*Abstracts; *Bibliographies; *Deaf Blind; *Exceptional Child Education; *Multiply Handicapped

The selected bibliography on the multiply handicapped contains an explanation of indexing and approximately 100 abstracts to be drawn from the computer file of abstracts representing the Council for Exceptional Children Information Center's complete holdings as of August, 1972. Abstracts are said to be chosen using the criteria of availability of document to user, currency, information value, author's reputation, and classical content. Preliminary information explains how to read the abstract (a sample abstract is included which identifies the different parts of the abstract), how to use the author and subject indexes, how to purchase documents through the Educational Resources Information Center Document Reproduction Service (three order blanks are provided), an order blank for Exceptional Child Education Abstracts in which the abstracts are originally published, a list of indexing terms searched to compile the bibliography, and a list of journals from which articles are abstracted for the bibliography. Publication date of documents ranges from 1947 to 1971. (DB)

The CEC Information Center on Exceptional Children

With a grant from the US Office of Education, the CEC Information Center was established at The Council for Exceptional Children to serve as a comprehensive source of information on research, instructional materials, programs, administration, teacher education, methods, curriculum, etc. for the field of special education. The Center functions as the Clearinghouse on Exceptional Children in the Educational Resources Information Centers (ERIC) program and also as a member center in the Special Education IMC/RMC Network. In addition, the CEC Center's program includes a commitment to a concentrated effort towards the development of products which will interpret research results into educational methods and practices.

How to Use This Bibliography

The Exceptional Child Bibliography Series was initiated by the CEC Information Center to answer the need for rapid responses to specific requests for information. The volume of information requests received by the Center is analyzed and used as a guide in preparing special topic bibliographies in the field of exceptional child education. Abstracts contained in the bibliographies are drawn from the computer file of abstracts which represents the CEC Information Center's complete holdings as of the date indicated on each bibliography.

Selective editing by Information Specialists is performed on each bibliography. From the total number of abstracts drawn from the file on a particular topic, selection is made of only those judged to best meet the following criteria: availability of the document to the user, currency, information value, author's reputation, and classical content. The number of abstracts selected to appear in a bibliography may vary from one to 100, depending on the amount of suitable information available. Updating of bibliographies as new material becomes available is accomplished when the volume of new material reaches 25 percent of presently available material on a given topic.

How to Read the Abstract

Each abstract contains three sections—bibliographic data, descriptors, and a summary of the document. The bibliographic section provides the document's identifying number (ED and/or EC), publication date, author, title, source, and availability. The descriptors indicate the subjects with which a document deals. The summary provides a comprehensive overview of the document's contents and in some cases document availability is announced here.

How to Use the Indexes

Some bibliographies in Exceptional Child Bibliography Series contain author and/or subject indexes. In these bibliographies, readers seeking work on a specific aspect of the general topic may consult the subject index to be referred to specific abstract numbers. Abstracts dealing with several topics may be identified by finding the same abstract number under two or more subjects in the subject index.

How to Purchase Documents

Documents with an ED number and EDRS availability indicated may be purchased from the ERIC Document Reproduction Service (EDRS). For your convenience an order form is provided on the back cover of this bibliography.

Abstracts appearing in the bibliographies have also been published in Exceptional Child Education Abstracts, the quarterly abstract publication of the Council for Exceptional Children. Approximately 750 abstracts covering the broad range of exceptionality appear in each issue. (Subscription order form below.)

Descriptors: exceptional child education; cooperative programs; vocational rehabilitation; vocational education; administration; mentally handicapped; state agencies; cooperative education; educational coordination; cooperative programs; state federal aid; administrative problems; communication problems; equalization aid; work study programs; handicapped; cost effectiveness

Five papers discuss cooperative work-study agreements between schools and vocational rehabilitation services in the western states. Areas discussed include the advantages of cooperative agreements, the forms and disadvantages of third party agreements, basic concepts of the programs, and an outline form to use when applying for matching funds; the relationship of special education, rehabilitation and cooperative plans, programs, and agreements; and California's past and present work study programs for the mentally retarded. Also reviewed are research demonstrating the economic feasibility of vocational training for the educable mentally retarded in the public schools and communication problems in work study programs. The conference summary considers the purposes, goals, essence of, and necessity for cooperative agreements. (MK)

The Effectiveness of a Specific Program Based on Language Diagnosis in Overcoming Learning Disabilities of Mentally Retarded, Emotionally Disturbed Children.

EDRS m.b.c

Descriptors: exceptional child research; mentally handicapped; emotionally disturbed; cognitive processes; multiply handicapped; learning disabilities; language; children; learning characteristics; language ability; language handicaps; remedial reading; remedial programs; psycholinguistics; speech handicaps; speech therapy

The objectives of this study were to (1) investigate and describe the learning characteristics of a group of mentally retarded, emotionally disturbed children, and (2) test the effectiveness of a psycholinguistic approach to the remediation of learning disabilities by comparing three groups—an experimental remedial treatment group, a comparison remedial treatment group, and a non-treatment group. In the descriptive aspect of the study, 32 educable mentally retarded, emotionally disturbed children (mean chronological age of 12-6, mean mental age of 7-4, and mean IQ of 61) were given a diagnostic battery based on an extended model of psycholinguistic functioning. The group did not evidence an overall deficit in the entire automatic performance were seen as factors precluding the achievement of a single, generalized deficit which had been posited in other research as typical of the retarded emotional disturbance as well as gross heterogeneity in the group's performance were seen as factors precluding the attainment of a single, generalized (i.e. typical) deficit. In the remediation aspect, 15 of these children, matched in triads based on obtained psycholinguistic characteristics, were randomly assigned to three groups. Excluding the non-treatment group, subjects were tutored individually for 30 sessions. All 15 subjects were retested on the 17-test diagnostic battery. The experimental group, receiving remediation based on a learning disability (i.e. psycholinguistic) approach, showed greater gains in disability areas and overall level of psycholinguistic functioning than the other two groups. The non-treatment group showed greater gains than the comparison group which had received traditional remediation. The psycholinguistic approach to remediation of learning disabilities was seen as effective inasmuch as the factor of attention was controlled by inclusion of a comparison treatment group. Fourteen tables and 77 references are included. (AA)

Characteristics Associated with Post-Rubella Deaf Children-Psychological, Educational, and Physical.

Michael Reese Hospital, Chicago, Ill., Institute For Psychosomatic And Psychiatric Research And Training

EDRS not available

Descriptors: exceptional child research; aurally handicapped; multiply handicapped; deaf; children; psychological characteristics; physical characteristics; student characteristics; residential schools; etiology; intelligence tests; achievement tests; student evaluation; intelligence; language development; speech; psychological evaluation; rubella

From a sample of 1,468 deaf children in a residential school, 129 were diagnosed as post-rubella deaf children. Critical psychological, educational, and physical factors were studied by means of standardized intelligence and achievement tests, teacher rating scales, school records of behavior, psychological evaluations, and psychodiagnostic measures. Prematurity was a factor in 43 percent of the rubella children, and 53 percent of the rubella children were multiply handicapped. The IQ's of 95.3 percent of the rubella children were significantly below the general population IQ of 100. Almost one-third of the IQ's were below 90, and 8 percent were below 70. Written language of the rubella deaf group was significantly poorer than the genetic or post-meningitic deaf groups, but there were no significant differences in speech or speech reading. Of the rubella deaf, 21.9 percent were aphasic, while only 1.69 percent of the genetically deaf were thus diagnosed. Of the 103 for whom psychological tests were available, 27 percent were classified emotionally disturbed. Teachers' ratings and school records also indicated an elevated rate of severe emotional disturbance. About 47 percent of the rubella children's responses on the Bender Visual Motor Gestalt Test were judged pathological, revealing significantly more organicity among the rubella children than the genetically deaf children. Techniques to facilitate academic learning and behavioral modifications need to be developed if these children are to benefit properly from the school. Included is a 14-item reference list. ABSTRACT 10408
EC 01 0492  ED 012 999
Pub. Date 66  60p.
Rusalem, Herbert And Others
EDRS m/hc

Descriptors: exceptional child education; multiply handicapped; communication (thought transfer); adult education; rehabilitation; research needs; language; learning; manual communication; perception; adults; social relations; behavior; behavior change; electromechanical technology; program planning; deaf blind; conference reports

