*Aesthetic Education; Art; Curriculum Development; Curriculum Guides; Fine Arts; Humanities; Humanities Instruction; Interdisciplinary Approach; Literature; Music; Secondary Education

Intended to assist in the development of humanities programs on the secondary level, this guide contains a rationale for teaching humanities, instructional objectives from the U.S. Office of Education, definitions of the concerns of the humanities, a message to teachers of the humanities, and three approaches to teaching the humanities. The three approaches suggested are the conceptual approach, which is divided into two units to discuss music, art, and literature under the headings of "Man Seeks the Divine," and "Man Seeks Social Order"; the elements approach, which is subject oriented (art, music, and literature); and the chronological approach, which deals with the humanities individually by periods. Supplementary references are given at the end of each section. (LL)

FOREWORD

This publication, THE HUMANITIES: A COMPENDIUM FOR TEACHERS IN THE METROPOLITAN PUBLIC SCHOOLS, NASHVILLE, TENNESSEE, is intended to encourage and offer direction in the development of humanities programs on the secondary level.

Along with the consideration that has been given to the selection of materials, suggestions have been made as to methodology of approach; however, the challenge and the success of the programming will depend on the individual teacher or teaching team involved in evaluating the classroom situation and meeting the needs of the particular students.

While teaching as a team is considered best, it is the hope of the committee that many teachers will feel the urge to participate in the development of a successful program.

the Humanities Committee
RATIONALE

The lives of men reflect an infinite pattern of change. Yet, within each pattern there are subtleties of thought and emotion which reflect a unity between the man of the past, the man of the present, and, inevitably, the man of the future.

Frequently educators expose their students to fragmentations of man's creativeness and endeavors, never allowing their pupils the satisfaction of recognizing man as a totality. The humanities approach to learning reveals the beauty, vitality, and ingenuity of the human life that has intrigued the artist, the musician, the historian, and the poet for centuries.

Such an approach can only be pursued by one who is not only well-informed, but who savors the richness of sound teaching and effective learning--both of which must result in the fruition, the permanent betterment of the student.

The humanities approach leads the student to consider values. It establishes an awareness of freedom and responsibility. The student learns that, within limits, men have choices among alternatives; that these choices should be made carefully and thoughtfully; that making a choice is an act; and that acts have consequences.
INSTRUCTIONAL OBJECTIVES IN THE HUMANITIES

from U. S. Office of Education

INSTRUCTIONAL OBJECTIVES

To introduce all students (including the vocationally minded who will not go beyond high school) to the study of man—his nature, the full development of his faculties, the realization of his aspirations, and the securing of his well being.

To help the student come to know himself, to understand what has shaped his beliefs, attitudes, and fortunes, and to develop a critical sense which will allow him as an individual to select and preserve the best in human societies.

To develop in the student an attitude toward life which centers on the inherent dignity of each individual human being.

To help the student reconcile freedom with social control.

To cultivate his understanding of the unresolved conflicts and struggles that have persisted throughout human history.

To develop his understanding of how social relations between different segments of society influence the form and content of literature and the arts.

To develop in the student an understanding of how language shapes ideas within a culture and is at the same time an expression of that culture.

To give the student the experience of personal involvement with ideas that have moved and shaped human societies.
DEFINITIONS

The humanities deal with man's awareness and response to the human situation.

The humanities are concerned with the responses of man expressed through many different media.

The humanities involve man's ultimate questions, his search for answers, and his formulation of values.

The humanities explore and illuminate that which is human and humane.

The humanities present man in his present, looking at the past and facing the future.

The humanities deal with the behavior of the human mind and human emotions.

The humanities show ways in which man has attempted to create form out of chaos.

The humanities work toward "a solution to the problem of existence."
A MESSAGE

This guide is designed as a resource for suggested approaches and materials. The selection and use of approaches and of materials are entirely dependent upon the particular situation. It is the responsibility of the teacher to determine what he can expect to elicit from his students and to select the material and the approaches accordingly.

The three approaches suggested in this guide are the conceptual, the elemental, and the chronological. Lists of materials which might be appropriately used with each approach are given, but materials and ideas for presentation can be drawn from any source.

The lists and suggestions offered here are not exhaustive; the categories are not restrictive. The materials and suggestions can be used in numerous ways. There are as many different ways of approaching a humanities study as there are individuals to devise them.

Additional approaches which have been utilized in other humanities programs include: Culture Epochs, Great Themes, Great Works, Allied Arts (consumer and performer), Cultural History, Basic Concerns Shared by All Men, and American Studies.

1 CONCEPTUAL APPROACH
21 ELEMENTAL APPROACH
37 CHRONOLOGICAL APPROACH
MAN'S SEARCH FOR ORDER

OVERALL OBJECTIVE  To increase awareness and understanding of man's basic searches by examining the values which have determined man's pursuits and by studying the medium through which man chooses to express his concerns.

UNIT I: MAN SEEKS THE DIVINE

OVERALL OBJECTIVE  To create an awareness of the timelessness and universality of man's basic searches.

SPECIFIC OBJECTIVES  (1) To provide opportunity for developing an appreciation and knowledge of cultural traditions, and to discover a means of understanding other cultures and other civilizations.

(2) To engender a spirit of purposefulness in examining the personal relationship between man and his God, and the individual's concept of and response to this kind of relationship.

CONCEPT  Man's relation to the powers of the universe appears in three forms: as participation, as religion, and as world religion.

For purposes of this concept, participation, religion, and world religion assume
certain characteristics:

Participation is a purely physical bond. Through his emotions, through his sensations, and through magic, man merges with his ancestral and totemistic demons.

Religion is a personal, physical and mental relationship. In religion, man for the first time faces his life-giving principle in the deity per se, detached from its human descendants. Man differentiates and disconnects himself from his life-giving principle, and at the same time, reconnects himself with it mentally. It still contains the physical bond of participation, but goes beyond the physical, biological bond.

World religion, or profession of faith, is a purely spiritual relationship. The concept of world religion is the profession of a universal god as creator, lord and savior, who is no longer a biologically related ancestor. The connection, sprung of faith and of confidence, constitutes the sole basis of man's allegiance to God. World religion is not religion in its original sense; it is a creed, a spiritual profession of faith.

Music, found in all civilizations, appeals to the mind of man. Music is accepted as a vital means of self-expression and is a means of expressing emotions. It can be a vital part of every man's worship and experience. Through music, man has been led to see his responsibility to God and to his fellow man. In 300 B.C. Aristotle said: "Since music has so much to do with molding character, it is necessary that we teach it to our children."

Man's recognition of the benefits of music has been evidenced through the ages: Pagan supplications included the "Kyrie Eleison," sacred ceremonial dances were used to praise a god or ruler, professional mourners wailed a noisy farewell to the dead, Pharaoh's courtiers awakened him by singing a hymn to the sun, and stringed and wind instruments were used in temple worship.

Compositions that have been in-
Music played an important role in the worship of God by the Hebrew people. The story of Jubal tells the origin of this music. Numerous references to music are found in the Old Testament: Genesis 4:20-22; 31:21; Exodus 15; Leviticus 23; 25; Numbers 10:10, 31; Joshua 6:4-5; Judges 5; I Samuel 10, 18; I Chronicles 25; Psalms 150; and Song of Solomon.

Music historians trace the first important period of Christian church music from the time of Constantine's recognition of Christianity in 315 to Pope Gregory in 590. The Temple services were patterned after the services in David's time. The text of Psalms could well have been furnished for the Jewish liturgical chants.

New Testament references to music also were made: I Corinthians 13 and 14; Matthew 9 and 26; Revelation 15; John 4; Ephesians 5; Colossians 3; Acts 4 and 16; I Timothy 3; and Luke 1.

The Roman church brought forth a body of Latin hymns and organized the beginning of music for Western civilization. Great contributors to this development were Ambrose of Milan and Gregory of the Roman Schola Cantorum. Pope Gregory I (590-604) was responsible for the organization of the church's music. He selected from the mass of traditional music a grand collection of melodies suitable for Christian worship.

Earliest musical liturgy used by the Christian church came from the East. Not until the seventh century A. D., when the Roman Catholic church adopted Latin as its official language, did the Roman liturgy begin to deviate from the Grecian form and language. Finally there were three parts of the liturgy: the Kyrie Eleison, Gloria in Excelsis Deo, and Sanctus. All were set to simple chants and sung by the congregation. The musical basis for this liturgy was
the plainsong.

Composers in music for the church continued to create for man's pleasure. From the Gregorians came "Concerto Gregoriano" by Respighi; "Haeas Dies," Easter chant; "Hymns of Jesus," Gustav Holst; and Third Symphony, Paul Creston. "Kyrie Eleison" was a seventeenth century plainsong.

Other songs from the Old and New Testaments were "Missa Brevis" and "Missa Papae Marcelli" by Palestrina; "O Magnum Mysterium" and "O Quam Gloriosum," Victoria; "Missa Brevis in Tempore Belli," Kodaly; "Symphoniae-Sacre," Gabrieli; "Tl Deum in C Major," Britten; "Stabat Mater," Rossini; Choral Preludes, Reger; Choral #3 in A Minor, Caesar Franck; The Crucifixion, Easter Cantata; "Seven Words from the Cross," Stainer.

"A Mighty Fortress Is Our God" became a musical call to the Reformation. A man named Martin Luther provided leadership in changes that had a great influence on life and music.

Significant changes effected were (1)a German mass from the Latin, (2)chanting of the mass, (3)polyphonic music to the tunes of Gregorian chants, (4)congregational singing. Many hymnals were published by Luther.

The Anabaptists found the leadership in men as Conrad Grebel, Felix Manz, and Wilhelm Reublin. Their doctrines and martyrdoms were expressed in Anabaptist hymnody. The main sources of their tunes were liturgical, pre-Reformation German sacred songs, and folk songs.

Music held an important place in the life of colonial America. Their books of Psalms included The Pilgrim Psalter, The Bay Song Psalter, New England Psalm Singer and The Sing Master's Assistant by Billings; and The Selected Harmony by Andrew Law. Lowell Mason became known as the Father of American Church Music. The singing school served
Music of the gospel song should stem from a vital Christian experience in order to induce such experience in the hearts and lives of worshippers. A gospel song must stand the test of time. Isaac Watts, a prolific hymn writer, wrote 760 or more hymns. William Cowper and John Newton revived many hymns, but wrote many on their own. Dr. George Pullen Jackson collected and arranged 550 folk hymns.

The American Baptist hymnal had two principal sources: the English hymn writers and American folk writers. The two sources of tunes were the standard psalms Americanized and English folk tunes. Early Baptist hymnody included The Psalmist by Lowell Mason and Dr. Samuel Smith, and The Psalms and Hymns by Isaac Watts.

Examples of hymnody of the South were A Selection of Hymns from Various Authors by John Courtney; Manley's Baptist Psalmody by Basil Manley, Jr.; Psalms and Spiritual Songs; and Broadman Hymnal.

The Methodist church had its beginning with John and Charles Wesley. They were sent by the Anglicans to help stabilize the Georgia Colony. A collection of Psalms and hymns was printed in Charlestown, South Carolina, in 1737.

Other Methodist musical literature flourished through the years: The Pocket Hymn Book, Collection of Hymns for Use in the Methodist Church, Tune Book of the Methodists, Episcopal Church South, and The Methodist Hymnal.

Presbyterians received the spiritual heritage of John Calvin and the musical heritage of the psalter (Puritan psalter and Psalms of David in English Meter by Francis Rous). The Scottish psalter was also based on Rous's psalter.

The development of the Christian churches and the churches of Christ brought about new recommendations for music in their worship experience.
"Thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above, or that is in the earth beneath, or that is in the water under the earth" Exodus 20:4.

The reputation of the old Hebrew musicians was considerable and the evidence of their skill as lyric poets is manifest in the Old Testament and elsewhere, but their legacy of artistic achievement is so small it is almost nil.

Aside from the engraving of gems for seals and signets, and the carving of ivory, there is no decorative work of distinction. There is a noticeable absence of representational art, either painting or sculpture.

The Hebrews were basically nomadic people; hence, any architecture was fairly primitive. During one brief period of affluence, through King Solomon's development of the copper industry and his cultivation of foreign trade, they were in a position to enrich and beautify their capital city of Jerusalem with a temple. For this they had to import Phoenician craftsmen to carry out the work. All of this was destroyed in the sack of Jerusalem by Nebuchadnezzar of Babylon in 587 B.C.

Paintings reflecting this period are Michelangelo's The Creation (on the ceiling of the Sistine Chapel), Baciccio's The Sacrifice of Isaac, Durer's Lot and His Daughters, Veronese's Rebecca at the Well, Bacchiacca's The Gathering of Manna, and Brueghel's The Tower of Babel.

Sculpture inspired by the Old Testament includes Verrocchi's David, Michelangelo's David, and Flannagan's Jonah and the Whale. The Shrine of the Book, designed to house the Dead Sea Scrolls, and Three Men in the Fiery Furnace, a fresco in the catacomb of Priscilla, are other works of art drawn from the Biblical period.

The Bible has inspired more art than any other source of inspiration. Many artists, particularly ones from the early Christian times to the Renaissance, have created works depicting scenes from the life of Christ. Frequently portrayed are the annunciation, the visitation, the nativity, the Madonna and Child, the holy family, the flight into
Egypt, the presentation in the Temple, the calling of the apostles, Christ at the Sea of Galilee, the raising of Lazarus, the transfiguration, the last supper, the betrayal, the crucifixion, and the descent from the cross.

The more famous of the paintings done of saints include Caravaggio's St. Matthew and the Angel, El Greco's St. John the Evangelist, St. Andrew, St. Philip, St. Peter the Penitent, St. Luke, and St. Mark, Giotto's St. Francis, Foppo's St. Paul, and Giovanni's St. Jerome in the Wilderness.

Other Biblical subjects have been used in works of art: Miracle of the Loaves and Fish (a mosaic at St. Apollinare, Ravenna), The Conversion of St. Paul (a painting by Michelangelo), Christ in Glory in the Tetramorph (a tapestry on the east wall of Coventry), The Four Horsemen (an engraving by Durer), and a work in stained glass in the baptistry of Coventry.

