The handbook offers guidelines to administrators who are developing programs to meet the need for speech therapy services in South Carolina schools. Responsibilities of school principals, speech coordinators, speech clinicians, and classroom teachers are identified. Recommendations are made concerning equipment needs (tape recorders, audiometers, record players, and mirrors) and facility specifications (room size, electrical supply, and furniture). Two procedures for scheduling clinicians' school visits (the itinerant and blocking systems) are diagrammed, and varying therapy schedules are recommended for children with different degrees of speech handicaps. Described are screening and reevaluation procedures for children in kindergarten through twelfth grade. Appendixes include forms for a statistical summary for state aid and a district summary of state aid; the South Carolina Special Education Act of 1970; addresses of companies publishing diagnostic and instructional materials; and addresses of speech and hearing centers in South Carolina. Also presented in the appendixes are forms for referrals, progress reports, dismissals, semester-end reports, and clinicians' monthly caseload attendance reports. (GW)

FORWARD

This guide is intended to serve as a resource for administrators and speech clinicians in initiating and maintaining programs for speech handicapped pupils. Each administrator and clinician determines policies that affect speech handicapped pupils.

Speech training for all pupils, including speech therapy for those who need it, is imperative. Adequate communication is essential for all pupils.

Speech correction is a task which requires teamwork among administrators, speech clinicians, teachers and parents. It is through this cooperative venture that the needs of speech handicapped pupils are met.

Hopefully, this guide will enable school personnel to provide a more effective program for the five to ten percent of the school age pupils with a speech handicapped.

Dr. W. Owens Corder, Director
Office of Programs for the Handicapped
INTRODUCTION

Communicative disorders may be described as those impairments which tend to interfere with or limit, to varying degrees, the individual's ability to formulate, express, receive or interpret oral language. These impairments are generally listed in the literature of the speech and hearing profession as defective articulation, delayed speech and language, stuttering, hearing impairment, cleft palate, cerebral palsy, aphasia, voice disorders, and cluttering. A relatively new addition is that of non-standard dialect.

National surveys conducted by leading agencies concerned with the speech handicapped indicate that five percent of all public school children will have a moderate to severe speech handicap which would require the services of a trained speech clinician.

Using the national average as a guide, 33,500 school children within South Carolina could benefit from speech correction services. This figure does not take into consideration the category of non-standard dialect.

As of June 1971, there were approximately 13,000 children receiving speech therapy from 120 clinicians in the public schools of South Carolina. The need for additional services or the expansion of existing services is obvious. The state of South Carolina is aware of the needs and has called for the systematic expansion of services from 120 clinicians to 325 clinicians and for an increase in the number of children receiving speech therapy from 13,000 to 33,500 within a five year period of time.

The purpose of this handbook is to aid districts in establishing efficient and effective speech programs to meet the overwhelming needs. This handbook is not intended to meet the needs of each individual district. It should be used as a resource manual and not as an absolute methodology.
Because of the nature and interest of the handbook, please feel free to reproduce any section of this material as your needs deem necessary.

H. E. Baud, Speech Consultant
David E. Holcombe, Speech Consultant
PART I

INITIATION OF A SPEECH THERAPY PROGRAM

It is the responsibility of the local school system to initiate services for handicapped children. The State Department of Education through the Office of Programs for the Handicapped assists the local school districts in providing appropriate programs for the various areas of exceptionality.

The following procedures are suggested for initiating a comprehensive speech therapy program:

A. **Determine the needs** - Identify the number of children in need of therapy. Determine their specific needs and establish priorities for meeting these needs. This may be done by consultation with parents, teachers, principals, physicians and personnel from the State Department of Education.

B. **Use consultative services** - Obtain information from a representative of an institution of higher education with teacher training preparation programs in speech pathology as to the availability of personnel. Obtain information from the State Department of Education concerning certification and state aid reimbursement.

