This report contains substance abuse program guides for fourth, fifth, and sixth graders. Each program combines pharmacological facts with affective experiences. Included are descriptions of self-awareness experiences, activities which identify and improve communication skills, activities that will develop decision-making and problem-solving skills, activities in values clarification, and information regarding the use and abuse of substances. (LKP)

DEVELOPING REAL UNDERSTANDING FOR GROWTH IN STUDENTS

Affective Approaches for Intermediate Elementary Substance Education

Rationale:

In recent years, substance abuse has been presented from a strictly "pharmecological" perspective. It was thought that by providing only information—name, origin, effects, legal consequences—about substance use and abuse, students would be equipped with the knowledge "needed" to deal with the "drug problem". It has been found, however, that a strictly informational approach not only provides kids with the information they need, but in two recent cases, leads to increased experimentation as well. On the other hand, a strictly affectively oriented approach denies students the very basic knowledge about substances they need to deal with real-life situations. Therefore, this unit will combine both the pharmecological aspects with affective experiences, with the emphasis on the latter.

General Objectives:

1. To provide students with the opportunity to participate in experiences enhancing self-awareness.

2. To provide students with the activities identifying and improving communication skills.

3. To provide students with activities that will develop decision-making and problem-solving skills.

4. To provide students with activities in values clarification.

5. To provide students with information regarding use and abuse of substances. (Note: This objective will be fulfilled by providing experiences in conjunction with affective education.)
Included in each of the intermediate grade program guides is both substance abuse information and affectively oriented experience. If you are doing

a. Magic Circle
b. DUSO
c. SRA—Social Science Laboratory Units
d. TABA: Feelings, Attitudes and Values
e. Any other regularly done guidance program

you need not include the affective activities contained herein. However, we suggest, that since the multi-faceted affective activities are integrally related to the required substance abuse information, they also be done as indicated.

The following materials are presented for your reference and guidance:

a. Magic Circle—Program Summary
b. Magic Circle Principles
c. Questioning Skills Which Promote Effective Communication
d. Silence and Non-Verbal Cues
e. Illustration of Non-Verbal Cues
f. Reinforcement Skills Which Promote Effective Communication

If you desire assistance in implementing any of the programs previously cited, see your Elementary Counselor, Area Substance Specialist, or Area Guidance Coordinator.
MAGIC CIRCLE—PROGRAM SUMMARY

The developers of the Magic Circle base their theories on the concept of preventative guidance. They feel that most patients in psychotherapy are unable to benefit because it is often too late. The Magic Circle is designed to be an approach to the school child to assure normal, healthy emotional growth. All patients in therapy reveal their basic deficits are in three distinct areas: self awareness, self confidence, and social understanding. They tend to ask and answer for themselves three questions: Will I get hurt? (Yes) Will I fail? (Yes) Will I be accepted? (No).

The young child also asks himself these questions. The pessimistic answers, the author believe, are not natural—they are learned either from negative experiences or from a lack of sympathetic adult guidance.

A preventative guidance scheme, therefore, must be based on three themes:
- AWARENESS (Knowing what your thoughts, feelings, and actions really are)
- MASTERY (Knowing what your abilities are and how to use them)
- SOCIAL INTERACTION (Knowing other people)

Regular participation in Magic Circle activities will help teachers (and students, ultimately) develop interactional skills in the areas of:

- Active listening
- Focusing on feelings
- Giving recognition
- Paraphrasing
- Reviewing

- Focusing on similarities and differences
- Involving everyone
- Transferring leadership

Since students ultimately are asked to take leadership of the Circle, they will likewise develop the skills outlined. Skills in the above mentioned areas are applicable in many areas for students and teachers alike.

It is best to begin the Magic Circle with a group of approximately ten children. In this way the teacher can gain skill and confidence in the methods used. Since the Magic Circle continuum is somewhat sequential, it is most desirable for children to enter the sequence at the beginning. However, worthwhile gains have been reported at all levels.

In deciding how to group the children, the following three criteria are helpful:

1. A relative balance of boys and girls
2. More highly or less highly developed children placed in the same group.
3. No more than two children with severe personal problems in the same group.
The possible duration of each meeting will vary from 15 to 25 minutes. Each session should be conducted at the same time each day, and, if possible, early in the day, when the children tend to be in the most attentive mood.

Four rules for the Magic Circle should be explained to the participants:

1. Everyone must sit quietly.
2. Only one person should talk at a time. That person should raise his hand and be recognized.
3. Members of the group must listen to each other. At any time they should be able to repeat what someone has just said.
4. NO PUT DOWNS

A sequential list of topics is provided in the lesson guides. The teacher's role is to introduce the topic, see that each child is heard from, require that each child be listened to patiently and well by the others, praise each child for his contribution and do his best to foster and preserve an atmosphere of warmth, tolerance, and honesty.
MAGIC CIRCLE PRINCIPLES

General Principles of Awareness
- Awareness means that the person has open channels for receiving information. His degree of awareness is his degree of openness or receptivity.
- The aware child is usually able to discriminate amongst classes of events and organize his experience. (Event is a feeling, thought, or behavior and whether it is negative or positive.)
- The aware child is an effective communicator. (Verbalize events of an internal or external nature.)
- The aware and effectively communicating child knows about and can verbally describe the similarities and differences among people. He is accepting and tolerant.

General Principles of Mastery (Self-confidence & responsible competence)
- The masterful child has acquired and continues to acquire knowledge and skills that are personally meaningful and satisfying to him in terms of his survival or enhancement.
- The masterful child has received sufficient recognition and approval for what he has accomplished so that he will inevitably have confidence in what he is capable of doing.
- The masterful child is tolerant, and has a positive attitude toward his mistakes, which he perceives as an integral part of the opportunity to learn and not as signs or proofs of inadequacy.
- The masterful child has a positive identification with the capabilities and accomplishments of others, whom he perceives as fellow members of the human race.

General Principles of Social Interaction
- The socially effective child understands that the behavior of one person can produce feelings in another person, and can predict on a discriminative basis whether a given action will produce a pleasant or unpleasant feeling in another.
- The socially effective child recognizes and believes in the importance of accepting responsibility for the effects that his behavior causes.
- The socially effective child realizes that everyone needs attention, acceptance, approval and affection and can detect these needs in others through their negative behavior.
- The socially effective child realizes that everyone has fears and angers.

- The socially effective child knows that inclusion, control, and affection are key elements in any relationship between two people.

- The socially effective child realizes that the negative is an inescapable part of all human relationships. (Disappointments, frustrations, and rejections.)
QUESTIONING SKILLS WHICH PROMOTE EFFECTIVE COMMUNICATION*

Practice in these skills is designed to help you promote effective communication by decreasing the amount of talk you do and increasing the amount of talk done by someone else. Communication is equated in many persons' minds with talking; in other words, unless you are talking, you are not communicating. This is not true. Effective communication is promoted in more ways than by just talking. Below is a guideline with examples to help you identify and practice the skills of questioning.

THESE ARE FOUR KINDS OF QUESTIONING SKILLS.

1. Fluency in asking questions is developed through practice in asking as many factual or descriptive questions as you can during a conversation.
   a. The words, who, what, when, and where are often used in asking factual questions. (What is your favorite course in school?)
   b. Descriptive questions require a person to organize facts into some logical relationship, and usually require longer answers than do the factual questions. (What are the differences between social clubs and civic clubs in high school?)

2. Probing questions keep discussions going because they require more than superficial answers. Probing skills include the practice of--
   a. seeking clarification (What exactly do you mean?);
   b. seeking to increase critical awareness (Is that all there is to it?);
   c. refocusing the response (If this is true, what are the implications for. . .?)
   d. prompting the speaker (Give the speaker a hint to help him answer the questions.); and
   e. redirecting the question (This helps to bring other people into the discussion quickly: Mary, what do you think about John's statement?).

3. Higher order questions are questions that cannot be answered merely from memory or by simple description. The key word related to higher order questions is why. A person needs to use questions which--

a. ask for evaluations (Which of the two cartoons drawn by class members do you believe illustrates the most understanding of events which affected the recent student council election?);

b. ask for inferences (Why do some people seem to make friends more easily with people younger than they are than with people their own age?);

c. ask for comparisons (What are the similarities and differences between students who succeed in school and those who don't?);

d. ask for application of principles (Can you think of another example which fits this definition of "popular"?);

e. ask the problem solving (Can you prove that these two people wanted the same thing to happen?); and

f. ask for cause and effect (If all the school rules were eliminated tomorrow, what do you think would happen?).

4. Divergent questions, or creative questions, are open-ended in that there is no right or wrong answer. They encourage a person to think creatively and to explore possibilities. The following are examples of divergent questions: What might happen to the family structure if the traditional roles of the mother and father were changed? If you were a new student in a school, and also of a minority race, what steps might you take to help others get to know you?
SILENCE AND NON-VERBAL CUES*

Most people tend to think that verbal communication is the best way to increase discussion. While this is important, the use of silence can also effect increased participation. By decreasing the amount of your own talk, you are taking action to stimulate the other person's participation.

Silence can be used effectively--

a. after an introductory statement (Your silence emphasizes what has just been said.);

b. after a question (Your silence indicates that you are considering the question and that the listener, too, should be considering the question.); and

c. after a response (Your silence will encourage the other person to continue talking, to extend and elaborate his point.).

The use of silence as a technique to promote communication is more effective when accompanied by a non-verbal cue indicating acceptance, rejection, questioning, or thoughtful consideration. There are four main kinds of non-verbal cues, which include--

a. facial cues, such as smiling, frowning, or looking thoughtful, serious or quizzical;

b. head movement, such as nodding "yes," shaking "no," tilting your head and ear toward the speaker;

c. body movement, such as moving nearer the speaker, assuming a thoughtful pose (fist under chin, for example); and

d. gestures, such as--

(1) pointing to the speaker;
(2) making a "continue" cue (moving hands in a circular motion);
(3) making an "anything else?" cue (by holding the hands out with palms upward);
(4) making a "stop" cue (by holding the arm straight out with the hand up and the palm out);
(5) pointing from speaker to speaker (by pointing first to one speaker and then to the speaker who has just finished speaking, and then looking quizzically back and forth from one to the other).

See the attached illustrations for examples of non-verbal cues.

*Adapted from Dwight W. Allen et al. Increasing Student Participation. (Morristown, N.J.: General Learning Corporation, 1969)
ILLUSTRATIONS OF NONVERBAL CUES

1. Thoughtful look
2. Thoughtful look
3. Frown
4. Quizzical look
5. Smile
6. Continue
7. Pointing to speaker
8. “Good point!”
9. “Anything else?”
10. Thinking
11. Thinking
12. Thinking
13. “Stupid”
14. Tilting head toward speaker
15. “Anything else?”
Positive reinforcement focuses on the use of incentives to reward desirable behavior—in this case, increasing participation in the communication process. If a person behaves in an appropriate way, immediate positive reinforcement increases the probability of his doing so again. Reinforcing techniques are used in the following situations:

1. Positive verbal reinforcement occurs when you immediately follow a desired response with such comments as, "Good," "Positive," "Okay," or other statements indicating acceptance.

2. Positive non-verbal reinforcement occurs when, in responding to a desired response, you nod your head in agreement, smile, move toward the speaker, or keep your eyes on the speaker while paying close attention to the speaker's words.

3. Positive qualified reinforcement occurs when you differentially reinforce, either verbally or non-verbally, certain parts of a response and not others.

4. Delayed reinforcement occurs when you emphasize positive aspects of a person's response by redirecting attention to something he did or said earlier.

Most of us use only a narrow range of reinforcers in our everyday conversation, consisting mostly of "Good," "Okay," "Yeah." By extending the range of both your verbal and non-verbal reinforcers you will be able to promote more effective communication. Below are some possible verbal reinforcers which will help you enlarge your repertoire.

"Delightful."
"Fine answer."
"Exciting!"
"Keep going."
"That's clever."
"I'm pleased."
"That shows thought."
"I like that."
"Thinking!"
"That's interesting."
"Good, I didn't know it could be done that way."
"I agree."
"That's a good point to bring up."
"Wow!"