Mythology also reveals man's search for the divine. Paintings based on the legends and myths are represented by Bacchus and Ariadne by Titian, Ryder's Pegasus, Goya's Kronus Destroying One of His Sons, Hoffman's Bacchanales Rustica, Botticelli's The Birth of Venus, and Caravaggio's The Youthful Bacchus.

Other mythological characters are portrayed in Greek sculpture, such as Nike Loosening Her Sandal, and in Hellenistic sculpture Medusa Ludovisi. Michelangelo created the frescoes on the ceiling of the Sistine Chapel, The Sibyls, and Phidias contributed sculptures for the Parthenon.

Eastern religions also served as a source of inspiration for artists. Buddha's influence is evidenced in the statue The Reclining Buddha, carved from rock in the famous Ajanta caves in Central India (483 B.C.). Other works include Chintche (a statue of a mythical lion-like animal), The Stupas at Pagan (houses for Buddha relics), and Kuan Yin (statue of Chinese Goddess of Mercy).

Much of the simple eloquence of Japanese art and much of the formal frugality characteristic of Japanese life are directly inspired...
recently Zen has attracted a great deal of attention from Western intellectuals and artists who have been drawn to and stimulated by its ideas of simplicity and intuitive inspiration. The Zen influence can be evidenced in Graves's painting Preening Sparrow.

The Temple of Confucius in Peking is reflective of Confucianism. In accordance with tradition, there are no images or statues of the sage in Confucian temples, only tablets with his name. The Philosopher Leo Tzu, done by an artist of the Sung Dynasty, is a product of Taoism.

Artistry from the Islamic religion includes the Mosque of Ibn Tuloun (Cairo); the Mosque of Ahmed I, the Blue Mosque (Istanbul); Persian carpets; pottery; metal work; and an illustration of a poem by Nizanni entitled Lalla and Majnun.

Additional references for the teacher's assistance are listed here; however, vast resources are available for further study.

Sign and Symbols in Christian Art by Ferguson; Art Through the Ages, Gardner; The World's Great Religions, editors of Life; 2000 Years of Christian Art, Newton and Neil; Early Christian Architecture, McDonald; and Medieval Architecture, Saalman.

Among helpful readings are Gods, Graves and Scholars, Cernan; Glotto, Battisti; The Agony and the Ecstasy, Stone; and El Greco, Bronstein.

Recommended are the sound filmstrips from the Lives of Old Masters Series (Michelangelo, El Greco, Francisco Goya), along with "Four Great Churches," "The Gates of Paradise," and the Life filmstrips, all of which have accompanying texts.

Films available from the Material Center of Metro Schools are "Michelangelo" and "Chartres Cathedral." From the Nashville Public Library "The Titian" and "Leonardo da Vinci" may be obtained. "Seven Hundred Years of Art," a slide-lecture presentation is available from the National Gallery.
MAN SEEKS THE DIVINE THROUGH LITERATURE

An infinite number of literary selections are available to serve as a basis for exploration in man's search for the divine. The following suggested topics and literary works are intended to serve as a catalyst for deeper study.

Investigate the different ways material from the Bible is put to use. The Marriage of Heaven and Hell, Blake; Paradise Lost, Milton; The Firstborn, Fry; Exodus, Uris; Noye's Fludde; Salome, Wilde.

Myths

The Uses of Biblical Material

Compare religious texts. The Holy Bible and The Koran; the Gospel of John and Bhagavad-Gita; Caedmon's Hymn and "Creation Hymn" from Rig-Veda.

References to Christ

Consider the religious influences (especially Christian influences) in writings that are not specifically or primarily related to religion. The Canterbury Tales; The Eve of St. Agnes, Keats; The Sound and the Fury, Faulkner; "The Cotter's Saturday Night," Burns; Arthurian literature.

Religious Texts

Compare translations. King James Version with other versions of The Holy Bible; King James translation of the Psalms and the Bay Psalm Book.

Influence of Religion in Literature

Compare the sermons of John Donne with sermons of Jonathan Edwards.

Translations of the Bible

Endeavor to draw a relationship between drama and church ritual: historical, origins,
common elements.

Greek Dramas
Determine the role of religion in the Greek dramas.

Drama and the Church
Investigate the relationships between drama and the Christian church.

Paganism in Beowulf
Point out the pagan and Christian elements in Beowulf.

Religion and Love Tradition
Study religion in the courtly love tradition.

Christian Observances
Find evidences of Christian elements or observances in literature. Mont-Saint-Michel and Chartres (symbolism: the cathedral); "Our Lady's Juggler" (reverence for Mary); The Crucible (Puritan doctrine); Requiem for a Nun (religious orders; requiem); "Ash Wednesday" (Holy day in the liturgical year); "The Habit of Perfection" (religious orders).

Savior Pattern
Trace "the Savior" pattern in literature. The Cocktail Party, The Crucible, Requiem for a Nun, A Fable.

Luther and Booth
Compare Martin Luther (Osborne's Luther) with General William Booth (Lindsay's "General William Booth Enters into Heaven").

St. Joan and Becket
Consider St. Joan and Becket as martyrs. Shaw's St. Joan and Eliot's Murder in the Cathedral.

Devil, Hell, Man's Fall
Investigate themes of the devil, hell, and man's fall. Paradise Lost; The Tragical History of Dr. Faustus, Marlowe; Faust, Goethe; The Marriage of Heaven and Hell; "The Day of Doom," Wigglesworth; "Sinners in the Hands of an Angry God," Edwards; No Exit, Sartre.

Journeys
Trace journeys in The Divine Comedy, Faust, The Pilgrim's Progress.

Note the treatment of death in Murder in the Cathedral; St. Joan; Faust; "Death Be Not Proud," Donne; "Thanatopsis," Bryant; "Crossing
the Bar," Tennyson; Riders to the Sea, Synge.

Analyze women as primary characters. The Cocktail Party, Requiem for a Nun, Electra, Iphigenia, Salome, St. Joan, Antigone by Sophocles.

Note Faulkner's use of "Ode on a Grecian Urn" in The Bear.

Compare the Rubaiyat with Wordsworth's "Tintern Abbey" or "Intimations of Immortality" or with Bryant's "Thanatopsis."

Supplementary References

Supplementary references that might assist the teacher are listed here only as a token of the larger selections available.

Background. The Greek Experience, Bowra; The Five Stages of Greek Religion, Murray; The Hidden God: Studies in Hemingway, Faulkner, Yeats, Eliot, Warren, Brooks; From Ritual to Romance, Weston; The Scriptures of Mankind, Braden; Man Seeks the Divine, Burtt; The Search for Meaning in Life (Readings in philosophy), Davidson.

Myth. Bulfinch's Mythology; Mythology, Hamilton; The Golden Bough, Frazer; Metamorphoses, Ovid; The Ring of the Nibelung, Wagner.

Greek Drama. Oedipus Rex, Oedipus at Colonus, Sophocles; Prometheus Bound, The Seven Against Thebes, Eumenides, Aeschylus; Iphigenia at Aulis, Orestes, The Bacchae, The Phoenician Women, Euripides; The Birds, Aristophanes.

Greek Themes, Religious Figures. Tiger at the Gates, Fry; J. B., MacLeish; Job.

England through the Medieval Period. A Vision of Piers the Plowman; "Debate of the
UNIT II: MAN SEEKS SOCIAL ORDER

OVERALL OBJECTIVE
To extend the individual's awareness of the forces of culture which insure his freedom, his individuality, and his creativity.

SPECIFIC OBJECTIVES

(1) To illustrate ways in which man has attempted to create form out of chaos.

(2) To engender a climate of open-mindedness, an attitude of inquiry, and a knowledgeable basis for personal choices.

CONCEPT
It is only through active involvement with the human endeavor that man achieves a synthesis of the fragmentary and conflicting forces which determine his response to his environment.

Literary selections presented here are related to five segments of the overall theme, "Man Seeks Social Order."

MAN'S SEARCH FOR ORDER / CONCEPTUAL APPROACH

Wordsworth; "Ulysses," Tennyson; The Adding Machine, Rice; The Glass Menagerie, Williams; Life on the Mississippi, Twain; Up from Slavery, Washington; My Lord, What a Morning, Anderson; Out of My Life and Thought, Schweitzer.

The Taming of the Shrew, Shakespeare; Travels with Charley, Steinbeck; Rubaiyat, Khayyam; The Classics Reclassified, Armour; Beastly Poetry, Nash; "Ode on a Grecian Urn," Keats; "How Do I Love Thee?", Browning.

The Iliad, Homer; The Birds, Aristophanes; The Seven Against Thebes, Aeschylus; Antigone, Sophocles; The Trojan Women, Euripides; Trial of Socrates, Plato; Beowulf; Song of Roland; The Faerie Queene, Spenser; Hamlet, Macbeth, Julius Caesar, Shakespeare; Gulliver's Travels, Swift; The Tale of Two Cities, Dickens.

Sociological Man. The Teachings of the Compassionate Buddha, Buddha; The Analects,
Confucius; Agamemnon, Aeschylus; Oedipus Rex, Sophocles; Electra, Euripides; The Clouds, Aristophanes; The Art of Courtey Love, Capallanus; Othello, The Merchant of Venice, Shakespeare; The Miser, Moliere; "The Deserted Village," Goldsmith; Les Miserables, Hugo; The Lady of the Camellias, Dumas.

Billy Budd, Melville; The Scarlet Letter, Hawthorne; Winesburg, Ohio, Anderson; Sister Carrie, Dreiser; Showboat, Ferber; Playboy of the Western World, Synge; The Crucible, Miller; "For the Time Being; Chorus," Auden; Old Possum's Book of Practical Cats, Elliot; "Chicago," Sandburg; "Mending Wall," Frost; "Richard Cory," "Miniver Cheevy," Robinson; Spoon River Anthology, Masters.

"The Outcasts of Poker Flat," Harte; "The Cloak," The Overcoat, Gogol; Cry, the Beloved Country, Paton; "The Bet," Chekov; USA, Dos Passos.

As with literature, art also reveals man's search for order. Work. Art works honoring man's work include paintings such as Cotton Pickers, Georgia by Benton, Dove's Flour Mill Abstraction, Moses's Sugarin Up, Corbet's The Stone Breakers, Picasso's Woman Ironing, Van Gogh's Return of the Miners, Millet's The Harvest and The Gleaners, Chardin's Kitchen Maid, Vermeer's The Lace Maker, and Degas's Rehearsal of the Ballet on Stage.

Sculptures dealing with man and work are represented by Villon's The Horse and Boudin's Washerwoman on the Shores of La Touques. Notable architectural structures are the Styling Building, General Motors Research Center (Detroit) and the Johnson Wax Company, Research Center (Racine).

Designs for Pleasure. Paintings reflective of man's designs for pleasure are Bosch's.

Representative sculptures for a design for pleasure include Apple's Turpin 6/3/6 (neon sculpture), Giacometti's Palace at 4 A.M., Rodia's Watts Tower, and Picasso's Baboon and Young.

The Sports Palace at Rome is an example of man's design as seen in architecture. Other works are the State Fair Arena in Raleigh, North Carolina; Kalita Humphrey Theater and the Theater of Epidaurus, both in Dallas.

Creative Man. Man's creativity may be evidenced in paintings, such as Mount's The Banjo Player, Seurat's The Parade, Raphael's Plato and Aristotle, Delacroix's Dante and Virgil in Hades, Dufy's Mozart Concerto, Picasso's Portrait of Ambrose Vollard, Caravaggio's The Musicians, Shahn's Silent Music, and Chagall's The Green Violinist.

Other representative works include Lipton's sculpture Archangel and Lipschitz's Man with Mandolin; a woodcut by Frasconi entitled Albert Einstein; and Frank Lloyd Wright's architectural design in the Guggenheim Museum.

Sociological Man. Art work denoting social comment is revealed in Trumbull's Declaration of Independence, Delacroix's Liberty Leading the People, Shahn's This Is Nazi Brutality, Pippin's Mr. Prejudice, Munch's Anxiety, Evergood's The New Lazarus, Picasso's Blind Man's Meal, Lewis's Forever Free, and Pippin's John Brown's Going to His Hanging.

Work. Man has revealed his attitude toward work in numerous musical selections. Operas representative of the selections are Massalov's Steele Foundry, Wagner's Siegfried, Bizet's Carmen, and Rossini's The Barber of Seville. Other works include McDonald's "Dance of the Workers"; folk songs such as "The Erie Canal," "Shenandoah," "Sacramento," and "Drill, Ye Tarriers, Drill"; musicals: Wilson's The Music Man, Rodgers's Pal Joey, and Adler and Ross's The Pajama Game; and work songs: "I Been Workin' on the Levee," "Casey Jones," and "Down in a Coal Mine."
MAN'S SEARCH FOR ORDER / CONCEPTUAL ORDER

Designs for Pleasure. "Education has no more serious responsibility than making adequate provision for enjoyment of recreative leisure." --John Dewey.

Music reflecting man's recreative art includes Foss's folk opera "The Jumping Frog of Calaveras County"; Weill's "Down in the Valley"; and Bryan's "Singin' Billy." Blondel's "Richard the Lionhearted" is an example of the music of the early troubadours. Folk music has evolved from various countries: "All Through the Night" (Welch); "Auld Lang Syne" (Scottish); "Alouette" (French Canadian); "Der Tannenbaum" (German); "Barbara Allen" (English); "Deep River," "The Erie Canal," and "Turkey in the Straw" (American).

Other musical compositions contributing to man's pleasure are Tchaikovsky's "The Nutcracker's Suite," Schumann's "Carnival," Handy's "St. Louis Blues," Benjamin's "I Don't Want to Set the World on Fire," along with music of the Fisk Jubilee Singers, songs from Shakespeare's plays, and madrigals.

