In a teleconference on "Integrated Databases for Higher Education" held in March, 1975, conference participants identified a number of data bases that could be potential data sources for the larger higher education community. This document is a listing of those data bases together with others that have been subsequently identified. Criteria for inclusion in this catalog were the following: (1) the data base must be reasonably available to other potential users; (2) the data base must be relevant to the postsecondary education community; (3) the data base must be recent; and (4) the data base must identify no specific individuals. Entries are described in general terms with emphasis on the content rather than the form of the data from a technical, data processing point of view. (DGG)
National Education Data Library
CATALOG OF SELECTED MACHINE-READABLE DATABASES FOR POSTSECONDARY EDUCATION

ACKNOWLEDGMENTS

The authors appreciate the efforts of Hayden Smith of the Council on Financial Aid to Education, David Breneman of the Brookings Institution, George Weathersby of Harvard University, William Dorfman of the National Center for Education Statistics, Alexander Astin and Allan Cartter of the Higher Education Research Institute, Robert Corcoran of the Education Commission of the States, and Earl Cheit of the Carnegie Council on Policy Studies who contributed to the materials for the catalog. The list of databases was developed from an Institute of the Future teleconference on "Integrated Databases for Education" sponsored by the Lilly Endowment, Inc.

This report was also prepared under a grant from the Lilly Endowment, Inc. as part of their program in education.
PREFACE

There have been a number of suggestions to improve the integration of the databases for postsecondary education. This effort would increase the usefulness of these data to researchers and decisionmakers. On-line access to databases has also been suggested. This effort would increase the timeliness of data distribution. There is still some question about an appropriate approach, even with the experience of the National Center for Education Statistics in attempting to develop EDSTAT II and EDSTAT III. There is, however, general agreement that a number of databases exist which would be useful to the postsecondary education community if potential users were aware of their existence, knew whom to contact to obtain additional information on the database, and had references to the use, content, or format of the database.

In a recent teleconference on "Integrated Databases for Higher Education", the participants listed a number of databases and suggested that the larger higher education community should be aware of these potential data sources.* This document is a listing of those databases and some which have been subsequently identified by conference participants. An exhaustive search would have provided a number of others. However, it seemed more appropriate to provide a partial list at this time, and encourage others to identify databases which may be useful to others in the community, than to delay until an exhaustive list could be compiled.

*The teleconference was held by the Institute of the Future on March 10-14, 1975. The participants used on-line terminals and communicated to a central computer from wherever they were. An edited transcript will be issued in the near future.
Hopefully this catalog, though limited in scope, will further encourage the use of available data in research, planning, administration, and policy analysis, and will be yet another step toward a capability which makes vast data resources available to all potential users.
INTRODUCTION

Databases Selected

The databases included in this catalog met several criteria. First, the databases had to be reasonably available to other potential users. There are some databases which, because of privacy or proprietary interest, would not be readily available. Second, the database had to be relevant to postsecondary education. This criteria was generally met by the database either being used in a policy study or for decisionmaking by an educational institution or agency, including state and federal level control and administrative agencies. Third, the database had to be recent. No database was included which had data collected prior to 1968, except when that data was part of a longitudinal database. Fourth, the database must identify no specific individual. This criterion was used to preclude potential conflict between a user's interest and an individual's interest.

In addition, the database had to be known to those who contributed to the catalog. There are probably a number of databases which are relevant and potentially useful, but were not known. Perhaps these will be included in a future catalog.

There were no criteria on accuracy, validity, or the form of the data. The data represents any inherent inaccuracies or lack of validity of the original data collection effort and subsequent data conversion. In some cases, analysts have improved the accuracy and validity by being particularly careful about editing and checking the data, externally determining some values, or inputting reasonable values.
A potential user should be aware that the responsibility for determining the accuracy, validity, and usefulness rests upon the user and the best source of information is likely to be the originating agency and subsequent users.

**Form of the Data**

Most catalogs of machine-readable data emphasize the physical media—the density, number of tracks, parity, format, and number of reels of magnetic tapes, or the type and size of disk pack containing the data. For the past few years, however, the standards for 200, 800, and 1600 bpi tape have been closely followed by manufacturers and there is little difficulty in exchanging reels of magnetic tape having a single file. Most installations can prepare tapes with or without standard labels, in either ASCII or EBCIDIC codes, and either 800 or 1600 bpi. All of these options are provided by most computer operating systems, or can be obtained by recopying the data tapes at an installation with a general purpose computer.