4th GRADE PROGRAM GUIDE

For Your Information

This program guide is transitional, i.e., it bridges the gap between primary substance abuse education and intermediate substance abuse education. The substance abuse information is provided by "Kool Kat Talks about Drugs and Medicine" and related activities. Affective experiences are provided on a day-by-day basis.

It is to your advantage to read the entire program guide, including the appendix items, and decide which materials are to be duplicated and when.
<table>
<thead>
<tr>
<th>FOCUS</th>
<th>OBJECTIVES</th>
<th>ACTIVITIES</th>
</tr>
</thead>
</table>
| Day #1 | 1. To introduce students to materials.  
2. To tell students what is expected of them.  
3. To allow students time to begin assignment. | 1. Hand out one copy of "Kool Kat..." to each student, that you have duplicated. (Appendix #1)  
2. Explain that it is divided into three sections, and that students are to:  
a. Read and color each section.  
b. Do the activity questions and assessment at the end of each section.  
c. And that this can either be done in class or at home.  
3. Allow students to familiarize themselves with "Kool Kat...", and, if time permits, begin working on it. | |
| Day #2 | 1. Ice Breaker—to get to know each other. | Ball Toss (Approximately 15 minutes)  
A. Form a circle so that everyone's face can be seen.  
B. Participants take turns tossing a large ball from one person to another.  
C. Before throwing to a person, the 'thrower' calls the name of the 'catcher'.  
D. If the 'thrower' does not know the 'catcher's' name, he asks him to state it first.  
E. The exercise continues until everyone knows everyone else's name. | |

KOOL KAT TALKS ABOUT DRUGS AND MEDICINE
My name is Kool Kat and I want to talk to you about drugs. Drugs are medicine and are very special. Doctors use them to kill germs, stop pain and help sick people get well. Drugs can help people when they are used the right way.

When they are used the wrong way, they might even make a person feel worse. Using pictures you can color, I'm going to tell you how you should use drugs or medicine so that they will help you.
Drugs are used to kill germs, stop pain and help sick people get well.
Drugs are medicine and are made from chemicals.

Some chemicals come from the roots and leaves of plants - others are man-made.
People have been using drugs for many, many years.
The ancient Chinese were the first people to write about
the use of drugs as medicine.
Many of the drugs used long ago are still used today.

Others, like rubella vaccine, are new.
Some drugs are pills, tablets or capsules. These are different colors and shapes.
Other drugs are powders, liquids and syrups.
ACTIVITY QUESTIONS
(Pages 1-6)

Before you answer any questions below, be sure you have colored and read pages 1-6.

Page 1

1. List two uses of drugs.
   A. ______________________
   B. ______________________

2. The picture shows a doctor taking care of a sick little boy.
   A. Draw a picture of the boy's face before the doctor came.

   B. Draw a picture of the boy's face after the doctor gave the boy medicine to make him well.

Page 2

1. Name the two places where drugs come from.
   A. ______________________
   B. ______________________

2. Place a "P" if the things below come from plants, and an "M" if they are made by man.
   ___ A. car
   ___ B. apple
   ___ C. ice cream
   ___ D. light bulb
   ___ E. tobacco
Circle "T" if the answer is true, and "F" if it is false.

T  F  1. Drugs are very new.
T  F  2. The Chinese were the first people to write about drugs.

Name a new drug.

__________________________

List 4 of the ways drugs come.

A. ____________________________
B. ____________________________
C. ____________________________
D. ____________________________
ASSESSMENT  
(Pages 1-6)

Circle "T" if the answers are true and "F" if the answers are false.

1. Drugs are used to help sick people get well.  
   T  F

2. Drugs are only man-made.  
   T  F

3. The Americans were the first to write about drugs.  
   T  F

4. Many drugs of long ago are still used today.  
   T  F

Draw four pictures showing the ways drugs come.

A.  
B.  

C.  
D.
Drugs are made in factories and given by doctors or bought in a drug store.
When used the right way, drugs can be very helpful.

If you are sick, the right drug can help you get better.
Your parents or your doctor can tell you what drug to use when you are sick.
They will tell you how much of the drug you should take and when you should take it.
You should take drugs only when your mother or father is with you.
Follow doctor's orders

Eat food that is good for you

Dress properly

Drugs alone will not make sickness go away.

You must also take care of yourself.
ACTIVITY QUESTIONS
(Pages 7-12)

Before you answer any questions below, be sure you have colored and read pages 7 to 12.

Page 7

Name two places you get drugs from.
A. ____________________________
B. ____________________________

Page 8

Circle "T" if the answer is true and "F" if it is false.
T  F  1. When used the right way, drugs can be helpful.
T  F  2. Drugs cannot help a sick person.

Draw a picture of the way you feel when you are well.

Pages 9 and 10

1. If you feel sick, who should you ask about taking drugs?
   A. ____________________________
   B. ____________________________

2. Circle "T" if the answer is true and "F" if it is false.
   T  F  1. You should take as much of a drug as you want.
   T  F  2. You should take a drug any time you want.

Page 11

Place an "X" next to those people you should be with when you take drugs.

--- A. friends
--- B. father
--- C. mother
--- D. strangers
List three things that will help drugs help you get better, if you are sick.

A. ________________________
B. ________________________
C. ________________________
ASSESSMENT
(Pages 7-12)

Circle "T" if the answers are true, "F" if the answers are false.

T  F  1. Drugs are given by a doctor or bought in a drug store.
T  F  2. If you are sick, the right drug can help you get better.
T  F  3. Your friends can tell you what drugs to take.
T  F  4. You should only take drugs when a stranger is with you.
T  F  5. Drugs are the only things that makes sickness go away.
You should not take any drug that a friend gives you and
you should not give drugs to a friend.
When you are given a drug, that drug is only for you.

It may not be good for your friend and may even make her sick.
If you take too much of a drug, you might get sick.
Ask your parents to clean out the medicine chest and throw away any old drugs.

Drugs can get stale and will not work the way they should.
ACTIVITY QUESTIONS
(Pages 13-16)

Before you answer any questions below, be sure you have colored and read pages 13-16.

Pages 13 and 14

Circle "T" if the answer is true, "F" if the answer is false.

T F 1. You should not take drugs from a friend.
T F 2. You should give drugs to a friend.
T F 3. A drug given to you is for only you.

Page 15

Draw a picture of how you might look if you took too much of a drug.

Page 16

What should you ask your parents to do with old drugs?

______________________________________________________________

______________________________________________________________
ASSESSMENT
(Pages 13-16)

Draw lines from the question to the answer.

1. Who should you not take drugs from.
   A. Throw them out

2. Drugs you are given are only for who?
   B. Friend

3. What should you do with old drugs?
   C. You
Remember what Kool Kat has told you about drugs. If you use drugs the right way, they will help you when you need them. But if you use them the wrong way they might hurt you. Don't take a chance.
NARROW ADDICTION CONTROL COMMISSION

Howard A. Jones, Chairman
Santiago Grevi
Harold Meiselas, M.D.
Arthur J. Rogers
APPENDIX #2

Communication begins not with speaking, but with listening.

Listening means more than hearing words—it means hearing a person.

We need to facilitate communication and trust-building in classes and group situations.

It is not enough to listen unless you understand what you have heard, and it is of little use to understand unless you can communicate that understanding.

Communication can be nonverbal

Effective communication is direct and honest.

This material excerpted from Wayne County Intermediate School District "DARTE"
both the white and black keys of

the piano to play

"The Star Spangled Banner"

unknown

This material excerpted from Wayne County Intermediate School Distri. "DARTE".
APPENDIX #4
THE WAYS PEOPLE COMMUNICATE

"THE WISE-CRACKER"
Harmless, never destructive.
Always has a remark or story
"that fits right in."

"THE HEAD-SHAKER"
Don't think -- it will possibly work. Closely
identified with The Distractor. "We've tried this before," is the
distinguishing and repetitive call of this bird.

"THE SUPERIOR BEING"
Identified by long beak which he looks down.
"THE WIDE-EYES ENTHUSIAST"

Common name "Eager-Beaver".

Agrees with everything and everybody.

"ALWAYS-VULNERABLE"

"THE BELITTLEER"
Hard to flush - always seeks a good cover. Gives acid edge to all remarks - criticizes every idea and everybody. "Back door bird."

"THE BLOCKER"
Closely identified with HEAD-SHAKER BUT MORE DESTRUCTIVE. Has tried everything before. Not only questions but actually stops all action.

"THE HAIRSPITTER"
Hard to distinguish from Pigeon-holeer. Can't function without definition and detailed cataloguing.
"THE DISTRACTER"
Attention-seeker - cuts in with inconsequential items, whispers to those on right and left. Never sticks to subjects.

"THE SECRETIVE SMIRKER"
Hugging his opinion to himself. Closely resembles the Filitlac.

"THE TALKER"
Member of large family. Always just happens to know everything. Offers to help out and does interminably.
People who deal most effectively with problems they encounter tend to be people who have learned and internalized a PROBLEM-SOLVING PROCESS:

- **PROBLEM** ... identify a problem - gather further information
- **UNDERSTAND AND CLARIFY** ... work with the problem to understand it fully, to know its dimensions, and to clarify it thoroughly
- **ALTERNATIVES** ... identify several ways of responding to the problem
- **CONSEQUENCES** ... look at each alternative to try to predict what would happen
- **ACTION PLAN** ... decide on the best course of action on the basis of the information and feelings that have been identified and analyzed.

How can we teach young children and older students these complex thinking and decision-making skills? How can we help them learn to put together the thinking and feeling aspects, the intellectual and emotional aspects, of themselves for effective decision-making? How can we help them learn how to help each other in positive and supportive peer group relationships?

Awareness-building and choice-making situations are useful. We also need to provide experiences and opportunities for children and young people to probe and examine both real and simulated problems, and to think through what they would do. "If I were faced with this problem, what would I do?"

**ONE APPROACH: PROBLEM SITUATIONS**

1. **Pose a problem situation to a group** - a problem story, a "trigger" film or filmstrip. Problems might reflect current social problems, a problem facing a person in a story or novel students are reading, a problem facing a scientist or mathematician. Whatever the problem, it should be open-ended and real.

2. **Spend some time probing the problem** - understanding its nature, clarifying its limits, gathering further information about it, and being sure that all in the group have a common understanding of the "facts" that are available.

3. **Now, have them suggest various ways of dealing with or responding to the problem** - possible "solutions." **BRAINSTORM** - no suggestion should be disparaged discarded, or even discussed at this point. Without comment, write all of the suggestions in a series across the chalkboard. (Initially, it might be best to work with the entire group. As they gain skill in using the process, they can break into small groups to do this step. It is essential, though, to maintain the idea of brainstorming - listing all possibilities without comment and judgment. The sifting and judging comes later. Right now the stress is on the most creative thinking possible.)
4. Taking each of the alternative approaches in turn, ask group members to predict the consequences - predict what might happen if this approach was used. Write predictions underneath each of the approaches.

5. Now, ask each of them, individually, to write down what his personal decision would be - on the basis of the information he has and the thinking they have done together. How would he act, if faced with this problem?

NOTE: This need not, in fact should not, be a laborious, drawn-out exercise. Particularly at the beginning when you are really teaching a group a process this material should be paced smoothly and should involve a fascinating problem. After a group learns the process, they can set their own pace. But don't let them or you get bogged down in some phase of the activity.

6. FURTHER PROBING AND VARIATIONS:

Variation A: Ask students now to consider their individual decisions in light of the seven criteria elements of the valuing process. Ask each to number from 1 to 7 underneath the decision they have written down. Ask them to write down either "YES" or "NO" as you read the seven questions to them:

- Did you make this decision freely - without worrying about what others thought? (Write down YES or NO)
- Did you consider alternatives - did you think about several ways of responding to the problem? (Write down YES or NO)
- Did you consider consequences - what would happen - in relation to each of the alternatives? (YES or NO)
- Are you happy with the choice? Do you prize it? (YES or NO)
- Would you be willing to tell others about your decision? (YES or NO)
- Is this how you would really act? Would you really do this? (YES or NO)
- Would this action be a pattern in your life? Would you act in a similar way repeatedly? (YES or NO)

If you can answer "YES" to six or more of these questions, your decision probably represents a value area in your life. If you can answer "YES" to fewer than 6 questions, you have an indication of your attitudes, interests, beliefs, and feelings, but your value commitments in these areas need further clarification.

