The objectives described in this report were to develop and implement an elementary school curriculum to meet students' needs and an inservice training program to show the teachers how to teach career development to the students. The six elementary schools in the Newport Independent School District are in a high poverty area with all of the problems of the socially, economically, and culturally disadvantaged. The academic-centered elementary curriculum in use was not relevant to the children's needs nor did it help them to relate to the world of work. To overcome these deficiencies, instructional units for each grade were written, media and materials purchased, field trips made, community resource persons consulted, and inservice workshops held. Achievement and intelligence pretests and posttests administered to the students showed a definite improvement in scores as a result of the new curriculum. The most significant gain was in the area of grades, a random sampling showing that 57 percent of students sampled improved at least one letter grade or more. Although parent involvement in the program was poor, school personnel and the community demonstrated a positive attitude toward career education. The growth of career awareness for elementary students is believed to be a way of alleviating the present high drop-out rate in the high schools. (MF)
FINAL REPORT

THE DEVELOPMENT AND IMPLEMENTATION OF AN INTEGRATED CAREER-CENTERED CURRICULUM FOR ELEMENTARY GRADES ONE THROUGH SIX

CHAPTER VI APPENDIX
SUMMARY

Description of the Problem:

There are six elementary schools in the Newport Independent School District, containing 2,600 pupils and 120 teachers and administrators. These schools are located in an urban setting with a large number of its constituents being socially, economically, and culturally deprived.

This deprivation is seen in the high level of poverty that exists in our community where many are unemployed, are on welfare assistance, or are holding jobs which do not adequately meet their financial needs. In addition, Newport has a migrant population. Our geographical location is such that we could be described as the "Gateway to the Industrial North for the people of Appalachia". Many of these farm reared persons are at a disadvantage in an urban environment. They need help in developing new occupational skills, in getting jobs, in getting acquainted with new neighbors, in making new friends. Moreover, many of the parents of our students have a meager educational background. Therefore, it must be realized the impact these social, economic, and cultural characteristics have directly affected the attitudes and interests of their children toward their own education.

There rural people migrating to Newport have brought with them unique educational needs. The children in these families tend to be overage for their grade placement. Their reading abilities are low. Their vocabularies are limited. Their home conditions are unstable because of difficulties their families are having in getting settled in a new locality. Tensions, inevitably generated as these newcomers try to find a place for themselves in a new and different community, are transmitted to both young children and older youth. At times these tensions are manifested in gang conflicts, truancy, juveniles delinquency, antagonism toward the schools, and eventually older youth dropping out of school. Moreover, these disadvantaged youngsters come into the schools with a great lack of personal adjustment to urban life and to school, and exposure to the world of work from an urban viewpoint.

At present, the curriculum in our elementary schools is academic-centered, with preparation for higher education implied by its emphasis. This is a great inadequacy in our curriculum since the majority of our students do not finish high school, much less go on to higher education. Because the curriculum has not been adapted to meet the changing conditions, many of them brought on by the migrant population, the present curriculum does not expose our children sufficiently to the vast changing world of work. It does not help students overcome the deficiencies of their poor education background, their poor attitudes toward school and work, and poor personality and emotional development.

The lack of relevance in the elementary curriculum noted above hinders the educational program of the entire school system as a whole. Students with vast educational and personal deficiencies are not pro-
vided with the appropriate curricular experiences to help them see the direct relationship of school activities to the world of work. They do not perceive how acquiring a knowledge of the academic skills affects one’s successful performance in an occupation. This eventually leads to and/or accelerates underachievement and failure. Thus, because of the inadequate curriculum the school system finds itself having further discipline problems, truancy, dropouts, and other behavior problems. In addition, the high school vocational education program is minimized and hindered because either the students dropout of school and never enter it or they have not developed the readiness to fully benefit from the vocational education program.

The dropout rate for Newport City Schools is 55.6 per cent of the students entering the ninth grade that do not complete high school. Approximately 70 per cent, on leaving the eighth grade, do not complete high school. This is so because a larger number of these students are over-aged, have a poor self-image, and have become dissatisfied with and/or fail to see a further need for school.

**SCOPE OF THE STUDY**

To accomplish our immediate objectives required the writing of three instructional units for each grade, purchasing the various media and instructional materials to be used in the implementation of the program, and for enrichment and interest. The training of teachers has been done through in-service workshops and by individual assistance.

The training and orientation for administering the program has involved 105 classroom teachers, six elementary principals, two superintendents, two art teachers, two music teachers, two physical education teachers, two elementary guidance counselors, one Director, two preschool in-service programs, and three in-service meetings involving the entire faculty. Dr. Larry J. Bailey, Southern Illinois University, Dr. Alfred Mannebach, University of Kentucky, and Dr. Walter Wernick, Northern Illinois University, have served as consultants; we have had in-service meetings per grade level (1 through 6) with the Curriculum Team and Director serving as the consultants.

A Citizens Advisory Committee was set up in September, 1971. The Committee was represented by two vice presidents of banks, Executive Vice President of the Chamber of Commerce, Police Sergeant, Patrolman, owner of a business machines and office supply store and repair shop, owner of a shoe store and shoe repair shop, housewife, PTA members, ministers, teachers, and the project staff. The Committee met once a month from September through June. Average attendance per meeting was ten people. It was requested by the committee that we not have too large a group for the first year, as Career Education was an entirely new concept in the community. They felt a comprehensive study by the group during the first year was necessary for building a good committee that would continue to function and do an even more effective job next year with a larger group of members. To a degree this could be labeled an in-service year for the Committee. The Instructional Units
written by the Curriculum Team were discussed, teachers of various grade
levels came to the meetings and brought charts, posters, pictures, and
slides to demonstrate how Career Education was being integrated into
the existing curriculum taught in the different classrooms. The Committee
served us well. They participated as resource people in the class-
rooms, and recruited other resource people from a variety of profes-
sions and occupations.

