ABSTRACT

This study was undertaken to devise a standardized faculty evaluation instrument which could be used by all departments at Rhode Island Junior College and which could be easily filled out by students, colleagues, and the department chairpersons of the instructor being evaluated. In order to ascertain the preferences of the college community regarding items which should be incorporated into such an instrument, two attitudinal questionnaires were designed and administered to 70 faculty members and a random sample of 200 students. One of the questionnaires related to preferred instrument format; the other to the characteristics essential to effective faculty performance. Among five alternative formats for the evaluation instrument, those polled preferred a multiple choice format. The selected characteristics of effective instructors closely paralleled the characteristics cited in the literature of the field. The developed instrument (which contains 50 items, with separate sections for students, advisees, faculty, and division chairpersons) is presented, as are both preliminary questionnaires and tables displaying questionnaire results. Pilot testing, revision, and college-wide implementation of the instrument are recommended.
DEVELOPING AN INSTRUMENT FOR EVALUATING FACULTY
BY STUDENTS, COLLEAGUES, AND ADMINISTRATORS
AT RHODE ISLAND JUNIOR COLLEGE

Rhode Island Junior College has no formal policy for evaluation of instruction beyond the statement that, "all full-time faculty shall be evaluated yearly." How it is done, when it is done, and by whom, is left to the whims of each department and, in many cases, to each instructor within a department. The use and distribution of any results is also questionable.

This writer agrees with Kinnibrew, Vandervert, and others, that evaluation should be directed towards the betterment of educational programs of an institution and to meet the goals and objectives of that institution. Further, says Richardson, it shouldn't be used to threaten faculty members' security and financial status.

Because of the divergent methods taken by, and within, departments at Rhode Island Junior College, results will be nebulous. Neither faculty nor administration can use them for any rational purpose with any degree of reliability.

For these reasons, this writer undertook to devise an evaluation instrument which could be used by all departments and which could be easily filled out by students, colleagues, and department chairmen of the person being evaluated. By involving those who are being evaluated, as well as those who are doing the evaluating, in the designing of a questionnaire it is expected a more acceptable and reliable instrument will emerge.
BACKGROUND AND SIGNIFICANCE

Educational institutions throughout the United States are increasingly being asked to become 'accountable' for their performance. Administrators are demanding faculty evaluations, for various reasons, and in many instances faculty are requesting evaluation to measure their teaching effectiveness. Students, more independent and self-disciplined than ever, recognize that learning is more and more their responsibility. This insight is aided by such experiential factors as exposure to self-paced instructional courses and Computer Assisted Instruction (CAI) programs. Administrators are beginning to feel the backlash from the arrogant and despotic decision-making methods used in the past and, to effectively run a college, are relying increasingly upon shared authority. Very infrequently will people "accept policy decisions that were generated without participation."

There are no policy guidelines to be followed for evaluation of instructors at Rhode Island Junior College. There is still disagreement about who is to do the evaluating; should students be involved? Colleagues? Department Chairmen? Also, there are no means of distributing any results, nor is there any way to tell what these results will be used for.

Student evaluation of faculty at Rhode Island Junior College is a hit-or-miss affair. Some departments use questionnaires which they have designed themselves. In
other departments, individual faculty members hand out sheets of paper to their classes and ask students to write out an evaluation. Even after this is done there is little, if any, method for compiling conclusions. Sometimes results are never used. Sometimes returned questionnaires are screened by the instructor to eliminate the noxious ones. It is also sad, as Miller reports, that most students "believe that the professor can recognize their handwriting." To compound this problem, it is a direct threat to students when they are required to sign their names to a written evaluation they do in class, which some instructors demand. "Evidence clearly indicates that students can evaluate teaching fairly and peremptively." This reinforces the statement by Bornheimer, that, "evaluations should be made by the group that is exposed directly and continuously to the process—the students."