Variation B: If students have had experience with "focusing", instead of the above process, you might want to ask them to move into FOCUS GROUPS of 3 to 4 people, and let a focus person in each group talk about the decision he made, what considerations were most important for him, and how he feels about his decision. (See GROUPING - FOCUS GROUPS)

ANOTHER APPROACH - FOLLOWING UP ON VALUES CONTINUUM

1. Pose a problem situation to a group. Have them list alternative responses on a VALUES CONTINUUM.

2. After a number of alternatives (at least 4 to 6 to move beyond EITHER-OR thinking) have been entered on the VALUES CONTINUUM (either at one time or perhaps over a few days so that students are challenged to think of new and appropriate responses), challenge them to turn their attention to consequences - to "what
After possible consequences of each alternative have been predicted, again use each student to write down his decision - his action plan.

3. Students might probe their own thinking and feel about decisions they have made in their VALUES JOURNALS.

EXAMAPLES OF PROBLEM SITUATIONS

...You are a high school teacher. A student in your class tells you the names of four boys in the school who are using heroin. You don't know any of these boys well, but you are surprised that these particular boys are into heroin. As a teacher, what would you do?

...A fourteen-year old girl whom you don't know too well -- usually you both just smile and say "hello" to each other - comes to you at school and says she has taken "acid" a couple of hours ago. She says she is feeling sick and she is frightened, though she looks pretty much like she normally does. She pleads with you not to tell anyone, she doesn't want to get "busted", but she needs your help. What would you do?

...A teacher has observed several students reacting and acting in a bizarre manner -- extreme hyperactivity, periods of withdrawal and depression, some surprisingly angry reactions considering the situations. Other students have reported to the teacher that these students are using drugs, but the students in question have not sought help from anybody. What should a concerned teacher do?

...Your parents have told you that you can have a party and invite about 20 friends, all under 18. Your parents have also indicated that they want no alcohol or drugs at the party, and you have agreed. The party is tomorrow night. Your father has an unexpected meeting and won't be home; your mother "trusts" you and your friends and will probably watch television most of the evening. Just today, one fellow you invited - a guy who is really popular and well-liked - told another fellow who is coming that he would bring the whiskey. What should you do?

WRITE YOUR OWN --

...
Encounters a problem.

Studies the problem.

Considers a variety of solutions.

Takes a good look at values. He must live with his decision.

Makes his decision.

Acts on his decision.

This material excerpted from Wayne County Intermediate School District "DARTE".
Inquiry is a necessary part of decision-making

Consider consequences

Decision making involves intellect as well as feelings

Be non-judgmental - accept thoughts and feelings

Stimulate to do some additional thinking

Make children aware they have made a decision

A child must be able to deal with his decision
Shoes divide men into three classes. Some men wear their father's shoes. They make no decisions on their own. Some are unthinkingly shod by the crowd. The strong man is his own cobbler. He insists on making his own choices. He walks in his own shoes.

S. D. Gordon
VALUE CLARIFICATION SKILLS

Inquiry into values is an important part of the classroom investigation of human interaction. Exploring consequences, that is, finding out whether a preferred alternative at a behavioral point leads toward a desired value or toward a negatively valued consequence.

Stimulate the person to do some additional thinking.

A person cannot take part in the valuing process without developing some values.

Values are inner forces which motivate behavior.

Values play an important role in a person's ability to make thoughtful decisions.

It's all right to have our own feelings and thoughts.

Consider from a variety of points of views, some notions such as fairness, trustworthiness, or justice.

Keep an "open minded" atmosphere in the classroom.
It is not what he has, nor even what he does, which directly expresses the worth of a man, but what he is.

Henri Frederic Amiel
APPENDIX #11

THE PROUD WHIP
SOME MORE EXAMPLES AND SAMPLES

These are not separated for age groups.

1. Tell us something you are proud of strongly believing.

2. What is something you did recently that you are very glad you did.

3. Tell us something you're proud of --
   - that you wrote, or
   - that you have in your wallet or pocketbook, or
   - that you refrained from doing even though all your friends were doing it, even though you wanted to.

4. What are you proud of in your relationships to adults (or young people, in the case of adults in the group)?

5. What thing have you done recently for a friend that you are proud of?

6. What can you say that you are proud of in relation to your attitude toward drugs?

7. What do you do in your spare time that you are proud of?

8. What habits do you have that you are proud of?

9. What thing do you do in relation to people who are different from you that you are proud of?

10. What did you do in class today that you're proud of?

11.

12.

13.

14.

BE SURE THE QUESTION USED IS SOMETHING THAT WOULD BE INTERESTING FOR THE GROUP. ROUTINE OR MORALIZING QUESTIONS OR AREAS ARE INAPPROPRIATE HERE.

This material excerpted from Wayne County Intermediate School District "DARTE".
This program guide provides substance abuse education with an affective focus.

The substance abuse information is provided via short study guides and accompanying activity sheets.

The affective material focuses on four areas: Self-Awareness, Communication Skills, Problem Solving/Decision-Making, and Values Clarification. Appropriate activities and experiences are either provided or cited.

Both substance information and affective activities are provided on a daily basis. However, it is hoped the substance information activities can be incorporated into the content areas, and the affective activities can be done at a more appropriate time during the day.

It is to your advantage to read the entire program guide, including the study sheets, appendix items, and decide which materials are to be duplicated, and when.

</table>
| Day #1     | 1. To provide students with an experience in learning more about their classmates. | 1. **Bumpety-Bump-Bump** (5 to 10 minutes)  
  The group forms a circle, and each person makes sure he knows the name of the person on either side of him. One person goes to the center of the circle and begins to walk slowly around the inside of the circle, facing each person as he passes. At any point, he may stop in front of a person, point to him, and say, "Right Bumpety-Bump-Bump," or "Left Bumpety-Bump-Bump." By the time he has completed his statement, the person he has chosen must say the name of the person to his right or left, depending on the direction given. If the name is given correctly before the "pointer" has completed the statement, the "pointer" continues around the circle, choosing someone else. If the name is not given in time or is given incorrectly, that person becomes "it" and the "pointer" joins the circle. |
<p>|            | 2. To orient students to this unit of instruction.                          | 2. In your own way, communicate to your students that during the next three weeks, they will be involved in activities and experiences that will provide them with specific information regarding the history, use and abuse of substances. They will also be involved in experiences that will teach them more about others and themselves. |</p>

### Objectives

2. To review study sheet #1 and activity sheet #1.

### Activities

6. Review study sheet #1 and have students answer activity sheet #1.

- Activity sheet #1--Answers
  - 1. Witch doctor
  - 2. Seven dwarfs
  - 3. Religious
  - 4. Drug history
  - 5. Tribe
  - 6. Pain
  - 7. Spells
  - 8. Potions
  - 9. Demons
  - 10. Tribe
  - 11. Fairy tales

7. Discuss further as needed, i.e., vocabulary.

8. Additional activities, based on class's interest, skill, and need.
   - a. Oral true-false quiz.
   - b. Listening station activity.
   - c. Films/Slides/pictures/records
     1) Tribes, witch doctor, voodoo.
     2) Snow White--discuss spells.
     3) Sleeping Beauty--discuss spell potions, etc.
   - d. Have students create puzzle of their own like activity sheet #1.
   - e. Have students draw picture depicting study sheet #1 and have students answer activity sheet #1.

(Note: you can use an overhead projector for this by making a transparency!) The answers are as follows: Down Across 1. cocaine 1. coca plant 2. poppy plant 2. heroin 3. poppy plant 3. morphone 4. addiction 4. narcotics 5. addiction 5. hypodermic 7. opium 7. civil war 8. opium 8. orient 9. civil war 9. civil war 10. orient 10. civil war 11. narcotics 11. narcotics 12. habit 12. habit 4. With class, discuss any questions they may have; clarify terms; etc. File completed homework assignments in student folders.</td>
<td></td>
</tr>
</tbody>
</table>
Day #5

FOCUS

3. To provide additional instruction regarding physical and psychological effects of narcotics.

OBJECTIVES

1. To introduce the concept of communication.

ACTIVITIES

5. With class, discuss pictograms (activity sheet 2B), as they provide follow-up information regarding narcotics.

a. Opium war (social studies)

b. Use of morphine in Civil War (science and social studies)

c. Marco Polo (social studies)

d. Incas of Peru (social studies)

7. Lead class in discussion of "habits" and "addiction," but not drug related—e.g., personal hygiene habits, craving certain foods, waking up, etc. How do we get into a habit? How can we break a habit?

1. Provide students with a brief description of what communication is, types (e.g., written, oral, pictorial, nonverbal), uses and its importance in relations between people (for your reference, refer to Appendix #1 and #2.

2. Duplicate Appendix #3 and provide each student with a copy. Spend sufficient time discussing each of the communication models presented.

<td>Day #9</td>
<td>1. To provide students with activities and exercises that identify and develop decision-making and problem-solving skills.</td>
<td>FOR YOUR INFORMATION&lt;br&gt;People use a variety of ways to solve problems and reach decisions in their everyday lives. The following strategies and activities highlight several of those ways. It is important for students to actively participate. It is even more important, however, for you to discuss with the class how their decisions were made or how their problems were solved. (See Appendix 4-, Problem Solving Process.) The suggestions provided are only a frame of reference. You are encouraged to develop your own variations. (See Appendix #8 for student variations.)</td>
</tr>
</tbody>
</table>
### Day #9

1. Based on the above, provide students with a thorough but brief introduction of what the problem-solving process is.
2. *Values Clarification, Strategy #37: Unfinished Sentences*, page 244.
   - Indicates relative ability of students to deal with a minimally structured problem-solving situation.
3. Duplicate sufficient copies of Study Sheet #5 and Activity Sheet #5A.
4. Distribute to students. Provide needed information so that students can do assignment.
5. Assign Activity Sheet #5A as either an in-class assignment or as a homework assignment.

### Day #10

1. To provide students with a model highlighting effective problem-solving approaches.
   a. Ask for three volunteers to participate in an activity. Ask that they leave the room. (They will be builders.)
   b. Ask for three additional volunteers to help the builders.
2. To provide students with information regarding the hallucinogens.
Focus
Day #10
(Cont.)

Objectives

Activities

c. Explain to the entire group and the builder's helpers that in helping people solve problems:
   1. We can be too responsible, e.g., we can take over and do all the work for them.
   2. We cannot be responsible enough, e.g., we can be there but not give help.
   3. We can be just responsible enough, e.g., we can really try to help them.

Explain, that through this activity we might be able to find out which approach is the most helpful in terms of helping people.

d. Give out one card to each helper. Tell each helper that he is to play his role as described on the card, but not to tell anyone which role he has.

Card #1--I'm the expert. I know what a tower is supposed to look like. I'm going to make sure you're going to build a good tower. I'll show you how to make a good tower.

Card #2--I couldn't care less what you do. I won't be rude to you so I'll give you a little help, but don't bother me too much.

Card #3--I want to help you solve your own problem. If there is anything I can do to help you build your tower, I'd like to. I'm confident in your ability to build a tower.

5TH GRADE PROGRAM GUIDE

STUDY SHEET
AND
ACTIVITY SHEETS
The history of drug use and abuse dates back to before recorded time. Early man used some form of drugs to heal wounds, and in trying to cure various aches and pains. The first real use of drugs actually came about when man first started to live in groups. In this situation, men were given certain tasks to do, and one man became the witch-doctor and/or the medicine man. The medicine man used drugs in connection with events that went on within the tribe.