We were fortunate in having Mr. James Patton and Miss Virginia
Pratt from Northern Kentucky Vocational School to assist us in intro-
ducing the project to the Committee, and attend several of our meetings.

THE OBJECTIVES PURSUED

A. To develop and implement an Integrated Career-Centered
   Curriculum which will meet the educational needs of students
   as they relate to the world of work. Essentially, attitudes,
   knowledge, and skills of the students must be considered in
   the development of the new curriculum.

   1. Attitudes
      a. To help children have a desire to succeed and be
         self-motivating.
      b. To develop a willingness in the child to accept
         responsibility.
         To improve self-discipline
         To respect the rights of others

   2. Knowledge
      a. To have a knowledge of the economic system
      b. To broaden knowledge of career choices
         In job opportunities
         In job requirements

   3. Skills
      a. To improve manual dexterity with tools and materials
      b. To improve communication skills
         In ability to change
         In recognizing vital choices

B. To develop and implement an In-Service Training Program
   involving:
   1. Instilling into the teachers the goals and objectives
      of the project
   2. Demonstrating to the teachers how to use various methods
      to teach career development for the students
   3. Training the teachers how to incorporate the Integrated
      Career-Centered Curriculum into their particular program.

The tools of the project are directly related to the problem area.
The primary concern of Newport City Schools is to meet the needs of our
children - to expose our disadvantaged youth to the many varied career
opportunities in the world of work, to show the relationship of school
to the world of work, to prepare our students to enter the world of
work as productively as possible, having acquired suitable knowledge, skills, and attitudes. Also, to demonstrate the world of work as an alternative to an idle welfare existence. One of the problems is to begin to meet those needs in the first decade of a student's life. Thus, action is needed to develop and implement an Integrated Career-Centered Curriculum in the six elementary schools in grades one through six.

THE METHODS USED

The Curriculum Team at the outset was involved in the overall planning concerning the methods of integration, researching and reviewing materials, developing the philosophy, concepts, objectives, and activities to be used in developing and implementing the instructional units.

It was agreed that improvements of self-image is of primary importance and must be an existing factor at all grade levels. In the writing of Instructional Units two teachers from each grade level worked as a team.

For each of the units produced by and for the various grade levels, the following criteria was used as a guide.
1. The developmental stage of the child.
2. Occupations found in the basal texts and supplementary materials.
3. Wide range of activities to provide for individual differences.

The overall theme of the units was "My World and Me".

Unit I "My World and Me" - awareness of self
Unit II "Hands-on Activities" - manipulation
Unit III "Exploring My World" - field trips

The Curriculum Team worked one Friday and Saturday each month to produce Units II and III. Unit I was produces prior to the opening of school in September. The following people served as consultants to the team while in the process of writing Units II and III.

Curriculum Team Consultants

Dr. Alfred Mannebach, Coordinator, University of Kentucky
Mr. John Shoemaker, State Bureau of Instruction, State Department of Education
Dr. Larry J. Bailey, Southern Illinois University, Carbondale, Illinois
Dr. Floyd McKinney, State Department of Education
Miss Virginia Pratt, Northern Kentucky Vocational School
Mr. James Patton, Northern Kentucky Vocational School
Mr. Douglas McKinley, Bureau of Vocational Guidance, State Department of Education
We made no change of basal text. The curriculum change was one of enrichment through the use of film strips, supplementary books, panoramas, study prints, tools, games, manipulative toys, field trips, and resource people. A new approach to teaching was introduced through a variety of activities and teacher training meetings with the involvement of guidance counselors, supervisors, and other school personnel.

Resource people from business and industry, field trips, special teachers, Director of Food Services, supervisors, guidance counselors, janitors, and cafeteria workers were utilized.

In-service training was provided for administrators, teachers, and staff in implementing the career education program. See appendix A, page _26_ for a complete list of Consultants and in-service meetings.

The Citizens Advisory Committee was a valuable asset to our program. A good source of information was provided by the Committee Members for the education and training needed to become a good worker in the business each member represented. They also pointed out qualities now lacking in the new employees being hired and made suggestions as to ways the school staff might improve students to reduce these weaknesses. (Inability to communicate and spelling topped the list in that order). The committee members served as resource people, also supplied us with other resource people, and provided their business establishments as a place for classes to visit. The committee has received the Instructional Units for study and evaluation, and have visited classrooms to see the work being done by teachers and students. By the personal contacts of the Director, the Advisory Committee, and teachers, approximately fifty occupations have been presented to our classes by resource people. Many of these persons have visited more than one classroom. These people are too numerous to mention here but the type of professions and jobs range from doctors to taxi cab drivers. See Appendix A, page _27_ for complete list of resource people, professions, and occupations.

The Integrated Career-Centered Curriculum Project has been pre-
sent to local PTA meetings and also the Sixth District PTA Board, contacts have been made with Dr. Ralph Tessener, Dr. Zelda Smith, Dr. Kent Curtis, and Dr. Nicholas Melnick of Northern Kentucky State College, to apprise them of the program and its progress.

