This document is a collection of forms, questionnaires, materials, and reports from two summer workshops attended by 50 educators and counselors at the University of Maryland. Career exploration questionnaires, progress reports on 13 career exploration workshops, career exploration 1971 goals and objectives, resource materials, and a team research form are followed by the document's major section: Each of four worlds—the human world, technological world, aesthetic world, and natural world—is related to classroom activities (e.g., have a State trooper visit the classroom) and to potential careers (policeman, crossing guard, security guard, etc.). A career exploration plan (to change attitudes toward work), career education in home economics and in industrial arts, and a high school career exploration workshop follow. (NH)

CAREER EXPLORATION WORKSHOPS FOR JUNIOR HIGH SCHOOL COUNSELORS AND EDUCATORS

SUMMER, 1971...a Maryland Career Development Project component

To remove the artificial barriers between school disciplines, to implement a team approach, and to explore the broad range of career identifications to which their students might one day aspire...these are the challenges faced by more than fifty educators and counselors in two summer workshops held on the campus of the University of Maryland.

During this second summer of workshop experience, team membership grew from 1970's original nucleus: the counselor, the home economics teacher, and the industrial arts teacher, to include the mathematics teacher and the free choice of the applicant school. Participants immediately engaged in concrete, role-playing experiences demonstrating each discipline's application to nine broad career areas and to effective mergers within existing curriculum. Such mergers were exemplified as each discipline area was able to effectively house activities which stressed both the need for basic skills and their relationships to common traits of employability. Participants were directly involved with people at work as they researched six roles they assumed. Among them were:

- an assembly line worker
- a family member's division of labor
- a small business entrepreneur
- a consumer of goods or services
- a creator of goods and services
- an educator validating education

These experiences, permitting educators and counselors to value one another's expertise, as well as to become aware of the career alternatives their students
be able to examine, resulted in custom-made plans which will be operational in a total of fifteen schools by the fall of 1971. The activities and strategies employed by each team in the home school setting will be observed and evaluated by the workshop staff during the school year. Continuing assistance of state, county, university, local, and business personnel has been assured in the recognition of education’s need to strengthen its relationship with all areas impacting upon the lives of the students it serves.

GUIDELINES FOR CAREER DEVELOPMENT...setting oriented

JUNIOR HIGH AND MIDDLE SCHOOL OUTCOME: The student will be able to demonstrate a broad awareness of the career alternatives which will someday be available to him.

GOAL STATEMENTS:

1. Provide opportunities for independent study, problem-solving, aptitude testing, through the utilization of community as laboratory.

2. Continue to emphasize transferable worker-personality characteristics which are applicable within and across occupational areas.

3. Coordinate curriculum areas so as to support the concept of interrelatedness between educational and vocational competencies.

4. Encourage the student to link his avocational or extra-curricular interests with his own designation of the kind of adult he will someday be.

5. Assist the student to evaluate his preferences in terms of real experiences with people, data, and things. Support and provide for experiences which permit him to make changes in his assessment if he wishes them.

6. Continue the provision of first-hand contact with people who work while supplementing those experiences through media (television, test, etc.) which can widen the range of possible career identification.

7. Provide concrete, manipulatory activities in all learning settings which can provide the basis for the student’s conceptualization of himself in future roles. Build the capacity for abstract thought on such concrete experiences.

8. Encourage the refinement of decision-making skills through role-playing activities, reporting of decision points in student’s or parent’s lives, accurate observation to date of people at work, work histories of older siblings and friends, etc.
9. Support the student who desires part-time work experience after school through activities permitting him to share these experiences with his classmates.

10. Prepare students for their next decision point by "forecasting" the need for each child to make as accurate a self-assessment as possible before election of future courses of study.

NOTE: Quantifiable objectives, stated in behavioral terms, are best designed by those local units who must implement them.

<tr>
<td>22. Career education in rural areas is more important than career education in urban areas.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>23. Only those students who declare themselves to be work-oriented need exposure to the career development approach.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>24. Parents with college educations are less apt to support curriculum stressing employability than are parents whose working careers began after high school.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>25. Only when a total school approach and curriculum reflect future career applications in all subjects will young people attribute status to the acquisition of a salable skill.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
As a professional educator, my primary concerns are with:
(Re-number according to your priority ranking)

1. Development of a salable skill.
2. Matching of known aptitudes with jobs demanding them.
3. Achievement of technological currency.
4. Meeting individual needs as they become apparent.
5. Vocational awareness for all students: K-12
6. Raising professional standards in my field.
7. Creating more valid measures of skill attainment.
8. Achievement of equal status with other disciplines
9. Teaming my proficiencies with those of other disciplines in an effort to validate education.

Career development is... (Check one or write your own one-liner)

- A vocational course offering in a comprehensive high school
- A response to the manpower needs of the future
- A progression through apprenticeship to certification
- A school and community assisted process of reality-testing
- Occupational orientation in a vocational-technical school
- Achieved at the moment of job entry
- An ongoing educational process that starts at birth and continues until death

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. Using your subject matter as a basis, briefly describe three ways you could incorporate work-simulation experiences for your students. (You may assume resource help, a change in setting, and "unlimited" equipment.)

   a. 
   
   b. 
   
   c. 

---

Nancy M. Finzer, Md State Dept of Education
3. Give one explicit connection between your discipline area and those represented by the four other areas on your team (If your team played "short" assume that your team met the five content area criteria).

1. 

2. 

3. 

4. 

4. Name two parents

5. two local businessmen

6. two staff members of a community college

7. two county-level personnel

8. two State Department staff

9. two university staff members

who could be described as career resource people.
5. Name the course options available to your specialty-oriented students in secondary schools to which they have access.

6. Define "employability" as it relates to

Math

Science

Art/Music

English

History/Civics

Home Economics

Industrial Arts

Guidance

Special Education

Physical Education

EXAMPLE: To be able to compute the tax you as a cashier would have to add to a purchase of $7.46 (math)
7. Career Exploration is a concept which incorporates a number of dimensions.

