This survey attempts to bring together as much information as possible on the current study and teaching of North American Indian languages in the United States and Canada. The primary source of data for this survey was a questionnaire distributed in the spring of 1973 to 61 universities and colleges in the U.S. and Canada. Other sources were publications, conferences, and correspondence with individuals working with these languages. An overview of the study of North American Indian languages is presented first, outlining the contributions of several generations of linguists and leading up to a discussion of the present situation. Some current trends are identified through discussion of a representative group of recently instituted programs. Three appendices present the collected data. Appendix A lists American Indian language courses and other types of programs of 101 universities and colleges in the U.S. and Canada. In Appendix B, materials useful for the study of Amerindian languages are cited. Appendix C indicates persons who are making significant contributions to the study of American Indian languages. Also included are statistics relating to the present number of speakers in the major language groups and the recommendations of the Conference on Priorities in American Indian Language Work, held in Eugene, Oregon, in August 1973. FOREWORD

The Center for Applied Linguistics, the principal national organization in the United States concerned with the role of language in the fields of public policy and education, has long been deeply concerned with the question of equal educational opportunity for native Americans. During the past decade, the Center has worked very closely with the Bureau of Indian Affairs and various American Indian groups in a number of efforts designed to improve the quality of Indian education.

Among the activities of the Center in this area have been a survey of the teaching of English to American Indians (1967); a conference on styles of learning among American Indians (1968); two planning conferences for a bilingual Navajo kindergarten program (1968, 1969) -- which led to the development of the first BIA bilingual kindergarten program in 1969; a conference on Navajo orthography (1969); the editing of the BIA publication *English for American Indians* (1968-1969); preparation of *Teaching English to Speakers of Choctaw, Navajo, and Papago* (BIA Curriculum Bulletin No. 6, 1969); a study of language policy guidelines for BIA schools (1972-1973); a conference on priorities for research and training in Native American languages (1973); maintenance of extensive clearinghouse files in Indian education; publication of the *Dine Bizaad Nanil'iih* (Navajo Language Review); the first Inter-American Conference on Bilingual Education, held in Mexico, which focused on Indian education throughout the Americas (1974); and most recently, a cooperative program with the University of Utah to train teachers of Indian languages.

As a further contribution to this same effort, the Center, together with the CAL/ERIC Clearinghouse on Languages and Linguistics, is pleased to publish *A Survey of the Current Study and Teaching of North American Indian Languages in the United States and Canada* by Jeanette P. Martin. We hope that the information in this survey will be of value to all those interested in American Indian languages and education, and the rights of native American peoples to determine their own way.

Rudolph C. Troike, Director  
Center for Applied Linguistics

A. Hood Roberts, Director  
CAL/ERIC Clearinghouse on Languages and Linguistics
The recent emphasis on cultural pluralism has brought about a rapid increase in the number of programs dealing with North American Indian languages. This increase has, in fact, been so rapid that communication among those engaged in such programs has often been inadequate. Scattered information has appeared in a variety of sources, but there has been no composite picture indicating the scope of recent developments. As a compilation of the available data can be of significant value to all concerned, this survey attempts to bring together as much information as possible on the current study and teaching of North American Indian languages in the United States and Canada.

The primary source of data for this survey was a questionnaire mailed out in the spring of 1973 to sixty-one universities and colleges in the United States and Canada. The schools were selected from the Center for Applied Linguistics’ University Resources in the United States & Canada for the Study of Linguistics, 1971-72. Other sources were publications, conferences, and correspondence with individuals engaged in work with these languages.

In order to help the reader interpret the data, an overview of the study of North American Indian languages is presented, outlining the contributions of several generations of linguists, and leading up to a discussion of the present situation. Here, some current trends are identified by discussing a representative group of recently instituted programs and the problems which have arisen in developing them.

The new programs are chiefly of two types: university and college courses, and bilingual education projects. The further development of all these programs depends greatly on two factors: linguistic and pedagogical training of native classroom teachers for bilingual education projects, and advanced linguistic training of native Americans to enable them to analyze their language and prepare teaching materials, dictionaries, and grammars.

Three appendices present the collected data: Appendix A lists American Indian language courses and other types of programs at 101 universities and colleges in the United States and Canada. In Appendix B materials useful for the study of Amerindian languages are cited. These include an annotated list of serials, bibliographies of outstanding basic references dealing with these languages in general and with the major language groups, and sources used in preparing the present survey. Appendix C, organized by major language groups, indicates persons who are making significant contributions to the study of American Indian languages. A fourth appendix presents statistics relating to the present
number of speakers in the major language groups, and a fifth appendix contains recommendations of the CAL-sponsored Conference on Priorities in American Indian Language Work, held in Eugene, Oregon, in August 1973.

In conducting this survey I have enjoyed the generous cooperation of a large number of individuals directly involved in the study of Amerindian languages and in the field of Indian bilingual education. Of primary importance was the help of Professors Wick R. Miller and William R. Slager, who revealed to me through their courses something of the fascinating world of linguistics and American Indian languages and who aided me greatly with their suggestions for the shaping of this survey. In particular I also wish to thank

whose responses to questionnaires and other types of queries have made possible the production of this survey.

Finally, grateful acknowledgment is made to the CAL/ERIC Clearinghouse on Languages and Linguistics, whose financial support has made publication of this survey possible.

J.P.M.
HISTORICAL BACKGROUND AND CURRENT TRENDS: AN OVERVIEW

Within the last few years, interest in the study and teaching of North American Indian languages has developed at a rapid pace. This interest has been accompanied by an increase in the number of college courses in these languages, by public evenings and conferences, and by a new and widespread emphasis on Indian language education. The extent of this upsurge can be illustrated by one example: the majority of Amerindian language college courses designed either to teach the language itself, or to help native speakers acquire skills of literacy and analysis, have been instituted since 1970. Fifty-seven percent of the courses offered in 1973 had been in existence for at most one year, and 80 percent had originated after 1970.

This increase is indeed remarkable. But it is equally remarkable that so many institutions have been able to secure the help of trained linguists to implement their new programs. One wonders how this need for linguists could be met so rapidly. The answer to this question can be found in a brief review of the history of American Indian linguistics. Such a review shows the importance of the study of Amerindian languages, particularly during the last hundred years, in the training of the linguists who are working with present-day programs.

Historical Perspective

During the first centuries of European colonization in the Americas, the principal interest in the Amerindian languages was utilitarian. Some studied a language because they wished to convert the Indians to Christianity, others because they wanted to carry on trade with them. From these studies there emerged the first publications concerned with American Indian languages. Among the earliest of these were a translation of the Bible into Massachusetts by John Eliot in 1664 (the first Bible published in what would later become the United States), and a grammar of Narragansett by Roger Williams, published at about the same time.

