The instructor's guide is coordinated for use with the student guide. The guide includes suggestions for teacher preparation, equipment and supply needs, suggested references, available audiovisual materials, open-ended questions for classroom discussion, educational opportunities for students, and a form for student evaluation of the study guide. The teacher may use the study guide as a basis for group study, practical application, or individualized instruction. The teacher is responsible for directing the study and learning program of the student; however, the teacher's role should be that of consultant after the student has exhausted his own means of completing a lesson, project, or activity. Agricultural Education Service, Division of Vocational Education, State Department of Education, Richmond, Virginia 23216

Publication AP - 16
Edited by: Dr. Larry E. Miller
February 1974
FOREWORD

The Individualized Study Guide on Apiculture is prepared for students at all grade levels of a vocational education program in agriculture education. The material is presented in such a manner as to develop an understanding of honey bees and apiary operations. By performing learning activities and completing projects, the student is afforded a means of applying the knowledge he has learned.

The teacher may use the study guide as a basis for group study, practical application, or individualized instruction. The teacher is responsible for directing the study and learning program of the student; however, the student should be the self-motivator to accomplish the activities and projects.

The Individualized Study Guide on Apiculture assists the student of agricultural education to solve the problems which a beekeeper may encounter whether the apiary be a hobby or commercial operation.
ACKNOWLEDGEMENTS

Appreciation is expressed to Julian M. Campbell, State Supervisor of Agricultural Education, State Department of Education, Richmond, Virginia for sponsoring this study guide. Thanks are also extended to James E. Roberts, Extension Specialists, Entomology, Virginia Polytechnic Institute and State University, Blacksburg, Virginia for providing technical assistance.

A very special thank-you is extended to Homer Powers, State Apiarist, Richmond, Virginia for the many suggestions he made concerning the technical accuracy of this publication. Mr. Powers has spent much of his own time reading and offering improvements in the correctness of this publication.

Appreciation is also expressed to Charlotte Mattson and Claudia Tolsma for typing the final draft of this publication.

Introduction to the Individualized Study Guide on Apiculture

This study guide contains introductory level information, principles, and management practices which may be applied by a hobbyist or a commercial apiary.

The lessons in this guide are designed to train students for entry level jobs, to establish students in a beekeeping enterprise, and to emphasize the importance of honey bees in our daily lives. Understanding the information in this study guide will help the student to understand the role of the honey bee in agricultural production, and how dependent man has become upon the honey bee.

Teaching Objective

The major teaching objective is to develop an interest on the part of the student to raise and to manage honey bees. The study guide should supplement community resources, on-the-job training, and provide the student with performance objectives during classroom instruction.

Teachers

First, teachers should read the introduction to the Individualized Study Guide on Apiculture.

Secondly, teachers should read the lessons included in the study guide, and add information, projects, or activities as they deem necessary.

Suggestions for Using the Study Guide

1. The teacher may substitute this study guide into the curriculum of a particular student, who has an interest in beekeeping, in lieu of the area being taught at that time.

2. The teacher may assist the student to develop a schedule for performing the learning or training activities.

3. The teacher should direct the student to perform some of the activities in a particular situation which will benefit the student; for example, at home, in the shop, in the apiary, or at the county agent's office.

4. The teacher should obtain the references, arrange to utilize community resources, or capitalize on individual experiences as may produce the learning experiences he plans for the student.

5. The teacher should encourage the student to become self-motivated and self-directing in the use of this study guide.

6. The teacher must use his professional judgment in supervising the students' activities. However, use of this study guide requires a minimum of aid and supervision on the part of the teacher.
7. The teacher, in certain cases, may desire to select particular lessons for a student to complete. Selection of lessons on an individual basis is recommended when the student has an urgent need to know about a practical situation which faces him in his occupational experience program.

Procedure

The teacher plays an important role in the usage of this study guide; however, the guide is written so that the student independently pursues the learning activities. The role of the teacher should be to serve as a consultant after the student has exhausted his own means of completing a lesson, project, or activity.

This study guide allows the student to work independently. The material has been kept in small lessons and presented simply to allow the student to understand the information. However, students should be encouraged to complete one lesson at a time to achieve the maximum outcome from completing the student guide.

The lessons of this study guide are designed with learning activities which allow the student to check his own progress, not as a graded exercise.

The lessons are developed around an activity sheet, information sheet, project sheet, glossary, references for the lesson, quiz, and answer sheet.

Activity Sheet

The Activity Sheet provides the direction for the student's study of the topic for each lesson. The Activity Sheet is planned to aid the student's understanding of the material.

Information Sheet

The Information Sheet contains the very basic information which is believed to be essential for the student to achieve success in completing the lessons.

An attempt has been made to present the information in a simple, easy to read, form.

The teacher should encourage the student to read additional literature listed in the reference section of each lesson, and to encourage the student to obtain the most up-to-date information on beekeeping.

Project Sheet

The Project Sheet is intended to be a "learn by doing" exercise which incorporates life experiences, skills, and public relations into learning activities.
Glossary and References for the Lesson

The Glossary and References for the Lesson have been included to supplement the information presented in the study guide, and to aid the student to understand the material.

Quiz and Answer Sheet

The Quiz and Answer Sheet for each lesson enables the student to measure his progress toward achieving the objectives for each lesson.

Students

The study guide was prepared to aid the student to understand the natural functions of honey bees. It is important for the student to use the study guide as intended, and to learn as much about honey bees as one needs to know to be successful as a beekeeper, farmer, or citizen.

