ABSTRACT

The Objective-Item Bank presented covers 16 sections of four subject areas in each of four grade levels. The four areas are: Language Arts, Math, Social Studies, and Science. The four grade levels are: Primary, Intermediate, Junior High, and High School. The Objective-Item Bank provides school administrators with an initial starting point for curriculum development and with the instrumentation for program evaluation, and offers a mechanism to assist teachers in stating more specifically the goals of their instructional program. In addition, it provides the means to determine the extent to which the objectives are accomplished. This document presents the Objective Item Bank for intermediate science.

## BEHAVIORAL OBJECTIVE -- TEST ITEM BANK

### BACKGROUND

The Evaluation for Individualized Instruction Project, an ESEA Title III project administered by the Downers Grove, Illinois, School District 99, has developed an Objective-Item Bank covering sixteen sectors of four subject areas in each of four grade levels.

		Subject Area			
		LA	MA	SS	SC
1		11	12	13	14
2		21	22	23	24
3		31	32	33	34
4		41	42	43	44

LA = Language Arts  
MA = Math  
SS = Social Studies  
SC = Science

1 = Primary  
2 = Intermediate  
3 = Junior High  
4 = High School

Nearly 5000 behavioral objectives and over 27,000 test items based on these objectives were recently published as the culmination of this three-year project. The complete output of seventeen volumes totals over 4500 pages. These publications have been reproduced by the Institute for Educational Research to make them available at cost to teachers and administrators.

The objectives and items were written by over 300 elementary and secondary teachers, representing forty Chicago suburban school districts, who participated in workshops of three to nine weeks duration throughout the project. In these workshops they learned to write effective behavioral objectives and test items based on the objectives. The results of their work were edited for content and measurement quality to compile the largest pool of objectives and test items ever assembled.

### PRINCIPLES AND MERITS

Unfortunately, the Objective-Item Bank is often viewed mainly as a source of test items. Although this is an important function, its greatest potential impact lies not in the availability of a multitude of test items, but rather in the ability of these items to measure carefully selected educational goals.

The almost frenetic search for test items on the part of some educators has been spurred by the current emphasis on measurement. Some educators have become so enamored with measurement that they seem more interested in obtaining a numerical index than examining what they are really trying to measure. Further, it is

not unusual for teachers to speak about a child obtaining a score of 95% on a particular test. Frequently, they encounter considerable difficulty in interpreting the real meaning of a score and are content to just accept its numeral value. A much more important question would seem to be: What are our goals of measurement? Unless we can answer this question precisely, the only real purpose that testing serves is to gather data concerning pupils to facilitate the marking of report cards. This is not to say that this function is not legitimate -- it is rather to say that such a view of measurement is much too constricting. The goal of measurement should be to provide feedback both to the teacher and the child regarding the success or failure of the learning experiences in realizing specifically stated objectives.

One of the main strengths of the EII Objective and Item Bank is that all the items are directly tied to specifically stated objectives. Each group of items is designed to measure a specific objective and therefore provides the means whereby the teacher can obtain feedback on the success of the educational program.

It is disheartening to observe so many districts attacking the complex problem of curriculum development independently. One cannot help reflecting on the mammoth duplication of efforts involved. The Objective-Item Bank offers a possible alternative to this duplication. Utilizing its resources, the curriculum committee is provided with some point of departure. The efforts of three hundred teachers participating in the Evaluation Project's workshops and the thoughts of forty districts can be evaluated and utilized. This is not to suggest that any set of objectives should be viewed as the "answer" to an individual district's curricular problem but rather the efforts of others offer a convenient point of departure and may serve to stimulate diverse opinions about the direction of curricular thrust within the individual district. The words of Sir Isaac Newton seem appropriate; "If I have seen further, it is by standing upon the shoulder of giants." The efforts of others, whether we consider them giant-like or pygmyish, do offer a threshold to view the immense, complicated problem of curricular development in better perspective.

The title of an article in a recent educational journal, "If You're Not Sure Where You're Going, You're Liable to End up Someplace Else," succinctly describes a continuing dilemma in our educational system. The vagueness of our goals often promotes the idea that "anything goes." Without a guiding beacon many classrooms become activity-centered rather than goal-oriented. One educator recently compared the all-too-typical classroom with Henry Ford's observation concerning history. He defined history as, "One damned thing after another." Is this true of the succession of activities within our classrooms? Does the teacher really know the educational purpose of each activity? Perhaps, even more importantly, do the children know the purpose?

The Objective-Item Bank offers a mechanism to assist teachers in stating more specifically the goals of their instructional program and further provides the means to determine the extent to which the objectives are accomplished. The specification of goals assists the teacher in discovering whether favored activities advance learning, or are merely time fillers; whether they get the "materials" across, or are merely perfunctory exercises.

Much discussion has been devoted to the topic of "how individualized instruction?" and occasionally some dialogue has even centered on the "how." But an even more basic question is one that is often ignored: "Individualize what?"

Many school districts mention their individualized programs in reading or mathematics. What is individualized within these programs? Are certain skills definitely identified? Is the practice of pretesting to determine the child's level of proficiency when he enters the program a guideline?

