## ABSTRACT

Project Reach introduced into twelve elementary schools a series of reading strategies designed to provide intensive reading skills development for referred first through third grade pupils during the 1971-72 school year. Involving diagnosis of reading difficulty and prescriptive teaching, the program aimed at returning the child to his peer group immediately upon mastery of the skill or skills for which he had been referred. Specifically, the objectives were: (1) to customize reading instruction through the use of differentiated learning materials in the classroom. (2) to inform teachers about a variety of reading inssruction approaches and provide training in the use of these approaches, (3) to continue development of a resource center which will distribute materials geared to reach individual reading needs, (4) to provide supportive staff in the project schools for consultative service to teachers and individualized services to pupils, and (5) to facilitate support from parents. The results indicate that from 48 to $92 \%$ of the pupils achieved marked or very marked improvement in various reading skill areas; $75 \%$ of the teachers who participated utilized flexible teaching styles; and two out of three pupils achieved successful reading performance within the classroom. (TO)

## FILMED FROM BEST AVAILABLE CO

I. INTRODUCTION
A. Needs and Rationale

The challenge for educational communities continues to be that of providing instructional strategies to meet the readjeng needs of pupils within the schools. The critical identified need appears in the concern for concentrated individualization of instruction for pupils whose learning styles and modalitics are unique. Project Reach proposes to combine the best of what has been learned about the teaching of reading with different materials and teaching techniques to assist individual pupils reach a mastery level of diagnosed reading deficiencies in the primary grades.

The project operates within a design which utilizes the services of a reading consultant and supportive teacher in each target school. It serves children who have been identified by their classroom teachers and school frincipals as evidencing non-functional reading performances due to lack of mastery of appropriate reading skills. It proposes to support pupil and teacher efforts through individual and small unit instruction through periods of treatment adjusted to time required for individuai reading skills mastery. The philosophy of the design is predicated upon the belief that every child can become a functional reader,

- Objectives

Generally, this program seeks to improve reading
competencies of disadrantaged pupils identified for service under the program criteria.

Specifically, the process goals for Project Reach
include:

1. To customize reading instruction through the use of differentiated learning materials in the classroom.
2. To inform teachers about a variety of rearling instruction approaches and provide troining jn the use of these approaches.
3. To continue development of a resource center which will distribute materjals geared to roach individual reading needs.
4. To provide supportive staff in the project schools for consultative service to teachers and individualized instructional services to pupils.
5. To facilitate support from parents:

Product objectives are outined detailing procedures,
criteria and conditions through which attainment of these objectives may be determined.

1. At least $40 \%$ of pupils participating in the project will evidence mastery according to the reading skill rating sheet ( $p .05$ ) after completion of one unit of service in the different reading approach applicd to a diagnosed reading problem. A criterion-referenced test will be explored for evaluation of̈ a selected sample.
2. Dissemination of promising practices to participating teachers will result in $50 \%$ of project teachers evidencing feeling of greater competency and flexibility in the use of the different reading approaches with appropriate materials as observed through teacher selfreport and/or selected observation techniques.
3. Organization and development of specific resources for diagnostic and prescriptive teaching shall be evidenced by:
a. Increased attention to reading needs of individual pupils observable in the classrooms of $50 \%$ of teachers participating in the project.
b. Greater flexibility in planning as reported by $50 \%$ of the teachers.
c. Ircroased obscrable competency jin utilizing diagnostic and preseriptive teaching for $50 \%$ of teaching staff as reportod by principals.
4. Involvement of parents in support of their child's realing efforts will be demonstrated to the cxtent that $70 \%$ of parents will have contact with consultants.
B. Historical Bochground

The 1971-72 school year represents the pilot yoar of implementation of the program in twelve experimental schools:

1. Anton Grdina 7. Forest Hill Parkway
2. Charles Chesnutt
S. George W. Carver
3. Charles lake
4. Hicks
5. Charles Oir
6. Mount Pleasant
7. Crispus Attucas
8. Sterling
9. Doan
10. Woodland-Observation

Funding for the progran was provided through Disadvantaged Pupil Program Funds which provided allocations to schooJ. systems enrolling high concentrations of childien from families receiving Aid to Dependent Children for development of programs related to demonstrated educational and cultural needs of these pupil groups.