Position papers, discussion, and research proposals cover communication, learning, rehabilitation, and resettlement. Communication problems of the deaf-blind are related to other concepts of communication. Verbal symbols and nonverbal sounds in communicative perception and the cognitive and affective roles of the language of sound in relation to activities are explained. In relating these concepts to problems of deafness, discrimination must be made between communicative behavior and communicative skills. The disadvantaged environment of deafness or blindness induces significant behavioral consequences. Thus, the goal of diagnosis and treatment must be the improvement of total behavior. The relationship between cognition and seeing and hearing, the effect of social isolation on learning, and the role of language and visual stimuli in the learning process need further investigation. Withdrawal and avoidance manifestations in both deafblind persons and their seeing and hearing associates suggest that heightened life interest and increased involvement of deaf-blind persons in everyday activities might elicit positive responses from associates which would influence tenure of service and effectiveness of volunteers and staff. An analysis of the language structure of the deaf-blind is needed in developing an improved language as well as a new nonlanguage transmission system to better provide deaf-blind persons with essential information. The use of an electronic device for facilitating deaf-blind interaction should be explored. Experiments need to be designed to raise the expectations of society regarding the deaf-blind. A more effective information and retrieval system would increase the usefulness of case studies and studies (cases are cited in planning for the vocational and social adjustment of the deaf-blind. A 15-item summary of research needs, a bibliography of 21 items, and a list of the seminar participants are included. (CF)

A Proposal for a Pilot Project to Meet the Needs of the Mentally Retarded Deaf, Wisconsin State Department Of Public Instruction, Madison EDRS m/hc
Wisconsin Department Of Public Instruction Bureau Memorandum; V9 N3 P14-19 Mar 1968

Descriptors: exceptional child education; program planning; mentally handicapped; auditory handicapped; multiply handicapped; program proposals; demonstration programs; program administration; children; deaf; program descriptions; educational objectives; pilot projects

A pilot project to meet the needs of mentally retarded deaf children is proposed by two Wisconsin schools. The rationale for the program and the summary statement from a 3-day workshop which met to consider a possible program are given. The purpose of the proposed program is to demonstrate the feasibility of removing, at least for a time, deaf retarded children from classes for the deaf of normal intelligence and from classes of mentally retarded hearing children. The proposal specifies short range procedures for 1967-68, including identification of students and criteria for admission. Intermediate range procedures for 1968-69 outline limitations of class size, children to participate, staff facilities, equipment, curriculum, parent involvement, reporting, evaluation, funding possibilities, and projected cost. A long range program is also considered in terms of facilities, teacher certification, diagnostic procedures, and state guidelines. Survey data on incidence and a diagram of the program's administrative structure are provided. A bibliography lists seven items. (GD)

In 1966, a national survey reported on 8,887 multiply impaired (MI) blind children. About 56% were boys; 83% had been blind since before age 3, and half were totally blind. The principal causes of blindness were retrolental fibroplasia and congenital cataracts. Almost 63% had two or more additional disabilities (86.8% of those under age 6), such as mental retardation (80.2%), speech problems (38.9%), brain damage (35.1%), emotional problems (16.7%), cerebral palsy (14.4%), epilepsy (14.0%), chronic medical problems (7.0%), crippling (4.9%), hearing im-

Descriptors: exceptional child research; recreation; mentally handicapped; physically handicapped; multiply handicapped; summer programs; children; program evaluation; program descriptions; student evaluation; tests; questionnaires; test results; physical fitness; parent attitudes; student attitudes; teacher attitudes; Doman Delacato Profile; Hayden Physical Fitness Test

This summer program for handicapped children was designed to meet the special needs of these children for socialization and better use of leisure time and to provide data which would enable the division of municipal recreation and adult education to plan future programs. Both the mentally handicapped children's program (34 participants) and the program for physically or multiply handicapped children (51 participants) consisted of games, crafts, musical activities, and field trips. Base line data were obtained from descriptions of the children by the director, the Hayden Physical Fitness Test, and an adaptation of the Doman-Delacato Profile. Questionnaires for children, staff, and,aj parents were used for program evaluation. Results showed the range of physical fitness. The four children tested with the Doman-Delacato Profile scored on four of the five possible scoring levels, excluding the highest level. Children's questionnaire results showed a higher percentage of happy responses than either neutral or sad responses to questions about the program. Staff ratings of the program ranged from satisfactory to outstanding. Parent responses also indicated a high degree of satisfaction. (J2)

An Introduction to Development of Curriculum for Educable Mentally Retarded Visually Handicapped Adolescents.
American Foundation For The Blind, New York, New York
EDRS m/hc

Descriptors: exceptional child education; multiply handicapped; visually handicapped; curriculum; language arts; educable mentally handicapped; adolescents; communication skills; teaching methods; arithmetic; family life education; visually handicapped mobility; social skills; industrial arts; travel training; physical education; sciences; social studies; health

Suggestions for curriculum development for educable mentally handicapped, visually handicapped students aged 13 to 18 years are presented. A discussion of communication skills includes the areas of listening, oral communication, reading, writing, and spelling and teaching methods for each. The goals of the computation skills sequence, basic understanding of mathematical concepts, and transfer of knowledge to other situations are discussed along with skills to be taught. Units are described for instruction in family and social living and health; also described is an industrial arts program involving machine operation techniques, woodworking, metal working, power mechanics, home repairs, electricity, and ceramics. Uses of a sighted guide, arm positions, trailing, squaring off, direction taking, orientation with others and self orientation, and skill testing are outlined in the unit on orientation and mobility. Recommendations are also made in the fields of physical education, science, and social studies. (LE)

Programming Habilitation of the Hospitalized Deaf Retarded.
Michigan State Department Of Mental Health, Lansing Vocational Rehabilitation Administration (DHEW), Washington, D. C.
EDRS m/hc
RD-800S RR-44

Descriptors: exceptional child research; multiply handicapped; psychotherapy; vocational rehabilitation; aurally handicapped; mentally handicapped; sheltered workshops; deaf; work experience programs; communication skills; social adjustment; personal adjustment; academic achievement; institutionalized (persons); job placement; community cooperation; homemaking education; intellectual development

Thirty-two deaf retarded patients were diagnosed for speech and hearing, intellectual function, academic achievement, and medical status. Eight of the patients served as controls and 24 received 18 to 24 months of special training in communication skills, shop experience, physical education, and homemaking. Twelve of the 24 also received psychotherapy. Formal vocational training in a sheltered workshop for males and participation in the institution work program and community vocational placement for both sexes were initiated during the final year of
the program. As a result of the program, some of the patients were able to be discharged or to be placed in the community on a day basis. Others were able to participate in the institutional work program. Communication, intellectual functioning, and social/personal adjustment improved significantly (p equals .02 or p less than .02), but academic achievement did not improve. The psychotherapy program was not shown statistically to be effective; in fact, the subjects without psychotherapy improved more in intellectual function and performance. The patients participated successfully in the sheltered workshop.

Frampton, Merle E. And Others
Forgotten Children: A Program for the Multihandicapped.
EDRS not available
Porter Sargent Publisher, 11 Beacon Street, Boston, Massachusetts 02108 ($6.95).