Music from Broadway, the hub of popular music, is represented by Lerner and Lowe's "Camelot," Berlin's "Easter Parade," Porter's "Kiss Me, Kate," Gershwin's "Porgy and Bess," Arlen's "Wizard of Oz," and Styne's "Funny Girl."

Creative Man. Real performance is as creative an act as composition. Performance is the completion of a musical work. Artists who have achieved greatness include Louis Armstrong, Richard
Burton, Cab Calloway, Xavier Cugat, Duke Ellington, Andre Kostelanetz, Henry Mancini, Elvis Presley, Billy Rose, the Stonemans, Minnie Pearl, Floyd Cramer, Al Jolson, Steve Lawrence, Mary Martin, David Rose, Dimetri Tiomkin, Van Cliburn, Chet Atkins, Boots Randolph, and Anton Rubenstein.

Folk dance and folk songs stem from the people and are natural outgrowths of social situations: "Scarborough Fair," "John Peel," "Lord Randall," Copland's "El Salon Mexico," Loeffler's "Memories of My Childhood" (life in a Russian village), Skilton's "Two Indian Dances," Gillis's "The Alamo" (tone poem for orchestra), Siegmeister's "Ozark Set," and Gilbert and Sullivan's "H. M. S. Pinafore."

MAN SEEK FOR ORDER / CONCEPTUAL APPROACH

For the development of one of the ideas, "Work," suggestions for the implementation of activities and materials in developing worthwhile multidisciplinary learning experiences dealing with a specific theme are presented here.

Theme "Man's Response to Work" is an illustrative theme that might be utilized in a unit entitled Westward Expansion.

Development of the theme "Work"
The objective is to show how man has fulfilled and perpetuated himself through various interpretations of work.

One’s work is his blessing, not his doom.

Report on the lives of James J. Hill, Cornelius Vanderbilt, and Annie Oakley.

Represent authentic early dress, for example, the cowboy (Spanish influence) or the Mormons.

Research and reconstruct model of an early mining camp, for example, Silver City.

Discuss native materials available to pioneering America. How did these materials determine the design of their architecture? the folklore? the music? their family life?

Research the native backgrounds for influences on art, architecture, literature, government, and music; for example, Georgian influence on public buildings, first homes similar to thatch-roofed dwellings in England, Swedish log cabins.

Write and produce an original historical pageant using folk themes, incorporating art, literature, music, dance.

Prepare radio or TV scripts involving the historical background and folk ideas reflected in the Westward movement.

Research examples of early journalism (for example, William Allen White in the Gazette) and construct a newspaper that would deal with the progress and the problems of the early western settlers.

Investigate ways in which work becomes fun through group participation; such as the quilting bees, house raisings, harvesting, corn shuck-
Relate different kinds of work mentioned in Whitman's "I Hear America Singing" to kinds of work found in folksongs. Construct a collage or assemblage using the themes suggested by the poem.

Collect and compile a glossary of words including their origins which have come through various kinds of work, for example, six-shooter (American); adobe and arayas (Spanish); gumbo (African).

Produce a map showing origins of folklore and folksongs.

Write a folksong or folktale relating to a kind of work with which you are familiar.

The Western environment provides inspiration for the creation of significant art expressions. Point out other works to add to this list: Grand Canyon Suite, Mississippi Suite, Cowboy Rhapsody, James F. Cooper, Rousseau, Hudson River painters, Thomas Cole: Course of the Empire Series, "I Hear America Singing," Bret Harte.

DISCUSSION IDEAS

What does this tell you about frontier women: "If it's ever told straight, you'll know it's the sunbonnet and not the sombrero that settled this country"? --selection from Edna Ferber's Cimarron.

The white men made, and broke, many treaties with the Indians in which Indians conceded some lands and were guaranteed their possession of the remainder. If those treaties had been carefully observed, what would have been the effects upon the America of today?

Consider the legality and morality of the vigilance committees of mining towns.

Work brings about man's creative responses in the making of songs which he uses as a part of work experiences: "Drill, Ye Tarriers, Drill," "Blow the Man Down," and "Erie Canal."

Cite evidences of qualities
which the early settlers admired, for example, the strength of the pioneer woman (as in writings of Edna Ferber), the determined spirit of the pioneer man (cattlemen and nesters), the strength of Paul Bunyan, and the skill of Pecos Bill.

Find reflections of different types of work in folklore and folksongs.

Notice evidence of the spirit of settlement found in works such as The Red Pony, Oklahoma!, and "Under the Lion's Paw."

Investigate how the Western expansion brought the establishment and growth of urban areas. Cite specific examples such as Chicago (Sandburg's "Chicago"; Red Grooms's "Chicago"; the Robie House; musical selections from the film Chicago; Carpenter's Skyscrapers; Illinois Institute of Technology), San Francisco (the song "San Francisco" and significant cultural institutions, such as the San Francisco Symphony, legitimate theater, De Young Museum, and influence of the Chinese community on the city), and Salt Lake City (architecture of the Mormon Temple and Tabernacle.)
By studying the medium employed in creating art, music, and literature, the student may grasp a new awareness of the qualities that contribute to the aesthetic value of a work of art.

**ART**

**Line** is the most basic of the elements of the visual arts. Through line we may achieve a feeling of depth called perspective. Perspective may be achieved in drawing and painting in several ways: overlapping and diminishing the size of objects, shading (giving form to shape), linear perspective (use of vanishing paint), and aerial perspective (things close are clearly defined; far away, less clearly defined). Examples of these techniques may be noted in De Chirico's *Melancholy and Mystery of a Street*, Trumbull's *Declaration of Independence*, and Goya's *Execution on the Third of May*.

**Value** is concerned with the use of light and dark. Value produces contrast, as well as volume and depth (by means of highlights and shadows). Examples of works reflecting value are *Raft of the Medusa* by Gericault, *Seven A. M.* by Hopper, and *Metopes on Parthenon*.

**Color** has three aspects: value, hue, and intensity. The hue of orange can be changed by adding more yellow or red. The value of orange can be changed by adding more black or white; the intensity, by adding more blue. Because colors are either warm or cool, they bear psychological and emotional connotations. Van Gogh's *Cafe de l'Alcazar* is an example of the use of warm colors while Cezanne's *Card Players* reflects cool colors.
ART / ELEMENTS APPROACH

Texture

The way a thing feels or appears to feel is known as texture. The painter can vary the texture by the surface on which he works, by the type brush or paint he uses, or by the manner in which he applies the paint.

A sculptor varies texture by the type stone he uses, the type tool with which he carves, or by the finishing of the surface on which he works. Examples of various textures can be noted in The White Flowers by O'Keeffee, Van Gogh's Self Portrait, Flannigan's Triumph of the Egg, and Arp's Human Concretion.

Volume and Space

Volume and space are depicted in positive and negative forms. Volume can be thought of as the material of a teacup and the inside of the cup as the void. The more space that is included in a design, the less the weight appears to be. Works for study in volume and space are The Parthenon, Chartres Cathedral, Henry Moore's Reclining Nude, Durer's Agony in the Garden, and Rembrandt's Agony in the Garden.

Mediums and Techniques

Tools employed in drawing are the pencil, pen, charcoal, chalk, pastel, crayon, and brush. Types of drawings include the sketch (abbreviated form), study (preliminary to a more ambitious work), cartoon (for transfer to another surface), and the drawing (intended as a complete work of art).

Drawing

John Marin's seascapes are examples of the use of transparent water color, composed of ground pigment with a binder usually of gum arabic or glue. Opaque water color, a water base paint with white pigment used for light, includes tempera (used by Andrew Wyeth), gouache (used by commercial artists), and casein (used by Rico Librum).

Painting

Oils are pigments mixed with a slow drying oil such as linseed. The paint is thinned with turpentine and may be used on sized canvas, prepared plywood, or masonite. The fresco is achieved by pigment ground in water being applied to a surface of damp lime plaster, which on drying incorporates the color into the wall. Michelangelo's painting on the ceiling of the Sistine Chapel is called a fresco.

The Egyptians used one of the oldest methods of painting, called encaustic. The pigment was mixed with wax and kept plastic by means of heat on a solvent. Karl Zerbe's Harlequin is an
example of this type of painting. Collage is a French term referring to something glued or pasted. Many variations of collage have become popular: de collage, de coupage, and assemblage. Broque and Picasso were early innovators of collage.

Acrylic is a new development in painting that is gaining wide-spread use. A polymer emulsion can be mixed with water and/or polymer medium. It is fast drying and waterproof. Egg tempera is a mixture of pigment and yolk of egg.

Four basic processes in graphic arts are relief, intaglio, planographic, and stencil process. Types of relief (the printing of a raised surface) are evidenced in linoleum cuts, wood engraving, callographs. Durer's Four Horsemen of the Apocalypse is illustrative of the relief.

Intaglio is the printing of the incised area of a plate in an intaglio print. Examples of this type of printing are etching, engraving dry point, and aquatint. Holta's Surrender, Whistler's Black Lion Warf, Piranesi's The Prisons, and Durer's Helenealia are examples of intaglio.

The printing of a flat surface, usually from a stone, is called planography. The monotype and lithograph are examples of the planographic process. The stencil process is a simple one with color directed to cut out areas of paper, thereby permitting color to be transferred to the picture in that area only. The serigraph or silk screen process is achieved when areas not to be printed are blocked out on the surface of the silk. Ink is forced through open areas of the silk by a squeegee. Sister Mary Corita's The Beginning of Miracles is illustrative of the screening process.

Sculpture involves the use of materials such as wood, stone, clay, and metals. Unconventional and new materials have opened up new vistas to the sculptor. Some of these materials are epoxy, plexiglas, vinyl, plastic, neon, polyurethane, and polystyrene.

Carving is a type of sculpture in which the artist cuts away areas to form a three-dimensional design. He employs hammer and chisel-type tools in his work. Examples of carving were done by Michelangelo, John Flannegan, and Henry Moore.
Modeling, another type of sculpture, makes use of plastic-type materials such as clay, wax, or plastercine. Constructing is a third type of sculpture and is achieved by putting together objects or materials, sometimes called constructions or assemblages.

Types of construction in architecture include the post and lintel, arch (corbelled, round, arcade, vault, cross vault, and dome), steel skeleton, cantilever, and stressed concrete.

Artistic Order

Every work of art should have enough variety to create interest and enough unity to avoid chaos. Unity may be achieved through the factor of nearness, the closer together the more unified; the factor of similarity, similar visual elements of shape, color, or brightness tend to be unified; the factor of direction, the similarity of movement; and the factor of closure, work lacking continuous direction.

Balance

Balance is concerned with visual weight. Similar visual weights (symmetrical) may be evidenced in Raphael's Sistine Madonna, the Parthenon, and de Vinci's The Last Supper. Tintoretto's Christ on the Sea of Galilee is illustrative of dissimilar visual weights (asymmetrical).

Structure

Structure consists of boundary, axis, lines, point, and size. David Smith's Hudson River Landscape is illustrative of boundary (enclosing a given area). Axis, or giving a sense of direction within the given shape, is evidenced in Bingham's Fur Traders Descending the Missouri. Albers's Homage to the Square shows how similar shapes can be varied in size for interest, distance, and importance.

Orientation

Orientation determines the direction of the structural axis while movement may be created by curving, straight, or jagged lines; light and dark; and color. The center of interest is a focal point to which attention is drawn, creating closed form of either mass or space.

The subject or theme determines
the content. Expressive content is the emotional effect of the subject matter and/or visual form, such as in Giovanni's Agony in the Garden or Gruenwald's Crucifixion.

Also for viewing is the Famous Artist at Work Series, which includes filmstrips about artists working in the areas of sculpture, murals, ceramics, lithography, painting, stained glass, and collage.

**Music**

MUSIC / ELEMENTS APPROACH

The elements of music consist of tone, time elements, melody, and counterpoint.

All musical tone consists of four properties: pitch (high-low of tonal sound), duration (tone sustained varying length of time), intensity (degree of loud and soft), and quality. All musical tone possesses a characteristic quality which distinguishes the sound of instruments from the human voice. The quality of a tone is referred to as timbre, tone quality, or tone color.

Music is a time art. Its medium is physical sound, which is not stationary, but moves within a span of time. The time element, fundamental to music, is divided into three factors: tempo, meter, and rhythm.

Tempo, or speed, is determined by terms such as presto (very fast), allegro (fast), vivace (lively), moderato (moderate speed), andante (moderately slow), adagio (slower than andante), lento (slow), and largo (very slow). Tempo is indicated on the musical score by metronome markings.
The most common meter is indicated by duple (2 beats to a measure), triple (3 beats to a measure), quadruple or common (4 beats to a measure), and compound (two or more groups of three to a measure: 6/8, 9/8, 12/8). Irregular metric schemes are shown in Tschaikovsky's Sixth Symphony (5 beats to a measure), Stravinsky's Histoires du Soldat (changed every few measures), the plain song (nonmetrical), and music written by some twentieth composers (no signature assigned).

Rhythm is the living source of all the arts. It is easy to feel, but hard to define. Stress or emphasis on a note to make it sound louder is called accent. Accent on any note in a series of regularly recurring beats produces rhythm.

Musical tones vary in the length of time they are sustained. Any combination of notes of different duration produces rhythm. Bach's Passacaglia in C Minor is based on a theme consisting of alternating long and short notes in triple meter.

A special kind of rhythm called syncopation occurs when a note on a weak beat of a measure is accented and held over into a strong beat. Syncopation also occurs when a tone beginning after a beat is carried over into the next beat.

Melody is a succession of tones arranged in varying pitch, duration, and order to produce a musical idea by instruments and voices, for example, "My Country 'Tis of Thee."

Counterpoint is illustrated in the round "Frere Jacque" (imitating a single melody), "Long, Long Trail" and "Keep the Home Fires Burning" (combining two or more melodies), and "Triumphal March" from Aida (the simultaneous combination of tones into harmony).

The great forms of music may be divided into the instrumental, vocal, and dance forms.