Delays in fully implementing the progran were experienced due to critical staff shortages and late deliveries of materials. As staff became available, the project moved forward with full implementation in March, 1972.
C. Sumnary of Operations

This evaluation focuses on operations during the 1971-72 school year. According to the June 1972 census, the project had rendered:

- indivicualized services to 1007 pupils in the primary grades
- in-class group services to 1922 pupiis in six schools using the Suliiyan approach as the core reading approach.

Project keach reportedly served a total of 2929 pupils during the 1971-i972 school vear. Appendix I sunnarizes enrollments for project school operations. Project mobility rates were $25 \%$ in the pilot year. Project records indicated that 728 pupiis transferred or withdrew during the year.

Project costs amounted to a total of $\$ 390,340.00$ which represented a per pupil expenditure of \$133.27.
D. Questions To Be Answored By Evaiuation

1. What kinds of materials and methods proved effective with reading disabled pupils in classrooms where pupils reflect wide ranges of potential?
2. Which children benefit most from the different techniques and materials?
3. What specific kinds of rcading disabiiities do they serve?
4. Which strategies are most helpful in adapting teaching styles to accommodate variant learning problems based upon subjective judgement?
iI. IIGGLICHTS OF FMNDINGS
A. Sunmaxy of key findings

Project Reach introduced into 12 elementary schools a series of reading strategies designed to provide intensive reading skills development for referred pupils as often as needed during the school year. This progran involved diagnosis of reading difficulty and prescriptive teaching. Its goal was to return the child to his peer group immediately upon mastery of the skill or skills for which he had been referred.

Speaific rosults appear to indicate:

- Projert Reach services in the form of intensive reading skill development were extended to 2929 pupils in the 12 Project Reach schools. Of this number 2201 remanined in their home schools throughout the project year, a loss of 728 pupils through transfer or withdrawal.
- mastery of reading skill deficiencies was exhibited to the extent that teachers adjudged the improvement in functional use of develoned punil reading skills from "marked" to "very marked" as illustrated:

|  | Sample | Skill |
| :--- | :--- | :--- |
| Grade | Number | Area of Pupils |
|  |  | Achieving Mastery |

1
38
38 Phonetic Analysis
58\%
Consonants $82 \%$
Basic Sight Words 53\%
Comprehension $87 \%$

2
56 Phonctic Analysis
$71 \%$
Consonants $88 \%$
Basic Sight Nords $48 \%$
Comprehension $64 \%$
3
52 Phonetic Analysis
$77 \%$
Consonants $92 \%$
Basic Sight Words $52 \%$
Comprehension $69 \%$

- greater individualization of reading instruction development processes for pupils whose primary reading deficiencies required intensive ireatment and lifferent materials.
- Sensitization of teachers to developmental reading instruction based upon diagnostic and prescriptive teaching.
B. Implications and Recommendations

Evaiuation findings suggest:

- continuance of the services of Project Reach to pupils in grades one through three in the 12 schools should be maintained
- substantiation of infereed mastery of reading skill deficioncies througl? the use of critericireforenced testing wouid be desirable
- utilization of flexible teaching styles by $75 \%$ of those teachers in project schools who participated es reported by their principals which exceeded be expected objective of 50 per cent
- successful reading performance with peer grorps within the classroom for two out of threc pupils as judged by their teachers who assigned a satisfactory mark. (S) as evidence of functional reading.
A. Participant Characteristics

Many Cleveland Public Schools face problems winch accompany highly mobile fanilics whose very existence is threatened by economic insecurities. The average mobility rate for the 12 project schools was $71.9 \%$ Specific mobility rates* for the project schools were:

- Anton Graina $77 \%$
- Charles Chesnutt $27 \%$
- Charles Lake $82 \%$
- Charles Orr 98\%
- Crispus Attucks 108\%
- Doan $64 \%$
- Forest Hill Parkway $46 \%$
- George W. Carver $44 \%$
- Hicks $96 \%$
- Nount PIeasant $80 \%$
- Sterling $70 \%$
- Woodland-Observation $71 \%$