C. **Select qualified personnel** - Employ clinicians with certification in speech pathology.

D. **Organization of the program** - Determine operational procedures with consideration given in accord with school district policy, employed clinician's objectives and State Department of Education guidelines.
E. Provide physical facilities - Determine that appropriate space and equipment are available. A list of recommended equipment and supplies is shown on page 8 of this guide.
PART II

ADMINISTRATION OF THE SPEECH PROGRAM

The superintendent is responsible for the administration of the total educational program, but may designate a staff member to supervise the speech therapy program. The local school district is responsible for developing written policies concerning the program of speech therapy services. These policies should provide provisions for annual evaluation of the speech programs, in-service training, short and long range objectives of the program and operational procedures within the program.

The speech clinician should observe the same number of hours as the regular classroom teacher. Speech therapy services are an integral element of the total school program, and the therapist is expected to coordinate activities with the classroom teacher to provide an effective learning environment.

From 75 to 90 children maintaining an average monthly attendance of 75 percent would constitute an average monthly caseload. For a speech clinician to work with more than this number would be unprofitable, inefficient and unsound. No clinician should be assigned to serve more than four schools. A clinician must maintain an average monthly caseload of 75 with 75 percent attendance in order to gain full state aid.
ROLE OF THE SCHOOL PRINCIPAL

The principal is responsible for all activities within the school. The speech clinician should be directly responsible to the building principal and follow all rules and regulations set down by the principal.

The principal should:
1. Provide an adequate room and furniture to house the program
2. Provide a school schedule
3. Help coordinate the work of the speech clinician with other special services available
4. Provide the opportunities for the speech clinician to talk to teachers, parents and community groups
5. Arrange for the classroom teacher to visit the speech classes
6. Discuss with the classroom teachers their role in the speech therapy program

ROLE OF THE SPEECH COORDINATOR

The coordinator of a speech program is designated by the superintendent to assume administrative responsibility for the operation of the program. This person should be experienced in public school programs and have additional training beyond a bachelor's degree. Ideally the coordinator should be certified in speech pathology. If this person is not available, the coordinator should have a background in special education and be familiar with the workings of a public school speech program.

The coordinator should:
1. Assign schools and assist in the scheduling of buildings served
2. Confer with principals to secure adequate rooms for speech classes
3. Arrange with the principals for furniture and equipment for each room in which the speech clinician works

4. Be responsible for all budget matters concerning the operation of the speech program

5. Assist in the integration of the speech services with the total school program by:
   a. Informing the speech clinician of district policies and procedures
   b. Providing the speech clinician the opportunity to interpret the speech program to professional and lay groups
   c. Helping the speech clinician assist the classroom teacher in reinforcing, within the regular classroom, material stressed in speech class

6. Assist the speech clinician in the establishment and maintenance of records and reports of children within the program

7. Visit speech classes at intervals

8. Hold periodic staff meetings

9. Arrange in-service training programs

10. Act as a liaison between administration and the clinicians

11. Be responsible for the recruiting and staffing of the program
ROLE OF THE SPEECH CLINICIAN

The clinician should provide services that include evaluation and therapy for individuals handicapped by disorders of language, speech or hearing.

The public school clinician should:
1. Conduct the identification program for children with speech handicaps
2. Provide appropriate diagnostic services
3. Conduct appropriate therapy classes
4. Coordinate the speech program so as to become an integral part of the total school curriculum
5. Serve as a consultant to the classroom teacher
6. Conduct in-service training sessions for classroom teachers
7. Involve parents and community resources into the program
8. Carry out duties as required by the speech coordinator

ROLE OF THE CLASSROOM TEACHER

The classroom teacher should:
1. Aid in the screening process through referral services
2. Cooperate with the speech clinician in scheduling children for therapy
3. Encourage children to attend therapy
4. Take an interest in the program and try to understand its purpose and operation
5. Visit the therapy sessions
6. Incorporate therapy activities into those of the classroom
7. Use the clinician as a consultant
8. Aid the clinician in becoming an active faculty member
Facilities for therapy are an integral part of the overall speech rehabilitation process. Not only do poor facilities minimize motivation of the clinician, but the motivation of the children is similarly affected. The provision of the following recommended list of facilities and equipment is the responsibility of the local districts:

