The second in a series of four Quinmester courses, this course is planned for any junior or senior high school student interested in possible employment as a Child Care Aide, or as a worker with exceptional children. It focuses on the stages of childhood growth and development, emphasizing the achievement of a positive self-concept. The main thrust of the course of study is directed toward the child with exceptional problems and is reflected in the following course outline: (1) as the twig is bent, (2) trusting threes through fetching fives, (3) the exceptional child with special needs, (4) services and facilities for exceptional children, (5) mental retardation, and (6) techniques for shaping behavior of the mentally retarded. The body of the guide is organized according to behavioral outcome goals with suggested content ideas, learning opportunities, and resources. A three-page bibliography completes the document. (MW)

COURSE DESCRIPTION

This is the second in the series of four quarter courses which will provide the student with the opportunity to gain the knowledge and skills necessary to become an effective Child Care Aide. This course will focus on the stages of growth and development in the typical young child with the emphasis placed upon gaining a positive self concept. The awareness of the worth of all individuals in a society leads the learner to recognize that training for the care of the typical child may be extended to the care of the child with special needs, thus enhancing the possibilities for employment.

ENROLLMENT GUIDELINES

This course is planned for any junior or senior high school student interested in possible employment as a Child Care Aide, or as a worker with exceptional children. This course fits into the Child Care Services sequence following prerequisite course, The Child Care Aide.

RATIONALE

The ages and stages in the development of the typical child occur also in the exceptional child but with varying degrees of disorder. These handicaps in intelligence and motor ability require special training for the child to fit into society to the best of his ability. These special programs for special needs depend upon the same capabilities in the Aides as do the programs for the normal child; therefore, training for work with exceptional children is a part of Child Care Services. The ages and stages in the development of the typical child is dealt with in greater detail in the course of study entitled Trusting Threes Through Fetching Fives, a prerequisite for the total sequence in Child Care Services. Therefore, the main thrust of this course of study is toward the child with exceptional problems.

FOREWORD

This course of study has been developed as an aid to teachers of Child Care, Guidance and Services. The content ideas and the resources are those found to be helpful to the writer, and are not intended to be other than a first working copy. It is hoped that as the course of study is used, the teacher will make additions and corrections to aid in future revision. This course of study was developed under the direction and leadership of Mrs. Martha Lee La Croix, Consultant, and Mrs. Betty Morrow, Teacher-Coordinator, Home and Family Education.
MAJOR GOALS

1. Based on an understanding of the growth and development of the young child, the student will identify the patterns of predictable behaviors and the approximate period of maturation for each.

2. The student will recognize that similar feelings exist in both herself and children; therefore, the development of self-understanding will be beneficial and necessary for the guidance of children.

3. The student will identify the special needs of the exceptional child, and will analyze the capabilities needed and satisfactions gained when working with such children.

BEHAVIORAL OUTCOMES

The student will be able to:

1. Describe the development of a child from the prenatal period to the toddler age.

2. Recognize the development that takes place in the first and second years of life and its relationship to the task of achieving identity.

3. Identify the predictable patterns of child behavior and the approximate age span of each.

4. Analyze the effects of heredity and environment on the growth and development of a child.

5. Apply knowledge of self-understanding to that of helping children gain an understanding of emotional expression.

6. Identify some of the ways in which children have exceptional problems and special needs.

7. Identify types of services and facilities for exceptional children and define the major objectives of such facilities.

8. Differentiate between mental illness and mental retardation and list the causes for retardation.

9. Evaluate personal qualities needed in working with exceptional children, and identify techniques that might be helpful for the development of such qualities in parents.

10. Recognize behavior patterns of mentally retarded children, and compare these behaviors with those of normal children.

11. Analyze the techniques used in guiding behavior in the mentally retarded and recognize the similarity to the techniques used when guiding normal children.

12. Select activities for exceptional children that aid in developing motor control, motor coordination and perceptual motor abilities.
COURSE CONTENT

I. As the Twig is Bent
   A. Early stages of development
   B. Awareness of the "self"
   C. Development of self-control

II. Trusting Threes through Fetching Fives
   A. Behavior patterns and maturation
   B. Heredity and environment influence development
   C. Theories of constitutional psychology
   D. Expression of feelings

III. The exceptional child with special needs
   A. Home conditions which might require special consideration
   B. Behavior "outside the usual limits"
   C. The gifted child
   D. Physical handicaps

IV. Services and facilities for exceptional children
   A. Types of facilities
   B. Legislation related to services

V. Mental retardation
   A. Evaluation of qualities required in an Aide working with the mentally retarded
   B. Psychological help for parents
   C. Needs of the mentally retarded
   D. Adaptive behavior and intelligence

VI. Techniques for shaping behavior of the mentally retarded
   A. The ABC's of Guidance
   B. Activities to develop motor control
   C. Games and exercises
   D. Arts and crafts techniques
   E. Action and drama in storytelling
   F. Music that teaches control and coordination
   G. Perceptual motor skills
**BEHAVIORAL OUTCOME:** 1. Describe the development of a child from the prenatal period to the toddler age.