Cohen comments that students recognize the fact that a teacher has taught them well, while faculty resent being rated by inexperienced and immature students, says Monro, even though that appears to be the best method of faculty evaluation. Miller denies the immaturity of students, however, where evaluating teaching is concerned.

Presently there is no evaluation of an instructor at Rhode Island Junior College by his colleagues. "Even when peer evaluation procedures are highly systematized, as detailed in faculty association recommendations," claims Cohen, "their value is open to question." If, however, the faculty is involved in preparing a carefully designed questionnaire for colleague evaluation, as recommended by Trent, maybe such trouble caused by this type of evaluation can be avoided, as indicated by Miller.

Administrative evaluation of faculty is done mainly by the chairmen of the departments at Rhode Island Junior College. Once each year, each chairman is required to write an anecdotal report to the dean regarding his faculty.
Various methods are used -- and misused! Some chairmen call in their faculty, inform them of their observations, show them the report, and have it signed. The possibility that there has been a visit to the classroom for observation is minimal, despite Deegan's\(^\text{15}\) claim that this is the most widely used form of chairman evaluation. Another method of evaluation is for the chairman to request the faculty member to write up his own report and the chairman then turns that in as his evaluation of the instructor. The objectivity of these evaluations is certainly questionable! If there was a standard form, with clear guidelines for use, some of these inequities may be avoided.

Richardson,\(^\text{16}\) warns us against being punitive with the results of faculty evaluation. It's overriding purpose "must be to improve the instructional program,"\(^\text{17}\) and to, "make informed judgements and decisions about the development, implementation, and effectiveness of instruction."\(^\text{18}\) This implies that feedback is important and necessary to faculty to help them develop effective teaching skills and strategies.

Evaluation is a "threatening procedure regardless of how it is approached,"\(^\text{19}\) warns Miller, and, "the potential threat to his own self-esteem is probably as great as to his position on the faculty."\(^\text{20}\)

Rhode Island Junior College should foster an atmosphere whereby all constituents; faculty, students, and administrators, would become willingly involved to design and administer a standardized evaluation form. At present, there are no ways to indicate which faculty members could benefit from a revitalization of professional and personal goals. A standardized, fair, evaluation instrument, specifically designed for Rhode Island Junior College personnel can aid in locating those who could benefit most from such improvement.
PROCEDURES

In order to design an instrument which would meet the needs and desires at Rhode Island Junior College, this writer designed two attitudinal questionnaires to ascertain the preferences of the college community regarding items which should be incorporated into such an instrument.

These questionnaires were distributed at the Providence Campus of Rhode Island Junior College which accommodates approximately 850 students and 70 faculty. Each faculty member received a questionnaire in his mailbox. A random sample of 200 students were given surveys in various locations about the campus, such as the cafeteria, lounge, and some classrooms.

The first questionnaire (Appendix A) was intended to determine what type of format the college community preferred. There were eight types of forms illustrated. The author borrowed from diverse sources such as the Illinois Course Evaluation Questionnaire suggested by Aleponi and an eclectic form such as that mentioned by Kelley. Numerous other types, which are commonly used, were also illustrated. Respondents were requested to read over the eight types offered and to check off the two they most preferred, with a first and second place designation. There was space provided at the conclusion of each type shown for any comments regarding that particular one. Further, there was room left for comments after their preferences were listed.

The second questionnaire (Appendix B) was an attempt
to discover the preferences of the characteristics that should be evaluated in a Rhode Island Junior College instructor. Section I consisted of nine categories, adapted from Miller, 23 from which respondents were requested to check off those three they thought were most important for assessing faculty performance at Rhode Island Junior College. Section II subdivides each of these nine categories into various attributes. Respondents were again asked to check those which they thought were important for that category. At the conclusion of the questionnaire there was space provided for additional comments.

There were no requirements to sign the forms, although there was a provision to determine the respondents status as faculty or student.
The numerical data, for returns of the first questionnaire, are shown in Table I. There were forty faculty and one hundred two student surveys returned, rates of 57% and 51% respectively.

