ABSTRACT

The consortium was formed in the summer of 1971 as a means of implementing William Glasser's philosophy and methods. The program was implemented in two parochial elementary schools and in nine public elementary schools located in eight school districts. The evaluation discussed in this report included questionnaires to measure pupil self concepts and attitudes toward school. Also, since classroom meetings are a major part of the program, teachers were asked to fill in a Classroom Meeting Evaluation form after holding a meeting. In the analysis of pupil attitudinal data, it was found that, when data from all project districts were analyzed together, no significant differences were found between SWF school and control school pupils in either attitude toward school or self concept. It was also found that when SWF school and control school pupils were compared in their Spring 1972, responses to specific items, SWF school pupils held more positive attitudes than did control school pupils on items highly related to the objectives of the SWF program. The analysis of Classroom Meeting Evaluation forms revealed that, in general, teachers felt their meetings were effective. However, meetings held near the beginning and end of the school year were rated as more effective than were those held during the middle months of the year. (Author)

Summary

The Western Pennsylvania Schools Without Failure Consortium was formed in the summer of 1971 as a means of implementing William Glasser's Schools Without Failure philosophy and methods. The program was implemented during the 1971-72 school year in two parochial elementary schools and nine public elementary schools located in eight school districts.

The consortium asked the Division of Research to help evaluate the first year of their project. This evaluation included questionnaires to measure pupil self concepts and attitudes toward school. Also, since classroom meetings are a major part of the program, teachers were asked to fill in a Classroom Meeting Evaluation Form after holding a meeting.

The analysis of Classroom Meeting Evaluation forms revealed that, in general, teachers felt their meetings were effective. However, meetings held near the beginning and end of the school year were rated as more effective than were those held during the middle months of the year. Fifth grade teachers felt their meetings were less effective than did teachers of pupils in other grade levels. Meetings planned in advance on topics selected by teachers were rated as more effective than were impromptu meetings and those in which pupils selected the topics for discussion. Both the number of meetings held per week and ratings of the effectiveness of meetings were found to vary across schools. An indication of the effectiveness of meetings was the finding that the percentage of pupils actively participating increased throughout the school year.

,

In the analysis of pupil attitudinal data it was found that, when data from all project districts were analyzed together, no significant differences were found between SWF school and control school pupils in either attitude toward school or self concept. However, in separate analyses performed for each school district, attitudinal differences between SWF school and control school pupils were found to vary across districts and, very often, for different grade levels within a district. Finally, when SWF school and control school pupils were compared in their spring, 1972 responses to specific items, it was found that SWF school pupils held more positive attitudes than did control school pupils on items highly related to the objectives of the SWF program.

I. Introduction

A. The Western Pennsylvania Schools Without Failure Consortium

The Western Pennsylvania Schools Without Failure Consortium was formed during the summer before the 1971-72 school year as a means of implementing William Glasser's Schools Without Failure philosophy and methods (see Glasser, William; Schools Without Failure, 1969). The consortium consisted of two parochial elementary schools and nine public elementary schools located in eight school districts. The eight public school districts were Beaver, Ambridge, McKeesport, Mohawk, New Brighton, Blackhawk, Ellwood City and Farrell. The two parochial schools were Saints Peter and Paul in Beaver and Divine Redeemer in Ambridge.

The Schools Without Failure program stresses relevance, involvement and thinking. A major part of Dr. Glasser's philosophy is the belief that, although elementary school pupils may fail in many aspects of their day-to-day learning, no pupil should be labeled a failure.

The program is implemented through Dr. Glasser's Educator Training Center. At intervals of approximately five weeks a representative from ETC works with a selected "core group" of teachers, principals and other staff from schools using the program. After receiving training in Dr. Glasser's philosophy and methods, these core group members return to their respective schools to work with their own staffs in weekly seminar sessions.

A major feature of the program is the use of three types of nonjudgmental classroom meetings wherein all pupils can experience success. Open-ended meetings stimulate thinking about intellectually important subjects; educational-diagnostic meetings are to help each pupil understand the concepts of the curriculum, and social problem-solving meetings consider school problems of pupils. Teachers who have learned to use them successfully usually hold a meeting of one type or another each day.

Although the successful operation of class meetings is a major aspect of the SWF program, other success-oriented and child-centered policies are fostered as natural outgrowths of the new philosophy. Reconsideration of the grading and pupil progress assessment practices and adaptations of curricular materials to meet the specific intellectual, social and emotional needs of individual pupils are examples of such policies. Through the program each school works as a unit to solve its own problems. Thus, the program in operation is different in each school.

B. First Year Evaluation of the Project

The Division of Research of the Pennsylvania Department of Education was asked by the Western Pennsylvania Consortium to aid in the evaluation of their project. Since two objectives of the SWF program are to improve pupil attitudes toward themselves and to improve pupil attitudes toward school, questionnaires to measure attitudes in these areas were used. Also, since classroom meetings are a major part of the program, a means of evaluating them was used.

The following report, then, summarizes analyses performed by the Division of Research on first year data obtained from project schools.

II. Classroom Meeting Results

A. Instruments Used

At the beginning of the 1971-72 school year, the Division of Research suggested that the Classroom Meeting Evaluation Form, shown in Appendix A, be filled in by each teacher after he or she held a classroom meeting. At the end of the school year each project teacher was asked to select randomly two forms per month from those he or she filled in and to send these forms to the Division of Research for analysis. Also at the end of the school year each teacher was asked to fill in the Record of Classroom Meetings, shown in Appendix B.