Project schools enroll large concentrations of children
from families receiving Aid to Dependent Children assistance.
To qualify for Title I programs, schools must reflect a rate exceeding the city-wide average of 30 per cent. Reports from the Cuyahoga Welfare Division indicate that the enrollment rates for the project schools range from 43 to 97 per cent. Specific school rates include:

- Anton Grdina $58 \%$
- Charles Chesnutt 97\%
- Charles Lake $70 \%$
- Charles Orr 82\%
- Crispus Attucks 97\%
- Doan $\mathbf{7 8 \%}$
- Forest Hills Parkway $43 \%$
- George W. Carver 88\%
. Hicks 61\%
- Mount Pleasant $53 \%$
- Sterling $97 \%$
- Woodland-Observation $57 \%$

[^0]Reading performance in thesc schools has been generally below the gratie norms as established by standardized reading tests used in the city-wide testing pregram. Grade average scores taken from the Comprehensive Test of Basic Skills at third grade level administered in April, 1972, reveaied the following levels of performance, as presented in Chart I.

Data from the Kuhlmann-Ancerson Test series for grades two and six indicated that the experjmental schools were below the average of 100.0 which is the ational norm for this test series. Average P.L.R. scores at each grade level inciuded:

| Grade Level | Average | Norms |
| :---: | :---: | :---: |
| 2 | 95.08 | 100.0 |
| 6 | 85.92 | 100.0 |

## B. Project Operations

Project Reaci provided a consultant, supportive teacher and instructional assistant for each school.

Teachers referred pupils to the assigned building consultant for service. The reforred pupil's specific reading skills were identified at the time of teacher referral. Consultants and supportive teachers administered available diagnostic reading tests to assess the degree of severity of deficiency. Consultants initiated the prescriptive teaching technique augmented with selected appropriate materials. Supportive teachers, instructional aides and, in some schools, volunteers supported the efforts of the pupil under the guidance and direction of the consultant. Treatment was continued until such time

as the child demonstrated mastery of the skills for which he was referred. fupils couid be referred as often as teachers observed either new deficiencies ol recurring woaknesses in the previously treated reading sliills.

Peacher consultants provided coordination among the teaching staff in the project schools. They functioned as in-service consultants in theix schools. In-service programs cmphasized the skills of proper diagnosis of need, supportive techniques for the child within the peer group, adjusting materials to pupil reading level and encouragement for pupil efforts at the reading task.

In six of the project schools the Sullivan Reading Program was the core reading approach. Teacher consultants and supportive staff rendered service to groups within the classroons in addition to the intensive treatment strategy for individual pupils.

In interpreting results observed for this program it should be recognized that individualized treatment involves a wide range of techniques and procedures. Specific standardization of diagnostic processes and post mastery assessment are needed before measurement of program impact upon pupil progress can be considered as valid.

- In-Service

Orientation to the project began in early Septenber, 1971 with the principals of the twelve selceted schools. At this meeting the Project Reach rationale, plan of operation and evaluation design were presented. Orientation to available staff was initiated prior to the meeting of principals. Following these meetings, individual principals aided by consultants assigned to their schools began in-school orientation meetings with teachers of primary grades from whose classes pupil participants would be identified and referred. The project had proposed co-school staff in-service for schoois with similar reading problems. This procedure would contirue applicable throughout the year. The Division of Research was requested to design the Project Reach Pupil Record Cari.

In March, 1972, Project Reach began full implementation with full staff complement. A cooperative planning meeting was attended by project administrators, school principals, consultant and supportive teaching staff. Workshops were tentatively set up for March, April and May. Suggested topics were:

- identification of reading difficulties
- reading lesson preparation
. reactor sessions.
The Division of Research and Development presented information pertinent to evaluation and the pupil card designed at the request of the project.