Please weight the following:

<table>
<thead>
<tr>
<th></th>
<th>Slightly Significant</th>
<th>Moderately Important</th>
<th>Essential</th>
</tr>
</thead>
<tbody>
<tr>
<td>a.</td>
<td>developing self-understanding</td>
<td></td>
<td></td>
</tr>
<tr>
<td>b.</td>
<td>practice in decision-making</td>
<td></td>
<td></td>
</tr>
<tr>
<td>c.</td>
<td>acquiring occupational information through literature, media, and lecture</td>
<td></td>
<td></td>
</tr>
<tr>
<td>d.</td>
<td>narrowing selections of career options</td>
<td></td>
<td></td>
</tr>
<tr>
<td>e.</td>
<td>observing people working, or training for work, in a broad range of career areas</td>
<td></td>
<td></td>
</tr>
<tr>
<td>f.</td>
<td>beginning to match achievement (or skill acquisition) to declared interest</td>
<td></td>
<td></td>
</tr>
<tr>
<td>g.</td>
<td>providing simulation or &quot;hands-on&quot; experiences</td>
<td></td>
<td></td>
</tr>
<tr>
<td>h.</td>
<td>making a firm career choice</td>
<td></td>
<td></td>
</tr>
<tr>
<td>i.</td>
<td>being less able to rank occupations according to dignity and worth</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
True or False for You:

1. _______ After this workshop experience I am more convinced than ever that career exploration is another term for occupational information.

2. _______ Career Exploration is that part of Career Development concerned with vicarious (second-hand) experience.

3. _______ I could not risk the change in instructional behavior which would be necessary if I committed myself to a study of my students' interests and values.

4. _______ I would dare to question the value of my content area beyond its in-school validity.

5. _______ Membership in a team makes it (easier, harder) for me to implement the concept of career exploration. (underline one)

6. _______ Most of my students do not need this "new" approach. The small percentage who disrupt my class would profit more from it.
A PROGRESS REPORT ON THIRTEEN CAREER EXPLORATION WORKSHOP SCHOOLS

Based on notes taken by K. B. Hoyt
May 30, 1972
CWE Consortium

LEMETEL JUNIOR HIGH SCHOOL

English
1. Skit on how to apply for a job (dropping out and coming back to school)
2. Made out job applications
3. Read want ads

Math
1. Insurance unit )
2. Real Estate Unit)

Home Economics
1. Concentrated on child care occupations
2. Visited a TV Romper Room

Science
1. Emphasized weather - went to Friendship Airport
2. Problem one of resource personnel - reported good student reaction and
   enthusiasm, had coffee for parents - many volunteers from parents. Did
   a unit approach in each class, kids liked these units: Lawyers, Dress
   Designer, Boutique Owner, Bank Manager, Dentist, Travel Consultant, some
   of physical therapy - most were black - good role models.

CABIN JOHN

A. Six week related career units - 356 7th and 8th graders made kits out of
   slide tapes kids developed - parents invited to see final product.
   Parents reported they like having their kids come down and spend a day
   with them in their jobs.

B. Line Production - Emphasis on major jobs in industrial occupations - did
get experiences of actually producing on assembly line - ran an industrial arts project - sold stock - paid off stock holders from sale of product - then workers split the rest of the money.

C. Ninth grader - This is where they concentrated on their career choice -
Industrial Arts counselor came in, gave test, then kids looked up occupational information.

Note: a. Regard 7th grades as learning about careers - really awareness b. Regard 8th grades as learning about work values c. Regard 9th grades as career exploration and tentative career choice.

JULIUS WEST
Use a unit with 9th graders just prior to 10th grade registration on in about 2 days a week in their ready unit. They clipped out help wanted ads - then wrote a business letter applying and then wrote up a telephone conversation in study form.

a. They spent time on study habits b. Made skits on job interviews c. Made visits to business and industry plus Vocational-Technical schools in Montgomery County d. Have job work experience program - 300 girls involved in health occupations e. Also jobs for boys - about 3 hours a day

CALVERT JUNIOR HIGH
Seventh grade Industrial Arts - 9 weeks career guide for boys - try to (1) help kids think about future (2) what are your goals for success? (3) what will help you move toward goals?

a. Take a "maze" vs "map" approach to considering future
b. Play "career" game - home points, happiness points, fortune points

c. Clipped out news articles depicting "success" and "failure" - had discussions about the meaning of the terms.

d. Using SRA - job experience kits - kids like it -

e. On moving towards your goals - had a sheet with good work habits - self graded - each day counted points for 6 weeks - also studied negative habits - shop lifting, drugs etc. (field trips were culminating)

**ESPERANZA MIDDLE SCHOOL**

Laurel Brown is Career Specialist to work with all teachers

General Project: To study jobs in community project CAN "Community Action Now". Things they like and things they wanted to change in their county - they had election for county offices - gave speeches, etc. Really worked on occupations county hires people for. Example: Chairman Humane Committee - had an animal adoption agency - really worked it in the community - Chairman Education Committee - kids became teacher aids in elementary school, Park and Recreation Committee - made a nature trail - labeled and identified trees - cleaned it up, Social Service Committee - studied Head Start - also bringing in workers from community to talk about the jobs - are doing evaluation on comparative effects of letting kids pretend they are in the jobs vs. having workers come in.

**THOMAS JOHNSON JUNIOR-SENIOR HIGH**

A. Fall Project - presented plan to faculty - line production to produce samples to sell at Christmas - designed in art, had work in Home Economics, Industrial Arts line production frame, personal development assembled, English, class wrote ads - math classes kept banks - real interdisciplinary approach

b. Special Pre-Vocational Program for disadvantaged 9th boys - for kids who
are turned off from school - 18 students - 1 teacher for four periods per day.

This is a full time job - teaches English, Math, Science, Social Studies. Individualized reading and math - marked improvement - 2 year growth in ready - much emphasis on vocational activities - one-half of room have shop tools - last half of year they did some line production and talked about jobs - then did some assembly work on county projects. Second half of year - one-half work experience on jobs - paid for it (3 teacher aides, 1 as school custodians, drug store) Teacher reports he can do it because he has the time - he teaches the four basic subjects, supervises work experience and get jobs, in summer he visits home of potential students - explain kid must come to school - had improvement in attendance - 29% decrease in absence 47% decrease in attendance - kids paid in school (reading, math, etc.) in funny money - in shop they build things, repair things for people, then they take the money - buy actual things (games, baseball, etc.) which kid can buy at auction with their funny money.

C. Spring Project

Patriots Against Pollution - 146 junior high kids who will work on recycling project this summer - get kids involved in community.

D. Have taken kids on visits to Vocational-Technical Center

Katie Smith - Instructional Field in Career Study Program

Career Studies Program for 2 groups (25 each, 9th graders)

Objective: To "turn on" students who have been "turned off" from school

1. To get students to be more responsible citizens - going to try Behavior Modification next year

2. Career Emphasis is on Career Awareness in Occupational Families rather than study or emphasis on career exploration in specific occupations.
Activities

1. Set up four companies - line production, sales, etc. - one-fourth of year - student learned how to work together, depend on each other, etc.