**Speech Therapy Room**
- **Location:** Near lower elementary classroom and relatively quiet
- **Size:** 150 square feet (approximately)
- **Conditions:** Free from interruptions and excessive noise

**Electrical Supply**
- Two 110 volt doubleplugs conveniently located

**Chalkboard**
- One 3' x 5' at the appropriate height for children

**Bulletin Board**
- One 4' x 4' mounted on the wall

**Table**
- One round table approximately 48" in diameter

**Chairs**
- Four chairs of appropriate age level for the children served

**Additional Furniture for Central Offices**
- Storage Cabinets
- File Cabinets
- Bookcases
- Desk or Work Table
Equipment and Supplies

A budget category should be established yearly for the purchase of supplies to be used within the speech program. Approximately $100.00 would be a reasonable amount. The clinician should be responsible for the purchase of these materials as needed. Basic equipment should include:

1. Tape Recorder
2. Audiometer
3. Record Player
4. Mirrors
5. Auditory Training Equipment (if needed)
6. Language Master
PART IV

SUGGESTED PROCEDURES FOR SCHEDULING, SCREENING, AND REEVALUATION

SCHEDULING

The scheduling involved within a speech therapy program involves two basic components; one being the assignment of the clinician and secondly, the assignment of children to receive therapy.

The scheduling of the clinician must take into consideration the total operation of the program. Factors such as attitudes toward the program, the geographic locations of the schools, the physical facilities within a school, the population of the schools, the age range within a school, and many other situations particular to a local district must be considered in the assigning of clinicians. A basic guide for clinician scheduling should be the most effective and efficient use of personnel.

The two most common scheduling systems and their variations are diagrammed below:

ITINERANT SYSTEM
(serving four schools)

<table>
<thead>
<tr>
<th>School - am</th>
<th>Monday</th>
<th>Tuesday</th>
<th>Wednesday</th>
<th>Thursday</th>
<th>Friday</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
<td>C</td>
<td>A</td>
<td>C</td>
<td>A</td>
</tr>
<tr>
<td></td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
<td>-</td>
</tr>
<tr>
<td>School - pm</td>
<td>B</td>
<td>D</td>
<td>B</td>
<td>D</td>
<td>office</td>
</tr>
</tbody>
</table>

In the itinerant system, each child should be seen at a minimum twice a week in a group situation. Friday mornings can be scheduled for a third session if necessary or classroom work within a primary building. Friday afternoons should be used for record keeping, diagnostic testing or in-service work. All sessions should be thirty minutes in length.
BLOCKING SYSTEM

A. **Six Week Intervals** - serving three schools

<table>
<thead>
<tr>
<th>School</th>
<th>1st 6 weeks</th>
<th>2nd</th>
<th>3rd</th>
<th>4th</th>
<th>5th</th>
<th>6th</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
<td>B</td>
<td>C</td>
<td>A</td>
<td>B</td>
<td>C</td>
</tr>
</tbody>
</table>

Plan A allows a clinician to see a minimum of twenty-five children in each blocking segment. Under this plan all children should be seen at least twice a week with children who exhibit severe problems being seen four times a week.

B. **Nine Week Intervals** - serving two schools

<table>
<thead>
<tr>
<th>School</th>
<th>1st 9 weeks</th>
<th>2nd 9 weeks</th>
<th>3rd 9 weeks</th>
<th>4th 9 weeks</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A</td>
<td>B</td>
<td>A</td>
<td>B</td>
</tr>
</tbody>
</table>

Plan B allows a clinician to see a minimum of forty children in each segment. All children should be scheduled for a minimum of two therapy sessions per week.

C. **Semester Intervals** - serving four to six schools

(This plan is only recommended when a severe shortage of trained personnel exists within a program.)

<table>
<thead>
<tr>
<th>Schools</th>
<th>1st semester</th>
<th>2nd semester</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>A B C</td>
<td>D E F</td>
</tr>
</tbody>
</table>

-10-
In plan C, schools are served on an itinerant basis within a semester block. Second semester constitutes itinerant services to schools different than those served in semester one. A clinician must see a minimum of forty children each semester. Every effort should be made to see a child at least twice a week.

