This report provides descriptive information on the research, demonstration, and evaluation programs of the Office of Child Development during fiscal year 1974. An overview describing the role, function, and long range goals of the Office of Child Development is presented. Specific research, demonstration, and evaluation projects (both continuations and new starts) are listed under a variety of topic areas: child advocacy, child abuse and neglect, child development and the family, children at risk and the child welfare system, day care, social policy/information dissemination, television and children, developmental continuity, and parent-child interaction. Each project is briefly described. Other information provides the name and address of the principal investigator and the amount of the grant received from the Office of Child Development. (Author/CS)
If the reader wishes further information on any particular research, demonstration, or evaluation project, he should write directly to the Project Director at the address provided.

Introduction

The purpose of this report is to provide descriptive information on the research, demonstration, and evaluation program of the Office of Child Development for Fiscal Year 1974.

An overview describing the role, function, and long range goals of the Office of Child Development is included along with a discussion of the research, demonstration, and evaluation program and its areas of activity undertaken in support of the goals of the agency.

Specific research, demonstration, and evaluation projects funded in Fiscal Year 1974 (both continuations and new starts) are then provided within the context of these areas of activity. Each area of activity is briefly described and reflects the program and strategy developed in relation to the issues of concern.

A DHEW Region, Principal Investigator and Institution, and Project number index are included.
Overview of OCD Mission, Function, and Long Range Goals

The Office of Child Development, located within the Office of Human Development, DHEW, serves as an advisor to the Secretary, the Assistant Secretary for Human Development, and other Federal agencies on matters pertaining to the care and development of children. The Agency assists in the development of national policies and programs which have a significant impact on the well-being of children and their families. The Office develops information on problems and trends affecting child life; analyzes information on programs serving children; recommends and reviews legislative proposals in the area of early childhood development and child welfare; and provides leadership in the development of priorities and strategies for childhood research, demonstration, and experimental efforts. In addition, through such activities as the development of model legislation and standards, the provision of technical assistance, and the conduct of demonstration projects, OCD seeks to stimulate institutional changes at the Federal, State and local level in order to improve the delivery of services to children and families, particularly those children and families who are most at risk due to economic disadvantage or other vulnerabilities. Major programmatic activities conducted by the Office of Child Development are focused on meeting the developmental needs of preschool-age children from low-income families and on improving services to particular populations of vulnerable children such as the abused or neglected, children in foster care, children in need of adoptive homes, and children in institutions. The Agency also conducts a variety of research and demonstration activities designed to improve the quality of children's programs (e.g., day care, emergency services, etc.) and to measure their impact on the children and families served.

The Office of Child Development has set priority on the following long range goals on the basis of assessing their importance and appropriateness in relation to the selected target group populations and improving the agency's capacity to serve as a more effective children's advocate:

1. **Capacity Building**

   Improve State capability in the provision of child development and child welfare services with priority on developing capacity on a State and area-wide basis in planning, needs assessment, and program management. Efforts will be directed toward ensuring that, by 1980, 80% of the States have acquired the intended capabilities (as measured against clearly defined criteria) and are in fact carrying out an appropriate set of functions (assumes passage of appropriate capacity building legislation).
2. **Head Start**

Strengthen Project Head Start as a national demonstration of cost-effective, community-based methods for providing developmental care to low-income children. More specifically, this goal entails continuation and expansion of the Head Start improvement and innovation effort with particular emphasis on:

- Improving local Head Start performance in the areas of health and nutrition services, parent involvement, services to handicapped children and basic program management;
- Program innovation and experiments aimed at expanding the range of options available to local communities for designing and organizing the delivery of child development services; and
- Upgrading OCD Regional Office capacity to support Head Start improvement and innovation efforts.

3. **Child Welfare**

Assist public and private child welfare agencies in effectively providing child welfare services to children and families (in their own homes or in substitute care) through a systematic effort to improve OCD capacity to:

- Collect and analyze child welfare service data;
- Provide program standards and guidelines;
- Develop, and encourage the enactment of model laws;
- Develop and test program models;
- Provide training materials and programs for child care workers.

4. **Day Care**

Develop and test a variety of mechanisms and approaches for improving existing day care delivery systems so that by 1980:

- Research will have provided good information on such key day care policy issues as staff/child ratio, staff professionalism, and parental attitudes and needs.
- Material describing workable techniques and mechanisms which can significantly improve the quality of care provided
in family day care homes at reasonable costs will be disseminated to state and local governments and technical assistance will be provided.

- The quality of existing day care provided under Federal auspices will be assessed and described and recommendations will be made and implemented as to means of improving the current day care delivery system and the quality of care purchased.

5. **Child Care Personnel Training**

In order to upgrade the quality of programs for preschool children and to increase the supply of adequately trained child care staff by 1980, OCD will:

- Identify and define competencies essential for early childhood staff training.