Early man thought that pain was caused by demons, and that the only thing that would get rid of the demon, was some kind of strong potion (a drug). However, early man did not limit himself to the use of drugs in connection with pain, he felt that all things had something to do with demons, and that magic spells and potions would make the demons go away. So, man used drugs for pain, as well as to prepare for battle, for medical reasons, and for religious purposes.

The idea about potions and evil spirits was not limited to these early groups of men. There are several examples in literature about drugs being used for one reason or another. Two very good examples appear in the fairy tales such as Sleeping Beauty and Snow White and the Seven Dwarfs, where potions were used by the "evil characters" to reach their goals.
ACTIVITY SHEET #1

Fill in the blank spaces by answering the questions below.

1. ______ D ______
2. ______ R ______
3. ______ U ______
4. G ______

5. ______ H ______
6. ______
7. S ______
8. ______
9. ______
10. ______
11. ______ Y ______

1. Another name for medicine man.
2. Snow White's friends.
3. An early purpose of drugs.
4. The first real use of drugs came about when man started living in ______.
5. The title of this study sheet.
6. A use for drugs now, and in the past.
7 & 8. These two things would make #9 go away.
9. Early man thought that pain was caused by ______.
11. Sleeping Beauty and Snow White are ______ ______.
The first true drug of abuse was **opium**. This drug was well known among the ancient Sumerian, Greek, and Roman civilizations. This fact was carried forth in writing and in the literature of these people. An ancient Sumerian tablet mentioned a joy plant, which as described, seems to be the opium poppy plant. Also in his story about the Trojan Wars, Homer writes in his *Iliad*, about a potion which appears to have exactly the same effects as opium. The knowledge of this drug was well known for ages, but its awareness by people in general had not reached such a peak as it has, until the past few centuries.

Europeans helped in increasing the knowledge of this drug in the Orient. Chinese emperors worried about the situations. They tried to stop the British import of opium into their country, but were unsuccessful. Finally, the Chinese and the British fought a war over China's rights, which included the opium import, and it was known as the "Opium War".

The British won the war, and the problem became worse. In 1911, both sides agreed to stop the British shipments of Opium from India, where it was originally grown. However, it was too late to solve the problem. The poppy plant was now being grown in China in large quantities. China tried to put a stop to this, but she is still unable to this day.

America was not free from the problem either. Opium was here while we were still colonies of England. However, it was not until **morphine**, a drug of opium origin was discovered, that the problem of drug addiction really began to get worse.

There are two things that helped this problem spread:

1. Books were being written about how great it was to use drugs, and about the fantastic dreams they had while they were using them.

2. More important than the first was the Civil War.

During this war, morphine was used to stop the pain of wounded men. It was used so much, it soon became a habit, which meant that the men could not stop taking it, so these men were called addicts. At first the doctors felt that if they used the newly invented hypodermic syringe (needle), instead of the pill form, the drug would not reach the stomach, and thus it would not become addicting. This they later found was in error, since it only made the addiction worse.

Through research the doctors discovered a new drug. Its purpose was to cure opium and morphine addicts. This drug was **heroin**. Scientists soon discovered that this drug was not a cure for opium and morphine addicts, but that it was more powerful and addicting than any other drug yet discovered.
Another drug called COCAINE was used to try to cure the addicts. This drug was used by the ancient Incas of Peru. It comes from the coca plant, and was used by the priests of this early civilization. The natives of this region still use this drug to keep their bodies going at a fast pace. They roll the coca leaves up into balls, and chew it until all the juice from the leaves is out. The miners of Bolivia use it for what they think keeps them strong. But, in actuality, it is used to keep them working longer hours in the mines. This is not to say that this is legal or non-habit forming, because cocaine itself is just as habit forming as the other drugs already mentioned, as well as illegal. Therefore, scientists still had no cure for the addicts, they merely presented more drugs for people to get addicted on, quite by accident.
ACTIVITY SHEET #2A

Fill in the crossword puzzle by answering the questions below. (Odd = down; Even = across—except #1)
DOWN:
1. Drug used by Incas of Peru.
3. This seemed to like the Sumerian "Joy Plant". (2 words)
5. Morphine caused drug __________.
7. The first true drug of abuse.
9. This helped drug addiction spread. (2 words)

ACROSS:
1. Cocaine comes from this. (2 words)
2. A drug to cure opium and morphine addicts.
6. The title of Study Sheet #2.
8. _______ syringe (needle).
10. Where Europeans learned of drugs.
ACTIVITY SHEET #2B
NARCOTICS

Read the following picture story about effects of narcotic drugs which are made from opium.

1. Narcotics which from O+P+UM actions of the down the actions of the brain and nerves. They cause a

This material taken in part from Dade County Curriculum Bulletin 4D-LP-75.
1. O+P+M is a narcotic drug. It is from the O+P+M of the O+P+M +E

It also from . All of the O+P+M8 8 have AB + OUT

the same effects.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-75.
3. Cocaine comes from coca. It is prescribed by + S in the 2 day. This is + cause the drug is so + us.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-75.
Two other kinds of drugs which are used in the United States, and which are
often abused, either by accident or on purpose, are the "DOWNERS" which are
called barbiturates, and also the "UPPERS" which are the amphetamines.

The more common forms of barbiturates are sleeping pills and pain killers.
Both forms of barbiturates are safe, when prescribed by a doctor. Taking
barbiturates too often or by taking too many at one time (not following a
doctor's prescription) can be very harmful. When misused, barbiturates can
be more harmful than heroin. They are more addicting and cause more deaths
than heroin. About one out of every four poison cases received in hospitals
have abused barbiturates.

The "UPPERS" are the opposite of the "DOWNERS". While the downers make you
sleepy and very tired, the uppers make you nervous and keep you awake longer
than you normally would or even could. This drug taken as prescribed by your
doctor is fine, but taken by the wrong person in the wrong way, they can be
very dangerous. Some people have been known to get in the habit of taking
either downers and/or uppers, and when this does become a habit, these people
are called "pill poppers".
ACTIVITY SHEET #3A

After reading Study Sheet #3, answer the following questions by choosing the best answer, and writing it in the space to the left of the number.

____ 1. A barbiturate is
   o. an amphetamine
   p. a "downer"
   q. heroin

____ 2. "Downers" make you
   r. sleepy
   s. nervous
   t. stay awake

____ 3. Barbiturates are safe when
   c. taken with "uppers"
   d. given to you by a friend
   e. prescribed by a doctor

____ 4. How many poison cases are caused by abusing barbiturates
   s. one of four
   t. one of two
   u. one of ten

____ 5. When someone is in the habit of using barbiturates and/or amphetamines, they are called
   b. "down dropper"
   c. "pill popper"
   d. "up user"

____ 6. A common form of barbiturate is
   r. sleeping pills
   s. diet pills
   t. amphetamine pills

____ 7. Which of the following can be more harmful than heroin
   g. narcotics
   h. opium
   i. barbiturates

____ 8. This activity is about
   a. doctors
   b. prescription drugs
   c. drug abuse
9. When taking barbiturates or amphetamines, not following a doctor's prescription

   e. can be harmful
   f. can cause habits and addiction
   g. can poison you

BONUS—What word do the letters you wrote spell?
1. Look at the five pictures below. Then read the five statements about the pictures. Each statement tells about one of the pictures. Write the letters A to E on your paper. Next to the letters write the number of the statement that tells about the picture.
1. During the first 8-12 hours, the abuser appears to get better.

2. Then the abuser has headaches and is sick to his stomach.

3. The abuser may faint when he tries to stand.

4. After 36-72 hours, the abuser may have convulsions.

5. Then the abuser may sleep for some time.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-65.
Look at the drawing below. The drawing shows a pill cycle. Copy the drawing on a large piece of art paper. Then draw or cut out six pictures from magazines to show how a person might feel before he takes each drug and after he takes each drug. Paste or draw the pictures in the appropriate boxes on your drawing.

Recently there have been many arguments over marijuana. Scientists have not been able to agree as to which other drugs marijuana is most like, if it is like any other drugs at all.

Like the drugs discussed earlier in the story, marijuana is not a new drug. It was used by the ancient Aztecs of Mexico to excite their people so that they were not in complete control of all their doings. Marco Polo also wrote about a group called "Hassan and his Assassins", who before they robbed, or killed anyone, used this drug. They referred to it as it is known in the East, hashish. Originally, the hemp plant, where this drug comes from, was burned in a fire with all the people around it, and the smell was what put them under its influence. However, as it was introduced in the United States by Mexican laborers who came here to work, the leaves are rolled and smoked as cigarettes.

When smoked, marijuana quickly enters the bloodstream. The blood carries the drug throughout the body. It may cause--

...the blood pressure to rise;
...the heart to beat faster;
...the eyes to become watery;
...the mouth and throat to become dry;
...the user to be hungry;
...the blood sugar to rise;
...the body processes to speed up;
...the pupils of the eyes to become larger;
...the skin to become sensitive to the touch;
...the skin around the eyes to become red.

These effects are usually felt in about fifteen minutes. The effects of smoking marijuana can sometimes last up to twelve hours. Scientists are working to discover other effects on the body caused by smoking marijuana.

The strength of marijuana and the way it is mixed cause the user to experience different effects. The strength of the drug depends upon where it is grown. For example, the marijuana used in the United States comes mostly from Mexico and is weaker than marijuana grown in Asia.

The effects of marijuana are unpredictable. This drug affects each person in a different way. Some people feel happy; some feel sad. A person may become very excited. Another user may become very quiet. Other users may feel nothing. Some users may see, hear, feel, taste, or smell things that are not there. He may see the things around him in a different way. Sights and sounds may be different. Time may seem to pass slower or faster than usual. Distances may appear shorter or longer. The user may become confused or not know where he is. He may lose his self-control. A person using marijuana may follow suggestions more easily than usual. He may develop a psychological dependence on marijuana, or think he needs the drug. These effects can cause the user to harm himself as well as others.

*Parts of this information from Dade County Curriculum Bulletin: "Marijuana" (4D-LP-25).
This drug is also known as pot, joint, etc., and the condition of being under its influence is called "getting stoned". The actual dependence of this drug has not been proved.
ACTIVITY SHEET #4A

ACROSS:

1. He wrote about a group called "Hassan and his Assassins."
2. This is the form marijuana is used when it is rolled and smoked.
4. How long the effects of marijuana can last. (number of hours)
5. When someone thinks he needs a drug, he may have developed a psychological ________.
6. A slang name for a marijuana cigarette.
8. The color the skin around the eyes may turn while using marijuana.
10. What the effects of marijuana are.
12. What the blood sugar level will do while using marijuana.
14. Marijuana used in the United States and Mexico is weaker than marijuana grown there.

DOWN:

1. The drug this section is talking about.
3. Marijuana like most other things is not a new ______.
5. Marijuana causes the mouth and throat to become ______.
7. The plant that marijuana comes from.
9. The user of marijuana may sometimes lose his ______-______. (2 words)
11. The pupils of this become larger with the use of marijuana.
13. This was a group of people in Mexico used marijuana to excite their people out of control.
15. The name used in the east for marijuana.
17. Laborers from here brought marijuana into the United States.
19. What the eyes become when using marijuana.
The Aztec civilization also used other drugs. They worshipped some kind of cactus and mushrooms. A drug obtained from the cactus by the Aztec priests, and which is still done the same way today, is the PEYOTE. This drug is taken also to bring about dreams as are the rest. It too is somewhat habit forming and is bad for your system, and the use of it is also illegal.

LSD are the initials of a new and unpredictable drug. These initials stand for lysergic acid diethylamidetartrate-25. This drug, though discovered recently, has created an overnight problem. Part of this problem is due to men such as Timothy Leary and Richard Alpert, who say LSD is great and that everyone should take it. When taken, this drug puts you into dreams, which are called trips. These trips can be very bad because of the damage they have been known to cause. People have no control at all over what they do or say, and have been known to hurt or even kill themselves or others while under the influence of LSD. However, this is not the only bad thing that has been known to happen. Some have had permanent brain damage and have never left institutions. Others have gone into dreams months after taking LSD, and lost control over themselves again as they did when they first took it. It is also known that this drug has a bad effect on your genes (the basic parts of the body), and it can permanently damage these.

