The product of two teacher-coordinator workshops, the guide represents the cooperative efforts of the teacher participants and provides supplementary instructional materials for secondary school multi-occupational cooperative programs. The first section of the guide is intended for use in large group classroom instruction and deals with the goals, objectives, suggested activities, and suggested resources for six instructional areas: safety, communications, human relations, work ethics, resource, and time management. Detailed classroom materials, games, checklists, activities, diagrams, and forms are provided. Section 2 offers task listings and duties for 20 selected jobs: produce clerk; grocery clerk; professional salesperson; marker/stockman; receiving clerk; credit interviewer; display helper; office clerk, checker (cashier); bank teller; newspaper advertising man; medical x-ray technologist assistant; yard foreman (lumber); nurses aide; carpenter (factory constructed homes); food service--chef; busboy or floor girl; salesperson (clothing store); auto parts counter man; and service station attendant. These task listings are applicable for use with small group and individualized instructional areas. (MN)
TEACHER-COORDINATOR'S GUIDE FOR
RELATED INSTRUCTION IN MULTI-OCCUPATION
COOPERATIVE PROGRAMS

TEACHER-COORDINATOR'S GUIDE FOR

RELATED INSTRUCTION

IN

MULTI-OCCUPATION COOPERATIVE PROGRAMS

Editor
Dr. Kendrick Spooner

Assistant Editor
Marylouise Mutter
ACKNOWLEDGEMENTS

The content for this guide was developed by teacher-coordinators of multi-occupation programs in Wyoming. The editor gratefully acknowledges:

Barbara Arnold - Green River High School
Bill W. Day - Central Wyoming College
Jim Deaver - Laramie Public Schools
John Deuker - Rock Springs High School
Bob Hanson - Rawlins High School
Kyle Herman - Buffalo High School
Bill Klements - Douglas High School
Don Knerl - Casper College
Mike Kouris - Laramie High School
Bill McIntosh - Jackson High School
Ed Mosher - Cheyenne Central High School
Dan Radokovich - Western Wyoming College
Jim Schlegel - Lander High School
Guido Smith - Eastern Wyoming College
Gib Tafoya - Casper High School
Gorden Thorne - Laramie High School

These coordinators were trained and directed by a team of three consultants lead by:

Dr. Dean Palmer; assisted by
Dr. James Zancanella and
Dr. Kendrick Spooner

Appreciation is extended to:

Central Wyoming College and the University of Wyoming for hosting the two developmental workshops; and

Dr. Jimmy Koeninger for the development of the simulation activities suggested within the units.
The purpose in preparing this guide was to fill a void that exists within the area of related instruction for multi-occupational programs. The problem was perceived that because of the diverse occupations coordinated by the multi-occupations teacher-coordinator, an exerted effort would be made to help define relevant content for their related class-room instruction.

It was the intent of this project not to duplicate guides already available, but to supplement those guides. Therefore, topics such as job interviewing, personal money management, etc., were not included.

The process used to develop the content outline for the guide relied upon directed teacher input. Two workshops served as the primary forum in the developmental effort. The first workshop presented to the coordinators a means of identifying related content through task listings of occupations they would coordinate.

Seventeen businesses in Riverton, Wyoming, agreed to let the coordinators at the workshop observe and interview employees at work, whereby the coordinators developed a job listing. Once the job listings were complete, the teacher-coordinators were asked to select another occupation and to do a task listing and teacher-coordinator resource-coordination. The second workshop presented the completed task listings and detailings as content for the second workshop, the participants analyzed each job and developed a list of common tasks performed by many occupations.

From this list was developed six instructional areas: Resource Management, Time Management, Safety and Housekeeping, Work Ethic, Communication, and Human Relations.

The remainder of this guide will be divided into two sections. Section One will deal with the task listings developed by the participants. Section Two will list the task listings developed by the participants.
The first section is meant to be used as a guide for large group classroom instruction. Section Two's task listings and task detailings for selected jobs can be used to pinpoint small groups and individualize instructional areas for one's students. Task listings for occupations not included in Section Two will have to be compiled by the teacher-coordinator.

Keiji G. Okano, Project Director
Wyoming Department of Education

Goal Area | SAFETY

Goal

To promote safe working habits.

Rationale:

Safety is a primary responsibility of all employers and employees regardless of the occupations. Safety is an attitude; one must think safety.

Purposes:

The purposes of this unit are to:

1. Acquaint the student with dangerous occupations;
2. Identify elements of general hazardous conditions on the job;
3. Suggest ways to eliminate hazardous conditions;
4. Identify acceptable safety practices.
SAFETY

1. Objective:
The student will review and critique the seventeen occupations identified as hazardous for individuals 16-18 years old and identify common elements within these occupations which make them hazardous.

Content

Activities

- Present the 17 hazardous occupations and describe each
- Bring in speakers to speak on occupation safety; have students prepare and ask safety-related questions
- Have students prepare a notebook of news clippings on work safety and health
- In a small group setting, have students formulate a list of conditions which may create hazardous working conditions; then take a tour through the school or business or industry

Resources

*Also see unit on Housekeeping, Objective One

*Also refer to resources as Reference Page 10

Occupations

With these occupations which make them hazardous:

Hazards for Individuals 16-18 Years Old and Identify Common Elements

1. Objective: The student will review and critique the seventeen occupations identified as hazardous.
SAFETY

2. Objective: The student will identify accepted safety practices related to his job and list these practices for the training station supervisor's review.

OTHER SUGGESTED ACTIVITIES

Provide the participants the opportunity to visit hazardous occupation sites first-hand. The team would have to reassess the situation a second time, instruction might be performed before the team would be given a second opportunity. The instruction could be given by the instructor, guest speakers, or preferably, by teams who exhibited proficiency. Since several categories might be considered in the rating, deviation scores would be used to arrive at the winner(s). The teacher might also establish a mathematical performance checklist to be used for rating businesses with regard to safety. The teacher might also consider assigning students to teams and approach the rating as a team project. The teacher might also establish a minimal performance level (e.g., seventy percent) and if a team did not reach the predetermined level, the instructor could rate the team and suggest areas for improvement. The multi-occasions teacher should contact the supervisor of a firm where a visit would be possible. In addition, the teacher might also consider assigning students to teams and approach the rating as a team project.

Since several categories might be considered in the rating, deviation scores would be used to arrive at the winner(s). The teacher might also consider assigning students to teams and approach the rating as a team project. The teacher might also consider assigning students to teams and approach the rating as a team project. The teacher might also consider assigning students to teams and approach the rating as a team project.
Goal Area I SAFETY
Goal Sub-Area HOUSEKEEPING

Rationale:

Good housekeeping habits relate to the performance of all aspects of one's job. The health, safety, and production of the employee is directly related to the cleanliness and orderliness of the work area.

Purposes:

The purpose of the unit is to:

1. provide the student with the importance of cleanliness and orderliness as it relates to his occupation;

2. acquaint the student with the tools and procedures necessary for the performance of his housekeeping duties;

3. acquaint the student with local, state, and national health laws relating to his occupation.
### SAFETY

#### Objective:
The student will adhere to good housekeeping procedures.

#### Content
- **Activities**
  - a. Inspectors talk to class about safety and health.
  - b. Local health or safety officials will talk to class.
  - c. The student will describe the general conditions of the work setting of one or more employees and critique the setting in terms of housekeeping and safety.
  - d. The coordinator will have the employer assess the students' housekeeping habits.

#### Resources
- **Reasons for Cleanliness**
  - tools of cleanliness
  - tools of maintenance
  - sanitation laws
  - tools of storage

---

#### Good Housekeeping

</table>

**For a Successful Safety Program**

- trip through an industry each term in course of housekeeping training these classes could be done in small groups with class discussions

---

#### 4. Objective:
The student will adhere to good housekeeping procedures.
OTHER SUGGESTED ACTIVITIES
(Housekeeping)

The instructor and/or students could develop a "housekeeping evaluation form" and participate in the same type of activity described under the SAFETY section.

Or, the instructor could acquire a rating form from the county health department for restaurants and pursue the same activity mentioned under SAFETY.

Or, the instructor could assign classroom housekeeping duties to a "team" for a week and have the remainder of the class to assign a rating. The team which received the highest rating would be declared the winner.

Resource List

SAFETY

SAFETY CHECK LIST*

Attitude and Personality

yes  no

1. Do I think, speak, and act in regard to building safety at all times?

2. Have I integrated my safety program with what I am teaching, in an interesting, logical manner?

3. Are my students keenly aware that building safety is a vital, required part of my program?

4. Do I immediately curb horseplay and carelessness in the building at all times?

5. Have I explained and demonstrated the need for cooperation among students and teacher when certain jobs of lifting, gluing of boards, and carrying of materials become necessary in the shop?

6. Am I acquainted with the school laws of state regarding building safety, negligence, etc.?

General Safety Rules

yes  no

1. Is the building well lighted, clean, free of grease and oil on the floor, and neatly painted?

2. Does each machine have an adequate safety lane area painted on the floor?

*Taken from "Industrial Arts--A Guide for Colorado Schools" published by the Colorado State Department of Education with the Colorado Industrial Arts Association, with permission.
3. Are all light switches in good working condition and of the right type for each part of the building?

4. Have all lines and electrical circuits been checked for proper load?

5. Are all plugs and extension cords in good condition?

6. Are the fuse boxes always maintained?

7. Have the fire extinguishers been checked recently and are they of the right type?

8. Do I have a fair knowledge of fire safety by keeping pleasant board displays?

9. Do I have a good knowledge of first aid and what to do in case of an accident?

10. Is there a good first aid chest at my service in the event that I should need it?

11. Are insurance and accident report papers neatly filed and kept ready?

12. Do I help promote building safety by keeping pleasant board displays?
1. Safety eye protection must be worn by all students any time they are in the shop.

2. Hard hats are to be worn in any activity where there is a hazard of striking your head or from falling objects.

3. Students must keep hair from obstructing their vision and provide and use their own safety device in the prevention of accidents involving their hair.

4. Students are to provide their own protective clothing when working in areas of instruction where aprons do not provide an adequate protection.

5. Students must exhibit safe housekeeping practice. As you work, do not allow your work area to become congested with materials, tools, or equipment so that they become a safety hazard.

6. Personal falls cause personal injury. Be aware of where you are and where you are going in relation to heights.

7. Get help when moving long or heavy materials or equipment. Know and use proper methods of lifting and handling materials.

8. All accidents involving students, equipment, or materials must be reported to the instructor at once.

9. The construction of any temporary structure must be approved by the instructor and inspected for safety prior to use.

10. All scaffolds must be approved by the instructor and inspected prior to use. The failure of scaffolding causes many accidents in the building construction industry.

11. All saw horses must be of approved design. Saw horses must be checked for loose nails and weakening cuts in the main support members.

12. Excavations must be properly shored. Care must be taken not to accidentally fall into one.

*Taken from "Occupational Building Construction Curriculum Guide for Grades 11 and 12" published by Denver Public Schools, with permission
13. Deck and floor surfaces are usually above ground or laboratory floor level. Care must be taken not to fall off or stumble over these structures.

14. When decks and floors have openings for stairwells and vents, care must be taken not to step or fall into the opening as this can result in serious injury.

15. Anytime you or others are working overhead, all materials and tools must be secured or placed so that they cannot fall on anyone.

16. Do not leave the work area with loose tools or materials overhead. Someone unaware of the hazard may cause them to fall, causing injury.