- Develop and implement an assessment system for child care staff based on child-centered competencies.

- Develop a nationally recognized CDA credential which will be incorporated into the licensing and certification requirements of at least 30 states by 1980.

- Develop competency based curriculum models for teacher training which will be instrumental in changing traditional academic training approaches.

- Train, assess and credential approximately 55,000 Child Development Associates by 1980 (assumes passage of appropriate Child Care Personnel Training legislation).

6. **Information**

Establish an information capability and system for the purpose of identifying, analyzing, and disseminating information relevant to conditions, social trends, and problems affecting children and children's services as well as information gained through research and evaluation activities. Included in this goal is the capacity to describe the status of children on a regular basis, to describe programs and services for children, to assess their impact on the children served, and to provide information useful for policy, program, research, demonstration and evaluation planning.
7. **Intradepartmental Coordination**

Develop and maintain an effective, ongoing intra-departmental coordinating mechanism for the purpose of providing the Secretary and other key DHEW officials with:

- a DHEW-wide overview and assessment of the impact of Departmental policies, programs and budget on children and their families;

- an identification and analysis of special problems of children;

- policy options and recommendations for remedial action, including how the activities and resources of various DHEW agencies may be brought to bear upon common objectives related to the needs of children.
Research, Demonstration, and Evaluation Program

The research, demonstration, and evaluation program established in conjunction with the legislative mandated responsibility of the agency to administer a research and demonstration program in child welfare (Section 426, SSA) and an evaluation program in conjunction with ongoing operating activities (Section 222, EOA) conducts activities in support of each of the agency objectives.

The program supports capacity building in the states through its evaluation of large scale program design experiments and its funding of demonstrations to ensure states have access to the information needed for designing delivery systems for children's services and to provide them with a continuing flow of innovative program designs, needs assessment techniques, and delivery systems for utilization by public and private agencies serving children.

The strengthening of the Project Head Start Program is primarily supported through the evaluation component. The findings from these assessments as well as those of related research and demonstration activities in the field of early childhood are continually being utilized in the planning processes, policy-making, and ongoing development of the Head Start Program. The evaluation effort serves as part of the developmental process when building new programs or services (formative); as an assessment of general or differential impacts of programs and services (summative); an assessment of the efficiency as well as effectiveness of programs and services.

The goal of child welfare is served through a number of research and demonstration activities aimed at improving services for such vulnerable children as the abused and neglected, children in institutions, foster care, and in need of adoptive homes; and enhancing family stability through the Education for Parenthood Program.

Improving existing day care delivery systems in order to more effectively serve those children requiring part-time substitute care is supported through a number of research and demonstration projects. These include determining the nature and extent of existing services, impact of day care on the development of the child; curriculum and program development; development of model alternative delivery systems and guidelines for day care licensing.

Child care personnel training is primarily supported through related evaluative activities. Results of further identification and evaluation of significant outcome variables associated with overall development (social competency) of children contribute to the refinement of competency based curriculum models which are the
focus for training. The goal is further enhanced through the assessment of training efforts.

The research, demonstration, and evaluation program specifically supports the goal of establishing an information capability through its funding of studies to identify critical social indicators describing the well-being of children; demonstration projects to generate new information on programs designed to counter child abuse and neglect; the pooling of information about all activities and plans along with that of other agencies to the Interagency Panel on Early Childhood Research; and the development of a utilization and dissemination policy encompassing each of the funded projects.

The goal of Intradepartmental Coordination is facilitated through the participation and contribution of research, demonstration, and evaluation information to the Interagency Panel on Early Childhood Research; coordination of program activities in conjunction with the Intra-Departmental Committee on Child Advocacy; and interagency coordination and combined funding of demonstration programs designed to counteract child abuse and neglect.

While the activities of the research, demonstration, and evaluation program reflect a continual concern on all matters pertaining to the overall goals of the agency, each year priority areas are established and statements prepared describing the research and demonstration issues deemed of critical importance to the agency in support of its mission. Continuity is reflected in these areas from one year to the next with current research and demonstration thrusts developed on the basis of current data, information, and knowledge derived from previous and ongoing efforts, including analyses and syntheses designed to highlight crucial knowledge and development gaps.