When concerned with the scheduling of clinicians, the State Department of Education recommends that schedules be so designed as to allow all children with moderate to severe speech handicaps to be seen for no less than two thirty minute sessions per week. The State Department further recommends that no clinician be assigned to serve more than four schools.
Pupil Groupings:

Whenever possible, children with speech defects should be grouped homogeneously according to age, type of defect, and severity of defect.

It is suggested that these groups range from one to three children with no more than four children in a given therapy session.

It is further recommended that children scheduled for speech therapy under a public school program receive the following amounts of therapy:

**Mild Speech Handicap:** A minimum of one thirty minute session per week with a maximum of two thirty minute sessions per week.

**Moderate Speech Handicap:** A minimum of two thirty minute sessions per week with a maximum of three thirty minute sessions.

**Severe Speech Handicap:** A minimum of two thirty minute sessions per week with no suggested maximum number of sessions.

When scheduling pupils, the clinician should be concerned with providing the appropriate amount of therapy in the most conducive atmosphere. Considerations must be given to classroom schedules and other remedial services.

**IDENTIFICATION AND REEVALUATION PROCEDURES**

Two aspects of identification must be discussed when concerned with procedures; these being early identification of K and 1st grade children with severe speech handicaps and the identification of those children in grade 2 thru 12 with any speech handicap.
OBJECTIVES AND PROCEDURES IN THE EARLY IDENTIFICATION OF
KINDERGARTEN AND FIRST GRADE SPEECH HANDICAPPED SCHOOL CHILDREN

I. OBJECTIVES

A. The identification of children with severe speech handicaps

1 - severe articulation
2 - language delay
3 - organic disorders
4 - stuttering

B. Involvement of primary teacher into greater participation in the screening phase and other aspects of the speech therapy program.

1 - through in-service training in speech workshops
2 - through referrals
3 - through consultation and interaction with the speech therapist

II. SUGGESTED SCREENING PROCEDURES

A. The screening of kindergarten and first grade children should be conducted by a certified speech therapist. If classroom teachers are to participate in the screening process, the speech clinician should conduct an in-service training workshop to orient participating teachers as to the speech problems usually found in early childhood classes.

The classroom teacher should serve as a referral agent in order to facilitate the screening process. In-service workshops should be conducted prior to screening.

B. The screening should take place within the first six weeks of school, but not before the children have had an opportunity to become adjusted to the classroom situation.
C. Each child to be tested should be seen individually using an articulation test chosen by the therapist. The screening process should reflect the major objective. The maturational aspect of speech development will have to be considered when evaluating the screening results. A certified therapist will be able to interpret the results.

With early identification, necessary medical referrals and involvement within a speech therapy program can be initiated before a child has become socially and educationally affected within the classroom situation because of his speech handicap.

PROCEDURES FOR IDENTIFICATION OF SECOND THROUGH TWELFTH GRADE STUDENTS WITH SPEECH HANDICAPS

In order to operate an efficient and effective identification program, a definite teacher referral system must be established.

In-service training workshops should be conducted by the local clinician prior to the screening process. The purpose of these workshops should be to orient the teacher as to the type of speech problems found in the classroom and the procedures to follow when making a referral. The teacher must know what to look for in order to identify.

A referral form should be devised to aid the teacher. See Appendix VI.
STEP I

Teachers should compile lists of children with possible speech defects. The lists should be submitted to the principals of each school for referral to the speech clinician for further evaluation.

STEP II

Visitation by the clinician to each school for the purpose of evaluating individually those children who have been referred by the classroom teacher.

STEP III

Placement: Following evaluation by the speech clinician, the children in need of remediation will be scheduled for services.

If after referrals are received and tested, a clinician does not have enough children for a caseload, the second and third grades should be tested individually. When more children are referred than can be served, a waiting list must be established. The key to a successful referral program is teacher awareness. This is the responsibility of the clinician.

