cases, the services of both tenured and non-tenured faculty members must be terminated, with as much notice as possible.

2. Within the surviving academic units, strict controls on new hiring must be maintained, so that as much of the necessary faculty reduction as possible occurs through attrition. Realistically, we do not expect that attrition can do a large part of the necessary job, if only because the controls on new hiring during the past two years have already resulted in a good deal of attrition.

3. The mandatory retirement age for faculty should be reduced from 68 to 65, effective September 1, 1972. That is, faculty members who have reached or will reach their 65th birthdays prior to September 1, 1972, would retire at the end of 1972-73, those who reach 65 between September 1, 1972, and August 31, 1973, would retire at the end of 1973-74, and so on. If this recommendation is implemented, approximately 60 full-time faculty members would retire at the end of 1972-73.

4. In addition, voluntary early retirements of faculty members between ages 62 and 65 should be actively encouraged. To this end, we suggest that financial incentives be offered, along the following lines. The University would agree to make, on behalf of the professor who is retiring, the full 15 percent annual contribution to TIAA-CREF (calculated on the basis of salary at retirement) for each year of early retirement (i.e., for three years for a professor retiring at age 62) plus an amount equal to the rate of return that would have been earned on these contributions had the professor not retired until age 65. In addition, the University would make a single supplementary contribution to TIAA-CREF equal to 50 percent of salary for those retiring at age 62, 35 percent for those retiring at age 63 and 20 percent for those retiring at age 64. In total, the University would make a settlement equal to slightly over one year's salary if retirement is at 62, slightly under 70 percent of one year's salary at 63 and just over 35 percent at 64. At the retiree's option, this amount could be paid to him in cash, but the tax laws are such that, for most professors, this would not be an attractive option.

5. Beyond these steps, we believe that faculty reductions must be discriminate ones. That is, we reject the idea that, within any unit, all non-tenured faculty members should be terminated before any tenured faculty member is terminated or that, among the tenured faculty members, the rule should be last in — first out. Both the AAUP and the AAC statements call for preferential treatment of tenured faculty.
7. In March, the Trustees would be asked to approve the University budget.

C. New controls on budget execution:

1. We propose a two-year rolling adjustment system, in which failure to meet income targets in year 1 requires a reduction in the budget for year 2; in effect, the short-fall in any one unit is a repayable loan from the Chancellor's office. For units undergoing a long-run decline, this will be a difficult rule to live with, but it has the advantage of forcing early action on the future of units in that unfortunate situation.

2. We propose that no firm offers of academic appointment — by department chairman or anyone else — be permitted before February 15. The University cannot continue to live with a system under which academic officers can unilaterally determine their own budgets by making offers of appointment prior to the formal setting of budgets.

3. In the event that a unit simply fails to meet the requirements of this budgetary system, the Chancellor's office should be prepared to send out non-reappointment notices by March 1, for all first-year faculty appointees, and by May 1, for all non-tenured faculty, in that academic unit, on grounds of financial exigency. Moreover, a salary freeze should be imposed on that academic unit. In return, the faculty members in that unit should be afforded a formal means for voting their continued confidence, or lack thereof, in the responsible budget officer, dean or department chairman. Presumably, the ultimate decision that this set of rules amounts to would not have to be deployed more than one time before strict adherence to the budget system became the universal practice.

this section represent an application of those guidelines to the specific circumstances of this University.

The initial AAUP-AAC "operating guidelines" call for "early, careful, and meaningful faculty involvement" in decisions on program reduction. Such involvement is provided at several stages. First, the Task Force itself has had extensive oral and written consultation with faculty groups in those schools whose continuance is most in doubt because of financial exigency. Second, there is faculty representation on the University Committee on the Financial Emergency, established to react to the Task Force proposals. Third, proposals for restructuring the academic units will be discussed in the University Senate.

Fourth, specific proposals for changes in faculty personnel practices will be discussed by the Faculty Council. Fifth, individual faculties will be involved in discussions of restructuring within a school and in staff reductions growing out of restructuring proposals. In each school, the governance body should form a faculty committee to work with the dean in accomplishing the restructuring and staff reduction.

The remainder of the "operating guidelines" refer to the rights of tenured faculty members, early retirement, notice provisions and changes from full-time to part-time service. We propose the following processes, as applications of these guidelines.

1. The first stage in faculty reduction involved the discontinuance of whole units or programs. Clearly, in these cases, the services of both tenured and nontenured faculty members must be terminated, with as much notice as possible.

2. Within the surviving academic units, faculty members would retire at the end of 1973-74, and so on. If this recommendation is implemented, approximately 60 full-time faculty members would retire at the end of 1972-73.