For example, during Fiscal Year 1974, new thrusts were announced in the form of priority statements in the areas of child abuse and neglect, child development and the family, children at risk and the child welfare system, and television and children. While these areas are interrelated and reflect the continuity of concern of the agency, the specific announcements pertaining to these areas highlight specific issues to be addressed in light of current knowledge and information available. While abused and neglected children are children at risk and involve the child welfare system, and television and children are related to child development and the family, the areas of activity are distinguished for the purposes of the priority statements and this report on the basis of the research and demonstration program and strategies developed to address the specific and varying issues they represent.
During Fiscal Year 1974, a new demonstration program was announced directed at the creation and development of innovative approaches to the problems of child abuse and neglect at the local and state levels. The program represents a combined funding effort on the part of the Office of Child Development, Social Rehabilitation Service, Health Services and Mental Health Administration, and the Office of Education. The goal of this effort is to have information illustrating how to develop community-wide programs to deal with the problem of child abuse and neglect in a systematic and coordinated manner. Demonstration projects aimed at establishing self-help groups for child abusing and/or neglecting parents in states, or local communities were also encouraged.

The research and demonstration thrust reflected in the announcement concerning child development and the family depicts the critical issues of the field of child development and the family within an ecological-systemic framework. This reflects the priority concern with the child in the context of his family, and of the family as it interacts with the larger society and institutional framework, views the family as the primary and critical social institution for child development, de-emphasizes intervention models focusing exclusively on the child, and takes into consideration cultural pluralism. The focus pertains to issues of how families cope with external institutions and major changes in social circumstances to meet their needs with respect to socializing the child; and how families do/do not interface with the school in socializing the child.

The announcement concerning children at risk and the child welfare system focuses on two specific sub-populations of children at risk: children with physical and mental handicaps; and children removed from public residential care institutions and returned to the community setting. The issues of concern are how to minimize the prolonged separation of children, particularly the handicapped, from families and family life including that of how to recruit adoptive parents for handicapped children; and how to ensure that de-institutionalization processes are constructive in terms of the effects on child welfare and child development including that of how the processes of deinstitutionalization affect the children involved.

The research and demonstration announcement in the area of television and children focuses on two facets of the role of television as a socialization agent: how television program content and family television viewing patterns influence family social relationships and, reciprocally, how family social relationships influence family television viewing patterns; and how television content affects the development of children's attitudes about social roles, including both role stereotypes and role diversity.
The evaluation activities highlight current Office of Child Development programmatic directions in the areas of preschool child development, development continuity, parent-child interaction, and state, local and community capacity building. While these areas are interrelated, they are distinguished for the purpose of this report on the basis of the programmatic issues they reflect. The evaluation program in Fiscal Year 1974 in addition to serving in multiple capacities in relation to program development further reflects the emphasis to investigate specific program effects on specific subgroups, to study a combination of process and outcome variables as well as a broadened array of outcomes on both children and families; and to assess long-term impacts as well as short-term effects.
Projects Funded in Fiscal Year 1974

The research, demonstration, and evaluation projects funded by the Research and Evaluation Division of the Children's Bureau of the Office of Child Development (OCD) are listed in numeric order under the areas of activity they depict. The areas of activity include those of ongoing concern as well as those receiving priority emphases in Fiscal Year 1974.

In addition to those projects funded in Fiscal Year 1974, there are a few projects listed that were funded in earlier years and are ongoing due to an extension of the grant period.

The current grant period and amount of grant award appear under the synopsis. A "(C)" following the OCD identification number indicates that the project is continuing beyond the initial year; for example, (C-2) would mean the present grant year is the second continuation, or third year.

If the reader wishes further information on any particular project, he should write directly to the Project Director at the address provided.
ADVOCACY

Advocacy is part of a larger effort developed in conjunction with the Intra-Departmental Committee on Child Advocacy (ICCA) established by the Office of Child Development in 1972. The aim of the effort is to determine the type of delivery systems needed for effective intervention into service and institutional systems on behalf of children.

OCD-CB-317(C2)
Child Advocacy Program

This child advocacy model has three goals: 1) to identify specific problems which interfere with a child's normal development; 2) to insure that all first grade children within a designated area obtain all needed available community services; 3) to identify needed preventive and corrective services not available and to mobilize resources to initiate them. The approach is based on an advocacy team concept consisting of indigenous high school seniors (child advocates), college students (team leaders), and various professionals, and a hierarchical problem-solving system.

OCD-CB-386(S)
Classification and Analysis of Child Advocacy Projects; and Child Advocacy Methods and Techniques: An Evaluative Study

The first part of this project included the development of research instruments and analysis of HEW advocacy programs so as to facilitate department-wide testing of hypotheses relating to child advocacy. The second part pertains to preparation and dissemination of major "state of the field" documents as well as empirical descriptions of model programs and the service system at the local level. Results of an international meeting of project staff from eight countries will also be included.

$75,462
Rural Migrant Health Aide Development Project

The objective of this project is to develop a community health aide training package that will take into consideration the assessments of health service providers, the existing legal system for service delivery, and the scarcity of health providers in the Chicano migrant community. The program will be conducted in a highly rural setting with limited health resources available and will serve Chicano migrant farm workers with children aged 0-8 years.

