ABSTRACT

An investigation was made of the effects of drop policy changes at Pasadena City College on student attrition and final-grade distributions. Data on student attrition were obtained from data processing printouts for the years 1965-1973, and final-grade distribution data were obtained from Departmental Grade Distribution Reports produced annually. Results of the survey showed that the first policy change that extended the drop data from the sixth week to the last three weeks caused a dramatic attrition increase, whereas the extending of the drop data an additional three weeks to the last Friday before finals increased attrition, but not to a significant degree. It was also shown that policy changes not only greatly increased the percentage of W (Withdrawal) grades but also shifted the distribution curve for A through F grades--the percentage of A and B grades was increased, with a reduction in C, D, and F grades. I PURPOSE OF SURVEY

Prior to 1969 the Pasadena City College drop policy permitted a student to drop a graded class through the sixth week and receive a W (Withdrawal) grade. Dropping a class after the sixth week incurred an F grade penalty.

Effective fall 1969 the drop policy was changed to read:

- Class drop during first 6 weeks = W grade
- Class drop during 7th to last 3 weeks = W grade if student was passing at time of drop
= F grade if student was not passing
- Class drop during last 3 weeks = F grade

In fall 1970 the drop policy was further altered, permitting a student to drop a class up to the Friday before final examinations with a grade of W. This policy is currently in effect.

Considerable conjecture resulted among college staff concerning effects of the two major drop policy changes upon the total college program. This historical survey was designed to investigate effects of drop policy changes upon student attrition and final grade distributions.

Major Findings

1. The two changes in drop policy were followed by a very significant increase in total student attrition. The mean per cent attrition prior to fall 1969 was 16.22, the mean per cent attrition from fall 1969 to spring 1973 was 24.51, an increase of 8.29 per cent.

JC 740 363

2. The two drop policy changes increased the per cent of A and W grades and decreased per cent of B, C, D and F grades for all graded courses. Mean per cent change and degree of significance are as follows:

<u>Grade</u>	<u>Mean % Change</u>	<u>Degree of Significance</u>
A	+ 2.88	Significant
B	- 3.17	Significant
C	-10.25	Very Significant
D	- 4.40	Very Significant
F	- 1.60	Significant
E	+ .30	Not Significant
W	+16.45	Very Significant

PART I
STUDENT ATTRITION

Data relative to student attrition were gathered from data processing print-outs issued each semester for years 1965-1973. Printouts inventoried enrollment for each class at census date and at end of semester. Student attrition was determined by subtracting end of class count from census count. Attrition was considered the sum total of all drops and withdrawals from class during the semester. (Data were incomplete or unavailable for fall semesters 1965-66, 1966-67, 1968-69, hence not a part of this study.)

Data and statistics for this study are presented in terms of course numbering system which has been used at Pasadena City College since fall 1966:

<u>Course Number</u>	<u>Purpose</u>
1-99	University or senior college lower division courses
100-399	General education and occupationally oriented courses
400-499	Review and foundation building courses

Prior to 1966-67 the following course numbering system was in effect:

<u>Course Number</u>	<u>Purpose</u>
Q1-Q99	Review and foundation building courses
E1-E99	General education courses
1-99	University or senior college lower division courses
100-499	Occupationally oriented courses

For purposes of this study data for 1965 from Q courses were combined with 400-499 courses, E and 100-499 data with 100-399.

Table I is a history of class enrollments by semester and year, according to course classification. Column 1, Total Enrollment All Courses, indicates a fairly steady increase from 41,377 in second semester 1965-66 to 52,427 second semester 1972-73.

Traditionally the majority of enrollments have been in 1-99 courses, (over 75% since spring 1969-70). Enrollment in the 100-399 courses has remained essentially

the same (approximately 20%). Per cent of enrollment in 400-499 courses has decreased about 50%.