LSD and Peyote are members of a very dangerous family of drugs (as was explained earlier), called hallucinogens.

Hallucinogens are dangerous drugs that can cause harmful effects on the user. These drugs affect people in different and unpredictable ways. The effects of the drug on a person depend on the dose he takes and on his own physical and mental condition. He may have any or all of the following effects on the mind. He may--

... have hallucinations (see, hear, feel, taste, or smell things that are not really there);
... have a change of mood;
... change the way he thinks about himself and others;
... lose his memory or be unable to think clearly;
... have illusions (see the world in a different way);
... become confused.

Hallucinogens can also cause many effects on the body. The abuser may--

... have higher blood pressure;
... have more sugar in his blood;
... have a faster heartbeat;
... have faster acting body processes;
... have poor health;
... be sick to his stomach;
... go into shock;

*Part taken from Dade County Curriculum Bulletin "Hallucinogens" (4D-LP-85).
have convulsions;
.. go into coma;
.. die.

Other members of this group include STP, DMT, Psilocybin, Mescaline, etc.
ACTIVITY SHEET #5A

Place the letter in the space provided on the line to the left of the number.

1. A drug obtained from cactus is
   a. Peyote
   b. LSD
   c. Marijuana

2. Timothy Leary says that this drug is great and everyone should take it
   a. Peyote
   b. LSD
   c. Marijuana

3. Hallucinogens can have a bad effect on your
   a. genes
   b. big toe
   c. liver

4. LSD and Peyote are members of which family
   b. prescription drugs
   c. narcotics
   d. hallucinogens

5. Drugs are called hallucinogens because they make you
   s. physically fit
   t. hallucinate
   u. depressed

6. Which of these is not an effect of hallucinogens
   r. hunger
   s. hallucinations
   t. confused thoughts

7. Hallucinogens effect
   g. mind
   h. body
   i. both mind and body
8. While under the influence of LSD, the dreams you have are called
   o. voyages
   p. trips
   q. journeys

**BONUS**—The letters in the spaces to the left of the numbers answer the question—

What using hallucinogens can be __________________________ (3 words).

VOLATILES*

Volatile are chemical substances which give off strong smells and fumes. Fumes are vapors or gases that leave the volatiles and spread out in the air. Volatiles will burn very easily when they are lighted. A few volatiles will even explode. When volatiles are not used properly, they can be dangerous and even cause death.

Here is a list of a few volatiles:

- aerosols (deodorant and hair spray)
- glue
- automatic transmission fluids
- gasoline
- kerosene
- paint lacquers and thinners
- lighter fluids
- cleaning fluids

Many people use volatiles in their homes. If they are used properly, they may be helpful and safe.

*From Dade County Curriculum Bulletin "Volatiles" (4D-LP-35).
ACTIVITY SHEET #6

On the chart, fill in the columns by looking for volatile substances found in your home.

Alcohol. This substance has been labeled the most abused drug in America by the U.S. government. However, its use and misuse is socially acceptable because it can be legally obtained.

Its effects on the person depend on the person, how much he takes, and how often he takes it. The effects can be different every time it is taken.

When a person becomes intoxicated, or drunk, from drinking too much alcohol, he may suffer from some of the following temporary effects. He may--

. . . become confused;
. . . be unable to do many everyday activities, such as walk;
. . . be unable to think clearly;
. . . faint or blackout;
. . . be unable to remember what happened while he was drinking;
. . . have hallucinations;
. . . become unconscious.

Alcohol affects a person's emotions as well as his body. A small amount of alcohol may cause the person to feel some of the following effects. He may--

. . . have a feeling of well-being;
. . . be free from worry or fear;
. . . have a feeling of confidence in himself and in his own abilities;
. . . feel more at home and comfortable with other people;
. . . say and do things he wants to without worrying about what others think.

Tobacco. "Warning: The Surgeon General has determined that cigarette smoking is dangerous to your health." This notice appears on every pack of cigarettes in the U.S. Other tobacco products include cigars and pipe tobacco. This, too is a socially acceptable substance, as its manufacture, sale, and use is legal throughout the world. It does produce a habit, and can cause serious illness and death. It has the effect of calming a person.

Caffeine. The most common forms of caffeine are found in coffee, tea, and cola. When swallowed, it makes the person more alert.

*This material taken in part from Dade County Curriculum Bulletin 45-LP-105.*
ACTIVITY SHEET #7A

Fill in the blank spaces by answering the questions below.

1. __ __ S __
2. __ __ U __
   3. B __ __
4. __ __ __ __ S
5. T __ __ __
6. __ __ A __
   7. __ __ N __ __ __

5th GRADE

PROGRAM GUIDE

APPENDIX
Communication begins not with speaking, but with listening.

Listening means more than hearing words—it means hearing a person.

We need to facilitate communication and trust-building in classes and group situations.

It is not enough to listen unless you understand what you have heard, and it is of little use to understand unless you can communicate that understanding.

Communication can be nonverbal.

Effective communication is direct and honest.
"The Star Spangled Banner"

Let's remember that it takes both the white and black keys of the piano to play.
APPENDIX #4

"THE WAY PEOPLE COMMUNICATE"

"THE WISE-CRACKER"

Harmless, never destructive.
Always has a remark or story
"that fits right in."

"THE HEAD-SHAKER"

Don't-think--it-will-
possibly work. Closely
identified with The Distractor. "We've-
tried-this-before," is the
distinguishing and repetitive call of
this bird.

"THE SUPERIOR BEING"

Identified by long beak which he
looks down.
"ALWAYS-VULNERABLE"

"THE WIDE-EYES ENTHUSIAST"

Common name "Eager-Beaver".

Agrees with everything and everybody.
"THE BELITTLED"
Hard to flush - always seeks a good cover. Gives acid edge to all remarks - criticizes every idea and everybody. "Back door bird."

"THE HAIRSPITTER"
Hard to distinguish from Pigeon-holer. Can't function without precision and detailed cataloguing.

"THE BLOCKER"
Closely identified with HEAD-SHAKER BUT MORE DESTRUCTIVE. Has tried everything before. Not only questions but actually stops all action.
"THE DISTRACTER"
Attention-seeker - cuts in with inconsequential items, whispers to those on right and left. Never sticks to subjects.

"THE SECRETIVE SMIRKER"
Hugging his opinion to himself. Closely resembles the Ballitier.
APPENDIX #4

EXPERIMENT IN COOPERATION: THE SQUARES GAME

PURPOSE:
1. To analyze certain aspects of cooperation in solving a group problem.
2. To sensitize participants to some of their own behaviors which may contribute toward or obstruct the solving of a group problem.

GROUP SIZE: Any number of groups of six participants each. There will be five participants and a group observer/judge.

TIME REQUIRED: Fifteen minutes for the exercise and fifteen minutes of processing.

PROCEDURE:
1. Divide the entire group into small groups of six each.
2. Give the observer for each group a copy of his instructions.
3. Ask each group to distribute the envelopes from the packet they have been given, but the envelopes are to remain unopened until the signal to work is given.
4. The facilitator then reads the instructions to the groups, calling for questions to make sure all participants understand the rules for the exercise.
5. When all the groups have completed the task, the facilitator will lead the process discussion, focusing on feelings more than a relating of experiences and general observations. A report is solicited from the group observers. In conclusion of the processing, the facilitator may want the groups to relate the experience with their "back home" situations.
A set consists of five envelopes containing pieces of cardboard which have been cut into different patterns and which, when properly arranged, will form five squares of equal size. One set should be provided for each group of six participants.

To prepare a set, cut out five cardboard squares of equal size, approximately six by six inches. Place the squares in a row and mark them as below, penciling the letters a, b, c, etc., lightly, so that they can later be erased.

The lines should be drawn so that, when cut out, all pieces marked a will be of exactly the same size, all pieces marked c of the same size, etc. By using multiples of three inches, several combinations will be possible that will enable participants to form one or two squares, but only one combination is possible that will form five squares, six by six inches.

After drawing lines on the six-by-six inch squares and labeling them with lower case letters, cut each square as marked into smaller pieces to make the parts of the puzzle.

Mark the five envelopes A, B, C, D, and E. Distribute the pieces into the five envelopes as follows:

- Envelope A: i, h, e
- Envelope B: a, a, a, c
- Envelope C: a, j
- Envelope D: d, f
- Envelope E: g, b, f, c

Erase the penciled letter from each piece and write, instead, the appropriate envelope letter. This will make it easy to return the pieces to the proper envelope when the group has completed the task.
INSTRUCTIONS TO THE GROUPS

In this packet there are five envelopes, each of which contains pieces of cardboard for forming squares. When the teacher gives the signal to begin, your group is to form five squares of equal size. The task will not be completed until each individual has before him a perfect square of the same size as that held by the others.

Here are some rules that you are to follow, exactly.

1. No member may speak.
2. Members may not ask other members for a piece or in any way signal that another person is to give him a piece.
3. Members may, however, give pieces to other members.

INSTRUCTIONS TO THE OBSERVER/JUDGE

OBSERVER: Your job is part observer and part judge. Make sure each participant observes the rules:

1. No talking, pointing, or any other kind of communication among the five people in your group.
2. Participants may give pieces to other participants but may not take pieces from other members.
3. Participants may not simply throw their pieces into the center for others to take; they have to give the pieces directly to one individual.
4. It is permissible for a member to give away all his pieces, even if he has already formed a square.

As an observer, you may want to look for some of the following:

1. Who is willing to give away pieces of the puzzle?
2. Did anyone finish his puzzle and then somewhat forget he was part of a group?
3. Is there anyone who continually struggles with his pieces but yet is unwilling to give any or all of them away?
4. How many people are actively engaged in mentally putting the pieces together?
5. Who's pulling his hair out?
6. Was there one point when the group began to cooperate?
7. Did anyone try to violate the rules by talking, pointing, or taking pieces?

Excerpted from the Social Seminar Training Institute. NIMH Washington, D.C.
ILLUSTRATIONS OF NONVERBAL COMMUNICATION

This material taken in part from Dade County Curriculum Bulletin 91.
APPENDIX #6
TOWER BUILDING

Purpose

To examine the processes of group task handling communication and decision-making when they are done under the pressures of time and competition.

Setting

This exercise is appropriate for grade 3 and above. It calls for two 20-minute periods, and may be accomplished in a single class period.

Procedure

1. Divide the class into groups of seven and designate two observers for each.

2. Provide each group with the following materials (and nothing else):
   - 6 pieces of thin cardboard (size of newsprint)
   - 20 manila file folders
   - 1/4 ream each of several colors of art paper (size 8½ x 11)
   - 3 newspapers and 2 magazines (any size)
   - 1 ball of string; 1 box of paper clips; 1 role of masking tape
   - 1 roll of scotch tape; 2 pairs of scissors
   - 4 pieces of tissue wrapping paper

3. Describe the task (during the first 20 minute period): using only the materials provided, the task is to build a tower which best characterizes each group.

4. Announce the rules for building the towers:
   a. Tower must be free-standing.
   b. Time allowed for building will be exact; divided into two 20-minute periods, with a five minute warning signal, and a 30-second countdown at the end of each period. For each second taken over the time limit, a point is deducted from the score.
   c. Observers may not participate and must remain silent.
   d. Constructions will be judged by outside "architectural experts" (such as other teachers/students/principal).

5. Give a signal for the groups to begin tower-building; and give the appropriate warning signals in due course.

6. Have the judges, without asking questions of any members of the groups, establish a rank order of the constructions on the basis of originality, creativity, use of materials, and "the message" received.
7. During the second 20-minute period, have the observers for each group summarize the discussion and the action in their groups.