Laredo, Texas 78040

6/1/74 - 5/31/75
$50,000
CHILD ABUSE AND NEGLECT

Child Abuse and Neglect is part of a larger effort of the agency designed to improve the identification, treatment, and prevention of child abuse and neglect. Program activities reflect the role of the Office of Child Development as lead agency on the Intra-Departmental Committee on Child Abuse and Neglect and the primary emphasis placed on the development of preventive strategies.

OCD-CB-141(C2)
Study of Social Illness in Children

The project integrates a descriptive epidemiologic study of the "social illnesses" of childhood (failure to thrive, child abuse and neglect, pica, accidents and ingestions) and a study of family situations from which such children may come. They expect to be able to identify attributes of child, family and environment which discriminate child abuse cases from other categories of early childhood social illness.

Charles A. Janeway, M.D. 6/1/74-5/31/75
Children's Hospital Medical Center $109,288
300 Longwood Avenue
Boston, Massachusetts 02115

OCD-CB-366(C2)
The Extended Family Center

The project provides services to the battered child and to his parents through a day care/treatment modality in an attempt to minimize the generational effect of child abuse. The treatment involves the development of group methods for use with parents and uses parent aides who once were abusive parents. Concurrently the day care center provides mothering and rehabilitative therapy for the children.

Elsa Ten Broeck, M.S.W. 7/1/74-6/30/75

3145 23rd Street
San Francisco, California 94110

OCD-CB-371(C1)
Prospective Study in Child Abuse

The objectives of this study are: 1) to develop statistics on the number and characteristics of children hospitalized through the Department of Health and Hospitals system for reasons of nonorganic failure to thrive,
child neglect, and nonaccidental trauma; 2) to design a longitudinal study outlining intellectual and physical developmental parameters in these children; 3) to provide early intervention to some of these index children to compare their developmental progress with other index children not so treated.

OCD-CB-473(C1)
Legal Bases for Child Protection

At present, many decisions on child neglect are alleged to be made from the perspective of middle class mores, and are also highly variable by state. This project is evaluating all present child neglect laws and seeks to develop a model law and guidelines for its interpretation. The "model" will be reviewed by legal and social authorities, and individuals representing ethnic minorities and other interested groups.

90-C-73
The Family Learning Center Project

"The Family Learning Center Project", seeking to serve abused and neglected children and their families among a county-wide population of 206,000, intends to coordinate existing resources, increase capacity to collect, analyze, and disseminate information related to referral and treatment procedures, and increase treatment options, especially related to crisis response and children's needs. Among the program elements included in this multidisciplinary effort are public education, medical evaluation and treatment, school and pre-school referral programs, and a Family Learning Center incorporating a 24-hour hot line and crisis nursery, lay therapy, and treatment and education for children and parents.

90-C-74
A Protective Service System – Union County, New Jersey

This publicly operated county-wide project intends to establish a comprehensive, systematic, and integrated service delivery network for abused and neglected children and their families in Union County, New Jersey, serving a population of 543,000. Program elements in this multidisciplinary effort include special investigation and supervision units within the Youth and Family Services Division, a Parent Development Center, community treatment resources, coordinating mechanisms for services, and an outreach program for identification and referral.

Florine Brown 5/1/74-4/30/75
State Division of Youth and Family Services $181,880

Elizabeth, New Jersey 07207

90-C-75
Family Resource Center

This urban, hospital-based program includes family intervention, coordination of services among relevant agencies, a community education program, and a multidisciplinary hospital team for the identification, evaluation, and followup of abused children. Number of families served through the family intervention program will range between 50 and 75 the first year. Individual and group therapy are offered for parents and a 24-hour crisis nursery, play therapy, and a child development program are offered for children.

Gregory Echele, M.S.W. 5/1/74-4/30/75
St. Louis Children's Hospital $135,757
4386 Lindell Boulevard
St. Louis, Missouri 63108

90-C-76
Makah Child Development Services Center

This reservation-based program will develop a system to detect impending child abuse or neglect, develop a procedure for reporting abuse and neglect incidents, effectively coordinate appropriate services to deal promptly with each reported incident, and provide effective tracking and followup procedures for each case. Program elements to be initiated include parent effectiveness and income management training and interest discussion groups. Number of families to be served will be approximately 150.
90-C-77
Coordinating Community Concern for Child Abuse

This county-wide program (population - approx. 412,000) under private auspices intends to reduce the incidence of child abuse and/or neglect through coordination of abuse/neglect services, direct services to parents, community education, and training and staff development. Program elements include parent education, the use of volunteers as followup workers, and a county-wide advisory board.