The suite, one of the instrumental forms, may be noted in such old-time dances as the minuet, the gavotte, the jig, and the horn-pipe. Couperin, Purcell, and Bach adopted it. Illustrative of the modern suite, a group of pieces in contrasting mood,

Rondo
dance in which people danced round and round in a circle, evolved into a short piece of dance music used in the suite. Eventually it developed into a larger form used by Haydn, Beethoven, and Mozart.

Sonata
The sonata, as form, is the pattern of one or more of the movements of a sonata (the work as a whole). The first movement of the sonata includes the melody, or theme; the development of the theme; and recapitulation, the return to themes heard at the beginning. Usually slow, songlike, and expressive, the second movement may be in three-part form or rondo form. The third movement is customarily a lively, rhythmic minuet or scherzo. The last movement, almost always fast and spirited, may be in rondo or sonata form, such as in Beethoven's "Pathetique."

Chamber Music
Music played in the nobleman's room took on the name chamber music. Inclusive in this group are the solo sonatas; string quartets; duos, trios, and quintets; and chamber orchestras.

Symphony
Among the greatest sonatas for full orchestra, the symphony, is Beethoven's Symphony No. 5, depicting man's struggle against fate. Other great symphonic works are Beethoven's Third Symphony (Eroica) (the glory and tragedy of a great man); Schiller's "Ode to Joy" from the Ninth Symphony; four symphonies of Brahms; the symphonies of Berlioz, Schubert, Mendelssohn, Tchaikovsky, and Dvorak; and works of modern composers such as Prokofiev, Shostakovich, and Vaughan Williams.

Concerto
The concerto is a sonata for one or more solo instruments along with the full orchestra. Among those who have mastered the concerto form are Bach (Concerto No. 2 in E Major for violin and orchestra), Mozart (Concerto in Bb Major for bassoon and orchestra), and Brahms (Concerto No. 2 in C Major).

Vocal Forms:
The mass, choral, madrigal, lied and song cycle, and opera comprise the vocal forms of great music.

Mass
The mass, a product of early Christianity, was chanted by priest and congregation
during the Roman Catholic services. By 1550, the writings of Palestina and Orlando di Lasso reflected a significant development. Monumental religious works were produced by Bach in his B Minor Mass and by Beethoven in his Missa Solemnis for voice and orchestra.

Additional development appeared in the forms of the cantata, chorale, and oratorio. The chorale, a simple, folk-like hymn tune, became a part of the Protestant service during the Reformation, for example, Martin Luther's "A Mighty Fortress Is Our God." Also prominent were chorales of Johann Sebastian Bach.

Bach's "Christ Lay in Bonds of Death," "Cantata #4," and Steiner's "The Crucifixion" are examples of the cantata, a composition in several sections for vocal soloist, chorus, and instruments based upon a secular or sacred text.

The oratorio provides a musical setting of a religious or epic theme for performance by soloists, chorus and orchestra. Illustrative works include Handel's The Messiah, Haydn's The Creation, and Mendelssohn's Elijah.

In the days of Queen Elizabeth, four or five singers would gather round and sing madrigals for pleasure. The madrigal, a song for small choruses, were often written in complex counterpoint with playful, tricky rhythms. England made fine contributions through Thomas Morley, William Byrd, and Thomas Wilkes. Excellent French composers were Claude Le Jeune and Orlando de Lasso while Italy produced Claudio Monteverdi.

For solo voice with piano accompaniment, the lieder and song cycle may be noted in the works of the German composers Schubert ("The Miller's Daughter"), Schumann ("I'll Not Complain"), and Brahms ("Lullaby"). Debussy wrote a cycle entitled "Chansons de Bilitis" while another French composer, Poulenc wrote "Songs for Children."

The opera and musical theater emerged, introducing a play in which the words are sung instead of being spoken. It is a combination of music, drama, poetry, painting, and the dance. Representative works include Mozart's The Marriage of Figaro, Wagner's Lohengrin, Verdi's Aida, and Menotti's Amahl and the Night Visitors. Kurt Weill's
"Down in the Valley" is an example of a folk musical. Other works composed for the musical theatre and film musicals are Anderson's "Lost in the Stars," Strauss's "Die Fledermaus," and Walton's film music for "Hamlet." A vast number of additional excellent musicals can be cited as illustrative of this musical form.

Dance forms comprise another important segment of great musical forms.

Medieval dances of note were the French estampie and court dance danse royale. During the Renaissance, the slow-moving Spanish pavane and the fast-paced French galliard were well-known dances. Dances characteristic of the Baroque period were varied: allemande (German, moderate tempo), sarabande (Spanish, slow), gavotte and loure (French, moderate), and the hornpipe (English sailor dance).

The 18th C. was introduced to the Polish dances, mazurka and polonaise. Other familiar dances were the quadrille (French), tarantella (Italian), polka (Bohemian), and the English country dance. Contemporary dances of the 20th C. include the bolero (Cuban); habanera, şandango, and jota (Spanish); and the tango (Argentinian).

Dramatic action interpreted through the pantomime of the dancers is evidenced in the ballet. Tchaikovsky's Nutcracker Suite and Stravinsky's Ballet for an Elephant are examples.

Mediums of the Time-Arts (The Source of Sound) are the voice and instruments.

Soprano, one of the qualities of the voice, has ranges designated as coloratura, lyric, and dramatic. Another voice quality is the contralto, which is comprised of the mezzo-soprano or lyric contralto and the dramatic contralto.

Tenor may be either the lyric tenor, lirico-spinto, or dramatic tenor. In the same manner, the baritone quality has both the lyric and dramatic baritone. Lyric and basso profundo refer to the divisions of the bass quality.

Four stringed instruments are played with bows in the instrumental medium: the
Stringed

Singed

Woodwinds,
Brass, Percussion

Woodwind instruments include the flute, piccolo, oboe, English horn, and bassoon. Woodwind instruments include the flute, piccolo, oboe, English horn, and bassoon.

Brass instruments are the French horn, trumpet, trombone, and tuba. Making up the percussion group are the timpani, bass drum, snare drum, and other percussion instruments, such as castanets, bells, and wood block.

Completing the instrumental medium are instruments similar to the piano, harp, organ, guitar, banjo, and mandolin.

LITERATURE / ELEMENTS APPROACH

violin, viola, cello, and the double bass.

Sound

sound, one of the elements in literature, may involve repetition of either a single sound, words, or phrases and sentences. The single sound may be noted in alliteration (Coleridge's "Kubla Khan"), assonance (Tennyson's "Break, Break, Break"), consonance (Dickinson's "I like to see it lap the miles"), and rhyme. In Blake's "Introduction to Songs of Innocence," he repeats the word pipe, just as Paul uses the word charity in his letter to the Corinthians. Churchill's address "Dunkirk 1940" is an example of phrases and sentences being repeated, in this case, the words "We shall fight."

Another element, words, concerns denotations (lexical interpretation), connotations (associations), and semantics (awareness of ambiguity in language). Through the element of syntax, Milton creates the tone or mood in the opening lines of "Paradise Lost." Departure from usual syntactical order was taken by e e cummings in "here's a little mouse."

Rhythm

Rhythm, an element of both prose and poetry, is a sequence of sounds in a free pattern of accents. In rhythm, phrasing, as well as accent, is important.

Meter

Meter is determined by a sequence of sounds in a fixed pattern of accents which regularly recur. Meter is measured by the foot, that is, a unit of accented and unaccented syllables. For example, an iambic foot may be noted by the pattern of unaccented/accented syllables in "My heart leaps up when I behold." Line length is determined by the number of feet in a line: tetrameter (four feet) as in Blake's
"Introduction to Songs of Innocence" and pentameter (five feet) as in Gray's "Elegy."

Verse Forms

Meter, line length, and rhyme scheme determine verse forms. The heroic couplet may be either open (Keats's Endymion) or closed (Pope's Essay on Man). The ballad, or common meter, is used in Wordsworth's "She Dwelt Among the Untrodden Ways."

Two types of sonnets are the Italian, or Petrarchan (Wordsworth's "The World Is Too Much with Us"); and English, or Shakespearean (Shakespeare's "Let Me Not to the Marriage of True Minds"). Other verse forms include the Spenserian stanza (The Faerie Queene), blank verse (Frost's "Birches"), accentual verse (Old English poetry), free verse and Hebrew meter (Oppenheim's "The Slave" and Psalm 51:7-11), and the haiku and tanka, based on syllable count (haiku-3 lines, arranged 5, 7, 5 syllables; tanka-5 lines, arranged 5, 7, 5, 7, 7 syllables).

Allusion

In "in Just-spring," e e cummings makes use of allusion by his reference to goat-footed, taken from mythology. Milton alludes to the Biblical "Parable of the Talents" in his poem "On His Blindness."

Notable examples of imagery may be found in Hopkins's "Pied Beauty" (visual), Whitman's "To a Locomotive in Winter" (auditory), Tennyson's "The Eagle" (motor), and Keats's "The Eve of St. Agnes" (tactile, thermal, gustatory, olfactory).

Figures of Speech

Figures of speech are indirect methods of expression which in some way involve comparisons. The simile, a comparison using like or as, is quite commonly used: "like a patient etherized" from Eliot's "Love Song of J. Alfred Prufrock"; "like some watcher of the skies" from Keats's "On First Looking into Chapman's Homer." In Psalm 23 and Keats's first eight lines of "Homer," the metaphor is used.

Use of part for a whole, or a whole for a part is called a synecdoche, for example, "flock of ten sail" for "flock of ten ships" or "Missouri won" for "University of Missouri won." Another figure of speech, metonymy, uses one word which suggests another, as in "the crown" for the name of a ruler or "the bar" for the legal profession.

"Now sleeps the crimson petal,
now the white," used by Tennyson in his "Song from The Princess," is an example of personification. Litanes is a type of understatement which affirms one thing by negating its opposite: "He's no fool" for "He is shrewd."

Other elements include the apostrophe, or address (Shelley's "Ode to the West Wind"), hyperbole, or exaggeration (Lovelace's "When I lie tangled in her hair, and fettered to her eye"), antithesis, parallel in syntax, but making an opposite statement (Shakespeare's "With mirth in funeral, and with dirge in marriage"), and irony.

Irony of statement, saying the opposite of what is meant, is evidenced in Swift's "A Modest Proposal" and in Antony's speech "Brutus is an honorable man." Robinson's "Richard Cory" is an example of irony of situation (contrary to what is expected). Dramatic irony occurs when the audience has knowledge not held by a character, as in Romeo and Juliet when Romeo tells of his happy dream and his assurance that all will be well.

While the element of dialect was employed by Burns in his "To a Louse" and by Pound in "The Ballad of the Goodyl Fere," ee cummings used the appearance on the printed page for effect. His arrangement of the text, his punctuation, capitalization, and type used depart from conventional practice.

Components of the organizational element are argumentation, exposition, lyric, and narrative.

Argumentation may be a sermon, oration, debate, newspaper, radio, or television script. Exposition includes the treatise, essay (familiar, historical, philosophical), and other writings, such as Plato's Republic (political ideas) and Dialogues (philosophy), Meditations of Marcus Aurelius (practical wisdom), and Confessions of St. Augustine (books of devotion).

Narrative is a fourth type of
LITERATURE / ELEMENTS APPROACH

organization. The elements of the narrative include plot (or two plots as in King Lear and Anna Karenina), characters, setting (time and place), theme (author's point of view, idea, and understanding of life), and narrator (may vary as in The Sound and the Fury).

Methods of presenting a narrative vary. Chronologically is one method that may be used. Henry James in his Portrait of a Lady presented one character through the eyes of another. In The Ring and the Book, Robert Browning presented a story as it was known to different people. Relating a story after a long passage of time was the method employed by Conrad in Youth and by Eliot in Journey of the Magi. James Joyce's stream of consciousness and the kaleidoscopic presentation of many sequences of events as in Benet's "John Brown's Body" are two other methods of narrative development.

Poetry also is used to present a narrative: epic (Iliad, Odyssey, Beowulf, Song of Roland), literary epic (Paradise Lost, Aeneid), medieval romance, and the ballad ("Lord Randal," The Rime of the Ancient Mariner).

In prose fiction, writers utilize the short story, novel, anecdote (Plutarch's Lives), and the novella.

In drama, the playwright presents his narrative through division by acts and scenes, use of dialog, designing the appearance of characters to give information about themselves, emphasizing what is said by the setting, and giving importance to stage directions.

Medium

The medium of literature is language. Theories are differing concerning the origin of language. For example, some claim it is divine origin (gift from the gods); others, imitations of sounds in nature ("bow-wow" theory).

Origin of Language

Language is characteristically symbolic, systematic, arbitrary, acquired, changing, based on custom, regional, stylistic, and functional. The functions of language are both interpersonal and intrapersonal, for example, in transmission of culture and history, in the communication of ideas, in
accumulation of knowledge, and in discovering a source of pleasure, humor, and enjoyment.

The spoken language is concerned with production of sound, transmission and reception of sound, and phonology. Written language involves the origin and history of writing, characteristics of written language, and a comparison of different systems of writing.

Morphology, syntax, comparison of different language structures, and the grammar of a language are involved in the structure of language.

Semantics, as a medium of literature, seeks importance in areas of context, connotation, denotation, and ambiguity in language. It pursues use of the metaphor as a way of thinking and expresses a need for a rich vocabulary of the senses. The means of the semantic growth of words is through similitude, abstract-concrete, genus-species, structure, operation, irony, and metaphor.

What is a literary work? Well, Wellek and Warren in Theory of Literature state: "...a highly complex organization of stratified character with multiple meanings and relationships."

One can approach literature intrinsically through a study of the work itself by exploring the mode of existence of the work (sound, meaning, objects represented), and by noting formalist criticism (Ransom, Ong, Empson).

The extrinsic approach to literature considers literature viewed through biography (Saint-Beuve), psychology (Nietzsche's The Birth of Tragedy), society, ideas (Babbitt), and other arts (Lessing).