Record of Classroom Meetings Forms were obtained from seven of the eight public school districts and from both parochial schools. Samples of Classroom Meeting Evaluation Forms were obtained from five of the eight public school districts and from both parochial schools. Since schools used the Classroom Meeting Evaluation Form in differing ways, it was not always possible to obtain two forms from each teacher for each month. However, all forms used in the following analyses were chosen randomly from those available and therefore should be representative of those filled in by all project teachers.

B. Description of Classroom Meetings Held

The Record of Classroom Meetings Form provided a means of compiling all classroom meetings held by teachers. Table 1 shows the number and per cent of each of the three types of meetings held in the nine schools where the form was filled in. As can be seen in the table, open-ended meetings were the predominant type held. Also, the per cent of each type of meeting held can be seen to have varied somewhat across schools.

Table 1
Number and Per Cent of Each Type of Classroom Meeting Held

| School* | Number of Teachers | Open-Ended | | Problem-Solving | | Educational-Diagnostic | | Total Number of Meetings |
|---------|--------------------|------------|----------|-----------------|----------|------------------------|----------|--------------------------|
| | | Number | Per Cent | Number | Per Cent | Number | Per Cent | |
| A | 14 | 1645 | 95.1 | 6 | 0.4 | 78 | 4.5 | 1729 |
| B | 6 | 81 | 56.6 | 38 | 26.6 | 24 | 16.8 | 143 |
| C | 21 | 722 | 86.1 | 80 | 9.5 | 37 | 4.4 | 839 |
| D | 13 | 1548 | 89.6 | 123 | 7.1 | 57 | 3.3 | 1728 |
| E | 6 | 418 | 78.6 | 63 | 11.8 | 51 | 9.6 | 532 |
| F | 13 | 793 | 94.0 | 41 | 4.9 | 10 | 1.2 | 844 |
| G | 9 | 230 | 95.4 | 6 | 2.5 | 5 | 2.1 | 241 |
| H | 5 | 135 | 50.9 | 74 | 27.9 | 56 | 21.1 | 265 |
| I | 7 | 918 | 92.0 | 37 | 3.7 | 43 | 4.3 | 998 |
| Totals | 94 | 6490 | 88.7 | 468 | 6.4 | 361 | 4.9 | 7319 |

*Since the intent of this report is to describe results for the total project, districts will not be identified by name. However, throughout the report each district will maintain the letter designation used in Table 1. Although McKeesport implemented the program in two schools, data were collected from only one of the two. Thus, each letter designation stands for one school within a school district.

A second analysis of data from the Record of Classroom Meetings Form revealed that schools differed considerably in the number of meetings held by each teacher. Table 2 shows, for each school, the mean number of meetings held each month per teacher. Schools varied from a high of about four meetings per week to a low of about three meetings per month per teacher.

Table 2
Mean Number of Meetings Per Month Held by Each Teacher

| School | Mean Number of Meetings Per Month Per Teacher* |
|--------|---|
| A | 14.2 |
| B | 2.7 |
| C | 4.5 |
| D | 14.8 |
| E | 10.2 |
| F | 7.2 |
| G | 3.2 |
| H | 6.8 |
| I | 15.8 |

*Adjusted for teachers who taught only part
of the school year and for schools which did
not hold meetings in September

The samples of Classroom Meeting Evaluation Forms, obtained from seven schools, also were used to provide a description of the use of meetings in the project. These forms were obtained from schools B, C, E, F, G, H and I. Data from a total of 1,152 forms were used in the following analyses. However, since all information called for in the form was not filled in on every form, the number of forms entering into most analyses is less than 1,152.

As a means of describing the use of classroom meetings in the project, the following three questions were answered from the data.

1. What per cent of the total number of meetings held were planned and what per cent were impromptu?

Table 3
Percentages of Planned and Impromptu Meetings

| Planned | | Impromptu | |
|--------------------|----------|--------------------|----------|
| Number of Meetings | Per Cent | Number of Meetings | Per Cent |
| 750 | 67 | 375 | 33 |

As can be seen in Table 3, two-thirds of all meetings held were planned in advance by teachers.

2. How did teachers determine which topics to discuss in their meetings?

Table 4
Methods of Determining Meeting Topics

| Method of Selecting Topic | Number of Meetings | Per Cent |
|------------------------------------|--------------------|----------|
| Suggested by Pupils | 301 | 27 |
| Selected by Teacher | 586 | 52 |
| Suggested by the Events of the Day | 205 | 18 |
| Continuation from Another Meeting | 36 | 3 |

For over one-half of all meetings held, teachers selected the discussion topic and prepared in advance for the meeting.

3. Of what length were meetings for each grade level?

Table 5
Percentages of Meetings of Various Lengths

| Length of Meeting | | | | | | | | | | |
|-------------------|-----------|---------|---------|---------|---------|---------|---------|---------|--------------------|-----------------------------|
| Grade | 3-10 min. | 15 min. | 20 min. | 25 min. | 30 min. | 35 min. | 40 min. | 45 min. | 50 min. or more | Total Number of Meetings |
| K | 17* | 46 | 29 | 6 | 2 | 0 | 0 | 0 | 0 | 65 |
| 1 | 12 | 52 | 28 | 7 | 0 | 1 | 0 | 0 | 0 | 83 |
| 2 | 1 | 14 | 33 | 24 | 22 | 3 | 3 | 0 | 0 | 125 |
| 3 | 1 | 21 | 29 | 25 | 16 | 3 | 2 | 1 | 2 | 124 |
| 4 | 1 | 24 | 24 | 14 | 25 | 4 | 4 | 2 | 1 | 206 |
| 5 | 0 | 13 | 26 | 37 | 12 | 5 | 5 | 1 | 0 | 281 |
| 6 | 4 | 11 | 25 | 25 | 16 | 9 | 6 | 3 | 2 | 234 |

*Numbers in body of table are percentages of meetings.