Project records reflected four subsequent workshops involving primary teachers of participating schools. Subjects of these workshops were:

```
1. Recognition of Incividual Difficulties in Primary Reading March, April, 1972
```

2. Reading Lesson Preparation and Presentation April, Hay, 1972
3. Basic Principles of Behavioral Objectives May 15, 22, 25, 31, 1972

Staffing
The project opexated under the direction of the Educational Program Manager of the Reading Instruction Program. An assistant project manager was added to serve as liaison, facilicate the implementation of the program in the schools and provide purposeful in-service to project staff. Other staff inciuded 12 teacher-consultants, nine supportive teachers and eight instructional assistants.

- Parent Involvement

Parent meetings were held at all schools to assist parents in understanding their children's reading problems and to enlist: their support. It had been proposed at the initial planning meeting that Project Reach Parent Task Forces be established at each school under the direction of principals. Formal structuring of this group was delayed. Parent involvement remained as part of each school's advisory committee.

## IV. EVALUATION

A. Basic Design

The evaluation of this project in its pilot stage was limited to dara collection and analysis to provide a comprehensive assessment of key questions. The One-Shot Case Study was used as it appeared appropriate to the nature and intent of this program. Inferences were based upon general expectations of what the data would have been had the treatment not occurred. Data collected for evaluation included:

- diagnostic information from individual pupil reading checklists representing specific reading skill defjeiencies
- city-wide achievement test scores
- pupil progress rating scale
- principal opinionnaires
- baseline data reflecting ages and scholastic aptitudes of pupils served
- study of variant materials used in the reading skills acquisition process in relation to diagnosed reading need
. teacher ratings of pupil mastery of reading skills
. ať̌endance information
Assignment of schools to the program was made on administratire assignment to twelve Title I elementary schools: Antor Grdina, Charles Chesnutt, Charles Orr, Charles Lake, Crispus Attucks, Doan, Forest Hill Parkway, George Washington Carver, Hicks, Mount Pleasant, Sterling and Woodland-Observation. Six of these schools had been previously Project Read schools utilizing the Sullivan reading approach. The six schools were:

Anton Grdina
Charles Chesnutt
Crispus Attucks
Forest Hill Parkway
Hicks
Mount Pleasant
The remaining six schools were designated as those which would support the core basal program with exploration of different techniques of reading development for identificd pupils. Selection of controls for the program was not effected as the project did not begin full operation until the latter part of the school year. In this short period of operation, any attempt at comparative analysis would have yielded depressed results.

Pupils who received individualized instruction were randomly selected from the prinary classrooms of the twelve schools. The analysis concerned itself with identification of categories of reading skill needs and the types of materials demonstrated effective for improvement. In addition, the evaluation sought an assessment of project impact upon individual pupil progress through teacher ratings. The opinions of principals in whose schools the project operated were solicited as an assessment of the effectiveness of the Project Reach strategies based upon subjective thinking.

The evaluation also examined the city-wide test scores of pupils at third grade level in twelve project schools and a comparable number of non-project Title I schools. Scores from the 1969 , 1970 and 1972 city-wide testing program were observed as baseline data for a longitudinal study which will attempt t.o plot the per cent of pupils who fall into the first quartile resulting from their achieved scores from the city-wide standardized testing program. The evaluation chart on the following pages outines the evaluation procedures which were to have been followed. In the initial year, the evaluation design was explored to the extent that limited operation would permit. At this evaluation its pertinency can only be considered directional.

The project served a total of 2,929 pupils in the primary grades of twelve selected public schools. Of this total 1,007 pupils were referred and received treatment for specific reading needs. A random sample of 200 pupils in grades one, two, and three was selected for the pilot evaluation sample. This number was reduced to 146 with the loss of 54 cases from the sample. The generality of reported information in these reports rendered them inappropriate for evaluation purposes. The evaluation sample population shown in Table I included a limited random selection of pupils who received the intensive treatment services and all pupils in the third grade; of schools using the Sullivan reading approach.

TABLE I

> Evaluation Sample Population Project Reach Grades One, Two and Three $1971-1972$

The California Test of Basic Skills was administered at third grade level as part of city wide testing. Project Reach schools and their control schools were included in this testing. Standardized achievement tests were administered at the first and second grade level because of the limited span of full project inplementation. Extrapolated scores from the Metropolitan Reading Readiness test were used as baseline data for first grade pupils. In lieu of achievement test results step placement beyond step one of the grade level became an indicator of post progress for pupils in grades one and two.