Descriptors: exceptional child research; multiply handicapped; visually handicapped; cerebral palsy; physically handicapped; case studies (education); student evaluation; individualized instruction; residential schools; physical therapy; recreational activities; therapeutic environment; teaching methods; multisensory learning; speech therapy; creative activities; language development; curriculum; staff role; parent school relationship

In a cerebral palsy-blind experimental school unit for day and residential care, a staff of 13 served 30 children in 6 years with 12 to 17 children each year. All but six children who were found to be nontrainable progressed; eight became trainable, eight trainable and partially educable, and eight educable. Variable progress was found characteristic of most of the children. Group placement was changeable in the three groups for children needing self help and social skills, for children with the greatest learning difficulties, and for children able to benefit from a full academic program. The medical services were the foundation of the program; the residential care given stressed a structured environment with 19 living at the school 10 months a year. Both physical therapy and the therapeutic setting used to teach the children how to play and use their leisure time tried to establish interaction with the world; personality was also developed by use of any creative ability. Speech therapy was given to 15 children and the language development program, like the academic program, included a total program for all, group programs, and an individual one for each child. The child also kept close involvement with parents. Recommendations were for a clinic and a multilocal school. Case studies are provided of one child age 6 and of four girls. (SN)

The proceedings consider special education programs for the multiply handicapped. Papers describe a case study in community challenge, California trends for services, the multihandicapped deaf child, the process of curriculum development, persistent educational problems, prescriptive teaching as an integration process, the clinician-educator, and educational planning. Panel discussions treat special programs, parental problems, innovations in teacher preparation, legislative needs, and problems confronting public schools in providing special services. (LE)

Exceptional Children: V35 N9 PS87-94 May 1969

Descriptors: exceptional child research; deaf; mentally handicapped; multiply handicapped; residential schools; academic aptitudes; aurally handicapped; incidence; classification

Information was collected from pupils' cumulative folders at six schools for the deaf on the prevalence of mentally retarded deaf children, the utility of intelligence tests for such children, classification and nomenclature, numbers and kinds of disabilities in addition to deafness and mental retardation, and projected grade level at graduation for the retarded children. A total of 304 pupils (19% of the pupil population of 1,632) had IQ scores below 83, but only 132 of these children were classified as mentally retarded. Handicaps in addition to deafness and mental retardation were reported for 73 children. A mean grade level expectancy of 4.3 at time of graduation was predicted by school psychologists for 117 of the 304 children. (LE)

Descriptors: exceptional child education; multiply handicapped; visually handicapped; aural stimuli; visually handicapped mobility; sensory experience; haptic perception; deaf blind; auditory perception; adults; visually handicapped orientation

To determine whether the aural mechanisms, shown to be the basis of the perception of obstacles by the blind, were auditory or cutaneous or both, 10 deaf-blind adults with no outer ear defects who could travel alone were studied. In the first exploratory experiment, only one of the subjects could perceive a wall at a distance of about 1 foot, the other subjects definitely did not perceive it. A second experiment eliminated secondary cues derived from the floor by substituting a small movable screen for the wall. The results indicated that at least light of the subjects lacked the obstacle sense and were incapable of learning it. Since the remaining two subjects who might possess this sense both wore hearing aids, their aids were removed and their ears were stopped for the third experiment. One of the two subjects now lacked the obstacle sense and was unable to learn it. The possibility of the remaining subject using vision was eliminated by repeating the experiment in the dark. Under these conditions this subject also failed to perceive the obstacle. In a further experiment with this subject a cardboard head shield reflected light from above his eyes, restricted him from seeing the obstacle, and left his cheeks and ears open to stimulation by reflected air and soundwaves. The subject now lacked the ability to perceive obstacles and the capability of learning it. (CG)

Behavior Modification with the Multihandicapped.
EDRS not available
New Outlook For The Blind; V64 N1 P6-13 Jan 1970

Descriptors: exceptional child education; multiply handicapped; behavior change; teacher behavior; reinforcement; reinforcers; teaching methods; sequential approach

The article discusses behavior modification in light of teacher behavior and reinforcers as affecting student behavior. The teacher behaviors and hopeful reactions to which they are noted are an increased rate of giving positive reinforcers depending upon appropriate behavior and decreasing for negative behavior, measuring behavior before, during and after instructional programs, individual altering of programs depending on behavior, and an ordering of complex behaviors in hierarchical complexity and teaching the least complex behavior first. Additional areas covered are separating complex behaviors into component parts and teaching each part separately, working with behaviors that match the environment to the child, and measuring, adjusting, and reworking programs. Also considered are methods of assessing and remediating expressive and receptive deficits. (JM)

Teaching Techniques for Institutionaled Blind Retarded Children.
EDRS not available
New Outlook For The Blind; V64 N1 P25-8 Jan 1970

Descriptors: exceptional child education; multiply handicapped; educational programs; visually handicapped; mentally handicapped; institutionalized persons; institutional schools; social development; behavior change

A discussion of teaching techniques for blind mentally handicapped children is concerned with the large numbers of institutionalized persons who have no programs in effect to help them relate to the sighted world and the narrowness of existing programs. Suggested techniques include encouragement of self care skills, counseling, remedial experience activities, and a nursery school to teach mobility and command responses. Brief case studies referred to concern acceptance of blindness, teaching productive goals, and training in socially acceptable behaviors. (JM)

Conflicting viewpoints exist with respect to the most appropriate facilities for the education of mentally retarded deaf children. This paper presents opinions of administrators of residential schools for the deaf relative to optimum physical facilities and educational services for retarded deaf children. In general, administrators tended to lean toward the development of services outside their own schools. (Author)

Volta Review; V72 N4 P225-36 Apr 1970

Descriptors: exceptional child education; institutionalized persons; multiply handicapped; aurally handicapped; mentally handicapped; institutional schools; residential care; testing; educational programs; teaching methods; qualifications

Questionnaires for teachers and for administrators as well as a hearing scale and a behavior rating scale were sent to 142 institutions for the retarded. Results received from 71 residential facilities were as follows: team evaluation is common for identifying deaf retardates; psychological and audiological tests are invariably used in identification; facilities for speech therapy are available in 85% of the institutions; a range of 21% to less than 1% of retardates are found to be deaf; only 33% of school age retarded deaf children are in some educational or training program; and 80% of the retarded deaf have borderline or mild retardation with severe to profound hearing loss. Program objectives revealed three common goals: communication skills, social adjustment, and rudimentary academics. Types of instruction and teacher qualifications are discussed, and conclusions and recommendations are provided. (RJ)

Descriptors: exceptional child education; visually handicapped; multiply handicapped; residential programs; program evaluation; residential schools; interpersonal competence; social adjustment; physical activities; sensory experience; teaching methods; learning activities; records (forms)

To design a residential school program for multiply handicapped (blind and deaf) children and to develop identifying procedures for prospects for this type of program, 15 children (ages 5 to 13, legally blind, educationally retarded, multiply handicapped) of both sexes were enrolled in a 12 month program. The curriculum was based on a systematic presentation of real experiences to build concepts, continual participation in physical activity, on sensory stimulation and the encouragement of social interaction, and on an adaptation of the Montessori method. The children were evaluated at the beginning and end of the program by a multi-disciplinary team. The results indicated that all children except one made some improvement with the younger children showing most progress. Self care skills and social skills were improved. Findings also suggested that a group of five would be the ideal size, grouping should be according to functional ability, parental visits and vacations are beneficial, personnel must be well trained and screened, and further study is needed in like programs. Case studies are presented in two volumes, EC 004 819. (Author/JM)

Robbins, Nan; Stenquist, Gertrude The Deaf-Blind Rubella Child. Perkins Publication Number 25. EDRS not available Perkins School For The Blind, 175 North Beacon Street, Watertown, Massachusetts 02172.
Descriptors: exceptional child research; multiply handicapped; rubella; case studies; deaf blind; academic achievement; intelligence level; communication problems; clinical diagnosis; preschool programs; academic ability

Twenty-eight children at Perkins School for the Blind with a prenatal history of maternal rubella were studied, and data were compiled on their characteristics. The children were multiply handicapped, primarily partially sighted with either severely impaired hearing or a 60-80 dB loss with generally flat configuration. Three were a heavy preponderance of IQ scores below 50 and a greater than normal number between 50 and 70 on the Ontario School Ability Examination. distractibility was found to be a significant problem in the classroom, and basic symbolic behavior was absent in more than one half of the group. Those who light-gazed excessively appeared to have serious learning disorders, only one had an obsessional trait other than light-gazing, and toilet training problems were related to generally slow development. In order to increase communicative abilities and foster language development, preschool programs are suggested which would include early introduction of amplification, glasses, and parent counseling. Additional information on 18 other children is appended. (RJ)

ABSTRACT 22401
EC 02 2401 ED N.A.
Publ. Date Mar 70 5p.
Descriptors: exceptional child services; multiply handicapped; emotionally disturbed; visually handicapped; behavior change; auditory aids; auditory perception; echolocation; multiply handicapped