Students showed no preference for the sliding scale form as a first choice but nine chose it as second. Multiple choice, chosen by 42 respondents as first choice and 24 as second choice, was the most popular student choice, receiving a 32% response. There were no faculty who chose true or false as either first or second. The most popular form, as indicated by the faculty first place choice, was the circle choice, with eleven tallies. This form received seven votes as second preference. Multiple choice, however, reversed these figures. The anecdotal type was second, as a first place preference, among the faculty, with a tally of eight. A sum of eighteen votes for both the multiple choice and circle choice types of questionnaires were maximum among the faculty.

In combined count, the multiple choice received a total of eighty-four first and second places, which was 30% of the total. A bit behind, with a sum of forty-eight, was the circle choice, which claimed 19% of the total.

Some comments, such as those that follow, were received regarding the illustrated forms.
I. ANECDOTAL

The consensus of the faculty who commented indicated this type would be the most informative and would allow more freedom of expression and feeling. Doubts existed, however, that students would give it proper attention and they would fail to return this type of form. Some faculty thought it would 'strongly encourage the evaluator to put thought in his evaluation,' while others claim, 'most students do not seem to want to take time for such a form.' The difficulty in tallying and reporting on results of such a form was also mentioned.

Students thought this gave them a better opportunity to express opinions but also thought that many may not like to do a lot of writing.

II. MULTIPLE CHOICE

Thirty percent of the respondents checked this as either first or second preference. It was considered 'desirable' by many inasmuch as it required little effort to complete, and it made several choices available. Others, however, wanted some 'option to explain answers.'

III. TRUE OR FALSE

This seemed the least popular, having been checked by only twelve students and no faculty. It was considered too restrictive by some respondents. 'Not refined enough,' says one, and, 'no in-between,' says another.

IV. FILL IN THE BLANKS

This was thought to be 'hard to tally,' and likely to be treated lightly by students. Also, there should be an option to explain answers.
V SCALE OF 1 TO 10

It was remarked, by a student, that students might not be really interested and just put any number down, 'without even reading the question.' Also, a 1 to 10 system was considered too artificial a barometer.

VI SLIDING SCALE

This allowed for the 'widest latitude of evaluation,' said one respondent, ... another thought it was too confusing -- four categories and seven choices! Perhaps, the claim is made, with clearer directions this might be preferable. One student thought this would be the easiest to fill out.

VII CHECK-OFF SYSTEM

Some considered this the best because it contained a 'non-applicable' column, and they thought this should be a feature of any evaluation form. It was also mentioned there should be space left for comments.

VII CIRCLE CHOICE

This second most popular choice was cited as being easy to fill out and would have been better received if the headings were clearer.

COMMENTS

One faculty member refused to select preferences inasmuch as it was based on 'input of the teaching act' rather than the 'output of the teaching act,' that is, student achievement. Another instructor was satisfied to require a
500 word composition on his course and methods, considering this more useful than any 'schematic formula.'

Other respondents wanted the form to include criteria to judge non-teaching personnel (i.e., librarians), and laboratory or clinical supervisors.

The numerical data, for section I of the second questionnaire, are shown in Table II. There were twenty-one faculty and eighty-one student surveys returned, rates of 30% and 41% respectively.

In section I no student thought publications or public service was one of the three most important factors for evaluating an instructor at Rhode Island Junior College. Faculty members failed to list management, performing arts, publications, and public service, among their selections. It is obvious, therefore, that no respondent thought publications or public service was a very important factor when evaluating faculty performance at Rhode Island Junior College.

All of the faculty and 89% of the students checked classroom teaching as one of the three most important attributes, while, percentages placed advising and faculty service in second and third place.

There were two faculty members who checked off 'other' categories. One listed 'curriculum development' as an alternative and the other listed 'harmony with student organizations' as another alternative.

Some comments on each of the categories follows.

