A complete mathematics testing program, involving diagnosis, prescription, and implementation, was developed by the Committee of Low-Achievers in Mathematics, Denver Area (COLAMDA), for use with low achievers in grades 7-12. A complete set of performance objectives serves as the course outline. Seventy-nine pretests and post-tests, covering whole numbers, decimals, fractions and percentages, determines student mastery of the objectives. (These tests and accompanying keys form a major part of this document). A computer is used to rapidly identify student deficiencies. The mathematics laboratory is the vehicle which introduces COLAMDA's innovative teaching strategies. Individualized instruction is accomplished through various fluid grouping techniques. Positive change in student and teacher attitude, as well as mathematical progress, is an integral part of evaluation of COLAMDA. For related information, see TM 003 415. (NE)

I would like to thank the following people and offices for making this effort possible:

To:

- Title III ESEA office for financial support
- Mr. Terry Shoemaker, Director of COLAMDA project
- Mrs. Lucy Grogan, Associate of COLAMDA project
- Mr. Roger Duncan, Director, Title III ESEA, State of Colorado
- Mr. William McCurley, Mathematics Consultant, Aurora Public Schools
- Mr. Gary Gibson, Associate Principal, Hinkley High School
- Dr. Richard Sharkey, Principal, Hinkley High School
- Mr. Bill Conners, Director, MAGIC project
- Dr. Marc Swadner, Associate Professor, University of Colorado
- Dr. Ruth Hoffman, Professor of Mathematics, University of Denver
- All the teachers involved in the COLAMDA project
COLAMDA materials were developed, field tested, revised, and finally used by hundreds of teachers in Colorado and in many other parts of the country. The final form consists of two parts: Teacher Idea Cards ($5.88) and Student Activity Packets ($21.22) (master forms) which are available through Northern Colorado Board of Cooperative Services, 830 South Lincoln, Longmont, Colorado 80501.
DEFINITIONS

Low Achiever: In this paper "low achiever" identifies students, grade 7-12, enrolled in remedial, "modified" or "basic" classes. Participants of low achiever classes are identified by:

1. Marked deficiencies in problem solving and computation skills as measured by standardized achievement or equivalent testing.

2. History of unsuccessful experiences in previous mathematics classes.

COLAMDA: (Committee of Low Achievers in Mathematics — Denver Area) was a curriculum development and teacher training project funded under the provision of Title III, ESEA. This cooperative project, incorporating thirteen Denver Metro area school districts, was created because representatives from local districts, the University of Denver and the Colorado Department of Education identified a need for the development of an effective program model for low achievers in mathematics, grades seven through twelve.

Personalized Instruction: Personalized Instruction is the utilization of teaching procedures geared to the individual characteristics of both pupil and teacher.
INTRODUCTION

This Guide presents a complete testing program—diagnosis, prescription and implementation for a mathematics program for low achievers. The testing program uses the input of tests and ideas from teachers, administrators, and directors of the COLAMDA project, MAGIC project, and other projects. Much of the work done by the COLAMDA project and the MAGIC project will be used.

The testing program is developed in five areas: 1. introduction, 2. diagnosis, 3. prescription and implementation, 4. use of computer for testing program, 5. appendix (pre and post tests, answer sheet, answer key, and item analysis).

WHAT IS COLAMDA?

COLAMDA (Committee On Low Achievers in Mathematics—Denver Area) is a curriculum development and teacher training project funded under the provisions of Title III, ESEA. This cooperative project, incorporating thirteen Denver Metro area school districts, was created because representatives from local districts, the University of Denver, and the Colorado Department of Education identified a need for the development of an effective program model for low achievers in mathematics, grades seven through twelve.

In developing and arranging materials, seven categories were designated:

A. Software—printed, drill type material.
B. Hardware—material adaptable for use with adders, calculators, computers, etc.
C. Manipulative and concrete material—drill activities.
D. Simulation activities—activities based on real-life situations.
E. Mathematical games—game and puzzle type activities designed to reinforce mathematical skills.
F. Physical involvement activities—lab experiments, etc.

G. Miscellaneous—teacher oriented material, techniques, suggestions, ideas, etc.

Activities were intended to be oriented toward the interest of students and "open-ended" in structure to provide for individual differences in skill development, interest, and age level.

Each activity was described on a 5 x 8 teacher's card telling purpose, procedure, materials, and other information: extension, cross-reference, etc. The teacher cards were letter and color coded (category) and number coded (order); the accompanying student sheets were also coded by letter and number. The set of student sheets, printed black on white, lent themselves to the making of ditto copies for the use of students in the classroom.

In 1968-69 the project teachers used various standardized tests (Stanford, CAT, ITBS, TAP, ITED) to measure student academic growth. During the last two years of project operation, the measurement was standardized by use in all schools of the Stanford Achievement Test, Advanced Battery. The following data are based on average grade placement scores of project students.

According to teachers who have worked with low achieving students in the past, any positive growth meant a successful year for both the
student and teacher. Based on statements such as this one, the academic gains of the COLAMDA students are excellent.

During the first year (1968-69) the COLAMDA project administered student questionnaires to measure student attitude before and after the use of COLAMDA materials. Results of the questionnaires (see Appendix) indicated that student attitudes had changed in the positive direction on each item. The most favorable changes occurred on the following:

1. I enjoy mathematics classes.
2. I enjoy working with the calculators.
3. I have enjoyed this mathematics class more than previous mathematics classes.
4. I feel more success in this mathematics class than in previous mathematics classes.
5. I feel I have learned more in this class than in previous mathematics classes.
6. I feel appropriate materials were used in this class.
7. I like the variety of activities used in this mathematics class.
8. I feel that the teacher understands me and my mathematical needs.
9. I enjoy working with the games and puzzles.

During the second year of project operation, a student semantic differential replaced the student questionnaire. This instrument measured student attitudes towards the following: arithmetic, school, teacher aide, reading, my teacher, homework, laboratory, myself. It was clearly evident that student attitudes had changed significantly in the positive direction in all areas.
In the third and final year of the COLAMDA project, a student, semantic differential was also given measuring student attitude towards the following: arithmetic, my school, teacher aide, homework, mathematics laboratory, my mathematics teacher. The project results indicate little attitude change.

Both written and oral responses have indicated that students involved in the project did experience success and satisfaction with mathematics and other facets of school life.