The evaluation utilized the California Test of Basic
Skills test data for third grades from the $1969-1970$ school year to initiate a directional study of average grade placement for
those third graders in the first quartile. This study will continue as jart of a longitudinal study for the duration of the project.
B. Presentation of Findings

The datia was analyzed to answer questions pertinent to the operation of the project during the 1971-72 school year.

1. What kinds of materials and methods proved cffective with reading disabled pupils in classroons where pupils reflect wide ranges of potential?
2. Which children benefit most fron the different techniques and materials?
3. What specific kinds of reading disabilities do they serve?
4. Which strategies are more helpful in adapting teaching styles to accommodate variant learning problems based upon subjective judgement?

The first question of concern was:
What kinds of materials and methods prove effective with reading disabled pupils in classrooms where pupils reflect wide ranges of potential?

Information from project pupil records revealed that treatment methods included individualized and small group instruction utilizing the reading instruction expertise of the consultant, supportive teacher and instructional aide. The techniques and methods included the use of teacher-made as well as screened commercial materials, audio-visual techniques, and teaching machines, books and other related reading materials, games and devices determined successful in reading skill development. Tutors and volunteers augmented the instructional effeorts of the teaching teams. All instructional
techniques and materiajs were used in total or in part based upon pupil need, learning modality and pupil progress. Chart III illustrates the scope of reading deficiencies diagnosed, materials and techniques used in the reading development process.

The second question was:
Which children bencfitted most from techniques and materials?

Teacher referrals of pupils for project services appeared to generate a general identity pattern of pupils who needed project services. It may be interpreted that pupils referred for service reflected:

- median ages from six months to one year above ages considered appropriate for grade level
- wide-ranged scholastic aptitude yielding a median within the low average to average range
- broad-spectrumed reading disabilities.

Table II illustrates median intelligence scores based upon the scores from the Kuhlmann Anderson Intelligence tests administered at grade two during the 1971-72 school years to second graders. Scores from the Metropolitan Readiness test administered at the end of kindergarten provided baseline information for pupils at first grade level. The table presents findings for the evaluation sample.

|  |  | Kuhlmann Anderson | $65-119$ |

It may be interpreted that pupils referred were generally within the low average to average range of intelligence. A history of low reading performance levels placed these pupils in need of different strategies of reading skills development as judged by their teachers.

It was evident from the school record of these pupils that a history of slow progress through the primary grades was evolving. Median ages at grade level revealed that within the sample pupils were from six months to one year above age for grade. These findings may be observed in Table III.

TABLE III

```
Median Age by Grade Level
Evaluation Sample
    197! - 1972
```

| Grade | Range $C:$ Ages | Nedian Age |  |
| :---: | :---: | :---: | :---: |
| 1 | 38 | $5-10$ to $9-6$ | 6.6 |
| 2 | 58 | $6-8$ to $9-6$ | $8-0$ |
| 3 | 49 | $7-11$ to $10-9$ | $8-11$ |

Treatment periods for pupils who received the intensive treatment services of project staff ranged from five to 179 days. It was detemined from project pupil records that length of service period varied from pupil to pupil for reading deficiencies within the same category.*

The third question of concern was:
What specific kinds of reading disabilities did they serve?

The greatest identified reading needs of pupils served are graphically presented in Chart IV. Specific reading needs are summarized in clusters. Specific reading deficiencies within the clusters are shown in Chart III. Included in Chaxt IV are only those clusters in which the greatest identified reading deficiencies occurred ( $40 \%$ and above).

The project utilized the first year in exploring and developing strategies, orientation to materials used to meet individual pupil needs, service to pupils, orientation to schools and staff development. It was not considered feasible

$39 \% \quad 44 \% \quad 53 \%$
to attempt to draw conclusions as to the specifics of techniques applicable to specific reading deficiencies without sufficient exploration. The fourth question will remain open for further project consideration. lle question was:

Which strategies are more holpful in adapting teaching styles to accommodate variant learning problems based upon subjective judgenent?