1. Classroom teaching

   More than 50% of each group thought the following were unimportant attributes for
evaluation of an instructor.

sincere  repetitive
motivated  personable
distractions (sayings or mannerisms)
speaking speed (too fast, too slow)

A total greater than 90% thought repetitive
and distractions were unnecessary traits to
evaluate, while the only ones to be checked as
necessary greater than 80% of the time were
clarity and fairness.

It was suggested by one respondent that
another category under classroom teaching be
attendance!

2. Advising

There were no attributes here which a major-
ity of each group thought should not be included
in a questionnaire. The largest majority, though,
thought helpfulness was extremely important
and sympathy the least important.

Comments were made that an instructor should
know how to refer students to available services
and be more knowledgeable about careers for
students.

3. Faculty service and relations

Students minimized these factors and faculty
tally's were not sufficient to cause any of them
to receive more than a 70% rating. Some respon-
dents thought there should be added traits
such as 'good leader,' 'good follower,' 'works
in interest of college,' and, 'works in interest
of students.'
Management (administration)

Every student checked getting things done as important, but well-organized was, over all, the attribute thought most important by a majority of all respondents. A specific plea was made that 'students be allowed to make their own decisions on matters relating to students.'

Performing arts

Unless an instructor teaches in these fields, they were considered unimportant by a large majority, in all cases.

Professional services

Students, by a two to one majority, thought each of these was important, while faculty were about evenly divided on them.

Publications

With the exception of special reports, thought by the students to be important, by a one vote margin, no category received more than 40% of the tallies.

'They're not important,' says one respondent, and, 'a faculty member need not be a literary figure to be an effective teacher,' says another. It was suggested, though, that these attributes might indicate personal growth on the part of the faculty member.

Public service

All of these were considered overwhelmingly unimportant, especially church work. Some respondents thought it didn't really matter
to the school or to the students and that a faculty members life should 'be his own,' as long as it didn't take away from his school work.

9. Research

Investigation within the discipline was the only one considered unimportant by a majority of respondents. Some thought there should be an additional trait called bridging disciplines.

Comments

It was indicated by some respondents that the faculty should be concerned with school-age children in general and that teaching be 'a labor of love not merely a job for x amount of dollars.'

As an outcome of this study, the writer has designed a Rhode Island Junior College Faculty Questionnaire (Appendix C) which has incorporated the above results. Hopefully this instrument can be utilized in all departments at the college. It can be administered in a reasonably short period of time, and can be easily tallied. It meets the needs of a unique model, as Deegan suggests, which fits the individual requirements of a district.
RECOMMENDATIONS

The difficulties involved in effectively evaluating teacher performance are legion. Any attempt to do so at Rhode Island Junior College must have the cooperation of all sectors of the college community. The instrument in Appendix C is not to be considered a final solution, but rather a first step on an arduous road to interaction among faculty, students, and administration for perfecting such an instrument. Faculty and students have had input into this version of the form and it is hoped, with widespread usage and distribution, it will be constantly revised and updated to more accurately reflect the concerns at Rhode Island Junior College and to better identify those faculty members in need of instructional improvement. To these ends, the following recommendations are made:

1. The Faculty Evaluation Questionnaire should be used on a trial basis for the R. I. J. C. Summer Session, 1975. This would enable us to determine such factors as time taken to administer the evaluation, ease of correcting, feasibility of obtaining and interpreting results, and the distribution of these results. It is suggested that all summer faculty be invited to participate in a revision seminar at the conclusion of the summer session in order to help amend any portion of the instrument.
which needs it. Their suggestions and comments should be solicited.

2. A revision committee of nine people should be formed. This committee should be composed of two administrators, three students, and four faculty members. Their concern would be to revise and reform the evaluation to further reflect the concerns brought up by the summer session trial period and the seminar which followed. They should also devise an objective scoring system in order to set norms to base suggestions for improvement of faculty performance.