THE RESULTS OBTAINED

As a result of our first attempt at integrating career education into the six elementary schools of Newport, we found there is a positive attitude toward Career Education. This has been evidenced by the Superintendent, the Newport Board of Education, all principals, supervisors, special teachers, and 95% per cent of the classroom teachers. The Citizens Advisory Committee, resource people and parents that we were able to involve, were highly receptive to the program. It is their opinion that our career education program and its continuance is the answer to a long overdue need in our educational program.

The program of career education brought impetus and enthusiasm to the classroom for teachers and students; they felt they had more freedom to utilize their own initiative and thus make learning and school, in general, more enjoyable and meaningful.

Achievement tests and mental ability tests were given to 100% of the students.
Individual tests were administered in special cases.
Teachers evaluated classroom work, participation and performance.
Personality, responsibility, and attitudes tests were given.

These tests were prepared by the Curriculum Team and were included in the Instructional Units.

Each teacher kept a folder for student’s work with a sampling of work done at intervals.
Observations were made by supervisors, counselors, principals, and the Director.
Pictures, slides, and tape recordings, applying to the program, were used.
Reports were received from resource people who visited the classrooms.
Evaluations were made by the Advisory Committee.

These experiences and observations provided many topics for utilization in classroom discussions, and gave students an awareness that what they were learning and doing in school would be useful upon entering the world of work.

HIGHLIGHTS OF THE PROJECT

At the risk of appearing trite, we wish to reiterate that as a result of our first attempt at integrating Career Education into the six elementary schools of Newport, it is found there is a positive attitude toward Career Education, by the Superintendent, Newport Board of Education, principals, supervisors, special teachers, and 95% of
the classroom teachers. The Citizens Advisory Committee, resource people and parents that we were able to involve, are highly receptive of the program. They feel that our career education program and its continuance is the answer to a long overdue need in the educational program.

The program of career education brought impetus and enthusiasm to the classroom for teachers and students. They feel they have had freedom to utilize their own initiative and thus make learning and school, in general, more enjoyable and meaningful.

Field trips gave the students a wide variety of acquaintances with professional services, personal services, and business and industrial enterprises. The opportunity to explore the world of work in each student's own community and beyond and observing real people at work on their jobs was a very successful enterprise. Students learned by first hand observations and experiences that the producing of goods and services are essential to everyday living, that people are interdependent upon each other for completion of jobs. These experiences and observations provided many topics for classroom discussion; students received a first hand awareness that what they were learning and doing in school would be useful upon entering the world of work. See Appendix A, page 28 for complete list of field trips.

Hands on activities with tools in the construction of stools, tables, whatnots, bookshelves for the classroom and other items took on a new meaning. There was cooperation in working and much pride in the quality of their finished products.

The world of work, through career planned guidelines and units of activity, became part of the child's way of learning. The students learned there is dignity in all kinds of work, and each one can take pride in a job well done. A new meaning came to be his from this learning, namely, "An honest day's work for an honest day's pay."

RECOMMENDATIONS FOR THE FUTURE

At the local level it is recommended that a systematic framework involving administrators, principals, supervisors, and teachers be utilized in various types of in-service work; ie.

1. Sharing ideas for the development and improvement of activities to be used in the classroom.
2. Collection and distribution of data.
3. Reviewing and reporting on new career educational material as it is published and accumulated.
4. Select and have appropriate staff members serve on panel discussions. This should be rotated if possible to build understanding and communication.
5. Have some just plain "rap sessions."
More involvement of leaders from all the State Departments with the local Career Education Project, i.e:
1. On site visits to the project schools.
2. More frequent meetings of the Director with the Project Monitor.

The role of the guidance counselors need to be more clearly defined, especially in the elementary school. If every school system cannot financially afford a guidance counselor proportionate to the number of teachers and pupils to be served, it is recommended that trained curriculum people be assigned to work with the teachers in the implementation of Career Education.

It is important that the Director be supplied with an outline giving details as to the data to be collected for the State Department of Education, and the form or nature of the reports to be presented at the beginning of the school session.
INTRODUCTION

The Staff and Curriculum Team assembled on July 6, 1971, to begin the planning, development and implementation of the Integrated Career-Centered Curriculum Project with University of Kentucky Coordinator Dr. Alfred Mannebach, Mr. John Shoemaker, State Department, Bureau of Instruction, and Robert Gearhart, Newport City Schools, serving as the consultants.

The initial start involved group discussions of long range goals and objectives, hopefully to be attained as a result of the ensuing years work. After tentative goals and objectives were established, materials to be used were researched, previewed, and evaluated to determine the kinds of things to purchase that would be of the greatest value to the teachers for instructional purposes, enrichment of the present curriculum and implementation of career education. These tentative basic decisions formed the structural framework or guides for producing Unit I to be used as an instructional guide.

The major goal of the Newport Schools beginning July 1, 1971, to June 30, 1972, was the development and implementation of an Integrated Career-Centered Curriculum Project for 100 per cent of the students in grades 1 through 6. The basic plans were to produce three Instructional Units for each grade (1 through 6) integrating career awareness with the present adopted curriculum whenever possible.

From the start of the project we kept in mind that our educational goals must be immediate as well as long-range; immediate to change attitudes, broaden knowledge, and lay the foundation for skills through "right now" experiences and activities in the classroom, to show the relationship of school to living and world of work. Long range goals to prepare each student to enter the world of work as productively as possible, equipped with attitudes, knowledge, and skills which will enable him to become a better adjusted citizen and successful in his or her chosen occupation or profession.

To accomplish our immediate goals, the writing of the three Instructional Units for each grade was required, also the purchasing of the various media and instructional materials to be used in the program as implementation for enrichment and interest. The training of teachers through in-service and individual assistance and the setting up of a Citizens Advisory Committee were also a must. See Appendix A, page 29 for a complete list of materials.

