ABSTRACT

Thirty-one school districts and Albuquerque High School and its feeder schools were evaluated in 1969-70 on 24 areas and 23 aspects of these areas, making possible a total of 552 recommendations for improvement. Districts surveyed ranged from a maximum of 178 recommendations to a minimum of 69. Program enrichment was found to be the area of greatest need. Recommendations were also made for greater leadership in administration, subject area committees and department chairmen, updated texts and materials, additional staffing, and redistricting. As a followup a team visited each school in October 1970. Reaction to the evaluation and followup varied. Most team members reported cordiality and cooperation from administrators. In most districts, those recommendations that could be implemented without additional expenditures had already been made. A few evaluators reported encountering opposition or hostility to some recommendations, either directly, through criticism of evaluation procedures or personnel, or indirectly, through establishing committees to study the report and make recommendations. Statistical data related to the evaluation is attached. (KM)

ANALYSIS OF 1969-70 EVALUATION REPORTS

Thirty-one school districts and Albuquerque High School and its feeder schools were evaluated in the first implementation of Senate Bill 1. For purposes of this analysis the subjects covered have been somewhat arbitrarily divided into 24 areas listed in the Minimum Standards and 23 aspects of these areas, making possible a total of 552 recommendations for improvement in each district if every section had been checked. Districts surveyed ranged from a maximum of 178 recommendations to a minimum of 69. Rankings of areas of concern follow:

NO. OF DTC.: AREAS EVALUATED:	NO. OF REC.: ASPECTS OF THESE AREAS:
378 Administration	405 Program Enrichment
304 Physical Education	332 Coordinator and/or Committee
299 Science	285 Vertical-horizontal
275 Language Arts	articulation, K-12
270 Music	280 Texts, supplementary material
261 Art	274 Counseling, testing, scheduling
223 Social Studies	grouping
218 Health	269 Plant, basic equipment
204 Math	241 Curriculum guide
197 Media	210 In-service training
180 Foreign Languages	206 Facilities, equipment
165 Guidance	205 Methodology and/or supervision
147 Business and Office	173 Objectives
146 Federal programs	140 Specialists
135 Home Economics	137 Philosophy
129 Industrial Arts	134 Community relations
90 Special Education	126 Budgeting
90 Agriculture	111 Media
56 Trades and Industry	108 Staffing, aides, etc.
41 Driver Training	70 Ratios
27 Student Activities	56 Health and safety
22 Indian Education	48 Preparation
20 Distributive Education	13 Language laboratories
15 Health Occupations	12 Redistricting, reorganization
	9 Food Services

Program enrichment was the area of greatest need. Additional course offerings were suggested in practically all subject matter areas. Special opportunities for underprivileged children and courses for the non-college bound in language arts and math were priority items. Additional vocational courses were also needed in the 32 schools. In-service training and released time for teachers to visit successful programs in other schools were mentioned 210 times. Teachers were urged to join professional organizations and subscribe to professional publications or have the schools include this item in the budget.

The administration in 28 districts was charged with failure to provide leadership and direction. Lack of philosophy and objectives was mentioned frequently in this connection, and it would seem that these are needed in most districts, clearly stated and well publicized. Lack of communication was also cited as a problem. Administrators in 20 districts were faulted for not providing adequate supervision and for not encouraging new and innovative methods of instruction.

Subject area committees and department chairmen are needed to provide curriculum guides and vertical-horizontal articulation from kindergarten through grade 12 in every subject matter area. Curriculum coordinators are needed in several school districts. Counselors should be included in curriculum planning. Testing, evaluation, and placement are all matters that should be considered in curriculum preparation and planning. Special grouping and innovative methods also should be included in the planning.

Updated texts and supplementary lesson materials were needed in many areas, particularly language arts and social studies. Need for better facilities and equipment was mentioned 206 times, also more extensive use of available equipment. Language laboratories particularly were not being used to best advantage. Audio-visual aids were neglected in many areas. It was recommended that all teachers be informed of the amount budgeted for their program so that they could plan special purchases to enhance the educational experiences of their students.

Additional staffing was needed, particularly in the areas of elementary counseling, libraries, art, and music. Aides were also needed in libraries. Pupil-teacher ratios needed adjustment in physical education classes and some vocational classes. There was a need for additional school nurses in 10 schools. Health education needs to be separated from physical education at the secondary level, and at the elementary level a physical education curriculum needs to be developed. Too many schools substitute supervised play or recess for required physical education courses. At the secondary level, physical education needs to be differentiated from organized athletics. More attention needs to be given to the curriculum for girls' p.e., and emphasis should be placed on lifetime carry-over sports rather than organized athletics.