A representative sampling of literary criticism includes the classical (Aristotle's Poetics and Longinus's On the Sublime), Renaissance (Milton's Paradise Lost), neoclassical (Pope Essay on Criticism), romanticism (Goethe's Conversations of Goethe and Schiller's Aesthetic Letters), 19th C. (Sainte-Beuve's Saint-Beuve on His Own Method), and 20th C. (Frye's Anatomy of Criticism).
Freud deals with the creative process in *On Creativity and the Unconscious*. Other similar works are Richards's "The Poetic Process and Literary Analysis" and Schneider's *The Psychoanalyst and the Artist*.

I. PERIOD TO 500 B.C.

**SOCIAL STUDIES**

During the Paleolithic period man was essentially a migratory hunter, primarily concerned with his own survival. Indicators show he was more identifiable with animal than human behavior and could not comprehend natural cause.

During the Neolithic period man began to acquire both material belongings and the leisure time with which to exploit his inventive capacity. His primary concerns were fertility and the weather. His leader was the priest, who functioned as intermediary between man and the weather.

The power and position of the "intermediary" began to grow and change in accordance with man's desire that he might placate the forces of nature on which he was still largely dependent. In his enforced realization that in centralized strength lay some measure of security, we notice powerful leaders emerging: Hammurabi in Mesopotamia, the pharaoh in Egypt, the patriarch in Hebrew society, and the emperor in the East.

Particularly noteworthy of this period is the accomplishment of the Israelites, who while fighting repeated wars, managed to develop a monotheistic religion.

**MUSIC**

During the Paleolithic period man experienced music by living with sounds of nature, by enjoying rhythmic move-
**MUSIC / CHRONOLOGICAL APPROACH**

<table>
<thead>
<tr>
<th>Age</th>
<th>Instruments and Techniques</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primitive Man: Old Stone Age</td>
<td>Movements such as animal-like dancing, by stomping the ground, by clapping hands, or by slapping on the body. His instruments were rattles, scraper (stick, shell, bone, gourd), stamped pit, ribbon reed, and holeless flute.</td>
</tr>
<tr>
<td>New Stone Age</td>
<td>During the Neolithic period man had more time to devote to song and dance. His instruments included slit-drum, stamping tube, flute with holes, trumpet, ground-harp, ground zither, and musical bow. Other instruments discovered in late Neolithic excavations were rubbed wood, basketry rattle, xylophone, jews' harp, nose flute, transverse trumpet, friction drum, and drum stick. Their principal techniques embraced plucking and rubbing; they did not know the use of the bow on the string.</td>
</tr>
<tr>
<td>Early Civilized Man: Mesopotamia</td>
<td>The ancient Sumerian civilization provided the oldest record of a musical system. Music schools for the training of the temple singers were established in various centers of the land. Their instruments were clappers, cymbals, bells, rattles, drums, pipes, and some types of trumpets. They preferred instruments such as the lyre, harp, and lute and combined them to produce King Nebuchadnezzar's orchestra.</td>
</tr>
</tbody>
</table>
| Ancient Egyptians  | Music played an important part in the lives of the Egyptians. The rich had their own company of musicians and dancers for entertainment. The less wealthy could hire troupes for special occasions. When Syria came under the influence of Egypt, the Egyptians were brought into contact with an exciting sort of music produced by orchestras of girls. While there was no system of notation established, the Egyptians considered music a sacred expression and felt that melodies had divine power or "ethos."

"The Song of the Harper" expressed a pleasing philosophy: Set singing and music before thy face. Cast all evil behind thee and bethink thee of joy. |
| Early Hebrew       | Judging from many Biblical references, music was important among the Hebrews. Their music, of a ritualistic nature, included unison singing, chanting, and antiphonal singing. Their instruments were mostly Egyptian with the

* Period to 500 B.C. 38
The Chinese and other Mongolian peoples used music extensively. The Chinese invented the major scale almost the same as it is used today and made particular use of a five-tone scale (pentatonic).

The Aryans, or ancient Hindoos, were the opposites to the Chinese. They had vivid imaginations and were romantically inclined. Their music was confined to unison singing and playing. It was in India that bow instruments had their origin in a simple, primitive, one-stringed instrument. However, instead of plucking, man used a bow to produce vibrations.

Extant examples of the work of Paleolithic man have been found engraved and painted on the cave walls in Lascaux, France, and Altamira, Spain.

Man's creative genius is reflected in the monumental work of Stonehenge in Salisbury, England. Dolmens, tombs or monuments, are composed of great single stones set on ends and topped with large slabs. The single megaliths in Brittany, along with handmade Neolithic pottery, make us aware of prehistoric man's efforts to express himself aesthetically.

Primitive man has created beautiful and useful works of art in all areas of the world. The African ceremonial mask illustrates their imagination, and food containers, their practicality. The Easter Islanders are a mystery with their huge "tiki" heads. Central American pyramids and statues arouse curiosity, as do the totems and masks of the Indians of Canada. American Indians were quite versatile in their crafts of weaving, making of jewelry and tools, and devising portable homes.

In Egypt in the Old Kingdom, the Ka, or soul, was dependent on the body for its existence; hence, the pyramids are tombs, built for the preservation of the body.

Architecture. The Pyramids
of Khafre and Khufu at Gisa are examples of man's amazingly accurate engineering. Sculpture. Life-size statures of the kings were made of wood, Diorite, and limestone: Khafre, Ranofet, Hezire. Painting. In the Old Kingdom, man used painting principally as an accessory to relief design. An exception is the famous tomb painting, Geese of Meldum (IV Dynasty).

Architecture. The buildings of the Middle Kingdom were mostly brick and have crumbled. Remains indicate that they were of the pyramid-complex type. Sculpture. Man reduced the size of his sculpture as evidenced by the obsidian head Amenemhet III, which is five inches tall. Painting. During the middle period painters were called on to decorate walls of palaces and tombs because of the ease of painting with a brush as compared to carving with a chisel. Useful objects. Man began to create inlaid jewelry, scarab bracelets, jeweled collars, and perfume bottles, in addition to beautifully carved spears.

Architecture. Nobles and kings hollowed burial chambers deep in cliffs. Rock-cut tombs were approached by long corridors through concealed entrances. Temples not only provided a king a place to worship his patron god but also served him as a chapel after his death. Tombs contained pylon gateways (facade); halls composed of rows of columns, called hypostyle; and columns featuring a flower and bud motif. High columns in the center provided a clerestory for light to enter. Examples of man's burial chambers are the Temple of Horus and the Temple of Amun.

Sculpture. Sculpture at this time was an integral part of the temple. Both sculpture in-the-round and relief were popular. Many sculptures remain, such as the famous No fretete from Amarna. Painting. Gay, colorful paintings reflecting man's everyday life remain. Paintings on sculpture such as No fretete and on the columns of the Temple of Amun were impressive embellishments to architecture and sculpture. Paintings were also done on papyrus.

Architecture. Sumerian architecture was exclusively of brick, as no stone or timber was available. A ziggurat, characteristic structure...
in Sumerian cities, was a tower with ramps for ascents. The Ziggurat at Ur is an example of this type of structure. **Sculpture.** Relief panels, alabaster vases covered with panels of figures, and figures carved from shells and limestone tell of man's spiritual past. His courage is depicted by a stele, showing a phalanx of spearsmen, and by an inlaid panel from Ur, showing a chariot being pulled by four onagers. Some of these inlaid designs are almost predictions of the mosaic art. **Useful objects.** Although no painting as such existed, beautifully tooled work was applied to objects, adding color, such as the Bull's head of gold foil and lapis lazuli (a stone of beautiful blue). Man expertly fashioned helmets and cups of gold.

The Assyrian adapted Sumerian art forms to meet the demands of an imperial state. **Architecture.** Palaces were large complexes of rambling structures, covering many acres. The Sargon's Palace and Temple at Dur-Sharrukin has two entrances, one a ramp for vehicles; the other, a stairway leading to the main entrance. There are small rooms grouped about courts. The facade is composed of an arched doorway flanked by towers decorated with brilliantly colored glazed tiles.

**Sculpture.** An impressive Assyrian work, the Guardian Bull from the Palace of Ashurnasirpal II at Nimrud, is a sculpture of a winged bull with a human head and five legs. Other notable works are the Dying Lioness, a relief sculpture from Nineveh, and the black obilisk of Shalmaneser III.

**Architecture.** The Ishtar Gate, excavated in Chaldean Babylon, is the best example of their contribution to the arts. **Sculpture.** Lion of Procession Street features glazed tile, raised slightly in a relief design. Other relief decorations are the Marduk temple tile reliefs of sixty life-size lions.

**Architecture.** The Palace of Persepolis is the most important source of knowledge of Achaemenian architecture. **Sculpture.** Low relief panels along the stairway to the Royal Audience Hall in Persepolis show a serene way of life through man's superb workmanship.

**Architecture.** Aegean buildings
Greek: Aegean (Crete, the Island of Minos)

were neither tombs, temples, nor fortresses, but rather palaces for kings and retainers. Lintel systems of architecture with bulbous columns that had cushion-like capitals, tapering from top to bottom, were constructed. The Palace of Minos at Knossos was so constructed.

Sculpture. The bull was a favorite subject of the Minoan sculptor. The mother goddess and other figures in terra-cotta were also popular, such as the ivory figure of Girl Toreador and Girl in a Swing in painted clay. Painting. Frescoes as Toreador Scene from Knossus and Flying Fish Fresco from the Island of Melos are typical of painted subjects. Useful objects. Gold utensils, pottery, vases, metal jewelry, and terra-cotta provision jars are a few of the objects fashioned by the early Aegean man.

Mycenae

Architecture. The Mycenaean palace was less decorative and more fortress-like than the Minoan palace. Illustrative of Mycenaean building are Citadel at Tiryns, Citadel at Mycenae, and the beehive tomb, called the Treasury of Atreus. Sculpture. In the sculpture of the age, man captured in gold and stone hunters attacking lions. Ivory carvings and plaques are also examples of Mycenaean sculpture. Painting. Frescoes at Tiryns are typical of the painting. Useful objects. Funeral masks of gold, along with cups and vases, are extant.

Archaic Period

Architecture. The first temples were of wood; later they were duplicated in more permanent and sculptural materials. Limestone and marble were used as in the early Doric stone temples at Olympia, Corfu, Delphi, Aegina, and Cyrene. Sculpture. The first life-size statues were frontal, majestic, and stylized, as in the figures on the Archaic Acropolis. Pottery. The first truly Greek pottery style was geometric in decoration and block-figured.

LITERATURE

During the period before 500 B.C. early civilized man was primarily concerned with his supranatural relationships. This is reflected in the early religious writings, in myths, and in epics which deal with man's origins and way of life.

By the time the Christian religion emerged, the eastern civilizations of Sumeria, Assyria,
and Babylonia--with the exception of Egypt--had reached their cultural maturity and had lost their power. However, the ancient Chinese, Hindus, and Hebrews were able to transmit their cultures through their writings.

The Chinese culture reached its peak in the fifth and sixth centuries when Lao-tzu and Confucius established China's rival religions, Taoism and Confucianism. Although Confucius wrote little himself, he did contribute through ardent scholars much knowledge of Chinese history, along with The Book of Songs, which were sayings and lyrics, and the Analects, collections of his sage sayings.

The oldest writings in any Indo-European tongue were the Vedas, ancient hymns and prayers composed by holy men. The Rig-Veda is one of the four great collections and the source of the other three.

Following the Vedic hymns, there arose numerous mystical commentaries on the universe, called the Upanishads, which embodied the Hindu religious beliefs. India's folk epic, Mahabharata, consists of 100,000 couplets of stories and essays. The "Gita," a poetic essay, is a famous section of the Mahabharata. A second epic, the Ramayana, reflects much fine narrative poetry.

Buddha left no writings of his own, only his beliefs, which have been the subject of volumes of Buddhist scripture. From The Teachings of the Compassionate Buddha, we have the "Sermon at Benares," the "Parable of the Mustard Seed," "Universal Love and Good Will," and "Buddha's Farewell Address."

The Sacred Writings were written by various Jews between 900 and 400 B.C. Later other books were added, presenting a collection of folklore, national history, and religious code. Their writings were direct and contained much imagery.

Select reading may be found in the Psalms, songs of praise which proclaim God's majesty in 97 and his creations, in 8 and 19. Proverbs are books of wisdom; Isaiah, prophecy; Deuteronomy, law; and Job and Ruth, tales of God's mercy and love.

II. PERIOD 500 B.C. - 300 A.D.

During this period in man's civilization, powerful cultures and equally powerful concepts developed. In Greece, there was progression from a subservient, fearful, and superstitious people to a powerful political nation. However, the rivalry between militaristic Sparta and imperialistic Athens, together with the inability of the people of Greece to maintain the balance between freedom and responsibility, led to decline. The Hellenistic period, after Alexander's conquests, was one of continual internal and external strife, paving the way for Roman conquest.

Because of this peninsula's availability to outside attack, the people of Rome
developed along practical and militaristic lines. The initial monarchistic government was overthrown in 509 B.C. in favor of a republican government, the results of which were imperialism and a rising middle class.

During the Empire period under Augustus, professionalism excluded both the masses and the intellectuals, who turned to the Eastern mystery cults and to religious theory to counteract their inward unrest. After Augustus, the Empire began to decline and the Germanic barbarian invasions began around 100 A.D.

MUSIC Instruction in music and gymnastics provided the educational foundation for the ancient Greeks. Information concerning these experiences came through the writing of philosophers and literary men. For the Greeks, music implied the art of performance (singing and playing), the Muses, the science of music, and music as a part of ethical training for the harmonious adjustment of the soul.

The principal instruments—the lyre, kithara, and aulos—had special functions, and the ideas they reflected dominated Greek thought. Music was used as an accompaniment to drama and poetry. Truly, the art of this era remains a symbol unsurpassed for its devotion to truth and beauty.

ART Architecture. The Periclean building program in Athens was the great contribution of this period. The Parthenon, Erechtheum, and Propylaea at Athens were among a few of the magnificent structures of the Golden Age. (See illustration on next page.)