The length of meetings differed for each grade level. In kindergarten and 1st grade most meetings lasted 15 to 20 minutes. In grades 2, 3, 4 and 5 most meetings lasted between 15 and 30 minutes, although a higher percentage of meetings longer than 30 minutes were held in grades 4 and 5 than in grades 2 and 3. Finally, in grade 6, although meetings of varying lengths were held, 20 per cent of meetings lasted longer than 30 minutes.

C. Evaluation of Classroom Meetings

Teacher Ratings of Effectiveness of Meetings and of Appropriateness of Topics Selected

The Classroom Meeting Evaluation Form included a section in which a teacher was asked to rate the effectiveness of each meeting and a section in which a teacher was asked to rate the appropriateness for his or her class of each topic discussed. Answers to the following seven questions were tabulated as a means of determining how teachers felt about their class meetings.

1. How effective did teachers feel their meetings were?

Table 6

Teacher Ratings of the Effectiveness of Their Meetings

| Effectiveness Rating | Number of meetings | Per Cent |
|-------------------------|-----------------------|----------|
| Excellent | 311 | 27 |
| Good | 635 | 56 |
| Not So Good | 152 | 13 |
| Poor | 37 | 3 |

In general, teachers felt their meetings were effective. Eighty-three per cent of meetings were rated either Excellent or Good.

2. Did the topics selected for discussion turn out to be appropriate ones?

Table 7
Teacher Ratings of the Appropriateness of Their Topics

| Appropriateness Rating | Number of Meetings | Per Cent |
|------------------------|--------------------|----------|
| Excellent | 425 | 41 |
| Good | 565 | 54 |
| Not So Good | 54 | 5 |
| Poor | 5 | 0 |

The overwhelming majority of topics discussed (95 per cent) were felt to have been appropriate ones.

3. Were planned or impromptu meetings more effective?

Table 8
Effectiveness of Planned and Impromptu Meetings

| Type of Meeting | Effectiveness Rating | | | | Total Number of meetings |
|-----------------|----------------------|------|-------------|------|--------------------------|
| | Excellent | Good | Not So Good | Poor | |
| Planned | 31* | 60 | 8 | 1 | 747 |
| Impromptu | 21 | 48 | 24 | 7 | 367 |

*Numbers in body of table are percentages of meetings.

As can be seen in Table 8, a higher percentage of planned meetings were rated Excellent or Good than were impromptu meetings.

4. Did the effectiveness of meetings increase as the year progressed?

Table 9
Effectiveness of Meetings Held Each Month

| Month | Effectiveness Rating | | | | Total Number of Meetings |
|-----------|----------------------|------|-------------|------|--------------------------|
| | Excellent | Good | Not So Good | Poor | |
| September | 31* | 54 | 13 | 3 | 39 |
| October | 32 | 57 | 10 | 1 | 79 |
| November | 26 | 63 | 9 | 2 | 118 |
| December | 22 | 54 | 22 | 3 | 134 |
| January | 20 | 51 | 23 | 7 | 183 |
| February | 26 | 47 | 18 | 9 | 184 |
| March | 28 | 65 | 6 | 0 | 130 |
| April | 34 | 60 | 6 | 0 | 123 |
| May | 38 | 56 | 5 | 0 | 130 |

*Numbers in body of table are percentages of meetings.

Table 9 indicates that teachers felt that their initial meetings went well, but that by December their effectiveness decreased. However, meetings were felt to be increasingly effective from December until the end of the year. In both April and May, 94 per cent of meetings were rated either Excellent or Good.

5. Did the effectiveness of meetings differ for each grade level?

Table 10
Effectiveness of Meetings Held with Each Grade Level

| Grade | Effectiveness Rating | | | | Total Number of Meetings |
|-------|----------------------|------|-------------|------|-----------------------------|
| | Excellent | Good | Not So Good | Poor | |
| K | 26* | 65 | 8 | 2 | 66 |
| 1 | 17 | 76 | 5 | 2 | 84 |
| 2 | 22 | 71 | 5 | 2 | 125 |
| 3 | 34 | 58 | 8 | 0 | 126 |
| 4 | 27 | 65 | 8 | 0 | 206 |
| 5 | 21 | 38 | 30 | 11 | 282 |
| 6 | 39 | 51 | 10 | 0 | 233 |

*Numbers in body of table are percentages of meetings.

The major result of interest in Table 10 is that shown for grade 5. Apparently 5th grade teachers encountered more difficulty with their classroom meetings than did teachers teaching any other grade level. Only 59 per cent of 5th grade meetings were rated either Excellent or Good whereas for each of the other six grade levels at least 90 per cent of meetings were rated either Excellent or Good.

6. Did the effectiveness of each of the three types of meetings differ?

Table 11
Effectiveness of the Three Types of Meetings

| Type of Meeting | Effectiveness Rating | | | | Total Number of Meetings |
|------------------------|----------------------|------|-------------|------|--------------------------|
| | Excellent | Good | Not So Good | Poor | |
| Open-Ended | 30* | 60 | 9 | 1 | 752 |
| Problem-Solving | 32 | 57 | 9 | 2 | 156 |
| Educational-Diagnostic | 26 | 58 | 14 | 3 | 120 |

*Numbers in body of table are percentages of meetings.

As shown in Table 11, teacher ratings of effectiveness differed little for the three types of meetings.