During the last two years of the project (1969-70, 1970-71), the teachers were administered a semantic differential questionnaire before and after the use of COLAMDA ideas and materials. Teacher attitudes were measured in the following areas: mathematics, slow learners, mathematics laboratory, teacher aide, myself, COLAMDA, my principal, personalized instruction. It is interesting to note that the COLAMDA teachers scored high in each area in the pre and post tests. This suggests that highly qualified and interested teachers were selected to guide the low achiever from the outset of the school year. The evidence from this instrument indicates that participating COLAMDA teachers were some of the best teachers in their school districts.

COLAMDA MATHEMATICS PERFORMANCE OBJECTIVES

Working with low achieving students requires a special desire on the part of the teacher. COLAMDA has developed a complete set of performance objectives which serves as the course outline for a mathematics program for low achievers. The program is designed to
involve mathematical skills that students would use in everyday life: whole numbers, fractions, decimals, and percents. Following is a list of all objectives needed to successfully teach the low ability student.

Assumptions:

Common measuring instruments include English and metric rulers, measuring cups, protractor, scale.

Fraction implies proper, improper and mixed numbers.

Reasonable denominators are halves, thirds, fourths, sixths, eighths, tenths, and sixteenths.

A decimal fraction is a number less than one which is written as a decimal.

Integral percent implies a whole number placed in front of a percent sign.

Fractional percent implies a fraction or decimal number placed in front of a percent sign.

Diversion refers to mathematical games and puzzles not tied to a specific objective.

Enrichment refers to materials which explore the objectives in more depth or extend beyond the given objectives.

Combinations refer to those activities which use a combination of preceding skills.

* indicates activities that are more high school oriented.

THE MATHEMATICS PERFORMANCE OBJECTIVES ARE INTENDED TO BE USED AS AN AID IN ADJUSTING STUDENT - INTEREST ACTIVITIES TO PUPIL INDIVIDUAL DIFFERENCES. THEY ARE NOT INTENDED TO BE USED TO DETERMINE THE SEQUENCE OF COURSE CONTENT.

THE MATHEMATICS LABORATORY

New and innovative teaching strategies were used by the COLAMDA teachers to achieve the objective of the program. The math lab is the vehicle used to introduce different teaching strategies.

"Individualized instruction" often means grouping together students with similar deficiencies. The following techniques of grouping were developed by Dr. Ruth Hoffman.

HOW DO YOU LEARN?

This is a brief exercise in learning. It will aid the student to see his part in the learning-teaching situation. (The teacher may also benefit.)

MATERIALS: Overhead projector; 10 toothpicks per pupil.

HEARING ALONE: "I'm just going to lecture. You may not see what I am doing or ask questions. We're going to make patterns with toothpicks. You do as I say. I want to put one toothpick up and down on the desk; lay another one across it at the middle." (etc., give very general instructions, laying your own on the unlighted overhead. Continue as long as desired.) "Let's see if our figures are alike." (Turn on the overhead; wander around to see some differences.)

HEARING, SPEAKING: "O.K., we won't learn much if all I do is talk. Let's see what happens if you can ask questions." (Again, with an unlighted overhead, give the general directions, allowing them to question you. Compare them.)

HEARING, SPEAKING, SEEING: "Now, what if I let you see what I am doing?" (Use a lighted overhead; repeat the pattern, using new words or asking for definitions. Compare them.)

ALL OF THESE WITHOUT ACTIVE STUDENT INVOLVEMENT: "Up until now, you have also been able to do the things as we talked about them. Suppose we discuss, see, listen, etc. without doing. What will be the result?" (Use a topic with which you are comfortable; swimming, parking a car, football, making pizza, working a complicated manipulative puzzle such as Instant Madness, etc. Then try it.) "Do you see that we need to involve our hands as well to help us learn?"

Fluid grouping involves several avenues that can be used for implementing the techniques presented in "How Do You Learn?"
**FLUID GROUPING**

<td>Execute two parts of one whole idea; two methods of same problem, etc.</td>
</tr>
<tr>
<td>Brainstorming whole:</td>
<td>Summary, overview, future ideas.</td>
</tr>
</tbody>
</table>

**Suggested uses:**

1. One drill sheet, experiment sheet, for two pupils. Both receive the same credit.

2. A tape recorder or dictation unit for recording student responses and interaction, allowing the students to replay and check their work.

3. Role-playing: teacher-student. The roles must be changed frequently.

4. Role-playing: Executive-secretary (or scribe). Executive dictates, secretary only records. Change roles and new executive may change something done before.

**TRIO**

This method, generally known as "Echolalia", is a technique to help students understand the learning process as well as learn new techniques. It is a role-playing technique that will require a brief explanation to
the class. It can be pointed out that this is a listening technique; give examples of not really listening (parent-teenager, teacher-student, etc., showing it goes both ways). One way to know if someone has heard the idea (not just the words) is to see if he can echo the concepts in his own words. The observer watches to see if this is done; he does not participate until the end. The helper gives an explanation; the learner echoes the ideas; the helper then echoes the learner to see if he (the helper) has heard correctly.

The procedure should be rigidly followed for a while; it will eventually break into an unstructured trio of listeners.

The teacher instructs the helper of each trio in the new process beforehand. The helper might be a student who finished a previous assignment before the group. Another is labeled the learner; the third is the observer. Cards give instructions for the helper and observer; these could be duplicated and given to the students.

The observer is not expected to learn the new process. After the helper and learner are finished, the observer then gives his observations as to their interaction. It should be stressed to the observer that he is not expected to learn; his task is to see if all the steps are followed.

The roles now shift: learner becomes helper; observer becomes learner and helper becomes observer. The procedure is repeated.

**ROLES IN FLUID GROUPING, TRIO**

**HELPER**

1. Give your explanation in your own words.

2. Ask the learner to tell you in his words what you've said.

3. Be sure he heard; ask for other illustrations or examples.

4. If he uses any new words, ask him to define them to see if he really knows what they mean.

5. Repeat what he told you in your own words.
OBSERVER

GENERAL: 1. Did the helper and learner listen to each other?
2. Did they use gestures, pencil and paper, etc. or did they just talk?
3. Were they making sure the other understood?
4. Did they clear up any problems in understanding or did they ignore them?

HELPER:
1. Is he being clear?
2. Did he take time, or did he hurry?
3. Is he explaining new words?
4. Does he wander in his explanation?
5. Does he ask the learner to repeat? Does he then repeat again?
5. Did he do more than just talk to help the other understand?