Sculpture. The more relaxed and moving sculptures of this period were occasionally rendered in bronze, as well as the more frequently used marble. Such figures as the Charioteer of Delphi, Discobolos (Discus thrower), and the sculptures of the Parthenon by Phidias will always be recognized among the finest sculptures that man has created.

Painting. We know from literary evidence that schools of painting existed in archaic and classical Greece. Two painters of note are Polygnotos (a sculptor as well as painter, who placed

Period 500 B.C. - 300 A.D.
figures one above another to suggest depth) and Apollodorus, the "shadow-maker," who experimented with shadow and light to make figures appear round.

Useful objects. Red-figured pottery on which paintings became freer and more graceful were made. Jewelry and coins are among crafts of the period.
Architecture. The temple of Apollo at Didyma (Miletos) and the theater at Epidauros are prime examples of the architecture of this period. Sculpture. Changing ideas of the time made themselves manifest in sculpture. The sculptors were not as honest regarding their material, or the stone, as previously. The tendency was toward capturing the soft flow of a garment rather than the integrity of the marble: Hermes with the Infant Dionysos by Proxiteles, Nike of Samothrace, and Old Market Woman. Prior to this period, sculptors always presented the female figure clothed, but during the Hellenistic period several pieces (the Venus of Milo and Aphrodite of Cyrene) were portrayed nude.

Painting. No painting of this era is extant, but a colorful battle scene between Alexander and Darius and a mosaic from the floor of the House of Faun was supposed to have been inspired by a 4th C. Greek painting.

Architecture. One Etruscan innovation was the regular town plan later used by the Romans. The origin of their temples may have been from Greece, as they resemble the Greek prostyle plan. They constructed mostly of wood and sun-dried brick in the post and lintel system with heavy wooden superstructure above an entablature of brightly painted terra-cotta. The emphasis was on a highly ornate facade.

Sculpture. The sculpture of the Etruscans was influenced by the Hittites and Aegean and archaic Greeks as depicted in the conical hats and upturned toes. They did both relief sculpture and sculpture in the round. They designed elaborate sarcophagus and preferred to work in clay and bronze rather than stone.

Paintings. Tomb paintings were done usually in fresco although some were painted directly on stone ceiling and roof designs. They were chiefly conventional and contained geometric patterns. Wall scenes with funerals, banquets, dancing, athletic contests, and hunting as subjects were popular. The Etruscans accented individual man and pictures of his activities rather than mythological
subjects. Useful objects. Bronze vessels, mirrors, urns, and jewelry were among the objects created. The Etruscans invented the safety pin.

Architecture. The Roman dwellings were of three types: the romus, or private house; the villa, or country house; and the insula, or urban house with an apartment on each story. Windows and loggias faced the street as well as courtyards. As exhibited in the public buildings, Rome was heir to techniques and aesthetics of Etruscan and Hellenistic pasts. Romans solved for the first time in western history the problem of enclosing large volumes of space. They developed the arch, dome, and vault with the use of concrete, which they invented. Examples of their important works are the Arch of Titus, Pantheon, Arch of Constantine, Colosseum, Baths of Diocletian, and Basilica of Constantine.

Sculpture. The first early Roman sculpture was of terra-cotta figures, bronze containers and busts. Later, shiploads of Greek marbles and bronzes were brought to Rome by generals and provincial governors to adorn their palaces. When these supplies were exhausted, copies were made or Greek artists were employed to create new ones. To expedite the copying process, the Romans devised a method of casting in which a mold was made from
the original, and plaster copies were made. Not all Roman sculpture was imitation; some Romans excelled in portrait sculpture. Some free-standing sculptures of merit are The Emperor Augustus and a marble bust of Hadrian.

**Painting.** As there were few windows, considerable wall space was available for decoration. The interests of the Roman painter were far wider than his forerunners. He, too, painted mythical and historical subjects, but he was inclined to scenes of architecture and landscapes. Genre and anecdotal paintings and still life paintings seem to be Roman innovations. Useful objects. Other forms created by the Roman craftsmen were cameos, coins, and vases.

**LITERATURE** During this period the poet Homer, writing of the Trojan War, gave the best interpretation of the spirit of man. The playwright Aeschylus attempted in his plays to define the relationship between power and individual freedom.

The ideals of the Greeks were expressed by Socrates and Aristotle ("Know thyself" and "Nothing in excess"), Sophocles (Oedipus Rex), Euripides (Electra), and Aristophanes (The Birds). All depict the tragic and comic sense in Greek experience.

The Roman political skills made the oratory of Cicero and the histories and chronicles of Caesar and Plutarch the favorite forms of literature. Vergil's Aeneid (particularly Book VI, "The Lower World") was later used by Dante as his guide through hell and purgatory in The Divine Comedy.

With the advent of Christianity was evidenced a combination of Greek idealism with that of Christianity, which had an oriental flavor and was tinged with Judaism.

III. PERIOD 300 A.D. - 1400 A.D. (Middle Ages)

Beginning with the acceptance of Christianity by the Emperor Galerius in 311, Christianity rapidly rose to a position of dominance in Western public life. One cannot exaggerate the influence of the Christian church on Medieval civilization. It was the Church that provided educational and vocational training for the small minority of people who were to lay the foundations of a new era. Monks provided Renaissance man with the classical heritage necessary for the birth of humanism.

For the most part, the Byzantine Empire enjoyed power and prosperity from its beginnings under Constantine until its fall. Byzantine government was essentially one of theocracy, or "caesaropapism," despotism, and paternalism. Byzantium served as a bastion for orthodox Christianity in the East. Its cultural influence on Eastern Europe and Russia was considerable.

In 622 A.D. the new religion of Islam (Muslim) began with the Hejira of Mohammed, the Prophet. Expansion reached its zenith under the Omrid dynasty by 750 A.D. The empire encompassed Spain, North Africa, the Near East, and reached far into Southeast Asia. The Islamic influence provided a basis for Medieval scholasticism, and left an indelible stamp on Spanish culture.

In Africa, the empires of Ghana (Kumbi), Mali, and Songhai produced powerful kings arising from a progression of family grouping, clans and clan states, village states, and kingdoms. The rulers were strongly influenced by Islam, particularly
King Askia Mohammed, who drew upon Islam's culture to make vast improvements both in the government and in the educational system.

With the decline and eclipse of Roman authority came the breakup of the former Empire into petty states and the nuclei of future national states. This was largely an agricultural and a fighting (feudalistic) society, whose only concern was preserving itself. For the average peasant, the world ended at the limits of the manor to which he was attached. The unit of government was sufficiently small that each individual could know the workings of the whole system.

Between 900-1000 A.D., towns sprang up in Europe. They had gained their impetus from feudalism, from the increase of land devoted to architecture, and from the development of markets by the monasteries. National states were beginning. England was united under William the Conqueror; France, under Hugh Capet. Kingdoms appeared in Denmark, Norway, and Sweden. With the establishment of Charlemagne's Palace School, the revival of learning began.

To a great measure, the results of the Crusades helped to mold European civilization for years to come. The breakdown of serfdom resulted from the noble's need for money and his absence during the Crusades. This absence in turn enabled women to begin to dominate medieval life, and the Courts of Love developed along with the Cult of the Virgin.

By 1000, an economic revival had begun in Europe with the rise of urban centers as a result of increased commerce and industry. Craft and trade guilds came to dominate much of urban life. By the end of this period there existed in France and England a semblance of legislative, governmental bodies. The rising urban middle class was soon to support exploration, the arts, centralized government, religious reforms, and, later, democracy.

MUSIC

The rise and fall of Roman civilization, as well as the rise of the Christian church and its spread, is important to the understanding of cultural development. Much of the Roman music was borrowed from the Greeks.
and was used for festivals and war. The trumpet and drum spoke of conflict in a man's heart, as well as in the life of a people.

However, in the reign of Augustus a child was born in Bethlehem of Judea, and this event was destined to change the world. A new religion was born called Christianity. These believers scattered through the Roman world, teaching the doctrine of mercy and peace. In Rome they met with terrible persecution, but neither persecution nor the threat of death marred the power of this new faith. Their music was written and performed to serve God. It was a sort of communication between man and God with the church controlling the types and character of music.

Christian music took its form and liturgical order from the Byzantine church and Jewish temple and was usually polyphonic. Since instruments were associated with pagan rites, music was vocal. It was at this time that the "Gregorian Chant," the first important music form, appeared. As the church grew, one of the most important musical developments, a liturgy called "the mass," emerged. Secular music was carried on by minstrels and troubadours, but little of it was written down.

In the Gothic period there was a break with the past by a gradual swing toward humanism. Harmony, one of the basic elements of Western music, was achieved by polyphony, or counterpoint, and homophony. Architecture, sculpture, painting, and music of the Gothic period were the expression of religion, mysticism, and scholasticism that permeated the age. Cathedrals were adorned with every art form known to man. Great organs were built into the churches, and Guillaume Machant created a complete polyphonic setting for the mass "Agnus Dei."

**ART**

Architecture. When Christianity was officially recognized after 313 A.D., it became possible to erect places of worship, called basilicas, which were suitable to the demands of Christian liturgy.

The basilica form was variously treated, not standardized. Some had transepts; some did not. Old St. Peter's Basilica in Rome, built...
in 333 A.D. and destroyed in the 15th C., was the most famous building of its type. Later a central-

plan church was developed. The dominant structural device was the dome covering the central portion.

**Sculpture.** Sculpture in the round existed, but because of its kinship to “graven images,” they were not often produced. There were stone, marble, and ivory relief designs and decorative capitals on columns. Furniture also used inlay and carved reliefs.

**Painting.** The mosaic decoration of large wall areas and tempera pen and ink illustrations, known usually as miniatures, were executed for religious manuscripts. Useful objects. Textiles and weaving became important. The chalice was a product in the field of metal work.

**Architecture.** The central-plan was almost exclusively used with variations on the Greek cross. Domes covered the cross and domes on pendentives were raised on drums. Interiors were covered with mosaics or frescoes which were executed in strict accordance with observed customs.

**Sculpture.** Artistic representations of all sacred personages were outlawed by the emperor, so artists were forced to flee or express their talents in secular terms during this Iconoclas-

- Period 300 A.D. - 1400 A.D. 55
tic controversy. Carved ornaments were used, but monumental sculptures were never encouraged. The Byzantine sculptor was called upon to carve small statues and reliefs, particularly in ivory, to adorn books and caskets.

**Painting.** The Iconoclastic controversy was stilled after 843 A.D., which permitted the portrayal of sacred images; still a rigid system for decoration was enforced. The lovely *Enthroned Madonna and Child*, painted on wood is such a painting. **Mosaics.** The mosaic of this period took precedence over painting. Many had gold backgrounds. The artists distorted proportions and elongated figures. Another characteristic was the negative or reverse values on portraits (high-lighted areas become dark and shadowed areas light).

**Useful objects.** Metal work and textiles were very important adjuncts to other arts. Furniture was covered with metal, ivory, and enamel plaques. Heavy embroidery with metal thread embellished rich vestments. Enamels of the cloisonne type were also used.

**Architecture.** Of the few extant examples of architecture, The Tomb of Theodoric in Ravenna is the only complete structure remaining with solid masonry, a central-plan, arches, and a dome of a large single stone hollowed into the shape of a saucer.

**Sculpture.** During these years in this area sculpture disappeared as a technique except for a few isolated workshops in southern France and Italy where early Christian traditions were faithfully preserved. In Ireland many crosses remain from this period. **Painting.** The beginning of Early Medieval painting in the decoration of manuscripts emerged. The *Book of Kells* was written and decorated by Irish monks in 700 A.D.

**Architecture.** The Early Christian basilica was adapted to the needs of the parish and clergy. Basic Roman principles of construction and methods for maintaining harmonious proportions were still available to these stone masons. Innovations were choirs for monks in the nave, an apse for

---

**Period 300 A.D. - 1400 A.D.**
royal burial places, and the inclusion of towers.

**Illumination.** The Carolingian artist of the Palace School at Aachen was the illustrator of manuscripts of the gospels and other sacred texts. He emphasized surface ornamentation, such as in the Utrecht Psalter, written at Hautvilliers or Reims, France, about 830 A.D. **Useful objects.** Gold book covers and ivory carvings were made at this time, as well as the bronze doors of Cathedral of Hildesheim.

**Architecture.** The architect of this period had several problems to solve: obtaining space for large crowds, providing circulation, building solid fireproof structures, and admitting light. Some characteristics of buildings of this period were the semi-circular arch; recessed arch; compound arch (one or two arches under one larger arch); increased length of nave; thick, continuous walls of massive, quite closely spaced, piers; stone vaults; intersecting groin vaults; vaults over aisles flanking the nave (thereby carrying thrust to thick outer walls); clerestory windows; and simple decorations. Many regional types of the Romanesque existed; England followed closely the Norman types. In Germany and Italy the type was distinctively Romanesque.

---

**ROMANESQUE CROSS SECTION**

- Period 300 A.D. – 1400 A.D.
Sculpture. As stone buildings began to rise it was inevitable that the sculptor turn to surviving Roman sculpture as inspiration. This he did, not only in stone, but in ivory carving and metalwork. The sculptor was limited to areas such as different parts of the portals. In the interior he was limited almost exclusively to the capitals and to the alters; therefore, most decoration was relief sculpture only.

Painting. Often the relief sculpture was painted; very little of this survives. Figures and religious scenes were often painted on walls and vaults. Miniature paintings in religious manuscripts continued to be an important monastic activity. Useful objects. Frames for miniatures were popular during this era.
Architecture. Gothic architecture developed from the Romanesque. Characteristics of the Gothic church are the flying buttress, ribbed vault, tracery windows, stained glass windows, elongated sculptural figures, pointed arches and gargoyles. Examples of the Gothic church are Amiens Cathedral and Notre Dame of Chartres, which is considered by many to be the most beautiful of its type.

Sculpture. Sculptured columns began to dominate facades of cathedrals with kings and queens, the majesty of Christ and the apostles. These were called Royal Portals. Painting. Two distinct trends existed in Italian paintings of the 13th C. One, Sienese, was distinctly medieval; the other, Florentine, was more obscure in its origin.