Therefore, the emphasis in this catalog was placed on the content rather than the form of the data. There usually is sufficient information in a catalog entry to estimate the size of the database.

**Documentation**

Few users expend the effort to develop documentation on the data sufficient for a subsequent user to know the specific content of the data file. For example, the National Center for Education Statistics
(NCES) still provides only a copy of the survey form and a tape layout for the HEGIS tapes. Probably the most organized effort at documenting a database was undertaken by the National Commission on the Financing of Postsecondary Education (NCFPE). Information was provided on the name, title, suggested descriptive headings, location, length, data type, and codes for each data element. Some general descriptive materials and copies of the data collection forms or methods were added to give a database directory. The NCFPE format has been generally followed by NCES in EDSTAT II, though the descriptive headings have been omitted.

In addition to this technical documentation of a database, often there is a general description of the data and some of its characteristics as part of a publication, frequently an appendix to a report. If available, these sources are also cited as documentation.
CATALOG ENTRIES

The catalog entries were organized using the form in Figure 1.

**Name of the Database**

The name of the database is usually the title this database is known by in related publications. Where the name is ambiguous, the title may be edited or additional description provided. It is intended to select a name which would be recognized by potential users who are familiar with the related literature. The title is given as Item A in the sample catalog entry form of Figure 1.

**Frequency of Issue**

Many of the databases are issued periodically. When this is the case, the frequency is given. For example, the Current Population Survey and the Higher Education General Information Survey (HEGIS) are repeated each year. Some surveys are repeated quarterly, annually, every three years, or every ten years. This is given is Item B of the catalog entry.

**Time Span of the Database**

Where it is known, the time span of the underlying data is provided. For example, if a researcher developed a database in 1974 that used 1972 institutional data, the database would be considered a 1972, not 1974, database. If the data covers several years, this period of time will be given. Sometimes this means that all of the data for that time span is included in a single data file, and sometimes this means that data is available for the time span, but consists of several data files.
NAME OF DATABASE: A

SUBJECT MATTER AND SCOPE OF DATA:

DATABASE ORGANIZATION AND SIZE:

FILE DEFINITION: J

DLA ___ DL/1 ___ DMS ___ DS/3 ___ EDMS ___ SYSTEM 2000 ___

ORGANIZATIONS DISTRIBUTING DATABASE:

ENTRY NUMBER:

Figure 1 - Sample Form
For example, HEGIS Finance is issued annually and is available for the period of 1966 through 1974.

Where the database is continuing, no terminal data is given. This means that the series is continuing even though a current data file may not be available. For example, the Census Employment Survey is listed as continuing, even though the 1972 survey will be available until 1976.

Both the frequency of issue and comments should be considered in interpreting the meaning of the time span.

**Originating Organization**

The originating organization is the first organization which placed the data in the database form which is being described. For example, if the data were collected by the National Science Foundation (NSF), but was reformatted and perhaps additional data were added by the National Board on Graduate Education (NBGE), NBGE would be listed as the originating organization and NSF would be identified in describing the subject matter or documentation. The originating organization is listed as Item E. A specific individual is listed, if known.

**Contact**

Often the person knowing most about the database, or having direct knowledge of the database when it was created, is not located at the originating organization. For example, the individuals who developed the database for the National Commission on the Financing of Post-secondary Education are no longer associated with that organization.
So, while the originating organization would be listed as NCFPE, the knowledgeable individuals would be listed in Item F as the contact. Others may have used the database, the contact may not be the most knowledgeable person. Rather, the listed contact is a knowledgeable person at the time the catalog entry was prepared.

Documentation

Two types of documentation are listed as Item G. These are specific documentation or technical and descriptive materials of the database itself, or general materials which describe the source, use or content of the database. Usually the difference is obvious from the citation. When feasible, standard bibliographic references are used. Catalog users should be aware that general materials may be published for several years referencing a particular database after the catalog entry was prepared. Not all subsequent publications can be identified or included.

Subject Matter and Scope of the Data

This section of the catalog entry is used to give a summary of the data elements, the source of the data, and other descriptive materials which would be useful to a potential user. The specific periods of time and sample represented by the data is identified, if known.