17. Know where all fire extinguishers are located and what emergency procedures to follow.

18. The building site can be a hazard. Rubble, excavations and danger from falling rock or materials from the building site are a few examples. Care must be exercised when working in these conditions.

19. If tools are broken or split handles or loose heads, they may separate in use and hurt you or others. If it is bad practice to use tools with broken or split handles or loose heads, they may cause injury. Use only hard metal tools such as hammer faces together. Sharp edges pointed downward and away from you and others.

20. Remove all nails from all scrap and salvage material immediately so no one is injured.

21. Be careful when cutting tools with the sharp edges pointed downward and away from you and others.

22. Carry cutting tools with the sharp edges pointed downward and away from you and others.

23. Do not strike hardened metal tools such as hammer faces together. Sharp places are a serious injury.

24. Do not throw things. You may cause someone to have an injury or accident. Table to fly off at high speed and injure you or others.

25. Horseplay causes accidents. Horseplay will not be permitted at any time. When working cutting tools, clamp the material to or support it on a work surface. Attempts to hold materials by hand or between your knees can cause you to cut yourself resulting in a serious injury.

26. Tools that are not being used should be returned to their proper storage place. Tools left on the work area can cause accidents. Tidy workers have fewer accidents.
27. Oily rags can cause a fire by spontaneous combustion. All used oily rags must be placed in a covered metal can immediately after use.

28. Keep your work area orderly. A messy work area is a safety hazard which can cause an accident or injury.

29. All extension cords must be the proper wire size, have grounded plugs and receptacles and be strung in such a way as not to cause someone to trip or fall.

30. All power equipment must be switched off, completely stopped, and, if possible, disconnected from power source before any adjustment, repair, or maintenance is performed.

31. You are not to operate any power equipment when the teacher is out of the laboratory.

32. Any type of special set-up of equipment must be checked by the teacher before use.

33. Report any tool or machine that is not operating correctly to the teacher.

34. You must pass the written test on General Safety Instructions and demonstrate by safe operation or use your ability to use the tool or machine, after the teacher's demonstration, to earn the right to operate and use the tool or machine.
Goal Area II COMMUNICATIONS

Goal
To affect better understanding.

Rationale:

Purposes:
In business and industry, communications are of paramount concern.
Without adequate communication channels, business objectives cannot be
achieved. "Good judgment" cannot be
Purposes achieved. Without adequate communication channels, business objectives cannot be

In business and industry, issues of communications are of paramount concern.

Maintained: To affect better understanding.

COMMUNICATIONS Goal Area II

"The Communication Casebook." 1956, 16 mm and 8 mm, black and white, $67.50. Henry Strauss Distributing Corp., 31 W. 53rd St., New York, N.Y. 10019. (Three-day preview no charge.)

"Effective Listening." 1959, 15 min., 16 mm, black and white, library, McGraw-Hill, 330 W. 42nd St., New York, N.Y. 10036.
LISTENING TEAM TECHNIQUE

The listening team technique is used to focus the attention of small groups or teams on a specific question while listening to a presentation. It usually produces lively and enthusiastic audience participation. The technique gives direction to listening, stimulates thinking, and increases the amount and quality of discussion. Members of the team react and discuss phases of the presentation with other team members and arrive at a consensus which is later reported to the entire group.

In an audience of 100 persons or more, two or more teams may be utilized. Questions can be raised that are sufficiently diverse in nature to create genuine interest on the part of the participants. Each team should be given the question at least 48 hours in advance. The speaker should be alerted to this procedure and told that it will be utilized. After all reports are made by the team chairman, the speaker may be called upon to clarify items for the group.

HOW IT WORKS

I. Several teams are organized by a designated leader.
   a. Members of the teams listen carefully, repeating what is said to the question.

II. The speaker makes a presentation:
   a. Every member should understand the question.
   b. A question is assigned to each team.
   c. A chairman should be elected.
   d. A recorder is designated to take notes and report to the audience.
   e. Members of the teams listen and react, reporting to the audience.
   f. A question is assigned each team.
   g. Members should be acquainted.

With permission.

b. Notes should be taken by team members to assist in discussion following the presentation.

III. The teams listen, discuss, and report.

a. Following the presentation, the teams discuss the presentation.
b. Observations appropriate to the question should be recorded.
c. The recorder reports the reactions of his team to the audience when called upon.

IV. Typical listening team questions:

A question that stimulates thinking and reaction is given each listening team. Some typical questions include the following:

a. Which suggestions presented by the speaker seem most practical for use in your work?
b. How can the ideas or concepts presented by the speaker be put to work by Vocational Educators?
c. What are the major barriers to be overcome before the ideas presented could be used in your program?
d. Which ideas seemed least practical for use in vocational education?
e. What things not said should have been given greater attention by the speaker?
f. What did the speaker say that does not "check" with your experience or your views?

The meeting chairman or designated leader must organize the listening teams before the speaker makes his presentation. This will take 10 or 15 minutes. The teams should be permitted to raise questions about their assignment or the organization prior to the speaker's presentation.

A careful briefing on the part of the chairman should prepare the speaker for the discussion and the reporting that follows his speech. He should recognize the fact that no rebuttal is necessary on his part. Should a clarification statement on the part of the speaker be requested, he should be encouraged to make some objective observations.
THE COMMUNICATION GAME

Game Overview

In this game, participants compete as members of a team in performing a task. The participants are called upon to perform a task—building a structure using Tinker Toys—in the least amount of time with the greatest accuracy.

Participants will experience three types of communication situations:

1. One-way communication
2. Two-way communication
3. Two-way communication plus visual aids

After participating in the gaming activity and post-game discussion, the participants will be able to:

1. Organize and transmit a message in such a manner that the message will accomplish what it is intended to do in the least amount of time with the greatest accuracy.
2. Identify causes of communication breakdowns.
3. Identify the advantages and disadvantages of one-way and two-way communication systems.
4. Understand that "feedback" is a continuous process involving both the sender and receiver.
5. Understand that meaningful feedback is obtained only when question methods are used (e.g., oral questioning) that test comprehension, and by acquiring restatement.

Equipment, Materials, and Supplies

If the user has a group of 24 participants, the following will be needed:

1. 4 tables with 6 chairs at each table
2. 6 cardboard shields; suggested dimensions: 36" (width) x 24" (height). The shields will be placed in the center of the table to separate the sender and receiver. Legs are needed to hold the shields in a vertical position.
3. 2, 6 cardboard shields; suggested dimensions: 36" (width) x 24" (height). The shields will be placed at each table.

*Source: Dr. Jimmy G. Koeniger, Angelo State University, San Angelo, Texas, with permission.
3. 6 patterns of a structure which can be made of Tinker Toys
4. 6 packages of Tinker Toys. You can purchase a large box of Tinker Toys and divide the contents into 6 portions. Be certain that each package contains enough parts to accomplish the task.
5. a timing device, such as a stopwatch

If Tinker Toys are not available, other materials can be used, i.e., sticks, blocks, paper symbols, string, etc.

Procedure

The following procedure is recommended until the instructor gains confidence and experience in using the game.

PRE-GAME PREPARATION

1. Reproduce the "Team Performance Chart" (Appendix I-A) on the blackboard or make a transparency for the overhead projector.
2. Review the patterns (Appendix I-B) and select one for use in the game. The pattern selected should be reproduced for each team.
3. Arrange for tables and chairs. One table and 6 chairs are needed for each team. Each team consists of 6 members.
4. Locate a room where participants can be sent until it is their time to perform their task.

GAMING ACTIVITY

5. Divide the participants into teams. A team consists of 6 members. Assign the teams to a table.
6. Distribute the following gaming materials to each team: 1 cardboard shield and 1 package of Tinker Toys.
7. Announce: "In this game, you will compete with other teams by building a structure with Tinker Toys. Three tasks are required, each demanding different guidelines. Each team should identify two team members for perform Task A, two members to perform Task B, and two to perform Task C. The winning team will be the one who completes the three tasks (A, B, and C) in the least amount of time with the greatest accuracy."
8. Announce: "The team members who will be performing Tasks B and C should leave the room until requested to return."
In Task A, one person will describe how to build a structure made with Tinker Toys. The other person will construct a structure with the Tinker Toys. In a few minutes, a pattern will be distributed to the person (the sender) who will describe how to build the structure. Will the two team members locate yourselves across the table from each other with the cardboard shield between you?

The team members who performed Task A to return to the gaming room.

Team Performance Chart (Appendix I-A). Request the team members responsible for Task B to return to the gaming room.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.

If you have not completed your task, you will be assigned 5 minutes and a partial percentage for accuracy. You may want to have selected participants to perform the accuracy evaluations.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.

If you have not completed your task, you will be assigned 5 minutes and a partial percentage for accuracy. You may want to have selected participants to perform the accuracy evaluations.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.

If you have not completed your task, you will be assigned 5 minutes and a partial percentage for accuracy. You may want to have selected participants to perform the accuracy evaluations.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.

If you have not completed your task, you will be assigned 5 minutes and a partial percentage for accuracy. You may want to have selected participants to perform the accuracy evaluations.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.

If you have not completed your task, you will be assigned 5 minutes and a partial percentage for accuracy. You may want to have selected participants to perform the accuracy evaluations.

At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structures taken apart.
21. Announce: "A five-minute maximum time limit is in effect. Your team will have five minutes to complete their task. As soon as the sender has communicated his directions and the receiver has completed his task, bring the structure evaluated and recorded. Your time will be recorded and the accuracy of the structure evaluated and recorded. If you have not completed your task, you will be assigned five minutes and a partial percentage for accuracy." 

22. Announce: "Do you have any questions? If not, you may begin." 

23. Observe the teams' approaches to performing their task. You may want to use a videotape recorder. The tapes and observations could be used in the post-game discussion. 

24. As teams complete their task, record "minutes" and "accuracy." Your accuracy evaluation is based upon the pattern and is totally subjective. You may want to have elected participants to perform the accuracy evaluations. 

25. At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structure taken apart. 

26. Request the team members responsible for Task C to return to the gaming room. The team members who performed Tasks A and B may remain and watch Task C. 

27. Announce: "In Task C, one person will describe how to build a structure made with Tinker Toys. The other person will construct a structure with the Tinker Toys. In a few minutes, a pattern will be distributed to the person (the sender) who will describe directions, seek clarification of directions, ask for additional directions, or anything that would help in building the structure. The receiver may ask questions, seek clarification of directions, or anything else which would be helpful in building the structure. The sender may also communicate any directions or may draw a graphic description of the structure. The pattern may not be shown to the receiver. The pattern may be shown to the sender. The pattern may be shown to the receiver, but may not be shown to the sender. The pattern may not be shown to the receiver." 

28. Distribute a pattern, a pad, and a pencil to the senders. 

29. Announce: "The sender will describe how to build a structure with the Tinker Toys, with a pattern, a pad, and a pencil. The receiver will construct a structure with the Tinker Toys, with a pattern, a pad, and a pencil. In a few minutes, a pattern will be distributed to the person (the sender) who will describe directions, seek clarification of directions, ask for additional directions, or anything else which would be helpful in building the structure. The receiver may ask questions, seek clarification of directions, or anything else which would be helpful in building the structure. The sender may also communicate any directions or may draw a graphic description of the structure. The pattern may not be shown to the receiver. The pattern may be shown to the sender. The pattern may be shown to the receiver, but may not be shown to the sender. The pattern may not be shown to the receiver." 

