This publication describes how the Library of Congress classification adapted for children's books by the Inglewood Public Library can also be used in the classification of children's sound recordings. One of the major features of the classification system is its applicability to various media, as it provides a method by which the same work can be uniformly classified regardless of the medium in which it appears. The publication also contains material on the revision and expansion of the M (Music) class shown in the Inglewood Public Library's "Library of Congress Classification Adapted for Children's Books, Second Edition" (LI 004 321). The following music subclasses were developed to more closely reflect the subject matter of children's sound recordings: M (Instrumental and vocal music), MC (Songs), ME (Folk music), MG (Popular music), MJ (Film and theater music), ML (Literature of music), and MT (Musical instruction and study). A listing of music index headings and music index headings by classification (revised from the book classification system) is included, as is a selected list of phonograph records illustrating a wide range of subjects within the classification system. (Author/SJ)

BACKGROUND

The Library of Congress classification adapted for children's sound recordings is the same classification used for children's books. The introduction to the Library's second edition of Library of Congress Classification Adapted for Children's Books best describes our reasons for developing a new classification and what this new classification is designed to do. The following is taken from the first part of the introduction:

The change-over from the Dewey Decimal classification to the Library of Congress (LC) classification system has proved so successful for adult subject materials in Inglewood — in branch libraries as well as the main library — that it seemed only logical to devise a similar system for children's materials.

In developing our adaptation of LC for children's books, we thought in three terms: (1) a classification system adapted from the standard LC would prepare children to use adult materials by means of a gradual transition; (2) we could plan a system that would more closely reflect the subject matter of children's books; (3) the LC adaptation would be easier for children to understand and use than the expanded Dewey Decimal classification; (4) the classification system could be easily expanded as required; and (5) a mandatory re-evaluation of children's subject materials would result. This last concept is especially challenging — we would be analyzing children's books in a different context and relationship. Subjects, in some cases, will be grouped with subjects other than those with which they were related in the Dewey Decimal classification.

We considered these requirements: (1) retaining as close a relationship as practicably possible to the original LC classification system; (2) developing a uniform system using a one or two letter classification and reducing numbers to a minimum; (3) using the first three letters of the author's last name (main entry) in place of an author number; and (4) devising a clear-cut classification and reducing the possibility of "choice" between various classes and subclasses.

The classification system is supplemented by a comprehensive alphabetical list of index headings. Index headings are also arranged by classification so as to illustrate subject groupings of each subclass. There is also a section on suggestions and recommendations for spine labels and special collections.

The new classification will be reviewed periodically as (1) new books indicating new subject areas or relationships are added, (2) comments and recommendations are received by those using children's books classified in the LC adaptation, and (3) comments are received from those interested in this aspect of librarianship who review this publication. Comments and recommendations are earnestly solicited.
CHANGES AND MODIFICATIONS TO THE LIBRARY OF CONGRESS CLASSIFICATION

The following is also taken from the introduction to the Library's publication, Library of Congress Classification Adapted for Children's Books:

All the major LC subclasses have been used if at all practicable; that is, if sufficient children's subject materials are available -- or the possibility exists that new materials will be published -- to justify the retention of a subclass. Examples of some LC subclasses not applicable to children's books are CD (Archives) and RX (Homeopathy).

Some subclasses were incorporated with other subclasses because they were not generally applicable — BJ (Ethics) was placed with B (Philosophy). Some important subclasses were better placed with other subclasses — BH (Esthetics) was placed with N (Fine arts — general). In some cases, several subclasses were assembled under one subclass — JF (Politics and government — general (except United States) was devised to include former subdivisions such as JN (Europe) and JQ (Asia).

New letter subclasses were developed for three original LC classifications which had numbers instead of two-letter subdivisions: E (America — general), F (Latin America — general), and Z (Books and libraries).

Use of a mixed letter-number notation was necessary when additional detail was required. Examples are EZ (Western United States — local history and topography), EZ5 (Pacific States), EZ56 (Alaska) and DS (Asia — general), DS6 (Far East), DS62 (China).

Some revision was required in parts of the original LC classification which reflect nineteenth century political alignments such as Austria—Hungary. A new class X (Sports and recreation) was developed because of the large number of children's books in this area.

Every effort has been made to analyze subjects in terms of putting them in one place rather than having variations appearing in different subclasses. Pollution (air, water, noise, solid waste, etc.) is placed in the new subclass ST (Pollution). Another new subclass developed is HY (Addiction) which assembles a variety of subjects formerly scattered.
NUMBER OF CLASSES AND SUBCLASSES

The following, also from the original introduction, has been edited to account for the addition of four new music subclassifications.

A total of 363 subclasses have been developed. This includes 221 one-letter or two-letter subclasses (60 percent of the total), 56 one-number subclasses, and 86 two-number subclasses. (Of the 86 two-number subclasses, 68 are used for states and Canadian provinces (class E) and 18 for Asia and Africa (class D).)

All subclasses, of course, do not carry the same weight. That is, there are major differences in the number of children's books in each subclass. There are more children's books, for example, classified in QT (Mammals) than in RT (Nursing) or CS (Genealogy). Most of the subclasses are taken from the original LC classification. To a great extent, this accounts for the variation in subject coverage. As previously noted, some of the original LC subclasses with little applicable material were not used, or in some instances were combined with other subclasses.