In addition to the missionaries and traders there were individuals—among them Thomas Jefferson—who were interested in the languages themselves and often collected and compared word lists. By the beginning of the nineteenth century this interest was especially motivated by the desire to discover the origin of these languages and their speakers. Those who insisted on a literal interpretation of the Bible tried to prove Indian kinship with the Hebrews. But as the century progressed, a growing number, who were students of the developing science of ethnology, considered the Indians to be of Asian ancestry. Also during this period, attention came to be focused on the variety of Amerindian languages and the number of different families that might exist, and as a result, the principal students of these languages were concerned more with classification than with the in-depth study of any particular language.
The publication in 1890 of John Wesley Powell's classification of language families north of Mexico marked the end of what has been called the "first period of linguistic research in America"--a period in which most of the work was done by persons who were not primarily linguists.

The second period of research was distinguished by the development of scientific methods for analyzing grammatical and phonological data. By the early 1900s Franz Boas had become the leader in the collection of detailed grammatical data and was applying what was then known about phonetic and morphological analysis. By 1886 he was studying the Indians of British Columbia, particularly the Kwakiutl, and recording the languages of the area. In the years that followed, he continued to study the languages of many other North American Indian groups. He collected and analyzed masses of texts and tales, and thus became the first of many anthropological linguists who, in order to better understand the various cultures, studied native American languages. Boas' greatest contribution to linguistic study was the development of the detailed analytical study of a language. In his famous Introduction to the Handbook of American Indian Languages (1911), Boas explained the basic linguistic characteristics of languages, using illustrations from Amerindian languages, and presented evidence which refuted the nineteenth-century idea that all American Indian languages have a similar structure.

One of Boas' most famous students was Edward Sapir, who refined the analytical techniques. Like Boas, Sapir was an anthropologist who considered the study of language important to the understanding of a culture; unlike Boas, however, he had had formal linguistic training, including the study of Indo-European comparative linguistics. Sapir was the first American linguist to systematically apply the comparative method to American Indian languages. He showed that regular sound correspondences could be drawn between certain of these languages and that, as a result, proto-forms (that is, the forms of a parent language) could be reconstructed. From these studies he was able to propose genetic relationships which created new groups (Algonquian-Ritwan and Na-Dene) and augmented some that were already established (Hokan and Uto-Aztecan). These new groupings enabled him to reduce Powell's fifty-eight separate families to twenty-two. Later, in his article "Central and North American Languages," written for the Encyclopedia Britannica (1929), he proposed a further classification of Amerindian languages into six superstocks, although he said they were "far from demonstrable" at that time. Although there has been some revision of these six, Sapir's contribution to the historical picture of American Indian languages marked an important step in language classification. In addition to his contribution to Amerindian comparative linguistics and to descriptive techniques, Sapir, through the work of his students, exerted a far-reaching influence on the study of native American languages throughout North America.

A contemporary of Sapir's, Leonard Bloomfield, also made significant contributions to the study of Amerindian comparative linguistics. Like Sapir, he had been trained in Indo-European comparative linguistics. He became a specialist in the Algonquian languages and through the use of comparative techniques was able to set up a parent language, which he called Proto-Central-Algonquian. This was an important step in
American Indian historical linguistics, for it laid the foundation for later studies that extended the knowledge of language relationships.

Descriptive techniques developed during the first half of the twentieth century, particularly by Sapir and his students, made possible much more accurate recording of the phonology and morphology of languages than could be done by those gathering data during earlier periods. The improved techniques in phonology have been especially helpful in developing usable orthographies for literacy programs at all educational levels.

However, during this early period, problems of syntax were not handled as explicitly as has been possible in recent years. The development of generative transformational grammar, based on the theory which Noam Chomsky first set forth in Syntactic Structures (1957) and refined in Aspects of the Theory of Syntax (1965), has helped to clarify syntactic and semantic problems and has brought more attention to the study of syntax. Most Amerindian linguists are now using the techniques of transformational grammar. Chomsky's Aspects, which stresses the importance of the underlying syntactic structure rather than the surface form, has placed renewed reliance on the intuition of the native speaker. It has focused attention on the need for linguistically trained native speakers as language analysts and teachers. As a result, academic programs are gradually being developed for native speakers.

Current Developments

The current interest in Amerindian languages is an important consequence of a growing belief in cultural pluralism—the recognition of the right of each group to preserve its own cultural identity. Pluralism is now superseding the long-accepted "melting pot" theory—the idea that all diverse cultural groups should be assimilated into a homogeneous society. With this new emphasis on cultural identity has come a realization of the importance of a native language. As a result, each American Indian group wants to preserve its language, if it is viable. If the language is dying, the group often wants to revitalize it in some way. The accelerating interest in these languages has led not only to a rapid increase in the number of courses and other types of programs in universities and colleges, but also to the development of Indian bilingual education programs in many elementary and secondary schools.

University and College Programs

The many courses which have been recently instituted in colleges and universities are especially important to the development of Amerindian linguistics. Most of these new courses are of a practical nature, many of them stressing language learning for both native and non-native Americans. Others are designed to teach skills of literacy and language analysis, principally to native speakers. However, the traditional academic courses dealing with these languages have also increased in number, and larger enrollments are reported. The traditional courses include...
general surveys of North American Indian languages, and linguistic field methods and language analysis classes for the training of professional linguists.

Although institutions in many parts of the United States and Canada have introduced both the practical and academic types of courses in recent years, the interest has been particularly great in those areas near concentrations of Indian populations. One such area includes the north central states from the Dakotas through Minnesota and Wisconsin. Colleges and junior colleges throughout the state of Minnesota, for instance, are initiating language programs in Ojibwa and Dakota, and there is some attempt to introduce these courses into primary and secondary schools both on and off reservations. Local Indian organizations also sponsor language classes.

The increase in practical courses has been particularly noticeable in small colleges located near Indian groups. Such institutions rarely had any such courses prior to 1968. These courses sometimes develop from the efforts of an Indian group to preserve its language. For example, a class in Shoshoni at the Elko Community College, Elko, Nevada, was instituted in this way. Initially, a small Shoshoni tribal group on the Duck Valley Reservation near Owyhee, Nevada, requested help from the University of Utah in developing language-learning and literacy courses. In a summer experiment, classes were taught with the help of a native speaker using linguist-developed materials. This experiment led to the course now taught at Elko Community College.

Native speakers have been involved in the development of courses at many other institutions. For example, a course in Puget Sound Salish at the University of Washington represents an attempt to resolve the dialect differences of several small groups (Skagit, Snohomish, Snoqualmie, Duwamish, Puyallup, and Nisqually) so that a strong language program can be established.

Some of the more populous Indian groups are developing their own junior colleges with native language courses as part of the culturally oriented curriculum. Among these colleges are the Lakota Higher Education Center, Pine Ridge, South Dakota; Sinte Gleska, Rosebud, South Dakota; and the Navajo Community College, Many Farms, Arizona.

There is also a growing trend toward the acceptance of a native American language to fulfill the foreign or second language requirement of some departments. For example, Eastern Montana College at Billings accepts a knowledge of Cree, Crow, or Northern Cheyenne; the University of Washington at Seattle, Puget Salish; the University of Utah, Navajo; and the University of Minnesota, Ojibwa or Dakota.