Database Organization and Size

The physical organization of the database, usually identifying the data underlying a record (e.g., an observation, an institution, a state) is given. If known, the record size and format and the number of records
is provided. If there is some special data format, such as machine-dependent floating point representations, this characteristic also would be given in Item I.

File Definition

A file definition is usually a series of component descriptions for a database software system which includes the data element name, data element description used for headings, location within the record, length, and data format. DLA is a COBOL program which is used for storage and retrieval of data on sequential and indexed-sequential files, DL/I is IBM's proprietary database description language, DMS is Univac's database management system, DS/3 is a proprietary system of the System Development Corporation for IBM equipment, EDMS is the Xerox Extended Data Base Management System for the Sigma series of computers, and System 2000 is a proprietary system implemented on CDC, Univac and IBM computers. All known file definitions are indicated in Item J.

Organizations Distributing the Database

The abbreviations for those organizations known to distribute the data are listed in Item K. All organizations distributing the database are listed. Where prices or limitations on availability are known to exist, these are noted. The list of suppliers and contacts are given in the Appendix.
Entry Number

All entries are given a key depending upon the originating organization. This key is used to cross-index the entries. All entries are listed in ascending Entry Number order. The date of the entry follows the entry number in the American National Standard format.

DOCUMENTATION:

SUBJECT MATTER AND SCOPE OF DATA:
A survey of the recipients of student monetary aid from the Illinois State Scholarship Commission requesting institution attending, present year in college, years receiving ISSC award, full-time or part-time status, college to be attending if no award, state tuition waiver scholarships offered and not used, total value of scholarships and grants, money borrowed and source, debt, work, institutional preference, opinion on ISSC award policies, knowledge of ISSC program, type and size of high school, sex, marital status, vocational interest, ethnic background, grades from last term, number of institutions attended since high school, commuter-resident status, money received from parents, cash payment to parents, school grade level of parents and family size.

DATABASE ORGANIZATION AND SIZE:
Coded questionnaires responses, one record per survey form. Forty-eight variables for 1,294 observations; 80 characters per record.

ORIGINATING ORGANIZATION: U.S. Office of Education

DOCUMENTATION:
Survey Form, "Institutional Fiscal Operations Report for the Supplementary Opportunity Grant, College Work-Study, and National Direct Student Loan Programs."

SUBJECT MATTER AND SCOPE OF DATA:
Annual year-end report of institutions on utilization of federal student aid funds. For each of the three programs, count of recipients, amount spent by ethnic group, sex, independent undergraduate, graduate, and family income for dependent undergraduates. Count of students receiving veterans assistance and SOG, NDSL or CW-S. For 1971-72, count of students not aided for lack of sufficient funds by independent undergraduate, graduate and family income for dependent students.

DATABASE ORGANIZATION AND SIZE:

DOCUMENTATION:

"Data Base Directory ECSIIIEP," Education Commission of the States,
March 1975.

SUBJECT MATTER AND SCOPE OF DATA:

Machine readable data from the pilot Information Exchange Procedures project
implementation by the National Center for Higher Education Management Systems.
Approximately 30 institutions are included, almost all are community colleges
and four-year and masters degree-granting institutions. Some PhD-granting
but no major research universities. For each of fourteen consolidated HEGIS
discipline clusters, and course-levels (occupational through graduate) counts
of semester credit hours generated and FTE major enrollments provided. Direct
and fully-allocated costs per SCH and per annual FTE major for each course
level provided. Count of degree awarded by level for each cluster included.

DATABASE ORGANIZATION AND SIZE:

The file consists of one record for each of the 30 institutions. Each record
contains 774 data elements and of 4020 characters.

DOCUMENTATION:

SUBJECT MATTER AND SCOPE OF DATA:
This file of data was compiled by the NCFPE staff from special listings provided by the Bureau of the Census from their Census of Local Governments. These data on the characteristics, revenues, and expenditures of local school districts with postsecondary education institutions are available for years 1966-67 and 1971-72. The file included type of government code, county number, institution number within each county, district revenues by type, additional institutions (FICE code) in county, and district enrollment for 1966-67 and 1971-72 plus Carnegie classification, and institutional characteristics, where appropriate, and Fall 1971 and 1972 enrollments.

DATABASE ORGANIZATION AND SIZE:
One record per local school district of 75 variables, 403 school districts with a record length of 404 characters.