7

7. Did the way in which topics were selected influence the effectiveness of meetings?

Table 12
Effectiveness of Meetings as a Function of
Topic Selection Method

| Means of Selecting Topics | Effectiveness Rating | | | | Total Number of Meetings |
|---------------------------------------|----------------------|------|-------------|------|-----------------------------|
| | Excellent | Good | Not So Good | Poor | |
| Suggested by Pupils | 23* | 41 | 29 | 7 | 298 |
| Selected by Teacher | 27 | 62 | 8 | 2 | 584 |
| Suggested by the Events of the Day | 31 | 61 | 6 | 1 | 205 |
| Continuation from Another Meeting | 33 | 58 | 8 | 0 | 36 |

*Numbers in body of table are percentages of meetings.

Meetings in which pupils selected the topics for discussion were rated lowest. Over 35 per cent of these meetings were rated either Not So Good or Poor.

Per Cent of Class Members Actively Participating in Meetings

Since a major purpose of classroom meetings is to increase involvement among pupils and teachers, a second means of assessing their effectiveness was to examine the per cent of class members actively participating. The following four questions were answered.

1. What per cent of class members actively participated in meetings?

Table 13

Percentage of Classroom Meetings in which Various Per Cents
of Class Members Actively Participated

| Per Cent of Class Actively Participating | Per Cent of Meetings | Total Number of Meetings |
|---|-------------------------|-----------------------------|
| 100 | 33 | 366 |
| 75 | 44 | 486 |
| 50 | 16 | 179 |
| 25 | 5 | 56 |
| 10 | 1 | 16 |

For 93 per cent of all meetings held, at least 50 per cent of class members actively participated.

2. Did the per cent of class members actively participating in meetings increase throughout the year?

Table 14

Percentage of Participation in Classroom Meetings
as a Function of Month of Year

| Month | Per Cent of Class Actively Participating | | | | | Total Number of Meetings |
|-----------|---|----|----|----|----|-----------------------------|
| | 100 | 75 | 50 | 25 | 10 | |
| September | 33* | 31 | 26 | 8 | 3 | 39 |
| October | 32 | 42 | 16 | 6 | 4 | 79 |
| November | 32 | 45 | 17 | 4 | 2 | 118 |
| December | 27 | 43 | 21 | 9 | 1 | 126 |
| January | 40 | 32 | 20 | 8 | 0 | 163 |
| February | 34 | 44 | 15 | 5 | 4 | 179 |
| March | 33 | 47 | 18 | 2 | 0 | 130 |
| April | 33 | 53 | 9 | 4 | 1 | 124 |
| May | 35 | 52 | 9 | 3 | 0 | 130 |

*Numbers in body of table are percentages of meetings.

There was a decided trend toward greater class participation as the year progressed. In May, 87 per cent of meetings included at least 75 per cent of class members. In September, only 64 per cent of meetings included at least 75 per cent of class members. This is an indication that meetings were achieving their involvement purpose well by the end of the year.

3. Did the per cent of class members actively participating in meetings differ for each grade level?

Table 15

Participation in Classroom Meetings
as a Function of Grade Level

| Grade | Per Cent of Class Actively Participating | | | | | Total Number of Meetings |
|-------|---|----|----|----|----|-----------------------------|
| | 100 | 75 | 50 | 25 | 10 | |
| K | 33* | 45 | 17 | 5 | 0 | 66 |
| 1 | 37 | 49 | 12 | 1 | 1 | 84 |
| 2 | 43 | 49 | 6 | 2 | 0 | 125 |
| 3 | 38 | 42 | 16 | 3 | 0 | 125 |
| 4 | 19 | 48 | 23 | 9 | 1 | 205 |
| 5 | 37 | 39 | 18 | 3 | 2 | 251 |
| 6 | 34 | 44 | 14 | 7 | 2 | 234 |

*Numbers in body of table are percentages of meetings.

Although for each grade level at least 90 per cent of meetings included 50 per cent or more of class members, in 4th grade there was less participation than in each of the other grades.

4. Did the per cent of class members actively participating in meetings depend upon how topics were selected?

Table 16

Participation in Classroom Meetings as
a Function of Topic Selection Method

| Means of Selecting Topic | Per Cent of Class Actively Participating | | | | | Total Number of Meetings |
|---------------------------------------|---|----|----|----|----|-----------------------------|
| | 100 | 75 | 50 | 25 | 10 | |
| Suggested by Students | 35* | 43 | 15 | 5 | 1 | 273 |
| Selected by Teacher | 34 | 44 | 17 | 6 | 1 | 576 |
| Suggested by the Events of the Day | 31 | 45 | 17 | 4 | 3 | 205 |
| Continuation from Another Meeting | 22 | 53 | 22 | 0 | 3 | 36 |

*Numbers in body of table are percentages of meetings.

Although it might be expected that pupil selected topics would increase active pupil participation, this was apparently not the case. All ways of selecting topics were equally effective in eliciting pupil participation.

Comparisons Across Schools

A final means used to examine the effectiveness of classroom meetings was to compare meetings held in different schools. The question asked was, "Did the effectiveness of meetings differ across schools?"

Table 17
Effectiveness of Meetings for Each School

| School | Effectiveness Rating | | | | Total Number of Meetings |
|--------|-------------------------------------|------|-------------|------|-----------------------------|
| | Excellent | Good | Not So Good | Poor | |
| B | 25* | 41 | 21 | 7 | 107 |
| C | 28 | 56 | 14 | 2 | 400 |
| E | 25 | 68 | 7 | 0 | 76 |
| F | 26 | 65 | 7 | 1 | 229 |
| G | 26 | 59 | 15 | 0 | 78 |
| H | 36 | 55 | 9 | 0 | 254 |
| I | D I D N O T R A T E M E E T I N G S | | | | |

*Numbers in body of table are percentages of meetings.