30. Request the team members responsible for Task C to return to the gaming room. The team members who performed Tasks A and B may remain and watch Task C.
31. Announce: "Do you have any questions? If not, you may begin."

32. Observe the teams' approaches to performing their task. You may want to use a video-tape recorder. The tapes and observations could be used in the post-game discussion.

33. As teams complete their task, record "minutes," and "accuracy." Your accuracy evaluation is based upon the pattern and is totally subjective. You may want to have selected participants to perform the accuracy evaluations.

34. At the end of the 5-minute time limit, call time and record team efforts on the Team Performance Chart (Appendix I-A). Request the patterns be returned to you and the structure taken apart.

35. Before conducting the post-game discussion, compute the "Team Total" column. Add the number of minutes taken for each team to perform Tasks A, B, and C and place the total in the appropriate column. "Total of Minutes" is computed by adding the accuracy percentages for Tasks A, B, and C and dividing by three. You should also average all the vertical columns. A sample "Team Performance Chart" has been computed and presented in Appendix I-C.

36. If the gaming activity has been "normal," you will want to relate to your observations:

a. In comparing Tasks A, B, and C, Task C may or may not be accomplished in less minutes but should produce the greatest accuracy rating.

b. In comparing Tasks A and B, Task B may or may not be accomplished in less minutes but should produce the greater accuracy rating.

c. Task A may or may not be accomplished in the least amount of time with the greatest possible accuracy rating.

37. If the accuracy ratings are not "normal," you will want to relate to your observations to determine the reason(s) for the deviations from past gaming experiences.

38. Conduct the post-game discussion using the questions provided and the content passes (Appendix I-D).

39. Consider playing the game again to allow the participants the opportunity to:

a. Improve their ability to organize and transmit a message which will allow completion of the tasks in the least amount of time with the greatest possible accuracy.

b. Ask questions (seek feedback), that test comprehension by requiring restatement.

c. Compete against other teams.
Post-Game Discussion Questions

The following questions should help in stimulating discussion and reinforcing the principles which were experienced in the gaming activity. Every attempt should be made to relate the principles to on-the-job experiences of the participants.

TASK A: ONE-WAY COMMUNICATION

1. How did the receivers and senders feel in the one-way communication situation? Did you become frustrated in your role as sender? Why? As receiver? Why?
2. Having seen the pattern, did you as the receiver feel the sender's message was organized and accurate? What suggestions would you provide to improve the message?
3. As a sender, do you feel your receiver performed according to the message you transmitted? If not, what do you believe was the problem? How would you overcome the problem(s)?
4. Did the lack of "feedback" affect either senders or receivers?
5. Have you experienced one-way communication before? On your job? Were you frustrated? Did you perform your duties as directed?
6. What is absent in one-way communication that would improve the sender's message and the receiver's accuracy in interpreting the message and transforming the message into action (building the structure)? (Answer: feedback).

TASK B: TWO-WAY COMMUNICATION

7. How did the senders and receivers feel in the two-way communication situation? Did you become frustrated in your role as sender? Why? As receiver? Why?
8. Having seen the pattern, did you as the receiver feel the sender's message was organized and accurate? Did you become frustrated with the message? Did you express this frustration to the sender in your feedback? Senders, were you aware of the receiver's frustration? Do you feel the frustration was justified? What did you do to reduce the frustration?
9. As a sender, do you feel your receiver performed according to the message you transmitted? If not, what do you believe was the problem(s)?
10. Did the "feedback" aid the efforts of the sender? Of the receiver? Is it possible that feedback is a continuous process involving both sender and receiver? Did the senders attempt to determine the degree of comprehension of the receiver? Did senders question the receiver and request a stated interpretation by the receiver? Would feedback be more meaningful if oral communication was used and restatement requested?
11. If feedback was used, why were problems still present in the two-way communication process? How could these problems be corrected? How can senders of a message be assured that it is received correctly?

Task C: Two-Way Communication Plus Visual Aids

You can use all of the questions for two-way communication in discussing Task C.

General Questions

19. Why methods can be used to produce meaningful feedback?
18. Is feedback important to the sender? To the receiver?
17. What are the advantages of two-way communication? Disadvantages?
16. What are the advantages of one-way communication? Disadvantages?
15. What causes communication breakdowns?
14. How can we organize and transmit a message which can be transmitted in the least amount of time with the greatest accuracy?

Task C: Two-Way Communication Plus Visual Aids

You can use all of the questions for two-way communication in discussing Task C.

Senders of a message be assured that it is received correctly? Communication process? How could these problems be corrected? How can feedback was used, why were problems still present in the two-way communication?
### TEAM PERFORMANCE CHART

</tbody>
</table>

**Observations:**
(a) Team #1 would be declared the winner—least total time (10 min., 50 sec.) and the greatest percentages (80%).
(b) Two-way communication (Task B) produced a greater accuracy rating (83%) than one-way communication (Task A—55%).
(c) Two-way communication plus visuals (Task C) produced the greatest average accuracy rating (95%).
Appendix I -D

COMMUNICATION THEORY

Laboratory Studies of Communication Nets

In one experiment an initial situation was established where "A" talked to "B" without reply. Two-way communication was set up in the same way, only this time there was conversation; that is, communication from "A" to "B" back to "A". Later the same format was followed involving more people. Several practical findings emerged from these studies.

1. People are selective in what they see and hear. They tend to favor communications in front of the television screen. It is true that after receiving a broadcast, and in a sense is related to it in a way, people hear only what they want to hear. And, no doubt, at times all of us prefer to be passive and let others account for us. Communication is really what the listener interprets.

Some Generalizations about Communication

1. People are selective in what they see and hear. They tend to favor communications which are congenial or satisfying more than neutral or hostile ones.

2. People are more likely to talk with like-minded people than with those who are different.

3. We seek our communication setting which tends to boost our ego.

4. After making an acquaintance, we tend to interact with someone who will disintersted or are opposed to our views.

5. If an audience is large enough it is virtually impossible to get everybody in it to agree.

Communication Theory

Appendix I-D
6. The higher the education of people, the greater the reliance on printed media. The lower the education level, the more people depend on the spoken word and picture media.

7. The more ego-involved we become with subject, the more we wish to share it with other people.

8. We tend to perceive persuasive communication in accordance with our own thinking.

9. The more status the communicator has, the more influence he exerts.

10. People tend over a period of time to forget the source of information but to remember the content.

11. "Majority opinion" is more effective in changing attitudes than "expert opinion".

12. The more attached people are to a group, and the more active they are within it, the greater their response to communications.

13. Communications are more likely to reinforce existing positions than to change them.

14. Communication has more effect on changing minor issues than on major issues.

15. When opinions are influenced by communications, they tend to regress to a pre-existing position unless reinforced from time to time.

16. The higher the intelligence of the individual, the more likely he is to acquire information from communication.

17. People are limited in the amount of information they can absorb in any given period of time.
Goal Area III
HUMAN RELATIONS

Goal
To aid the student in the understanding of his actions and their effects on his fellow workers.

Rationale:

Purposes:
The majority of employees discharged from employment are released from their jobs due to the inability to get along with people, rather than the inability to perform the tasks. The majority of employees discharged from employment are released from their positions on the recommendation of their fellow workers.

To aid the student in the understanding of his actions and their effects

The purposes of this unit are to:

1. Identify factors which affect human relations such as:
   a. Grooming
   b. Cooperation
   c. Attitude
   d. Rooming

2. Acquaint the student with the importance of adhering to company policies.

The purposes of the tasks are to:

3. Identify personal weaknesses on the part of each individual student.
1. Objective: The student will develop good work habits as judged by his employer.

HUMAN RELATIONS

CHAPTER 3
OBJECTIVE (Cont.)

Content

Activities

Resources

1. Working with Associates
   a. Cooperate
   b. Show interest
   c. Do your part
   d. Be loyal
   e. Accept your responsibilities
   f. Don't gossip

2. Employee Abilities
   a. Communication skills
   b. Creative attitude
   c. Understanding social structure
   d. Ability to concentrate and appraise
   e. Understanding the goals of business
   f. Decision making ability

3. Working with workers who report to work
   a. The employer is working with customers and associates
   b. Show interest
   c. Do your part
   d. Be loyal
   e. Accept your responsibilities
   f. Don't gossip

Illustrate the desired qualities:

The following qualities would be demonstrated by the employer role playing:

Example: The teacher is the fellow worker who reports to work late and has a friend clock in and out for him.

Projects

1. Rhett Tuttle has worked at Don's Variety Store for three years as a stock boy. The store has just employed three new stock boys. Emo Lee, the stockroom supervisor, assigned Jim Rule, one of the new boys, the job of moving merchandise from the stockroom to the Hardware Department. Rhett, believing that he has seniority, orders Jim to take the merchandise to the Building Supplies Department. If you were the new employee, what would you do? Why?

2. Patty Cake purchased a sewing machine from your store six months ago. The drive belt wore out. Patty complained to the department manager who said, "Sorry, lady, but you bought this on sale and that is your tough luck." If you were the manager, how would you have handled this situation?

3. Nancy Poppyseed works for the telephone company as an operator. She works with older women who have seniority rights. Nancy is using all of the techniques she was taught to use. Martha Parris, one of the older women, tells Nancy she is doing everything wrong. How should Nancy handle Martha?

4. Hank Lightfinger is a co-worker of yours in the furniture department. For over a week, Hank has taken a picture from stock and put it in his car. When you told him that he was stealing, he said, "This store can afford a little loss now and then. Hank has taken a picture from stock and put it in his car. When you told him that he was stealing, he said, "This store can afford a little loss now and then, after all. I work here and I don't earn enough for my ability anyway." What should you do? Why?

5. Sherry Tarte returns an electric blanket she purchased from your store a few months ago. She tells you that "this blanket has never been used and we would like to exchange it for a bedspread and drapes." You believe that the blanket has been used and we would like to exchange it for a bedspread and drapes. What will you say to Sherry Tarte? If you were the department manager, would you handle the situation differently?
**HUMAN RELATIONS**

**A Small Group Project**

Procedure:

1. Divide the students into small groups of three or four each. More than four tends to weaken the individual participation in the group, and small numbers encourages individual participation.

2. Appoint a leader and a recorder for each group, for time is generally lost if students must vote.

3. If sufficient copies of *Your Attitude Is Showing* are available, each student should have a copy for reading and reference. If not, reproduce four case studies that deal with typical general attitudes and behavior problems. Make enough copies for every student to have one to study, and allow 10 to 15 minutes for students to read and review the case problems.

4. In each group, the leader takes one case study at a time and asks questions pertinent to the case. Each student should voice his views, and significant statements should be recorded for later evaluation. Allow 15 to 20 minutes discussion on each case problem. The leader should have everyone in his group participate and voice his reaction.

5. After completion of all the group discussions on each case, the class should meet together to evaluate the case studies.

6. Taking one case at a time, each group leader or recorder should tell what the reaction of their group was in each situation. The main ideas should be listed on the chalkboard or a large newsprint pad as each group reports.