LEARNER:
1. Does he repeat what he was told?
2. Does he ask for repetition when he doesn't understand?
3. Does he do more than just talk to repeat?
4. Does he know the new process?

QUINTET

This is a means of pattern-discovery. A brief discussion with the entire class is necessary to explain the roles.

The expediter starts the group activity and calls on participants 1, 2 and 3 (in that order) for one single contribution or a pass. He makes no comments unless all 3 pass; then he asks a leading question. He sees that the recorder accurately records. He also calls out "finished" when the group has come to a conclusion.

The recorder makes no comments or contributions; he only records what he is told to when called upon.

A participant makes a contribution (he may direct the recorder to write it down), or he passes.
Upon completion, the recorder reports to the other quintets. He explains what he has recorded and gives the conclusions of the group as he understood them. He answers any questions or challenges that may arise.

The roles shift when going into a new pattern.

**DIAGNOSIS**

There is one area, "Diagnosis", that needs to be explained in order for the teacher to place the student in the correct groups. By placing the student in correct groups the teacher will be able to work with the needs of each group. Example; the higher group will need less help than the lower groups, therefore they will be able to progress more rapidly through the program and still not place unnecessary pressure on the lower groups because all are working through the program at different rates. This rate is determined by the teacher and the student. If proper care and understanding are given to the students, as well as explanations as to how the tests will be used to diagnose what they know and what they need to learn, most of the students will take the "tests" with the proper attitude. The results will aid the teacher very much in placing the students. The following is how this testing packet can be used to aid the teacher in diagnosing their students.

The next few pages contain three tests (pre, middle, post) involving whole numbers, fractions, decimals, and percents. The teacher should use the pre test to tell what the student knows in the areas defined.
Once this knowledge is gained the students can be placed in the correct grouping. Grading of tests can be done very quickly and easily by using an ice pick to push through the answer sheets all at one time.

The following answer sheet on whole numbers is designed to give the teacher diagnostic information on his student. Along the left side of each answer blank are the objectives designed to be measured by that particular problem. Example: missing problem 1 indicates objectives I-5 and IV-4 have not been mastered.

**Note:** The answers are placeholders for demonstration purposes. Actual answers should be filled in as provided in the question set.
On the List of Objectives, page vii, objective I-5 states, "Demonstrating the multiplication facts for 0 through 10 without reference to a table." Objective IV-4 states, "Demonstrating multiplication of whole numbers." If a student gives an incorrect answer, the teacher would know that student needs more work in the area of multiplication of whole numbers. At this point many teachers have difficulty in finding activities that correct the deficiency. COLAMDA provides such activities.

**PRESCRIPTION AND IMPLEMENTATION**

Following is an Item Analysis for the Whole Number Test. In this analysis, the quotation marks are used as part of the BASIC computer language. Another language or another computer would require a slightly different format.

ACTIVITIES A-16/1/3, A-35#1, B-1/1-2, B-2/1-2, C-14/1"
The item analysis indicates what COLAMDA activities are available to be used to correct the deficiency as indicated by the whole number answer sheet. This saves the teacher much work in selecting appropriate materials. It also makes grouping of students with similar deficiencies much easier. Once the groups are formed they are likely to remain motivated because the students in the different groups have the same difficulties. One teacher can keep three different groups operating successfully. There will be fewer discipline problems because students are involved in actually helping each other learn mathematics.

USE OF THE COMPUTER FOR THE TESTING PROGRAM

INTRODUCTION

A teacher might say: "I think the ideas presented so far are excellent, but I don't have enough time." Because teachers don't have enough time, techniques were developed to use the computer in conjunction with the COLAMDA testing program.

The testing program remains the same, but the computer will be used to print out a diagnosis of each student's deficiency. The teacher must make some arrangements to use the computer and to have cards punched. In some schools, students in key punch classes will punch the necessary cards. Once the system is set up and in operation the teacher saves much valuable time.
PROCEDURE

Pre tests are administered and incorrect responses are recorded for each student. The computer will identify the objectives in which each student shows a deficiency.

***************MISSING PROBLEM 03 INDICATES MISSED OBJECTIVES

I-2 DEMONSTRATE USING COMMON MEASURING INSTRUMENTS TO NEAREST WHOLE NO.
I-4 SUBTRACTION OF WHOLE NUMBERS THRU THOUSANDS, BORROWING FROM 1 PLACE.
I-10 INTERPRETING BY ESTIMATING ANSWERS, USING ANY BASIC OPERATIONS.
The teacher can with some effort group students with similar deficiencies and use the COLAMDA objective sheet for suitable activities.
EXAMPLE:

John misses problem 2 on the whole number test. The teacher will receive a print out of the following objectives.

I-4  (SUBTRACTION OF WHOLE NUMBERS THRU THOUSANDS, BORROWING 1 PLACE)
II-5  (MULTIPLICATION FACTS FOR 0-10 WITHOUT REFERENCE TO A TABLE.)
III-5  (SUBTRACTION)

The COLAMDA objective sheet for whole numbers lists activities that can be used to correct the deficient objectives. These activities are listed under several headings:

<table>

<tr>

</tr>
<tr>

</tr>
<tr>

</tr>
</tbody>
</table>

The following activities can be used to help remove deficiencies:

I-4  (C-8; C-35 #3)
II-5  (TEXTBOOK)
III-5 (TEXTBOOK)

Addition and subtraction combinations (A-13 #1; A-15 #1, A-21 #1-5; A-17 #2; C-18; E-33; K-11) may be used.
Programs can be written to print out what activities could be used to overcome deficiencies but the COLAMDA objective sheet will accomplish the same purpose.

With hard work on the part of the teacher and with the help of the computer a mathematics program for the low achiever can be developed and implemented with a high degree of success.

PRE-TEST IN PERCENT

NAME: ____________________________

PERIOD: __________________________

DATE: ____________________________

Directions: Solve the following problems. Write the letter of the correct answer on the blank at the left of the problem.