The report suggests that contralateral routing of signals (CROS) by a hearing aid may be useful in the habilitation of blind persons with profound unilateral hearing losses. Two case studies are presented of bilaterally blind persons who were fitted with CROS hearing aids while undergoing mobility training. In each case some improvement in mobility was reported, which was attributed to sound localization improved by the CROS hearing aid. This preliminary investigation concludes that CROS offers sound localization clues to the blind, even though the auditory cues are being received in only one ear. (Author/BJ)

Lennan, Robert K. Report on a Program for Emotionally Disturbed Deaf Boys. EDRS not available American Annals Of The Deaf; V115 N4 P469-73 Jul 1970
Descriptors: exceptional child research; multiply handicapped; program evaluation; emotionally disturbed; multiply handicapped; program descriptions; behavior change; intervention

To determine the effectiveness of behavior modification techniques on the behavior of emotionally disturbed, deaf boys, 16 boys (ages 2 and 12, IQ of 85 or slightly above) were enrolled in a 2 year program. Techniques used included positive reinforcement, gradual reward deferment, checkcards, interventions, dormitory checkcards, and a small (one to four) staff-pupil ratio. Seven of the subjects reportedly made satisfactory adjustments into the regular classroom and the others will be included in a further program. The conclusion is that behavior modification techniques can be useful in the education of the emotionally disturbed, deaf child. (JM)

The text, addressed to those educating the blind child who is retarded in development, defines the child, and discusses potentialities of family oriented counseling, factors affecting development and appraisal (behavior manurments, and developmental and communication problems), appraisal and evaluation (psychological, medical, neurological), and the child in school. The curriculum, administration policy, and dialogue between student and teacher are also described. Appendices include case studies, psychological measurements, and a suggested day's program. (Le)

ABSTRACT 22807
EC 02 2807 ED 034 369 Publ. Date Jun 69 346p.
Descriptors: exceptional child research; multiply handicapped; emotionally disturbed; deaf; academic achievement; parent education; interpersonal competence; programmed instruction; manual communication; reinforcement

A pilot project involved 21 emotionally disturbed deaf boys, all of whom had had no success in regular school attendance and several of whom had been excluded. Objectives were to modify behavior and to teach basic skills and subject content, enabling the boys to return to regular classes for the deaf. Features of the program were a small staff-pupil ratio, application of behavior modification, engineered instruction, in-
individualized self instructional curricula materials, coordinated classroom and dormitory activities, manual communication and parent education. Results indicated significant changes in class conduct and self control and significant gains in reading and arithmetic. Parents were enthusiastic about changes in the child, but made no meaningful changes in their own personal dimensions. Of the boys, one returned to a psychiatric hospital and nine successfully returned to regular classes for the deaf. (Author) (D)

Auditory Training in the Perkins Deaf-Blind Department.

EDRS not available
Perkins School For The Blind, Watertown, Massachusetts 02172 ($2.00).

Descriptors: exceptional child education; multiply handicapped; deaf blind; auditory training; sensory training; auditory discrimination; aural stimuli; speech instruction; hearing aids; psychophysiology

Written for teachers of deaf-blind children, the booklet describes methods for developing and maintaining residual hearing. Introductory material deals with the psychophysiology of hearing, nature of auditory training, and methods of amplification. Control of the auditory environment is discussed in relation to various types of hearing disorders. Types of sound stimuli are explored: gross sounds, environmental sounds, musical sound, and speech. Specific teaching activities are listed for each sound area. (JB)

Descriptors: multiply handicapped; deaf blind; communication (thought transfer); manual communication; special services; interpersonal relationship

The report of the Committee on Services for the Deaf-Blind contains their conclusions related to communication and services for the deaf-blind. Various methods of communication reviewed include: the International Standard Manual Alphabet for the deaf, other manual alphabets, braille, typing and script writing, alphabet plates and gloves, mechanical devices and machines, speech, and lipreading. Discussed are the first steps in the development of an International Rapid Manual Alphabet. The Basic Minimum Services Promulgated for deaf-blind persons covers the standing, communicative, play, and services. Guidelines are suggested for the helper of deaf-blind persons. Appendices include the interim report of the Committee, a verbatim excerpt from a discussion at the 1957 Conference on Communication for the Deaf-Blind, questions asked of deaf-blind persons, a discussion of relocation to centers, a description of a series of volumes on the rehabilitation of the deaf-blind, comments on making friends with a deaf-blind person, and a bibliography of resource literature. The Deaf-Blind.

Descriptors: exceptional child education; multiply handicapped; visually handicapped; mentally handicapped; slow learners; teaching procedures; elementary school students; institutional schools

Written for classroom teachers by a classroom teacher, the book illustrates through discussion, photographs, and annotated tape recordings how growth was promoted in slow learning blind elementary age children in a residential school for the blind. The application of educational goals and principles to the teaching of these children and the procedures used by the teacher in directing the classroom activities and learning are described, including practical teaching suggestions. Fun experiences interesting to children are emphasized, and their effects on the emotional, social, and educational growth of the children are recounted. The annotated copies of classroom tape recordings are appended for further evaluation and explanation of the teaching procedures discussed. (KW)

Pub. Date 63
Robbins, Nan
EDRS not available

Perkins School For The Blind, Watertown, Massachusetts 02172 ($2.00).

Designers: exceptiona child education; multiply handicapped; language development; deaf blind; oral communication; speech instruction; parent participation; guidelines; learning processes; training techniques; behavior; social development; lipreading

Designed for parents of deaf-blind children, the booklet discusses processes by which children learn to speak and the relationships between communication and physical, mental, and social growth. Speech development in normal children is compared with that of deaf-blind children. Specific areas are outlined in which parents may assist their deaf-blind children in acquiring speech readiness. Social development and life experiences are emphasized. The necessity for helping the child become independent is discussed with regard to eating, dressing, washing and toileting, getting about, and playing with others. These experiences are related to the steps in learning speech: auditory, non-verbal communication, understanding speech, speech. Parental attitudes and activities are discussed, with recommendations for maintaining healthy relationships with the child. (JB)

Pub. Date Mar 68
Graham, M. B.
Multiply Impaired Children: An Experimental Severity Rating Scale.
EDRS not available
New Outlook For The Blind; V62 N3 P73-81 Mar 1968

Designers: exceptional child research; visually handicapped; multiply handicapped; rating scales; teaching load; educational planning; teacher distribution; Oregon Severity Rating Scale for Multiply-Impaired Children (ORS)

A Severity Rating Scale for multiply handicapped children was devised in the following way: starting with the premise that one average teacher can handle ten normal blind children, it can be stated quantitatively that blindness has a numerical value of six and therefore that one average teacher can handle a teaching load of sixty points. Placing weighted numerical scores on all other impairments and disabilities in terms of severity yields a set of scores which will give individual scores for multiply handicapped children. A modified scale to reduce difference of interpretation by raters includes classifications of types of functional vision, functional hearing, functional CA vs. academic level of achievement, functional intelligence, functional emotional abilities, speech problems, cerebral palsy, brain damage, epilepsy, and mobility. The scale was used to estimate the academic loads for two successful residential schools for the blind and the computed need for teachers coincided closely with the actual number of teachers. (LE)

Designers: multiply handicapped; deaf blind; rehabilitation programs; demonstration projects; community attitudes; special services; community services; research projects; evaluation techniques; adults; vocational rehabilitation; Anne Sullivan Macy Service for Deaf-Blind Persons

Described is the Anne Sullivan Macy Service for Deaf-Blind Persons, a regional demonstration and research project conducted by the Industrial Home For the Blind in New York and the Social and Rehabilitation Service (DHEW). The purposes of the project...
are noted to be rehabilitation services to the deaf-blind, mobilization of state and local community resources to initiate referrals for rehabilitation and to provide services following rehabilitation, development of affirmative attitudes by the public toward deaf-blindness, and data collection, research studies, and dissemination of findings. The report describes the deaf-blind, the dimensions of the problem, the rehabilitation program organized, and the approach to cultivating public and professional concern. The salient features of the client group of 171 deaf-blind persons are described, as are the measuring procedures used (observational comparison and followup survey), and the findings of these studies. Recommendations for improving services in the future are made. Appendices include the schedule of evaluation procedures, characteristics at intake of the clients, changes resulting from rehabilitation in a sample of 30 clients, changes in age, sex, education, language proficiency, and a list of publications related to the project, guidelines for volunteers, and descriptions of manual alphabets. An Analysis of Evaluation Procedures, Disability Types, and Recommended Treatments for 100 Deaf-Blind Children.
Syracuse University, New York, Division Of Special Education And Rehabilitation Services And Rehabilitation Service (DHEW), Washington, D. C., Research And Demonstration Grants
EDRS m,hc