2. Trying to involve parents - hold parent teas to inform them to get reaction - also to tell about their own occupations - working basically with a project approach.

Boys take Industrial Arts 5 periods per week, Social Studies - formal corporation, math - banker and financing, English - sales and advertising (the line companies competed and saw which one won)

D.O. teachers from Senior High Vocational-Technical Center take junior high students, one at a time, with them when they go out on visits to business and industry. Fifteen field trips per year - have kids and teachers relate as people

PULL AIR JEEPS SCHOOL

1. Mini-Courses in Career Exploration emphasizing self exploration (2 courses as of now)

2. Math Program - 21 boys (turned off kids) - behavior problems - 2 math teachers at a time - example of activities
   a. Auto Specialist - boys complete prices, etc., - has resulted in over-all improvement in all grades - even in English, Social Studies, Science - as well as in math.

THIS IS ONE TO WATCH - SHOULD BE BIG EXPANSION NEXT YEAR

WORTH HARBOR JUNIOR SENIOR HIGH SCHOOL

Have made wide use of community so kids can learn about jobs out where jobs are - kids made tapes of interviews with workers that other kids could listen to.
Objectives

1. To help kids learn about work
2. To strength self concept and self understanding
3. To relate school subjects to jobs
4. Visits were introduced as part of family living unit in Home Economics so many visited their parents at work - others went with work-study coordinator and interviewed workers.

Also visited Vocational-Technical Center - could go back to visit one area longer if they wanted to - had money for substitute teachers so some regular teachers could go out, talk to employers and arrange for one or more kids to come work with someone for a day. Math teacher concentrated on helping kids make tentative occupational choices and then sent kids out to interview workers.

When kids came back, Mel then made up math projects to illustrate each occupation that the kids expressed interest in.

Side Benefit - THE TEACHERS ARE WORKING TOGETHER FOR THE FIRST TIME ON DIFFERENT ASPECTS OF SAME BIG PROJECT. THEY GET MORE RESPECT FOR EACH OTHER AND FOR THE VARIOUS SUBJECT FIELDS OTHER THAN THEIR OWN. HAD JUNIOR HIGH KIDS INTERVIEW SENIOR HIGH STUDENTS WHO WERE IN THE D.O. PROGRAM - LEARNED ABOUT EARLY LEVEL JOBS THIS WAY.

Maryland State Department of Education
Goals for Terns - To be pursued over time in the operational setting of the home school

THE TEAM WILL

1. Demonstrate its commitment to career exploration by encouraging total staff involvement in their plan

via objectives:

a) will be able to design a time table of gradual staff addition based upon the contribution that staff member can make to both a team approach and the specific workshop plan

b) will be able to describe at least three inservice activities for teachers which will give them options for accepting or rejecting team membership

c) will have increased staff involvement by 40% at the end of year one.

2. Will be knowledgeable about a check and balance system of interests VIZ aptitudes which can facilitate the self-knowledge of their students

via objectives:

a) will be able to name and administer at least two measures of interest which are appropriate for a majority of their students

b) will be able to name or create at least two sociometric (unstandardized) devices which will elicit measures of self-concept and peer relationship

c) will be able to name, and assist in the administration of, at least two measures of aptitude which deal with actual task involvement.

3. Will engage and continually involve, members of the parent, business, and educational community in the implementation of their plan

via objectives:

a) will form a parent/business advisory committee which meets on a monthly basis

b) will elicit from working parents a work sample via slide, biography, or personal interview. (Such data may be gathered by students.)

c) will elicit from 9 representative business firms in the school community their definitions of "employability". (Such data may be gathered by students.)

d) will establish an active relationship with an accessible community college

e) will establish a cooperative three year program of activity which introduces and maintains connections between secondary school program coordinators of vocational-technical offerings.
1. Will plan learning experiences for their students which have application to a broad range of socio-economic and intellectual backgrounds.

   via objectives

   a) will develop at least five interdisciplinary projects which engage a majority of the student body during their implementation

   b) will provide for those students not involved by virtue of class, age, or teacher contact, and opportunity to observe, react to, and/or replicate those experiences - with team assistance to their teachers

5. Develop decision-making skills by permitting students to engage in sequences of wishing, trying, taking consequences, and evaluating their performances.

   via objectives:

   a) will be able to conduct at least three follow-up activities which respond to results obtained from interest inventories

   b) will be able to construct at least three reality-testing situations which permit students to match their present aptitudes to their declared interests

   c) will provide specific times and locations for team consultations with student groups involved in self-evaluation and decision making.

1. To what kind of high school will your 9th graders be assigned (check one)
   traditional ___________________ comprehensive ___________________

2. How are your students oriented to secondary school offerings?
   (check those which apply)
   lecture ______________ films ______________ other ______________
   visit ______________ speakers ______________

3. How do you presently identify students who wish to gain skills in occupational specialties?
   a) They come to us with questions and we refer them to independent research _______.
   b) We provide information about vocational offerings and keep count of those
      who ask for it _____________________.
   c) We poll entire student body and report findings to feeder high schools _______.
   d) We do not identify these students _______.

4. Describe the schools (which are accessible* to your students) offering courses in occupational specialties. Name those specialties.

5. Do these schools provide you with information about their course offerings?
   Do they maintain any kind of continuing relationship with your staff _______.
   (student interest surveys, plans for reciprocal visits, demonstrations, etc.)
   yes or no

6. Within those accessible schools offering basic skill training in occupational specialties, what are the limitations? (check those which apply)
   inadequate range of courses offered agree or disagree
   no attempt to coordinate with feeder junior highs agree or disagree
   courses offered do not match work opportunities in community agree or disagree
   no opportunity for student to transfer between occupational areas agree or disagree
   no opportunity for student to transfer between occupational areas after initial selection

7. Describe at least three ways you as teams might expose your students to alternative secondary school choices which effectively removes superior status from any of these choices.

A Component of the Maryland Career Development Project
A TEACHER/COUNSELOR
TEAM EFFORT

FOUR WORLDS

.....Explored through junior high school subject matter
.....Developed in activity form
.....Leading to potential career alternatives

The Career Exploration Workshop Component
of the
Maryland Career Development Project
Summer, 1971

</table>
Establish a company; take orders for and produce in line production lecterns for teacher and student use.