The work on Amerindian languages at colleges often includes projects which cover a wider sphere than course offerings. For example, the Wisconsin Native American Languages Project at the University of Wisconsin at Milwaukee, funded by a grant promoted by the Great Lakes Intertribal Council, Inc., includes the languages of the Ojibwa.
Potawatomi, Menominee, and Oneida. It is designed to involve native
speakers in linguistic study which will train them to prepare instruc-
tional and reference materials and to teach their language.

Another project covering a wide sphere of activity is located at
D-Q University, Davis, California. The university was established in
1970 and is devoted to the interests of American Indian and Chicano
students. A National Center of Native American Language Education is
being set up within the university, with plans for language study and
development of teaching materials. In addition, an extensive survey of
the present state of Amerindian languages is projected, including a
study of dialect differences within individual languages and a survey
of the present ages of speakers.

Another research project, the British Columbia Indian Language Pro-
ject, is being carried on by British Columbia Indians with the assistance
of Randy Bouchard, a linguist. Although aimed at the preservation of
all British Columbia native languages, the project has concentrated so
far on Salish languages, with some work on Haida. Plans include the
preservation of oral materials through the use of tapes and the develop-
ment of language-teaching materials for the schools.

There is evidence of a growing interest in American Indian lan-
guages which is wider in scope than that encompassed by specific courses
and research projects. For example, Charlton Laird has included several
chapters in these languages in his recent book Language in America (1970).
Most books written previously about the development of language in this
country ignored the languages of cultural minorities and dealt almost
solely with American English. Even high school materials are beginning
to reflect this new trend: Scholastic Magazine has recently prepared
a wall map for high schools showing both cultural and linguistic his-
torical areas of North American Indians.

Bilingual Education

Another important consequence of the new emphasis on cultural plu-
pluralism has been the development of Indian bilingual education in ele-
mentary and secondary schools. Under the "melting pot" theory, every
effort was made not only to establish English as the dominant language
of a child of a minority culture but to eradicate his native language.
However, under bilingual education there is a place for more than one
language in the classroom, and instruction in two languages if the child
needs it.

History. The great majority of Amerindian bilingual projects have
been initiated since Elementary and Secondary Education Act (ESEA)
Title VII funds became available in 1968. But attempts at bilingual
education for Indians in the United States are much older. In the
late 1930s the Bureau of Indian Affairs established a program on the
Navajo reservation to promote first-language literacy. Motivation for
this program arose from the fact that almost nine out of ten Navajo
adults did not speak English, and their children were not adapting to
an English language curriculum. The U.S. government needed to
communicate with Navajos on such problems as overgrazing, water development, sanitation, and disease control. Bilingual education was viewed as a method that would help, and a program was begun for teaching both reading and writing in Navajo. Some adults were trained to serve as interpreters on technical matters. At the same time, bilingual reading materials were prepared for the Hopi, Tewa, and Sioux. However, Indian parents were not enthusiastic about the programs, nor was Congress willing to renew the appropriation during World War II; hence, all these programs were abandoned before they could be firmly and permanently established in the curriculum.

Shortly after World War II, the Bureau of Indian Affairs instituted a five-year plan for use with Navajos who were 12 to 16 years old and who had previously had little or no schooling. Navajo was used successfully as one of the languages of instruction to help these students become prepared for vocational training and complete their schooling in English. However, this project was looked upon as a "crash program" designed to accelerate the education of a particular group, and after the five years had come to an end, use of the native language in the classroom was abandoned.

These early experiments with bilingual education are examples of the original intent of the program—to use the native language to achieve mastery of the English language and adaptation to "American" culture. During the late 1960s, however, the growing emphasis on cultural pluralism focused the attention of Indian leaders on bilingual education as a means of preserving native languages. Robert E. Lewis, governor of the Pueblo of Zuni, emphasized this in his keynote address to the first National Indian Bilingual Education Conference, April 1973, when he said that preserving the language comes first in bilingual education, for it helps preserve the culture. Bilingual education, which includes both reading and writing in the home language, is needed to overcome the feeling of shame which the Indian has often felt about using his language.

The first experiments in Indian bilingual education in the 1960s were initiated in schools on the Navajo reservation in Arizona—at Fort Defiance, in 1965; at the Rough Rock Demonstration School, Chinle, in 1966; and in 1968 at the Rock Point Boarding School, Chinle, and the Kayenta Public School. Two planning conferences conducted by the Center for Applied Linguistics in 1968 and 1969 led to the development of the first Navajo bilingual/bicultural kindergarten programs—at Sanostee, Toadlena, Lower Greasewood, and Cottonwood.

Current Projects. The granting of federal funds under Title VII of the ESEA gave the impetus that was really needed for widespread development of bilingual education projects. In 1969, the first Indian bilingual education programs so funded were initiated at Tahlequah, Oklahoma, using the Cherokee language; at Grants, New Mexico, using Keresan (Laguna); in some San Juan County, Utah, schools, using Navajo; and in a Ukiah, California, school, using Pomo. During the next three years, 18 more programs were established under Title VII, involving the following 12 languages: Choctaw, Cree, Crow, Yuk Eskimo, Keresan (Acoma), Mikasuki, Northern Cheyenne, Passamaquoddy, Seminole, Lakota, Ute, and Zuni. Fifteen additional programs are now in operation or under consideration. These involve some languages or dialects not previously represented: Apache,
Inupiat Eskimo, Menominee, Papago, Eskimo (St. Lawrence Island Yupik), Tewa, Keresan (Zia), and some northern Athapaskan languages.

In addition to projects funded by Title VII, bilingual education is carried on as part of the regular programs in some schools, such as the Jemez and San Felipe Day Schools in New Mexico. In Alaska, a new law requires that a bilingual education program be conducted in all villages with at least 15 fluent speakers attending school, and the Alaska State-Operated School System is sponsoring several bilingual education projects, including programs in Inupiat and Yupik Eskimo, Tlingit, Haida, and certain Athapaskan languages, principally Kutchin, upper Kuskokwim, and Central Koyukon. Participation is optional for non-natives.

The rapid growth of Indian bilingual education and the need to exchange ideas and discuss common problems led to the first National Indian Bilingual Education Conference* (NIBEC), held in April 1973 at Albuquerque, with the Language Development Branch of the Bureau of Indian Affairs acting as coordinator. A second conference was held in May 1974 in Billings, Montana, and a third in Calgary, Alberta, in April 1975. Persons working with both U.S. and Canadian Indian bilingual education projects attended these conferences.

Bilingual education has stimulated a community interest in the schools, replacing the indifference or actual hostility which often existed previously. In areas populated by homogeneous Amerindian groups, native Americans are seeking control of school policies. Community-controlled schools can be found, for instance, on the Rocky Boy reservation (Cree) in Montana and on the Navajo reservation. Among the Navajo schools are the Rough Rock Demonstration School, devoted in part to the training of native teachers for bilingual teaching and producing classroom materials; the Rock Point Community School, which also produces materials; Ramah Navajo High School; and the Borrego Pass School. Many native teachers are responding to this growing community interest. For example, Navajo teachers now have their own organization—Diné Bi'oltta' Association—which holds workshops to train teachers and also prepares some classroom materials in Navajo.