Useful objects. Stained glass windows were used as early as the fourth century. Examples of this art form are from the Rose Window at Chartres. Decorative manuscripts, bronze crucifixes, candlesticks, and ornamental liturgical vessels were used during this Gothic era.

Period 300 A.D. -- 1400 A.D.
LITERATURE / CHRONOLOGICAL APPROACH

LITERATURE

During the earlier part of the Middle Ages the spirit of the people was expressed in their mythology and their hero stories. In the folk-epics (Beowulf, Song of Roland, and Song of the Niblungs) one sees the warrior's world of the first half of the medieval period. The group ideal of these times is revealed in the religious literature (particularly the lives of the saints) and in the morality plays. The purpose of this literature was to instruct the common people.

In his "Prologue" to the Canterbury Tales, Geoffrey Chaucer illustrates the problem: "How are new ways compatible with what we have always known?" It remains for Dante Alighieri in The Divine Comedy to achieve a literary synthesis of medieval life.

IV. Period 1400 A.D. - 1600 A.D. (The Renaissance)

SOCIAL STUDIES
In part, the rise of the wealthy commercial city (the dominant social unit) was responsible for the Renaissance and its early development in Italy. The spirit of adventure, which began with the Crusades, culminated in the 16th C. with world-wide exploration. Economic arrangements became a separate field of human thought.

During this period, the characteristic form of government was autocracy in the predominant form of absolute, divine-right monarchy. General corruption in the hierarchy of the church led to the Reformation, and ultimately to a trend toward national churches.

The Renaissance stressed the individual and sacrificed the group, and humanism was transformed from an imitation of classics to a faith
in the ability of man. Scientific theory led to Deism, and to a rejection of supernatural, mythical, emotional, and natural law.

**MUSIC**

The essence of the Renaissance is the essence of man himself—a period in history dedicated to the rebirth of classical learning. Materialism and individualism brought new incentives for living. The church remained the greatest patron of the arts, but music moved into the household of the aristocracy as well. The religious music spoke of the serenity of God and man. Josquin des Prez in his "Ave Maria" used the most generally used principle of organization, that of repetition and contrast.

Palestrina reached a new high in liturgical music. Hymns, anthems, motifs, and sacred forms were created by such composers as William Byrd, Guillaume De Fay, Orlando Gibbons and Tomas Victoria while Don Carlo Gesualdo, Claudio Monteverde, and Thomas Morley excelled in madrigals and secular forms.

**ART**

Architecture. During the Renaissance the temple was no longer the typical building. Features of the architecture were windows decorated with pediments—either triangular or rounded—overhanging cornices, pilasters, ornamented pediments, domes on drum and small and high drums. The most important French example is the Louvre court facade designed by Pierre Lascot and Jean Gojon. Italian examples are the Cathedral of Florence and the Villa Rotunda by Andrea Palladio.

Sculpture. Renaissance sculpture began with the broad naturalistic sculpture of the late 14th C. This was infused with new vitality and movement. Monumental, three dimensional form with robust energy developed, typified by Michelangelo's Moses, David, and Pieta.

Painting. Most of the paintings of this period had a religious theme and were commissioned for churches. Many of the wealthy honored their patron saints. Other paintings used pagan themes or combined Christian and pagan. Painters in the north

* Period 1400 A.D. - 1600 A.D.
remained Gothic in spirit many years into the Renaissance. High Renaissance artists were frequently versatile, working in painting, sculpture, and architecture, as did Michelangelo, who considered himself a sculptor, but was a genius in many arts.

**LITERATURE**

During the Renaissance, man gained insight into the ancient philosophies without the darkening cloak of the Church dimming his vision. The beginning of humanism was first noted in the writing of Petrarch.

The invention of printing in the 16th C. broadened the growth of learning. Erasamus, the foremost writer during this time, anticipated the Reformation. With the Reformation came writers such as John Milton and Jonathan Edwards, a Puritan preacher.

Just as the drama became the most popular form of entertainment, culminating in the works of William Shakespeare and Ben Jonson, the favorite literary form was the romantic epic (Spenser’s Faerie Queene). Songs and sonnets were also favored lyric forms, such as chivalric romances (Don Quixote), tales of adventure, fables, allegories, and character sketches.

The prose of this period was less than commendable, excepting the essays of Sir Francis Bacon.

V. PERIOD 1600 A.D. - 1700 A.D.

SOCIAL STUDIES In England, France, and Russia the monarch continued to reign supreme. In America, where the English were the dominant colonizing force, the agrarian South and the industrial North were established by the end of the century.

In the area of scientific development one thinks immediately of Sir Isaac Newton and his concept of a universe which operated like a
machine, with God becoming a sort of celestial stationary engineer.

Liberalism and naturalism found expression in the writing of John Locke, who based his entire thought upon the idea that there is a "natural law" which operates in the affairs of men in their political problems.

**MUSIC**

The term baroque may well describe the 17th C. style in the arts. In music there were two main lines of development: opera with arias and recitatives, oratorios and cantatas. There was an emancipation of instrumental music. For the first time two styles were purposely used together—the old of the Renaissance and the modern ornamented style of the baroque.

Tonality as a basic concept brought about new ideas. Homophony became as important as polyphony. Johann Sebastian Bach and George Fredrick Handel were "the giants" of this period, but the music of Giovanni Gabrieli, Domenico Scarlatti and Antonio Vivaldi captured the spirit of the baroque.

**ART**

Baroque often refers to the art of the 17th C. The term may come from the Portuguese, *barroco*, meaning "irregularly shaped pearl."

Architecture. In baroque architecture the space became independent and alive. Facades were independent of the mass and space in the buildings. Piers and columns became massive and forceful while landscaping, sculpture, and painting became as a unit. This period was one of the most dynamic in the history of western culture.

In the rococo buildings, space was subdivided and diffused. Light was abundant and revealing. Murals on walls and ceiling were an extension of the architecture and a feeling of airy cheerfulness prevailed.

In Italy one of the giants of baroque was Gian Lorenzo Bernini, who conceived the period 1600 A.D. – 1700 A.D.
Palazzo Chiri Odescalchi in Rome. In France, Jules Hardouin Mansart built Church of Les Invalides in Paris. In Austria and Germany, because of the Thirty Years War, the economic level was low. There was no High Baroque period until very late in the 17th C.; however, John Dientzenhoger designed the Abby Church in Banz, Germany.

In England, Indigo Jones and Sir Christopher Wren were perhaps the most famous of architects. The rococo in Italy was expressed by Filippo Raguzzini with his Piazza S. Ignagio in Rome.

Sculpture. At this time sculpture was an integral part of architecture and landscaping, for example, the Baldachin over the high altar in St. Peter's in Rome.

Painting. A staggering quantity of many kinds of paintings were produced at one time throughout Europe. Most art historians present this period geographically, even though artists were beginning to move frequently from place to place. Thus even national boundaries lost their meanings as to the culture of this time.

Renaissance art had been primarily religious. Now, in addition to religious paintings, art in many instances were executed to popularize truths about the State, and resulted oftentimes in persuasive art that sometimes verged on propaganda.

In England, paintings were taking a different direction with the work of William Hogarth, who did a series of scenes from "Marriage a la Mode." Peter Paul Rubens and Sir Anthony van Dyke were Flemish painters during this era.

LITERATURE

The 17th C. was heralded by a wave of intellectual, spiritual and physical activity. In this age the lofty verse of John Milton and John Dryden, as well as the metaphysical conceits of John Donne, expressed the intellectual spirit.

At the same time the cavalier period 1600 A.D. - 1700 A.D.
poets manifested in their verse an underlying pessimism which scientific discoveries invariably foster in any century. Restoration drama was brilliant, but morally lax. In America the literature was functional for the most part, consisting of diaries, sermons, letters, and histories.

* Period 1600 A.D. – 1700 A.D. 67
VI. PERIOD 1700 A.D. - 1800 A.D.

SOCIAL STUDIES

During the 18th C., social philosophers (Diderot, Rousseau, and Kant) influenced the thinking of their own countrymen and, in some instances, precipitated revolutionary reaction beyond their own boundaries.

Also making their appearance were social scientists, historians, political writers, and social satirists. Particularly associated with this development were Adam Smith, Edward Gibbon, Jonathon Swift, Thomas Paine, Benjamin Franklin, Alexander Hamilton, and John Jay.

In America, geographic advantages, the brilliant leadership of Washington, and substantial aid from the French contributed to the final success of the undertaking. Colonial forces were strengthened by freedom-seeking Negroes, who had been promised their freedom in exchange for fighting. Negroes in the 18th C. colonial period also contributed to the history of the United States in the advancement of medicine, literature, politics, and architecture.

In France, where reforms were long overdue, the Third Estate declared themselves a National Assembly, and shortly before the end of the 18th C., feudalism in France had ended. Louis XIV had been executed as a traitor, and a strong military dictator, Napoleon, had become Emperor.

Because Great Britain had suffered less from invasion or civil war, it was natural that the Industrial Revolution should begin there. It was first felt in the textile industry, but by no means ended there. Immediate and projected results on both sides of the water were the appearance of the factory system, the trend toward urbanization, the development of the working class, the development of corporations, the formation of labor unions—and the resultant myriad attendant abuses and problems.

MUSIC

During this era there came a revolution in all phases of life. Because reason was thought necessary for
success in any endeavor, the period has been called the "Age of Reason." It was a century of order and symmetry. Everything was formalized through intellect. There was an urge for intellectual, political, spiritual, and artistic freedom. A style called rococo emerged and dominated the period for a time. This style emphasized pleasantness and beauty.

Another movement, neoclassicism, sought to express the classic ideas from Greece and Rome. While music did not succumb to the rococo spirit, it was indeed influenced and the lasting classic period emerged.

Some of the world's great music came from this period in the perfect creations of Mozart and Haydn. The operatic works of Mozart (The Magic Flute and The Marriage of Figaro) and the symphonies of Haydn (The London and The Clock) are inspiring examples.

ART

Architecture. The emigrants to America hurriedly constructed shelters of a "make-shift" type; any enclosure could become a shelter. When houses of any permanence were constructed they were of the type known to them in Europe, crude wattle and daub, thatched roof structures, little if any better than the huts and wigwams of the Indians.

Later in the South, where abundant materials were available, homes were constructed of brick, stone, and wood. The oldest home still standing in the Southern colonies is the Adam Throughgood house (1636) in Princess Anne County, Virginia. The first brick house had been built in 1612.

In New England the homes followed the exposed wood frame, filled with wattle and clay, topped with steep gabled roofs. The House of Seven Gables, Salem, Massachusetts, built in 1668 is an example of a sturdy, draft-proof home with clapboard covering. Around 1640 the Swedes brought to the United States the log cabin. This was quickly accepted and became the traditional home of the pioneer.

Southern homes before 1800 were built of brick, weather-board and log. Some characteristics were chimneys for each room at the
ends of the house and large windows, for example, Cragfont in Sumner County, Tennessee. Notable buildings before 1800 are Monticello, designed by Thomas Jefferson and the buildings at Williamsburg, Virginia.

Sculpture. The first sculpture in America was basically useful. Tools were made by hand, many with decorative handles, created with respect for the material and for the use to which the object was to be put. Weather vanes, decoys and children's toys were made by the early American craftsman or perhaps by the pioneer himself. Some of the early tombstones were objects of beauty and pathos.

Painting. The first American painters were artists who provided picture signs for stores and taverns. Two famous early paintings were of Little Margaret Gibbs (1670) and of Ann Pollard (1721) both anonymous and examples of limning at its height.

LITERATURE The classic era, or "Age of Enlightenment," in English literature brings to mind the rationalistic views of the century as expressed by Alexander Pope in Essay on Man. It was an era of brilliant political and social satire, exemplified in the works of Jonathan Swift, Richard Sheridan, and Voltaire. The beginnings of the Romantic spirit find their expression in the poetry of Thomas Gray and Robert Burns.

In America the pen proved mightier than the sword in the fiery propaganda of Thomas Paine and Patrick Henry, the poetry of Philip Freneau, and the dignified prose of Thomas Jefferson, author of the Declaration of Independence. In the life and writings of Benjamin Franklin, the picture of "the complete American" began to emerge.

VII. PERIOD 1800 A.D. - 1900 A.D.

By 1800, the population of the United States exceeded five million. Rivers soon became national highways, and the nationalist decisions of John Marshall, together with the team of John Adams and James Monroe, brought America into a position of national prominence.

However, the three major areas of the United States were following different lines of development, and Jackson's presidential victory swung the political center of gravity away from the Eastern seaboard. Early slave revolts intensified the feeling of the South and drew attention to Gabriel Prosser in Virginia, Denmark Versey in South Carolina, and Nat Turner in Virginia.

During the late 18th and early 19th C., the British sided with the French in expression of "Liberty, Equality, Fraternity"—basic tenets of romanticism. Reforms resulted in the organization of Sunday schools, the building of hospitals, and movements to reform the prisons, free the slaves, and regulate the conditions of child labor.

With Napoleon's plan of conquest of Europe, England became allied with other nations in all-out war against France. Attempts toward unification in Italy and Germany failed until the middle of the century. The Congress of Vienna set the course of Europe for thirty-five years.

During the middle and latter part of the 19th C., the United States was characterized by separatism and reunion, further expansion, the final sectional rupture, Reconstruction and post-Reconstruction, and, finally, increased industrialization resulting from vast natural resources.

In Europe, Victoria and her consort reigned in England for sixty years, and the British faced the problems of coping with the "sins" of the Industrial Revolution. Reaction to Charles Darwin's Origin of the Species (1859) ranged from doubt to despair.
Both Germany and Italy saw periods of imperialism and unification under Kaiser William and Victor Emmanuel, respectively. In Germany, writer-thinker Friedrich Nietzsche accurately predicted the era of great ideological wars and influenced Germany with his concept of the "overman" (superman).

**Music**

**Romantic** is the term used to designate the style of art and literature of the 19th C. Music was a more effective medium of expression than the visual arts.