To accomplish our immediate goal required the writing of the three Instructional Units for each grade, purchasing the various media and instructional materials to be used in the implementation for enrichment and interest. The training of teachers through in-service and individual assistance, and setting up a Citizens Advisory Committee.

Training and orientation for administering the program involved 105 classroom teachers, 6 elementary principals, 2 supervisors,
2 art teachers, 2 music teachers, 2 physical education teachers, 2 elementary guidance counselors, 1 director, 2 pre-school in-service program, 3 in-service meetings involving the entire faculty, with Dr. Larry Bailey, Southern Illinois University, Dr. Alfred Mannebach, University of Kentucky, and Dr. Walter Wernick, Northern Illinois University, serving as consultants, 2 in-service meetings per grade level 1 through 6, with the Curriculum Team serving as the consultants.

A Citizens Advisory Committee was another integral part of the program. This committee was set up in September, 1971, represented by two Vice Presidents of Banks, Executive Vice President of the Chamber of Commerce, Police Sergeant, Patrolman, owner of business office supply and machines store and repair shop, owner of a shoe store and shoe repair shop, housewife, FYA members, ministers, teachers, and the project staff. The Committee met once a month from September through June. Average attendance per meeting was ten people. It was requested by the committee that we not have too large a group for the first year, as Career Education was an entirely new concept and they felt a comprehensive study by the group the first year was necessary for building a committee that would continue to function and do a more effective job next year with a larger group. To a degree I suppose this could be labeled an In-service year for committee. We discussed the Instructional Units written by the Curriculum Team, teachers came to the meetings and brought charts, posters, pictures, and slides to demonstrate how Career Education was being integrated into the adopted curriculum taught in the various classrooms.

We were fortunate in having Mr. James Patton and Miss Virginia Pratt from the Northern Kentucky Vocational School to assist us in introducing the project to the committee.

There were two Open House meetings of the committee, one at Arnold School, the other at A.D. Owens School. At these meetings the committee visited the classrooms to see the work the students were doing. Written work was examined in the children’s folders (each student kept a folder of classroom work, tests, and drawings). They saw other visible media such as bulletin boards, weaving, crocheting, bird houses, go-carts, whatnots, tables, footstools, step stools, cutting boards, and other things made by the students. Some made wood houses and furniture for the houses, other cut straw, mixed it with mud and made their own bricks to build adobes. There were many other types of things produced that were usable and/or of educational value.

The committee served the project well. They served as resource people, helped us obtain other resource people, and permitted our classes to visit their place of business.

The Curriculum Team and Staff met one Friday and Saturday each month from September, 1971, through May, 1972, plus one extra Saturday in May. The Friday and Saturday meetings were used for writing the Instructional Units II and III, evaluating the progress of the classroom work, preparing tests for teachers and children to get the feel of attitudes, interests, needs, and opinions of the teachers as to how
we might improve the program.

To assist us in the completion of our units of work for the Career Education Program the following Consultants from the State Department Bureau of Education were very helpful.

Mr. Patrick West, Early Childhood Education
Mr. Wendell Cave, Science Education
Mr. Lynn Hodges, Environmental Specialist
Mr. Russell Boyd, Mathematics
Mr. Tony Koester, Foreign Languages and Social Studies
Mr. Joe Clark, Reading
Mr. Kenneth Ray, full time Evaluator for the Middle School, Carrollton, Kentucky
Dr. Nicholas Melnick, Northern Kentucky State College.

The key people in the development and implementation of the Newport Integrated Career-Centered Curriculum Project was the Curriculum Team made up of 12 elementary teachers, two for each grade level, 1 through 6.

Grade 1          Norma Jolly - Sally Coomes
Grade 2          Edna Taulbee - Patricia Anderson
Grade 3          Nola Rowley - Anne McDaniel
Grade 4          Lona Kemplin - Thelma Teremi
Grade 5          Sue Eviston - Mike Vidas
Grade 6          Michael Jacobs - Garland Turner

The project staff are as follows:
Director - Noreen Wilson
Counselors - James Esposito and Jill Thompson
Secretary - Judy Slone

For two weeks the team concentrated on methods of integration, research, and reviewing materials, developing the philosophy, concepts, objectives, and activities to be used in developing and implementing the Instructional Units. This criteria to be used as a guide for all the units was as follows:

1. The developmental stage of the child
2. Occupations found in the basal texts and supplementary materials
3. A wide range of activities to provide for individual differences

The specific objectives were to develop and implement an Integrated Career-Centered Curriculum which would meet the educational needs of students as they relate to the world of work. Essentially, attitudes, knowledge, and skills of the students were to be considered in the development of the new curriculum.

A. Attitudes
1. To help children have a desire to succeed and be self-motivating.
2. To develop a willingness in a child to accept responsi-
bility.
To improve self discipline
To respect the rights of others

B. Knowledge
1. To have a knowledge of the economic system
2. To broaden knowledge of career choices
   In job opportunities
   In job requirements

C. Skills
1. To improve manual dexterity with tools and materials
2. To improve communication skills
   In ability to change
   In recognizing vital choices

After the basic criteria and objectives were established by the team and staff the two team members from each grade level worked as a team for the next four weeks to produce the Instructional Unit I, entitled "Me". In addition to writing the unit they prepared materials for the two day in-service Training Program for all teachers prior to the opening of school to be used for the orientation and implementation of the project. Large, illustrated charts were made to present to the group showing the overall perspective and outline of the years work.