3. The improved questionnaire should be implemented in the 1975-76 academic year. An advertising campaign should be mounted early in the first semester to familiarize everyone with the non-punitive aspects of such an evaluation. It should be administered close to the end of the first semester so results could be obtained, distributed to those concerned, and discussed before the start of the second semester.

4. The administration should suggest, and offer, assistance to those faculty shown to be in need of improvement. This aid could come in the form of in-service courses, seminars, or travels to conferences. It is possible that some faculty, considered to be excellent instructors, could be offered paying jobs as teachers of these courses.

Teaching is still the most important function of an instructor at Rhode Island Junior College. There should be
some method of discovering whether it is being effectively done. If we are to remain a viable, effective, teaching institution we must effect change which will reflect a more cohesive faculty, student body, and administration, dedicated to quality instruction.

APPENDIX A

A QUESTIONNAIRE DESIGNED TO DETERMINE THE TYPE OF FACULTY EVALUATION FORM WHICH WOULD BE PREFERRED AT RHODE ISLAND JUNIOR COLLEGE
I would like to design a questionnaire to evaluate faculty and I want to get the consensus of some of the student body and faculty as to the best type of questionnaire to use. This survey seems lengthy but it will really only take a few minutes of your time to fill it out. When it's completed I'd appreciate it if you would return it to me by placing it in my mailbox in the office in the fourth floor, or in my office (F-3), or in the math lab, which is room 313.

Thank you for your help.

Joseph W. Menard
Mathematics Dept.

Please indicate if you are;

A. Faculty member 
B. Student
When evaluating an instructor there is sometimes difficulty in getting people to return forms. Part of the reason for this may be the way the form is being asked to be filled out, and the manner in which it is presented! With your assistance, perhaps one can be designed which will be more likely to be completed and returned.

On the following pages there are seven types of forms illustrated. Would you choose two that you think are best and that you would like to receive if you had to fill it out? Mark the one you prefer most as #1 and your second choice as #2. If you wish to make any comment regarding each of the illustrations there is space provided after each one.

MY PREFERENCE:

I    ANECDO TAL
II   MULTIPLE CHOICE
III   TRUE OR FALSE
IV   FILL IN THE BLANKS
V    SCALE OF 1 TO 10
VI   SLIDING SCALE
VII  CHECK-OFF SYSTEM
VIII CIRCLE CHOICE

COMMENTS:______________________________________________________________

________________________________________________________________________

________________________________________________________________________
I. ANECDOTAL. (You are asked to write a sentence or two about each characteristic.)

EXAMPLES:

1. What do you think about the fairness of this instructor regarding grading?

2. Does this instructor know his subject matter?

3. Is this instructor well organized?

COMMENTS:

II. MULTIPLE CHOICE. (You are asked to circle correct response.)

EXAMPLES:

1. When grading students, I consider this instructor to be;
   a) extremely fair
   b) fair
   c) unfair
   d) very unfair
2. Regarding knowledge of subject matter, this instructor seems to be:
   a) well informed
   b) informed
   c) poorly informed
   d) uninformed

3. This instructor seems to be:
   a) well organized
   b) organized
   c) poorly organized
   d) unorganized

COMMENTS: ____________________________

III. TRUE OR FALSE. (You are asked to circle T or F next to the question.)

EXAMPLES:

1. This instructor has a grading system which is fair. T F

2. This instructor seems to know his subject matter thoroughly. T F

3. This instructor seems to be well organized. T F

COMMENTS: ____________________________

IV. FILL IN THE BLANKS. (You are asked to put an appropriate word in the blank.)

EXAMPLES: Fill the following blanks with words you feel best describe the instructor you are evaluating. The following list is not
complete, but is given as an aid.

<table>
<thead>
<tr>
<th></th>
<th>excellent</th>
<th>unorganized</th>
</tr>
</thead>
<tbody>
<tr>
<td>fair</td>
<td>uninformed</td>
<td></td>
</tr>
<tr>
<td>poor</td>
<td></td>
<td></td>
</tr>
<tr>
<td>good</td>
<td>organized</td>
<td></td>
</tr>
</tbody>
</table>

etc.