8. In the discussion that follows, raise these questions:

   a. What decision were made about tower design, and who made them?
   b. What other points of decision or crisis were encountered?
   c. Who exercised influence in each group?
   d. Who seemed to have no influence?
   e. How were human resources applied in each group?
   f. To what extent were alternatives explored before undertaking a particular task?
   g. To what extent did each group stay with a plan once adopted?
   h. What similarities and differences in the behavior of individual members were observed in this group in comparison with other groups?
APPENDIX #7

PROBLEM SOLVING PROCESS

People who deal most effectively with problems they encounter tend to be people who have learned and internalized a PROBLEM-SOLVING PROCESS:

PROBLEM ... identify a problem - gather further information

UNDERSTAND AND .. work with the problem to understand it fully, to know its dimensions, and to clarify it thoroughly

CLARIFY

ALTERNATIVES ... identify several ways of responding to the problem

CONSEQUENCES ... look at each alternative to try to predict what would happen

ACTION PLAN ... decide on the best course of action on the basis of the information and feelings that have been identified and analyzed.

How can we teach young children and older students these complex thinking and decision-making skills? How can we help them learn to put together the thinking and feeling aspects, the intellectual and emotional aspects, of themselves for effective decision-making? How can we help them learn how to help each other in positive and supportive peer group relationships?

Awareness-building and choice-making situations are useful. We also need to provide experiences and opportunities for children and young people to probe and examine both real and simulated problems, and to think through what they would do. "If I were faced with this problem, what would I do?"

ONE APPROACH: PROBLEM SITUATIONS

1. Pose a problem situation to a group - a problem story, a "trigger" film or filmstrip. Problems might reflect current social problems, a problem facing a person in a story or novel students are reading, a problem facing a scientist or mathematician. Whatever the problem, it should be open-ended and real.

2. Spend some time probing the problem - understanding its nature, clarifying its limits, gathering further information about it, and being sure that all in the group have a common understanding of the "facts" that are available.

3. Now, have them suggest various ways of dealing with or responding to the problem - possible "solutions." BRAINSTORM - no suggestion should be disparaged, discarded, or even discussed at this point. Without comment, write all of the suggestions in a series across the chalkboard. (Initially, it might be best to work with the entire group. As they gain skill in using the process, they can break into small groups to do this step. It is essential, though, to maintain the idea of brainstorming - listing all possibilities without comment and judgment. The sifting and judging comes later. Right now the stress is on the most creative thinking possible.)
4. Taking each of the alternative approaches in turn, ask group members to predict the consequences - predict what might happen if this approach was used. Write predictions underneath each of the approaches.

5. Now, ask each of them, individually, to write down what his personal decision would be - on the basis of the information he has and the thinking they have done together. How would he act, if faced with this problem?

NOTE: This need not, in fact should not, be a laborious, drawn-out exercise. Particularly at the beginning when you are really teaching a group a process this material should be paced smoothly and should involve a fascinating problem. After a group learns the process, they can set their own pace. But don't let them or you get bogged down in some phase of the activity.

6. FURTHER PROBING AND VARIATIONS:

Variation A: Ask students now to consider their individual decisions in light of the seven criteria elements of the valuing process. Ask each to number from 1 to 7 underneath the decision they have written down. Ask them to write down either "YES" or "NO" as you read the seven questions to them:

CHOOSING
1. Did you make this decision freely - without worrying about what others thought? (Write down YES or NO)
2. Did you consider alternatives - did you think about several ways of responding to the problem? (Write down YES or NO)
3. Did you consider consequences - what would happen - in relation to each of the alternatives? (YES or NO)

PRIZING
4. Are you happy with the choice? Do you prize it? (YES or NO)
5. Would you be willing to tell others about your decision? (YES or NO)

ACTING
6. Is this how you would really act? Would you really do this? (YES or NO)
7. Would this action be a pattern in your life? Would you act in a similar way repeatedly? (YES or NO)

If you can answer "YES" to six or more of these questions, your decision probably represents a value area in your life. If you can answer "YES" to fewer than 6 questions, you have an indication of your attitudes, interests, beliefs, and feelings, but your value commitments in these areas need further clarification.

Variation B: If students have had experience with "focusing", instead of the above process, you might want to ask them to move into FOCUS GROUPS of 3 to 4 people, and let a focus person in each group talk about the decision he made, what considerations were most important for him, and how he feels about his decision. (See GROUPING - FOCUS GROUPS)

ANOTHER APPROACH - FOLLOWING UP ON VALUES CONTINUUM

1. Pose a problem situation to a group. Have them list alternative responses on a VALUES CONTINUUM.

2. After a number of alternatives (at least 4 to 6 to move beyond EITHER-OR thinking) have been entered on the VALUES CONTINUUM (either at one time or perhaps over a few days so that students are challenged to think of new and appropriate responses), challenge them to turn their attention to consequences - to "what
might happen" if you chose and carried out each of these responses. (At least at first, it would probably be most useful to work with the total group, but as they get more skilled, small groups might be put together - each to work on identifying consequences of one alternative.)

3. After possible consequences of each alternative have been predicted, again ask each student to write down his decision - his action plan.

4. Students might probe their own thinking and feeling about decisions they have made in their VALUES JOURNALS.

EXAMPLES OF PROBLEM SITUATIONS

...You are a high school teacher. A student in your class tells you the names of four boys in the school who are using heroin. You don't know any of these boys well, but you are surprised that these particular boys are into heroin. As a teacher, what would you do?

...A fourteen-year old girl whom you don't know too well - usually you both just smile and say "hello" to each other - comes to you at school and says she has taken "acid" a couple of hours ago. She says she is feeling sick and she is frightened, though she looks pretty much like she normally does. She pleads with you not to tell anyone, she doesn't want to get "busted", but she needs your help. What would you do?

...A teacher has observed several students reacting and acting in a bizarre manner -- extreme hyperactivity, periods of withdrawal and depression, some surprisingly angry reactions considering the situations. Other students have reported to the teacher that these students are using drugs, but the students in question have not sought help from anybody. What should a concerned teacher do?

...Your parents have told you that you can have a party and invite about 20 friends, all under 18. Your parents have also indicated that they want no alcohol or drugs at the party, and you have agreed. The party is tomorrow night. Your father has an unexpected meeting and won't be home; your mother "trusts" you and your friends and will probably watch television most of the evening. Just today, one fellow you invited - a guy who is really popular and well-liked - told another fellow who is coming that he would bring the whiskey. What should you do?

WRITE YOUR OWN --

...
Encounters a problem.

Studies the problem.

Considers a variety of solutions.

Takes a good look at values. He must live with his decision.

Makes his decision.

Acts on his decision.
Inquiry is a necessary part of decision-making.

Consider consequences.

Decision making involves intellect as well as feelings.

Be non-judgmental—accept thoughts and feelings.

Stimulate to do some additional thinking.

Make children aware they have made a decision.

A child must be able to deal with his decision.
Shoes divide men into three classes. Some men wear their father's shoes. They make no decisions on their own. Some are unthinkingly shod by the crowd. The strong man is his own cobbler. He insists on making his own choices. He walks in his own shoes.

S.D. Gordon
APPENDIX #11

VALUE CLARIFICATION SKILLS

Inquiry into values is an important part of the classroom investigation of human interaction.

Exploring consequences, that is, finding out whether a preferred alternative at a behavioral point leads toward a desired value or toward a negatively valued consequence.

Stimulate the person to do some additional thinking.

A person cannot take part in the valuing process without developing some values.

Values are inner forces which motivate behavior.

Values play an important role in a person's ability to make thoughtful decisions.

It's all right to have our own feelings and thoughts.

Consider from a variety of points of views, some notions such as fairness, trustworthiness, or justice.

an "open minded" atmosphere in the classroom.
It is not what he has, nor even what he does which directly expresses the worth of a man, but what he is. Henri Frederic Amiel
6th GRADE PROGRAM GUIDE

For Your Information

This program guide completes Intermediate Elementary Substance Abuse Education. Drug abuse information is presented. However, the major focus of this unit, including the drug information presentations, is affectively based.

If you feel that students are deficient in the area of drug abuse information, refer to the fifth grade program guide.

It is to your advantage to read the entire program guide, including the study sheets and appendix items, and decide which materials are to be duplicated, and when.

</tbody>
</table>

People use a variety of ways to solve problems and reach decisions in their everyday lives. The following strategies and activities highlight several of those ways. It is important for students to actively participate. It is even more important, however, to discuss how decisions were reached or how problem situations were solved. (See Appendix #5, "Problem Solving Process"). The suggestions provided are only a frame of reference. You are encouraged to develop your own variations. (See Study Sheet #2 for student handout.)

DIFFERENT WORDS MEAN DIFFERENT THINGS TO DIFFERENT PEOPLE!

This material taken in part from Dade County Curriculum Bulletin 9L.
Many words in the English language vary in meaning according to the profession, age, or home of the speaker. Interpret the following sentences as the people given below would understand them. Write complete sentences for your interpretations. (Sample answers are in parenthese.)

1. Hang five.
   a. lynch mob (Hang five men.)
   b. surfer (Stand on the end of the surf board, with five toes over the edge.)
   c. washerwoman (Hang five pieces of laundry on the clothesline.)

2. Watch the bridge.
   a. engineer (Watch the bridge over the river.)
   b. dentist (Watch the dental bridge in the patient's mouth.)
   c. sailor (Watch the captain's bridge on the ship.)

3. The carriage is broken.
   a. secretary (The typewriter carriage is broken.)
   b. footman (The horse-drawn carriage is broken.)
   c. nursemaids (The baby's carriage is broken.)

4. It's light.
   a. camper (Daylight is here.)
   b. weight-lifter (The weight is not heavy.)
   c. baker (The dough is airy.)

5. My wheels are gone.
   a. teen-ager (My car is gone.)
   b. clock repairman (The clock wheels are gone.)
   c. auto mechanic (The wheels for the car are gone.)

This material taken in part from Dade County Curriculum Bulletin 9L.
Encounters a problem.

Studies the problem.

Considers a variety of solutions.

Takes a good look at values. He must live with his decision.

Makes his decision.

Acts on his decision.

This material excerpted from Wayne County Intermediate School District "DARTE".
Instruct tons:
You are a member of a space crew originally scheduled to rendezvous at a point on the moon. During landing, much of the equipment aboard was damaged, and, since survival depends on reaching the mother ship, the most critical items available must be chosen for the 200-mile trip. Below are listed the 15 items left intact and undamaged after landing. Your task is to rank order them in terms of their importance to your crew in allowing them to reach the rendezvous point. Place the number 1 by the most important item, the number 2 by the second most important, and so on, through number 15, the least important.

1. Box of matches
2. Food concentrate
3. 50 feet of nylon rope
4. Parachute silk
5. Portable heating unit
6. Two .45 caliber pistols
7. One case dehydrated Pet Milk
8. Two 100 lb. tanks of oxygen
9. Stellar map (of the moon's constellation)
10. Life raft
11. Magnetic compass
12. 5 gallons of water
13. Signal flares
14. First-aid kit containing injection needles
15. Solia-powered FM receiver-transmitter

Permission to duplicate the NASA decision-making exercises (Study Sheets No. 3A and 3B) for educational purposes is given in the Handbook of Structured Experiences for Human Relations Training, Vol. 1, by J. Wm. Pfeiffer and John E. Jones. (Iowa City: University Associates Press.)
NASA officially ranked the 15 items in terms of importance as follows:

1. Two 100 lb. tanks of oxygen
2. 5 gallons of water
3. Stellar map (of the moon's constellation)
4. Food concentrate
5. Solar-powered FM receiver-transmitter
6. 50 feet of nylon rope
7. First aid kit containing injection needles
8. Parachute silk
9. Life raft
10. Signal flares
11. Two .45 caliber pistols
12. One case dehydrated Pet Milk
13. Portable heating unit
14. Magnetic compass
15. Box of matches

Permission to duplicate the NASA decision-making exercises (Study Sheets No. 3A and 3B) for educational purposes is given in the Handbook of Structured Experiences for Human Relations Training, Vol. 1, by J. Wm. Pfeiffer and John E. Jones. (Iowa City: University Associates Press.)
Fred and his neighbors went to the Keys for a weekend of fishing, swimming, and boating. Saturday and Sunday were warm and sunny, just the right weather for fun at the beach. Everyone was sorry when five o'clock came because they knew it was time to get ready to go home. By six o'clock everything was packed and everybody was ready to start for home. When they had been driving about forty-five minutes, everyone heard a strange noise. They listened carefully while Mr. Mann slowed the car down and pulled off the road. S-S-S-S. You guessed it! The back tire was going flat. Poor Mr. Mann! He was already tired, and now a flat tire. He got out of the car and began taking all the camping and gear out of the trunk of the car. He finally found the jack and tire tools, but to his surprise he found that the extra tire was as flat as the other one. You can imagine the look on his face! Mrs. Mann, Fred, and his friends sat in the car while Mr. Mann rolled the flat extra tire to town. They waited and waited and waited.