Teachers in all schools except B rated at least 80 per cent of their meetings Excellent or Good. By referring to Table 2, it can be seen that teachers in school B held fewer meetings per month than did teachers in any other school. By comparing the two tables it can be seen that, in general, the more meetings held per month by teachers in a school, the higher the meetings were rated. However, it cannot be determined from these data alone whether the increased use of meetings increased their effectiveness or whether lack of success in meetings caused teachers to hold fewer of them.

III. Attitude Questionnaire Results

A. Instruments Used

Because of a felt need in the educational community for affective measurement instruments, representatives from Title III programs in 18 states contracted with the Instructional Objectives Exchange of the UCLA Center for the Study of Evaluation to develop such measures. This development effort, begun in 1970, resulted in the publication of collections of instruments to measure attitudes toward school and self concepts of pupils ranging in grade level from kindergarten through 12th grade.

Instruments were selected from the IOX collections to determine whether, after one year of the program, attitudes of pupils in SWF schools differed from attitudes of pupils in schools not using the SWF program. The Self Appraisal Inventory was used to measure self concept and the School Sentiment Index was used to measure attitude toward school. The Primary Level instruments were used for grades K to 3 and the Intermediate Level instruments for grades 4 to 6.¹

Since very little information about the measurement properties of these instruments was available, the Division of Research performed reliability studies using data from consortium school testings. As shown in Table 18, the internal consistency reliabilities were acceptable for instruments of this type.

¹The Primary Level instruments are shown in Appendix C. The Intermediate Level instruments are included in a later section of this report.

Table 18
Reliabilities of the IOX Instruments

| Instrument | Number of Items | Grade Level(s) of Pupils Tested | Number of Pupils Tested | Reliability* | Standard Error of Measurement |
|-----------------------------------|-----------------------|--|----------------------------------|--------------|--|
| Self Appraisal: Primary | 40 | 3 | 80 | .85 | 2.72 |
| Self Appraisal: Intermediate | 80 | 4-6 | 1,845 | .93 | 3.65 |
| School Sentiment: Primary | 30 | 3 | 80 | .78 | 2.28 |
| School Sentiment: Intermediate | 75 | 4-6 | 1,318 | .92 | 3.51 |

*Kuder-Richardson 20

b. Evaluation Design and Statistical Analyses Used

At the beginning of the 1971-72 school year the Division of Research suggested that each school district choose a control school, that is, a school not using the SWF program but similar to their SWF school in many ways. The Division of Research further suggested that the IOX instruments be administered both in the fall of 1971 and in the spring of 1972 to all pupils in both SWF schools and control schools. However, each school district was free to decide for itself how it would use the instruments.

Because school districts used the questionnaires in different ways, the analyses to follow were weakened somewhat. Two school districts did not obtain fall, 1971 scores for their pupils. These districts could not be included in the total project statistical analyses of data, since initial differences between their SWF school and control school pupils

could have accounted for whatever differences existed in their spring, 1972 scores. Two schools did not choose a control school. Since it was not possible to compare changes in their SWF school pupils with those of pupils from comparable schools, their scores were excluded from the total project analyses. Finally, two school districts did not use the School Sentiment Index and thus were included only in the Self Appraisal Inventory analyses.

Because no random assignment of pupils to experimental treatments was possible, class means were more appropriate as the unit of analysis than would have been scores of individual pupils. Therefore, instead of determining differences between fall and spring scores of individual pupils, the fall mean (average score) and the spring mean were computed for each class. These means entered into the analyses as scores.

Analysis of covariance was used in comparing the scores of SWF classes and control classes. In this statistical technique fall scores served as the covariate of spring scores. Through this procedure it was possible, when comparing spring means of SWF and control classes, to adjust these means to take into account fall differences which existed between the two groups. Adjusted spring means, therefore, were compared in the analyses.

In the analyses of covariance a 2 by 3 factorial design was employed. The two factors entering in were experimental treatment (SWF school vs. control school) and grade level (for Primary scores, grades 1 vs. 2 vs. 3; for Intermediate scores, grades 4 vs. 5 vs. 6). The use of a factorial design made it possible to determine not only whether differences in attitude existed between SWF and control classes, but also whether differences varied as a function of the grade level of pupils.

C. Self Appraisal Inventory Analyses

Table 19 shows the fall, 1971 and spring, 1972 means obtained by SWF and control classes on the Self Appraisal Inventories. Since in the analyses of covariance adjusted spring means were compared, these adjusted means are included in the table.

Table 19
Self Appraisal Inventory Means

| SWF Schools | | | | | Control Schools | | | |
|---------------------|-------------------|-----------------|-------------------|----------------------|-------------------|-----------------|-------------------|----------------------|
| Primary Grades | | | | | | | | |
| Grade | Number of Classes | Fall, 1971 Mean | Spring, 1972 Mean | Adjusted Spring Mean | Number of Classes | Fall, 1971 Mean | Spring, 1972 Mean | Adjusted Spring Mean |
| 1 | 7 | 26.00 | 26.22 | 25.93 | 5 | 25.41 | 27.36 | 27.53 |
| 2 | 10 | 26.48 | 28.53 | 27.87 | 6 | 26.07 | 25.31 | 24.98 |
| 3 | 6 | 24.58 | 25.71 | 26.53 | 5 | 24.40 | 25.02 | 25.98 |
| Intermediate Grades | | | | | | | | |
| 4 | 10 | 49.19 | 53.78 | 56.08 | 7 | 52.26 | 55.49 | 55.32 |
| 5 | 6 | 53.61 | 54.79 | 53.55 | 5 | 52.31 | 56.29 | 56.08 |
| 6 | 11 | 51.81 | 55.99 | 56.18 | 6 | 55.25 | 57.00 | 54.43 |

The analyses showed no significant differences between SWF and control groups or among grades on either inventory. (The analysis of covariance source tables are in Appendix D.)