1. This instructor's grading system is _____.
2. This instructor's knowledge of his subject matter seems to be ________.
3. This instructor seems to be ____ organized.

COMMENTS: _______________________

___________________________

___________________________

V. SCALE OF 1 TO 10. (You are asked to rate the instructor with a number from 1 to 10, ten being the best.)

EXAMPLES:
1. ____ The instructor's grading system.
2. ____ The instructor's knowledge of his subject matter.
3. ____ The instructor's organization of his Class.

COMMENTS: _______________________

___________________________

VI. SLIDING SCALE. (You are asked to put a cross, or some mark, on a number line for your appraisal of the instructor.)
1. The instructor's grading system.  
2. The instructor's knowledge of his subject matter.  
3. Organization of instructor's class.

COMMENT: __________________________________________________________

VII. CHECK-OFF SYSTEM. You are asked to check one of the boxes.)

KEY-- NA: Not applicable or I don't know.
SA: Strongly agree with statement.
A: Agree with statement.
D: Disagree with statement.
SD: Strongly disagree with statement.

EXAMPLES:
1. This instructor's grading system is fair.
2. This instructor has good knowledge of his subject.
3. This instructor's class is well organized.

COMMENTS: __________________________________________________________
VIII. CIRCLE CHOICE. (You are asked to circle your choice of appraisal for this instructor.)

EXAMPLES:

<table>
<thead>
<tr>
<th>EXCEL</th>
<th>SATIS</th>
</tr>
</thead>
<tbody>
<tr>
<td>NA</td>
<td>LENT</td>
</tr>
<tr>
<td>GOOD</td>
<td>FACTORY</td>
</tr>
</tbody>
</table>

1. The instructor's grading system.
   1 2 3 4 5 6

2. The instructor's knowledge of subject matter.
   1 2 3 4 5 6

3. Organization of instructor's class.
   1 2 3 4 5 6

COMMENTS:

APPENDIX B

A QUESTIONNAIRE DESIGNED TO DETERMINE FACTORS AND ATTRIBUTES NECESSARY FOR EVALUATING FACULTY AT RHODE ISLAND JUNIOR COLLEGE
When evaluating an instructor in any particular course, the use of the results must be clear. Are they for promotion, retention, retrenchment, etc.? There should be different directions taken for the various uses. This questionnaire is designed to get your preferences to the characteristics that should be evaluated when our goal is to improve faculty performance at Rhode Island Junior College.

Comments at the conclusion would be appreciated.

Thank you.

Math department

Your status:
Faculty_______
Student_______
I. WILL YOU PLEASE CHECK OFF THREE (3) CATEGORIES OF THOSE LISTED BELOW THAT YOU THINK ARE MOST IMPORTANT FOR GUAGING FACULTY PERFORMANCE AT R. I. J. C.

1. Classroom teaching
2. Advising
3. Faculty service and relations
4. Management (administration)
5. Performing or visual arts
6. Professional services
7. Publications
8. Public service
9. Research
10. Other (please signify)

II. UNDER EACH OF THE CATEGORIES LISTED BELOW, WHETHER THEY WERE ONE OF YOUR THREE CHOICES OR NOT, PLEASE CHECK THOSE ATTRIBUTES WHICH YOU DEEM NECESSARY TO EVALUATE AN INSTRUCTOR AT RHODE ISLAND JUNIOR COLLEGE.

