This paper presents instructional outcomes and student exercises related to the student's acquisition of the reading skills minimally required for comprehension in the SWRL Reading Program. The two outcome areas of the reading comprehension program are the development of word decoding skills and the development of skills necessary for sentence and passage comprehension. Comprehension tasks are divided into the following areas: vocabulary and word recognition, picture conventions, punctuation, syntax, and sentence comprehension (literal, deductive, and inferential). Representative samples of comprehension tasks are given for the stories used in the two outcome areas of the program. (MKM)
READING COMPREHENSION OBJECTIVES FOR BLOCKS 1 AND 2 OF THE SWRL READING PROGRAM

Jack H. Hiller

ABSTRACT

A design for reading-comprehension instruction is presented. Outcome areas pertaining to reading comprehension in Blocks 1 and 2 of the SWRL Reading Program are defined and comprehension exercises are described.
INTRODUCTION

The SWRL Reading Program has two distinguishable outcome areas:

1. development of word decoding skills;

2. development of skills necessary for sentence and passage comprehension.

This paper will present instructional outcomes and student exercises related to the student's acquisition of those reading skills minimally required for his comprehension of text.

"Comprehension" of any spoken (or written utterance or message) is a term that describes the character of a listener's translation of an utterance from its representational or symbolic form to its meaning(s), i.e., the idea which it represents.¹ When a listener or reader reproduces the idea carried in a message, we say that he comprehends it. Since comprehension designates a phenomenal quality of experience, e.g., someone's idea formed in conjunction with an utterance as nominal stimulus, it is obviously impossible in principle to determine the character of the individual's comprehension through direct measurement. If it is assumed that a given message conveys information both necessary and sufficient for the performance of an observable response,

¹This section assumes a narrow view of meaning which is expanded later, in the section on sentence comprehension-literal interpretation tasks, page 11.
then performance of the response implies that the listener has comprehended the message. However, there cannot be any real case wherein comprehension alone constitutes a sufficient condition for performance, since the listener must also understand what he is to do with the information in the message, and too he must possess the cognitive and physical skills required for response execution. Consequently, a response failure does not unambiguously imply a comprehension failure. Furthermore, message comprehension may not be necessary for a particular response or task performance, since the listener may anticipate or infer response requirements from previous tasks, from contemporary contextual clues, or from isolated elements of the message (e.g., key words), and he may guess by choosing from the responses provided by commonly used recognition tasks.

Because comprehension exercises and tests incorporated in the SWRL Reading Program are designed primarily to provide instruction and to diagnose performance for the purpose of remediation, and not to maximize student test variance, it is essential that comprehension tasks be constructed to minimize interpretive ambiguity. We shall first discuss the general philosophy underlying the construction of the comprehension tasks and then describe specific examples so the reader may see how interpretive ambiguity has been constrained.

COMPREHENSION TASK ANALYSIS

The first decision necessary for construction of comprehension tasks requires identification of those language elements and complexes that most likely require instructional attention. The language domain
of interest here is explicitly represented by the SWRL Reading Program materials, and the syntactic and lexical analyses proposed by Bessemer and Jenkins (1972), which have been performed by Fiege-Kollmann (1972), serve to identify and delimit the domain elements.

A second decision requires the selection of a strategy for ordering and pacing comprehension activities. The strategy adopted here derives naturally from the reading program's organization, wherein new words and syntactic devices are systematically introduced to the students in serial order. Hence, comprehension task sequence has been tied directly to the reading program's existing structure (although not to its verbatim content).

In addition to considerations of semantics and syntax, inspection of the SWRL Reading Program reveals that picture conventions employed in the story-books, and grammatical punctuation marks, also relate to student comprehension of story content.