7. Let the class decide what actions and reactions they think are best in each case.

*Reproduced from PROJECTS For Use With Preparatory or Pre-Employment Distributive Education Curriculums, compiled by Robert R. Luter, 1969, with permission.*
CASE PROBLEM #1

Terry has been working for about one year as a sacker and stockkeeper at the Rite-Way Food Mart. He has always been dependable, arriving for work on time and never asking for unnecessary time off. Generally, Terry is a hard worker and pleasant to work with. Terry has been working for about one year as a sacker and stockkeeper at the Rite-Way Food Mart. He has always been dependable, arriving for work on time and never asking for unnecessary time off. Generally, Terry is a hard worker and pleasant to work with.

Problems for Evaluation:
What do you think of Terry's decision? Do you feel that he was justified in quitting his job? What would you have done if you were in Terry's position?

What action could have been taken to prevent this situation from happening again?

What will likely happen to Terry on his next job?
THE FIVE-SQUARE GAME*

Game Overview

This gaming activity will demonstrate the need for cooperation among members of a group (team) to accomplish a group task. Participants are assigned to teams consisting of five members. Each team member receives a number of puzzle parts. The participants are told that there are exactly enough puzzle parts among the five members of a team to make five squares. The team's task is completed when a square appears in front of each team member. The game however does not allow any form of communication—verbal or nonverbal. Teams can only complete their task if they are aware of the needs of other members of the team. The team who completes the task in the shortest period of time is declared the winner.

The effectiveness of this gaming activity can be demonstrated by observing the participants' behavior in future group efforts.

Performance Objectives

After participating in the gaming activity, the participant will be able to:

1. Understand the importance of cooperation among members of a group who are attempting to perform a group task.
2. Demonstrate the importance of the awareness of the needs of others in a group-oriented activity.

Equipment, Materials, and Supplies

1. 1 table for every 5 persons; if you have 25 participants, you need 5 tables.
2. 1 Team Packet for each team (which consists of 5 members); construction of the team packets is described in the "procedures" section.

Procedure

The following procedure is recommended until the instructor has gained confidence and experience in using the game in the classroom.

*Prepared by Dr. Jimmy G. Koeninger, Angelo State University, San Angelo, Texas. With permission.
1. Assign participants to teams consisting of five members. For example, if there are twenty-three participants, you will have four teams and three extra participants. The three extra persons should be assigned as observers to record team behavior.

2. Each team should be located around a table so that all members of the team can exchange puzzle parts with ease.

3. Distribute team packets (use a 9" X 12" envelope) to each team. In each team packet, five smaller envelopes are found, one envelope for each team member.

   a. You should prepare several team packets at one time so that you will always have an adequate supply for future use. You might consider making five team packets. Five team packets will accommodate twenty-five participants.

   b. There should be five squares (Appendix III-A) in each team packet. Each square is composed of three puzzle parts; therefore, each team packet will accommodate twenty-five puzzle parts.

   c. Code the parts of each square according to the illustration in Appendix III-A. The five packets (A1, A2, A3, A4, and A5) are placed in a Team Packet "A" as illustrated in Appendix III-A.

   d. Five envelopes for member packets and five different colored envelopes are provided in Appendix III-B. A number of different colored envelopes will be needed to accommodate the puzzle parts. Each envelope should be coded with a different alphabet letter--i.e., A1, A2, A3, A4, and A5.

   e. Secure the envelopes for member packets and code each envelope according to the instructions in Appendix III-A. Code the parts of each square according to the illustration in Appendix III-A.

   f. There should be five square envelopes in each Team Packet. Each envelope should be coded with a different alphabet letter--i.e., A1, A2, A3, A4, and A5.

   g. The five packets (A1, A2, A3, A4, and A5) are placed in the Team Packet as illustrated in Appendix III-A.

   h. The materials could be used to make the squares. The more durable the material, the longer the squares will last since they will be handled a great deal in a gaming activity. Cardstock can be used and acquired economically. An easy way to differentiate sets of squares per team would be to color squares differently. Team Packet envelopes should have different colored material. Each Team Packet should be coded with a different alphabet letter--i.e., A1, A2, A3, A4, and A5.--so forth.

   i. The cards which are coded A1 should be placed in the Team Packet as illustrated in Appendix III-A. The cards which are coded A2 should be placed in the Team Packet as illustrated in Appendix III-A.

   j. Include different colored puzzle parts.

4. Announce:

   "Will one member from each team open the Team Packet and take out the five envelopes and distribute one envelope to each team member. Each member should exchange puzzle parts with ease. Do not attempt to do anything until I provide you with additional directions."

"Thank you."
5. Announce: "The team's task is to make five squares, one square in front of each team member. There are exactly enough puzzle parts among each team to construct five squares. The first team to complete the task is the winner. I want the teams that complete the task to observe remaining teams until all teams have constructed the five squares."

6. Announce: "The three puzzle parts you have in front of you will not make a square. To make a square, you must receive puzzle parts from other team members. However, there are rules which must be followed:

   a. No team member may talk, signal, gesture, or behave in any manner that would provide guidance, direction, or suggestions to any team member. You may not in any manner alert a team member of your need for a puzzle part he has in front of him.
   b. You can only give, not take.
   c. You cannot help another person construct his square.
   d. Remember: each team member must construct a square so that a team will have five squares when the team has completed its task."

7. Announce: "If there are no questions, you may begin. Good Luck!"

8. As a team completes their task (to construct five squares), request that they observe other teams and note the teams' approaches to constructing their squares.

9. It is not necessary that all teams complete the task; therefore, you may want to restrict the amount of time you devote to putting the squares together--e.g., ten minutes.

10. You will find it is difficult to recall your observations unless you record them. Use a note pad to record the teams' strengths and weaknesses.

11. Notice those team members who construct their square and then completely withdraw from helping others. It is possible to construct many individual squares but there is only one way to construct all five squares at one time. One square must be assembled like the one below or the other members will not be able to construct their squares. A team member may have to break a completed square team member may have a part he needs to complete his will also observe how difficult this is for some team members. You

12. You will also observe how difficult the task is for people who are leaders. The observe how difficult the task is for people who are task is also difficult for followers since there are no cues which provide direction to followers.

13. You will observe how difficult it is for team members to abide by the rules. The discipline demanded by the rules is too much for most of the participants.
14. When participants give someone a part, observe what usually happens. If the recipient does not use the part the way the giver wanted, the giver will many times reach out to place the puzzle part for the receiver. It is difficult for many persons to assign someone a job and then let them do it. Does this same experience occur at work? How? Why?

15. At the conclusion of the gaming period, a post-game discussion should follow. Post-Game Discussion Questions

First, request the observers to report what they noticed. Second, the participants should make observations about their own behavior and that of other teams they watched. Use the following questions to stimulate group discussion and teach concepts using the questioning method.

1. Did anyone find it difficult to focus upon the needs of other members in your team? If so, why?
   a. In a work situation, are you aware of the needs of other persons with whom you work? Should you be aware of others' needs?
   b. Did the game emphasize why awareness of others is important?

2. Did anyone become so involved with their own task that they failed to be aware of others? Do we do this on the job also? If so, why? In a work situation, are you aware of the needs of other team members when you work? Should you be aware of others' needs? Did the game emphasize why awareness of others is important?

3. Did anyone on your team complete their square and then fold their arms and refuse to break up their square and give it to someone who obviously needed one of their squares? Isn't this same behavior observable at work?

4. Did you give someone a puzzle part and then become frustrated because the receiver did not put it where you intended? If so, why? In a work situation, are you aware of the needs of other team members when you work? Should you be aware of others' needs?

5. Did you give someone a puzzle part and then become frustrated because the receiver did not know where to put it? Did you help them? Why?

6. What did you learn from your participation in this game?
THE MOON SURVIVAL GAME*

Game Overview

In this game participants assume they are traveling to the moon via a spaceship to man a weather station located on the light side of the moon. Approximately 200 miles from the weather station the spaceship experiences mechanical difficulties and is forced to crash on the surface of the moon. During the crash much of the equipment aboard was destroyed or damaged. The survivors' ability to survive a 200-mile trip to the weather station depends upon their ability to choose which items should be taken on the trip.

The participants will review the 15 items which survived the crash and rank the items in terms of their importance to survival during the 200-mile trip to the weather station.

After individual ratings are made, the participants are divided into teams. The teams are called upon to rank the items as a group, employing group consensus principles in their decision-making activities.

Individual and team rankings are compared to the "correct ranking". In almost all cases, the team rankings are superior to individual rankings, thus drastically illustrating that groups function more effectively than individuals working separately.

Performance Objectives

After participating in this gaming activity, the student will be able to:

1. Identify group consensus-making principles.
2. Suggest advantages for employing group consensus-making principles in decision-making activities in a group setting.
3. Acknowledge that when groups function effectively, they perform better than if individuals had worked separately.

*The Moon Survival Game was prepared by Dr. Jimmy G. Koeninger, Angelo State University, San Angelo, Texas. This group involvement activity is also known as The NASA Exercise, Lost on the Moon, and Trip Across the Moon. The original exercise was devised by Joy Hall of the University of Texas and reported in the February, 1969, issue of Today's Education. With permission.
The following procedure is recommended until the instructor has gained confidence and experience in using this game.

1. Distribute "Individual Participant Instructions" (Appendix IV-A) and the "Individual Ranking Sheet" (Appendix IV-B) to all the participants.

2. Discuss the situation in which the participants find themselves. The participants are travelling to the moon via a spaceship to man a weather station, the spaceship experiences mechanical difficulties en route, and crashes on the moon approximately 200 miles from the weather station.

3. Discuss the task the participants must accomplish. The participants should review the fifteen items which survived the crash (column a of Appendix IV-B) and rank the items (column b) in terms of their importance to their survival on the 200-mile trip to the weather station. Each individual should rank the items using "1" as the most important item to "15", the least important.

Columns "c" and "d" (of Appendix IV-B) should not be completed until directed.

4. Divide the participants into teams with no more than six members. Since you are seeking total participation by all team members, it is recommended that the group should be kept relatively small—e.g., six.

5. Each team should select a group leader to serve as spokesman for their team. (If you want to build an added dimension into the game, assign teams but do not direct the group to select a team leader. The team will quickly realize the necessity for appointing a group leader in order to accomplish their task.)

6. Each team should select a recorder/observer.

7. Distribute "Team Instructions" (Appendix IV-C) to each team member and the "Team Report Summary" (Appendix IV-D) to the team recorder/observer. Discuss the team's task—to arrive at a team ranking of the items they would take on the 200-mile trip to the weather station.

8. Discuss the group consensus principles (located in Appendix IV-C) the teams should follow to accomplish their task.

9. Direct the recorder/observer for each team to perform two duties:

- Follow the group consensus principles (located in Appendix IV-D) the teams should follow in order to accomplish their task.

- Record the team rankings in column "f", Appendix IV-D. Instruct the recorder/observer to complete the other columns only when directed.

The instructor should also review the teams and observe their activities which should be used in the post-game discussion period.

The following procedure is recommended until the instructor has gained confidence and experience in using this game.
10. The teams should be allowed approximately thirty to forty-five minutes to reach their team rankings by consensus. The team's ranking should be placed in column "f" (Appendix IV-D).

11. A brief discussion could follow to discuss the team's general reaction to the "survival decision" and the "group consensus principles".