Of interest to the evaluation process were the standings of *hird graders within the first quartile in schools identified for project services and Tithe I schools outside. the project. A sample of litle I schools were selceted in which mobility rates and povert.y indices was comparable to the twolve Project Reach schools. Third graders in the 12 selected litle I schools will serve as controls in the quartile one third grade status study. Information has been drawn from test scores of third graders beginning with the 1969 administration of the Comprehensive Test of Basic Skills. A list of the schools may be found in Appendix III.

It was considered appropriate to assess the median scholastic aptitude status of pupils in quartile one status 1969-1972. Table IV presents the findings.

TABLE IV
Longitudinal Sample Median Scholastic Aptitude Scores

Third Grade - Quartile One 1969-1972
Experimental vs. Control

| Group | 1969 |  |  | 1970 |  | 1972 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | N | Q1 | Median | Q 1 | Median | O | Median |
| Experimental | 949 | 86.25 | 94.41 | 87.75 | 95.83 | 37.25 | 95.66 |
| Control | 878 | 36.25 | 94.58 | 88.25 | 96.25 | 85.63 | 94, 63 |

J.t was evident that no appeciable difforences existed between the ages of experimental and third graders in project and control Title I schools at the time of the administrarion of Comprehonsive Test of Basic S!ills Reading Tests in 1969,1970 and 1972. It was determined more feasible to initiate the longitudinal study of the per cont of pupils in quartile one status with the 1070 results for a pre-program base. It is anticipated that the impact of Project Reach services would become more highly visible for pupils at this level and would be demonstrated by a reduction in the per cent of pupils who remain ir: quartile 1 as the project progresses.

Examination of the findings are graphically presented in Chart V. It may be observed that in 1970, approximately 29.3 per cent of pupils in 68 Titie I schools scored below average in reading comprehension. At that point in time slightly more than 29.9 per cent of pupils in the 12 sciools currently identified for this project were within the below average range in reading test performance. Control schools reflected 24.4 per cent rate of pupils below average in reading performance. In 1972, the percentage of pupils in the below average range in Title $\overline{1}$ schools was 12.7 per cent. Within the 12 project schools, 11.3 per cent of pupils' scores fell within the beiow average range while 13.9 per cent of pupils in control schoois remained in this category. A more

## Comprehensive Test of Basic Skills Reading Test Results <br> Grade 3 Level I Form Q-1970, Form R-1972

$\square$ Experimental

$\xrightarrow{3}$ Title I
$>$ Control
VOC.
realistic understanding occurs with knowledge that in the 68 Title I schools a total of 4,915 pupils were involved in the 1970 administration of the third grade Comprehensive 'Test of Basic Skills Reading Test. Of this number approximately 1,440 pupils in these schools reflected below average reading scores. In 1972, the number of third graders tested rose to 5,424 pupils. Of this number approximatcly 689 scored in the below average reading range in comprehension. Enrollment of third graders in schools identified as experimental to receive services of Project Reach stood at 980 at the time of the administration of the 1970 Comprehensive Test of Basic Skills in reading. Of this number 293 were below average by test performance. In 1972, a total of 956 experimental third graders participated in the city-wide testing program utilizing the Comprehensive Test of Basic Skills Reading Test. Results revealed 107 pupils in these schools demonstrated below average reading capabilities as measured by their comprehension scores. Approximately 136 of 981 pupils in control schools achieved below average status in 1972 compared with 214 of 878 pupils in 1970. While there occurred an overall drop in the numbers of pupils in experimental and control schools who failed to demonstrate functional reading capabilities for grade level, there remain pupils within the schools whose reading performances identify them to remain in need of different reading instruction strategies.

It cannot be conclusively interpreted that participation jn Froject Reach was the major contributing variable for change in this longitudinal study at this point in cinc. Continued follon-up of third grade resuits over the duration of this project will be needed to determine whether thexe is a continued decline in the number of pupils who fall within quaritile one by virtue of assistance given thejir reading nceds.