This new interest in Amerindian bilingual education exists in several countries besides the United States. In Peru, for example, a recent law stipulates that Quechua and Aymara Indian students be taught first in their native language before they are trained in Spanish. Projects for training native speakers as classroom aides in the lower grades are under way in Mexico and Guatemala. In the province of Quebec, Canada, a project for "Amerindianization of the Schools" is now in operation, directed by Raymond Gagné, Minister of Indian Affairs. Plans call for the linguistic and pedagogical training of native speakers as classroom teachers so that the native language and culture can be integrated into the curriculum wherever there are Amerindian children. If the Amerindian language is predominant in the home, it will be the basic language of the school, and English and/or French will be taught as second languages. However, among Indian groups where English or French has become the home language, the native American tongue will be taught as a second language. Similar plans are being developed in other parts of Canada.

*Now Native American Bilingual Education Conference
Materials Production. The first step in any bilingual program is the selection of an orthography which will facilitate learning and will also be acceptable to the native community. If the language has never been written, there are fewer problems with community acceptance. But if a system has been introduced previously, conflicts sometimes arise because of competing systems. One such problem has arisen with the Cherokee and Cree syllabaries, where tradition is so strong that older speakers, even some who are not literate, consider their own syllabary a part of their culture. The primary disadvantage of using a syllabary is that the child must learn two entirely different writing systems—the Roman letters so that he can function adequately in a predominantly English-speaking society (or French, in some parts of Canada) and the native syllabary so that he can become literate in his own language. Since linguists have demonstrated that with some small changes the Roman alphabet can be adapted to all American Indian languages, many bilingual education teachers feel it is advantageous to use this alphabet for the native language.

However, in those cases where tradition has made a syllabary an important part of the culture, literacy materials are being prepared in that orthography. Changes in the order of syllabary characters may be made to facilitate learning. For example, in the Cherokee Primer (developed in 1965 by Professor Willard Walker, a linguist working with a tribal literacy project) the traditional order of the syllabary characters was altered to permit the introduction of high-frequency syllables first, thus enabling the student to begin reading before he had mastered the whole system. In past years the Cree syllabary has been adapted to various Cree and Ojibwa dialects, to Chipewyan and Slave (both northern Athapaskan), and to Eastern Eskimo. It is now being used for literacy materials in those languages. It seems especially well suited to Eskimo and is extensively used for Eastern Eskimo, although the Roman alphabet is used for orthographies by some Eastern Eskimos. At the University of Alaska an 18-letter alphabet has been developed for Yupik (Western) Eskimo.

Another orthographical problem encountered with some languages is the extent to which diacritics need to be used with the Roman alphabet. At a conference convened in 1969 in Albuquerque by the Center for Applied Linguistics for the Bureau of Indian Affairs, a Navajo orthography was recommended for BIA-sponsored publications for use in its school system. The Rock Point School is experimenting with simplification of a highly complex Navajo orthography by eliminating certain diacritics. To determine the extent to which these diacritics can be eliminated without impeding reading ability, teachers present material written in both the complex and the simplified forms.

In the production of materials for teaching native languages, many questions must be considered, such as the kinds of subject matter which are best suited for classroom materials at various levels; the dialect differences that must be recognized; special speech forms of a particular language—male and female, adult and infant—that must be considered; and changes in the language that are taking place, including borrowings. Adequate answers can come only after extensive investigation of the language as it is presently spoken. One group carrying on such an investigation is the Navajo Reading Study, which is based at the University...
of New Mexico and produces materials for Indian bilingual education. From the studies it has made of the speech of children entering school, it has obtained information concerning vocabulary levels, use of borrowed terms, and English-speaking ability.

At present, most of the reading materials in native American languages are primers and readers for the first and second grades. Reading materials for older students and for adults who have become literate are almost non-existent. Some teachers of older children are using materials produced by the students themselves. For example, experience stories written in conjunction with a language lesson have served on later occasions as classroom reading material. Students sometimes produce a community news sheet in the native language (at Namah Navajo High School, for example) or make word lists of items important to their culture. Some tribal headquarters, such as the Cherokee at Tahlequah, Oklahoma, and the Micmac at Fredericton, New Brunswick, are publishing newspapers in the native language, thus encouraging literacy among adults.

Multimedia resources are being used for some native language materials. For example, the San Juan County, Utah, bilingual project has produced 32 multimedia Navajo language materials, including sound film strips of coyote tales, animated films based on those tales, a film on Navajo numbers, Navajo alphabet flash cards, and other items.

In the preparation of bilingual education materials, the choice of the language in which the child should be taught to read must be considered carefully. Evidence from psychological studies has favored initial learning in the child's home language. There is reason to believe that in teaching reading in a second language, the association of the written symbols with sounds of the language is more easily and efficiently taught if the child has already made the association through learning to read his own language.

Reactions to Bilingual Programs. Although most Amerindian groups have welcomed the inclusion of their native language in the school curriculum, there has been resistance from some members who have grown up believing that the English language, and consequently English-speaking teachers, are superior. Some participants in NIBEC I asserted that while the Indian community accepted native aides in a classroom, they often objected to a native teacher's handling the classroom alone. Another objection to bilingual education has been that it might hinder Amerindian young people from being successful if they should leave the reservation or the native village. In 1970, Yuk Eskimos objected to use of the native language in the classroom because they felt that English is the road to success. They had to be convinced that their language would be used only in the lower grades to help children learn English more readily. After the project had been initiated, they were delighted to see that children not only learned English more easily, but did better work in all subjects and enjoyed school more. Similar success with other bilingual education projects is overcoming objections to the use of the native language in the classroom. But acceptance of native teachers with full responsibility for the class is not so easily accomplished.
Participants at NIBEC I felt that this acceptance will depend in part on the training these teachers receive and their ability to prove their efficiency. There is a great need for pedagogical training, to enable native American speakers to be certified for classroom teaching, and for linguistic training, to enable them to function well in a bilingual education program and to develop or adapt language materials as needed.

**Linguistic Training for Native Speakers**

The skills of native speakers trained in linguistics are needed in all types of American Indian language programs—language analysis, materials production, college courses, and bilingual education programs. In most practical college courses stressing language learning, one or more native speakers assist a professional linguist. But the many demands made upon professional linguists to prepare materials and teach several courses limit the number of language classes which can be conducted in this way. If these classes are to increase significantly, native speakers with a knowledge of linguistics will be needed to conduct many of them. Some institutions, such as the University of Manitoba, have been unable to institute projected language teaching courses because of the lack of funds for preparing native speakers to serve as teachers. A similar need exists in bilingual education projects. These programs cannot be firmly established until many native speakers have the training necessary to teach their language and assume full classroom responsibility.