12. Direct each individual to complete columns "c" and "d" on the Individual Ranking Sheet (Appendix IV-B).

13. Read the correct ranking to the participants which they will use for completing column "c" (Appendix IV-C). The correct ranking was agreed upon by a number of NASA space experts. The correct rankings are:

   a. box of matches ................. 15
   b. food concentrate ............... 4
   c. 50 feet of nylon rope .......... 6
   d. parachute silk .................. 8
   e. portable heating unit .......... 13
   f. two .45 calibre pistols ........ 11
   g. one case dehydrated milk ...... 12
   h. two 100-lb. oxygen tanks ..... 1
   i. stellar map ...................... 3
   j. life raft ........................ 9
   k. magnetic compass .............. 14
   l. five gallons of water .......... 2
   m. signal flares .................... 10
   n. first aid kit .................... 7
   o. solar-powered radio ........... 5

14. Each participant should compute a differential score for each item. The participant should subtract column "c" from column "b" and place the difference in column "d" for each item. You may want to use the following examples:

<table>
<thead>
<tr>
<th>(a) Items</th>
<th>(b) Individual Ranking</th>
<th>(c) Correct Ranking</th>
<th>(d) Differential Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Two 100-lb. tanks of oxygen</td>
<td>1</td>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>Box of matches</td>
<td>5</td>
<td>15</td>
<td>10</td>
</tr>
<tr>
<td>Five gallons of water</td>
<td>3</td>
<td>2</td>
<td>1</td>
</tr>
</tbody>
</table>
Even though column "c" rankings may be greater than column "b", negative signs are not attached to the differences placed in column "d".

15. Each participant should add all fifteen differences in column "d" to arrive at a "Total Differential Score". This score should be placed in the box provided.

16. Each team recorder/observer should collect information needed for the "Team Report Summary" (Appendix IV-D).

17. The recorder/observer should request each team member to read his item rankings found in column "b" (Appendix IV-B) and place his ratings in column "b" (Appendix IV-D) for each individual. The individual's "Total Differential Score" is found in column "d" (Appendix IV-B).

18. The recorder/observer should add the participants' rankings for an item and place the total in column "c" (Appendix IV-D).

For example:

<table>
<thead>
<tr>
<th>Individual Rankings</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total of Individual Rankings</td>
<td>25</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

19. After the "Total of Individual Rankings" in column "c" has been computed for each item, the recorder/observer should rank order the "Total of Individual Rankings". These rankings should be placed in column "d" (Appendix IV-D).

20. The recorder/observer should compute the differences between the rankings of columns "d" (on the Individual Ranking Sheet) and the correct ranking (column "g" in Appendix IV-D). These differences should be placed in column "e" (Appendix IV-D). The correct rankings are the same as those found on the Individual Ranking Sheet.

21. The recorder/observer should compute the differences between the ranks in column "e" and the corresponding ranks in column "g" and place the scores in the appropriate boxes.

22. Column "f" (Appendix IV-D), the Team's Ranking, should be completed.

23. Column "g" (Appendix IV-D), the Correct Ranking, should be completed. This correct ranking was presented earlier.

24. Column "h" (Appendix IV-D), the Correct Ranking, should be completed.

25. Column "i" (Appendix IV-D), the Correct Ranking, should be completed.

26. Column "j" (Appendix IV-D), the Correct Ranking, should be completed.

27. Column "k" (Appendix IV-D), the Correct Ranking, should be completed.

28. Column "l" (Appendix IV-D), the Correct Ranking, should be completed.

29. Column "m" (Appendix IV-D), the Correct Ranking, should be completed.

30. Column "n" (Appendix IV-D), the Correct Ranking, should be completed.

31. Column "o" (Appendix IV-D), the Correct Ranking, should be completed.

32. Column "p" (Appendix IV-D), the Correct Ranking, should be completed.

33. Column "q" (Appendix IV-D), the Correct Ranking, should be completed.
23. The recorder/observer should compute the differences between the Team's Ranking (column "f" in Appendix IV-D) and the Correct Ranking (column "g" in Appendix IV-D). The difference for each item is computed and placed in column "h" (Appendix IV-D). Column "h" is totaled to arrive at the Total Differential Score for the Team Differential. Place the score in the space provided at the bottom of column "h".

24. Each team's recorder/observer should read the Total Differential Scores from the Team's Report Summary (Appendix IV-D—columns "b", "e", and "h"). A Reporting Form is found in Appendix IV-E.

25. Without any conversation from the instructor, request the teams to discuss their differential scores—high or low individual, average ranking, and team ranking. The participants will hopefully observe the principles taught in the game without the instructor discussing them.

26. Discuss the team's general reactions to the game and the differential scores.

27. Discuss the post-game discussion questions.

28. The instructor may wish to teach a short unit based upon the game's objectives. Refer to Appendix IV-F (Theory) before teaching a discussion unit or conducting the post-game discussion.

29. You may want to use the same process presented in this game but apply it to a different setting. You should observe the group's performance to note any change of behavior with regard to group decision-making. The second experience will provide the instructor an opportunity to evaluate the effectiveness of the game and the participant's change in behavior.

Post-Game Discussion Questions

1. Why should a group employ group consensus principles in their decision-making activities?

2. How difficult was it for you or others in your team not to argue for your own individual rankings? Why is it important for us to refrain from this type of behavior?

3. Did anyone in your team change their rating because they did not want to cause any conflicts? Why do some "give up" sooner than others?

4. Do you accept everyone's opinion equally or are you influenced by their aggressiveness, physical features, educational background, etc.?

5. Should a group accept everyone's opinion as being equal or should a group weigh receptiveness on the basis of the individual's background, etc.?
6. At any time in your team's discussion, did anyone suggest conflict-reducing techniques--e.g., “Let's vote?” Why are techniques like this employed? Are they helpful or harmful to group decision-making?

7. How well did your team use all the resources (individual team member's opinions) available?

8. What would you do differently if you participated in a similar activity?

9. What activities are you involved in at school, on-the-job, or elsewhere in which you will use the principles learned in participating in the game?

10. In summary, what did you learn from participating in this game?
Appendix IV-A

INDIVIDUAL PARTICIPANT INSTRUCTIONS

You and several other persons are traveling in a space ship to the moon to operate a weather station located on the light side of the moon. Approximately 200 miles from the weather station your space ship experiences mechanical difficulties and is forced to crash on the surface of the moon. During the crash much of the equipment aboard is destroyed or damaged. Your ability to survive a 200-mile trip to the weather station depends upon your ability to choose which items should be taken on the trip.

You should review the fifteen items (in column "a" of Appendix IV-B) which survived the crash and rank the items (in column "b") in terms of their importance to your survival on your 200-mile trip to the weather station. Place a "1" in column "a" for the most important item on the list and so on through "15", the least important.

Appendix IV-C

TEAM INSTRUCTIONS

Your team is responsible for arriving at a group ranking of the items they would take on the 200-mile trip to the weather station. Each member of the team has ranked the items individually; however, in this exercise your team should employ group consensus principles in their decision-making activities.

Group consensus principles you should follow are:

You should not:

1. Argue for your own individual rankings.
2. Change your mind only to reach agreement and avoid conflict.
3. Employ conflict-reducing techniques—i.e., voting, averaging, or trading.
4. Perceive differences of opinion as being a hindrance to the team's efforts.

You should:

5. Exchange useful information.
6. View differences of opinion as being helpful to the team's efforts.
7. Support only decisions with which you can agree somewhat.

You will soon realize that group consensus is difficult to reach. Therefore, team decisions may not meet with everyone's complete approval. Your team should attempt to arrive at each ranking so that all members can at least partially agree.

Team rankings should be recorded in column "f" on Appendix IV-D (Team Report Summary).

Appendix IV-F

THEORY

Studies of group decision-making and problem-solving have indicated that decisions produced by individual interacting in a group are usually superior to decisions produced by individuals when certain kinds of tasks are to be carried out. Where a task is relatively simple and the task calls for a strict sequence of acts that can be performed by an individual, then an individual trained to organize and solve that type of problem will almost always reach a better decision, and more rapidly, than would a group.

However, in the case of problems that are complex, that have many alternative paths or orders of sub-tasks through which the problem can be attacked, in which the elements are not easily discerned or conceptualized, in which one person can do one sub-task without interfering with another, and, in particular, where the efficacy of the solution depends on the continued coordination of a number of persons, then the decision will almost always be superior if it is produced by a group, in comparison to being produced even by the most capable of individuals.

Furthermore, coordination can be superior if those persons involved in performing the task compose the group making the decision. Of course, the quality of the decision is also affected by the skills of the group members in coordinating their efforts. Three decision-making styles observed to occur often in groups are: (1) decisions made by a single person or a minority of a group, (2) decisions based on the ability of a majority to overrule a minority, and (3) decisions based on support and agreement of the total group after debate and discussion. While it is difficult to obtain these decision-making patterns in their pure form, even under controlled laboratory conditions, studies by behavioral scientists indicate that each has a different effect on a group's performance. Speaking again of complex tasks demanding coordination, the decision-making performance of a majority group after debate and discussion is the least effective in using member resources and in obtaining the commitment of members, and are least apt to be decisions of high quality. When the number of members contributing to a decision is few, the final decision depends on the limited resources of the few. Generally, the minority (or one person) does less well than the total group both because it usually does not have as much resourcefulness as the total group, and because it usually does not have as much mutual probing and stimulation.
missing. This especially is true in complex organizations such as schools, in which the central tasks of the organization cannot be carried out in a small face-to-face group involving most of the members.

The majority-vote style relies more than does the previous method on the combined effects produced by interaction and the resources of most individuals. As such, it is superior to the minority style in producing effective decisions. However, some assets are still being wasted when the majority vote is used. To the extent that the out-voted or non-involved minority are unable to use their resources and to influence the decision, there are still some resources not being brought to bear on the decision.

The decision-making style of group consensus represents a pattern of interaction in which all participants contribute resources and all share in the final decisions. No decision becomes final that cannot obtain the approval of nearly all members; for this reason, consensus is difficult and sometimes impossible to obtain. It requires a fairly advanced understanding of the dynamics of conflict, interpersonal relations, and the use of individual resources. Observations indicate, however, that the method of consensus, when applied to complex problems requiring complex interpersonal coordination, results in decisions of superior quality which are usually well implemented.

If the method of consensus is to be used to greatest effort, the group must be skillful in using its resources. Ordinary life in groups does not enable most of us to develop the requisite skill. In fact, even if one develops skill of this sort in one group, he may find himself quite unable to bring this skill to bear in another group.
Goal Area IV

WORK ETHICS

Goal

Rationale:

Every society defines acceptable work ethics. It is important, therefore, for the individual worker to understand the acceptable work ethic in order to contribute to the successful operation of his firm. Therefore, for the individual worker to understand the acceptable work ethic within that society, it is important for him to familiarize himself with acceptable job performance standards, such as punctuality, attendance, honesty, loyalty, promptness, etc.

The purpose of this unit is to:

1. acquaint the student with acceptable job performance standards, such as punctuality, attendance, honesty, loyalty, promptness, etc.

Purpose:

To promote work attitudes consistent with the community norms.
WORK ETHICS

1. Objective*: The student will illustrate his understanding of the American work ethic by identifying primary principles related to it.

e. An important consideration in formulating an effective "work ethic" is the concept of goal-setting behavior. The attached "Cube Stacking Game" is appropriate for this section.

THE CUBE STACKING GAME*

Game Overview

In this game, participants are placed around tables on which several cubes have been placed. Participants are told to estimate the number of cubes they can stack in a single vertical column within a specified period of time. The participants establish their goal, stack the cubes, and compare their actual cube stacking performance with their goal. Participants also have the opportunity to establish goals and compete with other participants for "profit points". A third goal setting activity involves team participation.