The progress and direction of Phase II of the project was monitored by Dr. Alfred Mannebach of the University of Kentucky Research Coordinating Unit for Vocational Education, and Mr. John Shoemaker of the Division of Elementary and Secondary Education, Bureau of Instruction.

GENERAL CONCLUSION

The participants in the project was approximately 2600 students. These students were actively engaged in child-centered activities integrated into the present adopted curriculum. These activities were developed and implemented throughout the school year 1971-1972. For types of activities see Appendix A. Page 20. These activities were selected through pupil interest in careers which were founded and presented to them in their day by day classroom curriculum experiences. The choice of these activities stemmed from the decisions of the students guided by the classroom teacher.
METHODS

The development and implementation of the Integrated Career-Centered Curriculum evolved over the 1971-1972 school year with the derivation of its curricular program coming in the main from the efforts and directions of the elementary teachers. They were utilized to insure the resulting prod would be more workable and a realistic model for a "career development curriculum."

The elementary teachers were represented by six teachers from the six grade levels in a Planning Task Force to help plan and develop the proposal for the project. Over a period of four meetings the Planning Task Force provided the essential information, direction, planning, and decision-making for the preparation of the proposal for this project. The Planning Task Force consisted of the six elementary teachers, one elementary principal, the junior high Guidance Counselor, the High School Coordinator of Vocational Education, the Director of the In-Service Educational Programs, an elementary supervisor, the Coordinator of Federal Programs, and the Director of the project. And in addition, members of this Planning Task Force continued to function as a part of a Curriculum In-Service Team.

The Curriculum Team at the beginning, was involved in the overall planning concerning the methods of integration, researching, and reviewing materials, developing the philosophy, concepts, objectives, and activities to be used in the development and implementation of the Instructional Units.

It was agreed that improvements of self-image must be an existing factor at all grade levels. In the writing of the Instructional Units teachers from each grade level worked as a team.

For each of the units produced by and for the various grade levels the following criteria was used as a guide. (See Volume 2 for units produced).

1. The developmental stage of the child.
2. Occupations found in the basal texts and supplementary materials.
3. Wide range of activities to provide for individual differences.

The overall theme of the units was "My World and Me".
Unit I "My World and Me" - Awareness of self
Unit II "Hands-on Activities" - manipulation
Unit III "Exploring My World" - Field trips

The Curriculum Team worked one Friday and Saturday each month to produce Units II and III. Unit I was produced prior to the opening of school in September.

The grade segments of the program included 100 per cent of the students in grades one through six. The teachers involved were

1. Classroom 105
2. Speech 4
3. Arithmetic 13
3. Remedial Reading 5
4. Physical Education 2
5. Music 2
6. Art 2

The Staff and Curriculum Team, as before stated, were responsible for producing three Instructional Units, preparing for In-Service meetings and/or other teacher training, orientation, and selecting various types of teaching media for Career Education.

After the three Instructional Units were completed, there were two pre-school days of orientation and five in-service meetings during the school year, 1971-1972. Unit II on activities was completed in January 1972. Unit III - Exploring My World - field trips, was completed in April, 1972.

Our Career Developmental Program aimed to provide for the meeting of persistent life situations through different experiences, by having a balanced developmental curriculum. Thus enabling the learners to deal with situations when and as they occur. For example, using tools, machines, and equipment is a persistent life situation, met under varied conditions at different levels of learning. Likewise, providing a balanced development requires consideration of ways to acquaint children with new, appropriate experiences which will enrich the total pattern of their living. It is not sufficient to deal only with that which is immediate, we must guide the learners into going beyond the immediate situation. Children need to grow in ability to deal with persistent, common life situations in ways that provide for meeting the "New and Changing" ways as well as those of the present.

Developing a sense of responsibility to other people is an objective of general education, and it is also a necessary attitude in many vocations. The fact that any persistent life situation may be faced under circumstances calling for special competence requires that both elementary and secondary schools must include both general and specialized education in their curriculum.

The world of work through career planned guide lines and units of activity have become part of the child's way of learning. He has been taught that there is dignity in all work, and he can and should take pride in a job well done. A new meaning came to be his from his learning experiences. "An honest day's work must be done for an honest day's pay".
FINDINGS

Report of James Esposito
Guidance Counselor

Testing

In November, 1971, the students in the elementary schools in the New Port School System were administered an achievement test and an intelligence test.

Six elementary Schools participated in the testing. Otis-Lennon Mental Ability Tests were administered to 741 second and third grade students and to 1088 fourth, fifth, and sixth grade students.

Metropolitan Achievement Tests were administered to 738 second and third grade students. The second grade levels were administered the Primary I, Form F, the third grade, Primary II, Form F.

Stanford Achievement Tests were administered to the fourth, fifth, and sixth grade students. The number tested was 1099. The fourth and fifth grade received the Intermediate I, Form W, the sixth grade students, Intermediate II, Form X.

ACHIEVEMENT TESTS

The project staff chose to use Arnold School as the pilot school for its testing program. Reasons for choosing Arnold were twofold: First, its school population was sufficient, secondly, its school population represents the best cross-section of the citizenry of the city of Newport.

Arnold School has an enrollment of nearly 700 students which represents 25 per cent of the enrollment in Newport Elementary Schools.

With the exception of the first grade, all grades were given a pre-test and a post-test. The pre-test was administered November, 1971; the post-test was administered in May, 1972.

Grade two was administered the Metropolitan Achievement Test, Primary I Level, Forms F and G. Grade three was administered the Metropolitan Achievement Test, Primary II Level, Forms F and G. These tests were all administered the same day, groups were the actual classroom groups, and were administered within the classroom.