For the development of all types of Amerindian language activities there is a great need to establish training programs and to interest gifted native speakers in the study of their language. Some steps have been taken in the past to involve American Indians in the study of linguistics and the teaching of their language. Occasionally native speakers have been trained as linguists. Juan Dolores (Papago), William Jones (Algonquian), and Edward Dozier (Towa) are a few of those who have published their studies.

Occasionally non-Indian linguists have collaborated with native speakers in study and publication. The teamwork of linguist Robert Young and William Morgan, Sr., a native speaker of Navajo, is an early example. Together they produced linguistic studies and teaching materials, some of which are now being used in schools on the Navajo reservation.

There are at least two recent publications produced through this type of collaboration. One is a new textbook, *Seneca Today*, by the linguist Ruth Dudley and Ester Blueye, a native speaker of Seneca (to appear). It is used at the State University of New York at Buffalo. The other is *An Introduction to the Luiseño Language* by Villiana Hyde (1971). This book presents a series of carefully prepared lessons written by Mrs. Hyde and graduate students in linguistics at the University of California at San Diego under the direction of Professor Margaret Langdon. Unlike most linguistic descriptions of a language, which are intended for linguists, this book is designed as a text which can be used by native speakers to understand their language and to learn to read it. The book can also be used by non-native speakers who wish to learn Luiseño.
Another example of the collaboration of a native speaker with a professional linguist has been that of Albert Alvarez, a native speaker of Papago, and Professor Kenneth Hale. They have published some linguistic materials for the use of native Papago speakers. (See the Selected Bibliography for Aztec-Tanoan, Appendix B, Part 2.) However, Professor Hale's objective was broader than the production of linguistic materials. He wanted to train Alvarez in the skills of language analysis so that Alvarez himself could produce materials. Professor Hale has described this work in his essay, "A New Perspective on American Indian Linguistics." The Appendix which concludes the essay contains some of Alvarez's linguistic description of Papago. In the essay, Professor Hale makes this statement:

The point of view which will be central in this paper is that the future of American Indian linguistics (i.e., the extent to which it will advance significantly) will depend critically on how successful an effort there is to engage American Indians in the active study of their own languages—not as informants as in the past, but as linguists, philologists, lexicographers, creative writers, and the like.

If native American speakers are to engage in the study of their language as professionals, extensive linguistic training programs will be needed. Professor Hale proposed a plan for such training in The Indian Historian (Summer 1969, pp. 15-18, 28). Since that time he has conducted a tutorial project in linguistics for gifted native American speakers as part of the graduate program at the Massachusetts Institute of Technology. After an initial intensive study of general linguistics, particularly phonology and syntax, the student is led to apply the principles he has learned to an analysis of his native language. Most of the tutorial guidance is supplied by a linguist who has some knowledge of that language. Because of the expense involved with this type of program, only a few native Americans can be admitted each year. In 1973-74 there were three students—two Navajo and one Hopi. One of the Navajos, Paul Platero, is a Ph.D. candidate. He has conducted summer language workshops in the Navajo community and has also visited many Navajo schools encouraging language scholarship. He recently started a journal, Diné Bizaad Náníítį́į́ (Navajo Language Review) dedicated to language studies, both theoretical and practical, with special emphasis on linguistics, child language, and bilingual education. The Review is now published approximately four times a year by the Center for Applied Linguistics, with Platero as editor, for the Navajo Linguistic Society.

Several publications designed for the linguistic training of Navajo speakers have been produced in connection with the MIT program. They appear officially in the "Bibliography of Navajo Reading Materials," BIA Curriculum Bulletin #13. It is the hope of those working with the program at MIT that a special Master's degree program directed more specifically toward the language-scholarship needs of the American Indian communities can be developed in the future.
The great demand for native speakers with the linguistic and pedagogical training that will enable them to become certified teachers in bilingual classrooms will require many college programs. At least two institutions in Canada have recently established training programs. The University of Quebec at Chicoutimi is initiating a teacher training program for native Americans which will lead to the following: (1) Elementary Teaching Certificate; (2) Bachelor of Elementary Education; and (3) Certificate in Linguistic Technology. This program is part of the project for the "Amerindianization of the Schools" initiated in 1973 by the Department of Indian Affairs of the Province of Quebec. The second Canadian program, which leads to a diploma in Native American Languages, but not to certification, was begun in September 1974 at the University of Victoria, Victoria, British Columbia. This program is intended to guide native speakers in the study of their language so that they can prepare teaching materials, and to train native personnel to teach their language in British Columbia schools. A few universities and colleges in the United States have established programs for training native American teachers, among them the University of Alaska and the University of New Mexico.

Many more such programs will be needed if bilingual classrooms are to be adequately staffed. In the meantime, emergency measures are being taken to provide personnel. Native speakers serve as classroom aides in most bilingual education classrooms. In California, two native speakers of Hupa were certified under the "eminent persons" regulations of the California Teacher Accreditation Code in order to enable them to teach their language at the Hupa Valley Unified School in Humboldt County in Northern California.

Conferences and Publications

In addition to the numerous study and teaching programs dealing with Amerindian languages, there have been an increasing number of conferences, many of them held annually, such as the International Conference on Salish Languages, the Algonquian Conference, the Uto-Aztecan Conference, and the Conference on Hokan Languages. Some conferences have been regional in scope, rather than oriented toward a language group, such as the Workshop on Research Problems in Southwest Areal Linguistics held in 1972 and 1973. The first Inter-American Conference on Bilingual Education, organized by the Center for Applied Linguistics and the Council on Anthropology and Education, was held in Mexico City in November 1974. Many of the papers presented at the Conference dealt with Indian education in the Americas. The Center also held a conference in Eugene, Oregon, in August 1973, on priorities for research, training native Americans in linguistics, and developing necessary pedagogical materials. (See Appendix E for the recommendations of the conference.)

A number of informal periodicals have appeared in recent years, some of them, such as the Algonquian Linguistics Newsletter, closely associated with the conference for the language group. Others are published by individual American Indian communities, such as Agenutemagen (News in Micmac) and the Cherokee Nation News, which prints some material in the Cherokee
syllabary. Two newsletters with useful general information about American Indian languages are *Language in American Indian Education*, which was published by the Bureau of Indian Affairs from 1970 to 1972 (William R. Slager, ed.), and the *Newsletter of the Conference on American Indian Languages Clearinghouse*, (James L. Fidelholtz, ed.). (For more detailed information about periodicals, see Appendix B, Part I.)

The *Linguistic Reporter*, published by the Center for Applied Linguistics, contains news of educational projects, conferences, and publications relating to American Indian linguistics. It includes a section devoted to bilingual/bicultural education.

A publication which will serve as a valuable reference work in the future is now being prepared under the sponsorship of the Smithsonian Center for the Study of Man. It is the new edition of the Bureau of American Ethnology *Handbook of North American Indians*, intended to replace the two volumes of the BAE 30, published in 1907 and 1910. William C. Sturtevant is general editor of this encyclopedic work. One volume will be devoted to a variety of topics related to American Indian languages, including sketches of about fourteen languages, each representing a different family or an isolate.