1. There are thirty-five automobiles in a parking lot. Each car was made in the United States. What percent of the cars were made in the U.S.?
   (a) 0% (b) 79% (c) 50% (d) 100%

2. One half of the cars in problem one are painted some shade of blue. What percent of the cars are blue?
   (a) 33 1/3% (b) 50% (c) 75% (d) 100%

3. Since all of the cars in problem one were made in the U.S. what percent of the cars were made in Sweden?
   (a) 110% (b) 1% (c) 25% (d) 0%

4. Estimate what percent of the following figure is shaded.
   (a) 33 1/3% (b) 10% (c) 50% (d) 25%

5. Shade in 66 2/3% of this figure.

Directions: Solve the following problems and write the answer on the blank at the left of the questions.
6. Write the decimal equivalent of \( \frac{1}{3} \).

7. Write the decimal equivalent of \( \frac{1}{3} \).

8. Write the percent equivalent of .25.

9. Write the percent equivalent of .95.

10. True or false: The percent equivalent of .05 is 50%.

11. True or false: The percent equivalent of 1 is 100%.

Directions: 12–20 Solve the following problems. Then match the problem with the correct answer found in the answer column. Place the letter of the answer on the blank before the problem.

12. What number is 25% of 20

13. 35.2 is ___% of 88.

14. 23 is 50% of ___.

15. What number is 10% of 45.

16. 15 is ___% of 75.

17. 9.6 is 15% of ___.

18. 1 is ___% of 1

19. 6 is 66 2/3% of ___.

20. What number is 33 1/3 of 90.

POSSIBLE ANSWERS
A. 5  B. 20  C. 30  D. 45  E. 40  F. 100  G. 64  H. 4.5  I. 50  J. 46  K. 9

ARITHMETIC COMPUTATION

Directions: Work the example in each box. Then look at the possible answers at the right side of the box and see if your answer is given. If it is, fill in the space on your answer sheet which has the same letter as the answer you have chosen. If your answer is not given, fill in the space which has the same letter as the letter beside the NG (which means "not given"). Use a separate sheet of paper for figuring.

1. 6 is what part of 10?

|   | a. 1/6 | b. 1/10 | c. 3/5 | d. 2/5 |

2. What is 2.504 rounded to hundredths?

|   | a. 2.5 | b. 2.50 | c. 2.51 | d. 2.505 |

3. What does XIV mean?

|   | a. 104 | b. 16 | c. 14 | d. 115 |

4. \[ \_ + 4 \times 6 \]

What pair of numbers, if put in the blank, would make this sentence true?

|   | a. 10 \div 10 | b. 30 + 2 | c. 8 \times 3 | d. 4 \times 3 |

5. A number is evenly divisible (no remainder) by 9. You can be sure that it is also evenly divisible by --

|   | a. 2 | b. 3 | c. 4 | d. 18 |

6. What is the smallest common denominator for 4/5, 3/4 and 2/3?

|   | a. 3 | b. 5 | c. 12 | d. 60 |

7. In which of the following numbers has 7 the greatest value?

|   | a. 74.00 | b. 137.46 | c. 1474 | d. 9.97 |

8. What is 2.94 rounded to the nearest tenth?

|   | a. 2.90 | b. 2.9 | c. 2.95 | d. 3.0 |

9. By estimation, choose the example which will have the smallest quotient.

|   | a. 22 \div 600 | b. 21 \div 1200 | c. 21 \div 600 | d. 21 \div 1190 |

10. 4 \times 125 =

|   | a. (4 \times 5) + (4 \times 2) + (4 \times 1) | b. (4 \times 12) + (4 \times 5) | c. (4 \times 120) + 5 | d. (4 \times 100) + (4 \times 25) |

11. 9 is what percent of 15?

|   | a. 6 | b. 135 | c. 60 | d. 13.5 |
12. The perimeter of a square is found by using the formula:
   a. $s^2$
   b. $\frac{1}{2}s^2$
   c. $\frac{1}{2}bh$
   d. $4s$

13. If $N$ divided by 7 is more than 6, then $N$ may be:
   a. 20
   b. 30
   c. 40
   d. 50

14. Two fifths of what number is 6?
   a. 2 2/5
   b. 10
   c. 15
   d. 30

15. Which would tell you that a number is evenly divisible by 5?
   a. the last digit
   b. the number is even
   c. the number is odd
   d. the sum of the digits

16. You know that $A + B + C = 100$. You know that $D$ is greater than $A$. Then you know that:
   a. $D+B+C$ is greater than 100
   b. $A+D+B$ is greater than 100
   c. $B+B+C = 100$
   d. $D+B+C$ is less than 100

17. 2500 is equal to:
   a. 5
   b. 50
   c. 500
   d. 5000

18. $4^3$ equals:
   a. 7
   b. 12
   c. 16
   d. 64

19. What is the sum of $(-8)+(+4)$?
   a. +4
   b. -4
   c. +12
   d. -10

20. How many hours pass from 9:45 A.M. to 1:15 P.M.?
   a. 2 1/2
   b. 3 1/4
   c. 3 1/2
   d. 3 3/4

21. What is the value of $N$ in $\frac{20}{60} \times \frac{50}{N}$?

22. Which number comes next in this set?
   a. 22
   b. 21
   c. 20
   d. 19

23. In which of these will the product be less than $N$?
   a. $1 \times N$
   b. $1 \frac{1}{4} \times N$
   c. $\frac{3}{2} \times N$
   d. $\frac{3}{4} \times N$

24. 60% of 2150 is nearest:
   a. 1300
   b. 1500
   c. 1200
   d. 120

25. Without multiplying, find the difference between $78 \times 165$ and $79 \times 165$.
   a. 1
   b. 78
   c. 79
   d. 165

26. 0.24 \times 498 is approximately:
   a. 1200
   b. 2200
   c. 120
   d. 220
27. In the example \( \frac{16}{8} = 2 \), the 8 is the:
   a. numerator
   b. multiplier
   c. quotient
   d. divisor

28. If 8 times \( N \) is less than 50, you can be sure that 8 times \( N \) is:
   a. less than 40
   b. less than 46
   c. more than 48
   d. more than 40

29. By the commutative property of numbers, we know that:
   a. \( a+b = b+a \)
   b. \( ab = ba \)
   c. \( a+b = a+b \)
   d. \( a-b = b-a \)

30. The product of any number \( N \) multiplied by 25 is equivalent to:
   a. \( 100N \), divided by 4
   b. 20 times \( N \), plus 5
   c. \( N \) divided by 100, multiplied by 4
   d. 20 times \( N \), multiplied by 5

31. Which fraction is expressed in lowest terms?
   a. \( \frac{42}{421} \)
   b. \( \frac{287}{427} \)
   c. \( \frac{262}{261} \)
   d. \( \frac{88}{354} \)