Comprehension tasks related to the first use of picture conventions, punctuation, syntax, and vocabulary are provided immediately before these elements appear in each of the story-books. To enable relatively unambiguous inference to the basis for student performance failures, the comprehension tasks for each activity are presented in the following order: 1) vocabulary, 2) picture conventions, 3) syntax, including punctuation, and 4) sentence (passage) comprehension (each of these tasks will be described in the following section). Before the student attempts to perform any of the tasks following the vocabulary exercise, he will take and be debriefed on the immediately prior task.
Since Blocks 1 and 2 of the program are designed primarily to
develop decoding rather than encoding skills, and since the major
purpose of the comprehension program component is to instruct and
assess for comprehension, the tasks have been written to reduce as
much as possible difficulty in response requirements. The basic
strategy for avoiding response difficulties is to provide the student
with the correct response. For one kind of task, the student is
required merely to decide if a response tentatively provided by the
teacher in spoken form, or by the exercise in writing, is correct or
adequate. For a second kind of task, the student is given a standard
multiple-choice item. The response alternatives are chosen not to be
difficult but rather to provide the teacher with a vehicle for comparing
and contrasting correct and incorrect answers, wherever possible. Where
instructionally useful distractors are not available, response alter-
natives are carefully selected to avoid the artificial difficulties
commonly encountered in standard norm-referenced tests.

Potential difficulties for students, which derive from ambiguity
in question phraseology, or in the statement of task performance
requirements for the exercises, have been minimized in two ways.
First, a fixed number of question formats have been adherred to so
that the tasks will become quite familiar to the students. And
secondly, since the task requirement or questions posed to the students
are of no special interest here when used as comprehension exercises,
the teacher has been given complete freedom to rephrase questions and
to explain the tasks, as individual needs require.
The specific tasks written for the comprehension exercises necessarily form only a sample of the tasks possible. The following four kinds of tasks were avoided:

1. Tasks which focus on certain of the unusual speech patterns in the story-books, which were forced into the early portions of the program because of the small lexicon available for use.

2. Tasks which focus on ambiguity, where the children are not themselves very likely to experience confusion. For example, in "Pat and Snap run and play," the phrase, "run and play" is ambiguous since it may mean: a) they run and then play; b) they alternately run and play; c) they play such that running is a component or aspect of their playing; and d) the obverse of c. Obviously, no useful purpose would be served by writing tasks to demonstrate polysemy for beginning readers.

3. Tasks which are so simple as to be seen as trivial and hence boring.

4. Tasks which require knowledge and or reasoning skills possessed only by a minority of students.

COMPREHENSION TASK DESCRIPTIONS

**Vocabulary**

Purpose: to determine if grapheme-phoneme correspondence rules taught in the immediately preceding activity have been functionally retained; to determine if sight words have been retained; and finally, to encourage the student to engage in those behaviors that facilitate retention, such as overt and covert rehearsal. The vocabulary check ensures that the child will know the word when he sees it in the story to follow. It is not our purpose to introduce entirely new vocabulary as such.

Instructional objectives: Given the teacher's oral description or definition of a term, with the term itself not spoken, the student will select the correct word from a set of distractors.
presented in written form. In the early lessons, where only a few response alternatives are available, the student may be given a true-false type item.

Task completion requires knowledge of the target word's meaning and recognition of the printed form of the word; also required are comprehension of the orally stated definition and recognition of the similarity between this definition and the target word's meaning. Obviously, failure to perform the task may reflect difficulties in the latter two requirements.

Examples:

"What word means that someone is moving from one place to another place?"

I ☐
Go ☐
Will ☐

"What word means that something is going to happen?"

I ☐
Will ☐
G ☐
O ☐

In general, distractors are selected from words introduced in previous lessons, and the immediately preceding lesson in particular. Distractors include words that would show if the student has forgotten a correspondence rule. Distractors are also selected to reduce the possibility

2The examples are intended to convey task content and not the physical layout of the exercise sheets.
that students will select a correct response simply because all other responses have previously been used, or because of any other systematic but spurious test-taking strategies.

**Picture Conventions**

**Purpose:** to ensure that picture conventions essential to the interpretation of associated text are understood before their use in the story-books.

**Instructional objective:** Given a picture containing a schematic representation of a phenomenon and the teacher's verbal designation of that phenomenon, the student will identify the schema.

Two varieties of tasks are used. In one task, the student is required to indicate the designated schema, or target in the picture drawn on his exercise sheet. The other task requires selection of a picture containing the target from among a set of pictures. The pictures used in these exercises are simplified as much as possible to reduce competition from essentially irrelevant distractions, but complicated so as to include schemas that may be confused with the target.