D. School Sentiment Index Analyses

Table 20 shows the fall 1971 and spring 1972 means obtained by SWF and control classes on the School Sentiment Index. Also included are the adjusted spring means compared in the analyses of covariance.

Table 20
School Sentiment Index Means

| SWF Schools | | | | | Control Schools | | | |
|---------------------|-------------------|-----------------|-------------------|----------------------|-------------------|-----------------|-------------------|----------------------|
| Primary Grades | | | | | | | | |
| Grade | Number of Classes | Fall, 1971 Mean | Spring, 1972 Mean | Adjusted Spring Mean | Number of Classes | Fall, 1971 Mean | Spring, 1972 Mean | Adjusted Spring Mean |
| 1 | 4 | 19.53 | 21.90 | 22.66 | 3 | 19.29 | 22.20 | 23.12 |
| 2 | 7 | 21.96 | 23.83 | 23.09 | 4 | 21.82 | 21.89 | 21.24 |
| 3 | 3 | 19.36 | 18.36 | 19.23 | 3 | 21.11 | 22.21 | 22.00 |
| Intermediate Grades | | | | | | | | |
| 4 | 7 | 47.07 | 48.34 | 49.82 | 5 | 51.99 | 54.45 | 53.42 |
| 5 | 4 | 49.89 | 48.36 | 48.39 | 3 | 43.19 | 52.89 | 56.36 |
| 6 | 8 | 52.27 | 52.71 | 51.53 | 4 | 53.04 | 49.00 | 47.43 |

There were no significant differences between SWF and control schools in attitude toward school. Also, on neither the primary nor intermediate indices were the three grades significantly different. (The analysis of covariance source tables are in Appendix D.)

E. Analyses for Individual School Districts

In the attitude questionnaire analyses just described, data from individual school districts were grouped together. However, each school using the Schools Without Failure program may have done it in a different way. Thus, to see whether these schools had different results, separate analyses were performed on attitude questionnaire data from each district except B and H.

Table 21 summarizes the results of the individual school district analyses. For all districts but G, scores from a district's SWF school were compared with those of the district's control school. For district G no control school was available. For this district it was possible only to determine whether attitudes of SWF school pupils changed from fall to spring. When analysis of covariance was used for a school district analysis, differences found are described in Table 21 in terms of adjusted spring means. When, however, teachers did not ask pupils to write their names on their questionnaires, SWF school and control school pupils were compared on their fall scores and on their spring scores with analyses of variance. For these situations the results of both the fall and the spring analyses of variance are described in Table 21.

As can be seen in the table, not only did the results differ for each school district, but also, within a school district, the results very often differed for each grade level. It would appear, then, that the effects upon pupil attitudes of the SWF program depend on both school and teacher differences.

:

Table 21

Analyses of Pupil Attitude Data for
Individual School Districts

| School District | Pupil Grade Level | Self Appraisal Inventory | School Sentiment Index |
|-----------------|-------------------|--|---|
| A | 1-3 | <p>For grade <u>1</u>, differences favoring control school pupils were found in both the fall and the spring; <u>no conclusion</u> could be drawn.</p> <p>-----</p> <p>For grade <u>2</u>, a difference favoring <u>SWF</u> school pupils was found on adjusted spring means.</p> <p>-----</p> <p>For grade <u>3</u>, <u>no difference</u> was found in either the fall or the spring.</p> | <p>For grade <u>1</u>, a difference favoring <u>control</u> school pupils was found in the spring; no difference was found in the fall.</p> <p>-----</p> <p>For grade <u>2</u>, <u>no difference</u> was found on adjusted spring means.</p> <p>-----</p> <p>For grade <u>3</u>, a difference favoring <u>control</u> school pupils was found in the spring; no difference was found in the fall.</p> |

| E | 1-3 | Data not available for analysis. | Data not available for analysis. |
| | 4-6 | For grades <u>4</u> and <u>6</u> , differences favoring <u>SWF</u> school pupils were found in the spring; for grade <u>5</u> , a difference favoring <u>control</u> school pupils was found in the spring. Fall data were not available for analysis. | For grades <u>4</u> and <u>6</u> , differences favoring <u>SWF</u> school pupils were found in the spring; for grade <u>5</u> , a difference favoring <u>control</u> school pupils was found in the spring. Fall data were not available for analysis. |
| F | 1-3 | For grades <u>1</u> and <u>3</u> , differences favoring <u>SWF</u> school pupils were found on adjusted spring means; for grade <u>2</u> , a difference favoring <u>control</u> school pupils was found on adjusted spring means. | Did not administer. |
| | 4-6 | For grades <u>4-6</u> , <u>no</u> differences were found on adjusted spring means. | Did not administer. |
| G | 1-3 | For grades <u>2</u> and <u>3</u> , <u>no</u> differences were found between fall and spring scores of <u>SWF</u> school pupils. | For grades <u>2</u> and <u>3</u> , <u>attitudes became less positive</u> between the fall and the spring for <u>SWF</u> school pupils. |
| | 4-6 | For grades <u>4-6</u> , <u>attitudes became more positive</u> between the fall and the spring for <u>SWF</u> school pupils. | For grades <u>4-6</u> , <u>no</u> differences were found between fall and spring scores of <u>SWF</u> school pupils. |