Descriptors: exceptional child research; deaf blind; clinical diagnosis; classification; taxonomy; multiply handicapped; vocabulary; language classification; evaluation methods

Descriptions by various professionals of 70 multiply handicapped deaf-blind children evaluated at the Syracuse University Center for the Development of Blind Children were examined for terminologically used to describe the child and his life situation. Purposes were to develop some epidemiological characteristics of the multiply handicapped, deaf-blind population; identify terminology; classify terminology used by profession of examiner and by categories of diagnostic import (e.g., social-emotional, physical-medical, communicative); and develop suggestions and implications for utilization of this data to improve the evaluation process and communication of evaluation results. Inspection of terms in six professional reports on each child showed 1,646 terms, and no term occurred over four times. A general plan for the use of a formalized video-tape protocol for communication between agencies and as a means of standardizing observation procedure was evolved. It is suggested that the vocabulary of professional terminology be examined both in client contact and in student training.

The above project initiated research and training proposals based on the above findings. Appendices include statistical reports from the American Association for the Blind, terms used in initial and final analyses, and recommendations listed in report summaries. (KW)

Descriptors: exceptional child research; multiply handicapped; visually handicapped; mentally handicapped; statistical studies; educational needs; educational programs; incidence; residential schools; special classes; admission criteria

An inquiry schedule was used to obtain data from chief administrators at 48 residential schools for the blind and from 53 classroom teachers conducting special classes for mentally handicapped visually impaired children. Enrollment of the 48 schools numbered 6,696 children; the special classes, 453. Thirty-five schools, representing 70% of the population, reported 1,170 mentally retarded blind children enrolled. Results indicated a trend for the schools to accept multiply handicapped children. However, there was a lack of agreement regarding facility needs, educational theories, instructional processes, and educational classification for multiply handicapped blind students. (JD)

The Counseling Process and the Teacher of Children with Multiple Handicaps.
San Francisco State College, California
EDRS mf

Descriptors: exceptional child services; multiply handicapped; visually handicapped; counseling; teacher role; counselor role; case studies; conference reports

The focus of the institute on the counseling process and teachers of multiply handicapped children was on children with at least one sensory, emotional, or physical impairment in addition to a visual handicap. The roles of the specialist and the teacher in the counseling process and the determination of the best educational placement for the child were considered. The multi-disciplinary approach to children with multiple handicaps was urged. Six case studies are presented for study, and observations and implications based on the case studies are noted. A summary and recommendations for further study and follow-up are included. (KW)

*Educational Specifications: Trainable Mentally Handicapped and Multiply Handicapped Facility.*
EDRS not available
Thornton Area Public School Association, 250 West Sibley Boulevard, Dalton, Illinois 60419.
Descriptors: trainable mentally handicapped; multiply handicapped; educational facilities; facility requirements; building design.
Educational specifications for a facility for the trainable retarded and multiply handicapped are described. Background information concerns the philosophy of the Thornton Area public school association, educational and design goals, and implications and considerations for the architect. Educational specifications are given in terms of general information, organizational and utilization plans, physiological plant, traffic, interior movement, groupings, special utilities, and service facilities. General area requirements are listed for the following: administrative complex, ancillary services, teachers' workroom and storage space, conference room, multi-purpose room, gymnasium, audio-visual center, prevocational area, greenhouse, home simulator, outdoor education and recreation, and service system requirements. *Area Centers for Services to Deaf-Blind Children in Arkansas, Louisiana, Oklahoma, and Texas. Final Report: Planning Year.*
Callier Hearing And Speech Center, Dallas, Texas EDRS rfc OEG-0-536003-409(609)
Descriptors: exceptional child research; deaf blind; state surveys; statistical data; incidence; regional programs; interagency cooperation; education service centers; program descriptions; models; Arkansas; Louisiana; Oklahoma; Texas; Area Centers for Services to Deaf Blind Children.
To assess the educational needs within the region, a survey of deaf-blind individuals was conducted in 1969 involving 279 teachers, 85 United Fund agencies, 12 caseworkers, 20 education service centers, and ten parents. The survey resulted in the identification of 454 deaf blind children and adults in Arkansas, Louisiana, Oklahoma, and Texas. The project report also included a discussion of parent services, professional development, prototype models of services (medical, interagency, itinerant teacher, communications, residential, diagnostic, evaluative, and public school day programs), and recommendations for improved services. Tables provide incidence figures and distribution data on deaf blind children in the region, and appendixes contain information regarding the advisory committees, related references, workshop activities, and equipment. The Relative Occurrence of Secondary Disabilities in Children with Cerebral Palsy and Other Primary Physical Handicaps.
EDRS not available
Exceptional Children; V37 N4 P901-2 Dec 1970
Descriptors: exceptional child research; physically handicapped; multiply handicapped; cerebral palsy; incidence.
Sixty-one elementary school children (ages 6-12) with a primary diagnosis of physically handicapped were evaluated to determine the presence of secondary disabilities. Of the total group, 84% had such disabilities. Of the 36 cerebral palsied children, 92% had secondary disabilities compared to 74% of the other 25. The cerebral palsied children had significantly more mental retardation and speech disabilities. The importance to educators of these multiple disabilities is noted. (RJ)

Descriptors: exceptional child services; multiply handicapped; deaf blind; evaluation methods; clinics; diagnostic tests; medical evaluation; psychological evaluation; educational diagnosis; administration; individual characteristics; speech evaluation; audiometry; Syracuse University Center for the Development of Blind Children.
Prepared by specialists on the evaluation team at the Syracuse University Center for the Development of Blind Children,
the book describes the procedures of the special diagnostic clinic within this unit. The diagnostic clinic was established to provide a unified approach to the evaluation and study of multiply handicapped children. Described in detail are the various evaluation and examination techniques and procedures developed by the various disciplines participating in the program. Chapters deal with the general characteristics of deaf-blind children (Elizabeth Wagner), administration (Edward T. Donlon), psychoeducational evaluation (Edward T. Donlon), speech and language evaluation (Scott Curtis), casework evaluation (Vernon Wolston), pediatric examination (Miriam Swift), audiological examination (E. Harris Nober), ophthalmological examination (Joseph Frank), neurological evaluation (A. William Wright), and methods of education (Annette B. Dinsmore). (KW)

EDRS not available

Volta Review; V72 N9 P552-9 Dec 1970

Descriptors: exceptional child education; aurally handicapped; multiply handicapped; junior high school students; psychomotor skills; perception; memory; educational programs; academic achievement; New York

The educational program for multi-handicapped deaf children initiated at Junior High School 47, New York City's Public School for the Deaf, is described. Thirty children, ages 8-11 years, were selected. These children, referred to by the staff as Factor X children (etiology unknown) defy categorical diagnosis and cannot learn at a normal pace. The selection of the staff and the program is described. The program begins with exercises to develop gross motor coordination and includes tactile and kinesthetic approaches to help fine motor coordination, and activities to teach visual memory and perception. The children were divided into fast and slow groups, and it was a year before the slower group was introduced to academic work. Methods of teaching math, language, memory, and speech are discussed, and some individual cases are described. These children now know what it means to succeed and achieve. (GD)

Five experimental programs in the District of Columbia, which were implemented in 1968-69 and have served 116 handicapped children, are evaluated. The programs provided individualized instruction for aphasic, rubella, severely mentally retarded, seriously emotionally handicapped, and multiply handicapped children. A summary and a consultant's detailed evaluation of each program are included. The extent to which programs met their objectives, strengths and weaknesses, successes and failures are examined, and recommendations offered. Descriptive statistical data is included. Programs concentrated upon the development of linguistic and conceptual ability for aphasics; behavior modification principles in the emotionally handicapped program; the training of adaptive behaviors for the mentally retarded; and comprehensive education for the multiply handicapped deaf and the rubella children. **A Curriculum Instruction Guide for Orthopedically Handicapped Children.**

Seattle Public Schools, Washington

EDRS not available

Seattle Public Schools, Administrative And Service Center, 815 Fourth Avenue North, Seattle, Washington 98109.