Student demonstrations - build a simple radio receiver.

Have the students produce many of the same item using line production methods that incorporate jigs and fixtures.

Have students develop a three dimensional drawing with appropriate views of a simple machine.

Compare 1909 Ford w/1971 Ford through field trips to General Motors Plant and to a museum.

Take students on a field trip to an automobile assembly plant to see assembly line production.

Have students start a school newspaper.

Take students to visit a newspaper office and plant. Have them later describe, as technical writers, a piece of machinery and its function to someone who couldn't see.

Have students become involved in a line production, compute with them the break-even point for workers.

Have students visit a local manufacturer that is completely automated.

</table>
Our language is constantly changing. Find pictures or make pictures of all items you can find in or around your house that have names which wouldn't have been found in a dictionary at the turn of the century (e.g. T.V.). Ask your grandparents or an older neighbor if they know any words they used to use that are no longer in common use.

Visit a business office to see various types of office equipment in use.

Survey various newspapers in library for: type of print, format, place of publication, circulation price, pages, advertising, etc.

There are many study resources that students of 100 years ago did not have. You will find out the different media available to the class and inform them. You may bring in examples and show how they work.

Draw, render, shade, etc. labor saving household equipment.

Show slides on local industry.

Construct to scale a model means of transportation.

All occupations implied by items chosen, English Teacher, Lexicographer, Editor, Printer, Typesetter, etc.

Manufacturing Office, Supply House, Salesman, Repairman, Business Office Work, Inventor

Linotype Setter, Circulation or Sales, Advertising Sales, Display Work, Reporter, Editor, Paper Factory Worker

Librarian, Mechanical Engineer, Publisher, Assembly Worker, Salesman, Teacher, Technician, etc.

Technical Illustrator, Advertising, Home Economist

Photographer, Public Relations, Newspaperman

Bureau of Transportation, Construction Engineer, Mechanical Engineer, Auto Manufacturer, Rubber Tire Manufacturer, Draftsman

People who worked canal are in all walks of life. Carry over from an industry that no longer exists could be applied to industries today. Changing from one job to another. It is easy to change jobs, etc.

</table>
Assuming you could use any decor, furniture and furnishings you desire, design and furnish on paper a room of your own which you would consider ideal. Find standard measurements for items such as desks, chairs, beds, dressers, tables, etc. Put all measurements on a floor plan. You might include color drawings or models of any special area you might design, e.g. cabinets, decorations, etc. Remember everything has to fit to scale!

- Make examples of and report on clothing styles of the past which are popular today (study paints to help).

- Discuss and make a wall hanging either seasonal or non-seasonal - it could be a group or individual project.

- Prepare poster of snowflakes - discussion of geometrics.

- "Where is there symmetry in nature?"

- Collect from magazines pictures of geometric designs in architecture. These designs could also be photographed.

- Use a compass, straight edge, protractor, and free hand, construct a personal coat of arms using geometrical patterns.

- Study ratios in vibrations of scale tones in chords.

- Have student study a display of coins to become familiar with counties represented, coin values, metals used.

We have been given two acres of the local nursery grounds. Find out from them which types of trees and shrubs grow well in this area. Find out also, the amount of growing room needed for each type. Arrange on paper, how you would utilize this land to grow the most trees and shrubs. Include at least five varieties.

Describe the effects of continental drift and show how the U. S. will change in relationship to her neighbors.

Study air pollution index in your county.

Have guest speaker tell about "probabilities" of weather forecasting.

Make a collection of spring wild flowers.

Have students prepare slides of polluted water in the city.

"Rabbit or mink farming for profit."

Have students distill water.

Take students on a nature hike and upon returning, set up an insect collection.

Have students construct a windmill for a source of power.

Have students make a study of plant growth.

Have students grow flowers and plants which they would sell later, after setting up a shop.

In a group guidance session on career planning, invite the local senior high school teacher of agriculture to speak on careers in his field. Have students make individual reports on his remarks concentrating on those areas which might interest them as careers.

Take students on a trip to a lumber yard.

List the effects and sensations drugs have on young people.

Construct a scale model of man's "created environment."

Have students construct a scaled water control drainage system.

Form a mining company and design and build a scale model of a mine.

Take students in groups on a field trip to see the different methods of conservation (air, land and water).

Take students on a field trip around their own school environment. Encourage them to find ways of beautifying an area of the school grounds.

Have students go out into their city and count the ways the air is polluted (by looking around and/or talking to people).

Have the students write a letter to a government department or private company asking for information on ecology projects and problems.
PROBLEM
TOPIC
NATURAL WORLD

CLASSROOM ACTIVITY
Ecology

Take students on a tour with a natural conservationist in a rural area.

Invite a panel of watermen to see how each contributes to the balance of nature and conservation of wildlife.

Survey local soil and wildlife conservation concerns—choose one to investigate. Have students use communication skills to convince the community that something needs to be corrected.

Have students compute the volume of a hill.

"Pollutants per cubic mile."

Figure the longitude and latitude of your city.

Organize and set up an order similar to the Pythagorean Society.

Find rate of a stream current; find rate of rowboat going with and going against the current.

Have students make a bar graph of the distribution of tree species in two acres.

Count the number and species of trees in a forest in the community. Have students compute the number of trees that could be cut per year and have the forest naturally replenish itself, using the growth rate of the various species.

Social Studies

Plot map of population, regarding geography.

CAREERS

Farmer, Contractor, Ecologist, Land Conservationist.

CAREER EXPLORATION PLAN - June, 1971

Perry Hall Junior High
Perry Hall, Maryland

Team Members

Michael Goldsmith
Charles Wolfkill
Sharon Hurley
Jack Reagan
Annette Downs
I. Major Problem: Most students in junior high are unable to make wise decisions regarding high school course selections leading to future career choice.

II. Purpose: Through simulating work experiences utilizing industrial arts as the core with the other disciplines of home economics, science, and guidance contributing to the total program, we plan to change student, faculty, and community attitudes toward the world of work. The addition of English, art, math and social studies in the future would lead to a total school involvement in career exploration.