**Looking Ahead**

The accelerating interest in American Indian languages which has received its impetus from the new emphasis on cultural pluralism has brought a marked increase in college courses, bilingual education programs, and publications and conferences dealing with these languages. If these programs are to become permanently established, the great need for native speakers with the training necessary to carry them forward must be met.
Appendix A: AMERICAN INDIAN LANGUAGE COURSES AND PROJECTS
AT UNIVERSITIES AND COLLEGES

Appendix A lists courses pertaining to North American Indian
languages taught at universities and colleges in the United States and
Canada as well as other types of study. Most of this information was
supplied by respondents to the questionnaire sent by the author.

Courses have been divided into two categories: (1) those of an
academic nature; and (2) those with the practical purpose of promoting
language learning for either native or non-native Americans, or skills
of literacy and language analysis among native speakers.

The academic courses are of three general types: survey courses
of North American Indian languages, study of methods in field linguistics,
and study of the structure of a particular language.

In the following listing, universities and colleges appear in
alphabetical order. In the list of academic types of courses, the
United States and Canadian institutions are combined. In the list of
practical courses, United States and Canadian institutions are listed
separately.

Appendix B: MATERIALS

This appendix lists materials of several types related to the study of Amerindian languages:

1. Serial publications
2. Selected bibliographies
   (a) General background references
   (b) Surveys and studies
   (c) Study materials, by language group
3. Sources used in preparing the present survey

Some of the more recent bibliographies that appear in the listings can be found in many libraries in the microfiche collections of the Educational Resources Information Center (ERIC), a service of the National Institute of Education, U.S. Department of Health, Education and Welfare. ERIC documents may also be purchased in microfiche or hard copy from the ERIC Document Reproduction Service. ERIC documents are listed with their document number, a brief resume, price, and ordering instructions in *Resources in Education*, issued monthly and available in most university libraries. Access to the information in the ERIC system can be obtained via various indexes and a detailed thesaurus. A number of commercial firms provide a computer search of the ERIC data base.
1: Serial Publications

The abbreviations which follow some entries are also used in other parts of this survey. These abbreviations are based on the Master List and Table of Abbreviations, MLA International Bibliography, 1970.

Agenutemagen (News in Micmac). Published by and for Indians of New Brunswick, 181 Westmorland Street, Fredericton, New Brunswick, Canada.

The Algonquian Linguistics Newsletter. Published at Trent University, Peterborough, Ontario, Canada. Includes news about Ojibwa, Malecite, Passamaquoddy, Powhatan, Wamponag, Cheyenne.

Bureau of American Ethnology Bulletins (BAE B). First published 1887. The Handbook of American Indian Languages, Bulletin 40, 1911, and several other bulletins contain material important to the study of these languages.

Cherokee Nation News. A news organ of the Cherokee tribe. Published in Tahlequah, OK 74464. Some news and cultural material appear in the Cherokee syllabary and some in English.

The International Journal of American Linguistics (IJAL). First published 1917. University of Chicago, Chicago, IL 60637. This is the foremost journal in the publication of studies in American Indian linguistics.

The Navajo Education Newsletter. Published by the Education Division, Navajo Area, Bureau of Indian Affairs, Window Rock, AZ 86515.

The Navajo Linguistics Newsletter. Published by the Navajo Division of Education, Window Rock, AZ 86515. Appears monthly during the school year. February 1974 issue discusses the Alaskan Athapaskan language program, with some description of Tanaina.

The Newsletter of the Conference on American Indian Languages Clearinghouse. James L. Fidelholtz, ed., University of Maryland, College Park, MD 20742. Contains useful information on the study and teaching of American Indian languages at all academic levels.

The Newsletter of the Southwest Circles. Garland D. Bills, ed. Published at the University of New Mexico, Albuquerque, NM 87106. Contains news relating to languages of the Southwest.

The Southwest Journal of Anthropology (SJA). Published at the University of New Mexico, Albuquerque, NM. First published 1945. Contains occasional articles on American Indian languages.

The University of California publications in American Anthropology and Ethnology (UCPAAE) First published 1903. Contain many articles dealing with American Indian languages, particularly in the early issues. Emphasis is on the native languages of California.

The University of California Publications in Linguistics (UCPL) Berkeley, CA 94720. First published 1943. Emphasis is on the native language of California. In most cases each volume presents an extended treatment of one subject, such as a grammar or a text.
2: Selected Bibliographies

(a) General Background References

----- 1965. Corrected estimates regarding speakers of Indian languages. IJAL 35.345-6.

(b) Surveys and Studies

Matthews, G. Hubert. 1959. Proto-Siouan kinship terminology with bibliography of the Siouan languages. AA 61.252-78.

Pilling, J. C. 1887-1894. The following bibliographies were published in Bulletins of the Bureau of American Ethnology:

(May be brought up to 1910 through bibliographies in the American Anthropologist.)

Wares, Alan C. (comp.) 1968. Bibliography of the Summer Institute of Linguistics. Also Supplements 1 & 2, 1971 (out of print); 3 & 4, 1972. May be obtained from SIL, P.O. Box 1960, Santa Ana, CA 92702.

(c) Study Materials, by Language Group

ESKIMO-ALEUT PHYLUM

----- 1968b. Let's learn Eskimo. 2nd ed. Fairbanks: SIL.

NA-DENE PHYLUM

The following languages are represented in the list for this phylum: Apache (Chiricahua, Mescalero, White Mountain), Navajo, Galice, Hupa, Mattole, Carrier, Chipewyan, Koyukon, Kutchin, Sarcee, Eyak, Tlingit, Haida.

Goddard, Pliny Earle. 1904. Hupa texts. UCPAAE 1.91-368.

----- 1907. Phonology of the Hupa language. UCPAAE 5.1-19.

The preceding Navajo reading materials are available from the Massachusetts Institute of Technology, Department of Linguistics, Cambridge, MA 02139.

----- 1923. The phonetics of Haida. IJAL 2.143-58.

Sapir, Edward, and Harry Hoijer. 1967. The phonology and morphology of the Navajo language. UCPL 50.

-----; Becenti, Maebah; McLellan, Sarah; and Barbara Whaley. Navajo-English curriculum guide, kindergarten level. Window Rock, Arizona: Bureau of Indian Affairs.

White Mountain Apache Tribe. 1972. Apache-English dictionary. Tucson: Arizona Historical Society. (May be obtained from the Apache Cultural Center, Fort Apache, AZ 85926.) This dictionary is a cooperative effort of the White Mountain Apache Culture Center and the Summer Institute of Linguistics.

MACRO-ALGONQUIAN PHYLUM

The following languages are represented in the list for this phylum: Arapaho, Cree, Delaware, Menominee, Ojibwa, Potawatomie, Wiyot, Yurok Chickasaw, Choctaw, Mikasuki, Muskogee (Creek); and Chitimacha, Tonkawa, and Tunica isolates.