Participants are provided the opportunity to:

1. Compare their goal setting behavior with their actual performance.
2. Observe the effect the achievement motive has upon their goal setting behavior.
3. Appreciate the difficulty of establishing goals for which no past experience has been provided.
4. Experience group goal-setting behavior.

Performance Objectives

After participating in this gaming activity and the post-game discussion, the participant will be able to:

1. Approach goal-setting activities with a more realistic attitude.
2. Understand the problems of establishing goals--as individuals or in a team situation.
3. Understand the influence of the achievement motive in himself and other participants.
4. Understand the influence of the group upon goal-setting.
5. Understand the difficulty in motivating workers.

Equipment, Materials, and Supplies

1. An adequate number of tables on which the cubes will be stacked. No more than four participants should be placed around a table.

*Prepared by Dr. Jimmy G. Koeninger, Angelo State University, San Angelo, Texas, with permission.
2. Approximately 350 cubes are needed to accommodate 16-20 participants.

The cubes which this writer has used were wooden and 1-1/2 inches square.

NOTE: Ask your industrial arts teacher to cut these cubes for you. Or substitute some other stackable item such as pennies, sugar cubes, erasers, etc.

3. Goal setting record sheets are needed for the participants.

4. A one-minute timer is also needed.

Procedure

The following procedure is recommended until the instructor has gained confidence and experience in using this game.

1. Distribute the cubes evenly among all tables.

   If the cubes are distributed unequally to the participants, their goal setting behavior may be affected. Cubes should be spread evenly on each table so that all participants can reach them easily.

2. Announce:

   "On each table you will find a number of cubes. Your task will be to see how many cubes you can stack in a single vertical column in one minute. (You should demonstrate how this is to be accomplished.) You can only use one hand to stack your column."

3. Announce:

   "You will receive 10 profit points for each cube stacked. If you stack more than your goal, you'll receive 10 profit points. If you stack less than your goal, you'll receive 0 profit points."

4. Announce:

   "Let's look at the record sheet. For time period one, I want you to estimate (set your goal) how many cubes you can stack in a single vertical column in one minute. Has everyone established their goals?" Any questions?"

5. Announce:

   "You will receive profit points based upon the number of cubes you stack in relationship to the goal you established. If you do not attain your goal, you will receive 5 profit points for each cube stacked. For example, if your goal was 15 and you stacked 12 cubes, you would receive 15 profit points. However, if you attain your goal, you receive 10 profit points for each cube stacked beyond your goal."

6. Announce:

   "If everyone is ready, go!"

7. Allow one minute for the cube stacking activity. You should observe the participants and take notes of unique approaches. Some participants will proceed quite slowly and deliberately while others will work more rapidly. Announce to participants to be careful so they do not knock over another participant's column of cubes.

8. Announce at the conclusion of the one-minute work period: "Stop. Count the number of cubes you stacked, record your actual performance on the record sheet, and compute the number of profit points you received for your effort."

9. When all participants have submitted their record sheets, announce to the participants that they may be added to the party.
9. You may find it helpful to stimulate post-game discussion if you post goals and actual performances on the blackboard. Notice those participants who established their goal much lower than their actual performance and those who established their goals much higher than their actual performance.

10. Announce: "Let's try it a second time. You know how many cubes you stacked in the first time period, how many cubes do you feel you can stack in this second time period? Place your goal on the Record Sheet."

11. Announce: "If everyone is ready, Go!"

12. Allow one minute for cube stacking activity. Walk around the room and record what you observe.

13. Announce at the conclusion of the one-minute work period: "Stop. Count the number of cubes you stacked, record your 'actual performance' on the Record Sheet, and compute the number of 'profit points' you received for your effort."

14. You may want to conduct a brief discussion at this time, but save a major review for the post-game discussion. Again, you may want to record goals and actual performances on the blackboard.

15. Announce: "This time, each table (4 persons at each table) will compete as a team. Each team should select one team member as the supervisor. The supervisor is responsible for establishing the team's goal; however, the supervisor can, if he wishes, seek assistance from his three workers." (Provide the teams ample time to select a supervisor.)

16. Announce: "Will the team supervisors come forward and I will give you the directions for this third time period."

17. Announce to the supervisors: "You are the team's supervisor and are responsible for establishing your team goal. When you return to your team, you will have five minutes to establish your team's goal. The team's goal is based upon the total number of cubes all the team members can stack in four vertical columns. For example, if each team member can stack 15 cubes, the team's goal could be established at 60. However, the final decision for the team goal is your responsibility as supervisor. Return to your group, determine your goal, and write your team goal on the Record Sheet."

18. Announce: "If the teams are ready, Go!"

19. Allow one minute for the cube stacking activity. Walk around the room and record what you observe.

20. Announce at the conclusion of the one-minute work period: "Stop. Count the number of cubes your team stacked, record the team's 'actual performance' on the Record Sheet, and compute the number of 'profit points' your team received for your effort."

21. You may want to identify the teams' goals and actual performances and recognize the team who received the most profit points.

22. Conduct the post-game discussion.
Post-Game Discussion Questions

The post-game discussion questions should prove helpful in recalling the participant’s behavior for reinforcing what was learned in the gaming experience. Every attempt should be made to relate the participants’ gaming experiences to their on-the-job activities.

The following questions relate to “Time Period One”—the first goal-setting effort:

1. How realistic were your goals? How many of you established goals which were exactly what your actual performance was? How many established goals which were too high? How many established goals much lower than your actual performance?

2. Did you have difficulty in establishing your goal in the first time period? Why was it so difficult to estimate the number of cubes you could stack?

3. Did anyone set your goal low, achieve your goal, and stop stacking? Why: (Isn’t this similar to many persons in the labor force who do what they’re told to do and then quit?) Isn’t this approach a good one? Do you think this person will be promoted?

4. Did anyone establish a goal and find out that you could not attain your goal because of environmental influences—i.e., the cubes were not square, the table was jarred, etc.? (Isn’t this similar to many persons in the labor force who do what they’re told to do and then quit?) Is it so difficult to estimate the number of cubes you could stack?

The following questions relate to “Time Period Two”—the second goal-setting effort:

5. What influenced your goal for the second time period? How much did your actual performance in the first time period affect your goal in this time period? Were you affected by the goals and performances of the other participants? Which had the strongest influence?

6. Why do persons establish a goal that is easily reached rather than accepting the strongest influence?

7. Did anyone appreciably increase their goals after the first time period? Why?

8. Did anyone appreciate increase their goals after the first time period? Why?

9. Why do persons establish a goal that is easily reached rather than accepting the strongest influence?

The following questions relate to “Time Period One”—the first goal-setting effort:

1. How realistic were your goals? How many of you established goals which were exactly what your actual performance was? How many established goals which were too high? How many established goals much lower than your actual performance?

2. Did you have difficulty in establishing your goal in the first time period? Why was it so difficult to estimate the number of cubes you could stack?

3. Did anyone set your goal low, achieve your goal, and stop stacking? Why: (Isn’t this similar to many persons in the labor force who do what they’re told to do and then quit?) Isn’t this approach a good one? Do you think this person will be promoted?

4. Did anyone establish a goal and find out that you could not attain your goal because of environmental influences—i.e., the cubes were not square, the table was jarred, etc.? (Isn’t this true on the job? We establish goals but are constrained because we lack customers, the right merchandise, etc.)

5. What influenced your goal for the second time period? How much did your actual performance in the first time period affect your goal in this time period? Were you affected by the goals and performances of the other participants? Which had the strongest influence?

6. Why do persons establish a goal that is easily reached rather than attempting to set a goal which will receive maximum points?

7. Did anyone appreciably increase their goals after the first time period? Why?

8. Were any of you motivated to set a goal that would give you maximum points and achieve it? Why?

The post-game discussion questions should prove helpful in recalling the participant’s behavior for reinforcing what was learned in the gaming experience. Every attempt should be made to relate the participants’ gaming experiences to their on-the-job experiences.
The following questions relate to "Time Period Three"—the team competition:

7. How did your team establish the team goal? Did the supervisor arbitrarily establish the goal or did workers contribute their ideas? (Compare the different approaches to goal setting and review the teams' successes. You may be able to illustrate which method is better, which hopefully will be when all members are participating.)

10. How did your team accomplish your goal? Some teams will work as individuals; other teams will assign responsibilities, i.e., stackers, suppliers, and supervisors; and other teams will stack their four vertical columns together to achieve a more stable stack and a greater height.) Which method was most successful?

11. As a supervisor, how did you motivate your workers?

WORK ETHICS

An Individual Project*

Key: Personal Qualities for Success in Distribution, UIV.

Purpose: To help students formulate a set of workable ethics necessary for them to be successful in business, and to help them have a clear understanding of business ethics from both sides of the job.

Materials needed: notebook paper and pen; a good thesaurus will be helpful.

Procedure: (each student should base his set of ethics on his occupational objective)

1. Prepare a list of business ethics that you think are necessary for success in distribution. These ethics should include ethics with:
   a. the school
   b. the employer
   c. the customer
   d. fellow employees
   e. a base of honesty, loyalty, and courtesy
   f. the family
   g. friends and acquaintances

2. If you were an employer charged with the responsibility of hiring workers, what ethical standards would you want the applicant to have?

3. As a customer, what ethics do you look for in the company that you purchase from? (Examples: a used-car dealer, an appliance store that sells a stereo set for your car, or a restaurant where you eat.)
Time for Completion: Approximately two to three hours may be required for completion, depending upon individual ability.

Evaluation: Grade each student's project on an individual basis, giving credit for quantity, quality, neatness, thoroughness, and originality.

*Reproduced from PROJECTS FOR USE WITH PREPARATORY OR PRE-EMPLOYMENT DISTRIBUTIVE EDUCATION CURRICULUMS, compiled by Robert R. Luker, 1969, with permission.
Goal Area V  RESOURCE MANAGEMENT

Goal  To enable the student to efficiently obtain and use company resources on the job.

Rationale:
In order to have efficient production, one must have accessibility to the necessary resources for accomplishing a task. In order to insure access to the available resources, the employee should identify resource needs and insure effective utilization of these resources.

Purposes:
The purposes of this unit are to:
1. identify the resources required in his occupation;
2. understand the system for maintaining and accounting for his resources;
3. understand the result of the inefficient use of the resources.
Objective:
The student will identify, account for, and maintain company resources so as to insure efficient utilization.

Activities
- Principles of resource management
- Ordering supplies
- Distributing supplies
- Accounting for supplies
- Effective use of supplies
- Coordinating activities with others to meet time lines

Resources
- Job resources
- Durable and expendable resources
- The company maintains the resources
- The participants describe the resources they work with
- Have students identify the resources
- Have students describe the method used to account for supplies
- Have students devise a system to maintain the company's resources
- Have students devise a system of resource management for your classroom or some laboratory class, e.g., I.A., Chemistry, etc.

In the "Production Game" attached, the participants are called upon to use "resources" efficiently and effectively so that they can be the winners in the production effort.

Concern
- Resource management
- Resource management
- Time lines
- Ordering resources
- Have students devise a system for resource management
- Have students devise a system for ordering resources
- Have students devise a system for resource management
- Have students devise a system for ordering resources
- Have students devise a system for resource management
- Have students devise a system for ordering resources
- Have students devise a system for resource management
- Have students devise a system for ordering resources
- Have students devise a system for resource management
- Have students devise a system for ordering resources

I. Objective: The student will identify, account for, and maintain company resources efficiently and effectively so that they can be the winners in the production effort.
Goal Area VI  TIME MANAGEMENT

Goal  To enable the student to effectively utilize his work time.