32. Which of these is the best estimate of \( 0.243 + 1.944? \)
   a. .0125
   b. .0125
   c. 1.25
   d. 12.5

33. The union of all sets has how many (different) states?
   a. 2
   b. 3
   c. 11
   d. 7

34. Which of these two sets are disjoint (have no common members)?
   a. \( X \) and \( Z \)
   b. \( W \) and \( X \)
   c. \( W \) and \( Y \)
   d. \( Y \) and \( X \)

35. If the circumference of a circle is \( 2\pi r \), how do you find the radius \( r \) when you know the circumference \( c \)?
   a. \( \frac{c}{\pi} \)
   b. \( \frac{c}{2\pi} \)
   c. \( \frac{c}{2} \)
   d. \( \frac{c}{2r} \)

36. By the distributive property of numbers, we know that
   \( (A \times B) + (A \times C) = \)
   a. \( 2A + B + C \)
   b. \( 2A \times B \times C \)
   c. \( A \times (B + C) \)
   d. \( 2A + (B \times C) \)

37. Which of these is a prime number?
   a. 158
   b. 113
   c. 121
   d. 381

(Use these sets for Items 33 and 34)
38. A city has 16,000 people when counted by use of the decimal system. If counted in a base of 8, instead of a base of 10, which might be the population of the city?

a. 7500 eight
b. 37,200 eight
c. 3720 eight
d. 5000 eight

39. What is the cub root of \((K^2 \times K)\)?

a. \(K\)
b. \(K^2\)
c. \(K^3\)
d. \(K^9\)

40. How many x's are there below if counted in a base of five instead of a base of ten?

\[ \text{x x x x x x x x x x x x x x} \]

a. 13 five
b. 23 five
c. 20 five
d. 103 five
ARITHMETIC APPLICATIONS

Directions: Work each problem. Then look at the possible answers under the problem and see if your answer is given. If it is, fill in the answer space on your answer sheet which has the same letter as the answer you have chosen. If your answer is not given, fill in the space which has the same letter as the letter beside NG. If NG is not listed for an example, one of the given answers is the correct answer. There is no sales tax in any problem on the test unless you are told otherwise. Use a separate sheet of paper for all figuring.

1. How many flashlight batteries can you buy for $1.00 if they sell at 2 for 25¢?
   a. 8
   b. 4
   c. 10
   d. 12
   e. NG

2. The box in Figure A contains how many cubic feet?
   a. 24
   b. 26
   c. 36
   d. 72
   e. NG

3. Which city doubled its population between 1950 and 1960?
   a. York
   b. Davis
   c. Elgin
   d. Niles
   e. None

4. How many more people were there in these 5 cities in 1960 than in 1950?
   a. 6
   b. 26
   c. 5000
   d. 60,000
   e. NG

5. Which city had approximately half as many people as Davis in 1960?
   a. Hope
   b. York
   c. Elgin
   d. Niles
   e. None
6. What per cent of Mr. Brown's tax dollar is spent on miscellaneous taxes?
   a. 7
   b. 9
   c. 10
   d. 15
   e. NG

7. If Mr. Brown spends $80 a month on these taxes, how much of it is spent on sales tax?
   a. $1.60
   b. $4.00
   c. $16.00
   d. $40.00
   e. NG

8. How many spelling words did Dot miss the last 2 weeks?
   a. 5
   b. 1
   c. 10
   d. 25
   e. NG

9. Which week did Dot score 23?
   a. 1st
   b. 4th
   c. 3rd
   d. 2nd
   e. NG

10. How many words better was she for the 4th week than for the 3rd week?
    a. 3
    b. 10
    c. 15
    d. 22
    e. NG

(A family went camping. Items 11-16 are some of their problems)

11. They left at 6:43 A.M. to travel north. What time was it 8 1/2 hours later?
    a. 2:15 P.M.
    b. 2:45 P.M.
    c. 3:15 P.M.
    d. 3:45 P.M.
    e. NG
12. The scale of the park map reads, "1 1/2 inch = 1 mile." How far will a distance of 6 inches be?
   a. 1 mile
   b. 4 miles
   c. 6 miles
   d. 9 miles
   e. More information is needed.

13. At the camp store, beans were 2 cans for 41c. What would 6 cans cost at that rate?
   a. 20 1/2c
   b. 82c
   c. $1.22
   d. $2.46
   e. NG

14. They bought gasoline twice. On one tank of 12 gallons they went 216 miles. What was the average number of miles per gallon on this tank?
   a. 12
   b. 16
   c. 18
   d. 20
   e. More information is needed.

15. At 12 o'clock they had gone 1/3 the way. How many miles must they go?
   a. 4
   b. 15
   c. 36
   d. 12
   e. More information is needed.

16. Which solution should you use to find the rate (R) they traveled per hour if you know the time (T) and distance (D)?
   a. T/D
   b. D x T
   c. T x D
   d. D/T
   e. TR/D

17. What is the circumference of the circle in figure B? (Use π = 3 1/7)
   a. 22 in.
   b. 44 in.
   c. 88 in.
   d. 154 in
   e. NG

18. A map scale reads, "1 inch = 3 miles." Linda finds that two points on the map are 1 ft. 3 in. apart. How many miles is that?
   a. 9
   b. 15
   c. 39
   d. 45
   e. NG
19. In buying a rug for a bedroom, most people would buy one that is:
   a. 9' x 12'
   b. 16' x 22'
   c. 12' x 24'
   d. 15' x 18'
   e. 14" x 20"

(Mrs. White wonders how much she can save at a frozen food sale. Items 20-22 are some of her problems.)

20. Frozen peas usually cost 19¢ a package. They are on sale at 6 packages for 89¢. How much will she shave if she buys 2 dozen-packages at the sale price?
   a. 89¢
   b. $1.00
   c. 81.20
   d. 53.56
   e. NG

21. She can buy one half of a beef at 79¢ a pound. This half weighs 336 pounds. It will last the Whites 158 days. To find the average daily cost you would do which of these?
   a. multiply pounds by days; then divide by cost per pound
   b. multiply cost per pound by days; then divide by pounds
   c. subtract days times cost per pound from pounds
   d. multiply cost per pound by total pounds; then divide by days
   e. NG

22. Mrs. White spends an average of 51.82 per day for beef. If she buys the beef in Item 21 above, how much will she save each day on the average?
   a. 4¢
   b. 14¢
   c. 26¢
   d. 51.68
   e. NG

(6) 4 dimes
(7) 57 \(\frac{1}{2}\), 32 \(\frac{1}{2}\)
(8) 12 inches
(9) Henry - 11 years
    Sam - 22 years
(10) 2 ft. by 6 ft.
Give the next three numbers in each series.