| School District | Pupil Grade Level | Self Appraisal Inventory | School Sentiment Index |
|-----------------|-------------------|--|--|
| I | K-3 | For <u>K</u> and grades <u>1</u> and <u>2</u> , differences favoring <u>control</u> school pupils were found on adjusted spring means; for grade <u>3</u> , <u>no difference</u> was found on adjusted spring means. | For <u>K</u> and grade <u>1</u> , differences favoring <u>control</u> school pupils were found on adjusted spring means; for grades <u>2</u> and <u>3</u> , <u>no differences</u> were found on adjusted spring means. |
| | 4-6 | For grades <u>4-6</u> , differences favoring <u>control</u> school pupils were found on adjusted spring means. | For grades <u>4</u> and <u>5</u> , differences favoring <u>control</u> school pupils were found on adjusted spring means; for grade <u>6</u> , <u>no difference</u> was found on adjusted spring means. |
| J | 1-3 | Data not available for analysis. | Data not available for analysis. |
| | 4-6 | For grades <u>4</u> and <u>5</u> , differences favoring <u>SWF</u> school pupils were found in the spring; for grade <u>6</u> , <u>no difference</u> was found in the spring. Fall data were not available for analysis. | For grades <u>4</u> and <u>5</u> , differences favoring <u>SWF</u> school pupils were found in the spring; for grade <u>6</u> , a difference favoring <u>control</u> school pupils was found in the spring. Fall data were not available for analysis. |

F. Analyses of Item Data

In all analyses described thus far total scores on questionnaires were used. Because it was felt that these total scores might be obscuring actual differences between SWF and control school pupils, analyses of responses to specific items were undertaken.

In the spring of 1972 the Division of Research provided machine scorable answer sheets to all Western Pennsylvania Consortium districts which requested them and then scored the Intermediate questionnaires for these districts. The analyses to follow include data from districts A, C, D, E, F, G, H and J. Districts B and I were excluded because they scored their own questionnaires. Table 22 shows the number of pupils from whom the item data were obtained.

Table 22
Number of Pupils From Whom Spring, 1972
Item Data Were Obtained

| Self Appraisal Inventory | | | School Sentiment Index | |
|--------------------------|--------------------|------------------------|------------------------|------------------------|
| <u>Grade</u> | <u>SWF Schools</u> | <u>Control Schools</u> | <u>SWF Schools</u> | <u>Control Schools</u> |
| 4 | 393 | 195 | 293 | 116 |
| 5 | 371 | 211 | 305 | 114 |
| 6 | <u>433</u> | <u>212</u> | <u>348</u> | <u>142</u> |
| Totals | 1,197 | 618 | 946 | 372 |

Since no item data were gathered in the fall of 1971, the analyses to follow should be viewed as probable indications of the effects of the SWF program. However, it is possible that differences between SWF and control school pupil attitudes existed before the SWF program was started.

School Sentiment Index Analysis

The Intermediate School Sentiment Index consists of 75 items. The following five subscales are included in the instrument:

1. Teachers, i.e., one's subjective feelings about teacher behavior (rather than an objective report on that behavior) with respect to

- a. Mode of Instruction (T_M): 13 items
- b. Authority and Control (T_A): 13 items
- c. Interpersonal Relationship of Teacher to Pupils (T_I):
13 items

2. Learning (L), i.e., one's attitude toward the learning experience, independent of attitude toward school, teachers and subjects, as reflected in intellectual curiosity, willingness to study, voluntarism, interest in problem-solving, etc.: 6 items

3. School Social Structure and Climate (S), i.e., one's attitude toward his school as a social center, a rule-making and rule-enforcing entity and an extracurricular opportunity system: 16 items

4. Peer (P), i.e., one's feelings regarding the structure of, and climate of relationships within the peer group, rather than particular individuals within that group: 10 items

5. General (G), i.e., one's general orientation toward schooling, independent of a particular school: 9 items

The items of the Index consist of statements to which pupils respond "True" if an item describes them or "Untrue" if an item does not describe them. In scoring the instrument a pupil receives one point for each "True" response to a positively stated item (e.g., I try to do my best in school) and one point for each "False" response to a negatively stated item (e.g., This school is like a jail).

To examine differences between SWF school and control school pupils in their responses to specific items, answer sheets first were grouped by grade level (4,5,6) and by type of school (SWF and Control). For each of the six groups, the percentage of pupils giving a positive response was computed for each item. Depending on the amount of difference between SWF and control pupils, items were separated into three types:

1. Items for which rather sizeable differences existed between SWF schools and control schools in the percentage of pupils giving positive responses. For these items, shown in Table 23, differences of at least 10 per cent occurred in at least two grade levels.

2. Items for which some difference, but not a great deal of difference, existed between SWF schools and control schools in the percentage of pupils giving positive responses. For these items, shown in Table 24, differences of between 5 per cent and 9 per cent occurred in at least two grade levels.

3. Items for which either minimal differences or differences in only one grade level existed between SWF schools and control schools in the percentage of pupils giving positive responses. These items, shown in Table 25, comprise the remainder of the questionnaire.