The evaluation report also atiempted to determine the perspective of school staff abour project impact. The opinions of principals of participating schools, suggestions and recommendations are provided in conplete summary form. Data gathered and reporied in response to item six reveals that a key objective of the project was realized. That objective concerned itself with providing an observable impact upon classroom teaching strategies for the benefit of pupils to the extent of effeet on 50 per cent of teachers. The range of impact observed was from 50 to $100 \%$ of teachers participating. Teacher identification of specific techniques considered most effective in reading skill development will be needed after sufficient defjnitive exploration before attempting to draw conclusions in answer to the question:

Which strategies are more helpful in adapting teaching styles to accommodate different learning problems in reading based upon subjective judgment?

## Principals' Opinionnaire

2. To what desree was Project ecach operative in your building?

Totally $-90 \%$
90\%
75\%
$50 \%-10 \%$
None -
4. What did you consider to be strengths of this program for children?
. Individual help from inpact aide.

- Additional materials to be used by children.
- Literature program good.
- Creativicy and dedication of supportive staff
. Daily renediation of the children that were behind.
- Ability to work with students at grade level of their ability.
- Extra interest for each child as individual.
- Use of variant teaching techniques and differentiated learning materials which are specially structured for selected children.
. Giving help in small group and individual instruction.
- Stimularing a desire to read and making at a pleasure.
- Material and staff that made the reading approach an individualized one,
- Opportunity for late developers in reading to receive a "double exposure" of reading experiences.
- The "Open Classroom" approach used by the Reach supportive staff, helped children to identify and work tohard alleviating personal weaknesses.
- Exposure to a variety of techniques and raterials. Flexible scheduling to meet individual needs.
- Progress charts showing children's progress in different skills were placed in a strategje place in Reading Roong. enabling child to evaluate his own success in reading.
- Daily session with a specialist:
- Small group situations.
- Allowed teacher to successfuliy meet needs of all students.
- Providod opportunity for individualization of instruction.
- Remediation of specific depressed skills. Adequate personnel.
- Effective supply of funded and teacher-made materials.
- More individualization. Smaller groups. Opportunity to use different approaches, cifferent books and materials.
- Children with common needs worked together. Children remained in remedial groups only as long as necessary.

5. What dide you consider to be the strengths of this program for teachers?

- Help for impact aide in Grade 1.
- Construction workshop for Grades 2 and 3 .
- Teachers reluctant to acrept new ideas, as project proceded; most of them were cooperative.
- Special interest and concern for their children.
- Absentees were reinforced in the work they missed.
- Teacher assisted with specific problems. Children with special reading problems removed from groups for special help. In-service for teachers. Assistance with testing.
- Help for severely retarded reader whose needs connot be met in the regular size ciassroom.
- The availability of many and varied materials sparking the enthusjasum of teachers.
- Opportunities to set school behavorial objectives for reading via iocal in-service meeting.
- Intra school workshops were especially helpfui to new teachers.
- In-service meetings.
- Service available to teachers "on the spot" by the reading consultant.
- In-servjce meetings for teachers proved helpful by:

Introducing new and differentiated materials for use in classroom. Exchanging ideas.
Visits to the Consultants room for demonstrations sensitized teachers to different leariing techniques and expose them to new teaching skills.
.
Willingness and cooperation of the Project keach staff to assist and the feeling of freedom on the part of the teacher to request assistance of them.

- Additional reinforcecent of children's weaknesses. Communication of Reading Consultant with entire school, teacher, principal and parents.

## Suggestions and Recommendations

District mectings for primary teachers and principals who are involved in the program.

Instructional objectives stressed earlier in the year.
A skeleton set of guidelines, dates for testing, et.c. might be helpful for entire year. This might help with cotal view of the program.
Date cf screening and selecting children.
Date to begin remedial work with students.
Number of students to be given remedial.
Guidelines for point meetings.
Suggested Open House.
Date for evaluation or testing.
Last date for working with children.
Continue to send information copies to principals on supplies that are ordered or books to be ordered, etc.

Continuation of program and supportive staff. Follow-up in 4th grade as to remediation...results...teacher service...evaluation.