III. General Objectives for Staff:

A. To demonstrate to the faculty the need for an effective career exploration program in the junior high.
   1. Based on pre-test dates, the teacher will achieve the following gains.
      a. He will be able to list five additional career applications to his disciplines.
      b. He will be able to name the educational opportunities in the community.
      c. He will begin to list the general areas of career choices.
      d. He will be able to identify community resources.
      e. He will be able to list basic subject concepts and relate them to basic vocational skills.
   2. Based on government statistics, the faculty will be able to identify the need for a non-college trained labor force.
      a. He will be able to compare various job requirements based on education, training, and occupational needs.
      b. He will be able to list the monetary and social advantages of a non-college trained occupation.
      c. He will be able to state the self-satisfaction of choosing a career by interest rather than by social pressure.

B. To show the necessity for the faculty to become involved in order to create an effective total program within the school.
   1. Be able to utilise the faculty as resource people within the existing program.
   2. Utilise the faculty to evaluate the career exploration program.

C. To list those traits of employability a student must consider to make realistic career choices.
   1. By use of a preference ranking chart utilizing an exercise in rational decision-making, list various job values as they relate to career choices.
   2. Faculty in each discipline should be able to list three occupations and investigate educational requirements and traits necessary for entrance into occupations relating to their own area.

IV. General Objectives for Students

A. The student will be exposed to a variety of background career-related experiences to enable him to weigh alternatives leading to a realistic decision.
   1. The student will be able to name seven jobs under each discipline.
   2. The student should be able to list job requirements for one job under each discipline.
3. The student will be able to observe and evaluate on the job observations.
4. The student will be given the opportunity to evaluate job characteristics as they relate to his own interests and ability.

B. The student will be provided with opportunities for success to help him to develop positive self concepts utilizing his abilities, talents, interests and to become aware of his place in society.
1. The student will be able to use objective data to aid in his self evaluation.
2. The student will receive specific tasks according to his capability.

C. The student will be provided with the opportunity to develop those attitudes and basic skills necessary for successful entrance into an occupational area of his choice.
1. Given a specific task, a student will be able to demonstrate his ability to perform based on a pre-determined criteria for evaluation.
2. Student attitude shall be assessed at regular intervals during the year.

D. The student will be provided with the opportunity to develop social and communicative skills.
1. The student through the curriculum area will develop written materials that encompass the communicative skills.
2. The student will participate in group activity in the school as well as participate in social interaction out of school.

I. Staff Activities
A. Administer pre-test
B. Visit to Eastern Vocational Technical School while school is in session, in order that the teachers will be able to see the relevancy of their discipline to occupations.
C. Follow-up discussion where teachers are asked to identify skills relating to their discipline.
D. Panel composed of students from Eastern Vocational Technical School, a drop-out who went back to school, and a college graduate unable to secure a job; to discuss how the school could have better prepared them for the world of work.
E. Panel from the community consisting of non-college trained people to discuss, "How could the school have helped me prepare for my career?"
F. Invite a guest speaker, such as Dr. Hoyt, to present a "sensitivity experience" to stimulate the faculty in becoming career oriented.

II. Student Activities
A. Strategy: To explore and investigate the technological world through concentrated studies in the various curriculum areas, utilizing the concept that technological education is the basis for man's ability to provide for himself and function in his environment. From this we make the basic assumption that each curricular area in the junior high school has as its basic content the overall study of technology. Technology may be defined as a concept which encompasses the total society within which we live. Included in this area are the various phases of our world—example—industry and its relationship to the sociological, physiological and ecological interrelationships of man and his physical world.

Listed below are a series of activities that are applicable to all curricular areas and should be implemented by each curricular area to provide career exploration as a part of the study of technology.

B. Activities: Industrial Arts will be the major core with the major topic being under the broad area of manufacturing. The students will investigate either the fabrication or processing industries as they relate
to manufacturing. The students will choose a segment of either industry and explore it in detail.

1. **Techniques used.**
   A. Role playing in simulated company structure.
   B. Project orientation to industrial arts laboratory.
   C. Construction of a representative phase of the industry.
   D. Research into the function of the industry.
   E. **Field trips**
      a. A trip to an industrial manufacturing plant showing the useful organisation of tools, materials, people and machines for the production of goods.
      b. A trip to a service industry depicting the organisation showing the tools, materials, people and machines which provide services.
      c. A visitation to a fabrication industry showing organised manufacturing from processed materials and piece parts.
      d. Visitations to a processing industry depicting organisation and manufacture of useful materials and stocks from raw materials.
   F. Guest lecturers from industry.
   G. Use of tapes of on-the-job interviews.
   H. Audio-visual materials depicting related occupations.
   I. Applied games.

**Home Economics:** The major topic will be under the broad area of child development.

Due to the influence of technology in our society today, the role of the woman has changed from homemaker to the dual role of homemaker and wage-earner. As a result of this change the student may investigate and research the growing need for child care services. The students, as a group, will select an area of child care service, explore the career possibilities, and implement a similar child care program in the classroom.

1. **Techniques used.**
   A. **Field trips**
      a. A field trip to a day care center.
      b. A field trip to a nursery school or kindergarten.
      c. A field trip to a family day care home.

2. Other techniques will be developed similar to the program techniques used by industrial arts.

III. **Suggested activities related to other disciplines.**

   A. **English**
      1. Write a job resume
      2. Interview techniques
      3. Technological writing
      4. Telephone etiquette by role playing
      5. Writing business letters and thank you notes

   B. **Math**
      1. Measurement
      2. Bookkeeping
      3. Quality control techniques
      4. Financing
      5. Purchasing

   C. **Social Studies**
      1. Guest lecturer to speak to the students on the creative use of time.
      2. World of work tapes
      3. SRA Work Kit
4. Labor management
5. Labor relations
6. Physiological and psychological effects of work

D. Guidance
1. Coordination of the program
2. Administration of interest tests
3. Interpretation of tests given

E. Home Economics
1. Explore uses of the byproduct or material as it relates to consumer goods.
2. Comparative studies of consumer goods
3. Analysis of packaging and labeling
4. Advertising
CAREER EDUCATION IN HOME ECONOMICS

Material prepared for the Career Exploration Workshops

University of Maryland, College Park
June 21 - July 9, 1971
July 12 - July 30, 1971
CAREER EDUCATION IN HOME ECONOMICS

WE BELIEVE

In order to achieve the unique benefits which home economics can contribute to career education, We Believe that instructional goals, evaluation, and the learning environment should be designed to help the individual:

- Understand his multiple roles and their interrelationships in the economy -
  - The role of consumer and family member
  - The role of worker
  - The role of citizen
- Understand the multiple roles of family members
- Understand the changing roles of men and women
- Grow in self-understanding and self-awareness in terms of his interests and abilities, interpersonal relationships, and social skills
- Develop proficiency in solving problems and making decisions
- Understand and relate the classroom learning experience to role responsibilities
- Develop a positive attitude toward self
- Gain insight into careers available in the various occupational clusters
- Understand the significance of work in the various occupational clusters
- Evaluate the quality of products and services provided for consumers
- Understand that career education is an integral part of the home economics program
I. Presentation of Project - Establishing and Operating a Small Business

Description of the situation

A. The Small Business - a boutique and producers of boutique merchandise

- A boutique is defined as a small retail shop that specialized in gifts, fashionable clothes, and accessories.
- Boutiques provide an opportunity for careers at home, a small business for a family, an individual, or a partnership.
- Boutiques need to be properly located and provide unique and highly popular merchandise.

