This curriculum guide for English describes an individualized program for Spanish-speaking students aged 14 through 17, but it can be adapted for speakers of other languages. It outlines a program for all ability levels, except those classified as retarded educable. It formulates 36 lessons for four subjects: English, mathematics, history, and science. A bibliography is included. (SK)

General Guide to Curriculum

This curriculum includes an individualized program for Spanish speaking students, ages 14 through 17. However, the program can be adapted for speakers of other languages. It includes a program for all ability levels except for those classified as retarded educable.

Students are placed in groups according to achievement level and are not necessarily in the same group for both math and English.

For the maximum success of this program, a full-time teacher's aide should be employed.

This curriculum is designed for 40-50 minute classes with the following weekly schedule:

- English: 5-8 classes per week
- Math: 5 " " "
- History: 5 " " "
- Science: 3-5 " " "
I English Guide - This course is designed to provide maximum oral practice along with reading and writing skills.

1) Teacher should spend a few minutes a day in informal discussion with each group. Ask questions about things that happened over the week, about family, about what they want to do after school, etc.

2) Scope magazine very useful since it was developed for low ability and unmotivated students. Plays - each student and teacher (or aide) take a part. T should ask questions as story progresses. Word Power or Puzzles.

3) If students do not have individual copies of English: Your New Language, paper should be kept in order in a notebook or folder.

4) Even though it is not mentioned in all lessons, the audiotech is used for vocabulary from Reader's Digest Readings. From these readings, tear answers from the back of all but one of each volume. Small notebooks can be used for these answers and graded by teacher.

5) Word games or puzzles can be used when you have an extra 5-10 minutes.

II Mathematics Guide - This is a general outline of units to be covered in lessons over the 36 weeks. Students will have to be placed in groups according to their ability level and progress at their own rate. It should be taught in both English and Spanish.

III History Guide - In order to achieve maximum benefit from this subject and since this is a bilingual class, this subject should be taught mostly in Spanish.

IV Science Guide - This course design is explained in the science unit.

Teaching Manual

This course is used for deprived, disadvantaged, alienated, isolated students. Even though it is not written specifically for bilingual students, it can easily be adapted for their use.

"Major ideas of science are developed through a series of related investigations, each allowing the student to discover one concept at a time. The investigations are brief, requiring one to three periods to complete. The program has an easy reading level; paragraphs and sentences are short and, where necessary, are broken by illustrations so that no intimidating blocks of prose appear."

Most of the class time in this program is spent in the laboratory and the science is relevant to the social world.

This guide is based on a 36 week semester and the most beneficial lessons have been selected. Each lesson is based on three to five hours of classroom time.

Materials for each lesson are listed in Teacher's Manual. For related information, see introduction in Teacher's Manual.