Descriptors: exceptional child education; physically handicapped; multiply handicapped; educable mentally handicapped; curriculum guides; teaching guides; primary grades; intermediate grades; junior high schools; Washington

A curriculum guide for teachers of the physically handicapped is presented. Objectives of the program, characteristics of the physically handicapped and their needs, approaches to teaching, classroom organization and management, and contact class placements are discussed. Adaptations of curriculum include instruction for those following the regular course of study (those with normal intellectual potential) from primary through intermediate to junior high school level, and for those following the educable mentally handicapped course of study from primary through intermediate to prevocational. Language arts, mathematics, science, social studies, music, and physical education are basic to the curriculum levels. (CD)

**Multiply Handicapped Deaf Children: The Causes, Manifestations, and Significances of the Problem.**

EDRS not available

E.E.N.T. Digest; V31 P40-58 Feb 1969

Descriptors: exceptional child research; aurally handicapped; multiply handicapped; etiology; statistical data; neurological defects; rubella; Rh factors; premature infants; meningitis

Statistical information concerning the magnitude and nature of the problem of the multiply handicapped deaf child is presented. It is pointed out that behavior of deaf children, previously explained as a reaction to deafness, is often an interaction effect of both deafness and of other central nervous system (CNS) pathology associated with the condition causing deafness. Many language disabilities, learning disabilities, impulse disorders, psychoses, and other behavioral disorders are shown to be accounted for in part by CNS pathology present in many deaf children. Examined is the nature of four etiologies which are leading causes of deafness and which also result in other disabilities—maternal rubella, complications of Rh factor, meningitis, and premature birth. Data show the prevalence of major types of physical and psychologic anomalies in the deaf children of the four etiologic groups. (KW)

**Congenital Rubella: Pathogenesis of Motor Deficits.**

EDRS not available

PEDIATRICS; V47 N1 P16-26 Jan 1971

Descriptors: exceptional child research; multiply handicapped; rubella; motor development; prenatal influences; pregnancy; perceptual motor coordination; age differences; infectious diseases

Study of the motor behavior of 43 children, ages 3-1/2 years, with major hearing loss and a history of maternal
rubella revealed a relation between the character and degree of their motor deficits and the maternal gestational age at which the infection had occurred. It appeared that infection during the first 4 gestational weeks results in the greatest multiple handicaps for rubella children, and that the most serious motor deficits are associated with this period of pregnancy. It was also found that locomotor activities that require the maintenance of upright posture and equilibrium are most frequently, though not seriously, affected if the rubella infection occurs after the 6th week of gestation. The risk of motor deficit is considerably reduced if infection occurs after the 8th week of pregnancy. The result of the study supports the hypothesis that motor deficits in children with congenital rubella can be attributed to damage at specific stages of embryologic development, when the structures that will be involved in a particular motor activity are in the most crucial stage of organization and differentiation. (Author)

**Psychoeducative Considerations of Physically Handicapped Conditions in Children.**

EDRS not available

**Exceptional Children; V37 N7 P538-9 Mar 1971**

Descriptors: Exceptional child research; physically handicapped; emotionally handicapped; educational evaluation; multiply handicapped; incidence

To ascertain the prevalence of intellectual handicaps and emotional disturbances among physically handicapped children, a sample of 195 physically handicapped children from a six-county area of Iowa were evaluated by a team of specialists in diagnostic clinics. Incidence of five major categories of physical handicap was determined. It was found that 43% of the sample had some degree of mental retardation (IQ less than 80) and retardation was most frequently associated with cerebral palsy. The EMR physically handicapped represented only 5% of EMR population in the area, while the TMR physically handicapped represented 26% of all TMR children. Incidence of hearing loss was 7% and incidence of speech handicaps was 37% (most frequently articulation problems and among the cerebral palsy) in the sample. Approximately 25% showed some psychological maladjustment, and 20% of the families evaluated had adjustment problems related to the handicapped child. (KW)

**Multiply Handicapped Deaf Children: Medical, Educational, and Psychological Considerations.**

EDRS not available

**Council For Exceptional Children, 1411 South Jefferson Davis Highway, Suite 900, Arlington, Virginia 22202 ($5.25 HC, $3.75 PB).**

Descriptors: Exceptional child research; multiply handicapped; mentally handicapped; hearing loss; emotional handicap; etiology; incidence; psychological evaluation; educational diagnosis; medical evaluation; rubella; rh factors; premature infants; heredity; meningitis

An extensive survey of the literature examines five major etiologies—pre-natal rubella, premature birth, complications of rh factor, meningitis, and genetics—in terms of their relevance to deafness and other disabilities. Following this survey, results of a study of 1,468 deaf children to determine causes of secondary handicaps in deaf children and to describe the nature of these handicaps are reported. Intensively studied were those deafened by maternal rubella (141), meningitis (137), prematurity (257), erythroblastosis fetalis caused by rh factor complications (45), and heredity (79). Independent variables were those five etiologies. Dependent variables measured were intelligence, educational achievement, psychological adjustment, behavioral evidence of brain damage, communication skills, hearing loss, and physical anomalies. Data are analyzed for each of the dependent variables, and for prevalence of etiologies of the multiply handicapped. Findings for each of the five etiological groups are then presented. General conclusions were that much behavioral variance among deaf children is not due to their hearing loss, but can be ascribed to brain damage resulting from the same cause as the deafness. This variance was in areas critical to academic learning, psychological adjustment, and physical health. (KW)

Presented are the proceedings of the International Conference on the Education of Deaf-Blind Children held at Sint Michielsgestel, the Netherlands, August 25-29, 1968. Following report of the chairman, five papers are devoted to the planning and development of programs for deaf-blind children. Three papers discuss rubella children, covering medical and audiological aspects, behavioral characteristics, and education. Teaching techniques are the subject of three papers, and vocational preparations the subject of a fourth. The final two papers treat the mental health problems of the deaf with visual impairments, and the relationship between motor development and learning disorders. (KW)

An Early Childhood Curriculum for Multiply Handicapped Children. 
EDRS not available
Descriptors: exceptional child education; multiply handicapped; early childhood education; curriculum design; program descriptions; class activities; instructional materials; teaching methods
The guide for understanding the multidimensional educational problems of multiply handicapped children and for developing an appropriate curriculum and setting is addressed to teachers, methods, materials, and a curriculum for working with young (ages 4-9 years) multiply handicapped children are presented. The program includes an enriched language program to prepare the children who will go on to academic learning in a school setting. The curriculum can be adapted for children with motor and sensory defects, mental retardation, or emotional disturbance. Discussed are the identification and early years of the multiply handicapped; the ideal physical plant and special education classroom; the professional staff and teacher-parent cooperation; and an educational program which is a compilation of techniques used with multiply handicapped children (blind-cerebral palsyed, mentally retarded-emotionally disturbed) in two different schools. Ages and grouping, physical development, play, creative activities, language development, introduction of tool subjects, and arithmetic are covered, with appropriate activities and materials indicated. The partially sighted child and the blind child are treated in two separate chapters. (KW)

Problems of Severely Handicapped Deaf: Implications for Educational Programs. 
EDRS not available
Descriptors: aurally handicapped; multiply handicapped; rehabilitation; deaf adults: communication problems; behavior problems; Hot Springs Project
A study of multiply handicapped deaf adults at the Hot Springs project revealed that communication inadequacies and behavioral problems were central obstacles to rehabilitation. Despite average intelligence and an 11 year average of prior schooling, the subject progressed slowly at the center and experienced an extremely high attrition rate (55%). Special staff training was fundamental to success with the population as well as relatively flexible standards for student conduct and in-depth services such as personal adjustment training, counseling, and work adjustment training. The findings were felt to suggest a need for increased attempts at preschool education for young deaf children, parent education and counseling, strengthening dormitory programs in elementary and secondary schools, stronger counseling and guidance programs, and greater involvement in total education from teachers. Total communication was viewed as one possible solution to the communication problems, when initiated at an early age and used by parents and teachers. A special rehabilitation facility for severely handicapped deaf people was felt to fill the need for appropriate training and adjustment following secondary school. Such a center, staffed by competent and dedicated personnel, should, the author felt, be able to make significant progress in efforts to educate and rehabilitate this population segment. (Author)