**Examples:**

"Mark the box for the lilly pad."
"Which person is talking? Mark the box that shows a person talking."

Punctuation

Purpose: to ensure that punctuation marks essential for comprehension are learned.

Instructional objective: Given a sentence which contains punctuation critical to its interpretation, the student will identify the correct meaning. The task format here is to present the student a written sentence and to have the teacher read aloud two or three interpretations.

Example:

"Snap," yelled Pat.

Interpretations read by the teacher:

a. Snap yelled at Pat.
b. Pat yelled at Snap.
c. Both Snap and Pat yelled.

Syntax

Purpose: to ensure that syntactic devices will not block or interfere with comprehension of story-book text.
Instructional objective: Given a sentence frame in which a term has been deleted, the student will select a syntactically valid term from a set of alternatives.

This task is an adaptation of one originally proposed by Okada (1972)\(^3\) and generally requires syntactic discriminations relatively independent of semantics.

Examples:

"The sentence on your sheet has a word missing. Which word should go there?"

PLAY _____ ME. WILL □
GO □
WITH □
I □

GO _____ ME. GO □
WITH □
WILL □
I □

It is anticipated that additional task formats will be adopted for syntax, but tests for syntax will not be emphasized since the program generally employs syntactic patterns familiar to most children.

Sentence Comprehension

Purpose: to ensure that the students will develop and maintain a set to process text for meaning so that reading comprehension skills will develop. Three varieties of tasks are used according

\(^3\)"Rationale and Specifications for a Prototype Group-Administered, End-Out-Unit Assessment Instrument for the SWRL Reading Program," work in progress.
to this sequence: 1) literal sentence and passage interpretation; 2) deduction; and 3) inference.

Instructional objectives for literal interpretation:

Given a spoken or written statement, the child will select the statement which most nearly means the same as the target from a set of written alternatives. It should be noted that key terms in the written statement(s) are avoided in the alternatives.

Examples:

"Snap had fun."

a. Snap enjoyed himself.
b. Snap fooled around.
c. Snap was sad.

"Snap found Pat. Then they ran."

a. They ran after Snap found Pat.
b. They ran to find Pat.
c. Snap and Pat ran away.

It is currently impossible to specify any general algorithms for generating sentences to be used as alternatives such that the distractors vary systematically with respect to similarity of meaning and such that the "correct alternative" is unambiguously valid. In the early part of this paper, an utterance was regarded as having a single, definite meaning; however this view oversimplifies the nature of the processes by which an utterance is interpreted and given meaning by the listener. Let us accept the notion that a communicator may not legislate the meaning of his utterance. Instead, the speaker or writer merely intends, ordinarily, that his utterance be given only one particular
interpretation. Often, alternative interpretations may be derived by
the listener as a function of his assumptions or presuppositions
regarding the antecedent and contextual determinants of the message.
Since listener's vary markedly with respect to their personal experience
or knowledge, and in their ability to perform inferential reasoning,
it is clear that different listeners may produce different interpreta-
tions. It is for this reason that messages were referred to earlier
as nominal stimuli.

Relatively simple declarative sentences such as, "the name Bob
has three letters," should not produce interpretive difficulties.
However, statements which involve emotion and purpose in the fantasy
characters may prove to be troublesome.

Instructional objective for deduction:

Given a set of logically related assertions, the child will
select the valid deduction from a set of alternatives read
aloud by the teacher, or written on the exercise sheet.

Specifically, the hypothetical syllogistic form is used (e.g., if A,
then B). All problems have the premise (A) either confirmed (Block 1);
or (A) confirmed or (B) denied (Blocks 1 and 2). The student's
task is to select a response alternative asserting a valid conclusion.

Example:

Pat said, "If Snap will go, I will run?" Then Snap went.

What will Pat do?

play ☐
go ☐
run ☐
Instructional objective for inference:

Given written or spoken information, the student will select a possible inferential conclusion from a set of alternatives. Performance here requires both comprehension of the written material presented to the student and utilization by the student of information he is expected to know independent of the task. Psychological processes by which inferential problems are solved are not at all well understood by psychologists, and a program of research is now being formulated. However, tasks may be constructed on an intuitive basis.