The fourth and fifth grade students were administered the Stanford Achievement Test, Intermediate I Level, Forms W and X. The Sixth grade students were administered the Sat. Intermediate II Level, Forms W and X. Once again, all tests were administered the same days, in class size groups, within the classroom.

For comparison purposes we chose to use grade equivalents. The figures shown on the chart represent average or mean figures. First, the average test battery was determined, then for each class, and then for each grade level.

The results are charted thus:

Arnold Elementary School
Metropolitan Achievement Tests
Primary I & II, Forms F & G
Grades 1 - 2 - 3

**ATTENDANCE**

Once again Arnold Elementary School was used as the pilot school for attendance reporting. The attendance showed no appreciable gain. While the attendance was better, there was no significant change.

Attendance figures arrived at by comparing the school year 1971-1972 to the school year 1970-1971. The daily membership and daily days attended was used to get the percentages.

Total Gain of .35 % For Year 1971 - 1972

**GRADES**

This area shows the most significant gain. A random sampling was taken of grades. Once again comparing this school year, 1971-1972 to last school year 1970-1971. A ten per cent sampling was taken of the Arnold School enrollment.

Of the sampling taken 57 per cent of those sampled showed an improvement in their grades. The improvement showed at least one letter grade or better.
Teacher Survey of Career Exploration Project April, 1972

All teachers in the Newport Elementary School System were surveyed in April, 1972. Of the total surveyed, 90 per cent responded.

Questions asked and the responses follow:

1. The program as it now exists meets my personal objectives for instruction.

3. Their (students) interest level seemed
   
   a. Higher than last year 40%
   b. Lower than last year  3%
   c. About the same        30%
   d. Don't Know            24%
   e. No Response           1%
CONCLUSIONS

Public relations man, curriculum innovator, resource person, social worker, teacher advisor, aid to the principal, testing, guidance counselor. These were some of the many things or titles I could have assumed at one time or another during the course of the past year. None of which were outside the field of guidance, as far as my situation was concerned.

As a counselor I did all the things that counselors are supposed to do, but so rarely get an opportunity to do. It was definitely a growth year for me. I might also add, a very enjoyable year.

The first or beginning of the program began with helping the teachers write curriculum guides, I had a great deal of input into the booklets, and was used by the Curriculum Team for that ever needed guidance, but more importantly for ideas. This perhaps was the hardest take since I had never really taken an active role in curriculum development. It is my opinion that guidance people should become more active in this phase of education. There is a great deal of input guidance personnel can contribute to the writing of curriculum. Also, you can help referee the arguments, and this is very necessary, since you are a third party people will listen to.

School began and I had an "identity crisis". Who was I? What was I? Where was I? I had to answer all of these questions for myself first, and then try to relate to teachers, students, and principals. Acceptance was great by all concerned. A real "break-through" was made, the students accepted me and used me. After all they were the most important people.

But what happened later? I found the teachers needed that "shoulder to cry on", the words of encouragement, the little bits of advice to help them in their classrooms, or just a nice word or a smile. This didn't exactly tear my ego apart either!

Then I became the ogre that Guidance Personnel always become with their group testing. I made it a point to go to all the classrooms and explain the tests and the reason for the tests. This helped smooth over the rough spots for both students and teachers. In fact the students began to tease me about the tests!! What an outcome!!

The home visits were not as frequent as I would have liked them to be. A tremendous public relations thing, this phase of the program is vitally important. Unfortunately, the days are not long enough and there is not enough guidance personnel.

I also helped to test students individually and pre-test the pre-first graders. This was quite an experience.
The best part of guidance has always been and always will be working with the young people. I could write a book about my experiences this year. It is my feeling that my successes were better than my failures working one on one. I'm smiling as I write this. I can see so many faces before me. However, there was much ground I left unturned. I was totally and completely out-numbered. We need more guidance counselors in our elementary schools.

Now what about the Integrated Career-Centered Curriculum Project? It worked. It got young people involved, it got teachers involved, it got the community involved. Interest was generated in the minds which had, in the past, not been touched. This program needs to be continued. It has generated an interest in our schools by both students and parents. It has caused teachers to become innovative, imaginative, and creative. Any program which can do these things has to be good—no!! GREAT is a better word.

For the record, here are, in numbers, some of the things I did. These numbers, however, do not list accomplishments.

Group Conferences 191
Principal & Teacher Conferences 283
Individual Conferences 102
Individual Tests 74
Home Visits 20
State & Local Meetings 30

Assisted and set-up group testing
Helped administer VMI tests to pre-first grade students

And lastly, I hope I helped a lot of kids. It was certainly a fun year.

James Esposito

CONCLUSIONS

Accomplishments:

I feel that the strength of our accomplishments within the program are as follows. We have developed a positive attitude toward Career Education in grades one through six in our six elementary schools. The change in attitudes on the part of the teachers and pupils has gone from a negative to a positive approach. As shown in another segment of this report, 95 percent of the teachers and pupils are in favor of Career Education. Many of the teachers were asking the question, "May we continue to follow the Instructional Units and teach Career Education next year if the program is not funded by the state?"

I feel that the Instructional Units is number one on the list of accomplishments. The teachers have used them constantly, and suggested that we make no changes in them.

More than one hundred sets of our Instructional Units have been requested and distributed for study by schools who were preparing to develop a Career Education program. Following is a list of the different states that have been supplied with the Instructional Units and other materials pertaining to our program.