The University would agree to make, on behalf of the professor who is retiring, the full 15 percent annual contribution to TIAA-CREF (calculated on the basis of salary at retirement) for each year of early retirement (i.e., for three years for a professor retiring at age 62) plus an amount equal to the rate of return that would have been earned on these contributions had the professor not retired until age 65. In addition, the University would make a single supplementary contribution to TIAA-CREF equal to 50 percent of salary for those retiring at age 62, 35 percent for those retiring at age 63 and 20 percent for those retiring at age 64.

In total, the University would be making a settlement equal to slightly over one year's salary if retirement is at 62, slightly under 70 percent of one year's salary at 63 and just over 35 percent at 64. At the retiree's option, this amount could be paid to him in cash, but the tax laws are such that, for most professors, this would not be an attractive option.

5. Beyond these steps, we believe that faculty reductions must be discriminate ones. That is, we reject the idea that, within any unit, all nontenured faculty members should be terminated before any tenured faculty member is terminated or that, among the tenured faculty members, the rule should be last in — first out. Both the AAUP and the AAC statements call for preferential treatment of tenured
Guidelines for Reducing the Size of Faculty

The Task Force recommendations for restructuring the University's divisions and for achieving the prescribed budgetary results will require substantial shrinkage in faculty numbers in some parts of the University. We have given considerable thought to this difficult process.

In recent months, the AAUP and the Association of American Colleges have published a set of "operating guidelines" on institutional problems resulting from financial exigency. The AAUP statement appears in *Academe*, Vol. 6, No. 1 (January 1972), p. 2. Our recommendations in this section represent an application of those guidelines to the specific circumstances of this University.

The initial AAUP-AAC "operating guidelines" call for "early, careful, and meaningful faculty involvement" in decisions on program reduction. Such involvement is provided at several stages. First, the Task Force itself has had extensive oral and written consultation with faculty groups in those schools whose continuance is most in doubt because of financial exigency. Second, there is faculty representation on the University Committee on the Financial Emergency, established to react to the Task Force proposals. Third, proposals for restructuring the academic units will be discussed in the Senate Committee. Fourth, specific proposals for changes in faculty personnel practices will be discussed by the Faculty Council. Fifth, individual faculties will be involved in discussions of restructuring within a school and in staff reductions growing out of restructuring proposals. In each school, the governance body should form a faculty committee to work with the dean in accomplishing the restructuring and staff reduction.

The remainder of the "operating guidelines" refer to the rights of tenured faculty members, early retirement, notice provisions and changes from full-time to part-time service. We propose the following processes, as applications of these guidelines.

1. The first stage in faculty reduction involved the discontinuance of whole units or programs. Clearly, in these cases, the services of both tenured and nontenured faculty members must be terminated, with as much notice as possible.

2. Within the surviving academic units, strict controls on new hiring must be maintained, so that as much of the necessary faculty reduction as possible occurs through attrition. Realistically, we do not anticipate that a large part of the necessary job, if only because the controls on new hiring during the past two years have already resulted in a good deal of attrition.

3. The mandatory retirement age for faculty should be reduced from 68 to 65, effective September 1, 1972. That is, faculty members who have reached or will reach their 65th birthdays prior to September 1, 1973, would retire at the end of 1972-73, those who reach 65 between September 1, 1973, and August 31, 1974, would retire at the end of 1973-74, and so on. If this recommendation is implemented, approximately 60 full-time faculty members would retire at the end of 1972-73.

4. In addition, voluntary early retirement of faculty members between ages 62 and 65 should be actively encouraged. To this end, we suggest that financial incentives be offered, along the following lines. The University would agree to make, on behalf of the professor who is retiring, the full 15 percent annual contribution to TIAA-CREF (calculated on the basis of salary at retirement) for each year of early retirement (i.e., for three years for a professor retiring at age 62) plus an amount equal to the rate of return that would have been earned on these contributions had the professor not retired until age 65. In addition, the University would make a single supplementary contribution to TIAA-CREF equal to 50 percent of salary for those retiring at age 62, 35 percent for those retiring at age 63 and 20 percent for those retiring at age 64. In total, the University would be making a settlement equal to slightly over one year's salary if retirement is at 62, slightly over 70 percent of one year's salary at 63 and just over 50 percent at 64. At the retiree's option, this amount could be paid to him in cash, but the tax laws are such that, for most professors, this would not be an attractive option.

5. Beyond these steps, we believe that faculty reductions must be discriminatory. That is, we reject the idea that, within any unit, all tenured faculty members should be terminated or that, among the tenured faculty members, the rule should be last in—first out. Both the AAUP and the AAC statements call for preferential treatment of tenured members of a faculty. But the AAC statement goes on to say:

"Preferential retention of tenured faculty should not, however, leave a reduced academic unit in the highly undesirable situation of facing any probationary faculty. In some cases, tenured and probationary faculty may both have to be reduced."