1. Classroom teaching
   - audible
   - legible writing
   - clarity
   - repetitious
   - stimulating
   - imaginative
   - approachable
   - motivated
   - flexible
   - listens
   - patient
   - personable
   - sustains interest
   - arouses interest
   - sincere
   - sense of humour
   - neat appearance
   - courteous
   - fair (assignments, grading)
   - coverage of material
   - speaking speed (too fast, too slow)
   - organization of material
organization of presentation
distractions (sayings or mannerisms)
allows opposing views
uses teaching aids effectively
dynamic and energetic
enjoys what he's doing
presents course objectives
choice of textbook
quality of class discussion
other (please signify)

2. Advising
   friendly
   understanding
   sympathetic
   approachable
   courteous
   helpful
   objective
   student-oriented
   other (please signify)

3. Faculty service and relations
   works well as a committee member
   well-read beyond subject matter
   enjoys good working rapport with other faculty
   other (please signify)
4. **Management (administration)**
   - gets along with others
   - gets things done
   - is well organized
   - is prompt
   - other (please signify)

5. **Performing and visual arts**
   - plays musical instrument
   - paints
   - sculpts
   - writes (plays, prose, poetry, etc.)
   - acts in plays
   - other (please signify)

6. **Professional services**
   - belongs to an association within his discipline (Math Society, English Assoc., etc.)
   - attends conferences within his discipline
   - other (please signify)

7. **Publications**
   - books
   - monographs
   - special reports
   - chapters in books
   - periodical articles
   - other (please signify)

8. **Public service**
   - works for alma mater (alumni, fund drive, etc.)
   - church work
   - community works (Little League, Jaycees, etc.)
   - other (please signify)
9. Research

- investigation within classroom
- investigation within discipline
- investigation within college
- other (please signify)

COMMENTS:
APPENDIX C

RHODE ISLAND JUNIOR COLLEGE
FACULTY EVALUATION QUESTIONNAIRE
R. I. J. C. FACULTY EVALUATION QUESTIONNAIRE

THIS FORM WAS DESIGNED TO ASSIST US TO EVALUATE EFFECTIVE TEACHING AT RHODE ISLAND JUNIOR COLLEGE. IT GIVES YOU AN OPPORTUNITY TO ANONYMOUSLY EXPRESS YOUR VIEWS OF THIS COURSE AND HOW IT WAS TAUGHT. THE RESULTS WILL NOT BE USED TO DETERMINE PROMOTION, RETENTION, OR RAISES FOR FACULTY. IT'S MAIN PURPOSE IS TO INFORM INSTRUCTOR'S WHERE ROOM FOR IMPROVEMENT EXISTS IN ORDER TO ACCOMPLISH THE EDUCATIONAL OBJECTIVES OF RHODE ISLAND JUNIOR COLLEGE.

THERE WILL BE NO PUBLIC DISTRIBUTION OF INDIVIDUAL RESULTS. THE ADMINISTRATION, OR AN EVALUATION COMMITTEE, WILL INFORM INSTRUCTORS OF CONCLUSIONS, INDIVIDUALLY.

DIRECTIONS

Each question has five possible choices. You are asked to circle the letter before the one you believe best describes your feelings about the instructor and the course. If you feel you are not qualified to answer a particular question, or that it doesn't apply to you, or you do not know the answer, please circle the fifth choice, NA.

On the right of each page there is a column headed, COMMENTS, which allows you to express an opinion on any question or to clarify any answer, if you wish.

At the conclusion of the questionnaire there is space provided if you have any additional comments.
SECTION I. Only students who have had this instructor in class should answer this section.

1. The instructor's voice was clearly audible,
   a. all of the time
   b. most of the time
   c. some of the time
   d. none of the time
   e. NA

2. The instructor's directions and explanations were clearly understood,
   a. all of the time
   b. most of the time
   c. some of the time
   d. none of the time
   e. NA

3. The instructor stimulated me to more interest in this subject,
   a. all of the time
   b. most of the time
   c. some of the time
   d. none of the time
   e. NA

4. Regarding subject matter, this instructor,
   a. covered too much material
   b. covered sufficient material
   c. covered too little material
   d. covered no material
   e. NA
5. I found the time required to complete outside assignments for this course, to be,  
   a. more than adequate  
   b. adequate  
   c. less than adequate  
   d. completely inadequate  
   e. NA

6. The instructor's grading system seemed to be,  
   a. excellent  
   b. good
