ABSTRACT

The following are some of the findings based on the results of the annual survey of marital and family characteristics of workers: (1) about 27.6 million of 62.7 million children had mothers in the labor force (over 2 million more than in March 1970); (2) 1.1 million of 6.5 million children under six were in families headed by women (71 percent more than in 1970); (3) the number of children in two-parent families has decreased since 1970; (4) families with working mothers had fewer children; and (5) children whose mothers were employed were families with considerably higher incomes. More black children (48 percent) than white children (38 percent) in two-parent families had employed mothers. Three tables include the following information: (1) number of children under 18 years old, by age, type of family, mother's labor force status, and race, in March 1970 and March 1975; (2) number of families and average number of own children under 18 years old, by type of family, mother's labor force status, and race, in March 1970 and March 1975; and (3) number of children under 18 years old, median family income in 1974, type of family, parents' labor force status, and race, in March 1975.

# SUMMARY

U.S. DEPARTMENT OF LABOR Bureau of Labor Statistics

# SPECIAL LABOR FORCE REPORT

CE

## Children of Working Mothers, March 1975

Between March 1970 and March 1975, the total number of children under age 18 in families dropped substantially, while the number of children whose mothers were working or looking for work increased. Of the 62.7 million children in March 1975, about 27.6 million had mothers in the labor force, a little over 2 million more than in March 1970 (table 1).

Most of the children of working mothers were old enough to be in school, but 6.5 million were under age 6. About 1.1 million of these preschoolers with working mothers were in families headed by women, 71 percent more than in 1970. Over the same period, the number of working mothers--both wives and women heading families--advanced from 12 to 14 million (table 2).

In March 1975, as in other years, most children were in families in which both their mother and father were present. However, the number of children in 2-parent families has decreased since 1970, reflecting the unprecedented decline in the birth rate as well as a marked increase in divorce and separation. This latter development

has been a major factor in the recent upsurge in families headed by women and in the number of children with working mothers in such families. On average, divorced women with (and without) children have higher labor force participation rates than married women. Another factor is the long-term increase in the number of never-married mothers who head families; there were 930,000 in March 1975.

In March 1975, as in previous years, families with working mothers had fewer children, on average, than those families with mothers who did not work outside the home. This held true for families headed by women as well as for 2-parent families, and for white as well as for black families.

Also, whether in 1- or 2-parent families, white or black, children whose mothers were employed were in families with considerably higher income, on average, than were children whose mothers were unemployed or not in the labor force (table 3). For example, among white children in husband-wife families, median family income in 1974 was about \$18,000 if the mother was employed, compared with \$14,000 if she was not in the labor force. Corresponding figures for black children were about \$13,700 and \$8,500. A greater proportion of the black children (48 percent) than white children (38 percent) in husband-wife families had employed mothers, and the black mothers' contribution to family income clearly reduced the gap between their respective families' income.

These findings are from the annual survey of marital and family characteristics of workers, conducted for the Bureau of Labor Statistics by the Bureau of the Census. Additional information will be published in a forthcoming issue of the Monthly Labor Review.