1. 15, 16, 17
2. 201, 203, 205
3. 1231, 1331, 1431
4. 154, 144, 134

Put the following groups of numbers in order starting with the smallest.

5. 362, 162, 262, 62
6. 8700, 8007, 8070, 7080, 8078
7. 876, 678, 786, 867, 687, 768
8. 5391, 5139, 5931, 5913
9. What number is 4 more than 28?
10. What number is 7 less than 192?
11. What number is 8 less than 2006?
12. What number is 4 more than 1098?
13. How much is 3 tens and 12 ones?
14. How much is 7 hundreds, 13 tens and 12 ones?
15. How much is 2 hundreds and 43 ones?
16. How much is 11 hundreds, 24 tens and 15 ones?

Write each of the following numbers in words:

17. 76
18. 243
19. 30,003
20. 168,025
21. 2,060
Use 7,683,542 for the next group of questions.

22) Name the place value of the 4.
23) Name the place value of the 8.
24) Name the place value of the 6.
25) Name the place value of the 2.

Write each of the following numbers.

26) two hundred forty-eight
27) seven hundred thousand, seventy
28) thirty-two thousand, four hundred ten
29) one million, twenty-three
30) sixty thousand, two hundred fifteen
31) What number is 10 more than 47,238?
32) What number is 300 less than 6,702?
33) What number is 20,000 more than 683,021?
34) What number is 200,000 more than 4,321?
35) What number is one million less than 1,002,768?

19) Name the place value of the 2
20) Name the place value of the 5.
21) Name the place value of the 6.
22) What number is 20 more than 783?
23) What number is 10,000 more than 23,768?
24) What number is two million less than 2,007,234?
25) What number is 600 less than 8,702?
26) What number is 20,000 more than 78?

Write each of the following numbers.

27) two hundred sixty-seven
28) four thousand seventy-nine
29) nineteen thousand three hundred forty
30) two hundred ten thousand, twenty-two
Matching Exercise:

Select the property which is illustrated in each example. Put the letter of the correct property by the illustration.

a) Commutative of Addition  e) Distributive
b) Commutative of Multiplication  f) Identity for Addition
c) Associative of Addition  g) Identity for Multiplication
d) Associative of Multiplication  h) Closure

1) 2 + 3 + 7 = 2 + 7 + 3
2) 6 x (4 + 2) = (6 x 4) + (6 x 2)
3) 3 x (6 x 2) = 3 x (2 x 6)
4) 7 x (4 x 3) = (7 x 4) x 3
5) 6 x (4 + 0) = 6 x 4
6) (3 x 2) + (5 x 2) = (3 + 5) x 2
7) 7 + 6 = 13
8) (6 + 3) + (5 + 2) = 6 + (3 + 5) + 2
9) (7 x 1) + (9 x 1) = 7 + 9
10) (2 + 4) x (3 + 5) = (3 + 5) x (2 + 4)
Matching Exercise:

Match the examples to the property they illustrate by putting the appropriate letter in the blanks.

a) Associative of Addition  e) Associative of Multiplication
b) Commutative of Addition  f) Commutative of Multiplication
c) Identity for Addition  g) Identity for Multiplication
d) Closure  h) Distributive

_______ 1) \((a + b) \times c = (b + a) \times c\)
_______ 2) \(6 \times (a + d) = (6 \times a) + (6 \times d)\)
_______ 3) \(3 \times (a + c) = 3 \times a\)
_______ 4) \((3 \times 5) \times (4 \times a) = 3 \times (2 \times 4) \times a\)
_______ 5) \((6 + 3) + (1 + 4) = (6 + 3 + 1) + 4\)
_______ 6) If \(a\) and \(b\) are whole numbers, \(a + b = c\), and \(c\) is also a whole number.
_______ 7) \((3 + 2) \times a = (3 \times a) + (2 \times a)\)
_______ 8) \((3 + 2) \times (4 + 6) = (4 + 6) \times (3 + 2)\)
_______ 9) \((2 \times 1) + 6 = 2 + 6\)
_______ 10) \((a + b + c) + d = d + (a + c + b)\)

15) (7/8, 7/48, 9/16, 11/24)
Evaluate the following.
1) \((2^2) \times 7\)
2) \((2^5) \times (5^2)\)
3) \((2^3) \times (3^2) \times 7\)

Find a value for \(n\) to make each of the following true statements.
4) \((3^3) \times n = 135\)
5) \(n^3 \times 3 \times 5 = 120\)

Give the prime factorization for each of the following.
6) 24
7) 81
8) 100
9) 245

Find the G.C.F. for each set of numbers.
10) \((20, 36)\)
11) \((16, 24, \ldots)\)
12) \((20, 32, 48, 56)\)

Find the L.C.M. for each set of numbers.
13) \((18, 12)\)
14) \((25, 15)\)
15) \((5, 20, 16)\)

16) The G.C.F. of two relatively prime numbers is __.

Reduce each fraction using G.C.F.
17) \(\frac{63}{84}\)
18) \(\frac{84}{112}\)

Find the least common denominator for each set of fractions using L.C.M.
19) \(\left(\frac{7}{12}, \frac{5}{8}, \frac{9}{16}\right)\)
20) \(\left(\frac{7}{12}, \frac{5}{6}, \frac{9}{24}\right)\)

Test: 35
1) $\frac{3}{8} + \frac{2}{3} = \frac{21}{24} + \frac{16}{24} = \frac{37}{24}$

2) $19 \cdot \frac{2}{3} = \frac{38}{3}

3) $16 - \frac{3}{4} = 15 \frac{1}{4}$

4) $\frac{6}{7} \times \frac{2}{3} = \frac{12}{21} = \frac{4}{7}$

5) $2 \frac{2}{3} \times 3 = \frac{8}{3} \times 3 = 8$

6) $\frac{2}{3} \times \frac{3}{4} \times 2 \frac{5}{6} = \frac{2}{3} \times \frac{3}{4} \times 2 \frac{5}{6} = \frac{1}{2} \times \frac{5}{6} = \frac{5}{12}$