Descriptors: exceptional child education; deaf blind; language handicapped; multiply handicapped; language programs; multiply handicapped; program descriptions; early childhood education; parents; conference reports; Illinois  
Five of the nine papers, in the compilation concern multiply handicapped and deaf-blind children. Described are a home training and nursery program in a public school setting for hearing impaired children aged 18 months to 4 1/2 years, problems and progress in the Illinois state plan for hearing impaired children, and new trends in deaf-blind education. Particularly area centers for serving the deaf-blind. Parents of deaf-blind children and several avenues for productive study in the evaluation and education of deaf-blind children are also discussed. The remaining four papers treat language and behavior problems. Two focus upon characteristics and management of elective mutism in children, and the efficacy of operant conditioning in affecting the verbal behavior of young children with severe language disabilities. The other two describe a preventive approach to speech and language delay used with socioeconomically disadvantaged preschool children (a high-risk population), and a cooperative summer language and behavioral program entitled Repleb (Reinforcing Purposeful Language and Behavior) for 5 to 8-year-old mentally retarded children. (For other CEC convention papers, see EC 03 854-EC 03 859, EC 022 801) (KW)

The incidence of retardation and of hearing loss among the retarded is considered and the problem posed by the aurally handicapped who may be misdiagnosed as retarded is examined. The historical background of past and existing education for the retarded deaf is presented. A study was begun in early 1970 which concerned services for and incidence of deaf retardates among the state’s estimated 29,000 institutionalized retarded. Based on samples of educable and trainable persons aged 6 to 30 in two state schools, what was felt to be a minimum percent of .07 was determined to be the number who had hearing losses. No existing programs within schools for the retarded or for the deaf were adequately serving these people. These findings provided the rationale and need for the tentative proposal for a New York State Program which is described and includes

Problems and Programs in the Education of Multiply Disabled Deaf Children.
Illinois University, Urbana. Institute for Research on Exceptional Children
EDRS mf hc
Descriptors: exceptional child services; multiply handicapped; aurally handicapped; incidence; educational programs; teacher education; evaluation
The multiple disabilities, both remediable and adjustable, which may be associated with deafness are defined and comments are offered on the trend away from the medical model. Incidence figures for the various disabilities are given, and the problems of diagnosis and ascertainment of the educational needs of each individual are considered. Current programs for the multiply handicapped deaf are discussed in terms of preschool, school, and post-school programs and recommendations are made in regard to teachers, ancillary personnel, and prevention.

Austen State School, P. O. Box 1269, Austin, Texas 78767.
Descriptors: exceptional child education; mentally handicapped; aurally handicapped; multiply handicapped; manual communication; sign language; vocabulary
Presented is a functional sign vocabulary containing basic signs most needed for life in a community or institution. The manual communication system is meant as a departure point for exploring and developing academic and vocational skills in both hearing impaired and nonverbal mentally retarded groups. Sign subjects pictured are: alphabet, numbers, positions, animals, body parts, caution, clothing/grooming, colors, concepts (possessions), etiquette, foods, household nouns, places, prepositions and conjunctions, pronouns and possessives, question words, recreation, relationships, religion and holidays, time words, verbs, weather, seasons, and environment.

Austin State School, 2203 West 35th Street, Austin, Texas 78703.
Descriptors: exceptional child education; multiply handicapped; mentally handicapped; guidelines; sensory training; sensory experience; lesson plans
The manual for teaching sensory stimulation to the bedfast multiply handicapped retardate results from a 4-day workshop of sensory stimulation with six unresponsive bedfast girls, ranging from 10 to 20 years of age. The first half of the manual is devoted to illustrations of sensory organs and sensory stimulations: ear, eye, accessory organs of the eye, tongue, nose, palmar grasp, asymmetrical tonic neck, flexor withdrawal, crossed extension, associated reactions, neck righting, neck righting acting on the body, moro, landau, protective extension, sitting, neutral position, adjusting a sheet sling, and supporting child in chair. The second half of the manual presents five lesson plans for the instructor. Each lesson plan clarifies subject to be taught, purpose of the sensory stimulation, teaching aids, references, preparation of the learner, presentation of the material, which includes comprehensive instructions and a test to check student comprehension of material. The subject of the five lesson plans are sensory organs through which one learns; growth and development, neurological development, understanding the spastic child, and how to conduct a session.

Rehabilitation Teacher: V 3 N 8 P 3-22 Aug 1971
Descriptors: exceptional child education; multiply handicapped; deaf blind; infancy; preschool children; child rearing; child development; guidelines; parent education
The practical, nontechnical handbook for parents of deaf-blind children focuses on helping the child develop and prepare for school. Parents are encouraged to pay much attention to the child, not to compare their child's progress with that of other deaf-blind children, not to punish the child for mannerisms, to help the child discover his surroundings, to help the child sit up and walk, to establish a definite 24-hour routine, to acquaint the child with water, to introduce solid foods early, to familiarize the child with his clothes, to confine all toilet training to the bathroom, to discipline the deaf-blind child the same as normal children in the family, to expose the child to as much vibration and sound as possible to introduce many new toys to the child, to keep visual and hearing aids on the child, to keep the aids clean and in repair, and to let the entire family help the child.

The Electro-Brailler: A Communications Device and Teaching Aid for the Blind and Visually Impaired at Work and in School.
EDRS not available
Descriptors: exceptional child education; visually handicapped; multiply handicapped; deaf blind; electromechanical aids; braille: typewriting; instructional materials
Described is the electro-brailler, a braille transcribing aid consisting of two parts: transmitting braille transmitter and receiving braillewriter. The brailed material appears in the form of embossed tape and has numerous projected uses for the blind and deaf blind: substitute blackboard, electric shorthand typewriter, conference equipment, teletypewriter, and conversion device from inkprint into braille. Each application is discussed briefly. The electro-brailler is shown to be advantageous in both classroom and working conditions because each participant can be equipped with transmitters and receivers, permitting braille conversations. The author explains that little mechanical effort is required to operate the system, and the keyboard is adaptable to special needs of one-handed or thalidomide persons. The system can also be used by the sighted who have no knowledge of braille, enabling them to communicate with persons knowing braille.

Sex Education for the Multiple Handicapped as It Applies to the Classroom Teachers.
EDRS not available
Training School Bulletin V68 N2 P87-96 Aug 1971
Descriptors: exceptional child education; multiply handicapped; sex education; sexuality; teacher role
Sexuality and sex education as they pertain to the multiply handicapped and the mentally retarded are defined and discussed. Discussion is based on the Freudian contention that sexuality is at the core of all emotional disturbances or behavioral deviations, with more emphasis placed on confusion and bewilderment about sexuality than in the Freudian entities of castration anxiety, Oedipal conflict, and similar concepts accepted by the psychoanalytic theory. The role of the classroom teacher in sex education is examined, with emphasis upon the fact that the participation of teachers has an important influence in the psychological elements of sexuality in the pupil. A lengthy list of references includes a listing of pamphlets concerning sex education.

Regional Centers for Deaf-Blind Children: A New Hope.
EDRS not available
Volta Review; V73 N7 P411-5 Oct 1971
Descriptors: exceptional child services; multiply handicapped; deaf blind; regional programs; federal aid
The article concerns comprehensive regional centers, currently numbering 10, for deaf-blind children which have been put into operation under provisions of federal legislation. A review of the deaf-blind center concept explains that their purpose is to provide diagnostic and evaluative services, a wide range of educational programs, and consultative services for parents, teachers, and others. Other activities include research development of educational and vocational procedures, specialized training of personnel, and dissemination of materials and information about practices which have been found effective. Included are addresses of the 10 regional centers, with indication by state of the area served by each center (KW)

An Academic-Vocational Program for Multiply Handicapped Deaf Students.
EDRS not available
Descriptors: exceptional child education; multiply handicapped; aurally handicapped; program descriptions; vocational education; program planning
Described is a combined educational-vocational program for multiply handicapped deaf children (IQ no lower than 50 and not confined to a wheelchair) at the Ontario School for the Deaf in Milton. Discussed are the planning of the program, implementation problems, staffing procedures, use of consultative personnel, referral areas, and benefits of the program. The program provides on-the-job as well as classroom experience and, when possible, pupils are integrated into the regular classes for deaf children. It is reported that since the program was initiated, there has been a noticeable improvement in both academic and vocational skills and in the behavior of the students involved. (KW)

**HOW TO ORDER**

To order ERIC REPORTS include complete information for all order form items. Please print or type all information clearly.