- Connecticut
- Ohio
- Montana
- Illinois
- Alabama
- California
- Arizona
- Utah
- New York
- Maryland
- North Dakota
- Delaware
- Massachusetts
- Kentucky

Use of Resource People in the classroom and the Citizens Advisory Committee was another step forward in Career Education. They highly approved of the program and as they studied and observed the development of it, they felt they would be more knowledgeable and could be of more benefit to the project in the coming year. See Appendix A, Page 31 for direct quotes of evaluation by the Citizens Advisory Committee.

The field trips and materials were another positive asset to our program. Many of our students were aware for the first time that they were a part of the community in which they lived, and that they were dependent on the goods, services, and places of business for their survival. For some it was their first bus ride, for many it was their first trip out of the city. Because of this opportunity our students certainly were made aware of the world of work and learned that many people do work for an honest day’s pay, and necessarily so, to provide commodities for everyone. As one third grader said on his return from the Proctor and Gamble Soap Factory, with his box of samples, "I didn't know people had to work to make this stuff."
Non-Accomplishments

There was not enough involvement of the Administrative Staff. All approved of the Project, but due to the heavy load of administrative duties, active participation was greatly curtailed.

Parent involvement in the program was poor. The Curriculum Team and Staff have been greatly concerned over this lack of parent involvement, and after a year's struggle, we have concluded that personal contact in each and every home is the only remedy for this situation. Appeals were made to the P.T.A. by the Director. Attendance at the P.T.A. meetings represented only a small number of homes. P.T.A. parents, resource people, and chaperones for field trips were the parents most involved.

Dissemination of information through the news media did not meet with expectations. Only two articles were published by the Cincinnati Enquirer, one in the Kentucky Post and Times Star. The Newport School Newsletter did devote a large article on the Integrated Career-Centered Curriculum Project which was circulated in the community. See Appendix A, page 35 for newspaper articles.

Attendance showed no appreciable gain for the year as indicated in the chapter entitled, "Findings." For a period of time, our records did show an increase, but when childhood diseases, so prevalent in grades one through six, namely mumps, measles, chicken pox, and whooping cough made their usual invasion throughout the school system the percentage of attendance dropped. I personally do not believe that increase in attendance should be included in the elementary schools as a main goal for Career Education due to this factor. However, I sincerely believe that Career Education focused on self-awareness and career awareness beginning in kindergarten or grade one and continuing through grade twelve will show a decline in the number of students who dropout of school when they reach age 16.

SUMMARY OF ACCOMPLISHMENTS

We now realize that through the Instructional Units produced, the field trips experienced, the construction of the tangible products through manipulative tools, and producing of educational materials, that we have laid the grass roots for Career Education in our school system. There still remains much to be done, but we feel much has been done to make education for our children more relevant for meeting persistent life situations.

"Career centered education seems the most intelligent approach to the education of children. Secondly and perhaps just as importantly, it encourages the wisest use of limited resources to accomplish the best possible results. My feeling is that career centered education has across-the-board application potential, but I believe it particularly significant in the Newport area where the socio-economic climate for the past 20 or so years has encouraged and brought about some of the most serious problems our area teachers face today."

"While it is difficult to evaluate the benefits of a program after such a short duration, I must never-the-less recommend its continuance based on the enthusiastic reception and implementation of the program by teachers, parents, community leaders and students. I hope sincerely that Newport City Schools will not only be funded for continuing its present career centered educational program, but that they will be given additional grants to expand this much needed approach to education."

"Since the majority of our young people do not go to college it becomes increasingly important to prepare them for the life they will be facing rather than for an educational program they will not have the opportunity to engage in."

"The emphasis on the desirability, necessity and respectability of work is good. The learning about various jobs available for high school graduates in the area is also good. The visiting of business places is good training. The talks by businessmen to the classes is rewarding and enriching to both students and the speaker. The recognition of and actual use of various hand tools will benefit them whatever stage of life they find themselves in."

"The cumulative effect of repeated emphasis along these lines each year will produce young people with a healthy respect for work and for business and confidence in themselves and their ability to face real life situations."

"The program is a good one and should be continued if at all possible."

"The project at this time seems to be a success but a little hard to tell at least until the older students in this first year of the project reach graduation from high school. That is why this project should be funded for additional years. It would seem ridiculous to cancel this project when so much time and effort and just plain hard work have gone into this first year."

"In talking to teachers, parents, and students from several different areas of the district here are just a few observations:

a) Teachers are very enthusiastic about the program.

b) Most of the students are receptive to the program.

c) Parents show little interest and participation in project. A little encouragement from home could mean a lot to the students. Not all the parents but the majority seem apathetic."
CONFERENCES ATTENDED

September 13, 1971. Norean Wilson attended initial meeting of Project Directors of the five projects in Kentucky, to plan for Career Education Conferences to be held during the school year 1971-1972.

October 14 & 15, 1971, Lexington, Kentucky. State Conference on Career Education, Springs Motel. Those attending from Newport:
Sharon Menkhaus, Primary Supervisor
Lona Kemplin, Fourth Grade Teacher
James Esposito, Counselor
Jill Thompson, Counselor
Norean Wilson, Director

An overview of the project and activities being carried out in the classrooms was presented to the conference by the above group. Media used - posters, charts, slides.