About 8:30 p.m. a service station truck drove up with the station manager, Mr. Mann, and a good tire. They took the flat tire off and put the good tire on the car. Mr. Mann paid the man and thanked him. The man got into his truck and drove back to town.

By this time Mr. Mann was feeling sad and depressed, as well as very tired. Mrs. Mann gave him two of the amphetamine pills her doctor had given her when she needed to lose weight. Mr. Mann took them, and once again they were on their way home.

Fred and his friends fell asleep in the back seat. They were suddenly awakened when the car swerved, jerked, and stopped. Somehow the car ended up in a ditch, and Mr. Mann was saying something about a car almost hitting them.
Questions:

1. Mrs. Mann should not have given Mr. Mann the pills her doctor gave her. Why?

2. Should Mr. Mann have taken those pills? Why?

3. Why should a person not drive after he takes amphetamines?

4. Why do you think the car ended up in a ditch?

5. Would you feel safe if you were riding in a car driven by a person who has been using amphetamines? Why or why not?

6. If you were asked to go on another trip with Mr. Mann, would you go?

7. Could you tell your parents about this experience? All of it or part of it? Why or why not?

This material taken in part from Dade County Curriculum Bulletin 4D-LP-55.
Read the following story. Write the letters a to i on your own paper. From the list of words below, choose the correct word or words and write the term next to the appropriate letter.

hospital  water  pills  groggy  overdose  died  habit  doctor  sleep

Tammy was a beautiful movie star who was in the (a) of taking barbiturates to help her go to (b) at night. One night she went into her bedroom and began to read. About nine o'clock she went to the kitchen to get a glass of (c). She carried her glass back to her room and took two of her sleeping (d). Then she began to read again. Soon she felt sleepy, so she turned out the light and went to bed. She did not sleep soundly, and while she was drowsy, she rolled over and reached for her pills. She was so (e) from the effects of the first pills that she did not know what she was doing. She took more pills than she had intended to take. When Tammy's roommate got in from a date, she found the empty bottle of pills and quickly called the (f), who rushed Tammy to the (g). Tammy had a "close call." She could have (h) from an (i) of barbiturates.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-65.
1. **The Situation:**

Bill and Marty have been friends throughout elementary school. Now that they are in the sixth grade, they feel grown-up. A ninth-grade student gives Bill a marijuana cigarette. If you were Bill, what do you think you would do?

(Select the statement you think is best. You may wish to choose more than one statement or to write an answer of your own.)

- a. Report the situation to the police.
- b. Tell your parents.
- c. Throw the cigarette away and tell no one.
- d. Smoke marijuana by yourself.
- e. Share the cigarette with Marty.
- f. (Write your own answer.)

Explain to the group the reasons for your answer.

2. **The Situation:**

Mary is trying to discourage her friend Alice from trying marijuana. If you were Mary, what would you tell Alice?

(Select the statement you think is best. You may wish to choose more than one statement or to write an answer of your own.)

- a. Marijuana is habit-forming.
- b. Marijuana leads to the use of other drugs.
- c. Marijuana might be dangerous.
- d. Marijuana is more harmful than tobacco.
- e. Marijuana is unpredictable and can be dangerous.
- f. Scientists do not know all there is to know about marijuana.
- g. Marijuana is a powerful drug.
- h. (Write your own answer.)

Explain to the group the reasons for your answer.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-25.
Read the story below. With your class, act out the story and talk about the questions that follow.

Fred had a bad day at school. He was walking home when he saw two boys in his class, John and Ray. They ran up to him and said, "Hey, Fred, come on! Let's have some fun."

Fred stopped and thought for a moment. Then he followed his friends into an empty lot which was full of weeds. In the back of the lot was a hut made out of old wooden boxes. Next to the shack were several empty glue tubes and several plastic bags. John and Ray sat down on the ground next to the hut. Then they pulled out several tubes of glue and three plastic bags. They asked Fred to sit down. Fred said, "No, thanks," and started to leave.

John called Fred a "chicken." Ray joined in with, "You're a scaredy cat." Fred stood there for a moment and thought about all he had heard about the dangers of sniffing—how you could get sick, pass out, or even die.

Ray broke the silence when he said, "Come on, Fred. One time won't hurt you. Put some of the glue into one of the plastic bags and sniff it. You'll feel great."

Fred stood there a moment longer and then squeezed some glue into the bag and put it up to his face. He began to breathe deeply. The last thing Fred remembered doing was taking another bag from Ray. Ray then gave him another and still another bag to sniff.

When Fred passed out, the other two boys ran away. A neighbor who saw the boys go into the empty lot thought they were acting strangely and called the police. If it had not been for the neighbor's call, Fred might have died from lack of air. The police saved his life by rushing him to the hospital. The next morning Fred woke up in the hospital, not knowing where he was or what had happened to him.

Questions

1. What did Fred's two friends mean by "let's have some fun"?

2. Why did the boys go to an empty lot to sniff glue?

3. What made Fred stop and think before sniffing the glue?

4. Why did Fred sniff the glue?

5. Why did the two boys run away?

6. Do you think the neighbor should have called the police?
7. Do you think Fred will sniff glue again?

8. What do you do when you have a "bad day" at school?

9. Have you ever been called "chicken" or "scaredy cat"? How have you reacted? Have you ever called anybody "chicken"?

10. What can you do when you don't want to do things your "friends" want you to?
Activities

All written answers to the activities should be kept in your notebook. Write the number (and letter if needed) for each answer.

Place a sheet of paper over the puzzle and trace it. The following words can be found in the puzzle.

<table>
<thead>
<tr>
<th>DRUG</th>
<th>LSD</th>
<th>VIOLENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Powerful</td>
<td>Panic</td>
<td>Cancer</td>
</tr>
<tr>
<td>Dangerous</td>
<td>Penalty</td>
<td></td>
</tr>
</tbody>
</table>

Find these words and circle them. The words go across, down, and diagonally. For example, the word drug is written diagonally in the puzzle.

STUDY SHEET #9

VOLATILES

Read the story below. In a small group, discuss the ways that sniffing volatiles caused problems in this community.

I am twelve years old. I am in the sixth grade. Most of my friends are older and go to the junior high school. I like to go out with my friends because we have a good time.

Last week we were at our usual hangout when my best friend took some glue out of his pocket. He said we would really have some fun if we sniffed it. We used all the glue and decided we needed some more. No one had any money. Since I was the youngest, they made me go to the drugstore to steal a couple of tubes. They stood outside the store while I went inside.

I walked around the store. I was scared and wanted to run away. If I stole the glue, I might get caught. If I didn't steal the glue, my friends would get me. I walked around the counter to see if they were still outside. They were. I wanted to run away. I walked slowly back to the glue counter. The glue was near the edge of the counter, so I quickly took three tubes and put them into my pocket. I hurried out of the store and, without looking, dashed across the street. My friends followed. As we ran across the street, I heard a car's brakes screeching; then I heard a loud crash. Two cars had run into each other. I didn't stop running long enough to find out if anyone was hurt.

That night I didn't sleep at all. I was too tired to get up on time the next morning. I was late to school and couldn't stay awake in class.

Questions:

1. Do you think that having older friends makes for a good time? Why or why not?

2. Do you do things because the rest of your friends do them? Can you give an example of how you did not?

3. Would you do something you knew was "wrong" because your friends wanted you to? Why or why not?

4. If you did something you knew was "wrong" what would you do about it?

5. Problem: Your working for someone, and while doing something, you accidently break a window. The person you work for would never know you broke it. In order 1-2-3, tell what you would do. . .

   ___ Tell the person you broke the window.
   ___ Go home and talk it over with someone
   ___ Not tell anyone.

This material taken in part from Dade County Curriculum Bulletin 4D-LP-35.
STUDY SHEET #10

NARCOTICS

Read the story below. With some members of your class, talk about the story and answer the questions.

George was twelve years old and in the seventh grade. He had begun sniffing heroin during the summer. He used the money he had saved from cutting lawns to pay for the drug. The heroin cost $3.00 to $5.00 a day. Before long all his savings were gone, and George was developing a tolerance for the drug. As his need for the drug increased, George began giving himself a shot of heroin under his skin. He now had to find a way to get $12.00 to $15.00 a day to buy the drug.

George began stealing money from his mother's purse. When he could not get enough money this way, he began stealing his friends' lunch money. George's need for heroin was increasing each day. Within a month George was giving himself shots of heroin in the veins. He was now spending $20.00 to $35.00 a day on the drug. He could not get enough money to buy the drug, so he turned to other crimes. He began breaking into houses, stealing from stores, and stealing cars. George was always afraid of being caught and sent to prison.

He lost all of his friends and ran away from home because he wanted to be close to the man who illegally sold heroin. He moved in with a group of people who were also heroin addicts. They shared their food, slept on the floor, gave each other shots, and even shared the needles they used to give the shots.

George hadn't lived there long when he got a bad infection—HEPATITIS. He got sicker and sicker. Finally he became so sick that his friends thought that George was going to die. They were afraid. They talked about what they should do with George. They finally decided to borrow a car and take him to another part of town. That night they carried George to the car and drove to the other side of town. They left him on the steps of an apartment house.

An old lady saw George lying on the steps and quickly called the police. When the policeman came, he could see that the boy was very sick. He rushed him to the nearest hospital.

Two months later George was ready to leave the hospital. He no longer had hepatitis and had suffered the pains of withdrawal illness. He no longer had a physical addiction to heroin, but he still thought he had to have heroin again. Yes! He was still psychologically addicted to the drug.

His first day out of the hospital proved to be a costly one. George had forgotten that his body no longer had a tolerance for the drug. When he took a large dose, he felt very sick and passed out. George died that day. He died from an overdose of heroin.
Questions:

1. What did George's addiction to heroin lead him to do?
2. What three kinds of illnesses did George have?
3. How did George get hepatitis?
4. Why did George die of an overdose?
5. What would you have advised George to do about his problem?
6. How do you think George might have gotten involved with drugs?
STUDY SHEET #11
AMPHETAMINES

Read the story below. In a group discussion, talk about what you think is happening to Mary's neighbor. Give reasons for your answers.

Mary's neighbor works at a store near her house. When she comes home in the evening, she sometimes feels tired and depressed. She takes one or two of the capsules that her doctor gave her six months ago when she was trying to lose weight. They help her feel better, and she is able to have a good time with her family. After she puts the children to bed and the house is quiet, she takes two other pills that her doctor gave her three months ago to quiet her nerves. She takes these pills so that she can go to sleep.

Questions:
1. What is happening to Mary's neighbor?
2. Is Mary's neighbor abusing drugs? How?
3. Is it dangerous to take all these drugs? Why?
4. Does Mary's neighbor need all these drugs? Why or why not?
5. What other things could Mary's neighbor do to have a good time with her family, sleep, and feel good?
6. Are the 3 things in #5 Mary's neighbor's problem, or are drugs? What is the reason for your answer?

This material taken in part from Dade County Curriculum Bulletin 4D-1.P-55.
Communication begins not with speaking, but with listening.

Listening means more than hearing words—it means hearing a person.

We need to facilitate communication and trust-building in classes and group situations.