Gary D. Matthies
The Panel for Family Living
1115 South 4th Street
Tacoma, Washington 98405

90-C-78
Arkansas Child Abuse and Neglect Project

This project will demonstrate the use of a volunteer-based model for protective services in a four-county area. It has been in effect on a pilot basis in one county. The volunteers will receive training, professional supervision, and consultation from multidisciplinary teams. The volunteer model is designed to expand the capability of professional agencies both through the services of the volunteers and community involvement.

Janet M. Knight
Arkansas Social Service
P.O. Box 1437
Little Rock, Arkansas 72203

90-C-79
Child Abuse/Neglect Demonstration Unit

The department of social services will establish a specialized protective services unit in the Bayamon area and compare its effectiveness with that of the generalist management of cases in a similar area. Puerto Rico is cooperating in centralized reporting for the first time. This effort, if successful, will serve as a model for similar services to be established in 8 other high need regional areas. It is estimated that they will be serving over 1,000 children the first year.
Marie Christine Belpron
Department of Social Services
G.P.O. 1139-B
Santurce, Puerto Rico

90-C-80
Child Protection Center

This project will serve a minimum of 200 children in the East Baton Rouge Parish through the establishment of a 24-hour Center, Hot Line, etc. It will provide interdisciplinary evaluations of cases, and a joint agency determination of treatment plans. Similar coordinated efforts will provide needed services. There will be a special effort to develop preventive services.

Jeanette Hendrix
Division of Family Services
P.O. Box 44065
Baton Rouge, Louisiana 70804

90-C-81
Family Care Center

A Family Care Center for children, under two years of age, and siblings who are victims of child abuse will serve as an alternative to incarceration of parents and separation of the child from his parents with placement in foster setting. Individual, group and family therapy, and agency interaction will focus on family reunion. As a 24-hour facility for the care of a minimum of 25 persons, the Center will have the capacity of initial physical protection of children and utilization of a variety of treatment modalities aimed at changing family interactions. The Center will serve as a coordinating focus for community agencies and participate in treatment goals around the early reconstitution of the family.

Charles R. Drew Postgraduate Medical School
1621 E. 120th Street
Los Angeles, California 90059

90-C-82
Parent and Child Effective Relations Project

This project, in Pinellas County, Florida, will reduce the incidence of abuse and neglect by 1) improving casefinding through training a variety of personnel having regular contact with children and families,
2) improving case handling and treatment by the use of interdisciplinary coordinating teams; 3) developing additional treatment approaches to minimize the removal of children from their families, while at the same time developing management information and cost effectiveness systems. It is anticipated that 1,000 families will be affected by one or another of the various aspects of the project.

2930 West Imperial Highway  
Suite 332  
Los Angeles, California 90303
Child Development and the Family reflects the emphasis placed on the inter-relationships among important elements of the childrearing milieu: the child, his family, and the larger societal and institutional contexts. Activities in this area include those ongoing projects previously encompassed under early childhood, education for parenthood, single-parent families, and social ecology; as well as new projects addressing the issues concerning family interface with schools and other institutions, and family styles.

Early Childhood

OCD-CB-98(C3)
Curriculum Research in Infant Education

This project is conducting longitudinal observations on 36 mother-infant families with children aged one to two and one-half years from a representative range of socioeconomic backgrounds over an 18 month period; and developing three curricula for infant development in the areas of play, social, and language development. The in-home, in-service training of caregivers as research assistants is also being explored.

Harvard Graduate School of Education
418 Larsen Hall
Cambridge, Massachusetts 02138

OCD-CB-480(C1)
Psychiatric Impairment in Urban Children Over Time

Portions of information gathered from a longitudinal study of children, ages 6 to 8, in Manhattan are being investigated in three studies. The first study involves the prediction of violence in preadolescents and adolescents based on school and agency records and the mothers' reports. The second compares and delineates unique characteristics of the single parent family versus the dual parent family. The third study focuses on the influence of social ecological factors as a rate of social change.

Thomas S. Langner, Ph.D. 6/29/74-6/30/75

OCD-CB-493(C1)  
All Indian Pueblo Council-Speech and Hearing Project

This project is an attempt to gain understanding of the development of speech and language skills in Pueblo Indian children. Normative information on speech and language will be collected for Indian children from the Zia, San Felipe, Acoma and Laguna Pueblos, and specific speech, language and hearing disorders will be identified for these children. The validity of available speech and/or language tests will be determined, and new instruments will be developed for use with Indian children.

OCD-CB-494(C1)  
One...Two...Three...A...B...C....TV

This project employs 30 high school age males from low income homes to direct, produce and present a series of videotaped programs geared toward the educational development of the preschool child. The videotaped programs will complement the preschool's environment and curriculum, and will provide preschool and day care children with a positive male image. The completed videotapes will be aired by the local Cablevision station for viewing by community subscribers, and thus increase community awareness of early childhood education. In addition, a training program will be developed in the area of early childhood development, day care and nursery school operation, television production, and human relations.