SUGGESTED SCREENING TESTS

1 - The Goldman-Fristoe Articulation Test
2 - The Templin-Darley Screening Test
3 - The PAT Screening Test
4 - Any Articulation test devised by the clinician for the purpose of identification
REEVALUATION

Reevaluation of children who have received therapy from one year should be made by the clinician every fall when the children return to school. Reevaluation should concern itself with effectiveness of previous therapy, appropriateness of carryover and the need for additional therapy. The reevaluation should be conducted in a one to one situation and also by observation in a non-therapeutic situation such as the regular classroom. Diagnostic tools as deemed necessary by the clinicians should be employed.
SUMMARY

In order to maintain a successful speech therapy program in a district or county, there must be mutual cooperation and communication between all school personnel concerned with the program. This includes the superintendent, coordinator, clinicians, principals, teachers and students.

The superintendent should be the person with overall responsibility for the establishment of the program. He should make sure that all reports from the therapists are submitted on time and are accurate. He should keep abreast of activities of the program and confer with the coordinator and therapists in matters concerning administrative policy and the submission of reports.

The coordinator should be the actual supervisor of the program with such duties as securing proper facilities for therapy, acting as advisor-consultant to the therapists, aiding in recruitment, assisting in the filing of reports, coordinating referral activities between teachers and clinicians, and coordinating activities of the program with the school administration.

Clinicians should, through experience, be able to evaluate and select caseload, schedule students appropriately, and conduct meaningful and professional therapy. The clinicians should have close contact with parents, teachers and the school administration and keep all informed as to the progress of the children and of the program in general. Frequent parent conferences should be held. There should be meetings with the faculty members of each school periodically in order to discuss follow-up material on children receiving therapy. Clinicians should keep accurate records on all children in the therapy program. All administrative policies should be adhered to same as that of the regular classroom teacher.
Principals should provide adequate facilities for therapy sessions. They should provide materials if needed by the clinician. Opportunities should be provided for the clinicians to attend faculty meetings and for consultation with teachers. Space should be provided on bulletin boards for speech therapy schedules for his particular school. If possible the use of office equipment and clerical help should be provided.

The classroom teacher should aid in the initial screening of children for speech handicaps. The teacher should cooperate in seeing that the children attend therapy sessions regularly by making notation of the therapy schedule for pupils in her class. She should encourage therapy and also follow suggestions for therapy carryover in the classroom especially in the areas of conversation and oral reading.

The rehabilitation of the speech handicapped in South Carolina is not only the responsibility of the public school speech clinician, but also the responsibility of all professional educators, administrators, supervisors and teachers employed by a school district. It is through the establishment of such a program and the mutual cooperation, understanding and efforts of all those concerned with education that a speech defective child can be rehabilitated and take his proper place in the mainstream of education.

APPENDIX III

SPECIAL EDUCATION ACT OF 1970

AN ACT TO AMEND SECTION 21-295, CODE OF LAWS OF SOUTH CAROLINA, 1962, AS AMENDED, DEFINING CERTAIN TERMS USED IN REGARD TO STATE AID FOR THE EDUCATION OF HANDICAPPED CHILDREN, SO AS TO DEFINE HARD OF HEARING; AND TO AMEND SECTION 21-295.3, CODE OF LAWS OF SOUTH CAROLINA, 1962, AS AMENDED, PROVIDING STATE AID FOR THE EDUCATION OF HANDICAPPED CHILDREN, SO AS TO FURTHER PROVIDE FOR THE MINIMUM AVERAGE DAILY ATTENDANCE TO RECEIVE STATE AID.

Be it enacted by the General Assembly of the State of South Carolina:

SECTION 1. Section 21-295 of the 1962 Code, as last amended by Act 116 of 1967, is further amended by striking it out and inserting:

"Section 21-295. (1) 'Physically handicapped children' means children of sound mind and of legal school age who suffer from any disability making it impracticable or impossible for them to benefit from or participate in the normal classroom program of the public schools;

(2) 'Educable mentally handicapped children' means children of legal school age who, because of retarded mental growth, are incapable of being educated profitably and effectively through ordinary classroom instruction, but who may be expected to benefit from special education facilities designed to make them economically useful and socially adjusted;

(3) 'Trainable mentally handicapped children' means children of legal school age whose mental capacity is below that of those considered educable, yet who may profit by a special type of training to the extent that they may become more nearly self-sufficient and less burdensome to others;