* Data unavailable for first semesters 1965-66, 1966-67, 1968-69

Table II details student attrition by year and semester for 1-99 courses and 100-499 courses. Figure 1 is a graphic portrait of per cent attrition from columns 5, 8 and 11 of Table II. All three curves show a steep rise in fall 1969-70 when the first drop policy change became effective. All three curves show a gradual rise beginning in fall 1970 when the second policy was implemented.

Figure 1 indicates attrition in the 100-499 courses prior to 1968-69 was much higher than in the 1-99 courses and for the total college.

Year

Table III details enrollments and attrition for 100-399, and 400-499 courses. Figure II graphically compares per cent attrition over the years in all three course classifications. Prior to fall 1969 attrition in both 100-399 and 400-499 was high, but was gradually dropping, while attrition remained fairly constant in 1-99 courses. Beginning fall 1969 all curves show an increase in attrition. Attrition has been lowest in 100-399 courses since fall 1969, except for spring 1973. Attrition has been consistently highest in 400-499 courses.

SIGNIFICANCE
of
DROP POLICY CHANGES
on
STUDENT ATTRITION

In order to determine significance of policy changes on student attrition the mean per cent attrition for the five semesters prior to 1969 was compared with mean per cent attrition for eight semesters thereafter.

Table IV records statistics according to course classifications. For example the mean per cent attrition for courses 1-99, for the five semesters prior to fall 1969, was 15.0, mean per cent attrition for eight semesters thereafter was 24.2, an increase of 9.2 per cent. This is a very significant increase ($t=10.698$). Table IV shows a very significant increase in mean per cent attrition in each course classification: the greatest increase occurs in 400-499 courses (+10.97 mean per cent), an increase of 8.29 is recorded for all courses combined.

Effect of Each Policy Change

Table V compares effects of the two drop policy changes upon attrition in all courses. The mean per cent attrition prior to first policy change in fall 1969 was 16.22, for the two semesters immediately following it was 22.95 - an increase of 6.73 (a very significant increase). The mean per cent attrition for six semesters following second policy change in fall 1970 was 25.03, an increase of 2.08 which is not significant. In other words, Table V indicates the first policy change was followed by a very significant increase in level of attrition. The second policy change has been followed by a general increase in attrition, although not a significant change during the six semesters.

Change From Two Semesters 1969-70	+ 2.08	Not Significant (t = 1.930) (6 df)

PART II
EFFECT OF DROP POLICY CHANGES
on
FINAL GRADE DISTRIBUTION

Data for this portion of the survey came from Departmental Grade Distribution Reports traditionally produced each fall semester by Data Processing Center. Print-outs list the number and per cent ** of students obtaining A, B, C, D, E, F, W* grades, both for day and evening classes. Data are provided according to 1-99 courses and 100-499 courses only. For purposes of this study data for day and evening were combined.

Table VI lists by year the number and per cent of students earning final grades according to 1-99 or 100-499 courses.

Figures III, IV, and V show graphically by year and course classification the per cent of students earning final grades: Figure III records all courses, Figure IV 1-99, and Figure V 100-499 courses.

* A W grade means the student was enrolled in the class but either dropped the class or withdrew from college.

** In 1967 a change occurred in the policy for determining per cent of letter grades earned. Prior to 1967 per cent was based on total number of students completing the class, since that time per cents have been based on maximum enrollment in the class. All percentages in this report were based on maximum class enrollment.

Significance of Drop Policy Change on Final Grades

In order to determine the effect of drop policy changes on each final grade, the mean per cent earned for the first four years prior to policy change (fall 1969) was compared with the mean per cent earned in the subsequent four years.

Table VII records these statistics for each letter grade according to course number. For example, under 1-99 courses in the first column, the mean per cent of A's earned in the first four years prior to drop policy change was 14.53. The mean per cent of A's in 1969-1972 was 13.75 - a decrease of .78 mean per cent. This is not a statistically significant change. The first column under 100-499 courses indicates a mean per cent increase of 7.50 in A grades, which is very significant.

Finally, Table VII summarizes the general effect of policy changes on letter grades: an increase in A and W grades and decrease in B, C, D and F grades, (E grades were not affected by policy changes).