Algonquian

Anderson, Anne. 1970-1972. Let's learn Cree (oral Cree); and many other books including a Cree-English dictionary. Edmonton: Cree Productions. List and books available from the author at 10060 118 St. #5, Edmonton, Alberta, Canada.

----- 1966. What Algonquian is really like. IJAL 32.59-73.

Muskogean

----- n.d. A Choctaw orthography; A Choctaw morphology; The Choctaw language. Written for the Choctaw Bilingual Education Program, McCurtain County, Oklahoma; Southeastern State College, Durant, Oklahoma, assisting.

Chitimacha isolate

Tonkawa isolate

----- 1972. Tonkawa Texts. UCPL 73.

Tunica isolate

MACRO-SIOUAN PHYLUM

The following languages are represented in the list for this phylum: Assiniboine, Crow, Dakota, Hidatsa, Iowa-Oto, Lakota, Mandan, Osage, Cherokee, Mohawk, Oneida, Seneca, Kitsai, Pawnee, Wichita, Yuchi isolate.

Siouan

----- 1941. The Crow language: Grammatical sketch and analyzed text. UCPAAE 39.1-142.

Voegelin, Carl F. 1941. Internal relationships of Siouan languages. AA 43.246-9.

Iroquoian

Caddoan

Yuchi isolate

HOKAN PHYLUM (limited to families located wholly or partly in the United States)

The following languages are represented in the list for this phylum: Atsugewi, Chumash, Karok, Pomo, Salinan, Shasta, Washo, Yana, Akwa'ala, Cocopa, Diegueño, Havasupai, Kiliwa, Maricopa, Walapai, Yavapai, and Yuma.

McLendon, Sally. 1964. Northern Hokan (B) and (C): A comparison of Eastern Pomo and Yana. Studies in Californian linguistics, ed. by William Bright, 126-44. UCPL 34.

----- 1966b. Walapai II: Morphology. IJAL 32.141-63.

PENUTIAN PHYLUM

The following languages are represented in the list for this phylum: Chinook, Coos, Costanoan, Klamath, Maidu, Miwok, Nez Perce, Nisenan, Saclan, Sahaptin, Takelma, Tsimshian, Wintun, Yokuts, Zuni isolate.

Dixon, Roland B., and Alfred L. Kroeber. 1903. The native languages of California. AA n.s. 5.1-26.

----- 1907. Numerical systems of the languages of California. AA n.s. 9.663-90.

----- 1966. The position of Klamath in California Penutian. Lg 42.489-98.

Zuni isolate

AZTEC-TANOAN PHYLUM

The following languages are represented in the list for this phylum: Cahuilla, Comanche, Hopi, Luiseno, Pima-Papago, Shoshoni, Southern Paiute, Tubatulabal, Kiowa, Taos.

Dolores, Juan. 1913. Papago verb stems. UCPAAE 10.241-263.

Harrington, J. P. 1928. Vocabulary of the Kiowa language. BAE B 84.

SALISH FAMILY

The following languages are represented in the list for this family:
Bella Coola, Clallam, Cœur d'Alene, Colville, Comox, Halkomelem, Kalispel, Quinault, Shuswap, Snohomish, Soo ku, Spokane, Squamish, Tillamook, Twana, Upper Chehalis, and the Puget Sound and Straits Salish groups.

1963b. Phonology and morphology of Upper Chehalis II. IJAL 29.345-56.

1964b. Phonology and morphology of Upper Chehalis IV. IJAL 30.251-60.

WAKASHAN FAMILY

The following languages are represented in the list: Bella Bella, Kwakiutl, Nitinat, Nootka.

Swadesh, Mary Haas, and Morris Swadesh. 1933. A visit to the other world, a Nitinat text. IJAL 7.195-208.

KERESAN, KUTENAI & YUKI

Keresan

Kutenai

Yuki

Radin, Paul. 1924. Wappo texts. UCPAAE 19.2-147.

3: References Used in Preparing This Survey

Bureau of Indian Affairs: 1970. Colleges and universities with Indian-related programs.

------. 1966. Corrected estimates regarding speakers of Indian languages. IJAL 34.345-6.

----- 1969. Grammar or lexicon? The American Indian side of the question from Duponceau to Powell. IJAL 35.239-55.

Quebec Region, Department of Indian Affairs, Canada. n.d. Project for the Amerindianization of the schools. First 5-year plan. Draft copy.

Appendix C: PERSONNEL WORKING WITH INDIVIDUAL LANGUAGES OR LANGUAGE GROUPS

This appendix lists the names of many persons who have contributed significantly to the study of North American Indian languages. Professional linguists as well as non-professional (chiefly native speakers) are included. Although this survey is concerned with only the United States and Canada, names of Nahuatl (Aztec) and Mayan linguists also appear, chiefly because many U.S. linguists were reported to be working with these languages.

Names of personnel have been supplied principally by respondents to the questionnaire or to other types of queries.

Appendix D: ESTIMATES OF THE NUMBER OF SPEAKERS OF AMERICAN INDIAN LANGUAGES NORTH OF MEXICO

The viability of a language depends greatly upon the number of young children who speak it. Consequently, statistical data concerning speakers of American Indian languages and their ages afford an indication of the strength of these languages. The best overall source for these figures has been published by Wallace L. Chafe in the International Journal of American Linguistics, "Estimates Regarding Speakers of Indian Languages," (1963) and "Corrected Estimates Regarding Speakers of Indian Languages," (1965). Chafe's estimates form the basis of the information in this appendix, though more recent statistics are shown whenever possible, e.g., for the Na-Dene languages Professor Michael Krauss has published figures applicable to the early 1970s (Krauss, in press). Krauss has also provided figures for the Eskimo and Aleut languages in Alaska.

The figures in the following tables are taken from Chafe (1963, 1965)--marked (C)--and from Krauss (in press)--marked (K). Individual languages cited are reported to have speakers of all ages, including significant numbers of children, unless otherwise specified. The official census data compiled by the U.S. and Canadian governments are uneven in their sensitivity to linguistic matters and fail to offer substantial aid in a study such as this.

Appendix E: RECOMMENDATIONS OF THE CAL-SPONSORED CONFERENCE ON PRIORITIES IN AMERICAN INDIAN LANGUAGE WORK

There has been in recent years a great revival of interest among linguists in the study of American Indian languages, which represent the products of millennia of divergence in isolation from the languages of the Old World, and which differ among themselves as much as do English and Chinese. This growth of interest coincides with a mounting concern on the part of Native American groups for the preservation (or in some instances, the revival) of their unique linguistic and cultural resources in the face of growing pressures for assimilation into the national mainstream of society. Increasingly, Indian groups are calling for the recognition of their cultural identity, and are asking that their children be given an opportunity to learn their ancestral language either before it is too late, and the language is lost to them, or in order to bridge the gap between school and home, so that the children grow up with greater self-respect and pride in their heritage and do not suffer the effects of an imposed curriculum entirely in a foreign language.