(4) 'Special education program' means educational services carried on through special schools, special classes and special instruction;

(5) 'Emotionally handicapped children' means children of legal school age with demonstrably adequate intellectual potential who, because of emotional, motivational or social disturbances are unable to benefit from or participate in the normal classroom of the public schools but who may be expected to benefit from special instruction and services suited to their needs;

(6) 'Hard of hearing children' means children of sound mind of the age of four years and older who are certified by a licensed physician that they suffer from any disability making it impracticable or impossible for them to benefit from or participate in the normal classroom program of the public schools because of an impairment to their hearing facilities;

(7) 'Orthopedically handicapped children' means children of legal school age who have an impairment which interferes with the normal functions of the bones, joints, or muscles to such an extent and degree as to require the school to provide special facilities and instructional programs;

(8) 'Visually handicapped children' means children of legal school age who either have no vision or whose visual limitations after correction result in educational handicaps unless special provisions are made;
(9) 'Learning disabilities children' means children with special learning disabilities who exhibit a disorder in one or more of the basic psychological processes involved in understanding or in using spoken or written language. These may be manifested in disorders of listening, thinking, talking, reading, writing, spelling or arithmetic. They include conditions which have been referred to as perceptual handicaps, brain injury, minimal brain dysfunction, dyslexia, developmental aphasia, etc. They do not include learning problems which are due primarily to visual, hearing, or motor handicaps, to mental retardation, emotional disturbances or to environmental disadvantage.

SECTION 2. Section 21-295.3, as last amended by Section 12, Part II, of Act 485 of 1967, is further amended by striking it out and inserting:

"Section 21-295.3. The State Superintendent of Education shall reimburse school districts of the State for providing special educational services when in compliance with the provisions of this article and the rules and regulations of the State Board of Education, from the regular appropriations for teachers' salaries, in such manner as is provided by law. Such State aid shall be allowed as follows:

(1) For special education services for the educable mentally handicapped, State aid shall be allowed for a teacher employed with a minimum average daily attendance of ten.

(2) For special education services for the trainable mentally handicapped, State aid shall be allowed for a teacher employed with a minimum average daily attendance of eight.

(3) For special education for pupils with speech defects, State aid shall be allowed to school districts for speech correctionists on the basis of an average load of seventy-five speech handicapped students enrolled and a minimum attendance of seventy-five per cent with this special aid being allowed notwithstanding the fact that such children may be counted for regular State aid in regular classes.

(4) For special education for emotionally handicapped children, State aid shall be allowed for a teacher employed with a minimum average daily attendance of eight.

(5) For special education for hearing handicapped children, State aid shall be allowed for a teacher with a minimum average daily attendance of six.

(6) For special education for visually handicapped children, State aid shall be allowed (a) for a teacher employed with a minimum average daily attendance of six enrolled in a self-contained class or (b) a resource specialist in visually handicapped employed with a minimum average daily attendance of twelve enrolled for other instruction in a regular classroom.

(7) For special education for orthopedically handicapped children, State aid shall be allowed for a teacher employed with a minimum average daily attendance of eight.

(8) For special education for learning disabilities children, State aid shall be allowed for a teacher employed with a minimum average daily attendance of ten.
The proportionate part of a teacher's salary will be allowed when such teacher has less than the required minimum enrollment and attendance.

If in any district there are handicapped children not able even with the help of transportation to be assembled in a school, instruction may be provided in a child's home, or in hospitals or sanitoria. Children so instructed may be counted under the provisions of this article. If the child is permanently disabled, the cost of classroom-to-home video or audio service shall be allowed at the rate of six-hundred dollars per year. The State Board of Education shall determine the number of hours of home instruction acceptable in lieu of regular school attendance."

SECTION 3. This act shall take effect upon approval by the Governor.

In the Senate House the 21st day of April

In the Year of Our Lord One Thousand Nine Hundred and Seventy.

John C. West,
President of the Senate.

Solomon Blatt,
Speaker of the House of Representatives

Approved the 23rd day of April, 1970.

Robert E. McNair,
Governor.