Figures VI, VII and VIII illustrate graphically the mean per cent changes in each letter grade according to course classification: Figure VI illustrates all courses, VII, the 1-99, and Figure VIII 100-499 courses. The bar graphs are identical to the mean per cent before and after policy changes shown in Table VII.

All three figures indicate drop policy changes greatly increased mean per cent of W grades with following effects on A - F grade distributions: Prior to policy changes C grades were in modal frequency position, after policy changes B grades had highest frequency position, in 100-499 courses (Figure VIII) both A and B were higher than C. In other words drop changes truncated the A - F grade distribution: total per cent of A and B grades increased with reduction in per cent of C, D and F grades.

History of W Grades

Figure IX graphically compares the history of W grades (in per cent) earned each fall in 1-99, 100-499, and total courses. Traditionally the per cent of W grades has been higher in 1-99 courses than in 100-499 courses, regardless of drop policies. This information may appear inconsistent with Figure I which shows attrition to have been higher in 100-499 courses than in 1-99. However, a most likely clarification can be found in the two sources of data: Attrition in Figure I comes from differences between census enrollment and end of class, whereas per cent of W grades in Figure IX was determined by dividing number of students receiving W grades by peak class enrollment. Peak enrollment most likely occurred before census date.

Figure I could very well indicate a higher per cent of students in 1-99 courses drop or withdraw before census date than in 100-499 courses.

SUMMARY AND COMMENTS

On the basis of findings in this survey the following observations are offered:

I. Class Enrollments

During the past eight years class enrollments have shown a steady increase to a peak of 52,427 in spring 1972-73. Courses 1-99 have consistently enrolled the majority of students - over 75% during each of the last eight semesters.

The 100-399 courses had a fairly consistent 20% of total enrollment, whereas per cent enrollment in the 400-499 courses has dropped about one-half (from 6.7 in spring 1965 to 3.1 spring 1973).

II. Attrition and Drop Policy Changes

- A. Attrition has traditionally been highest in 400-499 courses, regardless of drop policy changes.
- B. Prior to changes in drop policy, attrition was lowest in 1-99 courses, since drop policy changes attrition has been lowest in 100-399 courses.
- C. Attrition during the last three years has been higher in second semester than the first.
- D. The first drop policy change (fall 1969) was followed by 6.73% increase in attrition during the next two semesters. This was a very significant increase. The second drop policy change (fall 1970) was followed by a gradual (but not significant) attrition increase of 2.08%.

In other words the first policy change which extended the drop date from sixth week to the last three weeks ushered in a dramatic attrition increase, whereas extending the drop date an additional three weeks to the last Friday before finals increased attrition, but not to a significant degree.

E. Effects of the two drop policies on attrition are in keeping with findings of a withdrawal study made by the Pasadena City College Research Office for spring semester 1971: Students withdraw at a fairly steady rate all during the semester rather than rushing to withdraw just before final examinations.

Further research is also needed to determine class drop rate during the semester. Accurate information concerning effect of drop date changes on student attrition is essential in view of the proposed second census date for determining units of ADA.

III. Final Grade Distribution

A. The two drop policies had the following effect on grades (by course numbers)

<u>Courses</u>	<u>Effect</u>
1-99	Increase in W grades Decrease in B, C, D, F grades No significant change in A
100-499	Increase in A and W grades Decrease in C and D grades No significant change in B and F grades
All Courses	Increase in A and W grades Decrease in all other grades

CLEARINGHOUSE FOR
JUNIOR COLLEGE
INFORMATION

E grades were not affected by drop policy changes.

B. Policy changes not only greatly increased the per cent of W grades but also shifted the distribution curve for A-F grades. Prior to fall 1969 the modal frequency was the C grade, after fall 1969 the modal frequency was the B grade. In other words, the drop policy changes tended to truncate the A-F grade distribution curve: the per cent of A and B grades was increased, with reduction in C, D, and F grades.