Orientation sessions in each bldg. with teachers, consultant, principal and supervisor. Presentation of strategy to be employed.

Supplementary reading books. Work books. As many reading machines as possible. Games for groups to be worked independently. (phonics)

Pre and post-test through primary grades, instead of just grade 3, would motivate the teachers to be more accountable, thus higher achievement on the pupils part.

Supply materials for Project Reach from Project Reach storchouse (on loan if necessary). Provision for in-service and workshops at home school level to serve all teachers $K-6$, after regular school hours.

## PROJECT REACH

6. What per cent of the participating teachers reflected improved flexibility in the use of different teaching techniques to meet individual pupil reading needs?

50\%
$60 \%$
70\%
90\%
$50 \%$
100\%
50\%
$97 \%$
90\%
No response from 2 principals
Average participation $65.70 \%$

A most cruciel evaluation concem was teacher ratings of the progress of individual pupils whom they referred for project services. The racing sheet was designed to draw ujon the subjective thinking of teachers in an attempt to gain indepth insight into their assessment of project impact unon the post reading performances of project participants whon they had reforred.

It must be borne in mind that the referrail of any individual puril to receive the services of Project Reach may carry with it from one to any number eff roading skill deficiencies. The range may span fron one to seven skill clusters encompassing 29 specific slill needs. It was determined that for the 38 first graders in the sample a cotal of 250 reading skill deficiencies were reported as remediated. Basod upon the classroom performances of these pupils, teachers rated their progress in reading as:

| Reading <br> Skills <br> N | Greatly <br> Improved | Much <br> Improved | Limited <br> Adequate | Inprovement | No <br> Inurovement |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $250 \%$ | $15 \%$ | $31 \%$ | $33 \%$ | $11 \%$ | $10 \%$ |

*Per cent based upon agrregate count

It may be jnterpreted that at second grade level, the reading skill deficiencies of pupils had become greatly multiplied. Approximately 50 per cent of the reading skill needs of pupils required the expertise of the reading consultant, 48 per cent, the services of the supportive teacher under the direction of the consultant and four per cent, the combined efforts of consultant and supportive teacher. At
least $77 \%$ of this sample received a satisfactory rating (S) in reading. In the prior year, 16 fer cont had achieved more than one step beyond step one in reading. Currently, $13 \%$ achieved more than one step beyond, a range of from one to three steps.

The sample group of 52 third graders reflected a total of 593 reading skill needs. At post treatment, their classroom teachers assessed their mastery of these deficiencies in the following manner:

| Skili <br> Area <br> N | Greatly <br> Improved | Much <br> Improved | Adequate | Limited <br> Improveinent | No <br> Improveinent |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $593 \%$ | $27 \%$ | $54 \%$ | $52 \%$ | $38 \%$ | $15 \%$ |

## *Per cent based on aggregate count

At post treatment 73 per cent of pupils in the third grade evaluation sample recej.ved a rating of satisfactory (S). Of this number of pupils served, 73 per cent required the skill of the consultant exclusiveiy, 38 per cent required the additional support of the supportive teacher and eight per cent of the third grade sample had completed more than one step beyond the reading step for this grade in the prior year. At the end of the project year, the number completing steps beyond step one had increased to 23 per cent.

ERIC

## V. CONCLUSIONS AND RECOMIENDATIONS

It may be concluded that the Cleveland Public Schools have implemented in Project Reach a series of reading development instructional strategies for the bencfit of pupils who need immediate andor long-term assistance with their learning styles and subsequent reading deficiencios. It i.s recomended that the project be continued.

Based upon information gathered for study in this pilot evaluation, the project might wish to consider:

- immediate standardization of its diagnostic procedures through the use of critcrion-referenced testing and appropriate mastery-level assessment instrument
- assessment and refinement of all teaching techniques and matcrials which have proven promising for dissemination to in-school teaching staff
- assignment of prior effort to that portion of each schools quartile one pupils in an attempt to foster continued positive reading developnent growth for these pupils
. continuance of its focus on teacher in-service and parent involvement.