The student should read the objectives for each lesson before starting to work. The objectives are presented on the Activity Sheet to give the student an idea of what to expect in the lesson.

When the student completes a lesson, he should check with his instructor. The instructor may desire to question the student about his mastery of the information and objectives of the lesson.
Composition of Lessons in the Individualized Instructional Booklet

1. Activity Sheet—films, class presentations by the student, and other in-school learning activities.

2. Information Sheet—applicable, detailed instructions for the student.

3. Project Sheet—outside school activities and skills which incorporate instruction and apiary business activity.

4. Glossary—list of terms for each lesson.

5. Reference Sheet—list of references for a given lesson.

6. Quiz—short, objective type.

7. Answer Sheet—answers to activity sheet as appropriate, and the quiz.
Suggestions for Teacher Preparation

LESSON I

THE HONEY BEE AND HER PRODUCTS

1. Obtain the visual aids needed for this study of apiculture.
2. Use Project 4, Observation Beehive, for a FFA Chapter project.
3. Demonstrate to students using this individualized study guide the use of film loop and movie projectors.

LESSON II

COLONY ORGANIZATION

1. Coordinate with a local beekeeper to arrange for students to use his apiary as a learning laboratory.
3. Encourage the student to write a news article for promotion of vocational education and FFA activities.

LESSON III

HOUSING AND EQUIPMENT

1. Provide a complete beginner's outfit for beekeeping for students to use.
2. May purchase beginner's outfit from any of numerous Bee Supply Companies.

LESSON IV

SELECTING AND OBTAINING BEES

1. Inform the student which beekeeper in the community may allow a visit.
2. Allow the student to make arrangements for the visit.
LESSON V

LOCATION OF THE APIARY

1. Need an apiary available for student usage.
2. Consult school policy regarding after school activities for students.
3. Coordinate student transportation needs to complete the projects.

LESSON VI

SEASONAL MANAGEMENT

1. Have the student provide the pail for constructing a friction top pail feeder.

LESSON VII

MANAGEMENT OF THE HIVE

1. Order a queen bee and have her on hand for introduction into the school's observation beehive; or,
2. Arrange with a local beekeeper to have a queen bee ordered for the replacement of another queen.
3. Insure that the student observes the introduction of the queen into a hive.

LESSON VIII

DISEASES, PESTS, PARASITES, AND PESTICIDES

1. Arrange for the student to visit an apiary to complete the learning activities.
2. Arrange transportation requirements for the student to travel to and from the apiary.

LESSON IX

PRODUCING, HARVESTING, AND MARKETING HONEY

1. Assist the student as needed to package and to market his honey product.
2. Explain the use of a double boiler to the student.

LESSON X

LAWS AND REGULATIONS

1. May desire to arrange a class field trip to allow the student to accomplish the projects for this lesson.

2. Be available to the student for consultation and to assist the student to understand the information sheet.
## Equipment and Supplies Needed for Apiculture

</tr>
<tr>
<td>* Super, 10-frame with frame</td>
<td>1 each</td>
<td>$11.00</td>
</tr>
<tr>
<td>Wire, No. 28 gauge steel</td>
<td>½ lb.</td>
<td>$0.70</td>
</tr>
<tr>
<td>** Bee, package with a queen</td>
<td>3 lbs.</td>
<td>$25.00</td>
</tr>
</tbody>
</table>

* Foundation comb must be ordered to fit the type super which is used.

** Package bees should be ordered for observation beehive or when an apiary is not available to students.

Open-ended Questions for the Teacher to Ask the Student

1. What happens to the egg of the honey bee after it is laid until the adult bee emerges?

2. What are the legal restrictions placed upon a beekeeper by the current laws of Virginia?

3. What are the factors a hobbyist beekeeper must consider when determining the selling price for his honey?

4. How and why does a honey bee sting?

5. Design a commercial beekeeping business which would provide a full-time job and sufficient income to support one adult male and his wife.
Educational Opportunity for Students

Delaware Valley College of Science and Agriculture, Doylestown, Pennsylvania, offers a short course on campus each summer for beekeepers. The students utilize the college beeyard and honey house. Beekeepers who attend the short course must be at least ten (10) years of age.

Student Evaluation of the Study Guide

Student's Name ____________________________ Grade Level ___________

School ________________________________________

No. Years Enrolled in Vocational Agriculture _______________________

Option in which enrolled ________________________________________

Instructions for completing this questionnaire:

The student should complete the study guide or do as much as possible and then answer the following questions. Some questions the student need only to check a response which is appropriate to the student; other questions the student has the opportunity to write a response.

QUESTIONNAIRE

In the opinion of this student:

1. The directions for using the booklet were
   ___ easy to follow
   ___ difficult to follow

2. The reading level of the study guide was
   ___ too difficult
   ___ about right
   ___ too easy

3. The student completed the workbook in a total number of
   ___ hours ___ minutes

4. If the student did not complete the lessons on apiculture, how far did he get?
   ___ lessons ___ page number

5. Why did the student not complete the study guide?

6. What projects did the student complete?
7. Which projects should be removed from the study guide?

8. The self-tests were
   ______ related to the instructional material
   ______ not related to the instructional material

9. The self-tests were
   ______ too difficult
   ______ about right
   ______ too easy

10. The student's ratings on the quizzes or self-tests were:
    1. 5. 9.
    2. 6. 10.
    3. 7.
    4. 8.