1. Complete "bill to" and "ship to" addresses. Be sure to complete "ship to" address if different from "bill to". A like "ship to" address may be completed as "SAME". Include zip code.

2. Order by printing ED number in designated space. ED accession numbers are listed in Research in Education (RIE). RIE may be purchased from Superintendent of Documents, GPO, Washington, D.C. 20402.

3. Include number of copies (1, 2, 3, etc.) to be ordered in appropriate space. Use MF space for microfiche copies, use HC space for hard copy (paper). Check RIE for availability of document in MF and HC.

4. Include price from the rate schedule. (Refer to price schedule on back.) Prices are also published in current issues of RIE.

5. Some ED numbers represent a series of titles, and will be billed by title, not ED number. A list of applicable ED numbers is available.

6. Extend number of copies and price for total price for each entry.

7. Add item 1 through 15 and insert amount in "Sub-Total" box.

8. Add state sales tax for Illinois and Maryland or check box and cite tax exemption number for Illinois and Maryland only.

9. Add "Sub-Total" and "Tax" and insert amount in "Total" box.

10. Indicate payment method desired. Payment must accompany all orders of $10.00 or less. Make all drafts payable to EDRS.

11. Sign AUTHORIZATION and date order.

12. Include only 15 entries per form. Complete and sign additional forms if required.

13. Quality warranty. LIPCO will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of LIPCO. Best available copy will be supplied.

**Orders are filled only from ED accession numbers. Titles are not checked. Please be sure you have supplied the correct numbers.**

1. Book Rate or Library Rate postage is included in above prices.
2. The difference between Book Rate or Library Rate and first class or foreign postage (outside the continental United States) rate will be billed at cost.

TERMS AND CONDITIONS

1. PRICE LIST
   The prices set forth above may be changed without notice; however, any price change will be subject to the approval of the U.S. Office of Education Contracting Officer.

2. PAYMENT
   The prices set forth above do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer.

   Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to LIPCO.

3. REPRODUCTION
   Materials supplied hereunder may only be reproduced by not-for-profit educational institutions and organizations; provided however, that express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

4. CONTINGENCIES
   LIPCO shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure of delay, (a) is due to events beyond the control of LIPCO including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortage, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments, (b) is due to failures of performance of subcontractors beyond LIPCO's control and without negligence on the part of LIPCO, or (c) is due to erroneous or incomplete information furnished by Customer.

5. LIABILITY
   LIPCO's liability, if any, arising hereunder shall not exceed restitution of charges.

   In no event shall LIPCO be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

6. WARRANTY
   LIPCO MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. CHANGES
   No waiver, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of LIPCO.

8. DEFAULT AND WAIVER
   a. If Customer fails with respect to this or any other agreement with LIPCO to pay any invoice when due or to accept any shipment as ordered, LIPCO may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

   b. No course of conduct nor any delay of LIPCO in exercising any right hereunder shall waive any rights of LIPCO or modify this Agreement.

9. GOVERNING LAW
   This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.

To order ERIC reports include complete information for all order form items. Please print or type all information clearly.

1. Complete "bill to" and "ship to" addresses. Be sure to complete "ship to" address if different from "bill to". A like "ship to" address may be completed as "SAME". Include zip code.

2. Order by printing ED number in designated space. ED accession numbers are listed in Research in Education (RIE). RIE may be purchased from: Superintendent of Documents, GPO, Washington, D.C. 20402.

3. Include number of copies (1, 2, 3, etc.) to be ordered in appropriate space. Use MF space for microfiche copies, use HC space for hard copy (paper). Check RIE for availability of document in MF and HC.

4. Include price from the rate schedule. (Refer to price schedule on back.) Prices are also published in current issues of RIE.

5. Some ED numbers represent a series of titles, and will be billed by title, not ED number. A list of applicable ED numbers is available.

6. Extend number of copies and price for total price for each entry.

7. Add items 1 through 15 and insert amount in "Sub-Total" box.

8. Add state sales tax for Illinois and Maryland or check box and cite tax exemption number for Illinois and Maryland only.

9. Add "Sub-Total" and "Tax" and insert amount in "Total" box.

10. Indicate payment method desired. Payment must accompany all orders of $10.00 or less. Make all drafts payable to EDRS.

11. Sign AUTHORIZATION and date order.

12. Include only 15 entries per form. Complete and sign additional forms if required.

13. Quality warranty. LIPCO will replace products returned because of reproduction defects or incompleteness. The quality of the input document is not the responsibility of LIPCO. Best available copy will be supplied.

Orders are filled only from ED accession numbers. Titles are not checked. Please be sure you have supplied the correct numbers.

*SUBJECT TO ALL TERMS AND CONDITIONS ON REVERSE SIDE OF THIS FORM.

ERIC Document Reproduction Service is operated by Leasco Information Products, Inc. for the U.S. Office of Education.
### PRICE LIST

| Microfiche Copy – Each Title | .65 |

| 401 - 500 | 16.45 |
| Each Additional 100 pages or portion thereof. | 3.29 |

1. Book Rate or Library Rate postage is included in above prices.
2. The difference between Book Rate or Library Rate and first class or foreign postage (outside the continental United States) rate will be billed at cost.

### TERMS AND CONDITIONS

1. **PRICE LIST**
   The prices set forth above may be changed without notice; however, any price change will be subject to the approval of the U.S. Office of Education Contracting Officer.

2. **PAYMENT**
   The prices set forth above do not include any sales, use, excise, or similar taxes which may apply to the sale of microfiche or hard copy to the Customer. The cost of such taxes, if any, shall be borne by the Customer.

   Payment shall be made net thirty (30) days from date of invoice. Payment shall be without expense to LIPCO.

3. **REPRODUCTION**
   Materials supplied hereunder may only be reproduced by not-for-profit educational institutions and organizations; provided, however, that express permission to reproduce a copyrighted document provided hereunder must be obtained in writing from the copyright holder noted on the title page of such copyrighted document.

4. **CONTINGENCIES**
   LIPCO shall not be liable to Customer or any other person for any failure or delay in the performance of any obligation if such failure of delay, (a) is due to events beyond the control of LIPCO; including, but not limited to, fire, storm, flood, earthquake, explosion, accident, acts of the public enemy, strikes, lockouts, labor disputes, labor shortages, work stoppages, transportation embargoes or delays, failure or shortage of materials, supplies or machinery, acts of God, or acts or regulations or priorities of the federal, state, or local governments, (b) is due to failures of performance of subcontractors beyond LIPCO's control and without negligence on the part of LIPCO, or (c) is due to erroneous or incomplete information furnished by Customer.

5. **LIABILITY**
   LIPCO's liability, if any, arising hereunder shall not exceed restitution of charges.

   In no event shall LIPCO be liable for special, consequential, or liquidated damages arising from the provision of services hereunder.

6. **WARRANTY**
   LIPCO MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO ANY MATTER WHATSOEVER, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.

7. **CHANGES**
   No variation, alteration, or modification of any of the provisions hereof shall be binding unless in writing and signed by an officer of LIPCO.

8. **DEFAULT AND WAIVER**
   a. If Customer fails with respect to this or any other agreement with LIPCO to pay any invoice when due or to accept any shipment as ordered, LIPCO may without prejudice to other remedies defer any further shipments until the default is corrected, or cancel this Purchase Order.

   b. No course of conduct nor any delay of LIPCO in exercising any right hereunder shall waive any rights of LIPCO or modify this Agreement.

9. **GOVERNING LAW**
   This Agreement shall be construed to be between merchants. Any question concerning its validity, construction, or performance shall be governed by the laws of the State of New York.