Any research on American Indian languages that is undertaken today must take place within this context. Scholars of American Indian languages have an obligation to the people with whom they work to return to the community some of the fruits of the information they obtain from it. This is being increasingly insisted upon by the Native American communities in which linguists work, and it should be recognized that the work of linguists has value to these communities, even where the motivation for the work is purely theoretical or scientific. Many linguists, for their part, are keenly interested in assisting Indian groups to develop means and materials for preserving their language. The means include sufficient training of Indians in linguistics to enable them to undertake the analysis of their own languages, and joint projects for the development of pedagogical materials. Indeed, the needs are so great that the only way to meet them is through the training of native speakers. Native Americans and linguists thus share a strong bond of mutual interest, and ways for closer cooperation and collaboration should be encouraged.

Priorities for work with American Indian languages may be grouped in three categories: research, pedagogical materials, and training. The topics indicated in each area all represent priority needs or criteria for evaluating projects; no relative priorities, unless specifically stated, are implied by the order of statement.
Research Priorities

1. Descriptive and comparative-historical studies
   a. Descriptive
      1. Dictionaries
      2. Texts
      3. Grammars
      4. Phonology
      The relative order of priority may differ in particular situations, as e.g., when work on phonology is needed as the basis for developing an orthography. In general, however, dictionaries and texts have the greatest priority since they have the greatest pedagogical utility, and can involve native speakers with relatively little training in the preparation; it should be noted that adequate dictionaries presuppose grammatical and phonological analysis.
   b. Comparative/Historical
      1. Family-level reconstruction
      2. Comparative dictionaries
      3. Dialect studies
      4. Areal studies
      Comparative/historical studies are important for a number of reasons, among them being the fact that they may contribute uniquely to the solution of descriptive problems. No priority of descriptive over comparative/historical studies is implied by this listing, however, nor of one type of comparative study over another.

2. Types of work
   a. Field research in poorly documented languages, especially those in imminent danger of extinction, or where work on the language is critical to the survival of the language.
   b. Analysis and publication of previously collected data, including archival data, to make it available (and, in some instances, to provide time depth).

3. Surveys of modern American Indian speech communities
   a. Model case studies of typologically different language situations which could be replicated by communities for their own situation.
   b. Needs assessment, by group, to determine relative research and materials priorities.

4. Conferences
   Where the growth of knowledge in a particular topic area or language family has reached a "critical mass," a conference
can produce a significant synthesizing or catalytic effect. The Hokan Conference in San Diego in 1970 and the Uto-Aztecan Working Conference in Reno in 1973 are examples.

**Pedagogical Materials**

1. The community must want the materials. In some instances this may require providing orientation for community members to enable them to make informed decisions.

2. There should be evidence of reliance on prior linguistic scholarship; if there has been no previous linguistic work, it should be an integral part of the project, with necessary time allowed for its completion and criticism by recognized specialists. Pilot projects should precede full-scale implementation to allow for carefully controlled experimentation.

3. Whenever development of an orthography for a language is needed, the consultation of linguists and members of the community should be sought. In cases where a writing system exists which is linguistically inadequate, but which is traditional in a community, the community should decide its preference based on consultations with informed specialists.

4. Whenever pedagogical materials are to be prepared, the consultation of linguists should be required.

5. Encouragement should be given to the development of dictionaries, grammatical sketches, and advanced reading materials. Without these, programs are likely to be weak and may fail to succeed.

6. People who are producing materials should have editorial consultation and support for printing in order to enhance the quality and acceptability of their work.

**Training**

1. Speakers of Native American languages need to be provided training in linguistics so that they can become fully responsible for the development of programs in their languages. Training should not necessarily be directed toward degrees, but should be as relevant as possible to immediate needs.

2. Emphasis should be placed first on training people to read and teach their language and on giving them an understanding of the nature of their language. Training should include practical problem-solving exercises, curriculum design, and materials development.
3. Where feasible, attention should be given to advanced training in linguistics for Native Americans. Universities should be urged to provide flexible curricula in their regular degree programs designed to meet the special needs of Native American students and to develop appropriate training programs for Native Americans who do not wish to seek academic degrees.

4. Linguists likewise need training in such areas as education, cultural sensitization, and methods of community work in order to make their participation in programs more effective.

Linguists stand ready to help in a number of ways, including the development of appropriate orthographies, grammatical sketches, dictionaries, primers and instructional material, and advanced reading materials on traditions, history, and customs, as well as the training of Native Americans in technical linguistic skills. Efforts to meet these needs may come from many sources, but one of the first considerations should be the determination of the professional linguistic competence of the people involved in order to avoid the exploitation of Indian groups by incompetent outside individuals or institutions. To aid in this determination, Indian groups should be provided with information on linguists who might be of assistance to them. The Center for Applied Linguistics should serve as a clearinghouse for information in this field and provide liaison between the linguistics profession and Native American groups.

CAL-ERIC/CLL SERIES ON LANGUAGES AND LINGUISTICS

ERIC (Educational Resources Information Center) is a nationwide network of information centers, each responsible for a given educational level or field of study. ERIC is supported by the National Institute of Education of the U.S. Department of Health, Education, and Welfare. The basic objective of ERIC is to make current developments in educational research, instruction, and personnel preparation more readily accessible to educators and members of related professions.

The ERIC Clearinghouse on Languages and Linguistics (ERIC/CLL), one of the specialized clearinghouses in the ERIC system, is operated by the Center for Applied Linguistics. ERIC/CLL is specifically responsible for the collection and dissemination of information in the general area of research and application in languages, linguistics, and language teaching and learning.

In addition to processing information, ERIC/CLL is also involved in information synthesis and analysis. The Clearinghouse commissions recognized authorities in languages and linguistics to write analyses of the current issues in their areas of specialty. The resultant documents, intended for use by educators and researchers, are published under the title CAL-ERIC/CLL Series on Languages and Linguistics. The series includes practical guides for classroom teachers, extensive state-of-the-art papers, and selected bibliographies.

The material in this publication was prepared pursuant to a contract with the National Institute of Education, U.S. Department of Health, Education, and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgment in professional and technical matters. Prior to publication, the manuscript was submitted to the American Anthropological Association for critical review and determination of professional competence. This publication has met such standards. Points of view or opinions, however, do not necessarily represent the official view or opinions of either the American Anthropological Association or the National Institute of Education.

This publication will be announced in the ERIC monthly abstract journal Resources in Education (RIE) and will be available from the ERIC Document Reproduction Service, Computer Microfilm International Corporation, P.O. Box 190, Arlington, Virginia 22210. See RIE for ordering information and ED number.

For further information on the ERIC system, ERIC/CLL, and the CAL-ERIC/CLL information series, write to ERIC Clearinghouse on Languages and Linguistics, Center for Applied Linguistics, 1611 North Kent Street, Arlington, Virginia 22209.