**Individuation and Discrimination in the Classroom**

The major goal of this research project is to define and analyze the distinction between individuation and prejudicial discrimination in teacher behavior. The study will contrast individuation versus prejudicial discrimination against racial groups in preschools. The procedures to be used include detailed recording of teacher classroom behavior, the documenting of teacher's evaluations of individual children at regular intervals, and in-depth teacher interviews to analyze the teacher's perceptions of her behavior in the classroom. The study will be carried out in eight racially mixed preschool classes which differ in emphasizing individualized teaching as part of their educational philosophy.

**Implications of Early Screening for Later Development**

The purpose of this study is to conduct a four to five year follow-up of children initially screened with the Denver Developmental Screening Test at ages 3 to 24 months, 25 to 48 months, and 49 to 72 months. Individual intelligence tests and school status (academic achievement and behavior problems) will be the criterion variables. Neurological exams and family interviews will be done to gather collateral information which may shed light on children who have moved into or out of the "at risk" category over the four year period.

OCD-CB-462(C1)
Education for Parenthood

A demonstration project in California, Maryland, Minnesota and Texas will provide formal and informal instruction and opportunities for older teens to gain direct experience with young children. Youth from rural, urban, suburban, out-of-school, parent and nonparent groups will learn first hand about infant and child developmental needs and become aware of the role and responsibilities which they may expect as future parents. Projects will, through the 4-H Youth Extension Service, include study-discussion formats, Teens-Teach-Teens programs, individual counseling, psychotherapy groups, films and video trainers, games and simulations, and work with family day care mothers in actual child care situations.

**Parent-Professional-Child Interaction and Involvement**

The purpose of this research project is to correlate parent-professional interactions with family and parent variables as well as school and teacher variables, with parent and teacher involvement in the child's education in the home and in the school, and with child behavior and achievement. Data on parent attendance for individual teachers will be used to select a sample of low and high interaction families and teachers for data collection from school records; interviews and questionnaires from parents, teachers and children; and for tape recording of parent-teacher conferences. Policies and
practices that may influence the amount of home-school interaction will also be studied through interviews with school administrators, principals, and teachers for a sample of schools and school systems.

Development of Parental Attachment

This study will compare development of parent-child interaction from birth to four months for high and low risk premature and normal full-term infants. Infants of low birth weight and/or perinatal complications are at risk for both developmental difficulties and for failure in parenting because 1) such an infant is a stress to the family and 2) such infants are separated from their parents during a sensitive period of normal parent-child relationship. It is predicted that
disruptive parent-child interaction in the form of avoidance, interaction through inappropriate sensory modalities and stimulation at inappropriate times will be more prevalent as risk increases.

Cognitive Development in Early Childhood

The purpose of this project is to complete the analysis of data collected for a three-year project which studied cognitive development in underprivileged black children. The objective of the three year project was to identify the principal maternal-care variables which promote advanced forms of infant functioning. Various aspects of infant development were measured: object permanence and causality in the sensorimotor period, problem-solving, symbolic representation and language development, cognitive style as revealed in spontaneous play. Two aspects of the mother-child interaction were studied also: the mother's general responsiveness to the child, and her specific ability to stimulate and instruct.

Preschool Multicultural Research Program

The purpose of this research is to begin to answer questions (both applied and theoretical) concerning multilanguage acquisition in young children, a variable of great importance to the culturally different child. This project will attempt to perform a descriptive and experimental analysis of bilingual (Spanish-English) acquisition in 2-3
year olds. A preschool program utilizing mothers as instructors will provide a base for the research. Bilingual repertoires will be initially described by accumulating language samples from children and mothers. An experimental analysis of interference between language will utilize specific training of conceptual and linguistic components in one language with accompanying measurement of effects in the second language.

CHILDREN AT RISK AND THE CHILD WELFARE SYSTEM

Children at Risk and the Child Welfare System pertains to that population of children at risk of being separated from their families or enduring long separations from families and family life. Activities in this area include those ongoing projects previously encompassed under adoption, foster care, emergency services, and children's institutions as well as new projects with a specific focus on two sub-populations of children at risk: children with physical and mental handicaps; and children removed from public residential care institutions and returned to the community setting.

Adoption and Foster Care

OCD-CB-59(C2)
A Study of Adoption of Black Children by White Families

This study has two major thrusts: 1) the followup of 125 children, age six or older, who have been in their adoptive homes at least three years, to obtain information on their development and adjustment and in the satisfactions and problems experienced by adoptive parents; and, 2) the examination of the adoption process in 35 recent adoptions from the point of view of the adoptive parents and the social workers who work with the families, in order to understand the attitude and perceptions of those involved in the adoption process.