The Objective-Item Bank has two potential contributions to make to all school districts embarking on or presently engaged in individualized instruction programs. These contributions are: 1. A group of well-specified objectives which could form the "what" of the program. 2. A set of items designed to provide information on the degree of mastery of the objective.

#### APPLICATIONS AND TECHNIQUES

The versatility of the Objective-Item Bank is evident in the value and usability by both teachers and administrators.

To the Administration the Objective-Item Bank:

1. Provides an initial starting point for curriculum development. The existence of many objectives avoids the necessity of each district duplicating the efforts of another. The task of the curriculum committee becomes one of selecting and/or rejecting objectives from the Objective - Item Bank and then supplementing them with objectives developed at the local level. Past-participants of the Evaluation Project workshops would be valuable resource people in this endeavor.
2. Provides the instrumentation for program evaluation. The selection of items from those objectives representative of the main emphases of the local district provides the framework for the evaluation of the stated goals.

To the Teacher the Objective-Item Bank:

1. Provides the pooling of talent and imagination of teachers of varied experience and interests, thus avoiding the present duplication of effort.
2. Provides resources for more highly sensitized program evaluation instead of a battery of standardized tests. Since the objectives are tailored to the program, the associated test items can be used to determine precisely the efficacy of the instructional materials.
3. Provides the means whereby the teacher can become more acutely aware of that which he is seeking to have occur in his classroom and that which he will accept as evidence of its occurrence. Hopefully, as teachers become more aware of their goals, they will share these

objectives with children and let the pupils become acutely aware of that which is expected of them, ergo allowing them to seek their own modality of instruction for the realization of the stated goals.

4. Provides the nucleus of an individualized instruction program.
  - a. It provides for more precise curriculum planning by differentiating those goals specific to each grade and even to each student. With the bank at their disposal, teachers are encouraged to become aware of their responsibilities in developing a set of basic objectives which every child must attain and a further set which can be pursued according to the students' abilities and interests.
  - b. It provides several items per objective, some of which may be used as a pre-test to discover whether a student should undertake that objective while the remainder may be employed to measure the mastery of those students who do tackle the objective.

#### NOTES

Several of the volumes have been reproduced from punched cards by the IBM 407, a machine which does not print all characters exactly as they appear on a typewriter. Thus:

% is actually (

□ is actually )

O is actually ? or !

Apostrophes cannot be printed.

The number immediately after the statement of each objective represents the number of items measuring attainment of that objective.

FOG IS A CONCENTRATION OF TINY WATER DROPLETS SUSPENDED IN THE AIR. IT MOST OFTEN OCCURS WHEN WARM, MOIST AIR IS SUDDENLY COOLED. WHEN THE WHITE, MISTY BLANKET HIDES RUNWAYS, AIRPLANES CANNOT TAKE OFF OR LAND. CHANGES IN FLIGHT SCHEDULES COST THE AIRLINES SEVERAL MILLION DOLLARS EACH YEAR. \*B

0934

IN 1968, A NEW FOG-SWEEPING MACHINE WAS TESTED FOR DISSIPATING THE MOST COMMON KIND OF FOG, WHICH OCCURS AT TEMPERATURES ABOVE FREEZING. THE MACHINE CONSISTED OF A 100-FOOT-LONG PLASTIC TUBE MOUNTED ON A MOBILE BLOWER. AS THE MACHINE MOVED ACROSS THE AIRPORT, CHEMICALS WERE BLOWN THROUGH THE TUBE AND UP INTO THE FOG. ONE OF THE CHEMICALS REDUCED THE SURFACE TENSION ON THE WATER DROPLETS SO THAT THEY WOULD JOIN TOGETHER MORE EASILY. THEY ALLOWED THE DROPLETS TO FALL AS RAIN. \*A

0935

COLD FOG, WHICH OCCURS AT TEMPERATURES BELOW FREEZING, CAUSES A SMALL PERCENTAGE OF AIRPORT SHUTDOWNS, AND IS FAIRLY EASY TO ELIMINATE. HOWEVER, COLD FOG TOGETHER WITH SNOW OR ICE COVERED RUNWAYS CAN BE AS HAZARDOUS AS THE MORE DENSE WARM WEATHER FOG. \*B

0936

FOG CAUSES AIRPORTS TO SEND SCHEDULED FLIGHTS TO OTHER AIRPORTS NEARBY. THIS, TOO, CAN BE VERY DANGEROUS. THE NEW GIANT JETS NEED LONGER RUNWAYS TO LAND THAN DO THE REGULAR PASSENGER JETS. MANY OF THE SMALLER AIRPORTS DO NOT HAVE RUNWAYS LONG ENOUGH TO ALLOW THE NEW JETS TO LAND WITH SAFETY, BUT FOG OFTEN FORCES THE HUGE AIRCRAFT TO USE SMALL AIRPORTS. \*B

0937

IN 1969, THE UNITED STATES AIR FORCE ANNOUNCED A PLAN FOR USE WHEN WARM, DRY AIR LIES OVER A LAYER OF COLD FOG. A HELICOPTER HOVERS OVER THE FOG LAYER. THE WHIRLING ROTOR BLADES PUSH WARM, DRY AIR DOWN TO MIX WITH THE FOGGY LAYER AND CAUSE THE WATER DROPLETS TO EVAPORATE. \*A