7) $3 \frac{1}{4} + 2 \frac{5}{6} + 3 \frac{7}{8} = \frac{12}{4} + \frac{13}{6} + \frac{29}{8} = \frac{36}{12} + \frac{23}{12} + \frac{87}{12} = \frac{146}{12} = 12 \frac{2}{3}$

8) $4 \frac{1}{2} - 1 \frac{1}{3} = \frac{9}{2} - \frac{4}{3} = \frac{27}{6} - \frac{8}{6} = \frac{19}{6}$

9) $5 \frac{1}{2} - 2 \frac{5}{9} = \frac{11}{2} - \frac{23}{9} = \frac{99}{18} - \frac{46}{18} = \frac{53}{18}$

10) $(19 \frac{1}{12} - 8 \frac{1}{3}) - 6 \frac{1}{2} = \left(\frac{229}{12} - \frac{101}{12}\right) - \frac{15}{2} = \frac{128}{12} - \frac{15}{2} = \frac{64}{6} - \frac{45}{6} = \frac{19}{6}$

11) $\frac{8}{9} \cdot \frac{5}{6} = \frac{40}{54} = \frac{20}{27}$

12) $\frac{7}{8} \div 2 \frac{3}{4} = \frac{7}{8} \div \frac{11}{4} = \frac{7}{8} \times \frac{4}{11} = \frac{7}{22}$

13) $2 \frac{2}{5} \times 3 \frac{1}{4} = \frac{12}{5} \times \frac{13}{4} = \frac{156}{20} = \frac{78}{10} = 7 \frac{8}{10} = 7 \frac{4}{5}$

14) $8 \frac{4}{5} \div 3 \frac{1}{7} = \frac{44}{5} \div \frac{22}{7} = \frac{44}{5} \times \frac{7}{22} = \frac{308}{110} = \frac{154}{55} = 2 \frac{44}{55} = 2 \frac{2}{5}$

15) $3 \frac{3}{8} \div 6 \frac{3}{4} = \frac{27}{8} \div \frac{27}{4} = \frac{27}{8} \times \frac{4}{27} = \frac{1}{2}$

16) $2 \frac{4}{5} \times 2 \frac{1}{2} \times 5 \frac{1}{7} = \frac{14}{5} \times \frac{5}{2} \times \frac{36}{7} = \frac{14 \times 5 \times 36}{5 \times 2 \times 7} = \frac{1080}{70} = \frac{108}{7}$

17) $9 \frac{23}{24} - (3 \frac{7}{8} - 2 \frac{5}{6}) = \frac{227}{24} - \left(\frac{31}{8} - \frac{15}{6}\right) = \frac{227}{24} - \left(\frac{47}{12} - \frac{30}{12}\right) = \frac{227}{24} - \frac{17}{12} = \frac{227}{24} - \frac{34}{24} = \frac{193}{24}$

18) $3 \frac{1}{3} \div 2 \frac{1}{2} = \frac{10}{3} \div \frac{5}{2} = \frac{10}{3} \times \frac{2}{5} = \frac{20}{15} = \frac{4}{3}$

19) $2 \frac{4}{5} \div (3 \frac{1}{2} \times \frac{8}{15}) = \frac{14}{5} \div \left(\frac{7}{2} \times \frac{8}{15}\right) = \frac{14}{5} \div \frac{56}{15} = \frac{14}{5} \times \frac{15}{56} = \frac{3}{8}$

20) $\left(64 \frac{1}{2} - 57 \frac{3}{4}\right) \div 2 \frac{1}{4} = \left(\frac{131}{2} - \frac{231}{4}\right) \div \frac{9}{4} = \left(\frac{262}{4} - \frac{231}{4}\right) \div \frac{9}{4} = \frac{31}{4} \div \frac{9}{4} = \frac{31}{4} \times \frac{4}{9} = \frac{31}{9}$
Add the following fractions. Reduce to simplest terms.

1) \( \frac{3}{5} \)
2) \( \frac{3}{8} \)
3) \( \frac{2}{3} \)

\[
\begin{align*}
1) \quad & \frac{3}{5} + \frac{1}{5} = \frac{4}{5} \\
2) \quad & \frac{3}{8} + \frac{3}{8} = \frac{6}{8} = \frac{3}{4} \\
3) \quad & \frac{2}{3} + \frac{2}{3} = \frac{4}{3} = 1\frac{1}{3}
\end{align*}
\]

4) \( 3 \frac{4}{9} \)
5) \( 7 \frac{1}{4} \)

\[
\begin{align*}
4) \quad & 3 \frac{4}{9} + 2 \frac{2}{9} = 5 \frac{6}{9} = 5 \frac{2}{3} \\
5) \quad & 7 \frac{1}{4} + 3 \frac{1}{4} = 10 \frac{2}{4} = 10 \frac{1}{2}
\end{align*}
\]

Find the common denominators for each group of fractions and change to equivalent fractions with the same denominators.

6) \( \frac{2}{3} , \frac{2}{5} \)
7) \( \frac{1}{4} , \frac{5}{6} , \frac{7}{8} \)

\[
\begin{align*}
6) \quad & \frac{2}{3} \quad \frac{2}{5} \\
7) \quad & \frac{1}{4} \quad \frac{5}{6} \quad \frac{7}{8}
\end{align*}
\]

8) \( \frac{2}{3} , \frac{1}{6} , \frac{1}{2} \)
9) \( \frac{5}{9} , \frac{5}{6} , \frac{3}{3} \)

Add the following fractions. Reduce each answer to lowest terms.