We believe that the last sentence above must apply to some of the units in this University. The instructional needs of the units and their continued ability to attract students and research support require discriminate faculty reductions. Our hopes and expectations are that, in reducing programs, the units will do so by changing and refocusing them, emphasizing areas of strength and exploiting possibilities for innovation; these hopes and expectation cannot be realized if younger faculty members are in all cases the first — and only ones — to go. Therefore, we urge that the academic units whose substantial contraction is necessary establish internal machinery and procedures for making discriminate faculty reductions, to the extent that attrition, reduction in the mandatory retirement age, and voluntary early retirement arrangements do not suffice to meet the budgetary targets the unit must achieve.

VI. CONCLUSION

The watchword for our poreration is "immediacy." The financial exigency is real and immediate. We must immediately reduce our scale of operations and revise our administrative and educational arrangements very substantially so that we have an institution that is well attuned to the demand for our educational services that we confront. No less immediately, we must launch the educational innovations and new directions that tap new sources of demand and satisfy educational needs that this University can meet. What we cannot do is to operate as we have been doing on the basis of hopes or assertions that salvation is "just around the corner." What is just around the corner is insolvency, unless we are able to deal promptly with direct expenses and a reasonable allowance of undergraduate scholarship funds to learn about new opportunities or they may be lost.
The initial AAUP-AAC "operating guidelines" call for "early, careful, and meaningful faculty involvement" in decisions on program reduction. Such involvement is provided at several stages. First, the Task Force itself has had extensive oral and written consultation with faculty groups in those schools whose continuance is most in doubt because of financial exigency. Second, there is faculty representation on the University Committee on the Financial Emergency, established to react to the Task Force proposals. Third, proposals for restructuring the academic units will be discussed in the University Senate. Fourth, specific proposals for changes in faculty personnel practices will be discussed by the Faculty Council. Fifth, individual faculties will be involved in discussions of restructuring within a school and in staff reductions growing out of restructuring proposals. The remainder of the "operating guidelines" refer to the rights of tenured faculty members, early retirement, notice provisions and changes from full-time to part-time service. We propose the following processes, as applications of these guidelines.

1. The first stage in faculty reduction involved the discontinuance of whole units or programs. Clearly, in these cases, the services of both tenured and nontenured faculty members must be terminated, with as much notice as possible.

2. Within the surviving academic units, would retire at the end of 1973-74, and so on. If this recommendation is accepted and, approximately 60 full-time faculty members would retire at the end of 1972-73.

4. In addition, voluntary early retirements of faculty members between ages 62 and 65 should be actively encouraged. To this end, we suggest that financial incentives be offered, along the following lines. The University would agree to make, on behalf of the professor who is retiring, the full 15 percent annual contribution to TIAA-CREF (calculated on the basis of salary at retirement) for each year of early retirement (i.e., for three years for a professor retiring at age 62) plus an amount equal to the rate of return that would have been earned on these contributions had the professor not retired until age 65. In addition, the University would make a single supplementary contribution to TIAA-CREF equal to 50 percent of salary for those retiring at age 62, 35 percent for those retiring at age 63 and 20 percent for those retiring at age 64. In total, the University would be making a settlement equal to slightly over one year's salary if retirement is at 62, slightly under 70 percent of one year's salary at 63 and just over 35 percent at 64. At the retiree's option, this amount could be paid to him in cash, but the tax laws are such that, for most professors, this would not be an attractive option.

5. Beyond these steps, we believe that faculty reductions must be discriminate. That is, we reject the idea that, within any unit, all nontenured faculty members should be terminated before any tenured faculty members is terminated or that, among the tenured faculty members, the rule should be last in — first out. Both the AAUP and the AAC statements call for preferential treatment of tenured faculty members.

VI. CONCLUSION

The watchword for our peroration is "immediacy." The financial emergency is real and immediate. We must immediately reduce our scale of operations and revise our administrative and educational arrangements very substantially so that we have an institution that is well attuned to the demand for our educational services that we confront. No less immediately, we must launch the educational innovations and new directions that tap new sources of demand and satisfy educational needs that this University can meet. What we cannot do is to operate as we have been doing on the basis of hopes or assertions that salvation is "just around the corner." What is just around the corner is insolvency, unless our immediate actions are sufficiently sweeping, resolute and imaginative. The Task Force believes that the University community — faculty, students and staff — is realistic enough, and capable enough, to grasp the opportunity for a fresh start in a reorganized University.
