A team of teachers, administrators, and supervisory personnel developed this curriculum guide for a pre-instrumental program in the elementary school. It is suggested that all pupils in the grade immediately preceding the beginning band grade be included, and that all sections taught by the music specialist be taught a minimum of 30 minutes a week for the entire school year. Although the Belwin method is suggested, this 30-lesson guide can also be adapted for use with other books. The primary exploratory instrument recommended for use in the classes is the tonette.

Examples of class activities in the program include instructions on: posture, breathing, and tonguing; music reading fundamentals; pick up notes; breath marks; key signatures; introduction of 2-part harmony; note values; accompaniments; and instrumental technique. Students are encouraged to keep a notebook of each new fundamental learned. Other guides in this series are SO 006 547-549. (OPH)

FOREWORD

Over the years the Vermilion Parish Public Schools have had a successful music program, but while the whole pace of life around us is being changed beyond recognition, we cannot stand still. As we look to the future, we can be sure of one thing--change will be the pervasive characteristic of our lives.

Our music curriculum and instructional program must be flexible and resilient enough to meet the test of change and new developments as they occur in the field of music education. Teachers and administrators must hold in constant review the existing program and make necessary changes and adaptations that will enable students to function effectively in our contemporary society.

This Curriculum Guide is the product of a cooperative effort involving teachers and administrative and supervisory personnel. I feel the Curriculum Committee under the direction of Mr. W. Gayre Bazar has done an excellent job of preparing this Guide, which should make it simpler and easier for teachers to complete more successfully the transition to modern techniques in music education.

This is a tentative Guide. Your active involvement and participation in the continuing development and strengthening of our music curriculum is encouraged. The Curriculum Committee will welcome suggestions and comments from teachers and parents throughout the school year. Revisions and modifications of the Guide will be made as required and/or deemed necessary.
Schools in this country have set the pattern for the world by making room for every child, but that objective is being superseded by another--quality education for every child. That is the objective for our schools--a system for all, dedicated to the pursuit of excellence.

I urge all teachers to work diligently in helping children achieve success with this program and, in so doing, help our school system achieve a higher standard of excellence.

Introduction

A study of public school music history points out difference of opinion among music educators concerning aims and objectives of the music programs. It has been found that most successful music programs are those that provide a wide range of musical endeavors which offer the opportunity for every child to investigate the many and varied aspects and implications of music. It is important that objectives be clearly defined in each segment of the curriculum in order that the contribution of each activity be directed toward the total music program.
We as music educators believe that:

Music education gives young people the opportunity to find a richer life through music, to guide students into a better understanding of, and love for music, to teach the pupil through music. It emphasizes the values of human living. It assists in developing an integrated person who may take his rightful place in the world in which he lives. Music may be his career, his hobby, his recreation, or simply another experience in his life.

Music education offers activities and studies which tend to develop the social aspects of life. Group activities in music in elementary, junior and senior high schools offer some of the most effective ways of developing cooperation, discipline, personal initiative, individual responsibility, and fellowship.

Music education contributes to the health of the student through the development of correct posture, rhythmical deep breathing, voice hygiene and other social habits. It also contributes to the mental and emotional health which is known to respond to the stimulus of music.

Music education contributes to the development of good work habits. It demands and encourages self discipline.

Music education aids in developing wholesome ideals of conduct.

Music education contributes to the development of citizenship by helping to produce an integrated personality; by giving students an opportunity to experience the democratic way of life which music
groups demand; by teaching love of country, pride in achievements, knowledge of its history, dedication to its improvement, hope for its future, and neighborly regard for the people of other lands through their music.

Music education contributes to home life by encouraging the pupils to take their music to their homes.

Music education contributes to recreation and to the fun of living.

In discovering talent, music education aids the pupil in discovering himself.

Music education affords a foundation for vocational training for all pupils whose interest and aptitude warrant their preparation for a profession career in some phase of music.
SECTION I

Objectives of Pre-Instrumental

1. The essential function of experiences with exploratory instruments will be to make musical responses richer, deeper, wider, more precise, sequential, and more dynamic.

2. These experiences will strengthen and enrich the elementary vocal program and develop unique qualities for musical growth.

3. This class will provide the key for a more successful instrumental program by creating in students a desire to play a formal musical instrument.

4. The exploratory instrument class will afford the opportunity to discover musical talent, being generally considered more effective than aptitude tests.

5. This class will develop more thoroughly music reading ability.

6. This class will make it possible for instrumental teachers to become involved in a learning situation with the pupils.

7. Finally, this endeavor will aid in determining and promoting parental interest and backing.

SECTION II

Scheduling

All pupils in the grade that immediately precedes the beginning band grade should be included.
Class sections will be taught by the music specialist for a minimum of thirty minutes weekly, preferably in the music room. This class should be included in the regular classroom schedule for the entire school year.

SECTION III
Instrument - Book

The primary exploratory instrument recommended for use in these classes is the tonette. This instrument was selected because it is inexpensive, easy to play, and because of the jointed mouthpiece, is relatively easy to tune. It is further recommended that this instrument be used along with other most commonly used classroom instruments (Auto Harp, Melody Bells).

Book Recommended: First Division Melody Instrument Method - Belwin

Note: The general procedure formulated here is recommended even if another book is used.
UNITS OF STUDY

It should be recognized that there will be variations in individual abilities and in class progress. Although it is not recommended, generally, it may be necessary, at times, to vary the suggested time schedule to fit the situation.