10) \( \frac{5}{7} \)
11) \( 18 \frac{3}{4} \)
12) \( 9 \frac{2}{3} \)
13) \( 2 \frac{3}{16} \)

\[
\begin{align*}
10) \quad & \frac{5}{7} + \frac{9}{14} = \frac{10}{14} + \frac{9}{14} = \frac{19}{14} = 1\frac{5}{14} \\
11) \quad & 18 \frac{3}{4} + 9 \frac{2}{3} = 18 \frac{9}{12} + 9 \frac{8}{12} = 27 \frac{17}{12} = 27 \frac{11}{12} \\
12) \quad & 9 \frac{2}{3} + 10 \frac{2}{5} = 9 \frac{10}{15} + 10 \frac{6}{15} = 19 \frac{16}{15} = 19 \frac{1}{15} \\
13) \quad & 2 \frac{3}{16} + 6 \frac{1}{6} = 2 \frac{9}{48} + 6 \frac{8}{48} = 8 \frac{17}{48}
\end{align*}
\]

14) \( 4 \frac{2}{5} + \frac{2}{3} + 3 \)
15) \( 21 \frac{1}{3} + 9 \frac{5}{6} + 5 \frac{7}{8} \)

\[
\begin{align*}
14) \quad & 4 \frac{2}{5} + \frac{2}{3} + 3 = 4 \frac{12}{15} + \frac{10}{15} + 3 = 7 \frac{2}{15} \\
15) \quad & 21 \frac{1}{3} + 9 \frac{5}{6} + 5 \frac{7}{8} = 21 \frac{8}{24} + 9 \frac{10}{24} + 5 \frac{21}{24} = 35 \frac{39}{24} = 35 \frac{13}{8}
\end{align*}
\]
Subtract in each example below.

1) \[ \frac{4}{5} \]
2) \[ 2 - \frac{3}{4} \]
3) \[ 3 - \frac{7}{8} \]

4) \[ \frac{9}{10} \]
5) \[ \frac{7}{15} \]
6) \[ 7 - \frac{1}{6} \]

7) \[ \frac{8}{3} \]
8) \[ 7 - \frac{1}{5} \]
9) \[ 5 - \frac{3}{4} \]

10) \[ 4 - \frac{7}{8} \]
11) \[ 28 - \frac{5}{12} - 9 \frac{2}{3} \]

12) \[ (19 - \frac{1}{12} - 8 - \frac{1}{3}) - 6 \frac{1}{2} \]

13) \[ 9 - \frac{23}{24} - (3 - \frac{7}{8} - 2 \frac{5}{6}) \]

14) \[ (29 - \frac{3}{5} - 13 - \frac{1}{2}) + 4 \frac{3}{5} \]

15) \[ 7 \frac{5}{6} - (9 - \frac{2}{8} - 7 - \frac{1}{2}) \]

1) Jim wants to buy a camera that costs $40. He has saved $25 already. What percent of the price of the camera does he already have?

2) Sam was practicing shooting basketball goals. He shot six baskets in 10 tries. What percent of his shots were successful?

3) Linda helped her teacher by correcting papers. One day after school she corrected 75% of the 36 papers the teacher had collected. How many papers did Linda correct?

4) When Bill started playing basketball, he weighed 100 pounds. Now he weighs only 95 pounds. Find the percent of decrease in weight.

5) Mr. Gregory owned 750 acres. He sold $\frac{2}{3}$ of it. How many acres does he have left?
6) A shipment of 1900 pounds of milk contains \(4 \frac{1}{8}\%\) butterfat. How many pounds of butterfat are there in this shipment?

7) Betty saved 15\% of her allowance last year. She saved a total of $22.50. How much was her total allowance last year?

8) A news report states that 3,640 families, or 70\% of the families, in the city of Redbluff own their homes. How many families live in Redbluff?

9) Mr. Bush calculated that 40\% of the radiator coolant in his car was antifreeze. The radiator held 15 quarts. How many quarts of antifreeze were used to fill the radiator?

10) There are 387 girls in Hilltop Middle School. This represents 45\% of the enrollment. How many students attend this school?

3) One year the Browns saved $360. This was 6% of their family income for the year. How much was the family income for the entire year?

4) In a class of 32 pupils, 28 were present one day. What percent of the pupils were present?

5) A storekeeper priced a radio set at 125% of the price he paid for it. He paid $84 for the set. What price did he plan to charge for the set?
6) In a school with an enrollment of 1400 pupils, 7% were absent one day. How many pupils were present?

7) In a junior high school with 650 pupils enrolled, 52% of the pupils were girls. How many girls were enrolled in the school?

8) A basketball team won 60% of the 40 games it played. How many games did the team lose?

9) Mr. Johnson paid $4060 for a lot. He built a $14,500 house on it. The price of the lot was what percent of the cost of the house?

10) A ball player made 70 hits in 200 times at bat. In what percent of his times at bat did he get a hit?
Solve each of the following problems. Show your work.

1) Paula sold 180 boxes of greeting cards for 75¢ a box. Her rate of commission was 20%. How much commission did she receive?

2) When the department store held a sale, a $30 coat was reduced 25%. What was the sale price of the coat?

3) Brian has $8.00. Betty has 25% more than Brian. How much does Betty have?

4) Mrs. Baker bought sheets at a "25% Off" sale. She saved $4.50. What was the regular price of the sheets Mrs. Baker bought?

5) The price of eggs was increased from $12.00 to $14.40 a case. The increase was what percent of the original price?
6) Mr. Briggs has 790 bushels of apples. This is 58% more than the previous year. How many bushels of apples did he have last year?

7) Mary Smith bought a watch which sells for $45. She was charged 10% federal tax and 4% sales tax. How much did she have to pay altogether?

8) A grocery salesman receives 15% commission on all his sales. What must his monthly sales be to assure him of $600 commission for the month?

9) Susan deposited $50 in a savings bank which pays interest at a rate of 3 1/2%. How much interest does her deposit earn in 1 year?

10) A salesman earned $1,110 for selling a house for $18,500. What was his rate of commission?

2) A pair of shoes and a pair of socks together cost $10. The shoes cost $8.50 more than the socks. Find the cost of each.

3) One number is represented by 'y'. Three less than five times that number is another number. The sum of the two numbers is 21. What are the two numbers?

4) Frank has a board 21 inches long. He wishes to cut from it 4 pieces of equal length and a fifth piece 6 inches longer than the others. How long should each of the five pieces be?

5) Find three consecutive odd numbers such that their sum is 27.
6) A collection of dimes and nickels is worth 80 cents. There are twice as many nickels as dimes. Find the number of dimes.

7) Separate 95 into two parts so that one part will be 20 less than the other part. What are the two parts?

8) A square and a rectangle have equal perimeters. The dimensions of the rectangle are 15 inches and 9 inches. How long is a side of the square?

9) Sam is twice as old as Henry. Four years ago the sum of their ages was 25 years. How old is each boy now?

10) The measure of the length of the top of a rectangular table is 3 times as long as it is wide. If its length were decreased by 2 feet, and its width increased by 2 feet, it would have the shape of a square. What are the dimensions of the table top?