November 9 & 10, 1971, Lexington, Kentucky. State Conference on Career Education, Carnahan House. Those attending from Newport:
Sharon Menkhaus, Primary Supervisor
Robert Gearhart, Coordinator of Federal Programs, Newport Schools
James Esposito, Counselor
Jill Thompson, Counselor
Norean Wilson, Director

Dr. Tom L. Gabbard, Superintendent of Newport Schools
Jill Thompson, Counselor
James Esposito, Counselor
Mr. Ervin Wolfzorn, Member of Newport Board of Education
Dr. Nicholas Melnick, Northern Kentucky State College
Norean Wilson, Director

March 21, 1972, Lexington, Kentucky. State Conference on Career Education, Springs Motel. Those attending from Newport:
Rebecca Sebastian, Jr. High Counselor
Robert Gearhart, Coordinator of Federal Programs, Newport Schools
James Esposito, Counselor
Jill Thompson, Counselor
Norean Wilson, Director

March 12 to 14, 1972, Barren River State Park. Norean Wilson, Director attended meeting for formulating state policies on Career Education.

February 22, 1972, Boone County High School. Regional Vocational Meeting. Those attending:
Norean Wilson, Director
James Esposito, Counselor
Jill Thompson, Counselor
May 9 & 10, 1972, Louisville, Kentucky. Attended final State Conference on Career Education. Those attending from Newport:
Sharon Menkhaus, Primary Supervisor
James Esposito, Counselor
Robert Gearhart, Coordinator of Federal Programs, Newport Schools
Norean Wilson, Director

May 30, 1972, Frankfort, Kentucky. Norean Wilson attended the CETC and CEFC Committees Meeting to plan for future conferences on Career Education.

June 20 to 22, 1972, Henderson, Kentucky. Attended workshop on Career Education.
Norean Wilson, Director
Willie Sowder, Teacher, Arnold School

May 26 & 27, 1972, Bowling Green, Kentucky. Conference on the "Essential Components of Career Education." Those attending from Newport:
Rebecca Sebastian, Jr. High Counselor
Martha Troendle, Jr. High Teacher, Math
Helen Cramer, Jr. High Teacher, Science
Norean Wilson, Director
VISITS BY STATE & UNIVERSITY PERSONNEL TO SITE OF PROJECT

August 30, 1971. Dr. Alfred Mannebach attended In-Service meetings.

September 24, & 25, 1971. Dr. Alfred Mannebach, University of Kentucky, and Patrick West, State Department of Early Childhood Education, attended the Curriculum Team work session as Consultants for planning the writing of Instructional Unit II.

October 18, 1971. Dr. Alfred Mannebach and Dr. Floyd McKinney, of the University of Kentucky, and Miss Virginia Pratt and Mr. James Patton, Northern Kentucky Vocational School, attended a workshop conducted by Dr. Larry J. Bailey on "Introduction to the World of Work Curriculum."

November 19, 1971. Mr. Douglas McKinley and Mr. Gary Steinhilber from the State Bureau of Vocational Guidance, was in our office to discuss the role of the counselors in the Integrated Career-Centered Curriculum Project.

December 16, 1971. Mr. John Shoemaker, from the State Bureau of Instruction, was in our office to review the project with the director.

December 21, 1971. Dr. Alfred Mannebach spent the day in Newport with the Director discussing the format of the units being written and visiting several classrooms.

January 7, 1972. Mr. Russell Boyd, Mathematics Consultant, Mr. Tony Koester, Foreign Languages and Social Studies Consultant, and Mr. Joe Clark, Reading Consultant, met with the Curriculum Team.

March 3, 1972. Mr. Lynn Hodges, Environmental Education Specialist, met with the Curriculum Team.

April 24, 1972. The Evaluation Team, consisting of Floyd L. McKinney, A.B. Moore, Charles Pryor, John Pagett, Gary Steinhilber, and Alfred J. Mannebach, visited in our office and then toured each of our six elementary schools and talked with teachers and principals.
To Curb Drop-Outs

‘World Of Work’ Program Set
In Newport Grade Schools

Newport elementary teachers Monday began the work on a new curriculum program designed to show children the relationship of education to careers. The teachers attended their first in-service training session at Arnold Elementary School.

Teachers who began planning the new program in July mapped out guidelines and encouraged the 120 elementary teachers to use their own ideas and imaginations in making the classroom more relevant to the child.

THE NEWPORT school system received $95,000 in federal funds for the project aimed at reducing the system’s high drop-out rate by helping students become oriented toward career opportunities.

“The time is at hand and talk to your children individually,” Mrs. Nora Wilson, director of the integrated career centered program, told the group of teachers.

She explained the stages of the program, beginning with an orientation period to help the child improve his self-image and to introduce him to the “world of work.” Following this, children will explore various tools, used in different jobs, hear about various occupations from community people who visit the classrooms, and take field trips to various businesses and industries to get a first-hand view of the working world.

The director reminded teachers to attempt to integrate ideas about career opportunities with all other school subjects.

The new program will place more emphasis on family participation in the educational process, Mrs. Wilson added. Two elementary guidance counselors hired this summer, Miss Jill Thompson and James Esposito, will work closely with children and parents in developing the new curriculum.

“We want you to enter into it with a free spirit,” Mrs. Wilson told the teachers, pointing out that the educational experiment will be a learning period for teachers also.

In-service training will continue today with a panel discussion and question and answer session to prepare teachers for the first day of school Wednesday.

TEACHERS WILL have more in-service training days throughout the year, and will plan their new activities with members of the career-curriculum team.

The team, composed of teachers who worked on the new project this summer, includes Mrs. Norma Jolly and Mrs. Hazel Turner for grade one; Mrs. Edna Toullie for grade two; Mrs. Patty Anderson for grade two; Miss Nora Rowley and Mrs. Anne McDaniel for grade three; Mrs. Lona Kempin and Mrs. Theilma Teremi for grade five and Garland Turner and Mrs. Wilson for grade six.