Indicated below are the 22 classes and the number of subclasses in each class.

</table>

Almost all class letters are used in the classification system as well as for the title of a class: B, Philosophy and Religion is used as Philosophy; P, Language and Literature, is used as Language — general, etc. Not used alone are the class letters A, General Works; J, Political Science; and Z, Books and Libraries.
BACKGROUND

The Inglewood Public Library classifies its adult collection of several thousand phonograph records by Library of Congress classification. Children's phonograph records, however, classified by the Dewey Decimal classification (as children's books were formerly classified Dewey). After surveying the LC classification adapted for children's books, it was decided to use this same system for the classification of children's sound recordings. We found, however, that the music section of the LC adaptation needed revision and expansion.

MUSIC CLASSIFICATION

In this present version we retained the designation of subclasses M, ML, and MT but changed their content. We added subclasses MC, ME, MG, and MJ, making a total of seven music subclasses.

M (Instrumental and vocal music), includes all musical material except for songs, folk music, popular music, and film and theater music — all of which exists in great quantity in children's recordings and would therefore be best covered in new subclasses.

MC (Songs), refers particularly to young children's songs of no specific subject content.

ME (Folk music), contains both traditional and national music.

MG (Popular music), applies to the more current and sophisticated music such as rock and soul or any future popular development with special emphasis on the artists and the music of interest to children and young people.

MJ (Film and theater music), includes sung and spoken materials from the movies, the theater, and television.

ML (Literature of music), is principally used to relate to a broad understanding of music and includes music history and development. It contains materials which stress concepts rather than instruction.

MT (Musical instruction and study) concerns musical instruments and instruction in how to play musical instruments. It also concerns aspects of music theory relating to music instruction.

The new music classification indicating (1) class M and its subclasses, (2) index headings arranged by classification, and (3) index headings arranged alphabetically are listed in a separate section following the system of classification.

APPLICABILITY OF CLASSIFICATION

One of the major features of this classification system is its applicability to various media. As books and sound recordings, for example, are classified under the same system, materials can be readily located. A child can therefore find materials on a subject under one classification.
NOTES ON CLASSIFICATION

Recordings by subject. Since many children's recordings contain both spoken material and music, and since music may be used as an approach to the study of many subjects, recordings which emphasize a subject are classified according to the subject. Two major subclasses, GS2 (Holiday stories), and PS (Nursery rhymes) are examples of subject areas which classifiers may expand to include songs and music. Other examples using specific recordings are Weather Songs which is classified QC2 (Meteorology) and Children's Riddles and Game Songs classified XS (Indoor sports and games).

Fiction. In conformity with the children's book collection, fiction is not classified but is arranged by author. (An alternate method would be to classify fiction in PN (Literature — general).)

Sounds by subject. Recordings of sound effects are classified by subject area. For example, sounds of farm animals would be SF (Animal culture).

Biography and music. Biographies of composers are in CV (Individual biography). This refers to recordings whose primary content is biographical although they may contain selections of composers' works. (The music selections can be noted by additional headings in the catalog.)

History and appreciation of music. General materials on history and appreciation of music are classified in subclass ML (Literature of music). Materials specifically relating to music history and appreciation in subclasses MC (Songs), ME (Folk music), MG (Popular music), and MJ (Film and theater music) are placed in their respective subclasses.

Dance music. Dance music is determined by classification — folk dance music in ME (Folk music), ballet music and dance music in M (Instrumental and vocal music), rock dancing in MG (Popular music). Materials on how to dance are found in XX (Dancing).

Popular music. The main entry is the artist or artists in lieu of composer.

Foreign languages. All recordings not in English are placed in separate foreign language collections. This is a more suitable arrangement for a large foreign language collection. Materials are classified by subject with the addition of the name of the language noted above the classification on labels. A record in German on learning numbers, for example, would be GERMAN QA (Mathematics) or a record in Spanish on El Cid would be SPANISH PC (Romance languages and literature).

Materials on how to learn a foreign language are classified PZ (Foreign language instruction) within the separate foreign language collection. An example of a specific recording is Songs to help you learn Spanish which is classified SPANISH PZ. Materials on learning English as a second language would be classified PZ within the normal subject collection.
NOTES ON CATALOGING AND PROCESSING

Notation. The first three letters of the composer's last name — or of the main entry — are placed under the classification. For example, the recording The Nutcracker Suite by Chaikovskii is M Cha, African Village Folktales by Edna Kaula is PR4 Kau, and Space Songs is QB Spa. In the subclass CV (Individual biography), the last name of the biographee (the person being written about) is used. An example of a recording is Amos Fortune, Free Man by Elizabeth Yates which is CV Fortune.

Catalog cards. Catalog cards for sound recordings are interfiled in the children's public card catalog. Card sets may include (1) composer or main entry, (2) title, and (3) subject. "Record" or "Cassette" is stamped in the upper left corner above the notation.

Subject headings. The latest edition of Sears List of Subject Headings is currently used. Library of Congress subject headings might also be used as this would allow for more uniformity with the adult catalog.

A SELECTED LIST OF PHONOGRAPH RECORDS

The phonograph records listed below have been selected to illustrate a wide range of subjects within the classification system. More examples are shown in the music and literature classes because more recorded materials are available in these subject areas.

Titles followed by an asterisk indicate that the same general material is available in book form.