It is not enough to listen unless you understand what you have heard, and it is of little use to understand unless you can communicate that understanding.

Communication can be nonverbal.

Effective communication is direct and honest.

This material excerpted from Wayne County Intermediate School District "DARTE".
APPENDIX #2

Let's remember that it takes both the white and black keys of the piano to play "The Star Spangled Banner".

APPENDIX #3

THE WAY PEOPLE COMMUNICATE

"THE WISE-CRACKER"
Harmless, never destructive.
Always has a remark or story
"that fits right in."

"THE HEAD-SHAKER"
Don't-think--it-will-
possibly work. Closely
identified with The Distractor. "We've-
tried-this-before," is the
distinguishing and repetitive call of
this bird.

"THE SUPERIOR BEING"
Identified by long beak which he
looks down.
"THE WIDE-EYES ENTHUSIAST"

Common name "Eager- Beaver".
Agrees with everything and everybody.

"ALWAYS-VULNERABLE"
Hari to distinguish from Pigeon-hole, Can't function without definition, ICA detailed cataloguing.

"TriF: BEL.1111., ER"

Hard to hash, I've got to all remarks - criticizing every idea and everybody. "Back door bird."

Closely identified with MADAM/MR BUT MORE DESTRUCTIVE. Has tried everything before. Not only questions but actually stops all action.

"THE BLOCKER"

"THE BELITTER"

Hard to flush - always seem a good cop. Giver acid edge to
"THE DISTRACTOR"
Attention-seeker - cuts in with inconsequential items, whispers to those on right and left. Never sticks to subjects.

"THE TALKER"
Member of large family. Always just happens to know everything. Offers to help out and does interminably.

"THE SECURE SMIRKER"
Hugging his opinions to himself.
APPENDIX #4
THREE-MINUTE TEST

1. Read everything before doing anything.
2. Put your name in the upper right-hand corner of the paper.
3. Circle the word "name" in the second sentence.
4. Draw five small squares in the upper left-hand corner of this paper.
5. Put an X in each square mentioned in number 4.
6. Put a circle around each square.
7. Sign your name under the title of this page.
8. After the title, write "yes, yes, yes."
9. Put a circle around sentence number 7.
10. Put an X in the lower left-hand corner of this page.
11. Draw a triangle around the X you just made.
12. On the back of this page, multiply 70 x 30.
13. Draw a circle around the word "paper" in sentence number 4.
14. Loudly call out your first name when you get to this point in the test.
15. If you think that you have carefully followed directions, call out "I have."
16. One the reverse side of this paper, add 107 and 278.
17. Put a circle around your answer to this problem.
18. Count out in your normal speaking voice from 1 to 10 backwards.
19. Punch 3 small holes in your paper with your pencil point here...
20. If you are the first person to get this far, call out loudly, "I am the leader in following directions."
21. Underline all even numbers on the left side of this page.
22. Now that you have finished reading carefully, do only sentences one and two.

This material from NTL Learning Resources Corporation. 1812 K Street, N.W., Suite 305, Washington, D.C. 20006.
APPENDIX #5

PROBLEM SOLVING PROCESS

People who deal most effectively with problems they encounter tend to be people who have learned and internalized a PROBLEM-SOLVING PROCESS:

**PROBLEM** ...
identify a problem - gather further information

**UNDERSTAND AND CLARIFY**
work with the problem to understand it fully, to know its dimensions, and to clarify it thoroughly

**ALTERNATIVES** ...
identify several ways of responding to the problem

**CONSEQUENCES** ...
look at each alternative to try to predict what would happen

**ACTION PLAN** ...
decide on the best course of action on the basis of the information and feelings that have been identified and analyzed.

How can we teach young children and older students these complex thinking and decision-making skills? How can we help them learn to put together the thinking and feeling aspects, the intellectual and emotional aspects, of themselves for effective decision-making? How can we help them learn how to help each other in positive and supportive peer group relationships?

Awareness-building and choice-making situations are useful. We also need to provide experiences and opportunities for children and young people to probe and examine both real and simulated problems, and to think through what they would do. "If I were faced with this problem, what would I do?"

**ONE APPROACH: PROBLEM SITUATIONS**

1. Pose a problem situation to a group - a problem story, a "trigger" film or filmstrip. Problems might reflect current social problems, a problem facing a person in a story or novel students are reading, a problem facing a scientist or mathematician. Whatever the problem, it should be open-ended and real.

2. Spend some time probing the problem - understanding its nature, clarifying its limits, gathering further information about it, and being sure that all in the group have a common understanding of the "facts" that are available.

3. Now, have them suggest various ways of dealing with or responding to the problem - possible "solutions." BRAINSTORM - no suggestion should be disparaged, discarded, or even discussed at this point. Without comment, write all of the suggestions in a series across the chalkboard. (Initially, it might be best to work with the entire group. As they gain skill in using the process, they can break into small groups to do this step. It is essential, though, to maintain the idea of brainstorming - listing all possibilities without comment and judgment. The sifting and judging comes later. Right now the stress is on the most creative thinking possible.)
4. Taking each of the alternative approaches in turn, ask group members to predict the consequences - predict what might happen if this approach was used. Write predictions underneath each of the approaches.

5. Now, ask each of them, individually, to write down what his personal decision would be - on the basis of the information he has and the thinking they have done together. How would he act, if faced with this problem?

NOTE: This need not, in fact should not, be a laborious, drawn-out exercise. Particularly at the beginning when you are really teaching a group a process, this material should be paced smoothly and should involve a fascinating problem. After a group learns the process, they can set their own pace. But don't let them or you get bogged down in some phase of the activity.

6. FURTHER PROBING AND VARIATIONS:

Variation A: Ask students now to consider their individual decisions in light of the seven criteria elements of the valuing process. Ask each to number from 1 to 7 underneath the decision they have written down. Ask them to write down either "YES" or "NO" as you read the seven questions to them:

1. Did you make this decision freely - without worrying about what others thought? (Write down YES or NO)
2. Did you consider alternatives - did you think about several ways of responding to the problem? (Write down YES or NO)
3. Did you consider consequences - what would happen - in relation to each of the alternatives? (YES or NO)
4. Are you happy with the choice? Do you prize it? (YES or NO)
5. Would you be willing to tell others about your decision? (YES or NO)
6. Is this how you would really act? Would you really do this? (YES or NO)
7. Would this action be a pattern in your life? Would you act in a similar way repeatedly? (YES or NO)

If you can answer "YES" to six or more of these questions, your decision probably represents a value area in your life. If you can answer "YES" to fewer than 6 questions, you have an indication of your attitudes, interests, beliefs, and feelings, but your value commitments in these areas need further clarification.

Variation B: If students have had experience with "focusing", instead of the above process, you might want to ask them to move into FOCUS GROUPS of 3 to 4 people, and let a focus person in each group talk about the decision he made, what considerations were most important for him, and how he feels about his decision. (See GROUPING - FOCUS GROUPS)

ANOTHER APPROACH - FOLLOWING UP ON VALUES CONTINUUM

1. Pose a problem situation to a group. Have them list alternative responses on a VALUES CONTINUUM.

2. After a number of alternatives (at least 4 to 6 to move beyond EITHER-OR thinking) have been entered on the VALUES CONTINUUM (either at one time or perhaps over a few days so that students are challenged to think of new and appropriate responses), challenge them to turn their attention to consequences - to "what
might happen" if you chose and carried out each of these responses. (At least at first, it would probably be most useful to work with the total group, but as they get more skilled, small groups might be put together - each to work on identifying consequences of one alternative.)

1. After possible consequences of each alternative have been predicted, again ask each student to write down his decision - his action plan.

4. Students might probe their own thinking and feeling about decisions they have made in their VALUES JOURNALS.

EXAMPLES OF PROBLEM SITUATIONS

...You are a high school teacher. A student in your class tells you the names of four boys in the school who are using heroin. You don't know any of these boys well, but you are surprised that these particular boys are into heroin. As a teacher, what would you do?

...A fourteen-year-old girl whom you don't know too well - usually you both just smile and say "hello" to each other - comes to you at school and says she has taken "acid" a couple of hours ago. She says she is feeling sick and she is frightened, though she looks pretty much like she normally does. She pleads with you not to tell anyone, she doesn't want to get "busted", but she needs your help. What would you do?

...A teacher has observed several students reacting and acting in a bizarre manner -- extreme hyperactivity, periods of withdrawal and depression, some surprisingly angry reactions considering the situations. Other students have reported to the teacher that these students are using drugs, but the students in question have not sought help from anybody. What should a concerned teacher do?

...Your parents have told you that you can have a party and invite about 20 friends, all under 18. Your parents have also indicated that they want no alcohol or drugs at the party, and you have agreed. The party is tomorrow night. Your father has an unexpected meeting and won't be home; your mother "trusts" you and your friends and will probably watch television most of the evening. Just today, one fellow you invited - a guy who is really popular and well-liked - told another fellow who is coming that he would bring the whiskey. What should you do?

WRITE YOUR OWN --

This material excerpted from Wayne County Intermediate School District "DARTE".
Inquiry is a necessary part of decision-making.

Consider consequences.

Decision making involves intellect as well as feelings.

Be nonjudgmental—accept thoughts and feelings.

Stimulate to do some additional thinking.

Make children aware they have made a decision.

A child must be able to deal with his decision.
Shoes divide men into three classes. Some men wear their father's shoes, they make no decisions on their own. Some are willingly shoed by the crowd. The strong man is his own cobbler. He insists on making his own choices. He walks in his own shoes.

S.D. Gordon

This material excerpted from Wayne County Intermediate School District "DARTE".
VALUE CLARIFICATION SKILLS

It is an important part of the classroom investigation of human behavior.
Exploring consequences, that is, finding out whether a preferred alternative at a behavioral point leads toward a desired value or toward a negatively valued consequence.

Stimulate the person to do some additional thinking.

A person cannot take part in the valuing process without developing some values.

Values are inner forces which motivate behavior.

Values play an important role in a person's ability to make thoughtful decisions.

It's all right to have our own feelings and thoughts.

Consider from a variety of points of views, some notions such as fairness, truthworthiness, or justice.

...p an "open minded" atmosphere in the classroom.
APPENDIX #10

SENTENCE COMPLETIONS

1. Having to do things in school that don't seem interesting makes me ______
2. When the teacher criticizes my work, I _____________________________
3. When I speak in front of the group I ________________________________
4. For me, learning to be good in sports is _____________________________
5. Giving oral reports makes me ________________________________
6. Having to do what adults say all the times makes me __________________
7. Learning to be good in a game that requires one to be alert and quick, rather than big and strong, is for me a ____________________________
8. I always say things to girls that ________________________________
9. Talking to other boys makes me feel ______________________________
10. When I watch one of my best friends winning in track events I _________
11. In sports I __________________________________________
12. I feel that working on things for which I will get no credit __________
13. The thing I like to do best in my spare time is _______________________
14. When I work in groups I _______________________________________
15. Having other people evaluate my work makes me feel ______________
16. Noisy rooms make me feel ______________________________________
17. I think that people who can't do very good school work ______________
18. Most of the time my father _______________________________________
19. I think that writing stories is a way to ______________________________
20. My mother usually ____________________________________________
21. Because I think I'm not as smart as some of the other children I

22. I think I can be better than others

23. I think taking part in extracurricular activities is

24. I watch how well the other boys get along with one another and

25. When I read a good book I

26. When I talk about other boys I

27. The most exciting ideas to me are

28. I think trying to keep my mind on school work is

29. In relation to my class, I often think of myself as

30. The thing that most interests me is

31. I think my parents

32. Not having others notice me makes me feel

33. I think the best way to get along with the teacher is

34. Because I'm the smallest boy in the room I

35. I feel having a special job in the room would

36. I have the feeling that I don't fit into the group because

37. When other people's ideas are different from mine, I

38. When the teacher disagrees with me, I

39. I feel the most important thing in getting along with adults is

40. The thing that would make me feel the most self-confident is

41. I have decided that the best way to get along with other children is
42. I want adults to understand that ____________________________