Redistricting was mentioned 12 times, more particularly reorganization within districts to make more efficient use of existing buildings or to adjust to changing school populations. Community relations were mentioned 134 times, not only in the sense of improved public relations between

school and community through increased communication, but with the idea of using community resources to enrich the educational product, i.e., tours to spots of local interest, lectures by qualified citizens, and expansion of vocational programs. It was suggested that in some of the more isolated districts the school library might remain open during the summer to provide a service to communities with no public library.

School districts with a high percentage of Indian students were advised to make greater efforts to involve the parents of these students in school affairs, to increase participation of Indian students in class activities, and to schedule buses so they might have an opportunity to take part in extra-curricular programs. Student activities in general were criticized for not offering meaningful experiences to a majority of the pupils.

These were the main points. A more detailed report was prepared in an attempt to find some correlation between number of recommendations made in the academic, vocational, and counseling areas and type of program offered, total district expenditure, pupil-teacher ratio, mobility rate, and absentee rate, and nothing of statistical significance was discovered.

See tables 1 and 2.

FOLLOWUP OF THE 1969-70 EVALUATION OF 32 DISTRICTS

As a followup to the evaluations, a team was appointed to visit each school in October 1970 to discuss the progress made in implementing the recommendations contained in the evaluation reports, and to report back to the Research and Development Division by October 31. Lists of the questions covered and the team members and their assignments are included in this report.

As might be anticipated, reaction to the evaluation and followup varied widely from district to district. A majority of the team members reported a cordial reception and fine cooperation from the administrators visited. Some of the benefits derived from the visitations, as perceived by the school people, were that they pointed out areas where improvement was needed, gave administrators clearcut objectives, reinforced the superintendent's position in correcting deficiencies he might already have been aware of, and aided in securing supplemental funds from the Public School Finance Division. The safety inspection was mentioned by three schools as being most helpful in calling attention to areas of great need.

In most districts, those recommendations which could be implemented without additional expenditure of funds, such as rescheduling, better maintenance, improved communications, and establishment of coordinating committees, have already been taken care of. Some districts have passed bond issues for building programs to relieve crowded conditions, and others are planning to initiate such action. For those recommendations requiring budgetary adjustments, several superintendents report they

have received much assistance from the Chief, Public School Finance Division, in making necessary transfers of funds and in the allocation of supplementary funds.

On the negative side, a few evaluators reported encountering opposition or hostility to some of the recommendations contained in the reports. It was felt that some administrators were not making a real effort to implement the recommendations. One new superintendent in a rather conservative district is having to proceed with care in attempting any innovations. In other districts committees have been appointed to study the report and make recommendations, apparently more as a delaying tactic rather than a sincere attempt at implementation.

Direct criticism of the evaluation procedure included comments that some of the evaluation team personnel did not understand the problems of the district, particularly if they were from a larger district or of a different ethnic background, and that their impractical suggestions and unprofessional attitude made a bad impression.

It was also strongly recommended by one district that no person should be assigned to an evaluation team in a school in which he has formerly worked.

Eighteen districts reported pupil gain at or above grade level; 12 reported below grade level achievement; and 2 did not supply this information.

Table 3 summarizes responses by districts to the questions asked by the evaluators. A lack of uniformity in collecting and reporting data is evident. Nevertheless, progress is indicated in the columns headed "Recommendations -- Number for Immediate Implementation," totaling 1487, and "Number for Future Implementation," totaling 584. "Number Unable to Implement" includes those considered completely unrealistic due to excessive cost, lack of understanding of local conditions, or difference in philosophy between local school personnel and evaluators.

Those schools evaluated in March, April, and May did not receive written reports on the findings of the teams in time to do much planning before school was out. It is anticipated that future visitations will show continued progress in meeting recommendations.

SUGGESTED QUESTIONS FOR FOLLOW-UP

1. Number of recommendations contained in the report, as identified by the district.
2. Number selected for implementation. Specify areas.
3. What progress has been made in meeting recommendations?
How has this been measured?
4. What additional cost to the district has been involved?
Actual _____ Anticipated _____
5. Pupil gain data.
What district-wide tests have been administered
(by name)? At what grade levels?