Interstate Compact on the Placement of Children

The Interstate Compact provides a mechanism which eliminates the complex legal and administrative provisions involved in the interstate placement of foster or adoptive children. This is particularly important in providing maximum opportunity for those with special characteristics, such as racially mixed and older children, groups of siblings, and physically handicapped and emotionally disturbed children, since resources may not be available in their state of residence. The project provides technical assistance to states interested in enacting the Compact and strengthens the service of the national secretariat maintained by the member states.

California Review and Synthesis of Foster Care Studies

The purpose of this project is to provide strategies derived from carefully done studies in foster care for guidance to public policy in the area of foster care in California through a review and synthesis of recent major foster care studies in California. A series of solutions
to problems set forth in the reports will be prepared by retired professionals in the field. The evaluation will include use of common data techniques, reliability ratings, and achievement of set objectives relative to time.

**Foster Care Cost Assessment Instrument**

The purpose of this project is to develop and test a foster care assessment instrument for use by local foster care agencies and associations in assessing the true cost of foster care in local areas. The project will include examining the problem of measuring the price of foster care and attempting to develop a measurement procedure based upon cost of living indices; as well as measuring costs actually incurred by foster families and the relationship of these costs to ideal standards of child care established by foster families and child care specialists advising on the project.

**Curriculum Development for Paraprofessional Training for Foster Parents**

The objectives of this project include developing a means of establishing foster parents as paraprofessionals, developing a model of paraprofessional training for foster parents on a state-wide and regional basis, and developing procedures among leaders in social agencies, legislatures, and educational institutions to assist in the establishment of foster parenting as a paraprofessional career. The primary task of the first year is to develop resource guides for foster parents suggesting nurturing activities to assist children to successfully accomplish developmental tasks moving from infancy through adolescence.

Increasing the Effectiveness of Foster Care

The purpose of this project is to test the use of a service contract with children, natural parents, foster parents, and workers to increase the effectiveness of foster care experience. The primary goals of the project are to protect the child from dysfunctional effects of separation from his own family by defining the role of parents and other relatives helping the family fulfill their role; increase the chance for each child in foster care to achieve appropriate outcomes; and reduce the length of time in foster care.

International Orphan's Inc. - Children's Village Project

The purpose of this project is to conduct an indepth study of placement needs of children who are victims of physical abuse in Los Angeles, Orange, and Riverside Counties. The project will determine the extent of need for a specialized placement resource when alternative forms of placement (foster care, adoption) are neither appropriate or available; and examine the concept of developing a team of professional consultants of several disciplines to work with the Board of Directors of the project to advise as to program content, personnel requirements, qualification, service systems, and alternative service systems for child abuse victims.

Relationship Opportunities in Day Care and Child's Task Orientation

This project addresses itself to the general question of what types of environmental changes interacting with the development of the child at what ages will enhance and sustain that development. Emphasis is on
improving the human relationships available to the child by means of
casework with parents and providing contact with volunteer aides, and
influencing development through use of an individualized curriculum.
Types of interventions and interactions which affect the child's task
orientation when he reaches school age are being examined.

A Feasibility Study of a Demonstration Project to Alert SSI-eligible Children and to Study Their Experience with the Program

This is a feasibility study to determine whether a demonstration project could be a viable mechanism through adding SSI, and locating and enrolling low income handicapped children in its cash grants program. The objectives are to identify a system to facilitate contact between potentially eligible children and SSI; to study the processes of these cases; and analyze the results and prepare a final report.

Graduate Training and Basic Research Program

This project, jointly funded by the Office of Child Development, Social and Rehabilitation Service, Health Services and Mental Health Administration, and Office of Education, supports various training and basic research activities of the University of Chicago School of Social Service Administration. Areas covered include child development programs, social services in schools, and health services.

HEW-OS-74-306  
Children's Concern Center - Phase II

This project is designed to develop, test and evaluate the feasibility of an information retrieval and delivery system related to public concerns about the health, education and social welfare of children. Information will be collected and distributed in response to written inquiries, and the volume and kinds of issues, concerns and interests of the public will be evaluated.

TELEVISION AND CHILDREN

Television and Children pertains to the role of television as a socializing agent in the lives of children. While ongoing activities reflect the interest in the development of effective instructional models, other funded studies have specifically depicted the issues of the influence of television content on the development of children's prosocial behaviors and the role of other socializing agents (e.g. parents) in moderating the impact of television content.

OCD-CB-479(C1)
Television Model Effects on Cognitive Skills

This project is assessing the effects of television models, and television models supplemented with classroom or home support activities, on the development of complex cognitive skills in young Papago Indian children. Instructional television sequences are being developed and tested for their effectiveness in teaching skills such as question-asking, seriation, enumeration skills and conservation skills.