Rationale:

The effective use of time is an important component of job success. In order to be employable, the student must have the ability to plan his time in relation to the job tasks assigned. Effective time utilization is a major contributor to job success.

Purposes:

The purposes of this unit are to:

1. identify relative occupational time concerns;
2. organize responsibilities in relationship to time constraints;
3. understand time policies and procedures of the employer.
## Objective:
The student will list the prescribed procedures for checking in and out of his work station.

<table>
<thead>
<tr>
<th>Activities</th>
<th>Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. have the student list his check-in/check-out procedures</td>
<td></td>
</tr>
<tr>
<td>b. have group discussion to compare differences and similarities between check-in/check-out procedures</td>
<td></td>
</tr>
<tr>
<td>c. have the students establish a check-in/check-out procedure for the class</td>
<td></td>
</tr>
</tbody>
</table>

#### TIME MANAGEMENT

1. Objective: The student will list the prescribed procedures for checking in and out of his work station.
2. Objective: The student will organize his time so that the assigned jobs will be executed efficiently and effectively.

</tr>
</tbody>
</table>
The Production Game previously mentioned in the RESOURCE MANAGEMENT section could be appropriately used in this section also. The instructor would emphasize the effect tardyism and absenteeism have on the production efforts of others who work with an employee who is tardy and absent. The Production Game would need to be modified so that employees were told to be tardy or absent on a regular basis.
RESOURCE AND TIME MANAGEMENT
Resource List

PERSONALITY DEVELOPMENT FOR BUSINESS, Russon South-Western.

BUSINESS PRINCIPLES AND MANAGEMENT, Shilt, Everard, and Johns, South-Western Publishing.

INDUSTRIAL EDUCATION: TRAINING PLANS FOR HIGH SCHOOL INDUSTRIAL COOPERATIVE TRAINING PROGRAMS, Thomas R. White, Project Director, Produced by Vocational Education Program Area, School of Education, Indiana University, Bloomington, Indiana 47401.

OCCUPATIONAL BUILDING CONSTRUCTION CURRICULUM GUIDE FOR GRADES 11 & 12, Denver Public Schools, 1971.

Overview

Teams are formed by dividing the participants into groups of four. Each team represents a production unit. "Machines" are provided each team to produce products. Throughout the game, participants receive orders from retailers, produce products to fill orders, deliver their products, and receive "profit points" for their efficiency.

The winning team is the one who has accumulated the most profit points. To order, deliver their products, and receive "profit points," players must follow these rules:

1. For each set of boxes not in an order, plus 5 profit points.
2. For orders delivered early, plus 10 profit points.
3. For a late delivery, minus 10 profit points.
4. For completed orders, 25 profit points.

Instructional Objectives

Participation in the Production Game provides the participant the opportunity to:

1. Organize, control, and evaluate a production activity which involves men, material, and machines.
2. Participate in a team activity which demands a high degree of cooperation among the players.
3. Compare team approaches used to accomplish their objective--to accumulate "profit points"--and identify effective management techniques used.

Procedure

1. Participants should be divided into teams consisting of four players.
2. Each team should select a team supervisor.
3. Distribute production machinery and materials to the teams, including:
   - 1 pair of scissors
   - 1 roll of tape
   - 60 patterns of Box A
4. Announce: "Teams may not use any other equipment or materials than those distributed.
5. Provide the teams with sample sets of acceptable products.
6. Explain the manner in which "profit points" are received:
   - For completed orders
   - For a late delivery: minus 10 profit points
   - For orders delivered early: plus 10 profit points
   - For each set of boxes not in an order: plus 5 profit points

The Production Game*

*Prepared by Jimmy G. Koeninger, Angelo State University, San Angelo, Texas, with permission.
7. Each team should be given the opportunity to organize their production strategy. The instructor should make a sample set of boxes and display. Teams should be encouraged to make a few boxes and have them examined to insure that they meet specifications.

8. Using the blackboard or an overhead projector, reproduce the "calendar" for everyone to read.

<table>
<thead>
<tr>
<th>TIME PERIODS</th>
<th>1</th>

<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9. At the beginning time periods, 2, 4, and 6, each team's supervisor will roll a die (or draw a number) to determine the calamity which will effect the team's production effort for that time period. No calamities will occur in time periods 1, 3, and 5. The instructor should announce the order(s) for each time period and post on the "calendar".

<table>
<thead>
<tr>

</table>

TOTAL
At the end of each time period, teams can have the opportunity to discuss their production techniques in hopes of improving their performance. The game concludes at the end of the sixth time period and points totaled to determine the winning team.

Post-Game Discussion

1. What plans were made by each team (especially the more productive teams)?
2. What would your team do differently if you were to play the game again?
3. Were your teams' plans specified or were they somewhat general?
4. Did each member's plans reflect exactly what was expected of them?
5. Did the lack of specificity of responsibilities affect the team's production?
6. What difference did the "calamities" make on the team's production and plans?
7. Did the supervisor become too actively involved in a particular part of the production effort?
8. Did the lack of quality control standards to assure acceptability of your order?
9. Did you use any graphic aids; e.g., flow charts, to help direct the team or monitor the team's performance?
10. Did you establish your own quality control standards to ensure acceptability of your order?
Pattern for the Production Game

   14. Thank customer

o. Run down auto part—other store.
JOB LISTING
FOR
SERVICE STATION ATTENDANT

Job Description

The service station attendant must be able to get along with people as his primary function is to wait on customers and satisfy their needs to the best of his ability and within the limits of the type of station and services offered. He must possess an understanding of the basic theory behind internal combustion engines, automatic and conventional transmissions, differentials, and other major automobile components to enable him to service associated equipment properly. He must understand how to check fluid levels in batteries, radiators, windshield washer reservoirs, the crankcase, transmission, differential, power-steering, air-conditioning, and brakes. He must understand what type and weight of oil to use in servicing the different fluid systems and how to grease friction joints in the suspension and steering devices. He must know how to repair flat tires and how to operate the machine and tools for doing so. He must be aware of many safety rules that apply when working around the station and especially when operating the hoist. His main duty is to wait on customers and pump gas so he must know how to operate the gas pumps on the island. He may be responsible for ordering merchandise for resale, gasoline from a distributor, keeping records of sales, opening and closing the station, housekeeping duties, and selling accessory items. He should be familiar with the surrounding area so he may give travelers directions and information. He must be able to make change, operate a cash register, and operate a credit card machine. He is responsible for keeping all station property as neat, clean and attractive as possible.

Task Listing and Detailing

a. Keeps records for island pumps and storage tanks.
   1. Read all pump meters at end of day or as required
   2. Properly record readings
   3. Use measuring stick to determine gallons in storage tanks
   4. Properly record amount
b. Pumb gas.
   1. Greet customer
   2. Ascertain type and amount of fuel desired
   3. Remove gas cap
   4. Remove gas hose and insert in fill opening
   5. Turn the pumps back to zero
Task Listing and Detailing

6. Wash all the windows on the car
7. Lift hood and check the oil
8. Cap off the gas (round it off); put nozzle back
9. Collect from the customer
10. Thank customer and invite him/her back

c. Test antifreeze.
   1. Lift hood and remove radiator cap
   2. Dip the end of antifreeze tester into solution
   3. Examine the position of the balls floating:
      a) 1 ball floating good for +20
      b) 2 balls floating good for +10
      c) 3 balls floating good for 0
      d) 4 balls floating good for +10
      e) 5 balls floating good for -20
   4. Shut hood

d. Repairs tube and tubeless tires.
   1. Locate and mark the hole in tire
   2. Place the tire on the tire machine and remove air
   3. Place the pressure handle on its rim and put your foot on the control and break the head
   4. Place tire iron on the pivot in the center
   5. Pull one end of tire above the rim with tire iron and again step on foot control
   6. Repeat that step with the bottom of the tire
   7. Check for any object stuck in the tire or tube and remove
   8. Clean the hole with a scraper and general area
   9. Place tire on tire spreader and spread the tire
   10. Place glue on and around the hole and light a match to it
   11. Remove backing and blow flame out; placing the patch over the hole
   12. Take patch roller and go over the patch, firmly sealing the edges
   13. If it is a tube, place air in the tube and check it again for any leaks
   14. Mounting a tire tube--after letting the air out place the tube so that the valve stem is even with the hole in the rim, press down on the tire and slide valve stem into place and begin tucking the tube into the tire all the way around; blow air into tube to stretch it out
   15. Plant the iron upon the tire using the opposite end you used to dismount the tire; step on foot control and one side of the tire is over the rim (if it is a tube tire just fill it with air, place valve core back, and the tire is done) and place the tire iron on the top and repeat the same step again
SERVICE STATION ATTENDANT (cont.)

Task Listing and Detailing

16. After the tire has been mounted again, press down on the tire to seal the bottom.
17. Grab the top half of the tire and lift, pulling towards you, fill the tire with air until a popping sound has been heard or beads form around the rim.
18. Place valve core back in place and check the pressure in the tires with a tire gauge for the correct pounds of pressure for that certain size tire.

e. Operate credit card device.
1. Place credit card in the brackets made for it.
2. Write up the amount of gas sold and amount of money (oil, lube, etc.) on credit card receipt.
3. Place the receipt on the machine, adjust the handles to amount of purchase.
4. Take handle on left and pull it across the machine and back.
5. Remove card and receipt and have customer sign receipt.
6. Tear off top part of carbon receipt and give that to the customer, placing the bottom two receipts into the bottom opening of credit card machine.

f. Operate auto hoist.
1. After pulling car in, place the dogs and the hoist so that they will support; raise the car 2 feet and test its sturdiness by its frame.
2. Stand on the right side of operating handle and pull towards you.
3. When car is finished, you stand in the same place and push away from yourself.
4. Place the dogs in the down position and move racks to center of car.

g. Keeping time card.
1. Pull a credit card receipt and write down hours worked that date.
2. Place it in the tray in the cash register.

h. Charging a battery.
1. Place the battery on block above the ground.
2. Remove caps and check battery water; if needed, refill the cells.
3. Leave the caps off and connect the negative cable of battery charger first, then positive cable.

i. Using jumper cables.
1. Place the negative end of the cable on first, connected to either battery charger or a live battery.
2. Connect the positive ends the same as the negative.
3. Turn the key in the car.
4. After car starts, remove negative, then positive.
Task Listing and Detailing

j. Replacing windshield wiper blade.
   1. Measure the size of the wiper blade
   2. With pair of pliers loosen the clamps to the blade
   3. Slide blade out
   4. Replace with a new blade
   5. Replace clamps until blade is firmly attached

k. Open station.
   1. Unlock all doors
   2. Place money in cash register
   3. Turn on pump lights, motor, air compressor, lights in salesroom
   4. Take towel dispenser and hang it up outside
   5. Sweep the islands

l. Close station.
   1. Clean restrooms, toilet sinks and floors
   2. Clean lube area and bay area; rinse, wash, rinse, and squeag
   3. Clean bench off
   4. Empty all garbage
   5. Mop office floor and dust shelves
   6. Bring in cars to be worked on next day
   7. Bring in tires, paper towel dispenser, squirt bottles and oil funnels
   8. Lock oil case
   9. Turn out lights in building
   10. Turn on night lights
   11. Refill pop machine
   12. Collect credit card receipts, subtotal register
   13. Place money in plastic bag
   14. Lock front door, side door, restroom doors and garage doors

m. Sell automotive accessories.
   1. Determine customer need
   2. Show (point out) worn equipment and explain danger or consequences likely
   3. Convince customer of your product's quality
   4. Explain that only a few minutes will be required to replace or install the new item
   5. Close the sale
   6. Install the equipment, if applicable
   7. Thank the customer
   8. Assure him to come back if the equipment should fail--stand behind your product and service

n. Washes car windows.
   1. Squirt on liquid washer (use an anti-freeze type in winter)
   2. Wipe dry with paper towels
Task Listing and Detailing