B. The Entrepreneurs - The families and individual community members

In a given community or metropolitan area similar to yours, we find 5 groups of individuals who are in various stages of entering the world of business. These groups are:

1. Two (2) families after their investigation of needs for small businesses in their area, decided to establish and operate a boutique. Their investigation revealed that boutiques are successful when they offer a high fashion specialty. Because of the present demand for fashionable ties for men, this item will be the number one specialty. The ties will be secured from three sources: a very small fashion line production business located in a home, owned and operated by a homemaker; independent private suppliers on a custom basis; and a local wholesale distributor.

- Each family consists of the father, mother, a grandparent, and two teenage children.

- Each family will purchase ties, set up, and operate a boutique.

2. A third family has also decided they would like to establish a small business, but they are still in the process of investigating the merchandising aspects of operating a boutique: (a) the kinds of merchandise and services most profitable; (b) how and where to obtain the merchandise; (c) how and when to advertise; (d) how to display and package the products; (e) selling strategies.

- The family consists of the father, mother, and three children (two teenage and one college age).

- The family will set up an exhibit of profitable merchandise for boutiques. The exhibit should also include sales promotional methods in advertising, displaying and packaging the products.
3. A homemaker in one (1) family would like to expand her already successful home career in making fashionable clothes and accessories by employing other people to work in her home workroom.

- The group will consist of the homemaker and four individuals she will employ as workers in her business (some may be members of her family).

- The homemaker will use a simple line production technique in making men's ties which she will sell to boutiques and other specialty stores.

4. Several (5) individuals wish to make products for boutiques on a custom or consignment basis.

- The individuals may represent a variety of community members such as: teenagers, retirees, young homemaker with young children, homemaker with grown children, senior citizens, employed men and women, college student or handicapped person.

- Each individual will make men's ties for sale in boutiques on a cash or consignment basis and will also provide custom services.
II. Team Assignment and Organization - Decisions!! Decisions!! Decisions!!

1. Each team will be designated as one of the community groups described in I-B.

2. Designate roles for each team member according to composition of your community group.

3. Choose a family name and/or business name.

4. Role Play - Decisions that will be needed to carry out the assignment for your community group.
   - In regard to the three major areas of business organization listed on supplement, decide on the kind of information and resources you will need as a family team or as an individual to guide you in developing and maintaining a successful business.
   - Some competencies needed by the personnel involved in the business.
   - Evaluation of the material and human resources of the family or individual on the basis of decisions made in above two statements. Should this family or individual continue their interest in establishing a business?
   - The occupational roles to be assumed by the members in your group on basis of personnel needed - manager, salesmen, bookkeeper, production worker, etc.
   - How the business will contribute to the overall welfare of the community.

5. Procedures and methods each team will use in carrying out their specific responsibilities such as: researching, reporting, producing products, setting up exhibits, opening and operating a boutique.

11:00 - 11:15 Demonstration on sewing ties for line production

11:30 - 11:45 Demonstration on sewing hand-made ties

11:45 - 1:00 P.M. LUNCH

1:15 - 3:15 P.M.

Team Research and Sewing of Ties

Resources:

- Boutiques and other small business establishments
- Boutiques in home or on family property
- Boutiques in department stores
- Specialty Shops
- Banks
- Real Estate Offices
- Chamber of Commerce
- Library
Department of Business Administration - University of Maryland
Specialist in Business Administration
Specialist in Distributive Education

MONDAY, JUNE 28, 1971

9:00 - 10:30 A.M.  Team Work Continued
- Preparation of Team Reports (all teams)
- Production of Ties Completed (2 teams)
- Ties Sold to Boutiques
- Set Up Exhibits of Merchandising Aspects of a Boutique (1 team)
- Set Up Boutiques (2 teams)

ILLUSTRATE REPORTS WITH PICTURES, CHARTS, SKETCHES, ACTUAL MATERIAL

10:00 - 10:15 A.M.  Demonstration of Line Production

10:15 - 11:15 A.M.  Report by Teams - Show and Tell
15 minutes maximum for each team
- Establishing and Operating a Boutique (show display)
- Merchandising Aspects of a Boutique (show materials)
- Small Business: Custom Made Product
- Small Business: Mass Produced Product

11:15 - 11:30 A.M.  The Boutique is Open

11:30 - 11:45 A.M.  Discussion
I. Line production model. The following examples could be developed for both boys and girls. The time evolved would vary with the product and project selected.

   a. Boutique - stressing small business, retirement/a vacation, family enterprise

      This model would allow for some individual project development.

      A small group could select this project so that more than one item would result. Example: (1) neckties, (2) leather goods, (3) macrame', (4) candy, (5) dashiki, (6) jewel box. The operation would include all phases of manufacture and sale.

   b. Food production and management

      Grades 7-9

      Using the line production technique, one project would be carried out. Example might be:

      (1) Fast foods (modeled after drive-in)

      (2) Specialised foods (make and sell fresh rolls every Friday)

      (3) Meal preparation (tearoom lunch for teachers every Thursday during the unit)

II. Family group model - Decision making model - Division of Labor

   A. Complete meal preparation and/or single dish preparation by each family group.

      Grades 3-6

      1. Divide total group into varying size families; income level; family structure.

      2. Choose membership roles.

      3. Use management process (to carry out responsibilities)

         a. Planning (goals, values, resources such as money, time, talents, experience, etc.)

         b. Controlling - organizing duties, time techniques

         c. Evaluating procedures and product

   B. This model will place emphasis on developing personal attributes for the dual role of homemaker and employee through:

      1. Decision making (what type meals, etc.)
II. B. (cont.)

2. Evaluation of one's performance
3. Carrying out responsibilities
4. Inter-personal relationships (ex-needs of all family members - young child, convalescent, older person)
5. Skills in meal preparation
6. Creative approaches
7. Personal achievement
8. Appropriate appearance

III. Insight into careers

Objective

Integrating career principals into existing curriculum

Content on Careers

Relate career opportunities, identified with skills of communication, production, service and governance

Personal qualities needed, each level
Salaries on various levels
Training needed
Responsibilities
Satisfactions

Some procedures

Each student selects career in which he is interested and through interviews finds out the characteristics reporting to class by means of slides and tapes. Give related experiences in each unit employing line, unit, and single proprietor techniques and noting other career principles involved.