</table>
| Certain types of behavior which is "outside" usual limits can be beneficial:  
  The gifted child  
  The genius | Read Child Care and Development, Chapter 25, entitled "Behavior Problems."  
  Define IQ. Differentiate between the normal IQ range and that of the gifted child.  
  Discuss what the problems may be for the child who is musically gifted but average in every other way; the child who has superior intelligence but is poorly coordinated; the child who is gifted in intelligence but slow in physical maturity.  
  Debate: "There should be special schools, rather than special classes, for gifted children." | Child Care and Development  
  Chapters 22 and 25 |
| Specialists now recognize five distinct types of brain disorders that greatly influence the learning and behaviors of some children:  
  Cerebral palsy  
  Epilepsy  
  Retardation  
  Brain injury  
  Perceptual handicaps | Divide into five buzz groups and prepare outlines on each of the five major types of brain disorders. Put the information on transparencies so the entire class may have it.  
  Collect clippings and articles on mental health (illness) and mental retardation, and report on the differences. | |
| Other types of exceptional children with special needs:  
  The orthopedically handicapped child  
  The deaf child  
  The blind child | Ask a doctor to visit and discuss epilepsy.  
  Invite a speaker from Family and Children's Services to inform the class regarding facilities available for children with brain disorders. | Periodicals:  
  Parent's Magazine  
  Today's Health  
  Newspapers  
  Public Health pamphlets  
  Resource persons:  
  Department of Public Health  
  Dade County Medical Association  
  Family and Children's Services |
### SUGGESTED CONTENT IDEAS

Children may have family situations that may require special knowledge and understanding.

### LEARNING OPPORTUNITIES

Prepare a case situation involving each of the following depicting one behavior problem that might be present as a result of being:
- An only child
- A child with one parent
- A child with a working mother
- An adopted child
- A step-child
- A child of recently divorced parents
- A child from a large family
- An unwanted child
- A child whose parents expect too much
- An overprotected child

If possible, view *Children of Change* and *Angel by the Hand* to help in the formation of interest and understanding of the special problems of some children.

Discuss the "battered child syndrome."

Collect a series of newspaper, and magazine articles relating to severe physical damage done to children by parents and family members. Discuss possible causes for these actions.

Invite a social worker to speak to the class about the battered children.

<th>RESOURCES</th>
</tr>
</thead>
<tbody>
<tr>
<td>The mentally retarded need the same kinds of guidance and discipline as any other child of the same mental age and ability level.</td>
<td>Using the ABC's of Guidance, do the following activities: Reduce each paragraph to one short descriptive sentence. Compare each ABC with what is known of &quot;normal&quot; nursery school-aged children. View the film, <em>He Acts His Age</em>, and observe how normally a child's emotional development keeps pace with his physical growth. Using the film as background, write a paper showing how the behavior of the mentally retarded and the normal child is similar, and at what approximate age the pattern of behavior changes. Develop a situation in which an adult, after establishing a limit, failed to take any action when that limit was not observed. Explain what would be the effect on a normal child, and on a mentally retarded child of the same mental age. Create a situation in which physical danger is present, i.e., one child hits another with a toy. Discuss what an Aide might do if the children involved were normal, and what might be done if the children are retarded. Role-play a situation in which a mentally retarded child has successfully tied his shoe-laces. Show by expression that this behavior is approved.</td>
<td>Child Care Aide pp. A-243 - A-250</td>
</tr>
</tbody>
</table>

It is essential that acceptable limits be set for the behavior of the normal child; this is equally important for the mentally retarded. Everything a child does expresses some inner feeling or need. Retarded children often respond to expressions, tone of voice, etc. more than the content of what is being said.

</table>
| The play needs of exceptional children are similar to those of normal children of the same mental age, except that they differ in expression and are the result of slower motor development. | Review Units VI, VII, VIII, IX in *Child Care Aide* for the purpose of planning activities for the mentally retarded.  
Practice, and demonstrate to the class, one or more of the exercises on pages A-252 through A-254 in *Child Care Aide*. Class members try each, then discuss together how balance and coordination are needed.  
Plan to visit a center for exceptional children. Before the visit, divide into groups each to develop an activity to be used during the visit.  
1. Try each of the games and vote on two to use at the center.  
   Practice the directions to be used to teach the game, keeping in mind the mental ages of the children to be taught.  
   At the center, observe the response of one child to the game. If possible, find out the mental age of that child.  
   2. Select any one of the arts and crafts activities to be used with a group of mentally retarded children.  
      Assemble all materials necessary for the teaching of this activity, and direct the class in the participation of the activity.  
      A second group from the class will plan on aiding in the art activity when it is presented at the exceptional children center. | *Child Care Aide*  
Units VI-IX                                                                                     | *Child Care Aide*  
A-253, A-254                                                                                   | *Child Care and Development*  
pp. 389-390                                                                                      | *Child Care Aide*