OCD-CB-340(C1)
Television and Prosocial Behavior

Through a combination of laboratory and field experiments, this project is determining 1) the effects of the "Misterogers Neighborhood" television program on prosocial behavior of preschool children, and 2) which environmental conditions combine with such a program to produce the greatest positive benefits. Environmental variables being explored are physical cues similar to the television program, verbal labeling and rehearsal, role-taking, and training adults in principles congruent with the television program.

Television Content and Children's Social Attitudes

This research project is designed to evaluate the nature of the influences of television content on the development of children's attitudes toward women's roles and the attributes women may legitimately possess, with specific focus on the stereotypic and diverse nature of the roles. The resultant outcomes that will be observed are the decrease of women's role diversity in terms of both girls' knowledge of women's roles and girls' behavioral choices of women's roles.

90-C-247
Children's Critical Evolution of Television Content

The goals of this project are to identify the processes children use to evaluate the applicability of diverse television content to their lives, to discover if parents can teach these processes, and to discern if children who are taught these processes are less affected by the television they watch. In the first year, processes which children and adults use, or could use, to evaluate television content will be identified, measures of attitudes in three issue areas (social interaction, concept of racial and ethnic groups, and concepts of appropriate sex roles for men and women) will be devised, and videotapes of television programs presenting influential content about each of these three issue areas will be collected.

EVALUATION PROJECTS

PRESCHOOL CHILD DEVELOPMENT

Programmatic activities in this area include Project Head Start Full Year and Summer Programs; Head Start Collaboration with Medicaid Early Periodic Screening, Diagnosis and Treatment Program; augmenting Head Start Services to Handicapped children, as well as the development of new approaches for providing Head Start services to handicapped children.

H-9766
Designing An Evaluation of Social Competency in Head Start Children

This project will assess options for designing a comprehensive evaluation of the Head Start program, and will make recommendations concerning these options in the form of reports. Tasks will include developing a conceptual framework for identifying outcome variables and program effects, identifying significant outcome variables in social competence, screening and selecting outcome variables for assessment, identifying appropriate existing measures and developing new measures, and designing evaluation plans.

Serving Handicapped Children

The purpose of this project is to conduct a review and evaluation of services provided to handicapped children enrolled in Head Start programs. Tasks include the design and implementation of an information system for use by local programs and the Office of Child Development regarding enrollment and services to handicapped children; collection and analysis of data regarding enrollment and services provided; assessment of the Head Start programs and experimental projects serving handicapped children; development of methods for estimating costs of services; and preparation of an issue paper for an impact evaluation of the handicapped effort in Head Start.

DEVELOPMENTAL CONTINUITY

Developmental Continuity encompasses those experimental programs designed to explore alternative strategies which promote continuous processes of learning, growth and development in young children. The aim of this effort is to gain new insights, and develop appropriate models and approaches for achieving cooperative, comprehensive services for dissemination and implementation on a broad scale.

HEW-OS-74-265
Feasibility of a Summative Evaluation and Follow-up Study of the Child and Family Resource Program

The intent of this contract is to determine the feasibility of performing a summative evaluation of the Child and Family Resource Program. If the evaluation is deemed feasible, the contractor will continue on with the design of the evaluation.

H-1926
Data Analysis of Short Term Effects for the National Head Start Planned Variations Study

Project objectives include the analysis and writing of reports on the data collected by SRI to evaluate the Planned Variation models of Head Start. The focus will be on determining the effects of the Head Start Planned Variations on children, determining the differences among models, and determining how children's characteristics, such as
initial I.Q., socioeconomic status and prior preschool experience, interact with the effectiveness of the models.

H-8256
Disadvantaged Children and Their First School Experience (ETS Longitudinal Study)

A longitudinal study conducted in four sites is recording the development of disadvantaged children from age three and one-half through their first school experiences, which may include Head Start and Follow-Through as well as regular primary school. The study will provide basic data concerning the impact of preschool experiences on the development of disadvantaged children. Focus will be on identifying components of early education that are associated with cognitive, personal and social development of the disadvantaged, and on the environmental and background variables which moderate these associations.

PARENT-CHILD INTERACTION

Parent-Child Interaction is part of a larger effort of the agency to recognize, emphasize, and reinforce the parents' role as the prime influence in the education and overall development of their own children, especially from the prenatal period through the preschool years. The aim of this programmatic effort is to explore and develop mechanisms for promoting parent-child interaction and models for dissemination and utilization by Head Start, school systems, and other community and child development service agencies or programs.

HEW-OS-72-127
Home Start Evaluation - Phase III

This is a formative and summative evaluation of Home Start. The formative evaluation consists of process case studies for 15 Home Start sites. A test battery developed during the first year of the project will be utilized.