Example:

"Pat got dirty by playing in the mud."

sad  
 dumb  
 small  

After the children have read the above sentence, the teacher asks them to, "Mark the box for the word that shows how Pat's mother felt about what happened."

The relative task difficulty of inference and deduction is not fixed but will vary according to the form and contents of specific problems. It is anticipated that certain inferential tasks will be suitable for the beginning readers.

The final section of this paper, which follows next, contains a representative sample of tasks for all stories of Blocks 1 and 2.
BLOCK 1
COMPREHENSION EXERCISES

1, 1, 1 "What word do you say when you talk about yourself?"

will  □
go  □
I  □
G  □

"What word means that something is going to happen?"

I  □
G  □
will  □
0  □

"What word means that someone is moving from one place to another place?"

I  □
go  □
will  □

"What marks on the paper show that someone is talking out loud? Mark the box for the sentence that shows that someone is talking."

I go  □
I go.  □
"I go"  □

"What marks show that a person finished talking? Mark the box for the sentence that shows that someone talked out loud and finished what he was saying."

I go  □
I go.  □
"I go"  □
"I go."  □

"Which sentence shows that someone is asking a question?"

"I go."  □
"will I."  □
"will I?"  □
"go, I."  □
"One of the sentences on your sheet means almost the same thing as something I will tell you. After I tell you, find the sentence and mark its box."

"Ok, listen - 'I am going to go'."

I will    □
will I    □
I will go □

"Let's say you really wanted someone to go to a place. Which sentence shows what you might yell at him?"

"will, will."
"go, go."
"I, I."
"I go, I go."

This is what you should do when something bad happens to your friend.

- still
- him
- play
- help

Let's play with ____ in the tent.

- us
- we
- him
- I

He did slip on the hill.

I must ____ him.

- help
- here
- slip
- hill

He did run up the ____.

- tent
- mud
- hill
- help

He did ____ it on the log.

- put
- puts

2, 5 Let's say that you run to school. What do you do once you get there?

- slip
- stop
- still
"This is a small lake or a very, very big puddle."

mud
hill
pond
den

"Nat thought that Ann stole his tent, so he yelled at her. You bad duck, you took my tent. But Ann didn't take the tent, so she yelled at Nat."

I did it.
I am it.
I did not.
I must not.

"Tip wanted Bud to stop playing. So he said -"

Bud, you must not play.
Bud, you must play.
Bud plays stop.

"Every time Ann plays, she is happy. Yesterday, Ann was not happy. Okay, can you tell if Ann played yesterday?"

Ann did play.
Ann did not play.

"Imagine that you were in your house. "What might you do if you heard your friends playing on the grass?"

Go in to play.
Go out to play.
Go up to play.

"Bud owns a tent. Which sentence tells who owns the tent?"

It is a tent.
It is the tent.
It is this tent.
It is his tent.

"Nat owns a drum. Imagine that you have seen Ann playing Nat's drum. Which sentence tells what you know about the drum?"

Ann has the drum.
Ann has a drum.
Ann plays his drum.
Ann and Nat are in the drum.
"Pat packed all his things and went on a trip. Where is Pat's big drum?"

Pat has his drum ____. 

with him 
with his 
on his 
to him 

2, 6 "Pat likes to play with his drum. When he plays the drum in his house, his mother gets annoyed. Pat's mother was not annoyed yesterday. Can you tell if Pat was playing with his drum yesterday?"

Pat did play his drum. 
Pat did not play his drum. 

2, 7 "What is his name (show Dash's picture)."

Dash 
Pat 
Nat 
Ann 

"What do you call this (show ship picture)?"

ship 
stop 
smash 
slip 

This word means hitting or bumping into something real hard. Let's say that you didn't see a glass door when you were running, and you ran right into it. This word tells what you would do to the glass.

Ship it. 
Stop it. 
Smash it. 
Slip it. 

Let's say that you wanted to stop a ship from hitting into some large rocks. What might you say?"

I will not let the ship smash. 
I will not stop the ship. 
I will let the ship smash."