3. Lift wiper blades from windshield to clean thoroughly under them
4. Don't forget headlights, side mirrors, and tail lights

o. Wash and wax autos.
  1. Car in wash bay
  2. Clean inside thoroughly first, if appropriate
  3. Check to see if all windows and air vents are closed
  4. Using high pressure water hose, remove all mud and dirt possible
  5. Wash car with soap to remove old wax (if necessary)
  6. Use chamois to dry windows and car
  7. Apply wax
  8. Rub wax in—NOTE: if electrical buffer is used, do not hesitate in any spot and do not press hard on the machine!

p. Replace or clean air filters.
  1. Open hood
  2. Remove cover from atop carburetor
  3. Remove filter by lifting out
  4. If filter looks dirty, clean by using air nozzle and blowing from inside to the outside (NOTE: avoid excessive pressure)
  5. Check for cracks or breaks in the paper before reinstalling, by holding a trouble light inside the filter and looking for leaks
  6. If breaks are present, install a new filter
  7. If filter is not obviously dirty, inspect with a trouble light

q. Replace gas filters.
  1. Locate gas filter
  2. Remove gas line clamps (either spring type or screw type)
  3. Remove filter
  4. Position clamps on gas line
  5. Install new filter with attention to direction of fuel flow in relation to arrow on filter
  6. Tighten clamps
  7. Record mileage and date replaced
  8. Wipe up spilled gasoline
  9. Properly dispose of old filter (Remember—it's flammable!)

r. Rotate tires.
  1. Position auto on hoist
  2. Raise about 10" to 12" from floor or to a comfortable height
  3. Remove all wheel covers (hub caps)
  4. Use impact wrench or speed wrench to remove nuts from studs
  5. Change wheel location on car as per established procedure of station or according to desires of owner
  6. Securely tighten all nuts
  7. Replace wheel covers—check carefully
  8. Lower car
Task Listing and Detailing

s. Check differential oil level.
   1. Properly position auto on hoist, observing all safety precautions
   2. Locate plug on outside of differential
   3. Remove plug
   4. If oil flows out, level is adequate
   5. If no oil flows from the plug hole, fill with S.A.E. 90 weight
      unless otherwise specified, until oil flows from the hole
   6. Replace the plug
   7. Check for leaks around the plug and seals
   8. Note quantity of oil used
   9. Lower hoist and auto

t. Check crankcase oil level.
   1. Open hood
   2. Locate dip-stick to oil pan
   3. Remove from engine
   4. Wipe the stick dry (always carry a rag when waiting on the island)
   5. Note the oil level indications on the stick
   6. Reinsert the stick
   7. Remove and read to determine oil level
   8. If level is indicated below the "add" mark, advise car owner
   9. Ascertain brand and weight of oil to add
  10. Attach pour spout to can
  11. Carefully add oil and wipe up any spills
  12. Recheck level
  13. NOTE: if level is just at "add" line on stick, notify owner but
      advise not to add a quart unless the engine consumes excessive
      amounts, because the oil retained in the upper engine will cause
      the crankcase to be overfull, which is serious in most engines
  14. Dispose of can
  15. Clean and replace spout to storage area

u. Check windshield washer fluid level.
   1. Open hood
   2. Locate windshield washer level in reservoir
   3. If half full or more, level is sufficient
   4. If below half full, fill with pre-mixed solution (follow the
      instructions provided with concentrate for mixing)
   5. Warning--do not fill with water either in summer or winter! most
      reservoirs are large and protection from freezing must be provided
   6. Wipe all spilled solution off of car finish--it may harm the paint

v. Operate cash register.
   1. Place amount tendered on register shelf
   2. Ring up sale on register, pushing appropriate keys
Task Listing and Detailing

3. Use keys representing type of merchandise sold, if appropriate
4. After register drawer opens, collect necessary change proceeding from the portion of a dollar of the sale to even dollars
5. Close register drawer
6. Count change back to customer

w. Check radiator fluid level.
1. Determine how to open hood and open
2. Cautiously touch (or determine) radiator cap to ascertain temperature (use of rag recommended)
3. Slowly unscrew cap to relieve pressure that may be present (counter-clockwise)
4. Remove cap
5. Observe coolant level
6. If level is well above the core, replace cap (clockwise)
7. If level is below core (coolant cannot be seen) consult owner to determine whether anti-freeze or water should be added
8. Add coolant to approximately 1 inch below cap and/or overflow tube
9. Replace cap (clockwise)

x. Check battery fluid level.
1. Open hood
2. Remove all battery cell caps
3. Ascertain whether water level is above the core (some batteries have directions on the caps and the caps need not be removed to determine water level)
4. If necessary, add distilled water to raise the level to that required as per instructions on the battery caps or at least above the core
5. Replace caps

y. Check brake reservoir fluid level.
1. Open hood
2. Locate brake fluid reservoir (usually on the fire-wall on the driver's side of the auto)
3. Remove the cover
4. Ascertain whether fluid level is OK (most indicate a level within the reservoir)
5. If fluid is low, consult customer and add fluid
6. Check brake system for leaks
7. Replace cover

z. Check tire pressure.
1. Secure pressure gauge
2. Remove dirt cover from valve stem
3. Press gauge onto stem, noting pressure
Task Listing and Detailing

4. If low, inflate to customer's desired pressure with pressure air hose (always stand or kneel to side of tire to protect from tire blow-out accidents)
5. Replace dust cover
6. If tire is abnormally (excessively low) low on air, check for obvious leaks and suggest repair to the customer
7. Worn tires should be mentioned to the customer and replacements sold if the station sells new tires

aa. Check transmission fluid level.
1. Open hood
2. Determine whether auto is automatic or standard transmission
3. If automatic, the car must be warmed up and the dip-stick pulled when idling and in neutral
4. Pull dip stick
5. Wipe all oil and residue clean off the dip-stick and note level indications
6. Replace dip-stick
7. Remove and read
8. If low, consult owner and add small amount through dip-stick hole until the correct level is reached
9. Replace dip-stick
10. If manual transmission, locate oil level plug beneath auto on transmission (the auto will require lifting on the hoist)
11. Remove plug carefully
12. If oil flows from the hole, it is full; if not, add transmission oil as required
13. Replace plug
14. Clean up any spillage

bb. Grease vehicles.
1. Position car on hoist
2. Locate all grease fittings on the drive train, suspension system, and steering mechanism (generally speaking, wherever movement is possible between two separate auto pieces, lubrication will be required)
3. If no fittings are observed on newer models, use of a grease needle will be required or the plugs will have to be removed and zerks installed
4. Wipe dirt and dust from zerk fitting
5. Push gun nozzle securely onto zerk
6. Squeeze gun handle until grease appears from joint
7. Repeat for all fittings
8. Wipe up any spillage
9. Lower hoist
Task Listing and Detailing

cc. Check power steering level.
   1. Open hood
   2. Locate steering oil reservoir
   3. Remove cap/dip-stick
   4. Wipe dip-stick dry, noting level indications
   5. Reinsert dip-stick
   6. Remove dip-stick
   7. If oil level is low, bring up to full mark using recommended oil

dd. Replace oil filters.
   1. Position car on hoist and raise
   2. Position used oil barrel and funnel beneath outlet in pan
   3. Remove the plug and drain old oil
   4. Remove the screw-on oil filter
   5. Remove the old gasket, if appropriate
   6. Dip the new gasket in oil, and insert in groove
   7. Install new filter and tighten firmly with hands only
   8. Replace pan plug
   9. Lower car
   10. Open hood
   11. Check oil fill cap and clean breather if necessary
   12. Add necessary oil (will take one additional quart with filter change)
   13. Check oil level with dip-stick
   14. Run engine and check for leaks around filter gasket and pan plug
   15. Clean up spillage
   16. Install sticker with date, auto mileage, type oil, etc.

ee. Operate auto jacks.
   1. Position jack in proper place on bumper, on axle, or on differential housing
   2. Check car brakes and block wheels
   3. Pump the handle evenly or operate the jack handle smoothly
   4. Turn the valve on hydraulic jacks to let the oil escape and lower the auto, or put the lever on a manual jack in the down position and smoothly operate the handle to lower the auto

ff. Clean and supply restrooms.
   1. Replenish tissue, hand towels, soap, etc.
   2. Empty trash cans
   3. Clean mirror and sink
   4. Clean and disinfect toilet bowl
   5. Sweep floor
   6. Mop floor and disinfect
   7. Check periodically during the day to insure cleanliness
Service Station Attendant (cont.)

Task Listing and Detailing

gg. Take inventory—physically count all merchandise for station usage and for resale by using either the cost or retail method.

hh. Replace various lights or bulbs.
1. For headlights—remove the chrome trim around the light if required
2. Loosen 3 screws holding the light secure
3. Turn the light slightly to enable removal forward
4. Disconnect socket from wires
5. Replace with proper size and type lamp using reverse order
6. For turn signal and tail lights—remove lens cover
7. Push on bulb and turn 1/4 turn in socket to remove
8. Replace with correct bulb
9. Replace lens cover

ii. Replace fuses.
1. Locate fuse box under dash on left hand side of auto, or under hood on fire-wall
2. Locate burned out fuse by observing filaments burned in two
3. Pry fuse out
4. Replace with correct ampere fuse
5. Check for normal operation of unit the fuse guards
6. If fuse burns out again while testing, look for shorts or other causes of trouble to the system

jj. Check fan belts and other belts and replace if necessary.
1. Open hood
2. Examine all belts for tightness and all inside and outside surfaces for cracks, or excessively hard and slick condition
3. If belt warrants replacement, loosen the belt tightener for that belt and remove old belt
4. Replace with proper size belt
5. Tighten to a snug condition but not in excess as bearings will wear out more quickly
6. NOTE: on some autos, you must remove other belts on the crankshaft first, before you can remove and replace a faulty belt behind

kk. Check shock absorbers.
1. Cause car to bounce
2. If car continues to bounce more than once or twice, the shocks are inefficient and should be replaced
3. Refer work to mechanic

11. Check air conditioner freon level.
1. Locate reservoir and window in the freon line (under hood)
2. With car running and air conditioner on, look for freon passing the window
Task Listing and Detailing

3. If bubbles appear too often or are too large, servicing may be required
4. Refer to mechanic

**mm.** Check and replace radiator hoses and heater hoses.
1. Visually inspect all hoses looking for water seepage, cracks, excessively soft, mushy, rotten condition
2. If replacement is necessary, drain radiator by using pet-cock at bottom, and plugs in the engine block, if necessary
3. Loosen clamps
4. Remove old hose
5. Replace with correct hose
6. Secure clamps (many will need replacement also)
7. Refill radiator
8. Start engine and check for leaks