:

Table 23

Intermediate School Sentiment Index Items Showing Sizeable
Differences Between SWF and Control Schools

| Item | Sub- scale | <u>Grade 4</u> | | <u>Grade 5</u> | | <u>Grade 6</u> | | Group Giving the Higher Percentage of Positive Responses |
|--|----------------|----------------|-----|----------------|-----|----------------|-----|--|
| | | SWF | Con | SWF | Con | SWF | Con | |
| My teacher always tells me when she is pleased with my work. | T _M | 72* | 61 | 75 | 55 | 61 | 62 | SWF |
| In school I have to remember too many facts. | T _M | 61 | 47 | 66 | 45 | 69 | 54 | SWF |
| I get tired of hearing my teacher talk all the time. | T _M | 58 | 54 | 60 | 47 | 51 | 38 | SWF |
| My teacher grades me fairly. | T _M | 88 | 78 | 87 | 81 | 87 | 72 | SWF |
| We change from one subject to another too often in class. | T _M | 70 | 60 | 76 | 70 | 81 | 67 | SWF |
| My teacher unfairly punishes the whole class. | T _A | 58 | 48 | 66 | 54 | 59 | 37 | SWF |
| I feel like my teacher doesn't like me when I do something wrong. | T _A | 53 | 39 | 53 | 48 | 53 | 27 | SWF |

| I want to be a very good student. | G | 96 | 93 | 96 | 97 | 94 | 94 |

*Numbers in the table are percentages of pupils giving positive responses.

As shown in Table 23, for certain items there were rather large differences between SWF schools and control schools in the percentage of pupils giving positive responses. For all of these items a higher percentage of SWF school pupils gave positive responses than did control school pupils. In examining these items it is evident that many are highly related to the objectives of the SWF program and the differences found are ones which would be expected to occur if the program were achieving its objectives.

A higher percentage of SWF school pupils than control school pupils felt that their teachers and others in the school cared about them, even when they did something wrong. Also, a higher percentage of SWF school pupils than control school pupils held more positive attitudes toward their grading system and toward the amount of fact-memory learning required of them. The differences found on the items of Table 23 were most striking for pupils in grade 6; for many of these items, only about one-third of control school pupils gave positive responses.

Of the 30 items shown in Table 24, items for which some difference but not a great deal of difference existed between SWF schools and control schools, a higher percentage of SWF school pupils gave positive responses to 26 items.

In Table 26 the results shown in Tables 23 to 25 are tabulated. As is evident in this table, SWF school and control school pupils differed most on the teacher subscale. For 26 of these 34 items, SWF school pupils had more positive attitudes than did control school pupils.

Mixed results were found for the School Social Structure subscale. Although SWF school pupils had more positive attitudes than did control school pupils for nine of these items, control school pupils had more positive attitudes for three of the items.

Self Appraisal Inventory Analysis

The Intermediate Self Appraisal Inventory consists of 80 items.

The following four subscales are included in the instrument:

1. Peer (P), i.e., one's view of self in relations with peers:
20 items.
2. Family (F), i.e., one's view of self in the family context:
20 items.
3. School (S), i.e., one's view of self in school situations,
involving school work, teacher, etc: 20 items.

4. General (G), i.e., one's general perception of self: 20 items.

For the Self Appraisal Inventory analysis of item responses, procedures similar to those followed for the School Sentiment Index were used. However, since differences between school and control school pupil responses were not great, items were grouped in only two ways:

1. Items for which some difference existed between SWF schools and control schools in the percentage of pupils giving positive responses. For these items, shown in Table 27, differences of at least 5 per cent occurred in at least two grade levels.
2. Items for which either minimal differences or differences in only one grade level existed between SWF schools and control schools in the percentage of pupils giving positive responses. These items, shown in Table 28, comprise the remainder of the questionnaire.

*Numbers in the table are percentages of pupils giving positive responses.

Table 29 is a compilation of the results shown in Tables 27 and 28. As shown in the table, almost all differences found between SWF school and control school pupils were on the Family and School subscales. As would be expected if the SWF program were achieving its objectives, a higher percentage of SWF school pupils than control school pupils felt that they were succeeding in school. The fact that a higher percentage of SWF school pupils than control school pupils gave positive responses to items of the Family subscale could be attributed to the SWF program; if SWF school pupils felt good about themselves in the school situation, it is possible that these good feelings could carry over to their relations at home. However, it is also possible that these differences existed before the SWF program was implemented in the Western Pennsylvania Consortium schools.

SCHOOLS WITHOUT FAILURE CLASSROOM MEETING
EVALUATION FORM

TEACHER _____ SCHOOL _____

GRADE LEVEL _____ DATE _____

1. Type of meeting:

☐ Problem Solving ☐ Open Ended ☐ Educational Diagnostic

2. Topic of meeting: _____

3. The meeting was: ☐ Planned ☐ Impromptu

4. How did you arrive at the topic of the meeting?

☐ Suggested by student(s)
☐ Selected by teacher
☐ Was suggested by events of the day
☐ Continuation from another meeting

5. The approximate length of the meeting (in minutes) was:

| | | | |
|-----------------------------|-----------------------------|-----------------------------|----------------------------------|
| <input type="checkbox"/> 3 | <input type="checkbox"/> 15 | <input type="checkbox"/> 30 | <input type="checkbox"/> 45 |
| <input type="checkbox"/> 5 | <input type="checkbox"/> 20 | <input type="checkbox"/> 35 | <input type="checkbox"/> 50 |
| <input type="checkbox"/> 10 | <input type="checkbox"/> 25 | <input type="checkbox"/> 40 | <input type="checkbox"/> over 50 |

6. The per cent of class members actively participating was approximately:

☐ 10 ☐ 25 ☐ 50 ☐ 75 ☐ 100

7. How would you rate the meeting in terms of its effectiveness in fulfilling the Schools Without Failure objectives for this type of meeting?

☐ Excellent ☐ Good ☐ Not so good ☐ Poor

8. How would you rate the topic in terms of its appropriateness for your class?

☐ Excellent ☐ Good ☐ Not so good ☐ Poor

9. Remarks: _____