Examples:
Foods - fast foods production on a certain week day, sold to faculty and
Clothing - a specialty item made to sell such as ties, suede items, belts, etc. (the "in" item for the year).
Child care - career levels, legal aspects, responsibilities involved in child care activities in the play school or home care.

Personal relationships - self-understanding personal characteristics needed for related careers.

Interior design - making pillows, wall hangings, jewelry boxes.

Health - related services and skills which permit student experience in nearby hospitals, clinics and playgrounds.

You will need to make many decisions such as,

- How much business would you like to do?
- What is a reasonable goal for annual net income?
- What percent of gross sales will you spend for promotion and advertising?
- Where will you obtain products for your type of business?
Two situations illustrating teaming potential of Industrial Arts process utilized in the Career Exploration Workshop(s) Component of the Maryland Career Development Project Summer 1971
One of the two approaches recommended deals primarily with people and how they function within a community setting. Another approach has a heavier emphasis upon the product and how its people are organized and function in relation to the production of that product.

A. In the first approach, the following may take place:

1. Emphasis should be placed on activities that will involve all nine of the broad career areas (Health; Personal Services; Social Services; Agriculture; Business; Manufacturing; Transportation; Communications; Construction; and Real Estate-Finance-Banking).

2. Establish a hypothetical town set-up (this could be either a large city, a town, a rural community, or any other mixture thereof).

3. Divide the class into one or two man teams and use the unitary method of teaching.

4. In this approach, the entire class would determine the kinds of people needed for an effective community which should include all nine of the broad career areas.

5. Each individual team (one or two students) would select the area that seems to interest them, using the criteria that only one team may select any one area.

6. Each team would then research the individual job function that they have selected and make a presentation to the rest of the class so that all individuals could become knowledgeable or aware of that particular job.
   a. This knowledge could be obtained through the use of written materials and/or
   b. A personal interview with an individual in a like position (either the students would go to the individual or he would come to the school setting).
   c. As a means of presentation, the student team could construct a tape slide show which would depict an overview of that particular job. As a supplement to the students report a representative from the selected career area could come speak before the class, a movie could be shown, or other aspects could be incorporated.

7. As a hands-on activity, each team could construct some type of display or object that would depict their chosen career area.

B. The same type of activity mentioned in A. above could be done using a group approach methodology.

1. With this method being employed, items 1, 2, 4, and 6 in A. above would be employed. In item A-6, an individual rather than a team would be doing the research and reporting function.

2. It is recommended that if the class size is eighteen or larger, divide it into two groups. If you have a two group setting within the same class, it is recommended that each group select a different size hypothetical town setting as described in A-2.
3. The type of hands-on construction activity to be used in conjunction with this approach would be the building of some type of display that would depict the community selected. Each member of the group would be responsible for a different phase of the construction activity as well as his report on the career area selected.

4. Using two different groups within the same class setting has a distinct advantage over a one group operation in that a very good discussion could be initiated on the similarity and differences of community needs of a large city as compared to a rural or smaller town setting.

The hypothetical community could be operated at any grade level by simply altering the degree of difficulty desired as an outcome of the program. This would also apply to ability levels within the same group.

C. In the second approach the following type of activity would be involved. This approach could also work at any grade or ability level depending upon the degree of emphasis placed upon the program.

1. Using either a line or mass production methodology, the emphasis would be placed on how people function and work together as they produce a single K-6 object in a large quantity.

2. This approach involves itself with large volume production industries and all the problems related to that involvement.

3. The class organizes a company with a management structure based on the management organizations of high-volume production industries.

4. Each member of the class then occupies one of the managerial and/or worker roles associated with their company and conducts a role playing activity by researching their counterpart, reporting to their fellow classmates and carrying out that role in their class activities.

5. Following the selection of an item for production, the class effort is directed towards the activities of designing the product, production line planning, designing and fabricating the jigs and fixtures necessary for the production of the object, and the training of personnel necessary to perform the various operations. Also, advertising, labor unions, negotiations, and other role playing and construction activities play a very important part in the project.

6. The financing aspect, or that of raising the necessary capital is a very significant part of the line production experience. This part of the program is accomplished through the issuance of stocks and other financing approaches.

7. Periodic staff meetings and special purpose meetings are held under the direction of an appropriate student department head. The staff meetings are led by the President of the company, meetings for safety instruction are held by the Safety Engineer, production planning meetings are held by the Project Director, etc. The meetings are designed to facilitate management planning and operation, smoother production, and a sharing of information.
8. Films, guest speakers, field trips, and student reports are all a part of the line production method of instruction.

This approach is not designed to get at all nine of the broad career areas but it does deal with a few of them and depending upon how the individual class gets involved, it could deal with more career areas than those that normally meet ones eye.

All of the above activities (A, B, & C) could be enhanced to a great extent if a team teaching situation could be employed or if other subject areas would involve themselves in these activities.

A Task Force, currently composed of three members, assisted by the principal and supervisor, plans to develop a project in the area of career exploration.

This project will begin in 1971-1972 school year, to a limited extent, and will be further developed in the following school years. This first year's efforts will be limited by several factors: the reduction of the size of the Task Force to only three members, the heavy obligations within the school to prepare for a school evaluation, and the very crowded physical plant. All three limitations will be somewhat relieved by 1972-1973.

We do support the importance of attention to career development in the schools, at all ages, for all students. We believe that all school personnel should be involved in providing such opportunities and experiences. We accept that such training should be interdisciplinary and that it should be an integrated and relevant part of all curriculum areas rather than isolated units of studies at predetermined ages or levels.
General Staff Objectives

1. To initiate a program of career exploration at the Junior High School level.

2. To establish a nucleus group of faculty members who will develop the initial program (71-72) and who will provide leadership in expansion for successive years.