Emphasis was placed on individual freedom and music provided opportunity for free expression. Composers became independent of patrons. While orchestras grew larger and more proficient, orchestration became more elaborate and complex. Composers introduced freer and more varied forms of music within a wider span of tempos and dynamics. They strove for emotional tension and dramatic contrasts by postponing the resolution of their sounds, by moving into different keys, by moving the melodic lines chromatically, and by compounding their meter with syncopation.

The three favorite mediums for expression for the romantic composer were the orchestra, the piano, and the human voice. Through these mediums, outstanding composers produced significant music, with many writing in forms for all three.

Ludwig von Beethoven's music was intensely expressive and pointed the way to the passionate outpouring of the Romanticist. Carl Maria von Weber, Giacchino Rossini, Charles Gounod, and Richard Wagner excelled in opera.

A growing consciousness of facts and world problems of reality brought about expressions concerned with actualities. **Realism** in music lay in the rise of program music (music with an extra-musical idea which often told stories and painted pictures). The orchestra became a concert organization, providing a suitable medium for the music of the time.

*Period 1800 A.D. – 1900 A.D.*
for the realist expression. Composers who excelled in this area were Hector Berlioz, Richard Wagner, Franz Liszt, Richard Strauss, George Bizet, Camille Saint-Saens, Antonia Dvorak, Jules Massenet, Alexander Borodin, and Rimsky-Korsakov.

Nationalism

Romantic and realistic art has reflected an expression of the struggle for freedom and liberation on a personal basis, but when the collective efforts of a people are directed toward freedom and liberty, we have nationalism. This musical application of the romantic spirit to the sovereign states was strongest among the Czechs, Russians, and Poles, and was clearly reflected in the works of Frederick Smetana, Peter Tchaikovsky, and Modest Moussorgsky. Edward Grieg was a champion of Norwegian nationalism. Jean Sebélius expressed love for his country in "Finlandia."

The later romantics related the total art expression to the impressionist movement. The fervent outpouring of the romanticist decreased and new ideas produced vague suggestions of mood and atmosphere. Stimulated by the paintings of Claude Monet, Debussy sought to express shimmering effects of light and shades by means of tone color and chordal structure. His music is almost formless in its vague melodic and harmonic structure. Debussy was the greatest creator of impressionist music, but Ottorino Respighi and Manuel de Fall worked successfully in this style.

ART Architecture. The styles of antiquity were in great vogue during most of the 19th C. This can be seen in the Corinthian order in the additions to the Capitol in Washington, D. C.

Technological developments, which were produced during the Industrial Age, gave rise to new types of buildings during the latter part of the century. Standardization of parts enabled prefabrication. The Crystal Palace in London, designed by Sir John Paxton, was almost entirely made of iron and glass.

Domestic architecture followed
these patterns: Tudor colonial, Georgian colonial, Dutch colonial, Queen Anne, Greek revival, and Gothic revival. Late Victorian architecture was popular during the last third of the 19th C. Examples are the Carson Mansion, Eureka, California; the Tennessee State Penitentiary, and Nashville Union Station. Late 19th C. buildings of interest are Carson, Perle, and Scott in Chicago, designed by Louis Sullivan; and the Marshall Field warehouse by Henry Hobson Richardson.

**Sculpture.** During the 19th C. sculpture was relatively unimportant. Painting was the dominant form of expression. Some of the best sculpture at this time was done by painters, such as Daumier, Degas, and Renoir. The most important sculptors were Auguste Rodin, who created *The Thinker*, *The Burghers of Calais*, and *Les Trois Ombres*, and *Francoise Rude*, who designed the relief for the *Arc de Triomphe*. In America sculpture was almost limited to the bust of the famous or monuments to the great.

**Painting.** In France, this century began with an art termed *neoclassic*. The most creative painter was Jacques Louis David, who became official painter to the Republic. In the latter part of the 1800's the *Impressionist* movement began with Edward Monet, Claude Monet, Auguste Renoir, and George Seurat.

In Spain Francisco Goya was foremost among the Spanish painters. Some his paintings are *Los Aprichos* (a series of eight etchings for which he was denounced by authorities of the church), *The Desisters of War* (series), and *The Bulls of Bordeaux*.

England produced several outstanding painters at this time: John Constable, John M. H. Turner, and William Blake. An American ex-patriate, James McNeil Whistler, was also among their ranks.

American painting of the 19th C. was of several schools: the primitives, painters of miniatures, genre painters, landscape and Hudson River painters. Outstanding artists were Edward Hicks, Edward Green Malbone, Eastman Johnson, Albert Bierstadt, and John James Audubon.

- Period 1800 A.D. - 1900 A.D.
LITERATURE / CHRONOLOGICAL APPROACH

The literature of the 19th C. falls roughly into four categories: romantic, realistic, nationalistic, and impressionistic. The romantic era is associated with the poetry of Wordsworth, Coleridge, Byron, Shelley, Keats, Bryant, Poe, Whittier, Longfellow, and Holmes.

In the short stories and novels of Washington Irving, Herman Melville, and Nathaniel Hawthorne, one finds the preoccupation with the past, the concern with man's moral functions, and the rejection of intellect as prime motivator in life.

Ralph Waldo Emerson and Henry Thoreau in their philosophical essays extolled the beauties of nature and insisted upon the individual's obligation to himself. Johann Goethe, in his master work "Faust," united the elements of activity and design and romanticism and classicism.

Realism, which reached its peak in the mid- and late 1800's, is characterized by a rejection of middle-class ideals, individualism, and restraint. Literary figures who best exemplify these characteristics are Charles Dickens, Walt Whitman, Henry James, Mark Twain, William Dean Howells, and Guy de Maupassant.

A tendency toward pessimism and a determination to depict the harsh realities of life and the basic weakness and inhumanity of man are illustrated in the works of Emile Zola, Henrik Ibsen, Theodore Dreiser, Anton Chekhov, Stephen Crane, and Thomas Hardy.

Nationalism as a literary trait of the 19th C. found its best expression in the folk tales dealing with Paul Bunyan, Davy Crockett, Mike Fink, and Johnny Appleseed. One must not overlook E. E. Hale's "A Man Without a Country," Mark Twain's The Innocents Abroad and Ibsen's Peer Gynt.

The sensory perceptions of Jewett, Mallarme, Materlinck, Dickinson, and Verlaine are an embodiment of the impressionistic writings of the 19th C.

Period 1800 A.D. - 1900 A.D.
III. PERIOD 1900 - PRESENT

SOCIAL STUDIES  In 20th C. man we find little
of the optimism characteristic
of the 19th C. Two world wars, a depression, a cold war,
and military action on two Eastern fronts have
given man little confidence in the future.

An age of violence, possibly
fostered by the influence of Social Darwinism and
Nazism, has resulted in an unprecedented rise in
crime--and the tragic and brutal assassination of
some of the world's strongest spokesmen.

"Mass man" has emerged, while
on the other hand, the individual continues to struggle
against conformity. Feelings of personal insecurity
have culminated in such reactions as racism,
totalitarianism, fatalism, and drug addiction. The
world, it is said, is running out of room--and pure
water and air.

There has been positive achievement, too. In atomic power, a new dimension has been
added to peace, as well as war. Scientists and engineers have put space at man's disposal. The Black voice,
too long ignored, has become an active irritant to
the slumbering conscience of the "uninvolved." Young
adults demand more meaningful curricula in education
and more voice in administrative policy-making; admin-
istrators who are aware are attempting to fulfill
these demands.

As the world has grown smaller,
man's opportunity to know more of it has increased,
and the pursuit of culture, formerly limited to the
affluent, is within the means of the blue-collar work-
er. Dramatic cures for crippling diseases have been
effected, and breakthroughs in the arresting of killer
diseases are indicated.

If we can learn nothing else,
we can know that men in the Western world have faced
at least five periods of chaos before, and that from
each of these periods has come a worthy design for
The test lies in individual response and attitude; if man is to attain a personal pattern for life which is constructive and fulfilling, it would seem that the search for this pattern is incumbent upon him.

The 20th C. has seen drastic changes in our way of life, and as always, the arts reflect the forces of the age. Modern music is bewildering to some, for it seems to lack order in the elements. Composers, to be totally creative, sought new dimensions of expression.

In this time of multi-media experiences, writers of music established new ideas melodically, harmonically and rhythmically. Form became relatively unimportant, and dissonance became a part of the expression, as experimentation produced musical sounds which characterized many 20th C. works. Arnold Schoenberg, Igor Stravinsky, Bela Bartok, Paul Hindemith are among those who make valuable contributions to the present day scene. In America, Ives, Copland, Sessions, Riegger, and Piston have contributed masterful works to the contemporary repertoire.

More and more modern music has been inspired through drama and dance, show music, and background music for radio and television. Irvin Berlin, George Gershwin, Jerome Kern, Cole Porter, Leonard Bernstein, and Richard Rodgers are among many "hall of fame" composers.

Modern jazz has charted new courses, created new styles and forms, and added new enthusiasm and interest to "Music, 1970." Jazz, as did art music, developed from folk music. The two main sources for this expression were Europe and Africa.

The origin and development of folk, pop, and rock vividly pictures man's problems through the years. Nashville, Tennessee, "Music City, USA," offers through its recording industry,
"Grand Ol' Opry," country music stars, and programming throughout the world a significant force in contemporary music today.

Developments in physical and electronic acoustics have opened ways for great experiments in musical tone production. Outstanding men in this field of endeavor include Milton Babbitt and Gilbert Trythall.

**Architecture.** During the last two centuries a new architecture has emerged with industrialism as its core. The Bauhaus, a school formed by Walter Gropius in Germany in the early 1900's, is of utmost importance in a study of our architecture today. It sought solutions for problems concerning housing, urban planning, and mass production while stressing creativity. His design for the Bauhaus building established the principles for the international style.

Mies von der Rohe, one of the founders of modern architecture, has many buildings to his credit: the German pavilion, built for the International Exposition at Barcelona; and the Illinois Institute of Technology in Chicago; the Seagram building in New York.

Frank Lloyd Wright has produced more outstanding examples of his work than most architects. From homes to museums to office buildings, all are equally superior: the Solomon Guggenheim Museum, Johnson Wax building, and two homes, Taliesin East and Taliesin West. Other architects of note are Paul Randolph, Eero Saarinen, and Edward Stone.

**Sculpture.** Sculpture has again become popular, after being rather unimportant during the last century. Today as never before, sculptors are working in a vast amount of new and unusual materials.

England's Henry Moore is noted for his monumental garden figures of metal. Metals have always been popular with the sculptor, from earliest time, and now with methods of casting available, it is more so. Artists working in metal include...
Jacques Lipschitz, Constantin Brâncuși, and David Smith.

Many of the current pop sculptors work in a variety of materials on the same design; their work is termed mixed media. Claes Oldenburg and George Segal combine plaster with "re-"mades." Others use parts of scrap metal or parts of furniture and plastics to give form to their ideas.

Of interest to Nashvillians are the following sculptures and/or sculptors: Puryear Him's cast metal sculptures depicting history of Tennessee, located around the Cordell Hull Building on Capitol Hill; William Edmondson, a primitive of Nashville, who before his death achieved fame as a sculptor, mainly of small figures (some are in the Children's Museum); and Kahlil Gibran, whose uncle wrote The Prophet, is represented in the permanent collection at Cheekwood by the metal sculpture Pieta; and Lin Emery was the creator of the metal fountain sculpture in the new Third National Bank lobby.

Other groups were the German expressionists (Franz Marc), the Blue Rider group (Vassily Kandinsky), the cubists (Juan Gris and Pablo Picasso), the futurists (Marcel Duchamp), the suprematists (Kazimir Malevich), and the surrealists (Salvador Dali and Yves Tanguy).

Painting. The first signs of a new and specifically 20th C. movement in painting appeared in 1905. The major movements are varied, and many artists who changed their styles of painting over the years could be placed with a number of different schools.

Les fauves were a group of painters under the leadership of Henri Matisse, whose paintings were so colorful and brilliant that critics labeled the "fauves" (wild beasts).

In America, "The Eight," or "ashcan" school, reported urban life honestly and were little interested in the formal problems which the European painters set for themselves (Robert Henri, George Luks, Everett Shinn).

Additional American groups include the social realists, critical realists, abstract expressionists, Northwestern School, new realists, pop art, hard-edge and op artists.

Period 1900 A.D. - Present
LITERATURE

The 20th C. writer in his search for new sets of values has involved himself with a considerable emphasis on the emotions, intuition, and action. This century is, too, a period marked by pessimism, disillusionment, and skepticism. We find a reflection of this unrest in the disappearance of metrical forms in all literary modes of expression, including entertainment media.

Among those writers who best reflect the characteristics of the age in the areas of the novel and short story are James Joyce, William Faulkner, John Steinbeck, Ernest Hemingway, Albert Camus, Truman Capote, and James Baldwin.

These same characteristics are borne out in the dramatic writing of Eugene O'Neill, Tennessee Williams, George Bernard Shaw, Jean Paul Sartre, Oscar Wilde, Sean O'Casey, T. S. Eliot, and Arthur Miller.

Poets who reflect both optimism and despair are Carl Sandburg, Robert Frost, A. E. Housman, Langston Hughes, Countee Cullen, James Weldon Johnson, Edgar Lee Master, Dylan Thomas, and Lawrence Ferlinghetti.

SUPPLEMENTARY REFERENCES

Among the numerous films available for viewing are "Brotherhood of Man" (Contemporary Films), "Hollywood: The Golden Years" (Sterling), "A City Decides" (Contemporary Films), and "Minds of Men" (UNESCO). Guidance Associates has a series which includes "The Search for Black Identity,"
"Proud Heritage from West Africa," "Martin Luther King," "Malcolm X," and "The Black Odyssey: Migration to the Cities." Recommended listening includes "But I Am Somebody" (Pete), "Israel Is Born" (Cadmmon), Edward R. Murrow's "Reporter Remembers" (Columbia).