3. To provide programs and experiences which will enable the total faculty to become informed, supportive, and active in projects in career exploration.

4. To incorporate this instruction within the regular curriculum.

5. To develop an evolving program which will become interdisciplinary - for all grades.

6. To involve total school personnel as participants and contributors to the program: professional staff, Board of Education members, teachers, students, and parents.

7. To advance the utilization of the total community as classroom, and to involve community members as participants and leaders.

8. To utilize this project as a pattern for improved relevancy and flexibility in the education of youth.

Objectives for North Harford Task Force

1. To acquire a comprehensive background of knowledge of the purposes, procedures and the provisions of the Maryland Career Development Project.

2. To gain understanding of the objectives which have been established for students.
3. To become well informed on the ways in which our individual school can provide effective career exploration for students.

4. To work with the school administration in preliminary planning for the development of a exploratory career project in the school.

5. To serve as leaders, resource persons and co-ordinators as the school develops its program of career exploration.

6. To maintain communication with the Maryland State Department of Education's Interdivisional Task Force on Career Development, in order to co-ordinate efforts, resources, and directions.

7. To endeavor to develop interest on the part of all departments and faculty members in providing career development training for students.

8. To promote parent and community support and participation in the project.

9. To maintain a continuous program of self-education in career education via reading, visits to schools, contracts with state and county departments, and cooperation with local business and industries.
Activities for Task Force and Faculty

1. The Task Force will inform the principal, assistant principals, supervisor, general curriculum committee and work-experience coordinator on the progress of the project.

2. The Task Force and school leaders (see #1 above) will consider plans of action, both long-range and immediate.

3. The School Curriculum Committee will be provided with information. This group will provide assistance with the planning and will provide support for those who participate.

4. The leaders of the school will contact the Board of Education to propose steps of action, to gain necessary support, and to acquire necessary funds and approval.

5. The Task Force, school leaders and School Curriculum Committee will:
   a. study the school situation
   b. list possible actions
   c. establish priorities
   d. determine the program to be developed
   e. select teachers to recruit for participation
   f. inform and involve the community

6. The faculty, as a whole, or in other designated groups, will be provided with the background of information, the objectives, the proposed plan of action, and the opportunity to participate in whatever capacity individuals may express interest.

7. Resource persons to be utilized will include the following:
   a. State Department members
   b. School counselors
   c. County and Industrial Arts supervisor
   d. Directors of curriculum
   e. Lay members
   f. Parents
   g. Students
   h. Vo-tech personnel
   i. Pupil personnel representatives
   j. Department of Employment Security
   k. Work-experience coordinator
   l. Retired teachers
8. Regular and continuous meetings will be held to evaluate the program, to further develop the program and to plan extensions for successive years.

Objectives for Students

1. To have opportunities to participate in experiences which will enable students to gain knowledge and understanding of the world of work.

2. To guide students in the development of positive self-concepts and self-understanding.

3. To provide experiences and direction which will strengthen effective decision-making on the part of individuals.

4. To relate knowledge of the world of work to personal selection and preferences and to personal evaluation of all members of society.

5. To establish provisions for effectively relating school subjects to vocational knowledge, attitudes and skills.

6. To employ the material and personal resources of the school, the home, and the community in career education for students.

7. To provide programs and training for students which are pertinent to a world of work where rapid change necessitates behavioral adjustment and continuous learning.
Activities for Students

1. Efforts to provide career training would be concentrated in two groups:
   a. Eighth grades because all three team members will work with them.
   b. Teachers we predict who will be most willing to work with us will be teaching 8th grade classes (part of each day).

2. The eighth grade social studies program is in the citizenship area and vocational studies are suggested in the topics and activities.

3. Eighth grade will be making more definite schedule choices three times a year.

4. One period per day is devoted to exploratory courses such as Technical Drawing, Art, Home Economics, Agriculture, Music, Speech and Dramatics.

5. Some members from the class of 16-1 which is the oldest special education group, are admitted to vo-tech; some are graduated; and some are prone to leave and become employed. This teacher is one who will contribute effectively to such a project.

6. Utilize advertisement sections of newspapers (buy 30 copies, or prepare overhead overlays, dittos, etc.) to study:
   a. opportunities
   b. requirements such as age, training, size, etc.

7. Relate literature and reading selections to given work opportunities.
8. Visit places of work to observe, record, analyze, inquire and evaluate.
   a. general - gas station, supermarket, store, etc.
   b. specific - electrician, heavy equipment operator, etc.

9. Watch a film with pre-established purposes of determining tasks, requirements, etc.

10. Interview teachers for other jobs they have had to establish a pattern of work choices, to compare benefits, etc.

11. List occupations of all fathers of students in a given class. Let students record their opinions of the most difficult task of each. Then, by interview, gain knowledge of same.

12. Let students list ten people they know (bus driver, mailman, teacher, minister, plumber, 4-H leader, etc.) Have each list the trait and skill they believe contributes most to the success of each.

Example:  

<table>
<thead>
<tr>
<th>Work Skills</th>
<th>Personal Attributes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mailman</td>
<td>Reading</td>
</tr>
<tr>
<td></td>
<td>Patience</td>
</tr>
<tr>
<td></td>
<td>Math</td>
</tr>
</tbody>
</table>

13. A math class could select five occupations. By observation and/or by interview find how math contributes to each. Take a test or worksheet to a worker. Let the worker tell which items he had to know for his work in the past week.

14. Study student responses to 70-71 choices and work experiences with the student.

15. Study CR-2 cards to note choices and changes over the years.

Evaluation

Evaluation of this program will be more informal than formal. To be considered in any evaluation will be total faculty, the teachers in the program, students in the program, community people and parents. Total faculty reactions will be measured by contributions of ideas, desire to participate, incidental or informal utilization of ideas in their classes.

Teachers involved directly in the project will reveal evaluation by expressed concerns or successes; by requests for materials, assistance and ideas; by self-directed extension of phases of the project; by indications of student behavior, interests, requests and decisions.

Students will indicate the effectiveness of the program by interest and enthusiasm, by directions they provide through questions, suggestions and requests; by what they discuss in out-of-class situations; by changes in independent reading. Community and parental interests will be revealed by questions, by offers of assistance, by reactions to activities which take students into the community.

The use of pre- and post-tests of facts or of attitudes will be one way to obtain some direct evaluation. Analysis or careful awareness of the individual students as they sign for schedules the next school year will be another. If the choices show more awareness of self and are more realistic about expectations—then there have been successes.
